Woodward, Orator F., Le Roy, N. Y. "Lane's Family Medicine"	5,948	June 18	47	1490

DISCLAIMERS.

Name, residence, and invention.	No.	Filed.	Official Gazette. Vol.	Page.
Allen, Marshall J., New York, N. Y., and William E. Bradley, Frankfort, Ky.; disclaimer filed by assignee. Process of making whisky	263,087	Apr. 5, 1889	47	276
Day, Augustus, Detroit, Mich.; disclaimer to first and second claims filed by patentee. Track-clearers. (Reissue)	8,388	Mar. 22, 1889	47	2
Faure, Camille A., Paris, France; disclaimer filed by assignee. Polarization of secondary electric batteries	252,002	Apr. 9, 1889	47	276
Grant, James M., Hartford, Conn.; disclaimer filed by patentee. Art of reeling and winding silk and other thread	267,192	May 27, 1889	47	1224
Henis, Charles F., Philadelphia, Pa.; disclaimer filed by executor of said Henis, deceased. Disintegrator and strainer	248,930	May 9, 1889	47	818

ALPHABETICAL LIST OF INVENTIONS.

Invention.	Name.	No.	Date.	Monthly volume. Specification.	Monthly volume. Drawing.	Official Gazette. Volume.	Official Gazette. Page.
Acid. Alizarine-green sulpho-	R. Bohn	401,635	Apr. 16	1851	.....	47	370
Acid. Manufacture of a new alpha-naphthol-disulphonic	M. Andresen	405,938	June 25	2356	.....	47	1705
Acid. Purifying acetic	I. A. F. Bang and M. C. A. Ruffin	401,992	Apr. 23	2378	618	47	480
Adding-machine	S. E. Austin	403,900	May 28	3031	536	47	1075
Adding-machine	D. E. Felt	405,024	June 11	956	255 256	47	1421
Adding-machine	J. G. and G. W. Smith	400,714	Apr. 2	415	112 113	47	83
Adding-machine	J. C. Stinson	405,924	June 25	2334	613	47	1702
Addressing-machine	J. W. H. Reisinger	404,732	June 4	523	134	47	1327
Advertising	J. A Christy	405,532	June 18	1728	456	47	1582
Advertising-cards. Preparing designs for	T. P. Heinemann	401,164	Apr. 9	1113	295	47	219
Advertising device	J. Castle	403,037	May 7	704	184	47	796
Advertising device	C. D. Goodwin and W. M. Chase	401,158	Apr. 9	1103	293	47	216
Advertising or display device	A. Dahlstrom	400,549	Apr. 2	177	48	47	37
Aerated water. Apparatus for manufacturing	J. T. Leighton	403,117	May 14	839	222	47	829
Aerated water. Manufacturing and bottling	O. Avedyk	404,402	June 4	137	32	47	1251
Agricultural implement	R. Owen	401,297	Apr. 9	1310	348	47	257
Air and gas engine	A. Schmid and J. C. Beckfeld	403,294	May 14	1129	299	47	883
Air. Apparatus for purifying atmospheric	W. Hibbert	404,021	June 4	382	92	47	1296
Air-brake	T. S. E. Dixon	402,418	Apr. 30	3033	786 787	47	613
Air-brake	F. A. Holleman	405,705	June 25	2044	529	47	1642
Air-brake	J. M. Maxwell	405,968	June 25	2406	630	47	1714
Air-brake. Automatic	R. Solano	405,755	June 25	2222	585	47	1663
Air-brake. Automatic	R. Solano	406,006	June 25	2475	647	47	1725
Air-brake signal	A. B. Collins	400,638	Apr. 2	298	84	47	62
Air-brake signal	A. B. Collins	400,639	Apr. 2	300	84	47	62
Air-brakes. Flexible piping for	D. M. Legat	401,706	Apr. 16	1943	507	47	386
Air-compressor	H. F. Fitzpatrick	402,517	Apr. 30	3192	826 827	47	643
Air-cooling apparatus	J. L. Wood	405,064	June 11	1014	271	47	1434
Air-engine	J. S. Baldwin	404,818	June 11	649	168 169	47	1362
Air-engine	J. A. Woodbury, J. Merrill, G. Patten, and E. F. Woodbury.	404,237	May 28	2564	668 669	47	1178
Air engine. Hydrocarbureted	J. J. R. Humes	400,850	Apr. 2	632	171 172	47	121
Air-heater	T. Nugent	403,064	May 7	738	192	47	803
Air-heating furnace	J. R. Barker	402,795	May 7	366	96	47	731
Air. Means or apparatus for the production and distribution of compressed	V. Popp	405,971	June 25	2413	631 632 633	47	1715
Air-motor	S. C. Hill	402,525	Apr. 30	3206	830	47	646
Air motor. Compressed	A. Jorgensen	402,838	May 7	496	112 113	47	743
Air-purifier	B. S. Benson	402,714	May 7	226	62	47	708
Alarm: *See* Burglar-alarm. Railway-track alarm. Letter-box alarm. Safe-alarm.							
Alarm	C. Agerskov	401,531	Apr. 16	1670	441	47	337
Alarm-lock	G. C. Day	402,413	Apr. 30	3023	785	47	611
Alarm system	C. A. and J. F. Cox	400,750	Apr. 2	466	125 126	47	92
Album-clasp	E. P. Hinkel	405,473	June 18	1633	431 432	47	1563
Alizarine-blue green	R. Bohn	401,633	Apr. 16	1848	.....	47	370
Alkali. Recovering	V. G. Bloede	403,870	May 21	1983	.....	47	1057
Alkali. Recovering spent	V. G. Bloede	403,869	May 21	1982	.....	47	1057
Aluminium by electrolysis. Reducing	C. M. Hall	400,766	Apr. 2	490	133	47	96
Aluminium. Electrolyzing crude salts of	C. M. Hall	400,666	Apr. 2	344	94	47	69
Aluminium. Electrolyzing fused salts of	C. M. Hall	400,667	Apr. 2	346	.....	47	69
Aluminium from its fluoride salts by electrolysis. Reducing	C. M. Hall	400,664	Apr. 2	342	93	47	69
Aluminium. Manufacture of	C. M. Hall	400,665	Apr. 2	343	93	47	69
Aluminium. Manufacturing	L. Grabau	400,449	Apr. 2	37	12	47	11
Amalgamator	J. Behm	405,337	June 18	1421	374	47	1520
Amalgamator	M. T. Van Derveer	405,447	June 18	1580	419	47	1554
Anchor. Folding	T. S. Laughlin	401,654	Apr. 16	1875	487	47	373
Anchoring device for portable machines	J. C. White	403,811	May 21	1899	499	47	1042
Angles for bevel-gear. Apparatus for plotting	J. A. Boorman	400,737	Apr. 2	451	120 121	47	89
Animal-catching device	T. Wickham	404,583	June 4	331	79	47	1288
Animal-releasing device	W. H. McCurdy	402,344	Apr. 30	2918	757	47	591
Animal-releasing device	G. A. Waterhouse	401,914	Apr. 23	2264	589	47	458
Animal-shears	A. A. White	401,806	Apr. 23	2112	551	47	428

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Dr's.	Official Gazette. Vol.	Page.
Animal-trap	A. Brawn	405,006	June 11	925	245	47	1415
Animals. Device for administering medicine to	P. Quitman	403,213	May 14	996	263	47	860
Annealing-box	W. H. Bailey	405,755	June 25	2093	548	47	1657
Annealing-kiln	A. D. Brogan, J. Craig, and J. French	405,527	June 18	1719	454	47	1581
Annunciator-drop	J. M. Stuart	402,043	Apr. 23	2463	642	47	495
Annunciator. Electrical	B. Smead	402,026	May 7	106	26	47	484
Anvil and swage	J. H. Urschel	405,191	June 11	1201	319	47	1469
Anvil and vise. Combined	H. H. Brandes	405,982	June 25	2430	636	47	1718
Anvil-mold	T. W. Vare	402,368	Apr. 30	2954	766	47	598
Arm-rest	A. B. Dick	403,652	May 21	1658	439	47	995
Armature-core for dynamos	J. F. Kester	404,713	June 4	501	128	47	1323
Armature. Dynamo	C. O. C. Billberg	401,632	Apr. 16	1247	487	47	370
Armature for dynamo-electric machines	E. Thomson	400,973	Apr. 9	824	220	47	167
Armature for electro-magnets	J. Geary	401,152	Apr. 9	1095	290 / 291	47	214
Artist's portfolio	F. M. La Bruce	405,782	June 25	2125	558	47	1664
Asbestus packing	J. B. Deeds	400,755	Apr. 2	475	.....	47	93
Asbestus. Treating	B. E. Church	405,201	June 11	1230	.....	47	1472
Asbestus. Treating	J. B. Deeds	400,756	Apr. 2	475	.....	47	93
Aseptic suit	J. L. Rollins	405,850	June 25	2217	584	47	1682
Asphalt-coated sheet-metal pipe	J. P. Culver	400,532	Apr. 2	608	166	47	116
Asphalt. Machine for mixing	G. L. Peabody	405,499	June 18	1677	443 / 444 / 199 / 200	47	1572
Assorting-machine	C. S. Gooding and S. W. Ladd	404,904	June 11	781	199 / 200	47	1386
Atomizer	N. R. Gordon	402,921	May 7	536	142	47	764
Atomizer	G. Kneuper	401,355	Apr. 16	1462	371	47	288
Atomizer-nozzle	W. Hugershoff	402,831	May 7	418	110	47	741
Attrition-mill	G. and A. Raymond	403,215	May 14	998	264	47	860
Attrition-mill	T. L. Sturtevant and M. G. Davis	403,970	May 28	2130	557	47	1094
Auger	F. C. Gerard	400,659	Apr. 2	322	90	47	67
Auger-bit	C. H. Irwin	404,197	May 28	2455	652	47	1166
Auger-bits. Package for	N. Sperry	405,613	June 18	1846	489	47	1607
Auger. Ground	J. Fleming	404,188	May 28	2483	649	47	1163
Auger-heads. Die for forming	H. L. Shaler	403,296	May 14	1132	300	47	884
Auger. Post-hole	H. C. Cloyd	401,999	Apr. 23	2387	621	47	481
Auger. Post-hole	N. Newman	400,939	Apr. 9	776	207	47	157
Automatic gate	W. H. Miller	400,935	Apr. 9	771	206	47	156
Automatic gate	J. C. Rock	400,952	Apr. 9	794	212	47	161
Automatic sprinkler	J. Clapp	404,897	June 11	772	197	47	1384
Automatic sprinkler	E. H. Davis and R. Westervelt	402,569	May 7	30	8	47	669
Automatic switch	A. G. Lawrence	402,252	Apr. 30	2777	719	47	565
Automatic switch	W. X. Stevens	400,802	Apr. 2	558	153	47	107
Awning	H. D. Greenwald	405,549	June 18	1755	464	47	1589
Awning	F. Hohorst	405,475	June 18	1636	432	47	1563
Awning-frame	C. M. Ashby	401,104	Apr. 9	1016	272	47	201
Ax	W. C. Kelly	402,936	May 7	569	149	47	771
Axes. Die for making	J. P. Kelly	402,935	May 7	567	149	47	771
Axes. Die for making	W. C. Kelly	402,937	May 7	570	150	47	771
Axle	E. M. Allen	400,817	Apr. 2	586	160	47	112
Axle	F. L. G. Chapman	404,342	May 28	2795	707	47	1208
Axle-box	W. F. Black	405,735	Apr. 2	449	120	47	89
Axle-box	B. T. Henry	405,737	June 25	2064	542	47	1651
Axle box and spindle	F. P. Gordon	402,819	May 7	400	105	47	738
Axle box. Car	E. Leslie	405,040	June 11	984	262	47	1427
Axle-box for locomotives	F. A. Carlson	403,735	May 21	1786	470	47	1019
Axle-box for locomotives	R. T. Chase	400,545	Apr. 2	172	45	47	36
Axle-boxes. Device for case-hardening	J. W. Parmelee	402,964	May 7	600	158	47	777
Axle boxes. Dust-guard for car	L. Goulliaud	404,701	June 4	486	123	47	1320
Axle boxes. Dust-guard for car	F. J. Roberts	402,858	May 7	453	119	47	748
Axle-boxes for railway-carriages. Manufacturing	J. Donnelly, W. McLaren, and A. Trask.	403,422	May 14	1326	345	47	921
Axle boxes. Metal packing for car	H. Rogers	403,141	May 14	875	231	47	836
Axle. Car	W. H. Melaney	405,428	June 18	1554	411	47	1547
Axle. Car-wheel	G. W. Jones	401,280	Apr. 9	1283	342	47	251
Axle. Carriage	F. Lebel	404,635	June 4	400	97	47	1302
Axle-lubricator	W. Good	403,659	May 21	1666	442	47	996
Axle-lubricator	O. F. Mulhaupt	400,784	Apr. 2	510	140	47	102
Axle-lubricator	W. E. Turner and J. F. Hudson	403,008	May 7	650	173	47	787
Axle lubricator. Car	W. H. Daniels and E. Costley	403,876	May 21	1991	528	47	1059
Axle lubricator. Car	T. Saunders	403,448	May 14	1367	359	47	929
Axle-making machine	A. Paterson	402,101	Apr. 23	2553	664	47	513
Axle nut. Carriage	F. D. Bliss	405,338	June 18	1423	375	47	1521
Axle-oiling device. Locomotive	T. J. Rogers	401,517	Apr. 16	1640	434	47	338
Axle-skein	J. A. Johnson	400,685	Apr. 2	374	101	47	74
Axle. Vehicle	J. M. Hubbell	405,356	June 18	1445	383	47	1525
Axles. Making	A. Paterson	402,102	Apr. 23	2555	664	47	513
Azimuth-instrument	W. Thomson	402,364	Apr. 30	2950	764 / 765	47	597
Baby-jumper	A. W. Gray	401,266	Apr. 9	1264	337	47	248
Baby-jumper	A. Wilson	404,241	May 28	2572	670	47	1179
Back and leg brace	J. H. Smith	401,223	Apr. 9	1197	320	47	236
Back-band pad	G. W. Moores	404,923	June 11	809	208	47	1391
Back-band trace-carrier	J. Collins	402,360	Apr. 30	3004	780	47	607
Back-pole, &c	W. Y. West	406,014	June 25	2490	651	47	1728
Bag: *See* Feed-bag. Hand-bag. Mail-bag. Paper bag. Saddle-bag. Traveling-bag.							
Bag-fastener	R. Wilson	405,518	June 18	1708	451	47	1579
Bag-holder	F. A. Brown	403,641	May 21	1644	436	47	992
Bag-holder	G. De Owens	400,551	Apr. 2	183	49, 50	47	39
Bag-lock	F. F. Ingram	405,357	June 18	1446	382	47	1525
Bag-lock	C. Reinisch	402,768	May 7	322	83, 84	47	723

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Dr's.	Official Gazette. Vol.	Page.
Bag-lock	C. Reinisch	402,769	May 7	324	84	47	724
Bag-lock	C. Reinisch	405,119	June 11	1063	288 / 289	47	1446
Bagging, &c., in pieces. Machine for winding	D. J. Winn	402,551	Apr. 30	3240	841	47	653
Baker's peel	G. A. Naumann	405,046	June 11	991	264	47	1429
Baker's peel for crackers, &c	S. S. Goldman	405,407	June 18	1519	404	47	1540
Baking and roasting pan	C. Preston	404,558	June 4	293	69	47	1280
Balance. Spring	J. H. Nolan	403,693	May 21	1720	454	47	1007
Balcony. Portable	M. L. and J. R. King	404,296	May 28	2637	685	47	1191
Bale-compress	S. J. Webb	402,636	May 7	123	30	47	687
Bale-covering	M. A. Heath	403,046	May 7	714	187	47	799
Baling-press	F. W. Anderson	404,815	June 11	644	167	47	1361
Baling-press	T. J. Corning	403,738	May 21	1790	471	47	1020
Baling-press	L. H. Hallam	403,662	May 21	1671	443 / 444	47	997
Baling-press	W. H. Heffley	400,912	Apr. 9	725	196 / 197	47	149
Baling-press	J. H. and J. H. Howard and E. T. Bousfield.	404,972	June 11	892	230	47	1406
Baling-press	W. J. H. Kappe	401,171	Apr. 9	1124	297 / 298	47	221
Baling-press	J. Le Dow	400,922	Apr. 9	746	200 / 201	47	152
Baling-press	J. D. Moon	402,209	Apr. 30	2804	726	47	570
Baling-press	J. F. Paty and A. W. Bigham	405,270	June 18	1327	349 / 350	47	1500
Baling-press	V. L. Williams	403,496	May 14	1444	378 / 379	47	943
Baling-press-operating mechanism	J. Wadleigh	405,286	June 18	1349	356	47	1505
Baling-presses. Power mechanism for	G. Ertel	401,494	Apr. 16	1502	399	47	307
Balls. Making foot	W. Howard	405,909	June 25	2461	643 / 644	47	1723
Balsa or life-boat	D. Ammen	404,150	May 28	2418	633	47	1152
Band-cutter	C. H. Hill	404,840	June 11	687	177	47	1369
Bar: *See* Binding-bar. Boring-bar. Cutter-bar. Draw-bar. Exercising-bar. Furnace-grate bar. Grate-bar. Pinch-bar. Railway splice-bar. Spike-blank bar. Stretcher-bar.							
Bars or rounds of steel or iron. Manufacture of	S. McCloud	400,931	Apr. 9	762	205	47	155
Barns. Composite truss for	J. W. Evans	404,612	June 4	372	89	47	1296
Barrel-cover	G. W. Lindsey	401,707	Apr. 16	1944	507	47	386
Barrel-cover. Adjustable	S. E. Crager	402,144	Apr. 30	2925	679	47	535
Barrel-beater	M. Wolf	402,879	May 7	482	126	47	753
Barrels, &c. Apparatus for shaving	W. Gibson and R. Ray	401,550	Apr. 16	1697	448	47	342
Barrels. Mechanism for the manufacture of	W. H. Cram	401,931	Apr. 23	2292	594	47	463
Basin or bath waste and overflow	W. H. Newell	401,579	Apr. 16	1741	459	47	350
Basket	G. B. Higgins	402,925	May 7	412	108	47	740
Basket-cover	G. C. Garbrance	403,528	May 21	1500	393	47	963
Basket-cover fastening. Fruit	F. Burne	401,002	Apr. 9	869	223	47	175
Basket cover. Fruit	F. A. Thomas	403,156	May 14	897	237	47	849
Baskets. Machine for making	I. J. W. Adams	401,403	Apr. 16	1477	390 / 391	47	301
Bathing-mitten	J. S. Snyder	405,506	June 25	2155	566	47	1670
Batteries. Automatic cut-out for secondary	S. C. C. Currie	401,332	Apr. 16	1359	363	47	279
Batteries. Containing-cell for secondary	P. Schoop	402,484	Apr. 30	3145	814	47	634
Batteries. Porous cup for	C. B. Noble	403,955	May 28	2108	552	47	1000
Batteries. Preparing elements for secondary	W. W. Griscom	405,733	June 25	2058	540	47	1650
Batteries. System of distribution by secondary	G. B. Prescott, Jr	402,191	Apr. 30	2691	699	47	548
Batteries. Therapeutic attachment for galvanic	C. V. Osborn	401,366	Apr. 16	1415	374 / 375	47	290
Batteries. Time-switch for secondary	C. E. Buell	403,177	May 14	927	245 / 246	47	846
Battery: *See* Diffusion-battery. Electric battery. Galvanic battery. Marine battery. Secondary battery.							
Battery-plates. Machine for making	W. W. Griscom	405,998	June 25	2457	642 / 643	47	1723
Battery-zincs. Making	H. G. Farr	401,338	Apr. 16	1372	.....	47	282
Beach-chair	C. E. Koechling	405,038	June 11	980	261	47	1426
Beams or girders. Support for	P. H. Jackson	405,358	June 18	1448	383	47	1525
Bearing. Anti-friction	B. G. and G. H. Handy	405,031	June 11	972	256	47	1424
Bearing. Ball	H. Kuneth	401,748	Apr. 23	2018	528	47	412
Bearing. Roller	R. W. Hent	401,864	Apr. 23	2215	579	47	449
Bearing. Roller	C. D. Meneely and J. Gibbons	400,471	Apr. 2	64	18, 19	47	16
Bed	W. Beckert	402,129	Apr. 30	2604	674 / 675	47	532
Bed-bottom and means for tightening and supporting the same	J. E. Moore	404,722	June 4	511	130	47	1325
Bed-bottom. Spring	J. M. Davis	400,900	Apr. 9	711	192 / 193	47	147
Bed-bottom. Woven-wire	J. B. Ryan	403,143	May 14	877	231	47	836
Bed. Couch	F. Kruedelbach	402,530	Apr. 30	3212	832	47	647
Bed drier and warmer	J. Fossati	403,339	May 14	1196	318	47	896
Bed. Folding	A. H. Merrill	403,851	May 21	1961	515	47	1053
Bed. Folding	F. E. Müller	402,179	Apr. 30	2675	694	47	545
Bed. Folding	F. R. Wolfinger	404,243	May 28	2573	670	47	1189
Bed-frame and bedstead	I. Chorlton and G. L. Scott	402,903	May 7	511	136	47	759
Bed-furnace	E. E. Hiatt	404,280	May 28	2630	682	47	1189
Bed-lounge	A. H. Merrill	403,850	May 21	1959	514 / 515	47	1053

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Bed-lounge	C. Newhouse	403,284	May 14	1116	226	47	882
Bed-pan	M. Riker	405,182	June 11	1181	314	47	1465
Bed-spring	E. M. Bonnell and J. S. Lambing	405,821	June 25	2173	571 572	47	1673
Beds. Appliance for sick	G. S. Brown	404,681	June 4	460	115	47	1314
Bedclothes-fastener	E. J. Watres	403,807	May 21	1895	498	47	1041
Bedstead	R. C. Graham	402,239	Apr. 30	2757	714	47	561
Bedstead	M. Weightman	402,704	May 7	222	58	47	705
Bedstead-brace	L. F. Ross	405,603	June 18	1830	446	47	1604
Bedsteads. Rack attachment for	E. M. Ware	402,211	Apr. 30	2722	706	47	555
Bee-hive	F. Danzenbaker	402,002	Apr. 23	2392	622 623	47	402
Bee-hive	G. L. Tinker and W. S. Kline	400,517	Apr. 2	134	34, 35	47	29
Beer chest or refrigerator	O. Neuman	403,130	May 14	857	226	47	833
Beer-engines. Construction of	J. A. Bigelow	401,406	Apr. 16	1481	392 393	47	202
Beer-steaming apparatus	W. J. Wirtz	404,143	May 28	2409	631	47	1150
Bell	I. Kinsey	402,165	Apr. 30	2660	689	47	542
Bell. Call	E. H. Peck	403,296	May 14	1118	297	47	883
Bell. Electric	R. R. Moffatt	402,960	May 7	594	157	47	776
Bell. Electric	W. K. Rainey	402,613	May 7	92	22	47	661
Bell. Electrical call	J. G. Noyes	401,296	Apr. 9	1309	348	47	257
Bell. Pneumatic	R. P. Garsed	401,341	Apr. 16	1377	366	47	283
Bell-pull. Electrical	C. A. Braun	405,525	June 18	1715	453	47	1580
Bells. Muffler for signal	E. T. Bates	400,821	Apr. 2	592	161	47	113
Bellows	O. Kullbom	405,103	June 11	1057	282	47	1442
Bellows-fold coupling	H. H. Sessions	403,224	May 14	1016	269	47	863
Belt. Electric	C. H. Grimley	401,882	Apr. 23	2212	578	47	449
Belt. Electric	W. L. Van Dorn	402,367	Apr. 30	2953	766	47	598
Belt. Electro-medical	W. J. Shelton	405,436	June 18	1566	414	47	1549
Belt-fastener	J. B. Norton	401,201	Apr. 9	1168	311	47	230
Belt-guide wheel	E. Benjamin	402,554	May 7	3	1	47	663
Belt. Hip	W. H. Bevinger	405,761	June 25	2098	550	47	1658
Belt-hole cover	W. E. Sharples	403,390	May 14	1288	337	47	913
Belt loop. Waist	F. J. Herrick	405,886	June 25	2270	596	47	1691
Belt-shifter	P. Medart	402,758	May 7	305	79	47	720
Belt-shipper and lock	F. W. Mallett	402,603	May 7	76	18	47	678
Belt. Skirt	M. Brunner	404,163	May 28	2437	638	47	1156
Belt-supporter	L. Sanders	403,220	May 14	1009	267	47	862
Belt-tightener	E. Benjamin	403,454	May 14	1376	360	47	930
Belt-tightener	C. W. Jones	403,048	May 7	720	188	47	799
Belts. Making flat	R. Dick	401,643	Apr. 16	1862	484	47	371
Belting	R. Dick	401,642	Apr. 16	1860	483 484	47	371
Belting	C. A. Schieren	405,434	June 18	1563	413	47	1548
Belting, &c. Fabric for machine	J. P. Maddox	400,579	Apr. 2	217	59	47	46
Belting for machinery	W. C. Edge	401,779	Apr. 23	2056	538	47	419
Bench-stop	J. C. Eckert	405,401	June 18	1511	401	47	1538
Bevel	G. H. Waggoner	404,451	June 4	116	27	47	1247
Beverage-mixer	C. B. Crafton	400,547	Apr. 2	173	46	47	37
Beverage shaking and mixing machine	P. P. Haring	400,674	Apr. 2	358	98	47	71
Beverages. Machine for mixing	F. H. Shepherd and J. W. Meyer	405,683	June 18	1978	518	47	1629
Bicycle	D. A. Babé	401,105	Apr. 9	1017	272	47	201
Bicycle	J. F. Brenx	404,771	June 4	576	148	47	1339
Bicycle	R. H. Fletcher	401,339	Apr. 16	1373	365 366	47	282
Bicycle	G. Kibbe	402,460	Apr. 30	3108	806 807	47	627
Bicycle	T. W. Moore	403,059	May 7	732	191	47	602
Bicycle	S. D. Reynolds	404,562	June 4	298	71	47	1281
Bicycle	W. E. Smith	403,153	May 14	893	235	47	839
Bicycle-gearing	W. J. Fitzpatrick	401,425	Apr. 16	1504	399	47	307
Bicycle-step	H. P. Chapin	402,304	Apr. 30	2857	738	47	560
Bicycle-treadle	G. Haynes, Jr	402,926	May 7	547	145	47	766
Bicycles. Handle-bar for	C. J. Colling	402,143	Apr. 30	2624	679	47	535
Bicycles. Spring-fork for	L. Baudreau	400,727	Apr. 2	437	117	47	86
Billiard-cue	W. E. Owens	403,856	May 21	1967	516	47	1054
Billiard-cue-tip fastener	A. H. Darrow	405,950	June 25	2178	623	47	1709
Bin: *See* Flour-bin. Wine-bin.							
Binder	A. K. Owen	402,849	May 7	438	115	47	745
Binder. Bundle	E. Berry and H. Lambert	404,155	May 28	2425	635	47	1153
Binder for corn-fodder	S. T. Renneckar	405,803	June 25	2152	565	47	1669
Binder for sheet-music, &c	G. C. Gowen	405,254	June 18	1301	343	47	1495
Binder. Load	T. A. Rogers	401,857	Apr. 23	2175	568	47	441
Binder or file for documents	P., R., and J. Garton	405,026	June 11	965	257	47	1423
Binder. Sheet-music	C. M. Lindsay	405,364	June 18	1320	347	47	1498
Binder. Temporary	T. Faifer	400,557	Apr. 2	193	52	47	40
Binder. Temporary	C. A. Gildemeyer	403,043	May 7	711	186	47	798
Binder. Temporary	W. Lumley	404,210	May 28	2523	658	47	1171
Binder. Temporary	W. F. Wakeman	404,513	June 4	222	53	47	1266
Binding-bar	J. T. Richardson	404,865	June 11	726	186	47	1375
Bit: *See* Auger-bit. Drenching-bit. Bridle-bit. Drill-bit.							
Bit-holder	H. S. Bartholomew	405,522	June 18	1712	452	47	1580
Blackboards. Crayon-rack for	A. J. Douglass	404,389	June 4	23	6	47	1229
Blacking and polishing shoes. Machine for	A. Kitson	401,890	Apr. 23	2227	581	47	451
Blacking for boots and shoes	G. H. Bishop	405,763	June 25	2101	.....	47	1659
Blacking. Shoe	C. D. St. Pierre	401,390	Apr. 16	1457	.....	47	298
Blades to metal handles. Securing	H. Glines and W. W. Holmes	402,320	Apr. 30	2882	747	47	585
Blank-heading die	C. D. Rogers	400,794	Apr. 2	546	150	47	105
Blank-holder	A. J. Kletzker	404,287	May 28	2638	685	47	1191
Blast-furnace	E. Walsh, Jr	401,395	Apr. 16	1462	386	47	299

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Blast-furnaces. Charging apparatus for	E. Walsh, Jr	401,394	Apr. 16	1461	396	47	299
Blast-furnaces. Dust-catcher for	F. H. Treat	404,807	June 4	633	162 163	47	1350
Blast-furnaces. Flux-feeder for	N. A. Pratt	402,103	Apr. 23	2357	605	47	513
Blast-furnaces. Flux-feeding apparatus for	N. A. Pratt	401,063	Apr. 9	954	254	47	150
Blind-stop	M. L. Hall	405,685	June 18	1933	513	47	1625
Blind-stop	M. B. Wesson	404,996	June 11	917	240	47	1413
Blind-stop	A. Smith	405,805	June 25	2153	566	47	1689
Blind. Venetian	F. Matthey	404,211	May 28	2726	658 659	47	1171
Blinds, curtains, &c. Fitting for							
Block: *See* Building-block. Pillow-block. Flooring-block. Pulley-block. Glass building-block. Snatch-block. Paving-block. Tackle-block.							
Block barking and splitting machine. Combined	O. W. Stearns	401,866	Apr. 23	2185	571	47	443
Blow-off device	J. D. Bowman	405,243	June 18	1285	340	47	1492
Blow-off. Surface	L. L. Crane and W. H. Prince	403,919	May 28	2059	541	47	1081
Blow-pipe	W. M. Brown	405,528	June 18	1721	454 455	47	1582
Board: *See* Bulletin-board. Key-board. Center-board. Multiple switch-board. Clip-board Pattern-board. Condenser switch-board. Sound-board. Trimming-board. Game-board. Wash-board. Ironing-board.							
Boat: *See* Collapsible boat. Folding boat.							
Boats. Apparatus for unloading	J. M. Dodge	402,419	Apr. 30	3044	787	47	615
Boats. Means for the electrical propulsion of	R. M. Hunter	403,193	May 14	960	252 253	47	853
Bobbin	C. E. Meding	405,267	June 18	1323	348	47	1499
Boiler: *See* Coffee-boiler. Steam-boiler. Egg-boiler. Wash-boiler.							
Boiler	J. Baner	405,757	June 25	2094	549	47	1657
Boiler	K. Gamper and R. Farkacs	403,343	May 14	1204	320	47	899
Boiler	C. Hallett	402,441	Apr. 30	3060	798	47	622
Boiler	M. E. Irving	404,912	June 11	796	203 204	47	1368
Boiler	W. W. Kelsey	404,201	May 28	2500	654	47	1167
Boiler	F. Ludwig	402,589	May 21	1586	420	47	979
Boiler	E. W. Poorman	401,369	Apr. 16	1421	376	47	291
Boiler	E. L. Waterous	400,529	Apr. 2	151	39	47	32
Boiler	J. T. Obenchain	404,425	June 4	72	19	47	1240
Boiler-cleaning apparatus	G. B. Boardman	402,796	May 7	370	98	47	732
Boiler-covering	J. H. Rae	404,730	June 4	521	133	47	1327
Boiler-feed	P. Born	405,456	June 18	1605	423	47	1557
Boiler-feed regulator	W. O. Ganckel	404,400	June 4	38	10	47	1233
Boiler-feed regulator	J. Crollard	404,346	May 28	2730	709	47	1209
Boiler-feeder	A. F. Jones	404,629	June 4	393	95	47	1300
Boiler-feeder	L. B. Potts	401,300	Apr. 9	1316	350	47	250
Boiler for heating purposes	H. L. Beach	404,821	June 11	658	170	47	1363
Boiler front and setting	E. Barrett	404,378	June 4	9	2	47	1226
Boiler-furnace	J. Stapleton	402,302	Apr. 30	2946	764	47	596
Boiler-furnace. Smoke-consuming	H. Schaubel	405,227	June 11	1254	333	47	1479
Boiler-stay	H. Schaubel	405,225	June 11	1253	332	47	1479
Boiler-tube fastening	H. Schaubel	405,226	June 11	1253	332	47	1479
Boiler-tubes. Fastening	W. E. Kelly	405,739	June 25	2096	542	47	1652
Boilers. Header for steam	P. J. Grau	401,701	Apr. 16	1936	505	47	385
Boilers. Low-water indicator for steam	J. W. Stevens	405,615	June 18	1848	489	47	1607
Boilers or water-tanks. Apparatus for feeding	W. F. Cunningham	404,175	May 28	2463	645	47	1160
Boilers. Safety apparatus for steam	H. Van Arsdale	405,192	June 11	1202	319	47	1470
Bolster-spring							
Bolt: *See* Flour-bolt. Rotary bolt.							
Bolt	C. J. Langenbach	403,847	May 21	1955	513	47	1052
Bolt and nut	A. M. Brainard	404,953	June 11	846	221	47	1399
Bolt attachment	W. H. Thomas	402,492	Apr. 30	3155	817	47	636
Bolt-heading machines. Slot-making attachment for	S. Uren	404,235	May 28	2561	668	47	1178
Bolt-heading machines. Slot-making attachment for	S. Uren	404,580	June 4	325	78	47	1287
Bolt-locking device	C. I. Penrose	403,131	May 14	859	227	47	833
Bolt-locking device	C. I. Penrose	403,132	May 14	860	227	47	834
Bolt-threading machine	A. Wood	405,236	June 11	1267	335 336	47	1461
Bolt-work mechanism	E. Stockwell	403,563	May 21	1539	404 405 406	47	970
Bolts. Machine for cutting the screw-threads on	J. M. Simpson	401,596	Apr. 16	1767	465 466 467	47	355
Bolting-chest	H. W. McEwen	404,100	May 28	2343	614	47	1137
Bolting-cloth cleaner	G. S. Burnap	403,088	May 14	793	211	47	820
Bolting-reel	W. E. Gorton	402,733	May 7	258	68, 69	47	713
Bolting-reel	W. E. Gorton	402,734	May 7	365	69, 70	47	714
Bolting-reel	J. Warrington	404,810	June 4	638	164	47	1351
Bolting-reel	J. E. Welch	405,973	June 25	2417	633	47	1716
Bolting-reel	H. W. Parsons	401,851	Apr. 23	2165	585	47	440
Bombs. Distributer for explosive	L. Oberhaeusser	401,657	Apr. 16	1880	.....	47	374
Bonbons. Making soluble	S. W. Goldberg and E. M. Tillmann	403,658	May 21	1665	442	47	996
Book. Account	A. J. Purvis	403,958	May 28	2111	552	47	1090
Book. Account							
Book and book-cover	I. Reed	401,210	Apr. 9	1179	314	47	232

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Book-binding	L. P. Sanford	405,276	June 18	1337	333	47	1502
Book. Blank	N. H. Baker	404,817	June 11	647	166	47	1362
Book-case	R. W. Lovering	400,925	Apr. 9	750	204	47	153
Book-case. Revolving	C. Goddard	403,099	May 14	810	215	47	824
Book. Combined record and sales	J. P. Harsha and C. Duval	401,948	Apr. 23	2315	602	47	468
Book-holder	W. H. Ash	400,628	Apr. 2	285	81	47	59
Book. Indexed shipping	F. C. Johnson. (Reissue)	11,004	May 21	2028	533	47	1066
Book-leaf or paper holder	E. F. Angell	400,627	Apr. 2	285	80	47	59
Book. Memorandum	M. F. Berry	401,115	Apr. 9	1033	276	47	204
Book. Pad	J. E. Schonacker	401,909	Apr. 23	2257	588	47	457
Book. Pocket check and form	E. Fanning	401,324	Apr. 9	1346	356	47	266
Book. Pocket memorandum	A. F. Conant	404,260	May 28	2595	675 / 676	47	1183
Book. School record	J. Du Shane	402,072	Apr. 23	2504	654	47	503
Book-stapling machine	J. W. Scull	402,984	May 7	621	162 / 164 / 163	47	781
Book-support	J. W. Coultas	401,011	Apr. 9	880	235 / 236	47	177
Books. Carbon-paper attachment for receipt or note	H. C. Seely	401,382	Apr. 16	1446	382	47	296
Books. Machine for lettering the covers of	W. J. Foster	404,189	May 28	2484	650	47	1164
Books. Spring-back for	F. E. Schubert	402,485	Apr. 30	3146	814	47	634
Boom	T. Raftery	405,597	June 18	1822	483	47	1602
Boot and shoe lasts. Machinery for the manufacture of	C. W. Evans	404,185	May 28	2477	647 / 648 / 649	47	1163
Boot-drier	E. A. Bryant	402,137	Apr. 30	2617	677	47	534
Boot-jack	G. H. Hackett	403,585	May 21	1571	415	47	976
Boot or shoe	W. Lapworth	402,943	May 7	576	151	47	772
Boot or shoe	B. A. Pillow	401,060	Apr. 9	951	253	47	190
Boot or shoe heel	F. P. Urruela	402,366	Apr. 30	2952	783	47	598
Boot or shoe nailing machine	M. Welsh	403,681	May 7	778	200	47	804
Boot or shoe. Rubber	E. F. Bickford	401,246	Apr. 9	1258	330	47	243
Boot or shoe sole and heel plate	G. Meyers	400,867	Apr. 2	658	170	47	126
Boot or shoe sole protector	L. P. Lang	403,621	May 21	1704	450	47	1009
Boots and shoes. Lasting	D. F. Willis	404,455	June 4	121	29	47	1248
Boots or shoes. Button-hole piece for	J. Reece	400,485	Apr. 2	85	23	47	19
Boots or shoes. Lasting	J. Patten	403,068	May 7	757	198 / 199 / 200	47	805
Boots or shoes. Machine for stamping soles of	M. E. Byron	402,803	May 7	377	99	47	734
Boots or shoes. Rotary trimming-tool for	C. W. Glidden	402,435	Apr. 30	3074	796	47	621
Boots or shoes. Trimming-tool for	H. W. Winter	402,376	Apr. 30	2964	768	47	600
Boring and drilling machine	B. B. Barnett	403,940	May 14	1040	275	47	868
Boring-bar. Adjustable multiple-cutter	J. Stone	403,154	May 14	894	236	47	840
Boring-tool	A. E. Brown	402,394	Apr. 30	2994	777	47	605
Bosom-form	J. W. Greene	401,028	Apr. 9	902	242	47	181
Bosom-pad	S. Wheeler	404,881	June 11	748	191	47	1379
Bottle	J. Stone	402,042	Apr. 23	2463	642	47	495
Bottle-case. Folding	E. L. Walker	404,809	June 4	636	163 / 164	47	1351
Bottle-necks. Machine for shaping	E. H. Everett	400,555	Apr. 2	187	51	47	40
Bottle-necks. Machine for shaping	E. H. Everett	400,556	Apr. 2	191	52	47	40
Bottle-necks. Tool for forming	W. A. Caswell	400,898	Apr. 9	709	192	47	147
Bottle-stand	C. K. Hall	401,229	Apr. 23	2141	559	47	434
Bottle-stopper	W. B. Chambers	400,436	Apr. 2	17	4	47	6
Bottle-stopper	D. J. Corcoran	405,194	Apr. 23	2593	672	47	521
Bottle-stopper	S. Glover	403,466	May 14	1391	364	47	933
Bottle-stopper	C. C. Haley	402,078	Apr. 23	2513	656	47	505
Bottle-stopper	T. B. Howe	405,035	June 11	977	260	47	1425
Bottle-stopper	E. L. Lloyd	402,238	Apr. 30	2911	754	47	590
Bottle-stopper	S. Marks	400,927	Apr. 9	757	203	47	154
Bottle-stopper	G., J. G., and M. O. Rehfuss	402,350	Apr. 30	2931	759	47	593
Bottle-stopper	G., J. G., and M. O. Rehfuss	404,797	June 4	621	159	47	1347
Bottle-stopper	J. J. Sands	404,799	June 4	623	160	47	1347
Bottle-stopper	W. Shepherd	406,005	June 25	2474	647	47	1725
Bottle-stopper and faucet	C. A. Tatum	404,122	May 28	2379	624	47	1144
Bottle-stopper cover	T. C. Bunting	402,297	Apr. 30	2839	735	47	577
Bottle-stopper holder	J. J. Sands	403,676	May 7	773	204	47	808
Bottle-stoppers. Wire fastening for	P. O. Walch	402,370	Apr. 30	2957	767	47	598
Bottle washing and brushing machine	C. B. Inman	401,561	Apr. 16	1713	451 / 452	47	344
Bottle-washing machine	O. Willcox	404,141	May 28	2406	631	47	1149
Bottle-wiring machine	A. Campbell	404,028	May 28	2210	580 / 581 / 582	47	1109
Bottles, jars, &c. Machine for finishing the necks of	H. Semple and C. N. Brady	404,311	May 28	2677	694	47	1199
Bottles, jars, &c. Stopper and fastener for	C. T. Nightingale	403,954	May 28	2106	551	47	1089
Bottles. Label attachment for	H. E. Woodward and S. R. King	406,017	June 25	2497	652	47	1730
Bottles. Machine for corking and wiring corks to	H. La Casse	400,776	Apr. 2	505	137 / 138 / 139 / 140	47	99
Bottles. Machine for wiring corks in	B. Adriance	405,688	June 25	1986	521 / 522 / 523	47	1637
Bottles, &c. Manufacture of	H. M. Ashley	403,096	May 7	689	.....	47	793
Bottles. Means for facilitating the opening of internally-stoppered	H. Barrett and J. J. Varley	400,892	Apr. 9	701	190	47	145
Bottles. Rack-box for	T. A. Taylor and W. H. Diamond	402,203	Apr. 30	2712	703	47	552
Bottles. Safety appliance for	L. L. Meynieu	405,788	June 25	2133	561	47	1665
Bottles. Stopper-receiver for	A. T. Scher	401,760	Apr. 23	2033	531	47	415
Bowl or basin. Set	J. Barrett	405,818	June 25	2170	571	47	1673

Buckle	G. M. Tyrrell	404,323	May 28	2696	700	47	1203
Buckle	W. J. Walters	405,514	June 18	1701	449	47	1577
Buckle and back-band hook	E. Munger	403,853	May 21	1964	516	47	1054
Buckle. Bale-tie	E. L. Clark	404,383	June 4	17	5	47	1228
Buckle. Belt	A. Goertz	403,263	May 14	1076	282	47	873
Buckle. Harness	H. L. Norris	402,272	Apr. 30	2807	727	47	571
Buckle. Suspender	J. Kennedy	405,902	June 25	2293	602	47	1712
Buckle. Trace	V. A. Coleman	405,247	June 18	1291	341	47	1493
Buckle. Tug	J. H. Myers	402,181	Apr. 30	2678	694	47	546
Buggies. Side curtain for	J. W. Thomas	400,609	Apr. 2	258	70	47	54
Buggies. Step-plate for	R. H. Stewart and L. D. Chambers	401,602	Apr. 16	1796	471	47	360
Buggy-top	S. W. Cately	405,303	June 18	1373	361	47	1510
Buggy-top spring	C. V. Pugh	404,434	June 4	89	23	47	1243
Building-block	J. A. Misaud	405,429	June 18	1558	411	47	1547
Building-blocks or paving-tiles. Frame for	B. W. Belden	400,996	Apr. 9	862	228	47	174
Building. Flat-roofed	J. G. Birely	400,431	Apr. 2	11	4	47	5
Buildings. Construction of	J. O'Donnell	405,794	June 25	2140	562	47	1667
Buildings or bridges. Truss for	J. T. Wells	401,870	Apr. 23	2191	573	47	445
Bulletin-board and base-ball indicator	E. S. Van Zile	402,700	May 7	217	57	47	704
Bundle-carrier	F. Hickmann	401,032	Apr. 9	910	243	47	182
Bundle-carrier	J. M. Rosebrooks	403,557	May 21	1533	402	47	969
Bung	F. Pettge and L. Metzger	403,956	May 28	2109	532	47	1090
Bung. Barrel	J. Lourim	405,425	June 18	1549	410	47	1546
Buoy-eyes. Wear-plate for	A. L. Woodworth	400,888	Apr. 2	692	187	47	133
Burden-carrier	R. H. Dixey	400,757	Apr. 2	476	128	47	93
Bureau or similar article of manufacture	C. W. Katherman and R. Folk	405,166	June 11	1157	309	47	1461
Bureaus. Hanger for mirrors of	J. R. Anderson	401,921	Apr. 23	2278	591	47	460
Burglar-alarm	N. McIntyre	402,266	Apr. 30	2709	704	47	549
Burglar-alarm	J. W. Roads and T. J. Griffith	404,734	June 4	595	135	47	1328
Burglar-alarm and testing system	F. H. Nutter	401,789	Apr. 23	2073	541	47	423
Burial-casket lid	G. W. Moorman	402,846	May 7	436	115	47	745
Burner: *See* Gas-burner. Gas and vapor burner. Gas-lighting burner. Gas-regulating burner. Hydrocarbon-burner. Lamp-burner. Liquid-fuel burner. Oil-burner. Oil and gas burner. Petroleum-burner. Regenerative burner. Safety-burner. Stove-burner. Vapor-burner.							
Burner	E. Pollard	402,476	Apr. 30	3136	812	47	633
Burner for night-lights	E. Ludde	405,786	June 25	2131	560	47	1664
Burner tip or pillar	W. M. Jackson	403,592	May 21	1578	417	47	978
Burners. Apparatus for supplying combustible liquids to	R. Wallwork and A. C. Wells	405,860	June 25	2230	587	47	1685
Burners. Automatic governor for liquid-fuel	W. E. Eastman	405,663	June 18	1948	512	47	1624
Burning carbonaceous material	E. F. Edgar	402,422	Apr. 30	3049	788	47	616
Burning coal and hydrocarbon fuel	A. Mason	405,967	June 25	2404	630	47	1714
Burning culm or pulverized coal	A. Mason	405,966	June 25	2403	630	47	1713
Burning fluids. Device for	W. H. Winegardner	400,618	Apr. 2	273	75	47	57
Bustle	C. A. Allen	400,494	Apr. 2	3	2	47	3
Bustle	A. Cathan	405,695	June 25	2003	525	47	1640
Bustle	H. E. Rheubottom	404,798	June 4	622	159	47	1347
Butter-can	J. E. Levasseur	403,054	May 7	796	189	47	801
Butter, &c. Device for packing	J. G. Peppler	405,595	June 18	1820	482	47	1602
Butter-mold	H. I. Carver	401,130	Apr. 9	1053	281	47	208
Butter-package	C. E. Macomber	400,698	Apr. 2	389	105	47	77
Butter-worker	H. I. Carver	401,129	Apr. 9	1052	281	47	208

Button-strips. Making	H. W. Lyon	402,339	Apr. 30	2912	755	47	590
Button-strips. Making	H. W. Lyon	404,047	May 28	2255	591	47	1118
Cab	C. A. Reade	401,758	Apr. 23	2028	530 531	47	414
Cabinet and cutter's size-ticket. Combined	J. Keller	403,939	May 28	2084	547	47	1085
Cable and railway crossing	F. C. Weir and N. O. Goldsmith	402,875	May 7	478	125	47	752
Cable-grip	G. A. Carreras	405,145	June 11	1117	297	47	1453
Cable-grip	C. S. Chapman	402,305	Apr. 30	2838	738 739	47	580
Cable-grip	C. S. Chapman	404,601	June 4	355	85	47	1292
Cable-grip	T. W. Lemieux	401,842	Apr. 23	2155	563	47	437
Cable-grip	S. F. McDill	401,895	Apr. 23	2232	582	47	452
Cable-grip carrier	J. Stephenson	403,303	May 14	1141	302 303	47	887
Cable-gripper	E. Dainty	403,680	May 21	1656	439	47	994
Cable roads. Slot-rail for	M. M. Suppes	405,231	June 11	1250	334	47	1480
Cable-ways. Conduit-yoke for	J. B. Johnson	402,741	May 7	281	73	47	716
Cable. Wire	T. C. Batchelor and A. Latch	401,112	Apr. 9	1027	274 275	47	903
Cable. Wire	T. C. Batchelor and A. Latch	403,319	May 14	1170	310	47	893
Cables. Splicing	J. Collins	400,748	Apr. 2	464	125	47	91
Calcining-furnace	D. Lewis, J. H. Williams, and M. Matthews.	404,720	June 4	509	130	47	1325
Calculating-machine	E. M. Rosenthal	401,463	Apr. 16	1567	414	47	316
Calendar	S. W. Balch	401,624	Apr. 16	1836	479	47	368
Calendar	C. K. Hamilton, Jr	405,160	June 11	1149	307	47	1460
Calendar	E. A. Parsons	402,965	May 7	601	158	47	777
Calipers. Micrometer	M. F. Smith	404,057	May 28	2277	596	47	1193
Calipers or dividers	F. A. Welles	402,876	May 7	479	125	47	752
Calk for running-shoes	W. W. Burnham	402,138	Apr. 30	2618	678	47	534
Call and switch. Individual	E. Pope	403,776	May 21	1847	485 486	47	1031
Calorimeter. Steam	G. H. Barrus	401,111	Apr. 9	1025	274	47	903
Cam	A. D. Woodmansee	401,390	Apr. 9	1337	356	47	963
Cam. Adjustable	A. D. Woodmansee	403,169	May 14	915	241	47	843
Camera: *See* Photographic camera.							
Camera-stand	F. G. Bement	405,758	June 25	2095	549	47	1658
Camera-stand	W. H. Fuller	404,396	June 4	32	8	47	1231
Cameras. Ground-glass attachment for	M. Bauer	402,712	May 7	234	61	47	707
Camp-chair	L. E. Truesdell	405,725	June 25	2047	538	47	1648
Can: *See* Butter-can. Metal can. Milk-can. Oil-can. Powder-dusting can.							
Can bodies. Machine for applying heads to tin	W. Hipperling	401,886	Apr. 23	2219	579 580	47	450
Can cover. Paint	C. H. Leggett	402,679	May 7	188	47, 48	47	699
Can-crimping machine	A. Slaysman, Jr	405,917	June 25	2324	610	47	1700
Can-forming device. Tin	C. W. Sleeper	402,774	May 7	333	86	47	725
Can-heading machine	W. H. Smyth	403,784	May 21	1856	488 489 490	47	1033
Can-opener	J. Kaylor	402,840	May 7	429	113	47	744
Can-opening device	T. Elcoate	400,590	Apr. 2	479	129	47	94
Can or jar cover	P. K. Reeves	402,614	May 7	93	22	47	681
Cans. Machine for applying heads to tin	E. L. Jones	400,853	Apr. 2	637	173	47	122
Cans. Sealed lock for	W. H. Stoops	400,505	Apr. 2	112	30	47	98
Candelabrum	T. McGovern	402,466	Apr. 30	3117	809	47	629
Candles. Drying-frame for coated	E. Clifford	402,406	Apr. 30	3012	782	47	609
Candle-guard	H. Bové	403,500	May 21	1464	384	47	956
Candle. Sulphur	W. G. Crissey	400,444	Apr. 2	31	10	47	10
Candlestick	A. Roelofs	401,592	Apr. 16	1762	464	47	354
Candy. Machine for making drop	J. Smith	405,721	June 25	2039	535 536	47	1647
Candy. Machine for making stick	J. Smith	405,720	June 25	2038	535	47	1646
Candy-pan	J. H. Magruder	403,663	May 21	1706	451	47	1004
Cane-slicing machine. Sugar	C. Rabe	405,909	June 25	2308	606 607	47	1698
Capodastro	L. Filstrup	402,577	May 7	41	10	47	671
Car attachment. Railway	G. L. Potts	405,323	June 18	1400	369	47	1516
Car berths. Ladder and guard for sleeping	S. Cullen and C. C. Brown	401,418	Apr. 16	1494	396	47	305
Car-body	J. T. Goodfellow	404,535	June 4	262	62, 63	47	1274
Car-brake	W. L. Abbott and V. C. Killin	404,373	June 4	1	1	47	1225
Car-brake	B. Boyer	400,542	Apr. 2	168	44	47	35
Car-brake	H. N. Coffin	401,253	Apr. 9	1245	332	47	244
Car-brake	G. Collins	403,090	May 14	797	212	47	821

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Car-brake	A. M. Kendall	404,005	May 28	2181	572	47	1104
Car-brake	F. D. Paradise	403,285	May 14	1117	206	47	862
Car-brake	G. B. Quigg	404,054	May 28	2269	593 / 594	47	1121
Car brake and clutch. Combined	L. Maurer and H. C. Scheer	405,266	June 18	1321	348	47	1490
Car-brakes. Device for operating	R. A. Kiskadden	404,418	June 4	64	17	47	1238
Car brakes. Registering-gage for railway	R. Potts	403,210	May 14	992	263	47	859
Car. Cable-grip	J. Stephenson	403,395	May 14	1297	336	47	915
Car-check	J. M. De Witt	404,901	June 11	778	196	47	1385
Car. Combined sleeping and day	H. M. Jones	401,438	Apr. 16	1525	403 / 404	47	311
Car coupler. Mining	W. Walter	403,159	May 14	902	237	47	841
Car-coupling	N. Barr	402,387	Apr. 30	2980	776	47	603
Car-coupling	J. Barry	402,646	May 7	135	33	47	690
Car-coupling	P. Bogler	402,391	Apr. 30	2988	776	47	604
Car-coupling	W. F. Braun	405,457	June 18	1606	423 / 424	47	1557
Car-coupling	R. L. Breth	403,640	May 21	1644	436	47	992
Car-coupling	L. W. Brewster and R. Swift	404,070	May 28	2300	602 / 603	47	1126
Car-coupling	J. C. Bryant	401,726	Apr. 16	1981	519	47	395
Car-coupling	J. E. Bull	404,468	June 4	147	34	47	1253
Car-coupling	E. W. Cady	405,993	June 25	2455	642	47	1722
Car-coupling	G. W. Campbell	401,251	Apr. 9	1244	231 / 232	47	944
Car-coupling	M. M. Carmona y Valle	400,005	Apr. 9	872	234	47	176
Car-coupling	F. J. Case and J. F. Preston	401,329	Apr. 16	1355	362	47	278
Car-coupling	E. F. Coffin	402,908	May 7	387	102	47	736
Car-coupling	W. G. Collins	405,876	June 25	2256	589	47	1689
Car-coupling	J. Coup	401,775	Apr. 23	2051	537	47	419
Car-coupling	M. D. Cox	403,461	May 14	1386	368	47	932
Car-coupling	A. G. Deshazo	402,572	May 7	33	9	47	669
Car-coupling	E. Dietrich	403,039	May 7	706	185	47	797
Car-coupling	W. Dorr	405,953	June 25	2383	624	47	1710
Car-coupling	R. J. Edwards	405,085	June 11	1038	277	47	1438
Car-coupling	C. Engel	405,252	June 18	1299	343	47	1494
Car-coupling	H. F. Foster and E. L. Webster	402,579	May 7	44	11	47	672
Car-coupling	A. H. Grant	403,531	May 21	1505	394	47	963
Car-coupling	D. U. Graveline	401,430	Apr. 16	1512	401	47	308
Car-coupling	W. Greenway and J. Strickland	404,967	June 11	877	228	47	1405
Car-coupling	W. M. Grisham	400,563	Apr. 2	200	54	47	43
Car-coupling	R. I. Hampton	401,160	Apr. 9	1106	294	47	217
Car-coupling	S. H. Harrington	405,255	June 18	1302	344	47	1495
Car-coupling	S. H. Harrington	405,256	June 18	1307	345	47	1496
Car-coupling	A. Harter	404,083	May 28	2315	607	47	1131
Car-coupling	F. J. Hughes. (Reissue)	10,999	Apr. 30	3241	841	47	653
Car-coupling	J. J. Jeter	402,085	Apr. 23	2527	658	47	508
Car-coupling	A. H. Johnson	405,889	June 25	2272	597	47	1692
Car-coupling	F. Karrer	405,360	June 18	1450	384	47	1526
Car-coupling	J. H. King and B. F. Reed	404,717	June 4	507	130	47	1324

Car-coupling	W. W. Rogers	402,973	May 7	609	160	47	779
Car-coupling	D. H. Royer	400,797	Apr. 2	550	151	47	105
Car-coupling	G. W. Smillie	402,775	May 7	335	87	47	736
Car-coupling	I. Stout	404,743	June 4	539	138	47	1331
Car-coupling	W. G. Stuart	400,508	Apr. 2	116	31	47	27
Car-coupling	A. Swenson	404,575	June 4	314	75	47	1284
Car-coupling	M. L. Unger	405,285	June 18	1348	356	47	1505
Car-coupling	A. W. Van Dorston	405,384	June 18	1485	394	47	1533
Car-coupling	W. G. Walker	405,287	June 18	1350	356	47	1505
Car-coupling	C. L. Webber	402,212	Apr. 30	2723	706	47	555
Car-coupling	F. A. Westbrook and W. S. Cook	402,877	May 7	480	125	47	752
Car-coupling	F. A. Westbrook and W. S. Cook	403,016	May 7	608	176	47	789
Car-coupling	I. L. Whidden and J. S. Bashaw	400,617	Apr. 2	270	74	47	56
Car-coupling	C. A. and W. W. Woolsey	403,632	May 21	1635	432	47	989
Car-coupling	W. N. Wright	405,644	June 18	1918	505	47	1618
Car-coupling apparatus	D. H. Freeman	403,241	May 14	1199	319 / 319	47	898
Car-coupling link	J. Schinneller and J. T. Jones	403,147	May 14	862	233	47	838
Car-door	J. Charlton	404,259	May 28	2594	675	47	1183
Car-door	E. B. Goelet	400,562	Apr. 2	199	54	47	42
Car-door	C. L. Ward	404,755	June 4	554	141	47	1334
Car door and banger. Freight	W. E. Eastman	405,699	June 25	2006	527	47	1641
Car-door fastening	P. H. Murphy	401,574	Apr. 16	1733	457	47	348

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Car door. Freight	J. S. Porter	405,848	June 25	2214	583	47	1681
Car door. Grain	W. A. McGuire	406,003	June 25	2468	646	47	1724
Car door. Grain	G. W. Oborn	403,366	May 14	1240	329	47	906
Car. Dumping	J. W. Alfred	403,571	May 21	1550	408 / 409	47	972
Car. Dumping	P. Everitt and W. C. Page	405,700	June 25	2007	527	47	1641
Car. Dumping	J. M. Goodwin	403,584	May 21	1566	414	47	976
Car. Dumping	B. McArdle	403,689	May 21	1714	453	47	1006
Car-dumping apparatus	A. F. Thayer	404,447	June 4	105	26	47	1246
Car. Electric	G. H. Condict and V. Angerer	402,830	Apr. 2	605	165	47	118
Car. Electric	J. W. Henderson	402,080	Apr. 23	2515	657	47	505
Car. Electric-alarm advance	H. Riesenberg	401,591	Apr. 16	1757	464	47	353
Car. Electric or cable railway	S. A. Bemis and L. Pfingst	402,890	May 7	496	131	47	756
Car for live stock	H. Baines	401,678	Apr. 16	1906	497	47	380
Car for mines. Tool	J. Treweek	404,510	June 4	219	52	47	1265
Car for transporting fruit	F. M. Barber	403,724	May 21	1771	465 / 466	47	1016
Car frame. Railway	W. W. Green and J. Murison	404,276	May 28	2623	681	47	1188
Car frame. Railway	M. A. Zürcher	401,529	Apr. 16	1662	439 / 440 / 692 / 693	47	336
Car. Freight	C. Mackall	403,174	Apr. 30	2670	693	47	544
Car-gate	N. F. Mathewson	404,819	June 11	804	206	47	1390
Car gate. Railway	N. F. Mathewson	402,956	May 7	588	155	47	775
Car. Grip	C. F. Snedeker	402,861	Apr. 30	2944	763	47	596
Car. Hand	A. F. Kuhl	405,893	June 25	2278	599	47	1693
Car. Hand	F. A. Staser	401,499	Apr. 16	1577	417	47	320
Car-heater	J. T. Mead and J. Thomson	401,194	Apr. 9	1159	308 / 309	47	228
Car-heater	H. Schreiner	401,794	Apr. 23	2091	545	47	425
Car heater. Railway	R. M. La Rue	401,749	Apr. 23	3019	524	47	412
Car heater. Railway	D. Springer and C. A. Spring	404,316	May 28	2654	696	47	1200
Car-heating apparatus	C. A. Marrder	404,402	June 4	193	43	47	1250
Car-heating apparatus	J. F. McElroy	404,927	June 11	814	209	47	1392
Car-heating apparatus	P. L. McGovern	405,112	June 11	1074	286	47	1444
Car-heating apparatus	J. B. Porter	402,540	Apr. 30	3023	836	47	649
Car-heating apparatus	J. B. Porter	402,541	Apr. 30	3024	836	47	649
Car-heating apparatus	J. H. Sewall	402,021	May 7	101	24	47	663
Car-lubricating device. Railway	J. W. Maloy	402,958	May 7	584	154	47	774
Car partitions. Chain for stock	B. C. Hicks	401,274	Apr. 9	1275	340	47	250
Car-pedestal	P. M. Kling	404,288	May 28	2630	685	47	1191
Car platform. Railway	R. S. C. Fuller	405,025	June 11	960	256 / 257	47	1422
Car-pusher	J. C. Chrisman	405,012	June 11	935	248	47	1417
Car. Railway	J. M. Davis	405,696	June 25	2004	526	47	1640
Car. Railway	L. J. Harris	403,965	May 14	1079	283 / 284 / 285 / 286	47	874
Car. Railway	J. J. Treanor	403,309	May 14	1150	306	47	869
Car. Railway	E. Wenigmann	401,525	Apr. 16	1655	437	47	334
Car. Railway	M. A. Zürcher	401,528	Apr. 16	1659	438 / 439	47	335
Car. Railway	M. A. Zürcher	401,530	Apr. 16	1663	440	47	336
Car. Railway	M. A. Zürcher	405,202	June 18	1336	357 / 358	47	1506
Car-replacer	R. W. Africa	405,143	June 11	1115	297	47	1459
Car-replacer	C. E. Dailey	405,398	June 18	1507	400	47	1537
Car-roof	G. A. Roberts	404,735	June 4	526	135	47	1326
Car. Safety railway	C. C. Gilman	402,157	Apr. 30	2648	685 / 686	47	540
Car-seal	H. Abbott	402,125	Apr. 30	2599	673	47	531
Car-seat	E. B. Goelet	400,561	Apr. 2	197	53, 54	47	42
Car. Sleeping	T. W. Moore	401,711	Apr. 16	1953	509 / 510	47	388
Car-spring	C. T. Schoen	403,558	May 21	1534	403	47	969
Car-springs. Machine for setting	J. B. Illingsworth	404,089	May 28	2326	610	47	1134
Car-starter	A. M. Craddick and W. S. Heady	405,535	June 18	1732	454	47	1583
Car-starter	R. O. Gercke	400,560	Apr. 2	196	53	47	41
Car-starter	G. Schmidt	404,563	June 4	300	71	47	1281
Car-starter	B. Wistar and M. Pettet	403,167	May 14	913	240	47	843
Car starter and brake. Combined	S. B. Fyler	401,340	Apr. 16	1375	360	47	283
Car-starting device	E. Fales	403,582	May 21	1563	413	47	975
Car-step. Extensible	J. F. and J. F. Wood	403,237	May 14	1036	274	47	867
Car. Stock	J. M. Burton and C. C. Crowson	405,670	June 25	2248	591	47	1687
Car. Stock	M. D. Moore	405,107	June 11	1067	284	47	1444
Car. Stock	J. R. Wilson	401,091	Apr. 9	997	266	47	197
Car. Street	A. Rapp	403,214	May 14	997	263	47	860
Car. Street-railway	S. D. King	402,743	May 7	284	73	47	717
Car-track-brake housing	J. Stephenson	403,300	May 14	1137	301	47	868
Car-track guard	J. Stephenson	403,302	May 14	1140	302	47	868
Car-track sweeper	C. E. Shreve	400,497	Apr. 2	101	27	47	23
Car-tracks. Brake-shoe for	J. Stephenson	403,220	May 14	1025	270	47	865
Car-ventilator	F. B. Mallory	402,604	May 7	78	18	47	679
Car-ventilator	L. C. Tappey, Jr., and C. A. Evans	402,044	Apr. 23	2464	642	47	496
Car-wheel	W. Joslin	405,710	June 25	2023	532	47	1644
Car-wheel	H. W. Libbey	401,504	Apr. 16	1623	429	47	329
Car-wheel	E. Peckham	405,847	June 25	2219	588	47	1681
Car-wheel	F. W. Taylor	404,126	May 28	2384	625	47	1145
Car-wheel chill	L. R. Faught	402,664	May 7	165	42	47	695
Car-wheel chill	W. H. Hollister	405,355	June 18	1444	382	47	1525
Car-wheels. Making	G. S. Strong	402,696	May 7	212	55	47	703
Car-window screen	E. S. Hutchinson	405,609	June 18	1957	514	47	1696

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Car-window ventilator	M. C. Huyett	405,312	June 18	1387	365	47	1513
Car-windows. Smoke and dust fender for	E. F. Waller and O. A. Carlstedt	405,060	June 11	1009	369	47	1433
					370		
Car. Wrecking	M. Wuerpel	402,378	Apr. 30	2967	768	47	601
					770		
Cars. Alarm-signal for cable and electric railway	L. Pfingst and S. A. Bemis	404,981	June 11	891	233	47	1408
Cars. Apparatus for heating railway	G. H. Benjamin	401,245	Apr. 9	1237	332	47	243
Cars. Apparatus for heating railway	J. Loftus	400,777	Apr. 2	513	141	47	100
Cars. Apparatus for operating safety-gates of railway	W. M. Brown, Jr.	403,176	May 14	925	344	47	846
					345		
Cars. Apparatus for shifting	R. Ramsay	404,656	June 4	426	106	47	1307
					107		
Cars. Bearing for street	D. G. Grant	401,159	Apr. 9	1104	293	47	216
					294		
Cars. Bed-frame for railway	W. W. Green and J. Murison	404,277	May 28	2025	689	47	1188
Cars. Brake-shoe attachment for railway	G. A. Diedel	401,257	Apr. 9	1252	334	47	245
Cars. Cable-lifter for railway	D. W. Smith	402,544	Apr. 30	3209	857	47	650
Cars. Center-bearing plate for railway	C. T. Schoen	403,560	May 21	1536	403	47	970
Cars. Chock-block for tram	J. W. Sims	403,894	May 21	2021	531	47	1065
Cars. Coupler for air-brake mechanism on railway	A. J. Wiener	404,760	June 4	561	143	47	1336
					144		
Cars. Device for steadying	S. D. King	402,676	May 7	184	47	47	698
Cars. Dog attachment for log	R. J. Thompson	403,898	May 21	2025	532	47	1066
					533		
Cars. Draft-rigging for railway	J. A. Graham	402,581	May 7	45	11	47	672
Cars. Draw-gear for cable	J. Stephenson	403,301	May 14	1139	301	47	886
Cars. Grain-door for freight	J. S. Patterson and J. R. Lawrence	403,208	May 14	980	261	47	859
Cars. Heating street	W. H. Patton	401,205	Apr. 9	1173	312	47	231
Cars. Hose-coupling for railway	C. N. Burnett	402,718	May 7	242	64	47	709
Cars. Lamp-fixture and ventilator for railway	J. Williams, E. J. Frost, and W. Dawson.	400,984	Apr. 9	842	225	47	170
					226		
Cars. Letter-box for street	G. B. McAllister	402,026	Apr. 23	2438	635	47	490
Cars. Means for propelling railway	J. M. Keith	403,758	May 21	1818	477	47	1025
Cars. Mechanism for extinguishing the lights in railway	I. N. Tillson	404,749	June 4	545	140	47	1332
Cars. Motive mechanism for railway	H. F. and G. F. Shaw	404,441	June 4	98	24	47	1244
Cars. Platform-gate for railway	F. M. Gilbert	402,919	May 7	533	141	47	763
Cars. Safety extinguishing attachment for heating and illuminating apparatus for railway	R. T. Smith	404,675	June 11	741	189	47	1377
Cars. Safety-guard for railway	G. W. Remington	401,068	Apr. 9	961	256	47	192
Cars. Safety-guide for railway	J. G. Blau	403,907	May 28	2044	538	47	1078
Cars. Sand-box for street	G. H. Hathaway	402,523	Apr. 30	3204	830	47	645
Cars. Sanding device for street	J. Ritchie	405,505	June 18	1689	446	47	1575
Cars. Stake-pocket for	C. T. Schoen	403,559	May 21	1535	403	47	969
Cars. Steam-heating system for railway	J. F. McElroy	404,926	June 11	812	209	47	1392
Cars. Steam-pipe coupling for railway	L. Aldrich	401,920	Apr. 23	2274	581	47	460
Cars. System of electric lighting for railway	H. W. Leonard and A. Hanson	405,897	June 25	2286	600	47	1604
Cars. Ticket-box for street-railway	S. H. Caughy	401,638	Apr. 16	1853	482	47	371
Cars. Track-brake for	J. Stephenson	403,299	May 14	1136	301	47	885
Cars. Track-brake for street-railway	P. M. Kling	404,289	May 28	2639	685	47	1192
					686		
Cars. Vestibule connection for railway	G. M. Pullman	403,137	May 14	868	229	47	835
Caramel-holder	G. W. and E. E. Chase	401,774	Apr. 23	2050	536	47	418
Carbazol-yellow	R. Bohn	401,634	Apr. 16	1849	.....	47	370
Carbon filaments. Manufacture of	T. V. Hughes and C. R. Chambers	405,480	June 18	1646	434	47	1506
Carbon filaments. Manufacture of	E. P. Thompson	401,606	Apr. 16	1802	472	47	362
Carbon filaments. Manufacture of incandescing	E. P. Thompson	401,607	Apr. 16	1804	472	47	362
Carbureting air or gas. Apparatus for	D. J. Snyder and J. Stephenson	405,747	June 25	2080	545	47	1654
					546		
Card-case. Pocket	C. J. Buffum	405,339	June 18	1424	375	47	1521
Card-clothing thereto. Device for holding cylinders while attaching	I. E. Comins	404,685	June 4	467	118	47	1316
Card-clothing to flats. Machine for fastening	W. Decker	403,924	May 28	2067	543	47	1082
Card-flats. Device for adjusting	E. Tweedale	405,625	June 18	1861	492	47	1609
					493		
Card-grinding roller	J. S. Dronsfield	404,608	June 4	367	93	47	1295
Card or ticket case	A. Allen	404,515	June 4	225	53	47	1267
Card-player's indicator	L. Bing	405,762	June 25	2100	550	47	1650
Card. Playing	R. F. Foster	404,722	June 4	597	155	47	1343
Card-setting-machine rest	N. C. Estes	404,036	May 28	2223	585	47	1113
Card-teeth. Making	G. and E. Ashworth	401,991	Apr. 23	2377	618	47	460
Carding cotton	J. V. Palmer	405,904	June 25	2301	605	47	1697
Carding-engines. Driving mechanism for	G. and E. Ashworth	403,720	May 21	1766	464	47	1015
Carding-engines. Driving mechanism for	G. and E. Ashworth	403,721	May 21	1767	464	47	1016
					465		
Carding-engines. Machine for securing clothing to	E. Ashworth	404,587	June 4	336	80, 81	47	1289
Carding-engines. Stripping mechanism for	A. Falls	403,931	May 28	2074	545	47	1084
Carding-machines, &c. Cylinder for	J. J. Rieger	402,616	May 7	95	23	47	682
Carding-machines, &c. Cylinder for	G. O. Wickers	405,234	June 11	1262	335	47	1481
Carding-machines. Doffer-cleaner for	G. Bebb	401,811	Apr. 23	2118	552	47	429
Carding-machines. Sliver-coiling can for	E. and G. E. Sutcliffe	403,304	May 14	1142	303	47	887
Carding or other machines. Cylinder for	G. O. Wickers	404,812	June 4	640	165	47	1352
Carpet-cleaner	W. P. White	403,313	May 14	1157	306	47	890
Carpet-protector	G. S. Burrell	402,504	Apr. 30	3171	821	47	639
Carpet-stretcher	L. G. Ballinger	402,220	Apr. 30	2733	709	47	557
Carpet-stretcher	C. M. Mallory	402,853	May 7	585	154	47	774
Carpet-stretcher	B. W. Moylan and H. P. Griemsmann.	405,171	June 11	1165	311	47	1462
Carpet-stretcher	A. W. Mühlhauser	403,126	May 14	852	225	47	832
Carpet-sweeper	E. Card	405,828	June 25	2182	574	47	1675
Carpet-sweeper	W. J. Drew	405,064	June 11	1037	277	47	1438
Carpet-sweeper	H. A. Gore and H. W. Ra Ton	402,158	Apr. 30	2692	696	47	540
Carpet-sweeper	G. W. Kelley	403,845	May 21	1952	512	47	1051

Alphabetical list of inventions, April to June, inclusive—Continued.

Churn-motor	W. H. Strickler and J. S. Braddock	400,507	Apr. 2	115	31	47	26
Churns. Motor for operating	E. N. Shafer and J. D. King	401,861	Apr. 23	2179	569	47	442
Chute for feeding sawdust to steam-boilers	G. W. Flood	403,830	May 21	1927	507	47	1047
Chute indicator. Coal	J. Elder	401,140	Apr. 9	1068	286	47	211
Cigar and cigarette holders or pipes. Stem for	I. Paine	403,550	May 21	1596	400	47	967
Cigar-box with metal or other frame. Glass	I. Friedman	400,840	Apr. 2	617	168	47	118
Cigar-bunching machine	N. H. Borgfeldt and A. Lewyn	403,410	May 14	1314	343	47	919
Cigar-bunching machine	G. F. Palm and M. Smith	402,766	May 7	317	82, 83	47	723
Cigar-bunching machine	S. A. Shepard	401,076	Apr. 9	970	258 259	47	193
Cigar-bunching machine	F. C. Smalstig	405,918	June 25	2325	611	47	1700
Cigar-bunching machine	J. E. Smith	402,038	Apr. 23	2451	639 640	47	493
Cigar-bunching machine	J. E. Smith	402,039	Apr. 23	2454	640 641	47	494
Cigar-bunching machine	J. E. Smith	405,439	June 18	1573	416	47	1550
Cigar-bunching machine	J. R. Williams	401,080	Apr. 9	992	264 265	47	197
Cigar-bundling machine	A. E. Pye	401,514	Apr. 16	1636	433	47	331
Cigar-cutter	J. B. Moos	402,760	May 7	310	80	47	721
Cigar cutter and support	P. Kern	401,174	Apr. 9	1129	299	47	221
Cigar-holder	H. Machtanz	404,644	June 4	409	109	47	1303
Cigar-machine	J. Thompson	405,724	June 25	2044	537	47	1648
Cigar-making machine	J. E. Smith	401,077	Apr. 9	971	259 260	47	194
Cigar-making machine	W. M. Steinle	401,599	Apr. 16	1784	468 469	47	358
Cigar-mold	F. C. Miller	400,868	Apr. 2	659	179	47	126
Cigar wrapping and rolling machine	C. W. Boman	405,073	June 11	1025	274	47	1436
Cigar-wrapping machine	S. J. Flatow	401,147	Apr. 9	1084	288 289	47	213
Cigar-wrapping machine	J. E. Smith	405,438	June 18	1569	415	47	1550
Cigars, cigarettes, &c. Machine for making mouth-pieces or holders for	R. W. Thurman	400,806	Apr. 2	566	155 156	47	108
Cigars. Machine for impressing letters or marks in	G. F. and J. W. McIndoe	402,467	Apr. 30	3149	809	47	629
Cigars. Match-lighting device for	A. Block	405,765	June 25	2103	551	47	1659
Cigars. Mouth-piece for	T. S. E. Dixon	400,446	Apr. 2	33	10	47	10
Cigarette-box for automatic vending apparatus	J. M. O'Kelly	404,299	May 28	2056	690	47	1195
Cigarette-machine	F. J. Ludington	400,780	Apr. 2	517	142 143 144 145	47	101
Cigarette mouth-pieces. Machine for making	S. Brown	403,324	May 14	1175	312 313	47	894
Cigarette mouth-pieces or paper tubes. Machine for making	G. M. Griswold, R. W. Thurman, and R. H. Wright.	400,765	Apr. 2	485	131 132 133	47	95
Cinder-boxes. Door for	J. B. Barnes	403,504	May 21	1454	382	47	953
Circles, curves, and geometrical forms. Device for forming	J. F. Earhart	403,827	May 21	1923	506	47	1046
Circuit-connecting device	J. C. Reilly	401,067	Apr. 9	959	256	47	191
Clamp: *See* Dental rubber-dam clamp, Electric-motor clamp, Jar-clamp, Rope-clamp, Rubber-dam clamp, Stitching-clamp, Wood-working clamp.							
Clamp	E. C. Stearns	404,368	May 28	2767	717	47	1216
Clamp for clothes-lines, tent-ropes, &c	S. W. Conklin	400,546	Apr. 2	172	45	47	36
Clarionet	R. Orsi	403,065	May 7	750	193	47	863
Clasp: *See* Album-clasp, Corset-clasp, File-hand clasp, Shoe clasp.							
Clasp	P. Frantzen	401,880	Apr. 23	2210	578	47	448
Clasp	O. C. Mann	401,844	Apr. 23	2158	563	47	438
Clasp	F. B. Spooner. (Reissue)	10,995	Apr. 16	1965	519	47	396
Clasp	F. B. Spooner	401,977	Apr. 23	2353	612	47	475
Clasp-plate	A. R. Dickinson	403,560	May 21	1562	412	47	975
Cleaner: *See* Bolting-cloth cleaner, Carpet-cleaner, Cotton-cleaner, Grain-cleaner, Saw-cleaner, Slate-cleaner, Window-cleaner.							
Cleansing and polishing compound	J. H. Despain	404,387	June 4	21	.....	47	1220
Clevis	A. W. Rumsey	400,493	Apr. 2	93	25	47	21
Clevis. Awning	W. M. Brown	400,895	Apr. 9	705	191	47	146
Clevis. Plow	H. G. Niles and P. Van Huffel	402,609	May 7	85	20	47	680

Clip-board. Folding	W. G. Weagly	403,233	May 14	1029	271	47	866
Clock	W. D. Davies	400,753	Apr. 2	471	127	47	93
Clock	A. Junghans	401,499	Apr. 16	1516	423	47	328
Clock attachment	E. T. Chase	405,394	June 18	1503	398	47	1536
Clock. Electric	E. G. Hammer	403,823	May 7	404	106 107	47	739
Clock. Electric alarm	B. Dubinski	405,206	June 11	1229	325	47	1474
Clock. Electric alarm	T. H. Grady	403,100	May 14	811	215	47	824
Clock. Electric alarm	W. E. Hadlock	404,906	June 11	785	200	47	1386
Clock. Electric self-winding	J. H. Gerry	405,080	June 11	1042	278	47	1439
Clock. Electric striking and repeating	A. M. J. and V. J. A. M. Jansen	402,329	Apr. 30	2895	750	47	587
Clock-escapement. Gravity	F. Gundorph	403,999	May 28	2174	571	47	1103
Clock-frame	D. A. Wiant	403,812	May 21	1900	499	47	1012
Clock-movement holder	J. Harwood	405,258	June 18	1311	345	47	1497
Clock-pendulum	J. Werner	404,997	June 11	916	242	47	1413
Clock striking mechanism	D. J. Gale	402,917	May 7	531	140	47	763
Clock striking mechanism	A. M. Lane	403,275	May 14	1104	293	47	879
Clocks. Electric winding for torsion-pendulum	H. Rabe	401,065	Apr. 9	256	67	47	191
Clocks. Setting mechanism for alarm	A. M. Lane	403,274	May 14	1103	293	47	879
Closet:							
See Columnar closet. Water-closet.							
Cloth-cutting apparatus	C. W. Boettner and H. H. Gilchrist	402,652	May 7	144	35	47	691
Cloth-cutting machine	R. Schofield	400,603	Apr. 2	248	68	47	52
Cloth into strips. Machine for cutting	J. G. McCarter	404,645	June 4	410	100 101	47	1303
Cloth. Machine for sizing and painting	D. A. Page and R. C. Bird	402,184	Apr. 30	2688	695 696 697	47	547
Cloth-marking implement	N. Harris	404,482	June 4	168	39	47	1256
Cloth. Ornamenting	A. Vehon	404,062	May 28	2283	.....	47	1124
Cloth-sponging machine	W. Hebdon	404,620	June 4	381	92	47	1298
Cloth-stretching machine. Clip or holder for	D. P. Smith	404,314	May 28	2682	695 696	47	1200
Clothes-drier	C. D. Fuller	401,264	Apr. 9	1262	336	47	247
Clothes-horse	E. A. Parrish	403,066	May 7	740	193	47	803
Clothes-line	F. P. Stanley	400,503	Apr. 2	111	30	47	25
Clothes-line attachment	M. Denise	403,332	May 14	1188	315	47	897
Clothes-line reel	H. C. Priebe	402,477	Apr. 30	3137	812	47	633
Clothes-line support	J. T. Crane	401,253	Apr. 9	1246	332	47	244
Clothes-lines. Support for endless	M. V. Teetor	402,630	May 7	114	28	47	686
Clothes-pounder	E. W. Tucker and A. P. Orr	404,234	May 28	2560	667	47	1177
Clothes-pounder	L. N. Martin	401,571	Apr. 16	1730	456	47	348
Clothes-wringer	L. C. Parker and B. Voges	404,653	June 4	421	104	47	1306
Clutch	L. Goddu	402,014	Apr. 23	2410	628	47	486
Clutch and brake. Friction	T. W. Capen	404,776	June 4	588	152	47	1341
Clutch and tension machine. Automatic	J. C. Bill	400,998	Apr. 9	864	222	47	174
Clutch, Automatic safety	G. Le Clair	405,845	June 25	2269	584	47	1680
Clutch for elevators. Safety	E. W. Houser	405,535	June 18	1763	465	47	1591
Clutch. Friction	G. A. Barnes	404,153	May 28	2422	634	47	1153
Clutch. Friction	H. C. Crowell	403,739	May 21	1792	471	47	1030
Clutch. Friction	G. L. Gerhard	403,098	May 14	809	215	47	823
Clutch. Friction	A. Hampe	403,663	May 21	1673	444	47	998
Clutch. Friction	G. W. King and H. M. Burnhart	401,170	Apr. 9	1131	300	47	222
Clutch. Lever	A. M. Stickney	403,562	May 21	1538	404	47	970
Coal and wood cabinet	H. Brandt	403,456	May 14	1379	361	47	931
Coal-conveyer	G. L. Stuebner	402,284	Apr. 30	2825	730 731	47	574
Coal. Conveyer contrivance for handling	J. M. Dodge	403,742	May 21	1795	472	47	1021
Coal. Conveyer for piling	J. M. Dodge	404,263	May 28	2600	677	47	1184
Coal-drilling machine	J. Noice	400,593	Apr. 2	235	64	47	49
Cock and coupling for barrels, casks, &c. Combined	C. C. Linindoll	404,918	June 11	803	206	47	1390
Cock. Automatic float tank	A. P. Howes	402,596	May 7	66	16	47	676
Cock. Automatic valve	J. F. Carpenter	405,694	June 25	2001	525	47	1640
Cock box. Stop	P. H. Gundermann	401,493	Apr. 16	1606	424	47	326
Cock box. Stop	A. Ormsby and H. Eberhart	404,049	May 28	2257	591	47	1118
Cock. Feed-water	H. D. Medrick	402,957	May 7	590	155	47	775
Cock. Gage	J. P. Strebig	405,129	June 11	1096	292	47	1449
Cock. Gage	D. B. Whitehill	402,373	Apr. 30	2939	767	47	599
Cock or faucet	F. B. Ray	401,568	Apr. 16	1754	463	47	352
Cock. Sea	B. S. Horton	402,454	Apr. 30	3098	804	47	626
Cock. Stop	M. M. Forestier	405,404	June 18	1514	403	47	1539
Cocks. Floor-key for	J. Powell	400,944	Apr. 9	783	209	47	159
Cocoa. Preparing soluble	H. Stollwerck	401,311	Apr. 9	1326	.....	47	261
Coffee-boiler	P. Bulow	405,946	June 25	2374	622	47	1708
Coffee-cleaning machine	C. J. Pickett	404,430	June 4	82	20	47	1242
Coffee. Machine for peeling, polishing, and cleaning	A. Gallardo	402,318	Apr. 30	2879	745 746	47	584
Coffee-mill	L. Drude	405,019	June 11	948	252	47	1419
Coffee or tea pot	G. W. Adams	401,919	Apr. 23	2274	600	47	460
Coffee or tea pot	G. E. Raymond	402,989	May 7	604	159	47	778
Coffee-pot	F. A. Hovey	404,707	June 4	491	124	47	1321
Coffee-roaster	J. T. Couse	403,419	May 14	1323	346	47	921
Coffer-dam	H. P. Kirkham	404,718	June 4	508	129	47	1325
Coffin	E. C. Manning	404,639	June 4	404	98	47	1302
Coffin-fastener	E. and B. Holmes	400,570	Apr. 2	209	56	47	44
Coffin-fastener	S. A. Scofield	404,872	June 11	737	188	47	1377
Coffin-fastener	W. A. Sparks	401,663	Apr. 16	1886	491	47	376
Coffin-fastener	C. E. Temple	401,767	Apr. 23	2041	534	47	417
Coffin-plate	J. H. Spicer	400,963	Apr. 9	810	216	47	165
Coffins. Frame for the pillows of	C. Krauser	401,284	Apr. 9	1287	343	47	253
Coin-actuated receptacle	E. C. Jones	405,215	June 11	1238	329	47	1476

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Coin-assorter	J. Roggy	401,593	Apr. 16	1763	464 465	47	354
Coin-operated lock	F. M. Leavitt	403,200	May 14	975	257 258	47	856
Coin-operated receptacle	W. Macnamar	405,578	June 18	1795	475	47	1597
Collapsible boat	C. Henderson	403,470	May 14	1395	365 366	47	934
Collapsible box	L. Casper	403,089	May 14	796	211	47	821
Collar-fastener	J. Himmelstein	404,403	June 4	52	14	47	1235
Collar. Horse	J. E. Purdy	403,610	May 21	1600	424	47	982
Collar-stuffing machine	C. Ewing	405,021	June 11	955	255	47	1421
Collars. Fastening device for dog	W. C. Gunn	405,551	June 18	1757	464	47	1590
Collars. Mold for making glass pads for horse	D. Barker	404,766	June 4	568	145	47	1337
Color-blindness. Device for testing	L. T. Stanley	404,386	May 28	2765	716	47	1216
Color. Red carbon	R. Gnehm	402,436	Apr. 30	3075	.....	47	621
Colors. Dissolving aniline	J. Hahn	404,193	May 28	2491	.....	47	1165
Coloring-matter. Production of yellow	A. Liebmann	404,097	May 28	2340	.....	47	1136
Colter attachment for plows	W. J. Edwards	401,337	Apr. 16	1369	364 365	47	231
Colter-band	A. J. Tatum	403,399	May 14	1302	340	47	916
Colter-holder. Tilting	W. H. Perrin	403,531	May 21	1527	400	47	967
Columnar closet	E. H. Watson	400,614	Apr. 2	266	73	47	58
Comb:							
See Curry-comb.							
Comb and curling-iron. Combined	G. L. Thompson	404,120	May 28	2388	626	47	1146
Combing machines. Dabbing-brush apparatus for	J. L. Ballantyne	404,376	June 4	6	2	47	1226
Combination-lock	I. A. Shaw	404,568	June 4	305	73	47	1263
Commode	J. A. Bell	401,629	Apr. 16	1843	480	47	369
Commutating device	D. W. Thompson	401,801	Apr. 23	2102	548	47	427
Commutator	H. H. Blades	403,905	May 28	2042	537	47	1077
Commutator-bars. Fitting	F. Bailey	400,994	Apr. 9	858	230	47	173
Compositor's bracelet wrist-protector	C. L. Smart	403,783	May 21	1855	487	47	1033
Compound engine	R. H. Lapage	405,569	June 18	1780	471	47	1594
Compound engine	G. Westinghouse, Jr., and F. M. Rites.	405,812	June 25	2161	568 569	47	1671
Compression-extractor	H. A. Crandell	405,348	June 18	1437	380	47	1523
Concrete and artificial-stone surfaces. Finishing	E. L. Ransome	405,800	June 25	2149	565	47	1668
Concrete pavement and floor	P. M. Bruner	401,539	Apr. 16	1661	.....	47	339
Condenser. Electric	W. Marshall	400,666	Apr. 2	657	178	47	196
Condenser for exhaust-steam	B. L. Rinehart	405,849	June 25	2215	583	47	1682
Condenser. Surface	E. W. Tucker	403,799	May 21	1862	495	47	1039
Condenser switch-board	W. Marshall	402,027	Apr. 23	2436	635	47	490
Condensing apparatus	C. C. Worthington	405,142	June 11	1113	296	47	1452
Conductor. Underground	E. E. Taillieur	404,877	June 11	744	189	47	1378
Conduit. Closed slotted	C. J. Van Depoele	401,325	May 28	2700	701	47	1203
Conduit. Underground	P. R. Greene	400,764	Apr. 2	484	130	47	95
Conduit. Underground	W. Walter	400,810	Apr. 2	576	158	47	110
Conduits. Coupling for underground	W. Lake	403,352	May 14	1215	323	47	901
Conduits. Leading-in apparatus for	J. A. Seely	400,958	Apr. 9	802	214	47	163
Cone-duster for fibrous substances	F. G. Sargent	400,953	Apr. 9	795	212 213	47	162
Confection-box	J. B. Langan	402,942	May 7	575	151	47	772
Contact-arm. Standing	C. J. Van Depoele	405,750	June 25	2085	547	47	1656
Converter-bottoms. Repairing	E. Bertrand	405,392	June 18	1409	398	47	1535
Convertible chair	A. Botkin	404,767	June 4	569	146	47	1338
Convertible suspending-chair	M. E. Schutt	402,170	Apr. 23	2568	666	47	515
Conveyer	R. E. Hurley	403,269	May 14	1089	287 288	47	876
Conveyer	C. N. Newcomb	403,603	May 21	1592	421 422	47	981
Conveyer	W. J. Selleck	405,608	June 18	1639	488	47	1605
Conveyer and belting-reel. Adjustable automatic	G. L. Jarrett	405,841	June 25	2203	580	47	1679
Conveyer for flour, &c	C. Espenschied	405,994	June 25	2455	648	47	1722
Conveyer. Reversible loading and unloading	J. M. Dodge	402,811	May 7	392	102 103	47	736
Cooker. Fruit or vegetable	F. W. and E. Gaines	405,253	June 18	1300	343	47	1494
Cooker. Steam	L. S. Brandenburg	404,255	May 28	2090	674	47	1182
Cooker. Steam	C. O. Schreyer and W. H. Penn	404,871	June 11	736	188	47	1376
Cooking apparatus	H. H. Boggs	401,480	Apr. 16	1569	420	47	323
Cooking apparatus. Portable	H. Fricker	401,261	Apr. 9	1258	333	47	247
Cooking utensil	F. H. Ferguson	405,087	June 11	1040	278	47	1439
Cooking-vessel	E. L. Dawes and W. A. Myler	403,093	May 14	801	213	47	822
Cooking-vessel	H. A. Manning	403,279	May 14	1110	295	47	880
Cooler:							
See Milk-cooler. Water-cooler.							
Coop. Folding	W. Carr and A. Evans	405,531	June 18	1736	455 456	47	1582
Coop. Hen	E. Butterick	405,008	June 11	928	246	47	1416
Copal, &c. Dissolving gum	G. A. Bobrick	404,251	May 28	2585	.....	47	1182
Copper by electrolysis. Production of	A. Rovello	405,604	June 18	1631	486	47	1604
Copper from copper pyrites. Extracting	J. Perino	401,056	Apr. 9	946	.....	47	189
Copying apparatus	G. H. Smith	401,762	Apr. 23	2036	532	47	416
Copying leaves. Moistening press	H. Thum	402,205	Apr. 30	2716	705	47	553
Copying-plates. Frame for holding	A. B. Dick	404,034	May 28	2231	585	47	1113
Copying writings. Apparatus for	F. A. C. Zabel	401,402	Apr. 16	1474	390	47	301
Cord-fastener	T. J. Tyler	402,786	May 7	352	92	47	729
Corded or elastic fabric	W. Lapworth	402,844	May 7	433	114	47	744
Cores. Chaplet for sand	A. J. Fisher	404,187	May 28	2462	649	47	1163
Cork-extractor	T. Kelly	402,742	May 7	283	72	47	716
Cork-extractor	K. Taylor	405,383	June 18	1484	393	47	1533
Corks. Apparatus for drawing	W. J. Himphy	402,945	Apr. 30	2768	716	47	563
Corkscrew	S. L. Alvord and E. E. Brown	401,672	Apr. 16	1898	494	47	378
Corkscrew	W. A. Williamson	405,385	June 18	1488	395	47	1533
Corn and silk separator	J. L. Wesley	405,634	June 18	1682	497	47	1612

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Corn-cob pipes. Manufacturing	A. Ruth	401,464	Apr. 16	1569	415	47	318
Corn-husking implement	J. L. Culberson	401,012	Apr. 9	881	220	47	178
Corn-sheller	C. Goddard	402,238	Apr. 30	2756	714	47	561
Corn-sheller	C. L. Heisler	405,838	June 25	2900	579	47	1678
Corn-shock binder	M. Spaulding	405,612	June 18	1845	488	47	1606
Cornet	C. G. Conn	402,721	May 7	246	65	47	710
Corpse-dressing table	C. Green	401,554	Apr. 16	1700	443	47	342
Corset	F. E. Denzel	401,015	Apr. 9	886	237	47	178
Corset	L. J. James	405,037	June 11	979	260	47	1426
Corset	J. Koon	403,760	May 21	1821	478	47	1026
Corset	A. D. Nason	405,113	June 11	1075	286	47	1445
Corset-busk	I. Levy	402,260	Apr. 30	2792	722	47	568
Corset-clasp	M. Adler	402,880	May 7	483	104	47	753
Corset-clasp	W. O. Corning	405,876	June 25	2957	593	47	1680
Corset-clasp	J. H. Haviland	401,650	Apr. 16	1672	436	47	373
Corset-clasp	C. H. Stahl and J. W. Bonton	405,442	June 18	1579	417	47	1552
Corset-clasp	D. H. Warner	404,135	May 28	2397	628	47	1147
Corset-clasp	N. B. Williams	403,166	May 14	911	239	47	843
Corset-fastening	G. Bouzard	404,252	May 28	2585	673	47	1162
Corset-steel. Covered	I. D. Warner	403,161	May 14	904	238	47	841
Corset-stiffener	R. T. Smith	404,991	June 11	903	237	47	1410
Cotton-carrier	A. O. Woodbury	403,403	May 14	1306	341	47	917
Cotton-chopper	W. M. Wilson	401,092	Apr. 9	998	266 / 267	47	198
Cotton cleaner. Seed	F. C. Gammons, G. L. Rollins, and H. Wadsworth	405,405	June 18	1516	403	47	1539
Cotton-gins. Brush-cylinder	I. F. Brown	401,124	Apr. 9	1043	278	47	206
Cotton-gins. Feed-regulator for	R. L. Brandon	405,245	June 18	1288	341	47	1492
Cotton. Machine for opening and scutching	S. Tweedale	404,133	May 28	2393	627	47	1146
Cotton-packing machine	F. Brady	403,734	May 21	1785	470	47	1019
Cotton-picking machine	T. J. Gray	401,268	Apr. 9	1267	337 / 338 / 339	47	248
Cotton-sprinkler	W. Kister	403,475	May 14	1409	368	47	936
Counting packages. Apparatus for	M. Gottfried	402,820	May 7	401	105	47	738
Coupler. Steam-tight	T. M. Jenks	404,710	June 4	498	126 / 127	47	1322
Coupling: *See* Bellows-fold coupling. Brake-pipe coupling. Car-coupling. Hose-coupling. Insulating pipe-coupling. Pipe-coupling. Pipe or tube coupling. Thill-coupling. Tube-coupling. Vehicle-coupling.							
Coupling-pin	F. L. Remington	401,659	Apr. 16	1882	490	47	375
Cracker-stacking machine	A. F. Fitz Gerald	403,526	May 21	1492	391 / 392	47	961
Crane. Traveling	G. H. Helvey	402,524	Apr. 30	3205	830	47	646
Crane. Traveling	J. Walker	401,613	Apr. 16	1815	474 / 475	47	364
Crank for motors	S. F. Armstrong	402,052	Apr. 23	2473	645	47	497
Crank-wrist and boxing	O. H. Castle	404,341	May 28	2724	707	47	1208
Crate	M. B. Hoag	402,896	May 7	412	108	47	740
Crib	C. Lawrence	400,693	Apr. 2	383	103	47	76
Crucible for lead surfaces. Detached	N. R. Wilson	403,815	May 21	1904	509	47	1043
Crusher: *See* Ore-crusher. Seed-crusher.							
Crushing or grinding mill	E. C. Griffin	403,997	May 28	2171	570	47	1101
Crutch	L. H. Remillard	404,303	May 28	2665	692	47	1197
Crystallizing-frame	A. E. Beller	400,539	Apr. 2	165	43	47	35
Cuff. Apparel	G. Benson	402,223	Apr. 30	2736	709	47	558
Cuff-fastener. Lady's	C. L. Moore	402,685	May 7	198	50	47	700
Cuff-holder	G. B. Adams	405,687	June 25	1985	521	47	1637
Cuff-holder	N. D. Daboll and J. L. Follett	405,877	June 25	2258	583	47	1089
Cuff-holder	C. O. McCasland	402,176	Apr. 30	2672	693	47	545
Cuff-retainer	J. M. March	403,280	May 14	1111	295	47	881
Culinary beaters, mixers, &c. Motor for	E. Baltzley	403,502	May 21	1451	381	47	953
Culinary vessel	O. E. Harmon	402,444	Apr. 30	3063	799	47	623
Cultivator	B. F. Berger	401,114	Apr. 9	1031	276	47	204
Cultivator	W. M. Brinkerhoff	405,942	June 25	2360	619	47	1706
Cultivator	J. Coomba	405,948	June 25	2376	623	47	1709
Cultivator	M. V. De Witt	405,204	June 11	1224	334	47	1473
Cultivator	J. Dodge	401,778	Apr. 23	2054	538	47	419
Cultivator	H. G. Emerson	400,837	Apr. 2	613	167	47	117
Cultivator	C. R. Hartman	404,084	May 28	2316	607 / 608	47	1132
Cultivator	C. R. Hartman	404,085	May 28	2320	608	47	1132
Cultivator	F. A. Head	403,587	May 21	1574	415	47	977
Cultivator	R. Insley	402,247	Apr. 30	2772	717	47	564
Cultivator	J. W. Johnson	404,711	June 4	499	127	47	1322
Cultivator	F. W. Kirkbride	401,178	Apr. 9	1133	300	47	222
Cultivator	T. Meyer	402,268	Apr. 30	2801	725	47	570
Cultivator	G. Moore	404,922	June 11	806	207 / 208	47	1301
Cultivator	T. R. Ringwood	402,196	Apr. 30	2698	700	47	550
Cultivator	C. H. Ruddell	404,437	June 4	91	23	47	1243
Cultivator	J. Shoolbred	401,585	Apr. 16	1766	465	47	355
Cultivator	H. Staggs	401,468	Apr. 16	1574	416	47	319
Cultivator and cotton-chopper. Combined	A. H. Johnson	405,165	June 11	1156	309	47	1461
Cultivator. Corn	W. J. Gohn	403,496	May 14	1333	350	47	922
Cultivator. Cotton	J. Marion	401,507	Apr. 16	1696	450	47	329
Cultivator. Disk	J. Albertson	400,422	Apr. 2	1	1	47	3
Cultivator for listed corn	H. B. King	401,177	Apr. 9	1132	300	47	222

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Cultivator. Hand	H. C. Tubbs	404,995	June 11	912	241	47	1412
Cultivator. Hand garden	J. W. Bowman	403,413	May 14	1317	344	47	919
Cultivator, plow, &c. Combined	A. B. McBride	401,045	Apr. 9	927	247 / 248	47	186
Cultivator. Wheel	R. C. Buckley	403,414	May 14	1318	345	47	920
Cultivators. Yielding shovel for	E. P. Lynch	400,467	Apr. 2	56	17	47	14
Cup: *See* Dental Impression-cup. Drinking-cup. Grease-cup. Sponge-cup.							
Cupola or blast furnace	G. M. Hathaway and E. B. Stocking	404,008	June 11	788	201	47	1387
Curling-iron	G. L. Thompson	404,127	May 28	2386	625	47	1145
Curling-iron	G. L. Thompson	404,128	May 28	2387	626	47	1146
Currency-package	E. S. Barreiras	403,065	May 14	780	210	47	820
Current or tide motor. Surface	E. Speckow	405,722	June 25	2041	536	47	1647
Current-wheel	J. Strasser	403,493	May 14	1437	376	47	948
Curry-comb	O. Smith	401,864	Apr. 23	2163	570	47	443
Curtain-fixture	A. W. Gayhart	403,344	May 14	1205	321	47	909
Curtain-fixture	P. B. Huffman	402,508	May 7	69	16	47	677
Curtain-pole	F. G. Johnson	404,841	June 11	689	178	47	1369
Curtain-pole socket	H. Reubel	401,590	Apr. 16	1750	464	47	353
Curtain-pole-supporting fixture	T. H. Kelley	405,671	June 18	1980	514	47	1626
Curtain-ring	J. Lines	404,637	June 4	402	98	47	1302
Curtain-ring	J. Lines	404,638	June 4	403	98	47	1302
Curtains. Hanging sliding	T. Tribe	405,333	June 18	1417	373	47	1519
Curtains. Refinishing	C. Imandt	404,543	June 4	276	.....	47	1277
Cuspidor	D. H. Murphy	400,938	Apr. 9	775	207	47	157
Cut-off and gas-regulator. Automatic	C. A. Dally and H. K. Richardson	405,830	June 25	2184	575	47	1675
Cut-out	O. P. Loomis	402,753	May 7	300	77	47	719
Cutlery	R. Daine	404,385	June 4	20	5	47	1229
Cutlery handle. Table	W. W. Lee	401,181	Apr. 9	1137	301	47	223
Cutlery. Table	F. C. Feicker	401,730	Apr. 23	2006	525	47	410
Cutter: *See* Band-cutter. Cheese-cutter. Cigar-cutter. Feed-cutter. Fireman's electric-wire cutter. Hair-cutter. Harvester-cutter. Leather-thong cutter. Milling-cutter. Paper-cutter. Pipe-cutter. Rotary cutter. Stalk-cutter. Straw-cutter. Tobacco-cutter. Tube-cutter. Vegetable-cutter. Veterinary incisor-cutter.							
Cutter-bar	C. Hank	402,150	Apr. 30	2653	686	47	541
Cutter-head	H. L. Haskell	400,567	Apr. 2	205	55	47	44
Cutting apparatus	H. Lindeström and A. Jernberg	404,548	June 4	289	67	47	1278
Cylinder-lubricator	A. L. Fillmore	400,653	Apr. 2	348	89	47	66
Cylinder-lubricator	J. G. Oracey	405,935	June 25	2195	578	47	1677
Dampening-machine	M. E. Wendell and T. S. Wiles	401,770	Apr. 23	2045	535	47	417
Damper	W. A. Hance	401,467	May 14	1392	365	47	933
Damper	C. F. Lange	403,333	May 14	1215	323	47	901
Damper. Stove-pipe	M. Griswold and O. R. Hanchett	405,408	June 18	1521	404	47	1540
Damper. Stove-pipe	W. A. Hance	403,468	May 14	1393	365	47	934
Damper. Stove-pipe	F. W. Hoefer	401,166	Apr. 9	1114	296	47	219
Damper. Stove-pipe	G. C. Humphrey	401,672	May 21	1689	447	47	1001
Damper. Stove-pipe	S. C. Schofield	403,489	May 14	1431	374	47	941
Dampers for fire-places, &c. Device for operating	A. V. Bay	401,025	Apr. 16	1838	479	47	368
Danger-gate	H. Boddiker	402,799	May 7	371	98	47	732
Dash-pot	W. F. Brown	403,643	May 21	1647	437	47	992
Decoy	W. H. Jencks	403,595	May 21	1581	418	47	978
Dental anæsthetic	A. L. McCarty	402,203	Apr. 30	2795	.....	47	569
Dental articulator	W. F. Slack and G. A. Smith	400,713	Apr. 2	413	112	47	82
Dental fillings. Protecting	D. C. McNaughton	400,585	Apr. 2	225	61	47	47
Dental impression-cup	J. Scheffler	401,792	Apr. 23	2090	545	47	425
Dental matrix	C. A. Meister	400,567	Apr. 2	228	61	47	48
Dental mirror	R. A. Tice	404,021	May 28	2201	578	47	1108
Dental plugger	F. L. Barney and H. E. Taylor	402,294	Apr. 30	2835	734	47	576
Dental plugger	J. W. Gilbert	402,156	Apr. 30	2646	685	47	540
Dental plugger	A. J. Sawyer	405,123	June 11	1089	290	47	1448
Dental rubber-dam clamp	J. W. Ivory	400,771	Apr. 2	497	135	47	97
Dental vulcanizers. Regulating-valve for	L. Stack	401,391	Apr. 16	1458	385	47	298
Derrick	L. S. Deming	405,082	June 11	1034	276	47	1438
Derrick. Adjustable	E. B. Steele	402,201	Apr. 30	2708	703	47	552
Designs on the face of fabrics. Cutting	J. Lowden	403,682	May 21	1705	450 / 451	47	1004
Desk	J. W. Duncan	402,909	May 7	521	137 / 138	47	761
Desk and chair for schools	G. A. Bobrick	404,250	May 28	2583	673	47	1181
Desk-box	A. W. Phillips	401,757	Apr. 23	2028	530	47	414
Desk, drawing-board, and easel. Combined writing-	H. L. Keith	401,440	Apr. 16	1529	404	47	312
Desk fastening. School	J. B. Sherwood	402,037	Apr. 23	2450	639	47	493
Desk or cabinet	W. H. Travis	401,314	Apr. 9	1231	354	47	262
Desk. School	A. M. Breadin	400,738	Apr. 2	454	121	47	89
Desk. School	C. B. Towle	403,795	May 21	1677	494	47	1036
Desk. School	C. B. Towle	403,796	May 21	1679	494	47	1038
Desk-top	W. H. Porter	400,871	Apr. 2	664	160	47	127
Detergent	F. C. Taylor	401,766	Apr. 23	2041	.....	47	417
Dial. Time-piece	C. Bickford	400,734	Apr. 2	446	119	47	88
Dial. Time-piece	M. V. B. Ethridge	401,687	Apr. 16	1931	504	47	364
Dial. Time-piece	M. V. B. Ethridge	403,525	May 21	1489	391	47	961
Dial. Time-piece	A. Fischer	403,338	May 14	1196	317 / 318	47	896

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Die: *See* Blank-heading die. Thread-cutting die. Gripping-die.							
Die-stock	W. H. Laguire	402,747	May 7	290	74	47	718
Diffusion apparatus	F. Bianchi	402,056	Apr. 23	2478	646 647	47	498
Diffusion-battery	W. Golding	405,472	June 18	1632	431	47	1562
Digger: *See* Post-hole digger. Potato-digger.							
Direct-acting engine	J. S. Bartlett	404,248	May 28	2582	672	47	1181
Direct-acting engine	R. Hardie	405,409	June 18	1521	404	47	1540
Direct-acting engine. Double-cylinder	W. D. Hooker	403,108	May 14	827	219	47	827
Dirt-loading machine	E. T. Hoffman	402,450	Apr. 30	3093	802 803	47	624
Dish. Wooden	W. D. Johnson	403,111	May 14	833	220	47	828
Disinfecting apparatus	E. Clarenbach	400,437	Apr. 2	17	6, 7	47	6
Display and sale rack for merchandise	S. R. Dunlap	405,400	June 18	1509	401	47	1538
Display-box	H. D. and F. A. Smith	401,974	Apr. 23	2349	611	47	475
Display-rack	E. G. Babcock	402,685	May 7	490	129	47	755
Display-rack	C. R. Harris	405,257	June 18	1310	345	47	1497
Display-rack	R. Kaufmann	401,653	Apr. 16	1875	487	47	373
Distilling apparatus	P. H. Bracher	403,638	May 21	1641	435	47	991
Distilling fat acids. Apparatus for	P. Marix	400,469	Apr. 2	60	17, 18	47	15
Ditching-machine	J. Lalonde	400,859	Apr. 2	645	175	47	124
Ditching-machine	D. J. Powers	404,301	May 28	2657	691 692	47	1195
Dobby. Double-lift open-shed	W. P. Uhlinger	403,565	May 21	1543	406 407	47	971
Domino	C. M. Hyatt	405,164	June 11	1155	308	47	1461
Door-check	W. S. Barlow	401,534	Apr. 16	1673	441	47	337
Door-check	M. H. Bassett	401,535	Apr. 16	1674	442	47	338
Door-check	R. N. Cherry	402,804	May 7	379	100	47	734
Door-check	T. K. Hansberry	404,038	May 28	2236	586	47	1113
Door-check	A. Hursh	404,627	June 4	390	94	47	1299
Door-check	H. Stanynought	403,393	May 14	1294	338	47	914
Door-check	G. W. Wright	400,815	Apr. 2	581	159	47	111
Door-closer. Thermostatic	W. R. Patterson	403,484	May 14	1423	372	47	939
Door-fastener and alarm. Combined	S. Goulden	404,617	June 4	378	91	47	1297
Door-hanger	R. Miller and J. G. Kanouse	402,342	Apr. 30	2015	756	47	591
Door-hanger	W. W. Smith	403,228	May 14	1024	270	47	885
Door-hanger track	J. G. Lane	402,843	May 7	432	114	47	744
Door-hanging	W. J. Boda	403,572	May 21	1552	409	47	973
Door lock and hinge. Combined	L. Binsfeldt and J. Chateau	404,590	June 4	340	82	47	1289
Door lock. Sliding	S. W. Hunton	404,412	June 4	55	15	47	1236
Door-mat	O. Westerholm	402,705	May 7	223	58	47	706
Door. Screen and storm	J. K. Wiesendanger and J. Ulrich	404,999	June 11	918	242	47	1413
Door-securer	B. F. Marshall, Jr., and D. H. Rickerd.	405,581	June 18	1800	476	47	1598
Door-spring	J. W. Davis	403,922	May 28	2064	542	47	1061
Door-spring	J. H. Williams	401,319	Apr. 9	1337	356	47	263
Doors. Roller for sliding	N. Clark	405,202	June 11	1221	323	47	1473
Double-pointed pin	J. H. Birch	404,675	June 4	449	113	47	1312
Doubletree	A. Minor	405,316	June 18	1393	367	47	1514
Doubling-machines, &c. Stop-motion for	A. A. Lehmann	400,604	Apr. 2	384	104	47	76
Draft attachment for vehicles	C. E. Miller	405,586	June 18	1807	478	47	1600
Draft-equalizer	J. Bevens	403,635	May 21	1638	434	47	990
Draft-equalizer	A. G. Brown	403,873	May 21	1967	521	47	1058
Draft-equalizer	L. C. Harris	405,161	June 11	1151	307	47	1460
Draft-equalizer	C. F. Holck	405,476	June 18	1637	433	47	1543
Draft-equalizer	C. Kieser	403,651	May 7	723	189	47	800
Draft-equalizer	W. E. Plumer	403,135	May 14	864	228	47	834
Draft-spring	E. L. Hilderbrand, H. Rost, and C. L. Daris.	405,102	June 11	1152	308	47	1460
Drain for sinks, wash-bowls, &c	F. A. Strater	404,060	May 28	2281	597	47	1124
Drains and sewers. Flushing system for	H. W. McDonald and T. W. Shunk	405,587	June 18	1808	479	47	1600
Draw-bar and hook	B. N. Phelps	403,133	May 14	861	227	47	834
Drawer. Furniture	J. H. Knaus	404,790	June 4	610	157	47	1345
Drawer-guide	D. W. Kendall	405,098	June 11	1053	281	47	1441
Drawer-pull	S. Feust	402,236	Apr. 30	2753	718	47	561
Drawer-pull	A. H. Jones	400,852	Apr. 2	636	173	47	122
Drawer-pull	E. P. Nobbs	404,405	June 4	188	46	47	1260
Drawers, &c	C. F. North	405,903	June 25	2300	603	47	1697
Drawing apparatus	W. S. Worden	405,386	June 18	1489	395	47	1534
Dray	J. L. Davis	404,688	June 4	471	119	47	1317
Dredge-box	J. W. Ivory	401,651	Apr. 16	1873	488	47	373
Dredging-bucket	R. Hosford	401,436	Apr. 16	1522	402 403	47	310
Dredging-bucket	C. A. Morris	400,936	Apr. 9	773	207	47	157
Dredging-machine	H. S. Brown	404,891	June 11	762	194 195	47	1381
Dredging-machine. Hydraulic	J. McFarlane	401,896	Apr. 23	2234	582 586	47	453
Drenching-bit	C. W. Crannell	402,068	Apr. 23	2499	652 653	47	502
Dress-form	A. McDowell	401,192	Apr. 9	1155	309	47	228
Dress-stiffeners. Manufacture of	I. D. Warner	403,169	May 14	902	238	47	841
Dressing-case slide	W. P. Tracy	405,623	June 18	1859	492	47	1609
Drier: *See* Bed-drier. Boot-drier. Clothes-drier. Fruit-drier. Grain-drier.							
Drift and drill catch	J. T. Kenworthy	404,546	June 4	278	66	47	1277

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Drill: *See* Grain-drill. Ratchet-drill. Rail-drill. Rock-drill.							
Drill	P. Leeds	402,170	Apr. 30	2666	691	47	544
Drill-bit	J. Eagen	404,829	June 11	968	173	47	1365
Drill-brace	T. C. Massey	400,928	Apr. 9	758	204	47	154
Drill-gage	I. Culver	403,740	May 21	1793	471	47	1021
Drill-press	E. C. Stearns	404,367	May 28	2766	717	47	1216
Drilling-machine	F. H. Richards	404,364	May 28	2759	716	47	1214
Drilling-machine. Electric	E. A. Sperry	405,187	June 11	1194	318	47	1468
Drilling-machine. Portable	J. T. Halsey	402,924	May 7	544	144	47	765
Drilling machine. Rock and earth	E. W. Pogrman	403,535	May 21	1530	401 402	47	968
Drilling rails for fish-bolts. Machine for	J. Davis	402,310	Apr. 30	2806	742	47	582
Drilling-tool	A. E. Brown	401,537	Apr. 16	1678	442	47	338
Drinking-cup	J. Schue	402,620	May 7	100	24	47	683
Drinking-fountain	S. E. Babcock	402,553	May 7	2	1	47	663
Driving and belt-shifting mechanism	E. R. Hyde	404,709	June 4	494	126	47	1321
Dropper-spout	S. P. Denison	401,256	Apr. 9	1251	333	47	245
Drum and gripper. Combined	H. Fletcher	401,727	Apr. 16	1982	519	47	395
Drum. Heating	J. Hodgkinson	403,349	May 14	1211	322	47	901
Dumb-waiter brake	H. Donohoe	404,076	May 28	2307	604	47	1129
Duplex-engine. Direct-acting	C. C. Worthington	401,401	Apr. 16	1471	388 389 390	47	300
Duplicating apparatus	G. H Davis	404,778	June 4	590	153	47	1341
Dust-collector	E. Bretney	405,869	June 25	2247	591	47	1687
Dust-collector	N. Ledue and A. E. Weeks	401,503	Apr. 16	1621	429	47	329
Dust-collector	O. M. Morse	403,362	May 14	1229	326 327	47	904
Dust-collector	O. M. Morse	403,363	May 14	1231	327	47	904
Dust-collector	O. M. Morse	403,770	May 21	1840	483	47	1030
Dust-collector	O. M. Morse	404,216	May 28	2538	662	47	1173
Dust-collector	O. M. Morse	404,217	May 28	2539	662	47	1174
Dust-collector	O. M. Morse	405,674	June 18	1902	515	47	1636
Dust-collector	H. Seck	403,701	May 21	1735	456 457	47	1010
Dust-collector	W. Trautmann	403,798	May 21	1842	495	47	1030
Dust-pan handle	L. Angevine	402,292	Apr. 30	2833	734	47	576
Dye. Azo	J. Schmid	402,980	May 7	618	.....	47	781
Dye. Blue azo	J. Schmid	404,309	May 28	2675	.....	47	1199
Dye. Compound orcin	R. Greville-Williams	404,331	May 28	2710	.....	47	1205
Dye. Crimson	T. Diehl	401,483	Apr. 16	1594	.....	47	324
Dye. Yellow	E. Frank	401,024	Apr. 9	899	.....	47	181
Dyeing apparatus	E. Wood	405,141	June 11	1111	296	47	1452
Dyeing-vat	J. W. Greaves	401,027	Apr. 9	902	241	47	181
Dyeing yarn on the skein. Machine for	J. P. Bray and O. S. Pierce	402,648	May 7	139	34	47	690
Dynamo	W. S. Belding	404,068	May 28	2296	601 602	47	1127
Dynamo	E. A. Sperry	405,441	June 18	1579	417	47	1552
Dynamo. Compound-wound alternating-current	H. Lemp	405,263	June 18	1316	347	47	1498
Dynamos. Brush-holder for	W. S. Bishop	405,002	June 11	920	243	47	1414
Dynamos. Brush-spring for	J. F. Kester	404,715	June 4	504	128	47	1324
Dynamos. Detachable brush-holder for	J. F. Kester	404,712	June 4	500	127	47	1322
Ear-ring. Lobe	J. C. Doran and H. A. Hall	402,071	Apr. 23	2503	654	47	503
Ear-rings. Mounting for	V. Gentner, Jr.	405,157	June 11	1146	305	47	1459
Earthenware	C. C. Gilman	405,028	June 11	967	.....	47	1424
Easel	W. V. Ackerman	404,146	May 28	2413	632	47	1151
Easel and sheet-music cabinet. Combined	O. Stoddard	401,389	Apr. 16	1456	384 385	47	298
Eccentric. Variable	D. Remington	402,479	Apr. 30	3139	813	47	633
Educational apparatus	A. L. Manning	401,043	Apr. 9	926	247	47	186
Egg-basket	J. T. Feager	404,340	May 28	2737	710	47	1210
Egg-beater	C. F. Pfau	401,058	Apr. 9	949	253	47	189
Egg-boiler	R. Reitheffer	403,446	May 14	1364	358	47	928
Egg-carrier	C. F. A. Eddy	401,645	Apr. 16	1867	485	47	372
Egg-crate	A. D. Linn	402,464	Apr. 30	3115	808	47	630
Egg-tester	J. L. Ritter	405,501	June 18	1828	485	47	1604
Elector	C. E. Church	405,992	June 25	2453	641	47	1722
Electric battery	J. A. Barrett	403,451	May 14	1371	360	47	920
Electric-cable terminal	R. H. Widdicombe	404,813	June 4	640	165	47	1352
Electric cables. Covering for	E. F. Garland	403,202	May 14	1075	282	47	873
Electric cables. Splice-box for	T. J. Dewees	402,007	Apr. 23	2401	625	47	484
Electric circuit. Apparatus for indicating the strength of the current in an	G. Pfannkuche	404,860	June 11	717	183 184	47	1374
Electric circuit. Indicating the strength of the current in an	G. Pfannkuche	404,861	June 11	719	184	47	1374
Electric-circuit switch	S. Bergmann	400,733	Apr. 2	444	119	47	88
Electric-circuit-testing device	M. Robinson	400,951	Apr. 9	793	212	47	161
Electric circuits. Automatic circuit-interrupter for	A. L. Reinmann and P. Lange	404,112	May 28	2364	620	47	1141
Electric circuits. Ground-detector for	O. P. Loomis	405,572	June 18	1788	474	47	1596
Electric circuits. Safety device for	W. J. Hammer	400,669	Apr. 2	350	95	47	70
Electric conductor	T. Egleston	401,936	Apr. 23	2298	567	47	464
Electric conductors. Coupler for	G. I. Hopkins	402,829	May 7	416	109 110	47	741
Electric conductors. Slotted conduit for	C. J. Van Depoele	403,009	May 7	656	173 174	47	787
Electric conductors. Slotted conduit for	C. J. Van Depoele	403,800	May 21	1585	406	47	1040
Electric conductors. Switch for suspended	C. J. Van Depoele	405,627	June 18	1866	494	47	1610
Electric-converter box	A. Schmid	404,114	May 28	2368	621	47	1142
Electric-current generators. Regulation of alternating	G. Pfannkuche	404,859	June 11	714	183	47	1373
Electric currents. Distribution by alternating	O. B. Shallenberger	404,566	June 4	302	72	47	1282
Electric currents. Distribution of	E. Thomson	401,608	Apr. 16	1805	472	47	362

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Electric currents. Regulating	J. W. Balet	400,726	Apr. 2	432	117	47	86
Electric currents. Switch device for	J. A. Turner	400,808	Apr. 2	509	157	47	109
Electric currents. System of generators for alternating	O. B. Shallenberger	404,567	June 4	304	72	47	1222
Electric cut-out	J. M. Kimball and H. C. Wirt	402,249	Apr. 30	2774	718	47	564
Electric distribution. Transfer system of	E. W. Rice, Jr.	400,486	Apr. 2	85	24	47	20
Electric energy. Apparatus for registering the consumption of	L. Brillié	403,244	May 14	1045	276 / 277	47	869
Electric-engine system. Reciprocating	C. J. Van Depoele	401,231	Apr. 9	1208	322 / 323	47	238
Electric generators. Regulating self-exciting alternate-current	W. Stanley, Jr	404,120	May 28	2377	623	47	1144
Electric lighting. System of	T. A. Edison	401,486	Apr. 16	1597	422	47	324
Electric lighting. Wiring structures for	E. H. Johnson and E. T. Greenfield	401,498	Apr. 16	1614	427 / 428	47	327
Electric lights. Adjustable support for incandescent	J. T. Pearson	405,970	June 25	2412	631	47	1715
Electric lights. Automatic circuit-controller for	O. P. Loomis	402,754	May 7	301	78	47	719
Electric lights. Device for supporting and operating	C. W. Russell and J. I. Drake	401,304	Apr. 9	1321	351	47	260
Electric locomotion. System of	F. Wheeler	401,616	Apr. 16	1820	476	47	365
Electric machine. Dynamo-	C. Coerper	402,066	Apr. 23	2496	652	47	501
Electric machine. Dynamo-	J. B. Entz	400,838	Apr. 2	614	167	47	118
Electric machine. Dynamo-	A. I. Gravier	403,836	May 21	1940	510	47	1049
Electric machine. Dynamo-	W. Hochhausen	404,484	June 4	169	39, 40	47	1256
Electric machine. Dynamo-	O. P. Loomis	405,218	June 11	1242	330	47	1477
Eleciric machine. Dynamo-	F. A. Perret	403,487	May 14	1427	573 / 574	47	940
Electric machine. Dynamo-	W. D. Sandwell	405,507	June 18	1691	447	47	1575
Electric machine. Dynamo-	F. Thone	405,284	June 18	1347	363	47	1504
Electric machine. Dynamo-	H. E. Walter	403,158	May 14	899	237	47	841
Electric machine. Dynamo-	E. Weston	401,318	Apr. 9	1336	356	47	263
Electric machine. Dynamo-	E. Weston	401,668	Apr. 16	1892	493	47	377
Electric machine. Dynamo-	E. Weston	401,669	Apr. 16	1893	492	47	377
Electric machine. Dynamo-	T. L. Willson	403,630	May 21	1628	431 / 432	47	929
Electric machine. Dynamo-	T. L. Willson	406,015	June 25	2491	651 / 652	47	1728
Electric machine. Dynamo or magneto	E. Weston	401,317	Apr. 9	1334	355	47	263
Electric machine or motor. Dynamo-	C. L. Rosenqvist	405,602	June 18	1830	485	47	1604
Electric machine or motor regulator	J. F. Kester	404,714	June 4	502	134	47	1323
Electric-machine regulator. Dynamo-	E. P. Clark	404,602	June 4	356	83	47	1292
Electric-machine regulator. Dynamo-	J. H. Robertson	405,743	June 25	2074	544	47	1653
Electric-machine regulator. Dynamo-	C. J. Van Depoele	401,230	Apr. 9	1205	321	47	237
Electric machines. Pole-piece for dynamo-	J. G. Statter	402,260	Apr. 30	2703	702 / 703	47	551
Electric, magnetic, or electro-magnetic forces by weight. Determining the value of	A. Gipperich	400,662	Apr. 2	336	92	47	68
Electric meter	O. Dahl	405,249	June 18	1294	342	47	1493
Electric meter	R. and P. Diehl	405,399	June 18	1507	400 / 401	47	1537
Electric meter	A. H. Manwaren	401,191	Apr. 9	1153	307	47	227
Electric meter	R. P. Sellon	404,310	May 28	2675	694	47	1199
Electric meter	W. F. Smith	401,226	Apr. 9	1200	321	47	236
Electric meter	E. Thomson	401,803	Apr. 23	2107	559	47	428
Electric meter	E. Thomson	406,010	June 25	2480	644 / 649	47	1727
Electric meter for alternate currents	M. M. M. Slattery	404,801	June 4	625	159 / 161	47	1348
Electric meter for alternating currents	D. L. Davis	402,410	Apr. 30	3012	783	47	610
Electric motor	W. S. Belding	404,067	May 28	2293	600	47	1127
Electric motor	C. S. Bradley	404,465	June 4	141	33	47	1252
Electric motor	H. B. Slater	404,661	June 4	433	106	47	1309
Electric motor	F. Yeiser	402,290	Apr. 30	2731	735	47	575
Electric motor. Alternating-current	C. S. Bradley	404,466	June 4	143	33, 34	47	1252
Electric motor. Alternating-current	E. Thomson	400,971	Apr. 9	819	219	47	166
Electric motor and regulator	A. Gartner	404,533	June 4	259	69	47	1273
Electric-motor clamp	W. S. Belding	404,069	May 28	2299	602	47	1128
Electric motor for tramway-vehicles	W. D. Sandwell	401,970	Apr. 23	2344	609 / 610	47	474
Electric motor or dynamo-electric machine	R. M. Hunter	405,668	June 18	1956	512	47	1625
Electric-motor regulator	A. Gartner	404,783	June 4	569	155	47	1343
Electric motor starting and stopping device	F. A. Perret	405,223	June 11	1249	331	47	1479
Electric-motor-trolley switch	W. Christy	402,064	Apr. 23	2494	651	47	501
Electric motors and generators. Prevention of sparking in	D. Higham	400,680	Apr. 2	366	99	47	73
Electric motors. Commutator-brush controller for	W. L. Silvey	402,990	May 7	631	167	47	783
Electric motors or dynamo-electric machines. Automatic governor for	S. S. Wheeler	403,017	May 7	669	176 / 177	47	790
Electric motors. Regulation of	F. Bain	400,890	Apr. 9	698	189	47	145
Electric motors. Safety attachment for	W. S. Paca	404,651	June 4	419	103	47	1305
Electric or magnetic forces. Apparatus for determining	A. Gipperich	400,661	Apr. 2	324	91, 92	47	67
Electric reciprocating engine. Alternating-current	C. J. Van Depoele	400,809	Apr. 2	571	137	47	109
Electric signal	J. T. Carter	402,506	Apr. 30	3173	822	47	639
Electric switch	L. Bergmann	400,732	Apr. 2	443	119	47	88
Electric switch	O. Dahl	405,248	June 18	1293	342	47	1493
Electric system of communication	E. B. Shafer	402,986	May 7	627	166	47	782
Electric-wire conduit	G. W. Cook	402,565	May 7	22	6	47	667
Electric-wire conduit	J. Lynch	405,576	June 18	1793	475	47	1597
Electric-wire nail	C. A. Gildemeyer	401,343	Apr. 16	1383	367	47	285
Electric wires. Box for the distribution of	D. Brooks, Jr.	401,927	Apr. 23	2286	593	47	462
Electric wires. Pole for	U. Snead	404,232	May 28	2558	667	47	1177
Electric wires. Supporting and cross-connecting	W. J. Denver	402,810	May 7	389	102	47	736
Electrical conductors. Apparatus for laying	W. F. Smith	401,225	Apr. 9	1199	320	47	236
Electrical conductors. Conduit for	G. H. and K. C. Gillette	401,155	Apr. 9	1100	292	47	215

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Electrical conductors. Slotted conduit for	C. J. Van Depoele	405,626	June 18	1862	483 / 494	47	1609
Electrical conductors. Underground conduit for	C. H. Cole	403,825	May 21	1919	504	47	1046
Electrical conduits with chemical substances. Treating underground	A. E. Colgate	402,563	May 7	20	6	47	666
Electrical converter	H. Lemp	403,541	May 21	1516	397	47	965
Electrical current generators. Regulation of alternating	G. Pfannkuche	405,174	June 11	1169	312	47	1463
Electrical distribution and conversion. System of	T. H. Hicks	402,671	May 7	178	45	47	687
Electrical-distribution system	T. A. Edison	401,902	June 11	779	198	47	1385
Electrical distribution. System of	E. P. Thompson	403,308	May 14	1148	305	47	888
Electrical distribution. System of	G. Westinghouse, Jr.	404,139	May 28	2403	630	47	1149
Electrical energy by induction. Secondary generator for the conversion of	W. Lowrie and C. J. Hall	400,802	Apr. 2	649	176 / 177	47	124
Electrical machines. Discharge device for	A. Schmid	405,124	June 11	1091	290	47	1448
Electrically-controlled engine	J. E. Byrne	404,894	June 11	767	196	47	1383
Electrically-controlled engine	J. E. Byrne	405,010	June 11	931	247 / 278	47	1416
Electricity. Apparatus for generating	T. Gleeson	405,471	June 18	1631	431	47	1562
Electricity by secondary batteries. Distributing	W. W. Griscom	404,968	June 11	875	220	47	1405
Electricity by secondary batteries. Distribution of	W. W. Griscom	400,843	Apr. 2	622	169	47	119
Electricity by secondary batteries. Distribution of	W. W. Griscom	402,566	May 7	53	13	47	674
Electricity by secondary batteries. Distribution of	M. Pfatischer	402,349	Apr. 30	2930	750	47	593
Electricity by secondary batteries. Distribution of	G. B. Prescott, Jr	402,190	Apr. 30	2690	690	47	548
Electricity by secondary batteries. Distribution of	G. B. Prescott, Jr	402,192	Apr. 30	2693	690	47	549
Electricity. System of transmitting and distributing	S. C. C. Currie	401,255	Apr. 9	1240	333	47	245
Electricity to propel vehicles. Apparatus for the application of	F. Wynne	404,322	Apr. 9	1341	357 / 358	47	965
Electro-dynamic motor	C. J. Van Depoele	404,324	May 28	2696	700 / 701	47	1203
Electro locomotive-engine	S. Z. De Ferranti	402,311	Apr. 30	2867	742	47	582
Electro-magnetic forces by weight. Apparatus for determining the value of	A. Gipperich	400,663	Apr. 2	339	92, 93	47	68
Electro-magnetic motor	N. Tesla	405,858	June 25	2228	586	47	1684
Electro magnetic motors. Operating	N. Tesla	401,520	Apr. 16	1646	435	47	333
Electro-magnetic transmitter	J. T. Williams	403,194	June 11	1205	320	47	1470
Electrode for electro-therapeutic body-wear	H. P. Pratt	405,176	June 11	1173	312	47	1464
Electrodes for secondary batteries. Preparing	W. Main	401,291	Apr. 9	1302	346	47	255
Electroller	J. M. Orford	405,742	June 25	2073	549	47	1653
Electroplating lead pipes	L. D. Hosford	403,429	May 14	1335	.....	47	923
Electrotype-molds. Apparatus for metallizing	S. P. Knight	403,197	May 14	969	255	47	855
Electrotypes. Forming curved	G. H. Benedict and P. M. Furlong	401,631	Apr. 16	1846	481	47	370
Electrotypes. Machine for blackleading the molds for	W. Miles	405,585	June 18	1605	478	47	1599
Electrotypes. Matrix-plate for curved	G. H. Benedict and P. M. Furlong	401,729	Apr. 23	1968	521	47	407
Elevating-machine	J. E. Byrne	404,893	June 11	764	195	47	1382
Elevating-machine. Electric	J. E. Byrne	404,895	June 11	768	199 / 197	47	1383
Elevator: *See* Hay-elevator. Ice-elevator. Hydraulic elevator. Water-elevator.							
Elevator	W. H. Milliken	401,449	Apr. 16	1537	407	47	313
Elevator	I. H. Venn	400,613	Apr. 2	264	73	47	35
Elevator	A. B. Wall	404,808	June 4	635	163	47	1351
Elevator and conveyer	J. S. Rogers	405,325	June 18	1404	370	47	1517
Elevator and conveyer	C. J. Seymour	404,660	June 4	431	108	47	1309
Elevator-belt shifter	E. W. Houser	401,951	Apr. 23	2318	603	47	468
Elevator-belt-shifting appliance	W. E. Nickerson	403,690	May 21	1715	453	47	1006
Elevator-car-operating device	G. W. Porter	402,277	Apr. 30	2810	728 / 729	47	572
Elevator-carriages. Electric controlling device for	W. E. Nickerson	403,439	May 14	1351	353	47	926
Elevator-controller	W. E. Nickerson	404,013	May 28	2191	575 / 576	47	1106
Elevator-controlling mechanism	W. E. Nickerson	404,012	May 28	2190	575	47	1105
Elevator. Electrically-controlled	W. E. Nickerson	403,441	May 14	1355	356	47	927
Elevator-gate	O. L. Davis	402,412	Apr. 30	3023	785	47	611
Elevator safety-brake	W. E. Nickerson	403,438	May 14	1350	353	47	926
Elevator safety device	P. G. Backman	401,106	Apr. 9	1018	273	47	201
Elevator safety device	T. W. Heermans	403,682	May 21	1679	446	47	999
Elevator safety device	W. E. Nickerson	405,371	June 18	1466	388	47	1529
Elevator safety device	P. B. Sullivan	402,760	May 7	342	88	47	727
Elevator slack-rope stop	W. E. Nickerson	404,014	May 28	2193	570	47	1106
Elevator-wells. Mechanism for operating the gates or doors of	O. L. Davis	402,411	Apr. 30	3020	784	47	610
Elevators. Electric controlling device for	W. E. Nickerson	403,440	May 14	1353	356	47	926
Elevators. Electric controlling mechanism for	W. E. Nickerson	403,442	May 14	1357	357	47	927
Elevators. Electrical apparatus for controlling	R. F. McFeely	404,361	May 28	2753	714 / 715	47	1213
Elevators. Electrical switch for	W. E. Nickerson	403,691	May 21	1716	453 / 454	47	1007
Elevators. Electrical switch for	W. E. Nickerson	404,015	May 28	2194	576	47	1106
Elevators. Electrical switch for	W. E. Nickerson	404,221	May 28	2544	663	47	1174
Elevators. Fluid speed-regulator for	W. E. Nickerson	403,436	May 14	1348	354	47	925
Elevators. Fluid speed-regulator for	W. E. Nickerson	403,437	May 14	1349	354	47	925
Embossed metallic plate	A. C. Hafely. (Reissue)	11,003	May 21	2027	.....	47	1066
Embroidering and edging machine	E. and R. Cornely	405,146	June 11	1119	297 / 298	47	1453
Embroidering-machine	E. and R. Cornely	405,147	June 11	1122	299	47	1454
Embroidering-machine	A. Saurer and E. Leuthold	403,221	May 14	1010	267 / 268	47	863
Embroidering-machine frame	J. Frey	401,260	Apr. 9	1257	335	47	247
Emery or other wheels. Apparatus for revolving	A. Altenburg	405,979	June 25	2427	635	47	1718
Emery-wheels. Instrument for cutting or grinding	W. Diebel	401,823	Apr. 23	2134	557	47	433
Emphysema. Electrically-controlled apparatus for treating	A. Steinhoff	402,779	May 7	340	88	47	736

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
End-gate	H. C. Bennett	402,891	May 7	497	139	47	756
End-gate	A. H. Stark	402,111	Apr. 23	2569	667	47	516
End-gate. Vehicle	T. B. Burr	404,071	May 28	2302	603	47	1128
End-gate. Wagon	A. E. Beason	403,241	May 14	1041	275	47	868
End-gate. Wagon	H. A. Larson	402,944	May 7	576	156	47	772
End-gate. Wagon	J. A. McClellan	403,480	May 14	1415	379	47	937
End-gate. Wagon	W. R. Watt	403,628	May 21	1627	430 / 431	47	988
Enema of oxygen. Apparatus for administering	J. E. Casey and A. W. Browne	402,302	Apr. 30	2853	739	47	580
Engine: *See* Air-engine. Air and gas engine. Compound engine. Direct-acting engine. Duplex engine. Electric reciprocating engine. Electrically-controlled engine. Electro locomotive-engine. Expansion-engine. Gas-engine. Gas or air engine. Gas or gasoline engine. Gas or hydrocarbon-vapor engine. Hoisting-engine. Hydraulic engine. Locomotive-engine. Low-pressure engine. Motive-power engine. Motor-engine. Pumping-engine. Rotary engine. Rotary steam-engine. Steam-engine. Tide and lock power engine. Traction-engine.								
Engine	J. Jonson	402,086	Apr. 23	2528	659	47	508
Engine	J. F. Shawhan	403,150	May 14	886	224	47	838
Engine compensating device	G. F. Blake	404,338	May 28	2720	705 / 706	47	1207
Engine-lubricating device. Steam-	A. L. Ide	400,682	Apr. 2	369	100	47	73
Engine reversing-gear. Steam-	D. A. Frazer	403,881	May 21	1997	525	47	1060
Engine-shafts. Electric indicator for	J. C. Ricketson	404,867	June 11	729	186	47	1375
Engine-shafts. Electric signal for	J. C. Ricketson	404,866	June 11	727	186	47	1375
Engines and other machinery. Adjustable carriage for Jordan	E. W. Barton	405,523	June 18	1713	453	47	1580
Engines. Balanced piston for steam-	W. J. Thomas	405,132	June 11	1100	293	47	1450
Engines. Casing for marine	J. D. Copeland	402,403	Apr. 30	3008	781	47	608
Engines. Device for connecting the cranks of two independently-acting	E. D. Leavitt, Jr	402,255	Apr. 30	2782	721	47	566
Engines. Gearing for road-	J. W. Stringer	403,000	May 7	644	170	47	785
Engines. Gearing for traction-	L. Ames, Jr., and J. H. Abercrombie	402,881	May 7	484	127	47	753
Engines. Powder-gas boiler for	O. and H. Schneider	405,229	June 11	1257	333	47	1480
Engines. Reverse-link for steam-	J. R. Snyder and J. Deets	400,960	Apr. 9	806	215	47	164
Engines. Reversing mechanism for	J. W. Stringer	400,805	Apr. 2	565	155	47	108
Engines. Starting-gear for compound	R. Lindner	404,295	May 28	2650	689	47	1194
Engines. Steam-cylinder for steam-	E. D. Leavitt, Jr	402,256	Apr. 30	2783	731	47	566
Engraving	W. S. Eaton	402,314	Apr. 30	2873	744	47	583
Engraving and chasing machine	W. W. Bradley	402,135	Apr. 30	2612	676 / 677	47	533
Engraving-machine	C. H. Field	402,316	Apr. 30	2875	745	47	584
Ensilage. Manufacturing	C. G. Johnson	402,248	Apr. 30	2773	717	47	564
Envelope	J. O. Donnell	403,604	May 21	1593	422	47	981
Envelope	E. Morgan	404,296	May 28	2654	690	47	1195
Envelope and stamp moistener	A. J. Elias	401,141	Apr. 9	1069	286	47	211
Envelope-machine	A. A. Rheutan	401,462	Apr. 16	1557	412 / 413 / 414	47	317
Envelope-machine	F. H. Richards	401,718	Apr. 16	1964	512 / 513 / 514	47	391
Envelope. Sample-	G. S. Van Woert	400,584	Apr. 2	146	38	47	31
Eraser. Blackboard-	S. C. Davis	402,570	May 7	31	8	47	669
Eraser. Blackboard-	F. Hammer	402,925	May 7	546	144	47	766
Eraser. Blackboard-	W. F. Jones	405,096	June 11	1051	281	47	1441
Eraser. Chalk-	W. H. Londerzon	400,465	Apr. 2	54	16	47	14
Eraser. Ink-	H. Baldwin and J. J. Smith	402,710	May 7	231	60	47	707
Eraser. Ink-	C. W. Johnston	403,674	May 21	1603	448	47	1002
Evaporating apparatus	R. J. Hoffman	405,738	June 25	2065	542	47	1651
Evaporating saccharine or other liquids. Apparatus for	A. Young	401,238	Apr. 9	1219	325	47	240
Excavating. Hydraulic	D. N. Long	404,852	June 11	704	181	47	1371
Excavating-machines. Steam-pipe joint for	L. Birckhead	402,555	May 7	3	2	47	664
Excavator	I. P. Lambing	403,762	May 21	1823	478 / 479	47	1026
Excavators. Loading and unloading mechanism for sewer-	N. E. Green	402,016	Apr. 23	2414	629 / 630	47	486
Exercising-bar	S. B. Stockburger	405,128	June 11	1095	292	47	1449
Exercising-machine	J. J. Sleeper	404,802	June 4	627	161	47	1348
Exhaust mechanism	J. D. Smith	404,739	June 4	531	136	47	1329
Exhibiting apparatus	C. S. Jenkins	403,673	May 21	1690	447	47	1001
Expansible frame	G. H. Lyon	402,755	May 7	302	78	47	730
Expansion-engine. Quadruple	J. Hang	403,266	May 14	1085	286 / 287	47	875
Expectorant	J. W. Bradley	402,296	Apr. 30	2838	.....	47	577
Explosives. Manufacturing	J. A. Halbmayr	403,749	May 21	1804	475	47	1023
Extension-table	E. L. Matteson	400,701	Apr. 2	395	107	47	78
Extension-table	E. H. W. and H. W. Stahlhuth	401,310	Apr. 9	1327	353	47	261
Extractor: *See* Compression-extractor. Cork-extractor. Nail-extractor. Stump-extractor.							
Eye-bars. Die for making	J. F. Kingsley. (Reissue)	11,001	Apr. 30	3244	842	47	654
Eye-bars. Die for upsetting	W. R. Webster	400,979	Apr. 9	831	222	47	168

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fabric: *See* Corded or elastic Fence fabric.							
Fabrics. Device for guiding the edges of	J. J. Scholfield	402,483	Apr. 30	3142	814	47	634
Fabrics. Forming an ornamental border on	J. M. Merrow	402,468	Apr. 30	3123	810	47	630
Fabrics. Machine for tentering and drying	F. Craven	401,932	Apr. 23	2293	594 / 595	47	463
Fan attachment	J. R. Stettheimer	402,283	Apr. 30	2824	730	47	574
Fan-shafts. Hanger for rotary	R. B. Cissel	402,306	Apr. 30	2859	739	47	581
Fan. Suspension fly-	W. C. Whitner	401,586	Apr. 16	1656	437 / 438	47	335
Fanning-mill	R. Miller	403,852	May 21	1963	515	47	1053
Fare-register	J. L. Harley	402,445	Apr. 30	3084	799 / 800	47	623
Farm-gate	C. M. Gitt	401,648	Apr. 16	1870	486	47	372
Farm-gate	S. S. and J. G. Sherman	402,489	Apr. 30	3150	815	47	635
Faucet	W. W. Kimball	400,691	Apr. 2	381	103	47	75
Faucet	E. U. Scoville	405,277	June 18	1738	353	47	1502
Faucet. Automatically-closing	E. E. Furney	402,075	Apr. 23	2508	656	47	504
Faucet. Basin-	B. Johnson	401,952	Apr. 23	2320	603	47	469
Faucet. Detachable	R. Marsh	402,961	Apr. 30	2793	723	47	568
Faucet. Measuring-	J. H. Kell	405,891	June 25	2274	598	47	1622
Faucet. Self-closing	K. Maier	401,288	Apr. 9	1292	345	47	253
Faucet. Sirup-	E. Haas	404,192	May 28	2489	651	47	1165
Feculent-matter receiver	O. D. McClellan	401,709	Apr. 16	1948	508 / 509	47	387
Feed-bag	W. M. Brooke	401,001	Apr. 9	868	233	47	175
Feed-bag	J. H. Williams	403,867	May 21	1990	520	47	1037
Feed-box	J. W. Jacobs	405,260	June 18	1313	346	47	1496
Feed-cutter and corn-husker. Combined	A. Rosenthal	401,719	Apr. 16	1969	514 / 515	47	392
Feed mechanism	F. H. Richards	404,365	May 28	2762	718	47	1215
Feed-mill	A. L. Eppley	400,447	Apr. 2	34	11	47	10
Feed-mill	G. D. Rowell	402,618	May 7	98	24	47	693
Feed-regulator	N. Sanders and J. Buchanan	402,979	May 7	617	162	47	780
Feed-regulator	J. B. Wheatley	400,720	Apr. 2	425	115	47	84
Feed-regulator. Automatic	C. A. Miller	403,056	May 7	727	190	47	801
Feed-regulator for roller-mills	J. W. Wilson	400,990	Apr. 9	848	227	47	171
Feed-trough	G. D. Burton	401,249	Apr. 9	1241	330	47	243
Feed-water heater	C. E. Ferreira	405,154	June 11	1141	304	47	1458
Feed-water heater	J. H. Vail	404,512	June 4	221	58	47	1265
Feed-water heater and purifier	H. D. Baragwanath	402,645	May 7	134	32	47	689
Feed-water heater and purifier	M. W. Hazelton	400,677	Apr. 2	361	99	47	73
Feed-water heater and regulator	N. Clute	404,683	June 4	462	116 / 117	47	1315
Feed-water purifier	W. J. Smith	402,199	Apr. 30	2701	701 / 702	47	551
Feeder. Calf-	W. L. Spencer	400,962	Apr. 9	809	216	47	164
Feeder. Fluid-	W. B. Wright	405,934	June 25	2351	617	47	1704
Felt boot	J. Vail	404,449	June 4	113	27	47	1247
Felt-hardening machines. Cone or former for	J. and D. Pendergast	404,362	May 28	2757	715	47	1214
Fence	W. E. and C. W. Arnett	404,026	May 28	2208	580	47	1109
Fence	J. M. Fellows	402,720	May 7	255	67	47	712
Fence	E. Gilbert	402,732	May 7	257	68	47	713
Fence	E. Gilbert	402,817	May 7	308	104	47	736
Fence	G. A. Horn	402,595	May 7	65	15	47	676
Fence	W. C. Lathrop	402,678	May 7	187	47	47	699
Fence	R. J. Reimer	400,711	Apr. 2	400	111	47	81
Fence	J. D. Rodgers	405,120	June 11	1086	289	47	1447
Fence	L. F. Wickers and B. C. Wickears	403,977	May 28	2140	550	47	1096
Fence. Apparatus for making wood-and-wire	M. F. Fink	402,815	May 7	306	104	47	737
Fence. Barbed	C. S. Trevitt and S. F. Monck	404,879	June 11	746	190	47	1378
Fence-building	D. R. Barton	400,429	Apr. 2	9	3	47	5
Fence fabric. Wire-	B. Scarles	400,954	Apr. 9	797	213	47	162
Fence gate. Barbed-wire-	T. M. Sampson	403,249	May 14	1068	266	47	862
Fence machine. Picket-	E. Ransom	404,933	June 11	823	211	47	1304
Fence machine. Wire-	E. Hutson	405,094	June 11	1049	280	47	1440
Fence-making machine	A. A. Parker and J. F. Landers	401,298	Apr. 9	1311	348 / 349 / 350	47	257
Fence-making machine	J. B. Steen	405,510	June 18	1694	448	47	1576
Fence-panel. Folding adjustable	J. J. Ogilvie	404,856	June 11	710	182	47	1372
Fence-pickets. Machine for pointing	C. B. Rice	405,181	June 11	1180	314	47	1465
Fence-post	W. Crabb	403,991	May 28	2162	568	47	1100
Fence-post	A. F. Elsey	405,251	June 18	1298	343	47	1494
Fence-post	H. B. Grant	402,666	May 7	169	43	47	695
Fence-post	J. Kelly	404,788	June 4	508	157	47	1344
Fence-post base	W. H. Thomson	405,445	June 18	1584	418	47	1532
Fence-riveting machine	W. W. McCallip	403,950	May 28	2101	550	47	1088
Fence-signal	J. Schlyer	405,851	June 25	2218	584	47	1662
Fence tightener. Wire-	E. Warner	404,938	June 11	829	215	47	1395
Fence. Wire	J. N. and N. Lehman	401,567	Apr. 16	1725	454	47	347
Fence. Wire	W. H. Mitchell	401,450	Apr. 16	1537	407	47	314
Fences. Guard for barbed-wire	M. B. Chappell	401,133	Apr. 9	1060	283	47	209
Fences. Machine for building wire-and-picket	J. M. Keith	405,800	June 25	2273	597 / 598	47	1692
Fences. Tension device for wire	D. H. Scott	400,606	Apr. 2	254	69	47	53
Ferrule for reel-plates	J. P. H. Hook	402,594	May 7	64	15	47	676
Fertilizer-distributer	J. Bender	400,731	Apr. 2	442	119	47	87
Fertilizer-distributer	J. S. Kemp	405,561	June 18	1771	467 / 468	47	1592
Fertilizers. Making	H. Endemann	404,348	May 28	2735	710	47	1209
Fertilizers. Mechanism for deodorizing refuse matter and converting it into	O. D. McClellan	404,360	May 28	2751	714	47	1213

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Fibrous materials. Disintegrating	R. P. Pictet	404,431	June 4	84	21	47	1242
Filaments. Apparatus for treating	F. S. Smith	404,118	May 28	2372	622	47	1143
File and binder. Transferring paper	W. A., Jr., and C. S. Cooke	403,826	May 21	1921	504	47	1046
File-band clasp	E. J. Hall and H. I. Norton	405,958	June 25	2388	630	47	1711
File-box	J. A. Rhoads	402,195	Apr. 30	2697	704	47	550
File case or cabinet	W. T. Wood	402,377	Apr. 30	2964	765	47	600
File case or cabinet	W. T. Wood	403,168	May 14	914	240	47	843
File. Document or letter	E. W. Woodruff	404,438	June 4	127	31	47	1249
File. Letter	L. A. Merk	404,920	June 11	805	207	47	1390
File. Newspaper	T. Lomas	402,024	Apr. 23	2429	632	47	489
File. Paper	B. Petsche	405,596	June 18	1821	472	47	1602
File. Portable scrap	C. W. Taylor	400,968	Apr. 9	815	210	47	166
File. Prescription	A. J. Shaul	402,488	Apr. 30	3149	815	47	635
File rack. Newspaper	C. H. Towne	403,797	May 21	1880	494	47	1039
Filing index. Paper	W. A. Cooke, Jr.	402,401	Apr. 30	3006	780	47	607
Filing-receptacle	A. L. Brown	404,772	June 4	577	148	47	1339
Filter	J. Davis	402,656	May 7	149	37, 38	47	692
Filter	J. Davis	402,657	May 7	151	38, 39	47	692
Filter	J. Davis	402,658	May 7	154	39, 40	47	693
Filter	J. Davis	402,659	May 7	159	40	47	693
Filter	J. Davis	402,661	May 7	161	41	47	694
Filter	H. E. Gasquet	405,406	June 18	1517	403	47	1540
Filter	H. Roeske	402,543	Apr. 30	3227	{836 837}	47	650
Filter	J. E. Warren	404,236	May 28	2502	668	47	1178
Filter	A. Wilbur	400,864	Apr. 2	682	185	47	131
Filter-beds. Strainer for granular	J. W. Hyatt	404,911	June 11	793	{202 203}	47	1388
Filter-beds. Valve mechanism for washing	J. W. Hyatt	402,738	May 7	276	71	47	715
Filter. Beer	O. Zwietusch	402,500	Apr. 30	3165	820	47	638
Filter. Oil	A. C. Darragh	401,544	Apr. 16	1690	446	47	340
Filter-press	J. Johnson	402,455	Apr. 30	3099	804	47	626
Filter. Water	J. V. Blake and F. C. Wilson	400,736	Apr. 2	449	120	47	89
Filter. Water	C. B. Davis and E. H. Riddell	404,962	June 11	868	227	47	1403
Filtering apparatus	R. Cooper, H. F. Clayton, and G. H. Holdroyd.	401,930	Apr. 23	2291	594	47	463
Filtering apparatus	C. H. Denison	402,147	Apr. 30	2928	680	47	536
Filtering apparatus	J. W. Hyatt	404,708	June 4	492	125	47	1321
Filtering apparatus	B. F. Perkins	401,057	Apr. 9	947	{232 233}	47	189
Filtering apparatus	C. W. Rabitz	403,073	May 7	768	200	47	807
Filtering water. Apparatus for	G. D. Gerson	402,433	Apr. 30	3072	795	47	620
Fin for vessels	G. W. Napier	400,592	Apr. 2	234	63	47	49
Finger-nails. Device for trimming and filing	C. P. Tener	403,003	May 7	648	171	47	786
Finger-pull. Coin-operated	W. H. Gilman	403,995	May 28	2168	560	47	1101
Finger-ring	L. L. Burdon	404,956	June 11	852	222	47	1400
Finger-ring	M. Freed	402,011	Apr. 23	2408	627	47	485
Finger-shield and fountain attachment	J. Patmor	402,185	Apr. 30	2685	698	47	547
Fire-alarm signal-box. Non-interfering	J. J. Ruddick	404,438	June 4	92	23	47	1243
Fire-alarm-testing apparatus	J. Young	402,642	May 7	129	31, 32	47	689
Fire-alarms. Thermal circuit-closer for	A. C. Iwanowski	400,917	Apr. 9	739	190	47	151
Fire-arm. Breech-loading	W. Anson	401,101	Apr. 9	1010	{270 271}	47	200
Fire-arm. Breech-loading	C. G. Bonehill	404,380	June 4	13	3	47	1227
Fire-arm. Breech-loading	W. Dicer and C. M. Barker	404,779	June 4	591	{153 154}	47	1341
Fire-arm. Breech-loading	E. Harrison	404,082	May 28	2315	597	47	1131
Fire arm. Breech-loading	C. A. King	402,675	May 7	183	46	47	698
Fire-arm. Breech-loading	J. H. and S. H. Redfield	403,959	May 28	2112	533	47	1091
Fire-arm. Breech-loading	C. M. Rider	400,712	Apr. 2	410	112	47	91
Fire-arm lock	C. J. Ehbets	402,423	Apr. 30	3051	769	47	617
Fire-arm. Magazine	A. Mieg and H. Bischoff	400,472	Apr. 2	66	20	47	16
Fire-arm. Magazine	L. Silverman	405,375	June 18	1470	{369 370}	47	1529
Fire-arm. Revolving	M. Kaufmann	402,331	Apr. 30	2898	731	47	588
Fire-arm. Revolving	D. B. Wesson	401,067	Apr. 9	966	263	47	196
Fire-arm sight	J. S. Blankman	403,242	May 14	1042	276	47	868
Fire-arm sight	J. W. Carver	404,598	June 4	351	94	47	1291
Fire-arm sight	J. W. Carver	404,599	June 4	352	94	47	1292
Fire-arm sight	J. J. Speed	400,715	Apr. 2	418	113	47	83
Fire-arms. Magazine for	P. Mauser	403,765	May 21	1831	491	47	1028
Fire-arms. Trigger-setting mechanism for	L. W. Gay	402,918	May 7	533	141	47	703
Fire-escape	I. H. Athey	402,053	Apr. 23	2474	645	47	497
Fire-escape	R. Belches	402,389	Apr. 30	2963	775	47	604
Fire-escape	W. Bruce	405,945	June 25	2372	622	47	1708
Fire-escape	F. D. Chandler	404,029	May 28	2221	582	47	1111
Fire-escape	W. S. Coon	405,307	June 18	1505	{399 400}	47	1537
Fire-escape	J. Flynn	400,656	Apr. 2	319	90	47	66
Fire-escape	P. Goldmann	402,437	Apr. 30	3076	796	47	621
Fire-escape	C. A. Luce	400,779	Apr. 2	515	{141 142}	47	100
Fire-escape	C. O. Rose	400,873	Apr. 2	665	181	47	127
Fire-escape	S. H. Sprague	401,598	Apr. 16	1763	468	47	357
Fire-escape	G. W. Worden	404,514	June 4	222	53	47	1266
Fire-escape ladder and truck	A. Frederick	401,468	Apr. 16	1600	422	47	325
Fire-extinguisher	T. C. Rice	402,970	May 7	605	159	47	778
Fire-extinguisher. Automatic	C. W. Kersteter	400,688	Apr. 2	377	102	47	74
Fire-extinguisher for ships	W. D. T. Travis	404,132	May 28	2393	627	47	1146
Fire-extinguishing apparatus	C. Kilburn	403,759	May 21	1819	478	47	1026
Fire-kindler	W. R. Myers	403,771	May 21	1841	484	47	1030
Fire-place heater	T. B. Jackson	405,707	June 25	2019	530	47	1643
Fire-pot linings. Joint for	S. D. Horton	400,848	Apr. 2	629	161	47	121

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Fire-proof plaster-cloth for ceilings and walls	A. J. Paris	401,967	Apr. 23	2339	608	47	472
Fires in passenger-cars. Device for extinguishing	S. H. Harrington	401,494	Apr. 16	1608	424	47	326
Fires. Portable apparatus for extinguishing	H. C. Rew	405,717	June 25	2034	584	47	1646
Fireman's electric-wire cutter	D. A. Woodhouse and T. V. Forster	404,667	June 4	440	{110 111}	47	1310
Fireproofing compound	C. W. Doughty	402,235	Apr. 30	2753	.....	47	561
Fish-hook guard	C. W. Teed	404,747	June 4	544	139	47	1332
Fish-plate and chair	G. A. Weber	402,371	Apr. 30	2958	767	47	599
Fishing-lines. Sinker for	J. L. and D. H. Coles	402,231	Apr. 30	2747	712	47	559
Fishing-net frames. Hinge-screw coupling for	J. G. Landman	403,680	May 21	1702	450	47	1004
Fishing-reel	C. K. Bradford	403,733	May 21	1784	469	47	1019
Fishing-reel	F. Carey	402,653	May 7	145	36	47	691
Fishing-reel	F. Carey. (Reissue)	11,006	June 11	1277	337	47	1484
Fishing-reel	P. G. Girond	405,731	June 25	2054	540	47	1649
Fishing-reel	G. Paddock	401,849	Apr. 23	2164	564	47	439
Fishing-reels. Line-guide for	C. E. Mollet and C. Raettig	401,049	Apr. 9	933	249	47	187
Flask: *See* Powder-flask.							
Flax. Apparatus for steeping	T. L. Henly	405,091	June 11	1045	279	47	1440
Flood-gate	H. A. Wright	404,761	June 4	562	144	47	1336
Flooring-block	W. Boelling	401,479	Apr. 16	1588	420	47	322
Flooring-jack	H. F. Townsend and C. T. Winslow	401,868	Apr. 23	2188	572	47	444
Flooring. Parquet or other	J. F. Ebner	405,021	June 11	951	254	47	1420
Flour bin and sifter	T. F. Crary	401,254	Apr. 9	1247	332	47	245
Flour bin and sifter	J. H. Thomas	403,974	May 28	2136	559	47	1095
Flour-bolt	J. Johnston	403,675	May 21	1693	448	47	1009
Flour-bolt	J. Johnston	403,757	May 21	1816	477	47	1025
Fluid-releasing device	D. Olmsted	405,320	June 18	1397	368	47	1515
Fluid-separator	T. J. Newsome	405,017	June 11	991	264	47	1429
Fluids. Apparatus for drawing effervescing	J. H. Walton	405,135	June 11	1103	294	47	1450
Flushing apparatus	J. J. Ricketts	405,912	June 25	2317	608	47	1698
Flushing-cistern for water-closets, &c	T. and J. Holt	402,246	Apr. 30	2770	717	47	563
Flushing device for urinals	R. Murphy and C. W. Atkinson	401,575	Apr. 16	1735	457	47	349
Flushing device for water-closets, &c	R. Murphy and C. W. Atkinson	401,576	Apr. 16	1737	457	47	349
Flushing urinals, &c. Apparatus for	S. H. Wright	401,321	Apr. 9	1339	{356 357}	47	264
Flux-carrier	J. C. Bayles	405,886	June 25	2240	589	47	1686
Fly-catcher	C. E. K. Andersson	401,946	June 11	838	218	47	1397
Fly-catcher	A. Arents	402,382	Apr. 30	2974	772	47	602
Fly-fan	H. S. Brewington	404,860	June 11	760	194	47	1361
Fly-fan	C. F. Wisloh	405,063	June 11	1013	271	47	1434
Fly-paper holder and trap. Combined sticky	O. and W. Thum. (Reissue)	11,000	Apr. 30	3242	841	47	653
Fly-paper. Preparing	A. B. Trenner	402,570	May 7	472	123	47	751
Fly-trap	J. E. Packard	404,727	June 4	518	132	47	1326
Fly-trap	G. W. Russell	402,977	May 7	615	161	47	780
Fly-trap	A. S. Schuyler	404,565	June 4	301	72	47	1282
Fly-wheel. Sectional	R. B. Collier	402,564	May 7	21	6	47	667
Fodder-binder	H. E. Fairchild	405,237	June 11	1271	336	47	14 2
Folding boat	D. H. Allen and W. H. Gamble	403,171	May 14	918	{241 242}	47	844
Folding bracket	J. H. Pilson	403,775	May 21	1846	485	47	1031
Folding chair	K. T. Hurlburt	405,830	June 25	2001	579	47	1679
Folding chair	J. E. Purdy and D. A. Sadgwar	405,117	June 11	1061	288	47	1416
Folding chair for steamers, &c	C. F. Batt	404,589	June 4	339	81	47	1289
Folding chair or settee	H. J. Harwood	404,836	June 11	683	176	47	1368
Folding gate	D. E. Ladd	404,007	May 28	2184	574	47	1104
Food compound. Dessert	W. P. Clotworthy	405,013	June 11	937	.....	47	1417
Food for fish. Producing	F. Lugrin and E. Du Roveray	405,713	June 25	2028	532	47	1645
Foot-guard	T. A. Griffin	403,998	May 28	2174	570	47	1102
Foot-rest. Adjustable	G. P. Bedford	402,130	Apr. 30	2605	675	47	532
Forging-machine	J. A. Hamer	403,586	May 21	1572	415	47	977
Forging-machine	H. Hammond	400,670	Apr. 2	351	95, 96	47	70
Fork: *See* Hay-fork.							
Fork	O. Kramer	403,536	May 21	1511	396	47	965
Fork-guard	R. B. B. Clayton	404,777	June 4	569	152	47	1341
Fountain: *See* Drinking-fountain. Tank-fountain. Poultry drinking-fountain.							
Fracture apparatus	W. H. De Camp	401,933	Apr. 23	2289	596	47	464
Frame: *See* Awning-frame. Bed-frame. Car-frame. Caster-frame. Clock-frame. Crystallizing-frame. Embroidering-machine frame. Expansible frame. Harvester-frame. Harvester elevator-frame. Lantern-frame. Photographic-printing frame. Spectacle-frame. Spectacle or eyeglass frame. Spinning-frame. Tile-frame. Umbrella-frame.							
Freight elevating and transporting apparatus	W. H. Russell	404,658	June 4	428	107	47	1308
Friction-generator	H. E. Waite	405,334	June 18	1418	373	47	1520
Frog. Replacing	J. J. Ladd	404,095	May 28	2335	612	47	1135
Frogs, switches, &c. Foot-guard for	C. H. Wakefield	402,209	Apr. 30	2719	706	47	554
Fruit-box	V. Wheat	404,880	June 11	747	190	47	1379
Fruit-drier	F. Altman	400,993	Apr. 9	856	229	47	173
Fruit-gatherer	C. H. Curtis	405,017	June 11	945	252	47	1419

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fruit-gatherer	W. J. Wingenroth	403,500	May 14	1447	299	47	944
Fruit-picker	W. P. Craig	403,331	May 14	1188	315	47	896
Fruit-picker	E. S. Harpst	405,410	June 18	1593	404	47	1540
Fruit-stoning machine	J. S. Briggs and W. E. Leach	404,517	June 4	294	55	47	1267
Frying-pan	M. S. Tracy	404,131	May 28	2301	606	47	1146
Fuel. Artificial	I. C. Bandman	405,865	June 25	2239	.....	47	1686
Fuel. Artificial	A. K. and C. M. Murray	401,365	Apr. 16	1414	.....	47	290
Fuel-magazine	J. D. Greene and J. C. Treman	400,909	Apr. 9	720	195	47	148
Fuel-saving device	A. C. Greenlee	404,702	June 4	487	113	47	1320
Funnel	C. Xander and W. Thomas	402,379	Apr. 30	2069	770	47	601
Funnel apparatus. Jar-holding	M. Ellis	401,467	Apr. 16	1598	422	47	324
Furnace: *See* Air-heating furnace. Bed-furnace. Blast-furnace. Boiler-furnace. Brick-kiln furnace. Calcining-furnace. Cupola or blast furnace. Gas-furnace. Glass-melting furnace. Heating-furnace. Hot-air furnace. Melting-furnace. Metallurgical furnace. Ore-roasting furnace. Regenerative furnace. Smoke and gas consuming furnace. Warm-air furnace. Zinc-furnace.							
Furnace	E. F. Edgar	402,514	Apr. 30	3186	824 / 825	47	642
Furnace	M. A. Foster	401,546	Apr. 16	1693	446 / 447	47	341
Furnace	M. Perret	402,474	Apr. 30	3132	811 / 812	47	632
Furnace and apparatus for producing and burning gaseous vapors	G. H. Harvey	403,839	May 21	1944	511	47	1050
Furnace-cover	W. Sleicher, Jr.	403,152	May 14	890	234 / 235	47	839
Furnace-grate	T. Henderson	403,840	May 21	1946	511	47	1050
Furnace-grate	W. H. Lahman	401,955	Apr. 23	2326	604	47	470
Furnace-grate bar	E. Boileau	403,730	May 21	1781	468 / 469	47	1018
Furnace-grate for portable engines	S. E. Burke	400,824	Apr. 2	597	153	47	114
Furnace-grate. Self-feeding	L. Hoperaft	404,706	June 4	490	124	47	1320
Furnace-joint. Sectional	E. Gurney	401,427	Apr. 23	2140	558	47	434
Furnaces. Indicating device for charging	E. Walsh, Jr.	401,521	Apr. 16	1649	435	47	333
Furnaces. Jet attachment for	M. A. Foster	405,956	June 25	2386	625	47	1710
Furnaces. Means for controlling the flow of oil to injector-burners for steam-boiler	S. Braggina	402,896	May 7	503	133	47	757
Furnaces. Operating electric	J. C. Hobbs	403,752	May 21	1807	475	47	1023
Furnaces. Peel for heating	S. M. Guss	402,588	May 7	57	13	47	674
Furnaces. Promoting combustion in	W. P. White and R. Wallbank	405,817	June 25	2169	570	47	1672
Furnaces. Smoke-preventer for	H. E. Piggott	400,709	Apr. 2	407	110 / 111	47	81
Furniture-spring	A. M. Gjestvang	402,434	Apr. 30	3073	795	47	620
Fuse or igniting device for projectiles	W. Kennish	400,687	Apr. 2	375	102	47	74
Gaff-topsail for vessels	L. W. Falck	403,257	May 14	1065	280	47	872
Gage: *See* Drill-gage. Micrometer-gage. Pressure-gage. Saw-table gage. Surface-gage. Vacuum or pressure gage. Water-gage.							
Galvanic battery	D. J. Arnold	403,868	May 21	1981	520	47	1057
Galvanic battery	J. A. Barrett	405,196	June 11	1210	321	47	1471
Galvanic battery	W. A. Childs	405,246	June 18	1290	341	47	1493
Galvanic battery	C. Collé	403,253	May 14	1059	279	47	871
Galvanic battery	E. H. Crosby	400,430	Apr. 2	10	3	47	5
Galvanic battery	W. Frishmuth	404,699	June 4	485	122	47	1319
Galvanic battery	W. P. Kookogey	402,166	Apr. 30	2661	699	47	542
Galvanic battery	J. H. Phalan	401,059	Apr. 9	950	253	47	189
Galvanic battery	R. J. Pratt	402,104	Apr. 23	2550	665	47	514
Galvanic battery	J. Serson	405,609	June 18	1841	488	47	1606
Galvanic battery	J. C. Vetter	403,802	May 21	1891	497	47	1041
Galvanic battery. Portable	A. Friedländer	402,915	May 7	528	139	47	762
Galvanometer. Portable tangent	E. Weston	403,312	May 14	1154	307	47	889
Galvanometer. Standard tangent	E. Weston	400,980	Apr. 9	852	223	47	168
Game	R. M. Washburn	403,012	May 7	661	175	47	789
Game apparatus	J. L. and D. H. Coles	402,230	Apr. 30	2746	711	47	559
Game apparatus	M. Joseph	405,314	June 18	1389	366	47	1513
Game apparatus	H. L. Smith	401,222	Apr. 9	1106	319	47	236
Game-board	S. T. F. Sterick	402,112	Apr. 23	2570	667	47	516
Game. Cabinet for preserving and displaying	H. L. Rand	405,678	June 18	1971	517	47	1628
Game-counter	J. Hope	400,770	Apr. 2	495	134 / 135	47	97
Game-wheel. Musical	G. Wilkening	404,140	May 28	2405	631	47	1149
Garment	W. F. Kneip	405,262	June 18	1315	346	47	1498
Garment-hanger	W. Gowen	401,943	Apr. 23	2308	600	47	466
Garment-pattern. Combination	M. Tuch	402,046	Apr. 23	2466	643	47	496
Garment-stay	R. B. Wheeler	403,809	May 21	1897	498	47	1042
Garment-stays. Apparatus for making	A. Taylor	404,124	May 28	2381	624	47	1144
Garment-stays. Apparatus for making	A. Taylor	404,125	May 28	2383	625	47	1145
Garment-supporter	P. J. Boyle and G. S. Gates	401,121	Apr. 9	1040	278	47	205
Gas. Apparatus for compressing carbonic-acid	F. Windhausen	405,289	June 18	1352	357	47	1505
Gas. Apparatus for manufacturing	W. Clark	404,520	June 4	237	56 57	47	1269
Gas. Apparatus for producing	R. R. Turner	404,322	May 28	2394	700	47	1202
Gas. Apparatus for the manufacture of	G. H. Brown	402,395	Apr. 30	2997	777	47	606
Gas. Apparatus for the manufacture of	G. K. Cummings	403,920	May 28	2060	542	47	1081

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gas. Apparatus for the manufacture of	C. M. Gearing	401,342	Apr. 16	1378	366	47	283
Gas. Apparatus for the manufacture of	B. Loomis	404,208	May 28	2517	657 / 658	47	1170
Gas. Apparatus for the manufacture of	T. S. C. Lowe	401,570	Apr. 16	1728	455	47	347
Gas. Apparatus for the manufacture of	J. M. Rose	403,384	May 14	1277	335	47	912
Gas. Apparatus for the manufacture of	J. F. Toraya	404,750	June 4	547	140	47	1333
Gas. Apparatus for the manufacture of fuel and illuminating	J. W. Harrison and F. Egnet	404,404	June 4	43	12	47	1234
Gas. Apparatus for the manufacture of hydrocarbon	L. P. Lowe	405,426	June 18	1550	410	47	1546
Gas. Apparatus for the manufacture of hydrogen	P. Yarrington	402,216	Apr. 30	2729	707	47	556
Gas. Apparatus for the production of	R. Nayasmith	403,283	May 14	1114	296	47	881
Gas-burner	W. F. Folmer	404,830	June 11	669	173	47	1366
Gas-burner	L. Henkle	405,735	June 25	2061	541	47	1651
Gas burner and heater	D. S. Robilliard and C. G. Davies	403,612	May 21	1904	425	47	983
Gas-burner. Device for automatically operating the stop-cock of a	C. M. Rider	404,733	June 4	524	134	47	1328
Gas-burner for boiler-furnaces	T. McSweeney	405,497	June 18	1673	442	47	1572
Gas-burner for grates and stoves	J. A. Dailey	402,635	May 7	148	36, 37	47	692
Gas-burner for heating purposes	P. Lesser	401,445	Apr. 16	1539	405	47	313
Gas-burner for stoves or fire-places	T. McSweeney	402,177	Apr. 30	2673	693	47	545
Gas-burner. Heating	S. L. Wiegand	405,139	June 11	1110	295	47	1451
Gas-burner. Incandescent	L. Henkle	405,736	June 25	2062	541	47	1651
Gas burner. Water	W. F. Steele	402,905	May 7	637	169	47	764
Gas-burners. Apparatus for lighting	A. A. Lister	401,184	Apr. 9	1140	302 / 303	47	224
Gas-conduits. Pressure-regulator for	J. D. Bowman	405,244	June 18	1280	341	47	1492
Gas-engine	A. Histon	400,458	Apr. 2	47	14	47	13
Gas-engine	S. Lawson	402,749	May 7	293	75	47	718
Gas-engine	S. Lawson	402,750	May 7	295	76	47	718
Gas-engine	S. Lawson	402,751	May 7	297	76	47	719
Gas-engine	L. H. Nash	401,453	Apr. 16	1542	408 / 409	47	314
Gas-engine	N. Rogers and J. A. Wharry	403,379	May 14	1262	333	47	910
Gas-engine	H. Tenting	402,363	Apr. 30	2948	764	47	597
Gas-engine governor	N. Rogers and J. A. Wharry	403,378	May 14	1260	333	47	909
Gas-engines. Carburetor for	N. Rogers and J. A. Wharry	403,377	May 14	1258	332	47	909
Gas-engines. Dynamo-speeder for	N. Rogers and J. A. Wharry	403,376	May 14	1257	332	47	908
Gas-engines. Fuel-mixing device for	L. H. Nash	401,452	Apr. 16	1539	408	47	314
Gas-engines. Igniting apparatus for	L. C. and B. Parker	401,204	Apr. 9	1172	312	47	231
Gas-engines. Ignitor for	N. Rogers and J. A. Wharry	403,380	May 14	1264	333	47	910
Gas-fixtures. Electric-lamp attachment for	E. F. Gennert	400,658	Apr. 2	321	90	47	67
Gas-furnace	R. Cartwright	400,827	Apr. 2	601	164	47	115
Gas-furnace	E. P. Reichhelm	405,051	June 11	997	266	47	1430
Gas-generating apparatus	W. G. Bedford	404,886	June 11	755	192	47	1380
Gas-generator	S. McIlvaine	402,534	Apr. 30	3216	833	47	648
Gas-generator	W. Rennyson	405,911	June 25	2315	608	47	1696
Gas generator. Compound hydrocarbon	E. Ferguson	404,527	June 4	250	60	47	1271
Gas-governor	H. J. Bell	401,626	Apr. 16	1839	480	47	368
Gas-governor	H. J. Bell	401,627	Apr. 16	1840	480	47	369
Gas-governor	H. J. Bell	401,628	Apr. 16	1842	480	47	369
Gas-governor	C. J. Hamilton	402,442	Apr. 30	3081	798	47	622
Gas-holder	W. Gadd	405,701	June 25	2009	528	47	1641
Gas-holder	W. Gadd	405,702	June 25	2010	528	47	1642
Gas-incandescent	L. Paget	401,890	Apr. 23	2239	.....	47	454
Gas-incandescent	C. A. von Welsbach	403,903	May 21	1892	.....	47	1041
Gas-incandescent	C. A. von Welsbach	403,904	May 21	1893	.....	47	1041
Gas-incandescents. Making	L. Paget	401,898	Apr. 23	2237	.....	47	453
Gas-lighter. Electric	J. H. Lehman	403,944	May 28	2092	548	47	1066
Gas-lighter. Electric	J. Y. Parke	400,479	Apr. 2	77	22	47	18
Gas-lighter. Electrical	D. C. Knowlton	402,332	Apr. 30	2900	751	47	588
Gas lighting and extinguishing apparatus. Automatic	N. H. Shaw	405,126	June 11	1092	291	47	1449
Gas lighting and extinguishing apparatus. Automatic	N. H. and A. B. Shaw	405,435	June 18	1564	413	47	1548
Gas-lighting burner. Electric	J. Geary	401,153	Apr. 9	1096	291	47	214
Gas-lighting device. Electric	D. Itonsseau	400,492	Apr. 2	92	25	47	21
Gas-mains. Service-pipe connection for	G. Westinghouse, Jr	400,532	Apr. 2	156	40	47	33
Gas. Manufacturing	W. M. Cosh	402,146	Apr. 30	2657	690	47	536
Gas. Manufacturing	G. K. Cummings	403,921	May 28	2062	542	47	1081
Gas. Manufacturing	B. Loomis	404,209	May 28	2520	658	47	1171
Gas. Manufacturing	J. M. Rose	403,381	May 14	1266	333 / 334	47	910
Gas. Manufacturing	J. M. Rose	403,382	May 14	1270	334	47	911
Gas. Manufacturing	J. M. Rose	403,383	May 14	1273	334 / 335	47	911
Gas-meter	W. Y. Stansbrough	403,297	May 14	1133	300	47	884
Gas or air engine	S. Wilcox	402,549	Apr. 30	3235	839 / 840	47	652
Gas or gasoline engine	L. C. and B. Parker	403,367	May 14	1241	329 / 330	47	906
Gas or hydrocarbon-vapor engine	L. C. and B. Parker	405,795	June 25	2142	562	47	1667
Gas or lamp bracket	W. and J. Boekel	403,508	May 21	1463	383 / 384	47	955
Gas or vapor burner for heating	O. Rotton	400,602	Apr. 2	248	67	47	52
Gas-outlets. Forming	W. M. Jackson	400,683	Apr. 2	372	101	47	74
Gas-pressure regulator	W. H. Metcalf	401,048	Apr. 9	933	249	47	187
Gas. Process of and apparatus for the manufacture of	B. Loomis	404,205	May 28	2505	635 / 636	47	1168
Gas. Process of and apparatus for the manufacture of	B. Loomis	404,206	May 28	2509	636	47	1169
Gas. Process of and apparatus for the manufacture of	B. Loomis	404,207	May 28	2513	657	47	1170
Gas. Purifying	W. A. M. Valon	402,787	May 7	353	.....	47	729
Gas regulating burner	O. W. Bennett	405,656	June 18	1937	509 / 510	47	1622

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gas-vending apparatus	R. W. Brownhill	405,943	June 25	2363	619, 620	47	1706
Gas-vending apparatus	R. W. Brownhill	405,944	June 25	2368	621	47	1707
Gas-vending apparatus	R. W. Brownhill	405,983	June 25	2431	636, 637	47	1718
Gas-washer	J. De Brouwer	404,606	June 4	363	87	47	1294
Gaseous fuel. Apparatus for making and burning	J. Locke and S. O. Richardson, Jr	403,434	May 14	1344	356	47	924
Gasometer	W. B. Hammond	400,671	Apr. 2	353	96, 97	47	70
Gate: *See* Automatic gate. Bridge-gate. Car-gate. Danger-gate. Elevator-gate. End-gate. Farm-gate. Fence-gate. Flood-gate. Folding gate. Railway-gate. Sliding gate. Swinging gate. Tilting gate. Water-gate.

Gate	T. Tyson	401,315	Apr. 9	1332	354, 355	47	262
Gate	J. Walker	404,754	June 4	553	141	47	1334
Gate	W. R. White	403,975	May 28	2137	559	47	1095
Gate-opening mechanism	J. N. Stong	402,998	May 7	642	170	47	785
Gear-wheel	M. T. Graf	403,101	May 14	813	215, 216	47	824
Gears. Machine for cutting	J. S. Waterman	401,987	Apr. 23	2367	616	47	478
Gears. Machine for cutting spur and worm	G. B. Grant	405,630	June 11	969	258	47	1424
Gearing	M. E. Benedict	401,993	Apr. 23	2379	619	47	480
Gearing	A. M. Benson	405,759	June 25	2096	550	47	1658
Gearing. Cogged	W. Courtenay	404,826	June 11	964	178	47	1364
Gearing. Driving	J. C. Whitford	400,961	Apr. 9	836	224	47	169
Gearing. Frictional	G. F. Evans	401,018	Apr. 9	889	238	47	179
Gem. Imitation	S. Grossiord	400,450	Apr. 2	39	12	47	11
Generator: *See* Friction-generator. Gas-generator. Steam-generator. Vinegar-generator.							
Glass and earthen ware. Muffle for	L. Lawton, F. Swann, and W. R. Whitehead.	405,571	June 18	1786	473	47	1596
Glass bottles. Machine for making	H. M. Ashley	403,719	May 21	1765	464	47	1015
Glass bottles, &c. Machinery for making	H. M. Ashley	403,024	May 7	684	180	47	792
Glass bottles, &c. Machinery for making	H. M. Ashley	403,025	May 7	686	180	47	793
Glass bottles, &c. Machinery for making	H. M. Ashley	403,027	May 7	690	181	47	794
Glass bottles, &c. Machinery for making	H. M. Ashley	403,716	May 21	1755	461, 462	47	1013
Glass bottles, &c. Machinery for making	H. M. Ashley	403,717	May 21	1757	462, 463	47	1014
Glass bottles, &c. Machinery for making	H. M. Ashley	403,718	May 21	1761	463	47	1015
Glass bottles, &c. Manufacture of	H. M. Ashley	403,023	May 7	681	179	47	792
Glass building-block	G. Falconnier	402,073	Apr. 23	2505	654, 655	47	503
Glass. Chipping or crystallizing	T. J. Thompson	405,283	June 18	1346	355	47	1504
Glass-melting furnace	W. F. Modes	405,317	June 18	1394	367	47	1514
Glass. Ornamenting	L. Pertin	403,552	May 21	1527	400	47	968
Glass through the annealing-tunnel. Device for conveying sheets of	P. Pfeifer	400,708	Apr. 2	405	110	47	80
Glassware. Apparatus for shaping	J. Anderson	401,099	Apr. 9	1007	268, 269	47	199
Glassware. Manufacture of	G. W. Leighton	402,090	Apr. 23	2534	668	47	510
Glassware. Mold for	R. M. Atwater and E. Herckner	405,863	June 25	2236	588	47	1686
Glaziers' points. Machine for driving	F. Holland	403,886	May 21	2005	526, 527	47	1062
Globe-holder	J. J. McGloin	405,793	June 25	2139	562	47	1666
Glove	C. R. Spall and E. Scoones	405,380	June 18	1461	382, 383	47	1532
Glove-fastener	G. W. Mandrill	400,865	Apr. 2	655	178	47	125
Glove-fastening	W. S. Richardson	400,948	Apr. 9	787	210	47	160
Glove-fastening	W. S. Richardson	401,070	Apr. 9	963	257	47	192
Glove or mitten	W. M. Tyrrell	402,287	Apr. 30	2828	732	47	575
Glove-package fastener	C. T. Bull	405,676	June 11	1098	273	47	1436
Gloves. Boxing	D. J. O'Sullivan	404,929	June 11	816	209, 210	47	1392
Gold and silver from ores. Obtaining	J. S. MacArthur, R. W. and W. Forrest.	403,202	May 14	979	.....	47	857
Gold ores. Chloridizing	T. D. Bottome	405,824	June 25	2177	573	47	1674
Goods. Apparatus for the delivery of prepaid	W. H. Bailey	400,536	Apr. 2	162	42	47	34
Gopher-exterminator	M. B. Parker	400,705	Apr. 2	400	109	47	79
Governor. Centrifugal	H. L. Berger and E. Noël	405,760	June 25	2097	550	47	1658

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Governor for engines. Hydraulic	W. H. and J. D. Gray	402,015	Apr. 23	2411	628, 629	47	486
Governor. Steam-engine	W. Berwick	402,899	May 7	498	132	47	756
Governor. Steam-valve	F. B. Pettengill	404,796	June 4	617	150	47	1347
Grading and ditching machine	M. G. Bunnell	403,034	May 7	700	183	47	795
Grading and ditching machine	M. G. Bunnell	403,035	May 7	701	183, 184	47	796
Grain. Apparatus for transferring, weighing, and delivering bags of	M. Swanson	402,781	May 7	343	88, 89	47	727
Grain-binder	W. E. Ferguson	405,088	June 11	1040	278	47	1439
Grain-binder	J. S. Davis	405,203	June 11	1222	323	47	1473
Grain-binder	W. W. Eastman and H. E. Potter	401,644	Apr. 16	1866	484, 485	47	372
Grain-binder	C. H. Salzman	403,365	May 14	1281	335, 336	47	912
Grain-binder	O. O. Storie	404,506	June 4	212	50, 51	47	1264
Grain-binders. Band-securing mechanism for	J. S. Davis	401,013	Apr. 9	892	236, 237	47	178
Grain-binding machine	F. Harper	404,479	June 4	164	38	47	1255
Grain-cleaner	B. P. Barney	405,070	June 11	1021	272, 273	47	1435
Grain-cleaning machine	J. Leaser	405,168	June 11	1160	310	47	1461
Grain-cleaning machine	J. F. Wilson	404,456	June 4	122	29	47	1249
Grain-clipping machine	R. W. Welch	401,667	Apr. 16	1891	493	47	377
Grain-conveying apparatus. Pneumatic	L. Smith	405,331	June 18	1413	372, 373	47	1518
Grain-drier	L. Borland	403,411	May 14	1315	344	47	919
Grain-drier	L. Borland	403,412	May 14	1316	344	47	919
Grain-drier	J. Hill	405,214	June 11	1237	326, 327	47	1476
Grain-drill	C. J. Fendel	401,022	Apr. 9	894	239, 240	47	180
Grain-drill	P. P. Mast	404,853	June 11	705	181	47	1372
Grain-drill	C. E. Patric and F. R. Packham	404,108	May 28	2357	618, 619	47	1130
Grain-drill	J. W. Rhodes	400,947	Apr. 9	786	210	47	159
Grain-drill attachment	R. G. Strother	402,097	May 7	213	56	47	703
Grain-drill hoe	W. C. Lathrop	402,677	May 7	105	47	47	699
Grain. Grinding and scouring	M. L. Kiesell	404,845	June 11	693	179	47	1370
Grain. Heating and steaming	F. Wegmann	405,811	June 25	2160	568	47	1671
Grain. Machine for shocking sheaves of small	W. H. Smith	404,571	June 4	308	73	47	1283
Grain. Magnetic machine for removing mineral substances from	J. N. Hieronymus	402,449	Apr. 30	3091	802	47	624
Grain-meter	M. L. Mowrer	405,045	June 11	990	263	47	1429
Grain-meter	L. Elliott	405,833	June 25	2192	577	47	1677
Grain-meter	G. B. Howland	400,849	Apr. 2	630	171	47	121
Grain-meter	W. W. Lockwood and C. M. Bickford.	405 315	June 18	1390	366	47	1513
Grain-meter	A. Stewart	403,396	May 14	1298	340	47	916
Grain-meter	V. Weber and J. R. Harrison	400,615	Apr. 2	268	74	47	56
Grain-meter. Automatic	E. H. Reynolds	404,225	May 28	2348	664, 665	47	1175
Grain-meter. Rotating	H. Applen	405,689	June 25	1996	524	47	1638
Grain-press	W. Preston	404,655	June 4	424	106	47	1306
Grain-scourer	W. Ager	405,937	June 25	2355	618	47	1705
Grain-scourer	H. Seck	403,389	May 14	1287	337	47	912
Grain-scourer	S. S. Shaver	405,611	June 18	1843	488	47	1606
Grain-separator	H. Wilhelm	402,020	May 7	676	178	47	791
Grain-separator	S. Freeman	402,012	Apr. 23	2409	628	47	485
Grain-separator	H. Stoker	400,965	Apr. 9	811	216, 217	47	165
Grain separator and cleaner	M. N. Laufenburg	402,462	Apr. 30	3112	807, 808	47	628
Grain-separator. Elevator for	S. B. Hart	402,522	Apr. 30	3202	829	47	645
Grate	H. C. Kerstine	402,849	May 7	431	114	47	744
Grate	H. P. Tallmadge	403,002	May 7	647	171	47	786
Grate attachment	J. J. Mitchell	404,423	June 4	68	18	47	1239
Grate-bar	J. A. Allen	402,126	Apr. 30	2900	673	47	531
Grate-bar. Rocking or shaking	G. M. Knight	404,719	June 4	509	130	47	1325
Grate. Fire	C. J. Dorrance	403,255	May 14	1002	269	47	871
Grate for ranges, stoves, or furnaces	H. Sutcliffe	406,009	June 25	2450	646	47	1726
Grate. Inclined	S. J. Buzzini	404,585	June 4	347	83	47	1291
Grater. Culinary	H. H. Campbell	403,416	May 14	1320	345	47	920
Grating	H. I. Block	402,651	May 7	143	35	47	693
Gravel-screen	D. McDonald	402,847	May 7	436	115	47	745
Grease-cup	J. D. Loughran	402,845	May 7	435	115	47	744
Grill or guard. Metallic	J. Massett	403,358	May 14	1221	324	47	902
Grinding and sharpening machinery	N. Poulson	404,993	June 11	892	233, 234	47	1408
Grinding-machine	H. Buckingham	401,875	Apr. 23	2203	576	47	447
Grinding-machine	R. Conrader	404,686	June 4	469	118	47	1316
Grinding-machine	C. H. Henderson	404,787	June 4	606	156	47	1344
Grinding machine. Surface	W. S. Robbins	401,212	Apr. 9	1181	314	47	232
Grinding-machine water-tank	E. R. Hyde and R. C. Horner	401,278	Apr. 9	1280	341, 342	47	251
Grinding-mill	C. A. Bauer	403,030	May 7	695	182	47	794
Grinding-mill	J. B. Allfree	401,872	Apr. 23	2197	574, 575	47	446
Grinding-mill	E. Derbec	403,421	May 14	1325	347	47	921
Grinding-mill	F. Quénéhen and A. Vansteenkiste.	405,177	June 11	1175	313	47	1464
Grinding-mill runner	E. T. Williams	400,533	Apr. 2	157	41	47	33
Grinding or planing machine, Surface	J. C. Dell	404,607	June 4	365	88	47	1294
	E. R. Hyde	405,706	June 25	2016	529, 530	47	1643

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Grinding-pan	P. Hinkle	400,681	Apr. 2	367	100	47	73
Grinding shimer molding-bits, &c. Machine for	H. C. Gilbert	400,660	Apr. 2	323	91	47	67
Grinding shovel-blanks. Machine for	J. E. Woll	403,818	May 21	1908	501, 502	47	1044
Grinding the cutters of wood-cutting machines. Machine for	O. A. Winter	403,712	May 21	1751	461	47	1013
Grinding twist or flat drills. Gage for	A. F. Brewer	403,175	May 14	924	244	47	845
Grinding-wheel	H. S. Lucas	402,682	May 7	192	48	47	700
Grindstone and mechanism for the same	H. A. Axtell	404,670	June 4	443	111	47	1311
Grip device. Intermittent	W. H. Wild	405,140	June 11	1110	296	47	1451
Grip-testing machine. Coin-operated	P. Everitt	400,839	Apr. 2	616	167	47	118
Gripping-die	W. Taylor	401,912	Apr. 23	2261	588, 589	47	457
Guard: *See* Candle-guard. Car-track guard. Cattle-guard. Fish-hook guard. Foot-guard. Fork-guard. Railway-guard. Railway-bridge guard. Snow-guard. Snow and ice guard.							
Guide-box	P. L. Day	404,178	May 28	2465	645	47	1161
Gumming machine. Paper	J. J. Allen	403,633	May 21	1636	433	47	990
Gun. Magazine	L. L. Hepburn	400,679	Apr. 2	363	99	47	72
Gun-rack	M. H. Amerine	405,335	June 18	1420	374	47	1590
Gun. Spring	J. D. Egler	403,096	May 14	904	214	47	832
Gun. Spring	E. Y. Knapp	403,432	May 14	1342	352	47	924
Guns. Barrel-lock for breakdown	L. Jeusette, D. D. and H. Henrard	402,330	Apr. 30	2897	751	47	587
Guns. Cartridge feed-pack for magazine	P. Mauser	402,605	May 7	79	19	47	679
Guns. Means for changing the center of gravity of	W. R. Miller	404,921	June 11	806	207	47	1391
Guns. Swab or cleaner for	C. J. Bailey	405,297	June 18	1366	360	47	1508
Gymnastic apparatus	L. F. Small	403,703	May 21	1737	457	47	1011
Hackling-machine	A. W. Montgomery	404,215	May 28	2335	661, 662	47	1173
Hair-crimping device	N. Helmer and C. L. Lietz	404,087	May 28	2323	609	47	1133
Hair-curler	F. Faust	400,904	Apr. 9	715	194	47	148
Hair-curler	F. Wilson	403,711	May 21	1750	460	47	1012
Hair-curling device	C. A. G. Pfanne	404,501	June 4	201	48	47	1262
Hair-curling implement	B. L. Toquet	404,664	June 4	436	109	47	1310
Hair-cutter	J. W. Eisenhuth	402,727	May 7	252	66, 67	47	711
Hair-holder	J. L. Hackett	401,649	Apr. 16	1871	486	47	373
Hair-plucking machine	J. H. Brierley	400,894	Apr. 9	703	191	47	145
Hair-singer	J. E. Poindexter	405,502	June 18	1683	445	47	1574
Halter	E. Barnard	401,922	Apr. 23	2279	591	47	460
Halter	J. Dunn	401,017	Apr. 9	887	237	47	178
Hame-connection	R. C. Elliott	402,910	May 7	523	138	47	761
Hame-fastener	I. W. and H. L. Bowman and S. Sharp	403,732	May 21	1783	469	47	1019
Hammer	A. L. De Vol	404,388	June 4	93	5	47	1229
Hammer and hatchet. Combined claw	G. W. Simonds	404,990	June 11	902	236	47	1416
Hammer. Bush	F. D. and W. Lisson	404,350	May 28	2750	714	47	1213
Hammer. Drop	F. M. Leavitt	401,566	Apr. 16	1719	453, 454	47	346
Hammer. Gold-beater's	H. B. Hughes	402,326	Apr. 30	3207	830, 831	47	646
Hammer. Power	R. A. Belden	403,453	May 14	1374	360	47	930
Hammer. Steam	J. H. Blake	405,072	June 11	1023	273	47	1435
Hammock	A. Beals	403,320	May 14	1171	314	47	893
Hammock	H. M. York	403,315	May 14	1166	309	47	892
Hammock and canopy support	H. Sinclair	405,719	June 25	2037	534, 535	47	1646
Hammock and canopy support. Combined	J. Gifford	404,614	June 4	374	90	47	1296
Hammock and chair. Convertible	R. W. Meesmore	402,469	Apr. 30	3125	810	47	631
Hammock-support	H. E. Collins	402,307	Apr. 30	2860	739	47	581
Hammocks. Apparatus for stringing	I. E. Palmer	402,275	Apr. 30	2812	728	47	571
Hand bag or sack. Collapsible	F. Emerio	403,928	May 28	2072	544	47	1063
Hand-motor	C. E. Bromwell	401,637	Apr. 16	1852	482	47	370
Hand-rest	H. F. Kretzer	405,781	June 25	2124	55	47	1663
Handcuffs and nippers. Combined	W. A. Hicks	403,268	May 14	1088	287	47	876
Handles: *See* Brake-handle. Cutlery-handle. Dust-pan handle. Hinged handle. Photographic-plate handle. Sancepan-handle. Tea or coffee pot handle. Tool-handle.							
Handle	L. M. Devore	401,419	Apr. 16	1495	396	47	305
Handle	J. B. Hartman	401,832	Apr. 23	2144	559	47	435
Hanger: *See* Door-hanger. Garment-hanger. Spring-hanger. Tobacco-hanger.							
Harness	I. J. Gray	405,771	June 25	2112	553	47	1661
Harness	A. Schunck	401,973	Apr. 23	2348	611	47	475
Harness-girth	W. S. Thayer	403,004	May 7	649	172	47	786
Harness-hook	D. E. Kempster	401,173	Apr. 9	1128	299	47	221
Harness-loop	E. B. Knapp	400,461	Apr. 2	50	15	47	13
Harness-maker's press	S. H. Randall	405,679	June 18	1971	517	47	1638
Harness-pad	N. M. Cahoone	402,719	May 7	244	64	47	710
Harness-pad	W. G. Robbins	402,480	Apr. 30	3140	813	47	633
Harness. Safety-hook for	C. Smith	405,055	June 11	1001	267	47	1431
Harness-trimming	D. J. Regan	402,478	Apr. 30	3138	813	47	633
Harrow	W. M. Brinkerhoff	405,459	June 18	1610	421	47	1558
Harrow	J. F. and B. A. A. Correll	405,534	June 18	1730	457	47	1583
Harrow	P. C. Loveland	400,861	Apr. 2	648	175	47	124
Harrow	H. L. Mack	400,697	Apr. 2	382	105	47	77
Harrow	J. Macphail and F. M. Needham	404,010	May 28	2188	574, 575	47	1105
Harrow	D. C. Markham	405,580	June 18	1796	476	47	1598

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Harrow	E. Miller	402,607	May 7	83	19	47	680
Harrow	G. Sweet	402,629	May 7	113	27, 28	47	685
Harrow and cultivator. Disk	E. C. Boyer	401,994	Apr. 23	2380	619	47	480
Harrow and drag. Combined	G. W. Mullenaux	400,785	Apr. 2	531	146	47	102
Harrow and roller. Combined riding	C. M. Rouse	402,975	May 7	611	160	47	786
Harrow attachment for land-rollers	J. W. Weir	400,616	Apr. 2	260	74	47	56
Harrow. Disk	G. T. Booth	405,005	June 11	994	244, 245	47	1414
Harrow. Disk	R. W. Hardie	401,745	Apr. 23	2013	527	47	411
Harrow. Pulverising	C. La Dow	404,701	June 4	610	157	47	1345
Harrow. Rotary	R. Rakestraw	403,778	May 21	1850	486	47	1039
Harrow, seeder, and planter	J. M. Poore	405,797	June 25	2145	564	47	1666
Harrow. Spring-tooth	S. N. Hench and W. A. Dromgold	402,079	Apr. 23	2514	657	47	505
Harrow. Spring-tooth	E. W. Herendeen	401,833	Apr. 23	2145	560	47	435
Harrow. Spring-toothed	T. R. Crane	402,000	Apr. 23	2288	621	47	492
Harrow. Spring-toothed	H. Wiard	401,976	May 28	2139	559	47	1096
Harrow. Sulky	W. Hewitt	402,670	May 7	176	45	47	697
Harrow-tooth holder	M. B. Williams	404,024	May 28	2304	579	47	1169
Harrow-tooth. Spring	A. W. and L. W. Stevens, W. M. Brinkerhoff, and L. D. Swart	405,923	June 25	2238	613	47	1702
Harrow. Wheeled	D. E. McSherry and H. G. Swope	400,932	Apr. 9	765	205	47	155
Harvester	G. Cox	404,261	May 28	2596	676	47	1183
Harvester	S. D. Maddin	402,025	Apr. 23	2430	633, 634	47	489
Harvester	S. D. Maddin	403,764	May 21	1827	479, 480, 481	47	1027
Harvester and thrashing-machine. Combined	J. A. Myers	402,536	Apr. 30	3218	834, 835	47	648
Harvester-binder	H. E. Pridmore	401,901	Apr. 23	2241	584	47	454
Harvester. Corn	W. D. Steele	402,040	Apr. 23	2461	641	47	495
Harvester. Cotton	S. D. T. Manning	400,700	Apr. 2	302	106, 107	47	78
Harvester. Cotton	R. H. Purnell	405,049	June 11	994	264, 265	47	1430
Harvester-cutter	J. A. Blair	401,117	Apr. 9	1035	277	47	204
Harvester cutter-bar guide	J. D. Norris	405,646	June 11	993	264	47	1429
Harvester elevator-frame	J. E. Deering	403,084	May 14	803	213	47	822
Harvester-frame	R. Brown	401,127	Apr. 9	1049	280	47	207
Harvester. Grain-binding	W. F. Olin	402,348	Apr. 30	2921	757, 758	47	592
Harvester-reel	J. F. Steward	401,665	Apr. 16	1888	492	47	376
Harvester sheaf-carrier	L. W. Ellis	401,259	Apr. 9	1255	335	47	246
Harvester. Stalk-fodder	H. F. Longworth, Jr.	404,044	May 28	2243	588	47	1114
Harvesters. Cutting apparatus for	R. J. Robinson and C. F. Collins	400,489	Apr. 2	89	24	47	20
Harvesters. Header attachment for	H. Bryan	404,954	June 11	849	221, 222	47	1399
Harvesters. Sheaf-carrier for self-binding	B. A. Kennedy and J. F. Steward	405,892	June 25	2276	598	47	1692
Harvesters. Twine-tension for	W. N. Dick	405,063	June 11	1036	277	47	1438
Harvesting-machine	P. Hanson	402,894	May 7	409	107, 108	47	740
Harvesting machine. Corn	J. F. Steward	401,368	Apr. 16	1453	384	47	297
Hasp-lock	H. Tripp and L. Lattan	402,307	Apr. 30	2718	705	47	554
Hat	A. H. Fritsch	403,334	May 28	2079	545	47	1084
Hat and coat rack	C. T. Gardner	405,729	June 25	2056	539	47	1649
Hat-forming machine	G. Yule	404,430	June 4	130	31, 32	47	1250
Hat-holder and packing-frame	W. M. Levy	404,634	June 4	401	97, 98	47	1302
Hat-molding machine	T. P. Wilkinson	401,800	Apr. 23	2116	551	47	429
Hat-packing support	M. C. Schoonmaker	403,561	May 21	1537	404	47	970
Hat shield and ventilator	W. P. O'Connor	402,122	Apr. 30	2690	695	47	546
Hat-sweats. Making	C. E. Keator	405,417	June 18	1534	406	47	1543
Hat-wire machine	B. McCusker	404,647	June 4	412	101, 102	47	1304
Hats. Bottom-board for	C. E. Keator	400,773	Apr. 2	500	135, 136	47	98
Hatchway	J. P. Ketteringham	403,196	May 14	967	254, 255	47	854
Hatchway. Elevator	M. J. Daly	403,875	May 21	1989	522, 523	47	1059
Hatchway. Elevator	H. G. Hester	401,873	Apr. 9	1275	340	47	250
Hatchway. Elevator	F. X. Hooper and C. Petersen	405,163	June 11	1153	308	47	1460
Hatchway. Self-closing	F. J. Gridley	404,618	June 4	379	91	47	1297
Hatchway. Self-closing	E. J. Herman	404,705	June 4	490	124	47	1350
Hay and grain rack	G. Carr	401,733	Apr. 23	1994	522	47	466
Hay-cap	W. R. Thatcher	404,577	June 4	322	77	47	1286
Hay-carrier	J. Farrell	404,585	June 4	247	59	47	1271
Hay-carrier	T. Milar and H. Pritchard	405,714	June 25	2030	533	47	1645
Hay-carrier track	C. E. Patric and R. H. Rodgers	403,443	May 14	1358	357	47	927
Hay-elevator	J. L. Harkinson	403,103	May 14	916	216, 217	47	825
Hay-fork	N. F. Mathewson	402,693	Apr. 23	2337	601	47	510
Hay-fork	C. E. Patric	404,107	May 28	2056	516	47	1130
Hay-fork. Horse	H. Wiard and J. L. Judd	403,019	May 7	675	178	47	791
Hay gatherer and elevator	D. B. Tanger	405,926	June 25	2238	614	47	1702
Hay-loader	J. W. Foust	403,041	May 7	708	185, 186	47	797
Hay-loader	A. Lasack	404,096	May 28	2336	612, 613	47	1126
Hay-rake and baling-press. Combined	J. A. Hooton and G. L. Wiard	405,034	June 11	974	259	47	1425
Hay rake and loader	J. E. Shinn	401,467	Apr. 16	1571	415, 416	47	319
Hay rake and stacker	W. D. Watkins	400,530	Apr. 2	158	39, 40	47	32
Hay-rake. Horse	O. H. King	405,484	June 18	1652	435	47	1567
Hay-rake. Horse	L. Kissner	404,846	June 11	695	179	47	1370

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Hay-rickers, &c. Metal point for the teeth of	H. A. Alden and J. E. Kirk	405,262	June 25	2235	588	47	1685
Hay-stacker	D. W. Bovee	402,895	May 7	502	133	47	757
Hay-stacker	T. H. Palm	404,222	May 28	2545	664	47	1175
Head-gear. Device for holding	D. M. Fuller	404,061	May 28	2314	607	47	1131
Head-rest, chin-support, and eye-closer for corpses. Combined	F. Moharter	402,095	Apr. 23	2540	662	47	510
Heat-regulating device. Automatic	N. C. Butler and F. D. Rosenberger.	400,826	Apr. 2	600	163	47	114
Heater: *See* Air-heater. Barrel-heater. Car-heater. Feed-water heater. Fire-place heater. Hydrocarbon-heater. Smoothing and sad iron heater. Steam-heater. Tank-heater. Water-heater.							
Heater	E. H. Jewett	402,162	Apr. 30	2657	687	47	541
Heaters. Muffler for steam or other	E. A. Leland	402,336	Apr. 30	2904	752	47	588
Heating and ventilating apparatus	W. S. Ziegler	402,217	Apr. 30	2730	708	47	556
Heating and ventilating buildings. Apparatus for	W. J. Baldwin	402,386	Apr. 30	2978	{773, 774}	47	603
Heating apparatus	H. B. Flint	402,153	Apr. 30	2642	684	47	530
Heating apparatus	E. N. Gates	401,940	Apr. 23	2302	598	47	465
Heating apparatus	L. B. Hartung	400,453	Apr. 2	41	13	47	12
Heating apparatus	H. Heim	401,349	Apr. 16	1390	358	47	286
Heating apparatus	J. Johnson	403,474	May 14	1407	363	47	936
Heating apparatus	I. C. Richardson	405,504	June 18	1686	446	47	1574
Heating apparatus. Automatic heat-regulator for hot-water	E. N. Gates	402,076	Apr. 23	2509	656	47	504
Heating apparatus. Electric	H. F. Watts	400,978	Apr. 9	830	222	47	168
Heating apparatus. Steam	J. T. Pine	403,287	May 14	1119	297	47	882
Heating device. Steam	H. A. Kroeschell	404,419	June 4	65	17	47	1238
Heating-furnace	T. Kruse	404,006	May 28	2122	573	47	1104
Heating-furnace for steam boilers	C. S. Servoss	404,116	May 28	2369	622	47	1142
Heating-furnace. Regenerative	H. Aiken	405,240	June 18	1281	{339, 340}	47	1491
Heating system	W. W. Canfield	401,685	Apr. 16	1915	{498, 499}	47	381
Heddles. Machine for making wire	E. Ebrayat	403,879	May 21	1994	524	47	1060
Hedge	P. M. Mishler	403,949	May 28	2100	550	47	1068
Heel-burnishing machine	J. W. Carver	401,131	Apr. 9	1055	{281, 282, 283}	47	208
Heel-protector	F. H. Richards	401,069	Apr. 9	992	254	47	192
Heel-trimming machine	C. W. Glidden	403,747	May 21	1802	474	47	1022
Heeling-machines. Top-lift carrier for	H. W. Winter	401,619	Apr. 16	1828	477	47	366
Heeling-machines. Top-lift holder for	H. W. Winter	401,620	Apr. 16	1830	477	47	366
Heeling-machines. Top-lift holder for	H. W. Winter	401,621	Apr. 16	1831	477	47	367
Hides or leather scraps. Agitating	C. W. Cooper	400,441	Apr. 2	25	9	47	9
Hides or leather scraps. Agitating	C. W. Cooper	400,442	Apr. 2	28	9	47	9
Hides or skins. Apparatus for treating	C. W. Cooper	400,443	Apr. 2	29	11	47	9
Hides or skins. Machinery for shaving or dressing green	J. Rood	401,905	Apr. 23	2251	586	47	455
Hinge	W. S. Larimer	401,036	Apr. 9	916	245	47	184
Hinge	L. K. Smedes	404,313	May 28	2681	696	47	1200
Hinge	J. A. Turner	401,066	Apr. 9	984	262	47	196
Hinge. Lock	B. F. Boughn and W. Cashner	400,540	Apr. 2	165	43	47	35
Hinge. Lock	J. Wolf	403,570	May 21	1549	406	47	972
Hinge-mortiser	W. Cooper, A. Milliken, and G. W. Bishop.	403,518	May 21	1482	386	47	959
Hinge. Spring	R. Belches	402,388	Apr. 30	2992	774	47	604
Hinge. Spring	H. Hertel	402,394	Apr. 30	2987	748	47	595
Hinge. Spring	D. M. Holt	403,670	May 21	1683	446	47	1000
Hinge. Spring	J. R. Payson, Jr.	404,556	June 4	290	68	47	1229
Hinge. Spring	J. Spruce and A. M. Comstock	401,978	Apr. 23	2355	613	47	476
Hinge. Spring	S. F. Streeter	403,494	May 14	1438	376	47	942
Hinge. Spring	G. W. Warner	405,931	June 25	2346	616	47	1704
Hinge. Spring	C. Zattau	403,713	May 21	1752	461	47	1013
Hinged handle	J. Gerstle	403,656	May 21	1664	443	47	996
Hitch for the ends of cord or rope	G. Race	403,074	May 7	769	203	47	807
Hitching device for ropes	I. E. Palmer	405,372	June 18	1467	388	47	1529
Hoe	E. J. Gates	403,655	May 21	1663	441	47	996
Hoe and scraper. Combined	A. F. Copper	403,330	May 14	1187	313	47	896
Hoe-blank	G. B. Ely	400,902	Apr. 9	713	193	47	147
Hoe. Scuffle	C. H. Bill	404,156	May 28	2426	633	47	1154
Hoes and shovels. Machine for making	H. E. Marchand	401,656	Apr. 16	1877	{498, 499}	47	374
Hoist	J. Wiest	403,164	May 14	908	236	47	842
Hoisting and loading machine	D. S. White	401,618	Apr. 16	1826	476	47	365
Hoisting apparatus	F. McMahon	403,546	May 21	1522	399	47	966
Hoisting apparatus for mines	S. Salmon	404,935	June 11	825	{212, 213, 214}	47	1394
Hoisting attachment for ash and garbage carts	J. F. Schultz	403,617	May 21	1611	{426, 427}	47	984
Hoisting-cages. Automatic dumping attachment for	H. Murray	405,493	June 18	1609	441	47	1570
Hoisting-engine	E. D. Leavitt, Jr.	402,257	Apr. 30	2784	{721, 722}	47	566
Hoisting-machine	T. W. Lemieux	401,841	Apr. 23	2154	562	47	437
Hoisting-machines. Differential gearing for	R. Lavery	402,601	May 7	73	17	47	678
Hoisting mechanism	T. A. Weston	402,878	May 7	481	126	47	753
Hoisting mechanism. Differential	G. F. Clemons	404,958	June 11	856	{223, 224}	47	1401
Holdback	G. T. Wilson and J. D. Hough	400,811	Apr. 2	577	158	47	111
Holdback for vehicle-thills	M. E. Campany	400,435	Apr. 2	16	5	47	6
Holdback. Vehicle	M. E. Burk	403,036	May 7	703	184	47	796

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Holdback. Vehicle	R. F. Dulany	404,935	May 28	2233	585	47	1113
Holder: *See* Bag-holder. Bit-holder. Blank-holder. Book-holder. Book-leaf or paper holder. Bottle-stopper holder. Caramel-holder. Chalk-holder. Cigar-holder. Clock-movement holder. Colter-holder. Cuff-holder. Fly-paper holder. Gas-holder. Globe-holder. Hair-holder. Harrow-tooth holder. Hat-holder. Horse-tail holder. Lamp-holder. Lamp-shade holder. Lead or crayon holder. Leaf-holder. Merchandise-holder. Music-holder. Music or paper holder. Necktie-holder. Paper-holder. Paper-bag holder. Paper-roll holder. Pen-holder. Pencil-holder. Pillow-sham holder. Refrigerator ice-holder. Rein-holder. Ribbon-holder. Rule-holder. Sample-holder. Sash-holder. Shade-holder. Skein-holder. Soap-holder. Spoon-holder. Stamp-holder. Thread-holder. Ticket and stamp holder. Tooth-holder. Tug-holder. Twine-holder. Vessel-holder. Veterinary-file holder. Whip-holder.							
Hoof parer and trimmer	W. Conwell	405,080	June 11	1031	276	47	1437
Hoof-shears	J. P. Lee	401,892	Apr. 23	2229	581	47	458
Hook: *See* Button-hook. Check-hook. Checkrein-hook. Harness-hook. Ladder-hook. Lock-hook. Snap-hook. Wardrobe-hook. Whiffletree-hook. Wire hook.							
Hook	C. O. Buell	401,683	Apr. 16	1912	498	47	381
Hook	C. Smith	400,501	Apr. 2	106	29	47	25
Hook and bait safety-box	W. B. Mumford	402,270	Apr. 30	2805	726	47	576
Hoop-fastening machine	F. L. Wilson	405,517	June 18	1704	450	47	1576
Hoop. Wire barrel	E. C. Gordon	405,049	June 11	968	257	47	1424
Hoops or tires. Expanding	M. W. Dewey	402,416	Apr. 30	3030	786	47	613
Horn. Campaign	W. Sellers	403,702	May 21	1736	457	47	1011
Horse-boot	J. J. Ryan	402,109	Apr. 23	2568	666	47	515
Horse-detacher	J. J. Joter	404,090	May 28	2328	{610, 611}	47	1134
Horse-detacher	G. Kimmich	405,963	June 25	2395	628	47	1712
Horse-detacher	F. Lenhart	404,009	May 28	2187	574	47	1105
Horse-detacher	W. M. Morrison	402,097	Apr. 23	2542	{662, 663}	47	511
Horse-power	J. C. Pruet	403,371	May 14	1246	331	47	907
Horse-power	J. C. Pruet	403,372	May 14	1248	331	47	907
Horse-power	J. R. Shear	402,198	Apr. 30	2700	701	47	550
Horse-rake	C. R. G. Fell	404,969	May 28	2009	679	47	1166
Horse-tail holder	R. L. Betts	405,941	June 25	2360	618	47	1706
Horseshoe	M. Gates	405,470	June 18	1630	430	47	1562
Horseshoe	D. S. Jaffray	400,684	Apr. 2	373	101	47	74
Horseshoe	S. Thompson	400,514	Apr. 2	124	33	47	98
Horseshoe and pad	G. W. Wemple	400,531	Apr. 2	154	40	47	83
Horseshoes. Device for removing calks from	C. E. Hudson	402,673	May 7	180	46	47	698
Hose. Appliance for uniting and reparing rubber	C. J. P. Heim	404,279	May 28	2027	682	47	1169
Hose-bridge	H. M. Campbell	402,900	May 7	509	134	47	758
Hose-carrying strap	R. A. Austin	402,219	Apr. 30	2732	708	47	557
Hose-coupler	S. E. Pearce and G. W. Merrill	404,429	June 4	81	20	47	1242
Hose-coupling	P. M. Stevens	405,748	June 25	2081	546	47	1655
Hose-coupling	W. T. King	403,053	May 7	785	189	47	800
Hose-nozzles. Shut-off for	H. G. Herbert	402,223	Apr. 30	2886	748	47	585
Hot-air furnace	J. B. Long	402,278	May 14	1108	294	47	880
Hot-air furnace	A. Williams	400,886	Apr. 2	684	{186, 187}	47	131
Hot-air register	H. K. Tallmage	405,620	June 18	1855	491	47	1608
Hot-air register. Side-wall	C. S. Hood	405,092	June 11	1046	{279, 280}	47	1440
Hot-beds. Light-holder for	W. De Caux	401,137	Apr. 9	1064	285	47	210
Hotel room-register	C. H. Greculeaf	404,396	June 4	35	9	47	1239
House interiors. Finishing of	W. J. Beda	403,573	May 21	1554	{409, 410}	47	973
Hub and axle. Vehicle	J. R. Cole	401,699	Apr. 16	1923	501	47	382
Hub and axle. Vehicle	I. M. Warner	405,032	June 25	2348	616	47	1704
Hub-band	W. L. Hawes	404,257	June 11	884	176	47	1396
Hub band. Vehicle	J. Maris	403,257	May 14	1220	324	47	902
Hub. Vehicle-wheel	E. D. and S. C. Clark	405,572	June 25	2253	592	47	1688
Hub. Vehicle-wheel	W. L. Hawes	404,238	June 11	884	177	47	1396
Hub. Vehicle-wheel	J. D. Roth	403,613	May 21	1606	426	47	983
Hub. Wheel	E. C. Roberts	401,213	Apr. 9	1181	314	47	223
Hubs. Point-band for vehicle	W. L. Hawes	404,239	June 11	885	177	47	1396
Huller: *See* Rice-huller. Seed-huller.							
Hulling-cylinders. Concave for	W. R. Fee	404,037	May 28	2235	586	47	1113
Hulling or grinding machine	F. Wegmann	405,810	June 25	2158	{567, 568}	47	1670

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hydrant	J. F. Durham	402,421	Apr. 30	3048	788	47	616
Hydrant	J. Kaiser	401,652	Apr. 16	1873	487	47	373
Hydrant	A. J. Tyler	402,115	Apr. 23	2573	668	47	517
Hydrant-casing	P. P. Bradley	403,699	May 21	1642	435	47	992
Hydraulic cylinder for controlling steam-cylinders	C. F. Elmes	404,523	June 4	243	58	47	1270
Hydraulic elevator. Self-regulating	W. E. Nickerson	404,726	June 4	516	132	47	1336
Hydraulic engine	C. E. Foster	404,528	June 4	251	60	47	1272
Hydraulic machine	J. Kennedy	402,458	Apr. 30	3104	805, 806	47	627
Hydraulic shears	J. Kennedy	402,457	Apr. 30	3101	805	47	626
Hydrocarbon apparatus	J. F. Seery	400,959	Apr. 9	804	214, 215	47	163
Hydrocarbon-burner	J. Adams	404,148	May 28	2115	633	47	1151
Hydrocarbon-burner	J. Akin	400,869	Apr. 9	697	189	47	145
Hydrocarbon-burner	J. H. Bullard	404,955	June 11	850	222	47	1400
Hydrocarbon-burner	E. W. Fellowes	401,021	Apr. 9	893	239	47	179
Hydrocarbon-burner	W. L. Fisher	401,149	Apr. 9	1088	289	47	213
Hydrocarbon-burner	A. F. Fletcher	400,905	Apr. 9	716	194	47	148
Hydrocarbon-burner	T. E. Hall	405,884	June 25	2265	595, 596	47	1691
Hydrocarbon-burner	C. L. Heverin	402,241	Apr. 30	2759	715	47	562
Hydrocarbon-burner	A. A. Phillips	403,134	May 14	863	227	47	834
Hydrocarbon-burner	A. L. Shore	404,442	June 4	99	24	47	1245
Hydrocarbon-burner	W. Snee	404,804	June 4	629	161	47	1349
Hydrocarbon-burner and combined superheater	E. Shallow	403,963	May 28	2119	554, 555	47	1092
Hydrocarbon-burner for furnaces	G. Griffith and T. L. Miller	401,431	Apr. 16	1513	401	47	308
Hydrocarbon-heater	L. W. Lombard	405,422	June 18	1546	410	47	1545
Hydrogen from alkali. Apparatus for obtaining sulphureted	A. M. and J. F. Chance	403,248	May 14	1053	278	47	870
Hydrogen sulphide from alkali waste. Obtaining	A. M. and J. F. Chance	403,249	May 14	1056	.....	47	870
Ice-creeper	F. W. Coe	405,873	June 25	2254	592	47	1688
Ice-creeper	M. Steiner	405,381	June 18	1483	393	47	1532
Ice-elevator	J. Hall	402,589	May 7	58	14	47	675
Ice-making machine	L. D. Railsback	402,968	May 7	603	159	47	778
Ice-making machines. Gas-pump for	T. L. Rankin	405,503	June 18	1684	446	47	1574
Ice or refrigerating machines. Oil-extracting and gas-saving apparatus for	F. W. Wolf	405,451	June 18	1594	420	47	1555
Ice or snow plow for railway-tracks	E. Leslie	405,039	June 11	981	261	47	1426
Ice-tool	S. K. Lovewell	402,173	Apr. 30	2669	692	47	544
Illuminating composition	T. J. Fealy	400,651	Apr. 2	316	.....	47	65
Incubator	W. Knopff	404,634	June 4	399	96, 97	47	1302
Incubators. Egg-tray for	J. W. Hile	404,041	May 28	2239	587	47	1114
Indexing books	W. M. Lester	404,294	May 28	2649	689	47	1194
Indicator: *See* Card-player's indicator. Cash-indicator. Chute-indicator. Power-indicator. Speed-indicator. Station-indicator. Thermometric indicator. Valve-indicator. Windlass-indicator.							
Induction-coil	F. H. Brown	404,822	June 11	659	170	47	1364
Induction-coil	J. F. Kelly	404,630	June 4	395	95	47	1301
Induction-coil and self-inductive apparatus	E. Thomson	400,972	Apr. 9	821	219	47	167
Induction machine. Static-	H. Glässer	401,156	Apr. 9	1101	292	47	216
Infants. Guard for	A. E. Lane	402,334	Apr. 30	2902	752	47	588
Ingot-forming apparatus	W. R. Hinsdale	402,325	Apr. 30	2888	748, 749	47	586
Ingot-mold	E. L. Clark	404,381	June 4	14	4	47	1228
Inhaler	J. E. Brunker and P. W. Maxwell	405,692	June 25	2000	524	47	1639
Inhaler	W. E. Gard	405,883	June 25	2264	595	47	1691
Inhaler	D. E. Herbet	402,593	May 7	63	15	47	676
Inhaler	J. S. Hooker	400,769	Apr. 2	494	134	47	97
Inhaler	J. Rudolfy	404,986	June 11	896	235	47	1409
Inhaler. Oxygen-	J. E. Casey and A. W. Browne	402,303	Apr. 30	2855	738	47	580
Inhaling apparatus	E. Krull	401,502	Apr. 16	1619	429	47	328
Injector	C. E. Church	405,990	June 25	2445	640	47	1721
Injector	C. E. Church	405,991	June 25	2449	641	47	1722
Injector	L. W. Lombard and W. Connor	401,753	Apr. 23	2024	529	47	413
Injector. Low-pressure	J. H. Killey	404,091	May 28	2329	611	47	1134
Injector. Steam-	J. Desmond	402,513	Apr. 30	3184	824	47	642
Injector. Steam-	J. Desmond	404,262	May 28	2598	676	47	1184
Injector. Steam-	A. Lambert	401,565	Apr. 16	1718	453	47	345
Ink-well	S. G. Baldwin	404,246	May 28	2580	672	47	1181
Ink-well	S. G. Baldwin	404,247	May 28	2581	672	47	1181
Ink-well	A. R. Sprague	405,921	June 25	2331	612	47	1701
Inkstand	J. J. Hoey	405,033	June 11	973	259	47	1425
Inkstand	G. R. G. Jones	402,837	May 7	495	119	47	743
Inkstands, &c. Self-closing cover for	I. W. Heysinger	404,539	June 4	267	64	47	1275
Inscription and motto plate	C. M. Underwood	405,809	June 25	2157	567	47	1670
Insect-powder duster	C. B. Glover	401,941	Apr. 23	2304	599	47	485
Insect-trap	C. G. Jennings	400,460	Apr. 2	49	15	47	13
Insect-trap	J. G. F. Johnson	400,572	Apr. 2	211	57	47	45
Insecticide	M. B. Church	401,928	Apr. 23	2287	.....	47	462
Insulated electrical wire	H. W. Johns, Jr.	404,913	June 11	797	204	47	1389
Insulated wire	S. Heimann	403,267	May 14	1067	287	47	876
Insulating and coating compound	A. de Figanière	401,014	Apr. 9	885	.....	47	178
Insulating cut-out joint	H. M. and R. Doubleday	402,420	Apr. 30	3046	788	47	615
Insulating device for line-wires	T. J. Smith	403,491	May 14	1433	375	47	941
Insulating pipe-coupling	F. C. Rockwell	400,600	Apr. 2	245	67	47	52
Insulating tubular iron posts	W. H. O'Beirne	403,482	May 14	1418	371	47	938
Insulator	J. C. Berrang	403,727	May 21	1776	467	47	1017
Insulator	R. P. Frist	405,546	June 18	1752	463	47	1588
Insulator	F. M. Locke and J. Lapp	402,752	May 7	299	77	47	719

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Insulator and holder for electric railways	B. Jennings	402,836	May 7	434	112	47	743
Insulator. Electric-wire	A. W. Heaviside	402,592	May 7	62	15	47	675
Invalid-lifter	J. H. Murdock	402,180	Apr. 30	2677	694	47	545
Iron: *See* Curling-iron. Sad-iron. Soldering-iron. Vehicle rub-iron. Waffle-iron. Wagon-box corner-iron. Whiffletree-iron							
Iron and steel. Manufacturing	J. Reese	401,903	Apr. 23	2247	.....	47	455
Iron chair	A. M. Gjestvang	401,522	Apr. 16	1692	448	47	342
Iron direct from its ores. Reducing	C. J. Eames	404,473	June 4	157	36	47	1254
Iron from ores. Machine for separating	G. Conkling	403,575	May 21	1556	410	47	974
Iron into malleable iron or steel. Apparatus for converting crude	J. W. Bookwalter	404,159	May 28	2430	636, 637	47	1155
Iron or steel. Determining the temper of	C. A. Caspersson	404,600	June 4	354	.....	47	1298
Iron ore. Dephosphorizing	T. F. Witherbee	400,622	Apr. 2	281	.....	47	59
Iron ore. Reducing	C. J. Eames	404,186	May 28	2472	646	47	1162
Iron ore. Reducing	C. J. Eames	404,183	May 28	2474	646	47	1162
Iron ore. Reduction of	C. J. Eames	404,181	May 28	2471	646	47	1162
Iron ore. Treating magnetic	G. Conkling	401,414	Apr. 16	1491	395	47	304
Iron ores. Apparatus for deoxidizing	M. R. Conley	404,344	May 28	2727	708	47	1206
Iron. Plant for the manufacture of wrought	G. Lindenthal	405,490	June 18	1665	439, 440	47	1570
Ironing-board	G. W. Carr	402,397	Apr. 30	3001	779	47	606
Ironing-board	A. T. Scanland	401,858	Apr. 23	2176	568	47	441
Ironing-board	J. M. Sebold	400,799	Apr. 2	555	152	47	106
Ironing device	C. Hayes	403,045	May 7	714	187	47	799
Ironing-machine	G. Heidel	400,678	Apr. 2	363	99	47	73
Ironing-table	W. L. Carr	405,144	June 11	1118	297	47	1452
Ironing-table	J. A. Kimball	401,786	Apr. 23	2071	541	47	423
Jack: *See* Boot-jack. Carriage-jack. Flooring-jack. Lifting-jack. Pegging-jack. Thill-jack. Wagon-jack.							
Jar	E. C. Napheys	405,902	June 25	2299	605	47	1697
Jar clamp, Fruit-	W. W. Lyman	403,035	May 7	727	190	47	801
Jar cover. Fruit-	G. Stalb	404,069	May 28	2290	597	47	1194
Jar fastening. Preserve-	G. Simkins	403,358	Apr. 30	2942	769	47	595
Jetty	W. M. Douglas	401,695	Apr. 16	1920	504	47	384
Jeweler's stock. Cutting-of machine for	F. L. Lewis	403,171	Apr. 30	2967	692	47	544
Jewelry. Ornamental ring for	G. H. Knight	404,082	May 28	2333	611	47	1135
Jewelry. Ornamental ring for	G. H. Knight	404,083	May 28	2334	612	47	1135
Jewelry. Ornamental ring for	G. H. Knight	404,084	May 28	2334	612	47	1135
Jewelry. Plating stock for	J. S. Palmer	401,900	Apr. 23	2240	583	47	454
Joint: *See* Carriage-body joint. Chair-joint. Furnace-joint. Insulating cut-out joint. Pipe-joint. Rail-joint. Railway-joint. Railway-rail joint. Show-case joint. Strap-joint.							
Joint-fastenings. Machine for making	C. T. Remus	400,792	Apr. 2	543	149, 150	47	104
Journal-bearing	W. E. Elliott	402,009	Apr. 23	2404	627	47	485
Journal-bearing. Anti-friction	H. M. Johnson	402,599	May 7	71	17	47	677
Journal-bearing for vehicle-wheels	C. Taylor	402,296	Apr. 30	2827	732	47	574
Journal-box	J. Curtin	403,992	May 28	2163	568, 569	47	1100

Kitchen-cabinet	L. Houston	403,590	May 21	1576	416	47	977
Kitchen-cabinet	H. S. Wolfe	402,707	May 7	226	59	47	706
Kitchen-cabinet and flour-chest	J. W. Stone and A. Colman	402,113	Apr. 23	2572	667	47	516
Kitchen-safe. Vertically-movable	J. C. Wright	403,170	May 14	916	241	47	844
Kitchen table and dresser	C. W. E. Ripley	403,139	May 14	873	230	47	836
Knife: *See* Pocket-knife. Pruning-knife. Shear-knife. Surgeon's knife.							
Knife for printer's use	L. J. Dus	401,421	Apr. 16	1498	398	47	306
Knitted shirt	R. W. Scott	404,249	May 28	2555	666	47	1176
Knitting machine. Circular-	H. Curtin	402,906	May 7	516	136	47	760
Knitting machine. Circular-	W. H. Pepper and A. T. L. Davis	401,791	Apr. 23	2087	544, 545	47	424
Knitting machine. Circular-	W. H. Pepper and A. T. L. Davis	404,930	June 11	817	210	47	1393
Knitting machine. Circular-	C. F. Swain	400,510	Apr. 2	118	32	47	27
Knitting machine. Circular rib-	H. P. Ballou	402,793	May 7	362	94, 95	47	731
Knitting-machine stopping mechanism	H. Curtin	402,905	May 7	513	136	47	759
Knitting machine. Straight-	R. W. Scott and L. N. D. Williams	404,230	May 28	2556	666	47	1177
Knitting machine. Straight-	F. Wilcomb	405,636	June 18	1885	498	47	1613
Knitting machine. Straight-	F. Wilcomb	405,637	June 18	1887	499	47	1613

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Knitting machine. Straight	F. Wilcomb	405,638	June 18	1889	499, 500, 501, 502	47	1614
Knitting machine. Straight	F. Wilcomb	405,639	June 18	1908	503	47	1617
Knitting machine. Straight	F. Wilcomb	405,640	June 18	1911	503, 504	47	1617
Knitting machines. Sinker-bar for straight	F. E. Busiel	403,985	May 28	2150	561	47	1098
Knitting machines. Striping attachment for circular	J. A. Parr	402,854	May 7	444	117, 118	47	746
Knob attachment	S. Schmaus	403,222	May 14	1014	268	47	863
Knob attachment	S. Schmaus	403,223	May 14	1015	269	47	863
Knob. Glass	E. A. Foy	403,340	May 14	1199	318	47	898
Knockdown case for eggs, &c	W. M. Baker	401,873	Apr. 22	2199	575	47	446
Labeling and pasting apparatus	E. H. Faulkner	405,466	June 18	1619	427	47	1560
Labeling machine. Can	W. Lee	401,039	Apr. 9	920	246	47	184
Lace fastener. Shoe	I. B. Stofiel and C. R. Cuthbert	402,546	Apr. 30	3232	838	47	651
Lace-pin fastening	M. E. Oppenheimer	401,053	Apr. 9	942	251	47	189
Lactometer	A. L. Rousse	404,985	June 11	895	234	47	1409
Ladder. Fire	L. Harris	401,433	Apr. 16	1516	402	47	309
Ladder. Fire-truck	C. Albert	401,623	Apr. 16	1833	469, 470	47	367
Ladder. Folding	F. W. Lowe and C. F. Sullivan	400,778	Apr. 2	514	141	47	100
Ladder-hook	J. B. Foote	401,742	Apr. 23	2010	528	47	410
Ladder. Portable extension	W. S. Odle	405,969	June 25	2408	630, 631	47	1714
Ladder. Step	J. A. Neill	403,602	May 21	1500	421	47	980
Ladder. Step	C. R. Williams	402,215	Apr. 30	2727	707	47	556
Ladders. Adjustable attachment and extension for fire	J. W. Tully	404,511	June 4	220	58	47	1265
Lamp	R. T. Barton	405,940	June 25	2358	618	47	1706
Lamp	A. O. Brunne	404,162	May 28	2435	650	47	1156
Lamp	C. H. Grube	403,669	May 21	1668	443	47	997
Lamp	H. W. Hayden	405,039	June 11	973	253	47	1425
Lamp	D. W. Parker	401,583	Apr. 16	1746	461	47	351
Lamp	L. H. Thomas	403,400	May 14	1303	341	47	917
Lamp and toilet-case. Combined	F. Maehr	404,421	June 4	67	17, 18	47	1228
Lamp. Arc	L. C. Atwood	404,244	May 28	2575	671	47	1160
Lamp. Arc	D. Houghton	403,671	May 21	1686	447	47	1000
Lamp. Arc	G. M. Lane	400,692	Apr. 2	382	100	47	75
Lamp. Arc	W. L. Silvey	403,964	May 28	2122	553	47	1093
Lamp. Argand	L. J. Atwood	400,619	Apr. 2	589	161	47	112
Lamp-black machine	E. R. Blood and S. P. Wenstran	403,174	May 14	923	243	47	845
Lamp-bracket. Piano	W. A. Smith	404,570	June 4	308	72	47	1263
Lamp bulbs. Exhausting electric	J. W. Packard	401,560	Apr. 16	1742	460	47	350
Lamp-burner. Argand	P. J. Fonlon	404,474	June 4	158	37	47	1254
Lamp. Carbureting	L. Doms	405,860	June 25	2261	594	47	1690
Lamp. Central-draft	J. C. Miller	403,762	May 21	1837	483	47	1029
Lamp. Electric-arc	L. C. Atwood	404,245	May 28	2578	672, 673	47	1160
Lamp. Electric-arc	J. R. Fox	404,351	May 28	2739	711	47	1210
Lamp. Electric-arc	C. B. Noble. (Reissue)	11,002	May 7	781	207	47	810
Lamp. Electric-arc	S. E. Nutting	400,476	Apr. 2	73	21	47	17
Lamp. Electric-arc	H. Pieper, Fils	405,906	June 25	2306	606	47	1697
Lamp. Electric-arc	E. A. Sperry	405,440	June 18	1576	416, 417	47	1551
Lamp-extinguisher	A. H. Bixler	405,764	June 25	2101	551	47	1659
Lamp-extinguisher	C. M. Brown	400,743	Apr. 2	459	120	47	90
Lamp-extinguisher	A. E. McLeod	400,584	Apr. 2	294	61	47	47
Lamp-extinguisher	C. E. Postlethwaite	400,789	Apr. 2	537	147, 148	47	103
Lamp-extinguisher	O. Reichels	404,055	May 28	2271	594	47	1121
Lamp-extinguisher	B. D. Stevens	403,896	May 21	2022	533	47	1065
Lamp extinguisher. Automatic and instantaneous gas	J. S. Edge and F. W. Ticehurst	403,654	May 21	1660	440, 441	47	995
Lamp filaments. Manufacture of incandescent	T. D. Bottome	401,120	Apr. 9	1039	----	47	205
Lamp. Gas	T. C. J. Thomas	402,204	Apr. 30	2713	706	47	553
Lamp-holder	L. J. Atwood and F. W. Tobey	405,388	June 18	1493	396	47	1534
Lamp-holder for vehicles	C. L. Ellicott	401,422	Apr. 16	1499	398	47	306
Lamp holder or frame	S. Clarke	403,327	May 14	1184	314	47	895
Lamp-holder. Piano	L. Pray	401,064	Apr. 9	955	254	47	191
Lamp. Hydrocarbon	S. Siemang	403,151	May 14	888	234	47	838
Lamp. Incandescent	C. A. Backstrom	404,816	June 11	646	168	47	1362
Lamp. Incandescent	H. Lemp and M. J. Wightman	401,444	Apr. 16	1532	405	47	312
Lamp. Incandescent	J. Stewart	403,397	May 14	1300	340	47	916
Lamp. Incandescing electric	T. A. Edison	401,646	Apr. 16	1868	485	47	372
Lamp. Oil	F. J. Allison	405,065	June 11	1015	271	47	1434
Lamp. Safety	J. Davidson and J. Taylor	405,878	June 25	2259	593	47	1690
Lamp-shade	H. Hohenstein	404,540	June 4	272	64	47	1276
Lamp-shade holder	J. Klutz	400,854	Apr. 2	640	174	47	122
Lamp-shade holder	B. G. Krapf	404,208	May 28	2502	655	47	1168
Lamp shade or reflector and guard. Combined	C. A. Cooley	401,416	Apr. 16	1493	396	47	305
Lamp-shade support	J. Klutz	400,855	Apr. 2	641	174	47	121
Lamp socket. Incandescent	F. C. Rockwell	402,481	Apr. 30	3141	813	47	633
Lamp-standard	W. C. Homan	403,841	May 21	1948	511	47	1051
Lamp. Student	A. Kiecmann	405,740	June 25	2089	542	47	1652
Lamp. Suspension	J. Klutz	400,856	Apr. 2	641	174	47	123
Lamp-suspension device	W. E. Hammond and J. G. Merriam	401,557	Apr. 16	1706	450	47	343
Lamp-wick tube	T. Langston	404,848	June 11	698	180	47	1370
Lamp with annular burner. Oil	A. Cautius	401,543	Apr. 16	1689	445	47	340
Lamps. Apparatus for the manufacture of filaments for incandescent	H. S. Maxim	405,239	June 11	1275	336	47	1484
Lamps. Attachment and oil-filler for	J. G. Seltzer	401,075	Apr. 9	969	258	47	198
Lamps. Automatic cut-out for electric	E. R. Knowles	403,941	May 28	2089	548	47	1066

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Lamps. Cut-out for incandescent electric	E. R. Whitney	401,527	Apr. 16	1657	438	47	335
Lamps. Device for supporting electric	A. T. Moore, Jr., and H. A. Fitch	400,473	Apr. 2	69	20	47	17
Lamps, &c. Extension-fixture for	L. F. Griswold	401,347	Apr. 16	1387	367, 368	47	285
Lamps. Filament for incandescent electric	T. D. Bottom	404,463	June 4	138	----	47	1251
Lamps. Heating attachment for	J. W. Zinn	401,475	Apr. 16	1584	419	47	322
Lamps. Lens-fastening for	J. S. Gall	400,763	Apr. 2	488	130	47	95
Lamps. Manufacture of filaments for electric	H. S. Maxim	405,170	June 11	1168	311	47	1402
Lamps or lanterns. Globe or shade for	P. R. D. D'Humy	401,934	Apr. 23	2296	596	47	464
Lamps. Sheath for regulating light from electric	W. H. Melaney	405,427	June 18	1553	411	47	1496
Lamps. Wick-raiser for	G. W. Woodward	400,016	June 25	2498	636	47	1720
Lantern	F. Barbig	402,794	May 7	365	95	47	731
Lantern	H. A. Matthews and D. M. Ireland	405,106	June 11	1066	284	47	1443
Lantern. Electric	C. W. Cox and T. E. Van Dyke	401,417	Apr. 16	1494	396	47	305
Lantern-frame	I. Van Hagen	405,628	June 18	1675	496	47	1611
Lantern. Portable electric	W. Frishmuth	404,696	June 4	422	122	47	1319
Lantern. Tubular	L. F. Betts	401,116	Apr. 9	1034	270	47	204
Lantern. Tubular	E. C. Glazier	401,490	Apr. 16	1603	423	47	325
Lantern. Tubular	R. Hermance	404,538	June 4	366	64	47	1275
Lap-ring	W. H. Baker	402,384	Apr. 30	2876	772	47	602
Laps. Machinery for making	W. H. Palmer, Jr	404,106	May 28	2358	617	47	1136
Last	E. W. Arnold and G. W. Osgood	403,982	May 28	2146	561	47	1097
Last	A. K. Chase	405,911	June 11	934	248	47	1417
Last	J. Condell	405,346	June 18	1436	379, 380	47	1523
Last	J. Reeson	400,946	Apr. 9	785	209	47	159
Last	E. W. Stead	400,876	Apr. 2	669	182	47	128
Last and stand	J. K. Dugdale and C. E. Mastin	403,927	May 28	2071	544	47	1063
Last-block fastener	W. Cook	402,500	Apr. 30	3179	823	47	641
Lasting-machine	J. W. Millet	402,959	May 7	583	156	47	776
Lasting-machine	J. Patten	403,067	May 7	741	193, 194, 195, 196, 197, 198	47	869
Latch	J. A. Baldwin	403,173	May 14	922	242	47	845
Latch	O. A. Jenison	401,189	Apr. 9	1120	296, 297	47	290
Latch	F. L. Pierce	403,554	May 21	1529	401	47	988
Latch	J. R. Scott	404,231	May 28	2557	667	47	1177
Latch	B. L. Wright	400,814	Apr. 2	560	159	47	111
Latch and lock combined	J. Austin	405,241	June 18	1263	340	47	1491
Latch and lock combined	J. A. Campbell	401,540	Apr. 16	1682	443	47	339
Latch and lock combined	W. W. and F. P. Pursel	405,050	June 11	996	265	47	1430
Latch-case	C. M. Burgess	404,892	June 11	763	195	47	1382
Latch for sliding doors	W. H. Thomas	402,493	Apr. 30	3156	817	47	636
Latch. Gate	P. Dyer	404,391	June 4	26	6	47	1230
Latch. Gate	M. F. Hill	404,971	June 11	881	229	47	1406
Latch. Gate	G. C. Loar	404,974	June 11	885	231	47	1407
Lath-sawing machine	D. S. Abbott	400,981	Apr. 9	854	229	47	172
Lathing	L. L. Sagendorph	404,227	May 28	2553	665, 666	47	1176
Lathing	L. S. Scott	405,718	June 25	2036	534	47	1646
Lathing. Machine for forming sheet-metal	J. Weichhart	401,522	Apr. 16	1650	435, 436	47	333
Lathing. Machine for forming sheet-metal	J. Weichhart	401,523	Apr. 16	1652	436	47	334
Lathing. Machine for making metallic	G. Hayes	402,940	Apr. 30	2757	714, 715	47	561
Lathing. Metallic	L. Kinney	400,774	Apr. 2	502	136	47	96
Lathe	G. E. Mertz	402,958	May 7	591	156	47	775
Lathe-dog	T. C. Smith	405,853	June 25	2221	584	47	1663
Lathe for turning non-circular forms	J. W. Maloy	403,120	May 14	843	223, 224	47	830
Lathe. Metal-turning	J. R. Back	400,820	Apr. 2	591	161	47	113
Lathe. Turning	R. F. Darling	400,550	Apr. 2	180	49	47	38
Lathe-turret	C. I. King	401,564	Apr. 16	1717	453	47	345
Lathe. Turret	G. T. Reiss	406,008	June 25	2469	646	47	1724
Lawn-rake	J. B. Detweiler	401,822	Apr. 23	2133	557	47	439
Lawn-tennis net	F. W. Taylor	401,062	Apr. 9	978	261	47	195
Lead. Apparatus for the electrolysis of	C. O. Yale	405,452	June 18	1580	421	47	1555
Lead. Apparatus for the manufacture of white	A. C. and S. R. Bradley	404,253	May 28	2567	674	47	1182
Lead. Making white	J. Baldwin	401,533	Apr. 16	1672	441	47	337
Lead or crayon holder	M. Bailey	405,541	June 18	1711	452	47	1580
Leaf-holder. Adjustable	C. Barbour	405,942	June 18	1284	340	47	1491
Leather. Compound for restoring the color of brown	E. Frid	402,731	May 7	257	----	47	713
Leather-cutting tool	H. W. Winter	402,375	Apr. 30	2963	768	47	600
Leather-dressing machine	G. W. Baker	405,653	June 18	1933	508, 509	47	1021
Leather-splitting machine	E. M. Dunphe and C. Blockhous	405,607	June 25	2005	526	47	1640
Leather-splitting machine	H. C. Pease	403,496	May 14	1494	373	47	989
Leather-splitting machine	F. F. Stanley. (Reissue)	11,008	June 18	1982	519	47	1630
Leather-stretching machine	C. L. Royer	402,940	May 7	455	119, 120	47	748
Leather-thong cutter	P. Wilder	403,805	May 21	1894	497	47	1041
Ledger or similar account-book	J. W. Horne	401,497	Apr. 16	1613	426, 427	47	327
Leg. Artificial	C. A. Frees	401,436	Apr. 16	1506	399	47	307
Leg. Artificial	B. F. Rounds	403,142	May 14	876	231	47	836
Lens. Aplanatic	H. L. H. Schröder	404,506	June 4	210	50	47	1264
Letter-box	W. D. Doremus	404,898	June 11	666	173	47	1365
Letter-box	J. T. Lamman	404,293	May 28	2648	688	47	1194
Letter-box	J. E. Morris	402,535	Apr. 30	3217	834	47	648

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Letter-box	W. A. Paulsen	402,855	May 7	449	118	47	747
Letter-box	E. A. Sharp	402,623	May 7	104	25	47	684
Letter-box	F. T. Taylor	403,790	May 21	1870	492	47	1026
Letter-box alarm	F. Snyder	402,382	Apr. 30	2232	730	47	573
Level, &c. Brick-layer's plumb-	J. Smith	402,360	Apr. 30	2243	763	47	596
Level. Spirit-	E. Lewis and F. Armstrong	401,843	Apr. 23	2157	563	47	438
Levels. Sighting attachment for	J. A. Traut	402,869	May 7	471	123	47	751
Levels. Sighting attachment for spirit-	J. A. Traut	405,624	June 18	1860	492	47	1609
Lever. Brake-	G. W. Barnes	403,963	May 28	2147	561	47	1097
Levers. Foot for sand-	C. Vezie	401,611	Apr. 16	1811	474	47	363
Library books. Apparatus for automatically changing circulating-	J. Mehlhardt	405,968	June 18	1323	349	47	1499
Lid for receptacles	C. W. Elliott	400,901	Apr. 9	712	183	47	147
Life-line carrier. Floating	A. D. Newell	403,207	May 14	988	261	47	858
Lifter:							
See Invalid-lifter. Plate-lifter. Track-lifter. Transom-lifter. Wick-lifter.							
Lifting device	C. Ellis and E. E. Benigar	403,594	May 21	1488	391	47	960
Lifting-jack	J. A. Boice	401,119	Apr. 9	1036	277	47	205
Lifting-jack	H. H. Clever	403,141	Apr. 30	2621	678	47	534
Lifting-jack	L. J. Crecelius	403,407	Apr. 30	3013	782	47	609
Lifting-jack	W. H. Holmes	403,181	Apr. 30	2656	687	47	541
Lifting-jack	W. M. Piper	401,368	Apr. 16	1430	375	47	291
Lifting-jack	G. H. Shaffer and J. Bairstow	404,800	June 4	624	160	47	1348
Lifting-jack	A. J. Souders	401,865	Apr. 23	2184	570	47	443
Lifting-jack	A. A. Strom	401,722	Apr. 16	1973	516	47	392
Ligatures. Flexible receptacle for	R. W. Johnson	404,843	June 11	690	178	47	1369
Light:							
See Submarine search-light.							
Light-fixture. Extension	G. W. Bayley	401,925	Apr. 23	2285	592	47	461
Lighting. Combined track and train	H. W. Leonard	405,895	June 25	2981	599; 600	47	1693
Lighting device	I. M. Rose	402,617	May 7	96	23	47	682
Lighting system. Electric-	H. W. Leonard	405,896	June 25	2284	600	47	1694
Lightning-arrester	R. Belfield	404,154	May 28	2424	634	47	1153
Lightning-arrester	M. D. Law	400,463	Apr. 2	52	16	47	14
Lightning-arrester	E. Thomson	401,085	Apr. 9	982	262	47	196
Lightning-conductor for wire fences	F. E. Wood	401,095	Apr. 9	1002	267; 268	47	199
Lightning-rod and coupling	S. R. Lawshe	400,464	Apr. 2	54	16	47	14
Linear transformers. System of	E. E. Rice	402,971	May 7	606	159	47	778
Liniment	J. A. Achard	400,992	Apr. 9	855	.....	47	173
Liniment	M. F. Martin	403,121	May 14	845	.....	47	830
Link. Self-acting unlocking	W. F. Fisher	404,903	June 11	780	199	47	1385
Liquid-distributer	F. W. Kendall	402,841	May 7	430	113; 114	47	744
Liquid-fuel burner	W. E. Eastman	405,881	June 25	2992	594; 595	47	1690
Liquid-fuel burner	W. Vogel	406,013	June 25	2487	650; 651	47	1728
Liquid-separator. Centrifugal	P. M. Sharples	402,624	May 7	104	25	47	684
Liquid transporting and measuring vessel	H. P. and S. L. Barnhart	404,619	June 11	655	169	47	1363
Liquids. Apparatus for delivering	S. Jenkins	401,704	Apr. 16	1941	506	47	385
Liquids. Apparatus for dispensing	J. C. Mayrhofer	405,846	June 25	2210	582	47	1680
Liquids. Device for agitating	R. S. Williams	401,724	Apr. 16	1976	517	47	393
Liquids under pressure. Reservoir for holding	W. H. Thayer	401,960	Apr. 23	2357	613	47	476
Liquors. Apparatus for purifying and aging	S. G. Cabell	404,682	June 4	461	116	47	1315
Lithographic and sincographic presses. Damping apparatus for	A. Genet	401,025	Apr. 9	900	241	47	181
Loading and hoisting bucket	W. S. Bogle	402,134	Apr. 30	2610	676	47	533
Lock:							
See Alarm-lock. Bag-lock. Coin-operated lock. Combination-lock. Door-lock. Fire-arm lock Hasp-lock. Nut-lock. Registering-lock. Seal-lock. Stove-pipe lock. Switch-lock. Time-lock. Trunk-lock. Vehicle-seat lock.							
Lock	A. S. Boice	404,516	June 4	226	54	47	1267
Lock	H. C. Frost	404,080	May 28	2313	606	47	1131
Lock	S. C. Harlan	404,835	June 11	682	176	47	1368
Lock	T. B. Jeffery	405,842	June 25	2204	580	47	1679
Lock	F. Krupp	400,858	Apr. 2	643	175	47	124
Lock	F. W. Mix	404,048	May 28	2255	591	47	1118
Lock	W. H. Taylor	403,705	May 21	1740	458	47	1011
Lock	W. H. Taylor	403,706	May 21	1742	458	47	1011
Lock	W. H. Taylor	405,057	June 11	1003	268	47	1432
Lock	W. H. Taylor	405,131	June 11	1098	292; 293	47	1450
Lock-case	E. C. Smith	405,329	June 18	1410	371	47	1518
Lock-hook	C. T. Brown	404,160	May 28	2430	637	47	1155
Lock-hook	C. T. Brown	404,161	May 28	2433	637	47	1155
Locks. Making	E. C. Smith	402,627	May 7	108	26, 27	47	685
Locomotive. Air and gas	A. Schmid, R. Siegfried, and J. C. Beckfeld.	400,218	Apr. 9	1190	318	47	234
Locomotive-brake	L. P. Lawrence	403,277	May 14	1107	293; 294	47	880
Locomotive-cab seat	G. W. Stone, Jr	404,662	June 4	434	109	47	1309
Locomotive-driver brake	G. A. Boyden	403,871	May 21	1964	521	47	1057
Locomotive-driver brake	G. A. Boyden	404,339	May 28	2721	706	47	1207
Locomotive. Electric	C. J. Van Depoele	403,011	May 7	661	174; 175	47	788

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Locomotive-engine. Compound	R. H. Lapage	405,570	June 18	1784	472; 473	47	1595
Locomotive-engine. Compound	S. M. Vauclain	406,011	June 25	2484	649	47	1727
Locomotive or other engine	J. Lewis	405,104	June 11	1058	283	47	1442
Locomotives. Driving-gear for	A. Haubrouck	402,922	Apr. 30	2884	748	47	585
Locomotives. Push-bar for	M. D. Toohey	400,518	Apr. 2	136	35	47	99
Log-loading machine	G. W. Pratt and J. P. Hanson	400,790	Apr. 2	539	148; 149	47	103
Log-puller	M. Hargus	403,830	May 21	1943	510	47	1050
Logs and timber. Device for handling	W. Baptist	400,728	Apr. 2	439	118	47	87
Loom	J. Jagger	403,194	May 14	964	253; 254	47	854
Loom	H. Wyman	402,122	Apr. 23	2589	670; 671	47	560
Loom attachment for weaving center selvages	F. Lacey	403,198	May 14	971	255; 256	47	855
Loom jacquard mechanism	E. Crossley and H. N. Mellor	402,309	Apr. 30	2962	740; 741	47	582
Loom. Lappet-	G. H. Hodges and T. Lonergan	400,915	Apr. 9	730	198	47	150
Loom lease-rod	C. H. Hobbs and T. P. Whelan	401,351	Apr. 16	1394	360	47	287
Loom. Narrow-ware	A. Morace	403,769	May 21	1830	483	47	1029
Loom-picker	P. H. Connor	405,947	June 25	2376	622	47	1706
Loom-picker	E. S. Grinnell	404,478	June 4	164	38	47	1253
Loom picking mechanism	J. and E. Horrocks	402,452	Apr. 30	3005	803	47	695
Loom positive shuttle-motion	C. B. Rumsey	404,987	June 11	898	235; 236	47	1410
Loom positive shuttle-motion	F. Schmirk	402,354	Apr. 30	2936	761	47	594
Loom shedding mechanism	C. Hahle, C. E. Liebreich, and T. Hanson.	401,947	Apr. 23	2313	601; 602	47	467
Loom shedding mechanism	W. Wattie	403,089	May 7	777	205	47	809
Loom-shuttle	F. K. Wright	403,979	May 28	2142	560	47	1097
Loom-shuttle binder	S. J. Noiseux	404,640	June 4	417	103	47	1305
Loom shuttle-box mechanism	J. Mathieson	404,640	June 4	405	99	47	1309
Loom shuttle-box mechanism	H. Wyman	405,645	June 18	1919	505; 506	47	1619
Loom shuttle-box-operating lever	J. A. Evans	405,022	June 11	952	254	47	1460
Loom-shuttle check	N. Boisvert	405,960	June 25	2427	635	47	1716
Loom-shuttle checking and relieving mechanism	E. M. Ball	405,069	June 11	1040	278	47	1436
Loom-shuttle checking and relieving mechanism	O. A. Sawyer and M. M. Lahue	405,913	June 25	2318	609	47	1699
Loom shuttle-motion	J. L. Brook	400,742	Apr. 2	458	122	47	90
Loom shuttle-relief mechanism	J. and E. Horrocks	402,453	Apr. 30	3006	803; 804	47	695
Loom-shuttle. Self-threading	E. A Scholfield	405,746	June 25	2079	545	47	1654
Loom-shuttles. Tension-regulating device for	M. Mercier	405,673	June 18	1903	515	47	1606
Loom stop mechanism	G. Crompton and H. Wyman	402,001	Apr. 23	2389	621; 622	47	482
Loom stop mechanism	E. Herzig	404,407	June 4	48	13	47	1234
Loom stop-motion	A. J. Pirotte	403,767	May 7	320	83	47	723
Loom take-up mechanism	D. Cunningham	405,859	June 25	2163	575	47	1675
Loom-temple	N. I. Allen	405,267	June 18	1402	395	47	1534
Loom-temple	J. Barnes	403,038	May 7	692	161	47	794
Looms for weaving fabrics having end borders. Shuttle-box-pattern mechanism for	F. Hebden	401,709	Apr. 16	1938	505	47	385
Looms. Operating mechanism for the cloth-beams of	C. Strasmann	400,879	Apr. 2	672	184	47	129
Looms. Picker-staff connection for	J. McGinnis	405,495	June 18	1671	442	47	1571
Looms. Pile-cutting apparatus for double-pile fabric.	J. Oswald	405,114	June 11	1076	286	47	1445
Looms. Selvage-shedding device for hand-	H. S. McKean	400,583	Apr. 2	232	60	47	47
Looms. Tug-strap holder for	T. Kendray	405,418	June 18	1535	406	47	1543
Loop-tie for decorative scarfs or similar articles	J. Müller	401,051	Apr. 9	968	250	47	188
Low-pressure engine	H. Haab	404,905	June 11	783	200	47	1386
Lubricants. Feeding	A. Schmid and R. Siegfried	403,146	May 14	881	228	47	837
Lubricating device	J. B. Glover	403,657	May 21	1665	442	47	996
Lubricator:							
See Axle-lubricator. Cylinder-lubricator. Pulley-lubricator. Sight-feed lubricator.							
Lubricator	W. H. Cooper	402,404	Apr. 30	3009	781	47	606
Lubricator	E. G. Felthousen	403,543	June 18	1748	488	47	1588
Lubricator	L. M. Fleischmann	400,761	Apr. 2	480	120	47	94
Lubricator	J. Gracey and G. W. Keech	405,925	June 25	2456	640	47	1723
Lubricator	T. J. Hart	405,985	June 25	2227	586	47	1691
Lubricator	J. Powell	403,695	May 21	1736	455	47	1006
Luggage-carrier	C. H. Smith	402,991	May 7	633	168	47	783
Lumber. Machine for grooving	J. T. Grzybowski	402,521	Apr. 30	3199	833; 839	47	644
Lumber-piles. Device for launching	H. Rich	401,370	Apr. 16	1423	376	47	302
Lumber. Preserving	T. H. Sampson	403,144	May 14	877	231; 232	47	837
Lumber-trimmer	W. Dunbar	404,267	May 28	2606	678	47	1185
Magnet and armature. Electro-	F. W. Cole	403,517	May 21	1480	388	47	958
Magnet for dynamos. Field-	S. S. Wheeler	403,018	May 7	673	177; 178	47	790
Magnetic separator	G. Conkling	400,766	Apr. 2	463	123; 124	47	91
Magnetic separator	G. Conkling	400,767	Apr. 2	463	124	47	91
Magnetic separator	G. Conkling	401,415	Apr. 16	1492	395	47	304
Magnetic separator	O. Conkling	402,904	May 7	512	135	47	750
Magnetic separator	G. Conkling	403,576	May 21	1556	411	47	974
Magnetic separator	H. S. Maxim	402,684	May 7	194	49	47	709
Mail-bag	H. L. Boyle	403,672	May 21	1966	521	47	1058
Mail-pouch	C. W. Miller	401,196	Apr. 9	1161	309	47	229
Malt. Manufacturing dextrine corn-	E. M. Louis	405,573	June 18	1789	.....	47	1596
Malting grain. Apparatus for	P. G. Toepfer	400,607	Apr. 2	568	156	47	109

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Mandrel. Expansible	F. J. Gay	403,529	May 21	1502	394	47	963
Mandrel. Expansible	P. H. Griffin	404,477	June 4	163	38	47	1255
Mandrels, keys, &c. Machine for driving	J. Richards and J. Walker	401,968	Apr. 23	2342	606	47	473
Manure-distributer	J. A. Tigner	401,768	Apr. 23	2043	534	47	417
Map	H. B. De Beaumont	400,642	Apr. 2	304	85	47	63
Map-case	G. B. Heckel and G. James	405,666	June 18	1954	513	47	1625
Map-exhibitor	W. A. Taylor	404,805	June 4	631	162	47	1249
Marine battery. Revolving	L. Durand	400,636	Apr. 2	612	166	47	117
Marker. Land	W. H. Boggs	401,679	Apr. 16	1906	497	47	380
Mash-machine	R. Garich	404,532	June 4	257	61	47	1273
Mason's float	I. N. Conrad and A. W. Pounder	405,396	June 18	1505	399	47	1557
Mat: *See* Door-mat. Metallic mat.							
Match	F. Leiss	401,443	Apr. 16	1531	405	47	312
Match-safe	J. K. Robinson	400,428	Apr. 2	88	24	47	20
Matching-machine	B. G. Luther	403,201	May 14	977	258	47	856
Matrices. Producing	F. M. F. Cazin	402,720	May 7	245	65	47	710
Mattress, pillow, &c. Spring	A. J. Lytle	401,287	Apr. 9	1200	344	47	253
Mattress. Water-proof air	B. F. Snavely	402,992	May 7	634	168	47	783
Mattress. Woven-wire	R. Preuss	401,301	Apr. 9	1317	350	47	250
Measure. Liquid	D. Bothwell	405,075	June 11	1027	274	47	1436
Measure-scale	W. Cook	405,464	June 18	1617	426	47	1559
Measurement apparatus. Electrical	A. C. White	401,617	Apr. 16	1821	476	47	365
Measuring apparatus. Fluid	W. H. Forbes and J. Gibson	403,333	May 28	2077	545	47	1064
Measuring device and cutting-guide. Garment	E. Stearns	405,614	June 18	1846	499	47	1607
Measuring-instrument. Electrical	E. Weston	403,311	May 14	1159	307	47	889
Measuring machine. Foot	E. B., 2d, and E. B. Stimpson, 1st	404,994	June 11	909	240 241	47	1411
Measuring-siphon	J. M. Clark	401,413	Apr. 16	1490	395	47	304
Measuring-stick. Extensible	C. M. Mumford	401,292	Apr. 9	1305	346	47	256
Measuring the height of human bodies automatically. Machine for	W. F. Stanley	404,317	May 28	2685	696 697 698	47	1200
Measuring-vessel	T. S. Cockcroft	404,603	June 4	358	86	47	1293
Meat-chopping machine	F. Bloomqvist	400,999	Apr. 9	865	232	47	175
Meat-cutting machine	H. Albrecht	403,022	May 7	678	179	47	791
Meat-cutting machine	H. Koepp	403,846	May 21	1954	513	47	1052
Meat-rack	C. A. Gloekler	403,996	May 28	2170	570	47	1101
Meats. Curing and preserving	G. Holgate	402,736	May 7	274	70	47	715
Mechanical and electro-magnetic motor. Combined	C. A. Randall	401,207	Apr. 9	1175	312 313	47	231
Mechanical movement	J. H. Baker	405,756	June 25	2093	549	47	1657
Mechanical movement	D. W. Dodson	402,234	Apr. 30	2750	713	47	560
Mechanical movement	J. L. Follett	402,430	Apr. 30	3067	793	47	619
Mechanical movement	J. Hunt	402,018	Apr. 23	3420	631	47	487

Mechanical movement	F. H. Richards	403,373	May 14	1249	331	47	907
Mechanical power	L. B. Watkins	404,136	May 28	2399	628	47	1148
Medical apparatus. Electro	J. J. Lewin	401,041	Apr. 9	924	247	47	185
Medical apparatus. Electro	T. J. Smith	403,492	May 14	1435	375	47	941
Medical compound	F. Krüger	401,500	Apr. 16	1618	.....	47	328
Medical compound	F. Krüger	401,501	Apr. 16	1619	.....	47	328
Medical compound	N. Levering and M. E. Curry	400,577	Apr. 2	215	.....	47	46
Medical compound	A. Roberts	400,793	Apr. 2	545	.....	47	105
Medicated felt	A. F. Machold	401,189	Apr. 9	1151	.....	47	227
(Medicine.) Alterative tonic	T. C. Fuller	403,185	May 14	944	.....	47	849
(Medicine.) Bitter tonic	J. D. Delisle	402,312	Apr. 30	2868	.....	47	583
(Medicine.) Cough-sirup	W. A. Maxwell and O. E. Meddaugh	404,422	June 4	68	.....	47	1239
Medicine-dispenser	J. Barnes	404,950	June 11	841	220	47	1398
Medicine-spoon register	H. W. Welles	400,719	Apr. 2	424	115	47	84
Melting-furnace. Open-hearth	W. Swindell	402,782	May 7	345	89, 90	47	727
Menthol crystals. Apparatus for making	H. D. Cushman	402,907	May 7	517	137	47	760
Merchandise-box	G. E. Raymond	405,801	June 25	2150	565	47	1689
Merchandise-holder. Coin-operated	W. H. Gilman	402,920	May 7	535	141 142	47	764
Mercury. Making double salts of	E. Mennel	405,368	June 18	1463	.....	47	1598
Message and time recorder	J. C. Wilson	402,120	Apr. 23	2586	670	47	519
Metaamidophenol	C. Kusmauli	403,678	May 21	1701	.....	47	1003
Metal. Apparatus for mixing molten pig	W. R. Jones	404,415	June 4	60	16	47	1237
Metal can	M. Ams	402,882	May 7	486	127	47	754
Metal can, box, or other receptacle	G. A. Waeber	401,913	Apr. 23	2363	589	47	458
Metal into malleable iron or steel. Apparatus for converting crude	J. W. Bookwalter	405,706	June 25	2104	551	47	1659
Metal. Mixing molten pig	W. R. Jones	404,414	June 4	57	15	47	1237
Metal shears	P. Broadbooks	405,596	June 18	1716	453 454	47	1581
Metal stripe for ornamental metal lattice or fence work. Machine for shaping	F. H. Kindt	402,087	Apr. 23	2530	659 660	47	509
Metal wheel	A. Keith	401,563	Apr. 16	1716	452	47	345
Metal wheel	J. W. Savene	405,327	June 18	1407	371	47	1517
Metallic mat	A. M. Reeves	401,066	Apr. 9	958	256	47	191
Metallic mold	N. Washburn	401,504	Apr. 23	2110	550	47	428
Metallic strap for boxes	B. H. Gedge	403,530	May 21	1563	394	47	963
Metallic wheel	F. H. Ensign	404,611	June 4	370	89	47	1295
Metallurgical furnace	W. Stubblebine	404,369	May 28	2768	718	47	1216
Metallurgical plant	G. Lindenthal	405,401	June 18	1666	440	47	1570

Nipple. Nursing	R. Lockwood	401,505	Apr. 16	1624	430	47	329
Nipples. Machine for cutting right and left threads on	H. H. Taylor	403,791	May 21	1871	492	47	1037
Nitrogenous compounds from impure waters. Precipitating	M. Nahnsen	402,848	May 7	437	.....	47	745
Non-conducting jacket	J. Riley	403,700	May 21	1732	456	47	1009
Nozzle. Spray	J. Bean	402,730	Apr. 2	441	118	47	87
Nut and pipe wrench. Combined	W. T. Chesley	405,343	June 18	1433	378	47	1522
Nut-cracker	H. M. Quackenbush	404,016	May 28	2196	577	47	1106
Nut-lock	J. L. Bay	402,054	Apr. 23	2476	645	47	498
Nut-lock	J. Dickson	403,334	May 14	1190	316	47	897
Nut-lock	L. W. Evans	401,019	Apr. 9	891	238	47	179
Nut-lock	G. P. Fuller	404,530	June 4	265	61	47	1272
Nut-lock	A. J. Gunn	405,773	June 25	2114	544	47	1661
Nut-lock	G. C. Illingworth	402,739	May 7	279	72	47	716
Nut-lock	I. F. Leiby	402,063	Apr. 23	2487	632	47	488
Nut-lock	B. Marshall	401,044	Apr. 9	927	247	47	186
Nut-lock	A. T. Sangeton	403,386	May 14	1353	336	47	912
Nut-lock	J. G. Strader	403,968	May 28	2127	537	47	1094
Nut-lock	G. Van Nest	404,370	May 28	2770	718	47	1217
Nut-lock	C. O. Vinyard	404,326	May 28	2703	702	47	1204
Nut-lock	C. H. Warren	405,632	June 18	1878	497	47	1612
Oar. Bow-facing	S. R. Sweet	402,114	Apr. 23	2373	607	47	516
Oculists and opticians. Trial-frame for	A. L. Smith	404,903	June 4	698	161	47	1349
Oil and gas burner	E. H. Sargent	403,447	May 14	1366	359	47	928
Oil-burner	P. L. Bear	405,301	June 18	1497	397	47	1535
Oil-burner	F. M. Mahan	404,096	May 28	2241	613	47	1136
Oil-burner	M. D. Miller	404,297	May 28	2653	690	47	1195
Oil-burner	G. S. Paine	404,498	June 4	80	20	47	1242
Oil-burner	W. R. Parke	402,853	May 7	443	117	47	746
Oil burner. Hydrocarbon	F. W. Minshall	405,219	June 11	1243	330	47	1477

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Oil burner. Hydrocarbon	W. H. Myers	405,201	June 25	2288	604	47	1626
Oil. Burning hydrocarbon	C. L. Hevezin	402,243	Apr. 30	2761	715	47	582
Oil-can	C. A. Frayer	403,042	May 7	709	186	47	706
Oil-can	F. Marsaville	403,544	May 21	1519	396	47	966
Oil-can	H. Muller	401,451	Apr. 16	1538	407	47	314
Oil-distributing cartridge and projectile	G. N. McKibbin	402,345	Apr. 30	2910	757	47	593
Oil from oil-wells. Device for ejecting	W. Geiser	404,307	June 4	34	9	47	1232
Oil or petroleum. Refining and deodorizing coal-	F. M. F. Casin	400,683	Apr. 2	201	52	47	61
Oil. Refining cotton-seed	G. W. Scollay	405,852	June 25	2219	.....	47	1683
Oil-well bailer	T. A. Burkellow	400,896	Apr. 9	706	191	47	148
Oiler	J. F. W. Stairs	405,922	June 25	2332	612	47	1701
Oiler	W. F. and C. E. Traves	402,639	May 7	110	28	47	686
Oiler. Eccentric	J. and I. Roabong	401,072	Apr. 9	965	257	47	199
Oiling wheels. Device for	F. W. Harris	404,481	June 4	167	39	47	1256
Ointment	C. V. Sutherland	400,967	Apr. 9	814	.....	47	165
Opera-chair	D. Schnatek	405,220	June 11	1258	334	47	1480
Opera-glass case. Coin-controlled	E. J. Colby	405,659	June 18	1941	510	47	1632
Optical device for the observation of localities by reflection.	E. A. Trapp	401,229	Apr. 9	1203	321	47	237
Orange-grader	A. Ayer	401,241	Apr. 9	1227	327	47	241
Order. Credit or store	C. S. Hempstead	400,589	Apr. 2	207	56	47	44
Ordnance. Breech-loading	J. P. Lavigne	405,644	June 25	2207	581	47	1689
Ordnance. Construction of	E. Maitland	403,694	May 21	1707	451	47	1005
Ore-concentrator	W. McDermott	404,011	May 28	2189	575	47	1105
Ore-concentrator	W. H. Meginness	402,694	Apr. 23	2538	661	47	510
Ore-concentrator	J. H. Pemberton	401,457	Apr. 16	1549	410	47	315
Ore-crusher	J. Rodermond	400,601	Apr. 2	246	67	47	52
Ore-crusher and metal-separator	J. C. Wiswell	400,988	Apr. 9	850	226	47	172
Ore-feeder	G. Johnston	401,034	Apr. 9	913	244	47	183
Ore-grinding mill	J. McKenzie	401,964	Apr. 23	2336	607	47	472
Ore. Reducing	C. J. Eames	404,184	May 28	2475	.....	47	1163
Ore-roaster	C. J. Fendel	401,023	Apr. 9	897	240	47	180
Ore-roasting furnace	I. B. Hammond	404,000	May 28	2176	571	47	1103
Ore-separator	J. Coombes	400,440	Apr. 2	24	8	47	8
Ore-separator. Magnetic	C. M. Ball and S. Norton	404,333	May 28	2712	703	47	1205
Ore-separator. Magnetic	C. C. Coats	401,626	Apr. 16	1928	500	47	382
Ore-separator. Magnetic	W. R. Thomas	403,024	May 21	1623	429	47	967
Ore-washer	W. W. Rosensteel	403,498	May 14	1420	374	47	940
Ore-washer	J. Talley	402,698	May 7	214	56	47	704
Ores by magnetism. Separating	C. M. Ball and S. Norton	404,332	May 28	2711	703	47	1205
Ores. Device for collecting metallic	H. H. Eames	403,256	May 14	1063	280	47	878
Ores. Reducing and separating magnetic	J. D. Cheever	403,250	May 14	1057	.....	47	879
Ores. Separating	C. M. Ball and S. Norton	404,334	May 28	2714	704	47	1205
Ores with hyposulphite solutions. Leaching	E. H. Russell	403,615	May 21	1606	.....	47	964
Ores with hyposulphite solutions. Leaching	E. H. Russell	403,616	May 21	1610	.....	47	964
Organ	O. C. Whitney	401,474	Apr. 16	1583	416	47	321
Organ. Reed	H. Janes	405,708	June 25	2029	531	47	1643
Organs or pianos. Resonator for	A. J. Reynolds	405,393	June 18	1401	780	47	1516
Ornamental vessel or article	T. B. Gibson	404,795	June 4	963	156	47	1343
Oscillating chair	C. E. Whittlesey	401,069	Apr. 9	990	264	47	196
Oven and flat-iron heater	S. E. Robinson	401,969	Apr. 23	2343	606	47	473
Oven. Baker's	J. H. Meier	404,641	June 4	407	99	47	1363
Oven. Baking	A. Crumble	405,304	June 18	1375	368	47	1510
Oven. Drying	P. McArthur	405,220	June 11	1245	330	47	1477
Oven for vapor or gas stoves	J. Stubbers	401,723	Apr. 16	1974	516	47	393
Oven. Knockdown	M. S. Sager	402,978	May 7	615	161	47	780
Oven. Portable	J. Middleby	401,573	Apr. 16	1731	456	47	348
Overalls, &c	J. H. Brown	403,457	May 14	1361	362	47	931
Overdraw or checkrein attachment	R. W. Jones	402,456	Apr. 30	3100	804	47	626
Overflow-trap. Water-seal	E. J. Whitlock	404,750	June 4	560	143	47	1336
Overshoe	G. C. Wolfe	403,817	May 21	1907	501	47	1043
Oxides. Manufacturing	S. R. and A. C. Bradley	404,254	May 28	2588	674	47	1188
Oyster-opener	W. F. Stewart	402,867	May 7	470	123	47	750
Package-fastener	T. T. H. Harwood	405,775	June 25	2116	545	47	1662
Package-fastener	C. F. Spencer	405,685	June 18	1981	519	47	1630
Package for merchandise	H. A. Lee	405,364	June 18	1456	385	47	1527
Package-head	I. J. W. Adams	405,000	June 11	919	243	47	1413
Packing-box. Folding	H. Johnson	405,709	June 25	2021	531	47	1644
Packing-case	G. W. Banker	403,503	May 21	1453	381	47	953
Packing for metallic boxes	H. R. Gillingham	404,709	June 4	486	123	47	1300
Packing for piston-rods	J. P. Murray	404,493	June 4	185	44	47	1259
Packing. Metallic	R. Weatherburn	403,808	May 21	1896	498	47	1042
Packing. Piston	S. Hughes	403,753	May 21	1908	476	47	1023
Packing. Piston	G. H. Meader	402,267	Apr. 30	2800	725	47	569
Packing-ring. Renewable	H. R. Friebie	401,262	Apr. 9	1260	336	47	247
Packing. Rod	J. Cockfield and C. D. Higgins	400,436	Apr. 2	22	7	47	7
Packing. Rod	S. Udstad	401,984	Apr. 23	2364	615	47	477
Pad: *See* Back-band pad. Harness-pad. Bosom-pad.							
Paddle-wheel. Feathering	H. F. W. Sobst	403,392	May 14	1292	336	47	914
Padlock	G. Brambel	401,407	Apr 16	1483	393	47	302
Padlock	W. D. Doremus	402,663	May 7	163	42	47	694
Pail-cover	G. Fuchs	400,998	Apr. 9	719	195	47	162
Pail. Dinner	P. L. Crossman	400,752	Apr. 2	471	126	47	92
Pail. Dinner	J. H. Yarnell	403,239	May 14	1039	275	47	886
Pail. Fisherman's	C. F. Meyering and J. A. O'Connor	400,588	Apr. 2	229	62	47	43
Pail. Oyster	J. P. Kuhn and J. A. Reynolds	405,486	June 18	1663	439	47	1569

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Pails with water and other liquids. Apparatus for storing	F. A. Messer and W. F. Thorpe	405,900	June 25	2294	{582 / 583 / 584}	47	1696
Paint	S. C. Dunham	403,523	May 21	1498	.....	47	960
Paint-distributer	C. L. Burdick	402,398	May 7	506	124	47	758
Paint-mixer	G. W. Schock and W. H. Wanebrough.	401,306	Apr. 9	1323	352	47	200
Paints, &c. Sample of	F. H. Rose	402,859	May 7	454	119	47	748
Painting apparatus	S. W. Peregrine	402,188	Apr. 30	2688	696	47	547
Painting machine. Shingle or sheet-metal	G. D. Armstrong	400,426	Apr. 2	4	2	47	4
Pan: *See* Baking and roasting pan. Bed-pan. Candy-pan. Frying-pan. Grinding-pan. Vacuum-pan.							
Panel-raising machine	J. Green	401,555	Apr. 16	1702	{449 / 450}	47	343
Paper bag	J. Arkell	405,067	June 11	1017	272	47	1435
Paper bag	E. E. Clausen	401,687	Apr. 16	1918	{499 / 500}	47	392
Paper bag	C. B. Stilwell	405,616	June 18	1849	490	47	1607
Paper-bag holder	H. E. Gage	401,825	Apr. 23	2137	558	47	433
Paper-bag machine	A. C. Getten	405,308	June 18	1380	364	47	1511
Paper bag. Soft-tie	J. Arkell	405,068	June 11	1019	272	47	1435
Paper bags. Making	A. E. Osborn	405,590	June 18	1812	480	47	1601
Paper box	D. S. Clark	401,009	Apr. 9	877	235	47	177
Paper-box-covering machine	M. D. Knowlton	403,677	May 21	1698	449	47	1003
Paper box for cigars	O. H. Hicks	405,413	June 18	1330	405	47	1542
Paper bucket. Folded	H. S. Janke	403,594	May 21	1580	418	47	978
Paper. Case for displaying sheets of	M. M. Vardon	405,630	June 18	1876	496	47	1611
Paper-coating apparatus	G. Manahan and H. Gade	405,044	June 11	988	263	47	1428
Paper. Composition for waterproofing and preparing sheathing and building	G. Manahan and H. Gade	401,042	Apr. 9	925	.....	47	186
Paper-cutter	L. Ehrlich	405,402	June 18	1511	402	47	1536
Paper-cutter	W. H. Tivy and L. Ehrlich	404,321	May 28	2094	499	47	1202
Paper-cutting machine	H. P. Feister	400,652	Apr. 2	316	88 89	47	65
Paper. Dampening apparatus for rolls of	W. Scott	404,505	June 4	208	49 50	47	1263
Paper, envelopes, cards, &c. Frame for fanning out writing.	J. C. Oliver	404,104	May 28	2349	616	47	1138
Paper-folding machine	W. Downing	401,336	Apr. 16	1368	364	47	281
Paper-folding machine	J. C. Fowler and E. A. Henkle	400,762	Apr. 2	481	129	47	94
Paper-hanging machine	L. B. Polk	402,612	May 7	90	22	47	681
Paper-holder	C. H. Fisher	402,237	Apr. 30	2754	714	47	561
Paper. Machine for making perforations in	S. Wheeler	404,582	June 4	329	79	47	1287
Paper machine. Lace	G. Paci	401,054	Apr. 9	943	251	47	189
Paper-machines. Spray-cylinder cleaner for	G. D. Crance	405,015	June 11	938	249	47	1418
Paper-making machine	J. T. Flood	403,744	May 21	1798	473	47	1021
Paper-making machinery	S. Wilmot	401,917	Apr. 23	2271	590	47	459
Paper. Making perforations in	S. Wheeler	404,581	June 4	327	79	47	1287
Paper package. Toilet-	O. H. Hicks	404,622	June 4	384	92	47	1298
Paper. Perforated	O. H. Hicks	405,412	June 18	1528	405	47	1542
Paper-pulp digester	H. W. Stebbins	405,279	June 18	1340	354	47	1503
Paper-pulp screen	P. H. Cragin	403,577	May 21	1559	{811 / 812}	47	974
Paper-pulp screen	B. Eilers, Jr.	402,426	Apr. 30	3058	790	47	618
Paper-reel	H. T. Wilson	402,050	Apr. 23	2471	644	47	497
Paper-reel	H. T. Wilson	403,814	May 21	1904	500	47	1043
Paper-roll holder	A. Q. Ross	405,121	June 11	1066	280	47	1447
Paper roll. Toilet-	O. H. Hicks	400,913	Apr. 9	728	197	47	149
Paper roll. Toilet or wrapping	S. Wheeler	401,233	Apr. 9	1213	323	47	238
Paper tubes. Machine for rolling	H. O. Whitney	405,136	June 11	1106	295	47	1451
Paper waxing and cutting machine	J. B. Anderson	404,151	May 28	2419	624	47	1152
Paper-weight	F. B. Whipple	402,048	Apr. 23	2469	644	47	496
Paper-weight, calendar, and musical watch. Combined	E. N. Gaillard	402,916	May 7	530	140	47	763
Papeterie	A. Bühler	404,594	June 4	344	93	47	1290
Parer, corer, and slicer. Apple	W. H. Boutell	405,825	June 25	2178	{573 / 574}	47	1674
Parer. Vegetable	H. O. Thomas	403,793	May 21	1874	493	47	1037
Paring squashes. Machine for	F. L. Webster	404,452	June 4	117	28	47	1249
Partition, shutter, and the like	J. G. Wilson	405,450	June 18	1598	420	47	1555
Passenger-register	A. Romain	402,035	Apr. 23	2449	638	47	492
Pattern-board	J. Wright	404,144	May 28	2110	522	47	1150
Pavement and paving-brick	D. Harger	401,030	Apr. 9	905	242	47	182
Pavement for streets or roads	M. Levi	401,752	Apr. 23	2094	549	47	413
Pavement. Laying artificial	J. W. MacKnight	401,447	Apr. 16	1535	406	47	313
Pavement. Street	H. S. Hallwood	400,767	Apr. 2	492	133	47	96
Paving-block	R. B. Berrie	400,997	Apr. 9	864	229	47	174
Paving-block	J. L. Breed	402,897	May 7	505	133	47	758
Paving-block	G. M. Graham	401,492	Apr. 16	1604	{423 / 424}	47	336
Paving-block	W. and J. W. McReynolds	401,361	Apr. 16	1408	373	47	289
Pegging-jack	J. A. Dill	405,768	June 25	2106	562	47	1660
Pen	J. L. Ackerman	403,021	May 7	677	178	47	791
Pen	H. Belchling	404,249	May 28	2583	673	47	1181
Pen and pencil. Drawing	R. Anderson	405,650	June 18	1930	508	47	1621
Pen. Fountain-	J. D. Bray	405,458	June 18	1609	424	47	1558
Pen. Fountain-	S. D. Dias	402,417	Apr. 30	3032	786	47	613
Pen. Fountain-	L. A. Shattuck	402,864	May 7	462	{121 / 122}	47	749
Pen. Fountain-	L. A. Shattuck	403,225	May 14	1017	269	47	864
Pen. Fountain-	W. Van Demark	401,985	Apr. 23	2365	615	47	478
Pen guide or rest	I. Bergmann	402,796	May 7	367	97	47	732
Pen-holder	G. W. Baldwin	404,027	May 28	2269	590	47	1109

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Pen-holder	L. M. Hopkins	401,435	Apr. 16	1519	402	47	309
Pen-holder	A. S. Hubbell	403,190	May 14	951	251	47	850
Pens or pencils. Spring holder or clasp for	F. J. W. Fischer	404,697	June 4	462	122	47	1319
Pencil-holder	S. Wales	403,567	May 21	1546	407	47	972
Pencil-sharpener	B. N. Black	402,715	May 7	239	63	47	709
Pencil-sharpener	J. R. Foster	402,914	May 7	527	139	47	762
Pencil-tip	S. Kraus	405,102	June 11	1057	282	47	1442
Peptone. Serum-albumen	S. E. Ullman	402,494	Apr. 30	3157	.....	47	636
Percolator	T. Boyce	404,591	June 4	343	82	47	1280
Perforating-machine	S. D. Layman	401,038	Apr. 9	919	245	47	184
Periodicals. Preventing the fraudulent return of	R. D. Brain	402,136	Apr. 30	2616	677	47	533
Pessary	A. W. Sperry	404,019	May 28	2200	577	47	1107
Petroleum. Apparatus for refining	F. M. F. Cazin	400,634	Apr. 2	283	83	47	61
Petroleum-burner	C. V. Fleetwood	401,741	Apr. 23	2009	525	47	410
Petroleum-burning apparatus	J. W. Budd and G. D. Carroll	403,033	May 7	698	183	47	785
Petroleum or similar substances. Apparatus for burning	L. P. Guignard and J. Schweitzer	404,399	June 4	36	10	47	1232
Phonogram-blank	T. A. Edison	400,648	Apr. 2	314	.....	47	65
Phonogram-blanks. Making	T. A. Edison	400,649	Apr. 2	314	88	47	65
Phonogram-blanks. Making	T. A. Edison	400,650	Apr. 2	315	88	47	65
Phonograms and graphograms, &c. Case for carrying	R. H. St. John	402,997	May 7	641	169	47	785
Phonograph	C. Batchelor	400,639	Apr. 2	296	81	47	60
Phonograph	T. A. Edison	400,647	Apr. 2	312	86	47	65
Phonograph-doll	W. W. Jacques	400,851	Apr. 2	635	172	47	122
Phonograph recorder and reproducer	T. A. Edison	400,646	Apr. 2	311	87	47	64
Phonographs or telephones. Mouth-piece guard for	W. L. Candee	401,779	Apr. 23	1994	532	47	408
Photo-cameras. Film-supporting frame for	W. H. Lewis	402,680	May 7	189	48	47	699
Photo-engraving. Translucent film for use in the art of	C. A. Müller	401,510	Apr. 16	1631	432	47	330
Photograph-cabinet	J. Cornish	403,647	May 21	1652	438	47	993
Photograph-print mounter	J. W. Allderige	404,814	June 11	643	167	47	1361
Photographs. Mount for	R. H. L. Talcott	405,130	June 11	1097	292	47	1449
Photographer's retouching-machine	L. O. Girvin and J. Loff	404,534	June 4	260	62	47	1273
Photographic apparatus	H. Kuhn	403,476	May 14	1409	{368 / 369}	47	936
Photographic camera	E. B. Barker	402,711	May 7	232	61	47	707
Photographic camera	C. E. Burlingame	403,574	May 21	1554	410	47	974
Photographic camera	J. H. Ford and M. Jurnick	403,994	May 28	2166	569	47	1100
Photographic camera	E. Hackh	401,946	Apr. 23	2312	601	47	467
Photographic-camera shutter	R. E. M. Bain	404,375	June 4	5	1	47	1225
Photographic-camera shutter	R. D. Cleveland and C. A. Hoffman	402,806	May 7	381	100	47	734
Photographic cameras. Attachment for	G. D. Thompson	401,802	Apr. 23	2105	549	47	427
Photographic emulsions. Device for setting or cooling	J. W. T. Cadett	405,463	June 18	1616	426	47	1559
Photographic films. Roller-holder for	L. H. Bannister	405,454	June 18	1602	422	47	1556
Photographic paper	F. H. Rogers	402,279	Apr. 30	2818	729	47	573
Photographic-plate-developing tray	T. S. Wiles	402,214	Apr. 30	2726	707	47	556
Photographic-plate handle or holder	W. K. Moody	402,861	May 7	596	157	47	776
Photographic-plate holding apparatus	J. P. Decker	402,512	Apr. 30	3181	824	47	641
Photographic plates. Package for	D. C. Hoover	402,927	May 7	413	109	47	741
Photographic plates. Rack for washing and drying	W. S. Cullen	404,605	June 4	302	87	47	1294
Photographic plates with emulsion. Apparatus for coating	R. E. M. Bain	401,771	Apr. 23	2046	{535 / 536}	47	418
Photographic-printing frame	W. H. Fuller	402,154	Apr. 30	2643	684	47	539
Photographic-printing frames. Vignetting attachment for	J. R. Tewksbury	401,083	Apr. 9	980	{261 / 262}	47	195
Photographing-instrument	G. A. Cooke	401,330	Apr. 16	1355	362	47	278
Photography. Making iron prints by	C. R. McBlair and A. A. Raff	403,061	May 7	734	.....	47	802
Piano-action	S. Hansing	404,704	June 4	489	124	47	1330
Piano and harmonium. Combined	J. W. Erbe	402,427	Apr. 30	3059	{791 / 792}	47	618
Piano-forte action	S. Hansing	402,735	May 7	272	70	47	714
Piano-fortes. Sheet-music support for	E. J. Snow	401,662	Apr. 16	1485	491	47	376
Piano-plate	P. Gmehlin	403,583	May 21	1565	{413 / 414}	47	975
Pianos. Key-leveling device for	C. H. Smith	401,309	Apr. 9	1326	352	47	261
Pianos or organs. Indicator for	L. W. Blasius	403,906	May 28	2043	537	47	1677
Pianos. Repeating-action for grand	A. T. Strauch	404,876	June 11	743	189	47	1378
Pianos. Touch-regulator for	C. R. Elias	405,465	June 18	1618	{426 / 427}	47	1559
Pick	H. C. Stouffer	400,903	Apr. 2	560	153	47	107
Picture-exhibitor	G. D. Knipp	403,887	May 21	2008	527	47	1002
Picture. Transparent	W. Read, Jr	401,308	Apr. 9	1320	351	47	260
Piles, &c. Drive apparatus for	T. J. Harriman	401,031	Apr. 9	908	243	47	182
Piles. Teredo-proof covering for	G. M. Baronidis	403,409	May 14	1313	343	47	918
Pillow-block	S. M. Herber	403,471	May 14	1306	366	47	934
Pillow-sham holder	N. C. Moffett	403,300	May 14	1226	325	47	908
Pilot or head for sectional rods for threading underground conduits.	G. H. Warde	405,515	June 18	1702	450	47	1578
Pin: *See* Brooch-pin. Catch-pin. Coupling-pin. Double-pointed pin. Safety-pin. Scarf-pin.							
Pinch-bar	P. C. Forrester	403,184	May 14	943	250	47	848
Pinch-bar	S. H. St. John	400,964	Apr. 9	811	216	47	165
Pinion-facing machine	W. B. Learned and L. Murray	401,180	Apr. 9	1135	301	47	222
Pipe: *See* Blow-pipe. Stove-pipe. Tobacco-pipe.							
Pipe-coupling	J. C. Bayles	400,822	Apr. 2	503	162	47	113
Pipe-coupling	J. I. Collins	403,916	May 28	2054	540	47	1080
Pipe-coupling	S. R. Dresser	400,644	Apr. 2	306	86	47	64
Pipe-coupling	R. J. Edwards	400,750	Apr. 2	478	128	47	94
Pipe-coupling	R. Groark	403,884	May 21	2003	536	47	1002

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Pipe-coupling	C. F. Hurrel	404,413	June 4	56	15	47	1236
Pipe-coupling	O. J. Meyer	403,767	May 21	1836	483	47	1029
Pipe-coupling	G. N. Riley	400,949	Apr. 9	788	210	47	160
Pipe-coupling	H. S. Ross	405,745	June 25	2078	545	47	1654
Pipe coupling. Steam-	F. Hanson	404,786	June 4	604	156	47	1344
Pipe-cutter	E. Foerster	402,730	May 7	236	67	47	712
Pipe-cutter	V. B. Stevens	401,367	Apr. 16	1452	383	47	297
Pipe-joint	F. A. Lane	402,089	Apr. 23	2533	660	47	509
Pipe-joint. Oscillating	R. Groark	403,863	May 21	2001	525	47	1061
Pipe-laying apparatus	D. A. Streeter	400,881	Apr. 2	675	184	47	129
Pipe-laying apparatus	J. F. Ward	403,865	May 21	1977	519	47	1056
Pipe-molding apparatus. Former for	A. H. McNeal and W. A. Stineruck	402,029	Apr. 23	2440	636	47	490
Pipe or tube coupling	G. W. H. Brogden	401,996	Apr. 23	2383	620	47	481
Pipe-punch	C. S. Olmsted	402,273	Apr. 30	2808	737	47	571
Pipe-supporting device	H. J. Sullivan	403,564	May 21	1543	406	47	971
Pipe-testing machine	M. Sexton	405,054	June 11	1000	267	47	1431
Pipe trap. Exhaust-steam-	T. Burkhard, Jr	401,248	Apr. 9	1240	330	47	243
Pipe-trimming device	G. T. Fitzsimmons	403,828	May 21	1925	506	47	1046
Pipe-welding bell	J. Simpson	402,689	May 7	202	51	47	701
Pipe-welding machine	R. Cartwright	400,829	Apr. 2	603	164 163	47	115
Pipe-wrench	L. J. Bergendahl	401,926	Apr. 23	2286	593	47	462
Pipe-wrench	E. S. Boynton	404,770	June 4	576	147	47	1338
Pipe-wrench	C. L. Dunham	404,781	June 4	596	154	47	1342
Pipe-wrench	J. T. Hawkins	404,619	June 4	380	92	47	1298
Pipes. Composition for	J. H. Walsh	400,527	Apr. 2	149	.....	47	32
Pipes. Leak-detector for	A. H. Brown	401,409	Apr. 16	1485	383	47	303
Pipes. Machine for shaping sheet-metal	J. A. Carr	402,140	Apr. 30	2620	678	47	534
Pipes. Mold for forming drain-	R. E. Olsen and C. Gabriel	404,219	May 28	2542	663	47	1174
Pipes. Safety-cushion for water-	A. Hattersley	404,969	June 11	879	228	47	1405
Pipes. Securing rigid sockets in rubber	A. D. Schlesinger	400,955	Apr. 9	798	213	47	162
Pipes. Testing and disinfecting drain and soil	W. S. Clark	404,343	May 28	2736	707 708	47	1208
Piping, bowls, &c. Compound for	B. E. Olsen and C. Gabriel	403,548	May 21	1524	.....	47	967
Piston for caloric-engines	T. J. Rider	405,394	June 18	1403	366 370	47	1516
Piston for hydraulic presses	L. Miller	402,955	May 7	587	153	47	775
Piston-rod guide	D. W. Umstead	405,511	June 18	1697	444	47	1577
Pitman	P. R. Pulliam	402,105	Apr. 23	2560	665	47	514
Plaiting apparatus	C. F. A. Röell	401,214	Apr. 9	1182	315 314	47	233
Plane	J. J. Driver	405,540	June 18	1743	460	47	1587
Plane. Bench-	F. M. Bailey	401,532	Apr. 16	1671	441	47	337
Plane. Bench-	F. M. Bailey	402,896	May 7	491	128	47	755
Planing and molding machine	E. F. Autenrieth	405,389	June 18	1495	398 397	47	1535
Planing and surfacing machines. Feed-roll for	L. P. Hoyt	404,486	June 4	174	44	47	1257
Planing-machine	E. F. Autenrieth	404,948	June 11	840	219	47	1398
Planing-machine	E. F. Autenrieth	405,390	June 18	1496	397	47	1535
Planing-machine	B. D. Stevens	405,280	June 18	1342	354	47	1503
Planing-machine	J. P. Welch	404,138	May 28	2401	627 626	47	1148
Planing-machine feeding device	J. F. Welch and E. F. Autenrieth	401,524	Apr. 16	1654	434 437	47	334
Planing machine. Metal-	G. A. Gray	401,267	Apr. 9	1266	337	47	248
Planing machine. Wood-	A. B. Hutchinson	404,088	May 28	2324	609 614	47	1133
Planing machine. Wood-	F. J. Plummer	404,433	June 4	87	21	47	1242
Planing machine. Wood-	G. F. Wetherell and R. B. Jones	401,397	Apr. 16	1465	387	47	299
Planing-machines. Belt-tightener for	E. F. Autenrieth	401,677	Apr. 16	1904	496	47	379
Planing-machines. Chip-breaker for	J. Connell	405,014	June 11	937	249	47	1417
Planing-machines. Pressure-bar for	G. W. Passel	401,299	Apr. 9	1316	350	47	250
Planing machinery	L. Power	405,431	June 18	1359	412	47	1547
Planter	A. Charles	403,516	May 21	1478	387 388	47	958
Planter and cultivator	D. B. Henry	400,456	Apr. 2	44	14	47	12
Planter and drill combined. Corn-	A. J. Callaway	400,897	Apr. 9	707	192	47	146
Planter and fertilizer-distributer. Corn-	J. B. Broadwell	400,740	Apr. 2	455	121	47	90
Planter and fertilizer-distributer. Seed-	W. A. Holt	405,477	June 18	1637	433	47	1564
Planter and fertilizer-distributer. Seed-	W. A. Holt	405,478	June 18	1640	435 436	47	1564
Planter attachment. Corn-	W. Price	403,369	May 14	1244	330	47	906
Planter. Check-row corn-	G. A. Thode	405,444	June 18	1581	418	47	1552
Planter. Check-row corn-	W. M. Williams	404,025	May 28	2205	579	47	1108
Planter. Combined cotton, corn, and sorghum	J. D. Schofield	404,056	May 28	2272	596 595	47	1122
Planter. Corn-	A. Lindgren	403,119	May 14	841	223	47	890
Planter. Corn-	J. Moran	405,790	June 25	2135	561	47	1665
Planter. Corn-	J. R. Patterson and M. T. Foster	405,496	June 18	1675	443	47	1573
Planter. Corn-	N. O. Starks	404,318	May 28	2688	698 699	47	1201
Planter. Corn and cotton	T. J. Cathey	401,122	Apr. 9	1058	283	47	209
Planter. Corn or cotton	J. J. Armstrong and A. S. Lowrey	401,728	Apr. 23	1967	521	47	407
Planter. Hand-	C. G. Watson	405,633	June 18	1879	497	47	1612
Planter. Potato-	S. Grenon	403,264	May 14	1077	282 283	47	874
Planter. Seed-	G. D. Haworth	402,669	May 7	174	44	47	696
Planter. Seed-	J. Mitchell	401,897	Apr. 23	2235	589	47	453
Plastic compound for use in various arts	A. T. Woodward	403,631	May 21	1634	.....	47	989
Plate-lifter	S. T. Mickey	402,606	May 7	81	19	47	679
Plate. Name and letter-drop	W. Graham	401,700	Apr. 16	1935	505	47	384
Platform: *See* Car-platform.							
Pliers for applying couplings of wire	H. D. Taylor	400,512	Apr. 2	123	33	47	27

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Plow	C. Billups	402,300	Apr. 30	2986	775	47	604
Plow	M. M. Bowers	403,032	May 7	607	182	47	795
Plow	C. G. Buechner	404,823	June 11	660	170	47	1344
Plow	J. Clayton	403,269	May 14	1186	315	47	896
Plow	S. Kauble	401,562	Apr. 16	1715	452	47	345
Plow	W. W. Leak	402,253	Apr. 30	2780	719	47	565
Plow	E. P. Lynch	400,468	Apr. 2	58	17	47	15
Plow	O. S. Meeks and J. C. Brown	403,281	May 14	1112	295	47	881
Plow	P. Reaser	404,304	May 28	2666	692	47	1197
Plow	L. B. Tebbetts, C. H. Pope, and J. A. Stewart.	404,320	May 28	2692	699	47	1202
Plow	J. W. Webster	401,615	Apr. 16	1818	475	47	365
Plow and plow-point	J. W. McAnulty	400,581	Apr. 2	219	59	47	46
Plow attachment. Gang-	E. H. Farmer	401,937	Apr. 23	2299	597	47	464
Plow. Corn-	W. Quillan and F. A. Dake	400,710	Apr. 2	408	111	47	81
Plow. Cultivating-	M. Day	403,463	May 14	1387	364	47	933
Plow, cultivator, and seeder. Combined	H. M. Kingsbury	403,114	May 14	835	221	47	839
Plow. Ditching-	W. Borton	401,998	Apr. 23	2386	621	47	481
Plow. Ditching-	R. H. Nogar	404,424	June 4	99	18	47	1239
Plow. Double-shovel	E. C. Burnett	405,007	June 11	927	246	47	1415
Plow. Gang-	L. Gibbs	402,155	Apr. 30	2644	685	47	539
Plow. Hillside-	M. J. Bunnell	400,434	Apr. 2	14	5	47	6
Plow or cultivator attachment	J. M. Burford	405,693	June 25	2001	525	47	1639
Plow. Side-hill	F. Kuntzman	405,489	June 18	1664	439	47	1569
Plow. Sulky-	C. Boulay	400,433	Apr. 2	13	4	47	6
Plow. Sulky-	J. A. Garber	404,476	June 4	161	37	47	1235
Plow. Sulky-	E. C. Westervelt	403,866	May 21	1978	520	47	1056
Plow. Swivel-	A. Gale and E. Tremblay	404,531	June 4	256	61	47	1273
Plow. Wheel-	G. Kimball	404,716	June 4	506	128 129	47	1324
Plow. Wheel-	G. Moore	403,892	May 21	2018	531	47	1065
Plows. Adjusting device for wheel-	A. J. Ventzki	400,977	Apr. 9	829	221 222	47	168
Plows. Harrow attachment for	J. F. Williams	404,142	May 28	2408	631	47	1150
Plows. Seeding attachment for	J. S. Hibbets	402,843	Apr. 30	2762	715 716	47	582
Plug for closing pipes, &c. Expanding	C. M. Kemp	402,600	May 7	72	17	47	678
Plug for sinks, tubs, &c	W. B. Smith	401,976	Apr. 23	2352	612	47	475
Plume	W. E. Barnes	403,084	May 14	748	209	47	819
Pocket-book	E. Schnopp	401,219	Apr. 9	1192	319	47	235
Pocket-book. Magnetic	B. F. Thomas	402,491	Apr. 30	3154	816	47	636
Pocket-books, &c. Frame for	E. Oldenbusch	404,979	June 11	849	233	47	1408
Pocket-books or other articles. Frame for	L. Messer	404,721	June 4	510	130	47	1325
Pocket-knife	J. C. F. Schenck	404,870	June 11	734	187	47	1376
Pocket-knife	A. Wilzin	400,947	Apr. 9	849	228	47	171
Pocket-knife	A. Wilzin	401,093	Apr. 9	1060	267	47	198
Pocket or note book	E. Weissbrod	404,758	June 4	559	143	47	1336
Poison distributer	F. Eaton	404,077	May 28	2108	605	47	1130
Polarized relay	J. C. Wilson	402,639	May 7	126	30	47	688
Pole for lumber-wagons. Coupling-	B. R. Stogsdill and W. A. Worley	403,621	May 21	1619	498	47	986
Pole or post protector	M. E. Campany	405,658	June 18	1940	510	47	1622
Pole or tower	J. W. Davy	401,313	Apr. 16	1361	363	47	280
Pole tip. Vehicle-	N. R. Doan	403,925	May 28	2068	543	47	1082
Pole tip. Vehicle-	G. T. Wilson	403,236	May 14	1035	274	47	867
Polish. Furniture-	G. H. Allen	403,715	May 21	1754	.....	47	1013
Polishing compound	G. W. Hastings	404,483	June 4	169	.....	47	1256
Polishing-machine	W. McQuiston	405,589	June 18	1811	479 480	47	1600
Portable chair	L. Engebretsen	404,610	June 4	389	88	47	1295
Portraits. Mounting	P. G. Kramer, Jr	401,441	Apr. 16	1530	404	47	312
Post: *See* Fence-post.							
Post-hole-boring machine	J. F. Lacey	402,941	May 7	574	151	47	772
Post-hole digger or earth-auger	E. F. Scholder	404,115	May 28	2368	621	47	1142
Postal-cards. Machine for packaging	W. H. Bunce, D. Slate, and J. Rodda	404,773	June 4	579	148 149 150	47	1339
Pot: *See* Coffee-pot. Dash-pot. Coffee or tea pot. Transplanting-pot.							
Pot and protector for seedlings, &c. Combined	W. L. Wright	404,585	June 4	334	80	47	1288
Pot lid or cover	E. G. Copelin	405,949	June 25	2378	623	47	1709
Pot-rest	J. McLean	401,193	Apr. 9	1157	308	47	228
Potato-digger	J. H. Finkle	405,155	June 11	1144	305	47	1458
Potato-digger	J. H. Lewis	403,846	May 21	1956	513 514	47	1052
Potato-digger	J. W. Loree	401,295	Apr. 9	1288	344	47	253
Potato-digger	C. Roberts	403,375	May 14	1253	332	47	908
Pottery-jigger	P. Wilkes	404,941	June 11	832	216	47	1396
Poultry-carrier	G. M. Beerbower	401,812	Apr. 23	2120	552	47	430
Poultry drinking-fountain	F. E. Merriman	405,369	June 18	1464	387	47	1528
Powder-duster. Poisonous-	G. B. Titus	401,313	Apr. 9	1230	354	47	902
Powder-dusting can	W. Deming	405,351	June 18	1441	381	47	1524
Powder-flask	F. J. Rabbeth	404,932	June 11	820	211	47	1393
Power: *See* Horse-power. Water-power. Mechanical power.							
Power-brake	L. P. Lawrence	403,539	May 21	1514	397	47	965
Power-indicator	E. Nixon	401,199	Apr. 9	1165	310	47	230
Power-meter	F. M. Clark and F. R. Low	401,929	Apr. 23	2288	593 594	47	462

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec	Monthly volume. Dr'g	Official Gazette. Vol.	Official Gazette. Page.
Power-testing machine. Coin-controlled	W. S. Reed	405,910	June 25	2310	607, 608	47	1698
Power-testing machine. Coin-operated hand	A. C. Meady and C. B. Bosworth	400,933	Apr. 9	766	205	47	155
Power to steam-vessels. System of applying	S. H. Timmons	404,878	June 11	745	199	47	1378
Power transmission. Electrical	N. Tesla	405,859	June 25	2229	586	47	1685
Power-transmitting device	A. Larson	403,598	May 21	1585	430	47	979
Precious metals from ores. Separating	J. Welrich	404,328	May 28	2705	.....	47	1204
Preserving fruit	W. R. Baker	401,109	Apr. 9	1023	.....	47	202
Press: *See* Baling-press. Harness-maker's press. Drill-press. Printing-press. Filter-press. Stamping-press. Grain-press. Tobacco-press.							
Press for bundle-wrapping. Self-locking	E. E. Porter	401,587	Apr. 16	1752	462	47	352
Pressure brake. Fluid-	G. A. Boyden. (Reissue)	10,993	Apr. 2	693	187, 188	47	133
Pressure contact-arm. Universal upward	C. J. Van Depoele	402,117	Apr. 23	2579	669	47	518
Pressure-gage. Detachable	M. Warren	402,703	May 7	221	59	47	705
Pressure-regulator	J. D. Bowman	402,392	Apr. 30	2989	775	47	605
Pressure-regulator	C. Dubois	400,553	Apr. 2	185	50	47	39
Pressure regulator. Fluid-	W. Ross	404,503	June 4	203	49	47	1263
Pressure regulator. Fluid-	W. Ross	404,504	June 4	206	49	47	1263
Primer. Delay-action	E. L. Zalinski and H. J. Smith	405,647	June 18	1927	547	47	1620
Primer. Electric	H. J. Smith and E. L. Zalinski	405,684	June 18	1980	519	47	1630
Primer. Electrical	E. L. Zalinski and H. J. Smith	405,646	June 18	1925	547	47	1620
Printer's chase	P. Huether	405,479	June 18	1645	434	47	1565
Printer's press-point	J. W. Meese	401,195	Apr. 9	1160	309	47	229
Printer's quoin	S. D. Webb and S. C. Swett	403,402	May 14	1305	341	47	917
Printing and addressing machinery. Combined	S. D. Carpenter	402,561	May 7	11	4, 5	47	665
Printing and delivering mechanism. Web	L. C. Crowell	400,548	Apr. 2	174	46, 47, 48	47	37
Printing and delivery mechanism	L. C. Crowell	405,016	June 11	939	249, 250, 251	47	1418
Printing apparatus. Hand	T. Bartholomew	403,822	May 21	1915	543	47	1045
Printing device	S. G. Adams and C. L. Leonori	403,062	May 14	785	209	47	819
Printing. Diaphragm to be used in stencil	M. J. D. Carter	405,198	June 11	1214	322	47	1472
Printing in imitation of type-writing. Apparatus for	C. E. Adamson	402,792	May 7	361	94	47	731
Printing-machine	F. H. Grote	405,159	June 11	1148	306	47	1460
Printing-machine	F. Kirsch	405,099	June 11	1054	281	47	1441
Printing-machine	J. W. Osborne	401,790	Apr. 23	2075	542, 543	47	423
Printing-machine	H. L. Snow	404,058	May 28	2279	596, 597	47	1123
Printing machine. Calico-	J. Sutherland	403,001	May 7	646	171	47	786
Printing-machine. Hand	W. O. Nelson	401,455	Apr. 16	1546	409	47	315
Printing machine. Line-	J. McAdams	403,206	May 14	985	260, 261	47	858
Printing-machine offset mechanism	W. Scott	402,772	May 7	330	85	47	725
Printing machine. Plate-	U. and H. E. Eberhardt	403,181	May 14	937	248, 249	47	847
Printing-machine. Rotary	J. Brooks	403,513	May 21	1468	385, 386	47	956
Printing-machine sheet-delivery apparatus	A. R. Bartlau	404,951	June 11	843	220	47	1398
Printing-machine sheet-delivery apparatus	G. P. Fenner	404,350	May 28	2738	710, 711	47	1210
Printing-machine sheet-delivery apparatus	G. P. Fenner	405,153	June 11	1140	304	47	1457
Printing-machine sheet-delivery apparatus	C. B. Maxson	405,582	June 18	1800	477	47	1598
Printing-machine sheet-delivery apparatus	W. Scott	400,875	Apr. 2	667	181, 182	47	128
Printing-machines. Form-cylinder for	J. C. Ford	403,423	May 14	1328	348	47	922
Printing-machines. Stop mechanism for cylinder	S. D. Tucker	401,473	Apr. 16	1580	418	47	391
Printing machines. Stop mechanism for web	L. C. Crowell	404,959	June 11	858	224, 225	47	1401
Printing machinery	J. H. Buxton, D. Braithwaite, and M. Smith.	405,009	June 11	929	246, 247	47	1416
Printing-press	A. B. Carty	401,541	Apr. 16	1684	443, 444, 445	47	339
Printing-press	J. F. W. Dorman	405,832	June 25	2190	576, 577	47	1676
Printing-press. Hand	J. Kunze	401,839	Apr. 23	2151	561, 562	47	436
Printing-press. Platen	F. W. Musetter	403,365	May 14	1233	327, 328, 329	47	904
Printing-presses. Ink-fountain for	A. B. Carty	401,542	Apr. 16	1688	445	47	340
Printing-presses. Inking apparatus for	J. T. Hawkins	402,447	Apr. 30	3088	600, 601	47	623
Printing-presses. Numbering attachment for	T. Robertson	400,599	Apr. 2	244	66, 67	47	51
Printing-presses. Paper-folding attachment for	T. C. Dexter	401,737	Apr. 23	2002	524	47	409
Processing apparatus	J. S. Hull and T. A. Hand	401,276	Apr. 9	1277	341	47	250
Projectile and gas-check. Combined	A. Ball	405,690	June 25	1997	524	47	1639
Propeller and governor. Chimney or stack	J. A. Robb	401,516	Apr. 16	1639	433, 434	47	331
Propeller for canal-boats, &c	A. Burrowes	404,072	May 28	2303	603	47	1128
Propeller for small boats. Hand	E. W. Schildknecht	402,482	Apr. 30	3141	814	47	633
Propeller for vessels. Current	E. Lotze	401,446	Apr. 16	1534	406	47	313
Propeller for vessels. Screw	C. Vose	402,874	May 7	477	124, 125	47	752
Propeller. Screw	A. Vogelsang. (Reissue)	10,997	Apr. 23	2596	672	47	522
Propeller. Vibrating	F. D. Whipp	405,813	June 25	2164	569	47	1671

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Protector: *See* Boot or shoe sole protector. Heel-protector. Pole or post protector. Carpet-protector. Scarf-protector. Check-protector. Skirt-protector. Chimney-protector. Thread-protector. Compositor's brace-let wrist-protector. Tree-protector. Wall-protector.							
Pruning-knife	L. H. Sholder	400,800	Apr. 9	555	153	47	104
Puller: *See* Log-puller.							
Pulley	C. W. Clark and T. D. Keasey	403,987	May 28	2152	562	47	1096
Pulley	H. J. Gilbert	401,499	Apr. 16	1601	423	47	335
Pulley	P. V. Lawson and W. L. Field	403,116	May 14	838	222	47	929
Pulley	R. C. Paul	400,706	Apr. 2	401	109	47	79
Pulley. Adjustable split	H. C. Bailey	403,891	May 28	2038	536	47	1076
Pulley. Adjustable split	H. C. Bailey	403,892	May 28	2039	536	47	1076
Pulley-block	T. R. Ferrall	403,982	May 28	2076	545	47	1084
Pulley-block. Sectional locking	S. G. Emerson	405,541	June 18	1744	460	47	1587
Pulley-bushing	C. W. Clark and T. D. Keasey	404,824	June 11	661	171	47	1364
Pulley-bushing	F. G. Perkins	404,300	May 28	2656	690	47	1195
Pulley-changing device	A. J. Burbank and E. L. Church	401,398	Apr. 16	1354	368	47	278
Pulley. Drive-	W. H. Bleasley	403,060	May 14	791	210	47	820
Pulley. Drive-	G. C. Cowles	403,460	May 14	1386	362, 363	47	932
Pulley. Grooved	W. H. Avis	405,851	June 18	1931	508	47	1621
Pulley-key	C. W. Clark	402,065	Apr. 23	2495	651	47	501
Pulley lubricator. Loose-	W. P. Miller	403,057	May 7	729	190	47	801
Pulley lubricator. Loose-	C. W. Wilder	400,885	Apr. 2	683	188	47	131
Pulley. Separable	H. J. Gilbert	405,352	June 18	1441	382	47	1594
Pulley. Split	H. Baute	402,221	Apr. 30	2734	709	47	537
Pulley. Split	J. M. Pollard	401,580	Apr. 16	1749	462	47	351
Pulley. Split	M. T. and M. O. Reeves	403,857	May 21	1968	517	47	1054
Pulley. Split	M. O. and M. T. Reeves	403,859	May 21	1970	517	47	1055
Pulley. Split band	A. Kehler	400,574	Apr. 2	212	57, 58	47	45
Pulley-support	A. G. Lawrence	402,251	Apr. 30	2776	718	47	564
Pulley. Wood-rim	W. W. Carey	403,824	May 21	1919	504	47	1045
Pulleys. Hub for split	M. O. and M. T. Reeves	403,860	May 21	1972	518	47	1055
Pulleys. Hub-plate for wooden	M. T. and M. O. Reeves	403,858	May 21	1969	517	47	1055
Pulleys. Temporary covering for	M. O. Reeves	403,861	May 21	1972	518	47	1055
Pulp-board-bending machine. Wood-	C. B. Jameson	401,353	Apr. 16	1398	370	47	287
Pulp, &c., from fibrous plants. Machine for scraping the	R. G. Ward	404,756	June 4	555	142	47	1335
Pulp machine. Wood-	F. Dilts	403,653	May 21	1639	440	47	995
Pulp-making. Wood-grinder for	B. Ellers, Jr	402,425	Apr. 30	3055	790	47	617
Pulp. Sizing	W. J. Menzies	405,209	June 18	1398	.....	47	1500
Pulverized substances. Receptacle for	F. Kampf	400,646	Apr. 2	375	101	47	74
Pulverizer	C. La Dow	404,291	May 28	2641	686, 687	47	1192
Pulverizer	F. Taggart	405,281	June 18	1343	354	47	1503
Pulverizer. Rotary	M. B. Dodge	401,678	Apr. 23	2207	577	47	448
Pulverizer, seeder, and harrow. Combined	F. B. Kendall	404,285	May 28	2635	684	47	1191
Pulverizing clay and extracting stone. Machine for	J. W. Shaffer	401,562	Apr. 23	2180	569, 570	47	442
Pump	C. Bagley	400,428	Apr. 2	6	3	47	4
Pump	P. J. Bode	403,507	May 21	1462	383	47	955
Pump	J. P. M. Earty	402,149	Apr. 30	2633	682	47	537
Pump	T. J. Ivans	402,835	May 7	423	111, 112	47	742
Pump	E. Neff	405,172	June 11	1167	311	47	1463
Pump	T. J. Rider	405,680	June 18	1972	517	47	1608
Pump	S. T. Russell	403,902	May 28	2118	554	47	1092
Pump	U. P. Sawyer	403,077	May 7	774	205	47	808
Pump	G. W. Stafford	401,979	Apr. 23	2356	613	47	476
Pump-brake	A. J. Tyler	402,116	Apr. 23	2578	668	47	518
Pump-bucket	C. La Dow	401,954	Apr. 23	2323	604	47	470
Pump. Centrifugal force-	J. Baker	405,294	June 18	1361	358, 359	47	1507
Pump-gearing	E. H. C. Oehlmann	401,512	Apr. 16	1634	432	47	331
Pump. Lift-	R. N. Roach	400,487	Apr. 2	87	24	47	20
Pump. Mercury air-	J. W. Packard	401,581	Apr. 16	1743	460	47	350
Pump. Rotary	J. H. Parker	401,903	Apr. 9	1171	311	47	231
Pump. Steam-	S. J. Parker	400,787	Apr. 2	533	146, 147	47	102
Pump. Steam-	N. J. Pritchard	405,116	June 11	1078	287, 288	47	1445
Pump. Steam or other	G. G. Picking and W. Hopkins	405,501	June 18	1681	444, 445	47	1574
Pump. Stock-	G. W. Schroeder	404,737	June 4	528	135	47	1338
Pump. Vacuum-	J. T. Hambay	400,668	Apr. 2	348	94	47	69
Pump-valve	A. Belcham	402,647	May 7	137	33, 34	47	690
Pumps. Rubber bucket for chain-	M. D. Temple	405,928	June 25	2342	615	47	1703
Pumps. Valve-gear for duplex steam-	N. E. Nash	402,100	Apr. 23	2551	664	47	513
Pumping-engine. Steam	F. Steinmann	400,877	Apr. 2	670	162, 163	47	128
Pumping rig. Well	C. C. Stover	404,744	June 4	540	138	47	1331
Punch	F. H. Seibel	401,220	Apr. 9	1192	319	47	235
Punch	W. H. Woglom	401,918	Apr. 23	2273	590	47	459
Punch, shears, and saw-gummer. Combined	J. Schofield	401,504	Apr. 16	1765	465	47	354
Punching-machine. Hydraulic	C. C. Klinik, F. Pinkowski, and A. Gross.	404,633	June 4	398	96	47	1301
Punching, shearing, and such like machine	C. Schumacher, R. Daelen, and M. Rothe.	401,795	Apr. 23	2093	546	47	425
Push-button	H. L. Currier	404,033	May 28	2280	585	47	1113

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Puzzle	F. Howard	402,017	Apr. 23	2418	630	47	487
Quicksand. Apparatus for raising	H. Stoltze, Sr	404,741	June 4	533	137	47	1329
Quilting-machine	A. Faulkner	405,403	June 18	1512	402	47	1539
Quilting-machine shuttle-carrier	J. Thomas and G. Creter	401,981	Apr. 23	2359	614	47	477
Rack: *See* Display-rack. Display and sale rack. File-rack. Gun-rack. Hat and coat rack. Hay and grain rack. Meat-rack. Umbrella or cane rack. Wagon-rack. Wood-rack.							
Rack-teeth. Automatic machine for cutting	U. and H. E. Eberhardt	400,645	Apr. 2	307	86, 87	47	64
Radiator	S. D. Tompkins and T. H. Williams	402,547	Apr. 30	3233	836	47	651
Radiator for heating buildings	J. Shakleton	402,357	Apr. 30	2941	762	47	595
Radiator-loops. Machine for assembling	H. H. Taylor	404,746	June 4	541	134, 135	47	1331
Radiator. Steam	L. Halsey	403,936	May 28	2981	546	47	1085
Radiator. Steam	T. Holland	404,353	May 28	2742	711	47	1211
Rail	R. D. Bacot	401 107	Apr. 9	1019	271	47	302
Rail-braces. Forming	J. A. Tranell	403,450	May 14	1370	356	47	929
Rail-brake	M. A. Michaler	401,755	Apr. 23	2026	530	47	414
Rail-cutting machine	T. G. Perkins	400,707	Apr. 2	402	109, 110	47	80
Rail-drill	J. Doyle and J. Williamson	403,040	May 7	707	185	47	797
Rail-joint	D. R. Atkinson	404,764	June 4	565	145	47	1337
Rail-joint	E. M. Cooke	402,308	Apr. 30	2861	739	47	581
Rail-joint	E. M. Cooke	402,402	Apr. 30	3007	781	47	607
Rail-joint	A. J. Schaff	404,308	May 28	2674	692	47	1198
Rail-joint	G. A. Weber	402,372	Apr. 30	2958	767	47	599
Rail-spiking machine	S. W. Roberts and E. P. Caldwell	401,374	Apr. 16	1430	378	47	293
Rail-track-laying machine	D. S. Moore and C. McLennan	405,318	June 18	1395	367, 368	47	1515
Rails. Cast-metal brace-chair for girder	W. M. Brown	401,538	Apr. 16	1681	442	47	339
Rails to iron sleepers with iron cramps. Securing	K. L. Gucht	402,818	May 7	399	104	47	738
Railway	E. J. Devens	403,464	May 14	1389	364	47	933
Railway	W. J. Kenney	402,164	Apr. 30	2650	688	47	542
Railway-alarm apparatus. Automatic	W. Rymer	401,376	Apr. 16	1434	378, 379	47	294
Railway and railway-vehicle	G. W. Brown	400,544	Apr. 2	170	44, 45	47	36
Railway-bridge guard	S. G. Scott and W. O'Hern	402,487	Apr. 30	3148	815	47	635
Railway-bridges. Danger-signal for	J. W. Steele	401,763	Apr. 23	2037	533, 534	47	416
Railway-bridges. Danger-signal for	J. W. Steele	401,764	Apr. 23	2039	535	47	416
Railway-bridges. Danger-signal for	J. W. Steele	401,799	Apr. 23	2099	549	47	426
Railway-bridges. Danger-signal for	J. W. Steele	401,800	Apr. 23	2100	549	47	427
Railway-bumper	J. Waterhouse	402,790	May 7	358	93	47	730
Railway. Cable	A. R. Parkeson	402,863	May 7	398	157	47	777
Railway-conduit mold. Cable	I. Bishop	403,728	May 21	1777	467	47	1017
Railway cross-tie. Combination	W. H. Bagby	403,634	May 21	1637	433	47	990
Railway-crossing	B. B. Morgan	403,060	May 7	734	191	47	802
Railway-crossing signal	J. H. Young	401,323	Apr. 9	1345	358	47	265
Railway crossing. Street	A. J. Moxham	402,470	Apr. 30	3127	811	47	631
Railway danger-signal	F. Allen	403,981	May 28	2144	560	47	1097
Railway. Electric	W. Cannell	404,469	June 4	148	38	47	1253
Railway. Electric	L. Daft	404,687	June 4	470	118	47	1317
Railway. Electric	R. M. Hunter	402,802	May 7	419	110	47	742
Railway. Electric	R. M. Hunter	403,192	May 14	953	252	47	850
Railway. Electric	R. M. Hunter	403,754	May 21	1809	476	47	1024
Railway. Electric	R. M. Hunter	405,556	June 18	1764	466	47	1591
Railway. Electric	A. L. Lineff	405,365	June 18	1457	385, 386	47	1527
Railway. Electric	R. Lundell	400,926	Apr. 9	751	202, 203	47	153
Railway. Electric	S. H. Short	401,221	Apr. 9	1194	319	47	235
Railway. Electric	S. H. Short	404,873	June 11	738	188	47	1377
Railway. Electric	F. M. Speed	403,786	May 21	1865	490	47	1035
Railway. Electric	C. J. Van Depoele	403,801	May 21	1887	496	47	1040
Railway. Elevated	A. D. Gates	402,319	Apr. 30	2880	746, 747	47	584
Railway. Elevated and suspended cable	G. R. Taylor	402,490	Apr. 30	3151	816	47	635
Railway fish-plate	T. A. Davies	402,725	May 7	250	68	47	711
Railway-frog. Automatic	M. Leary	405,965	June 25	2402	629	47	1713
Railway-frog. Sliding	F. J. Hoyt	402,830	May 7	417	109, 110	47	741
Railway-gate	A. J. McDonald	401,754	Apr. 23	2035	529	47	414
Railway-gate	A. J. McDonald	404,724	June 4	514	131	47	1326
Railway-gate	I. Whisman	405,814	June 25	2165	569	47	1672
Railway-gate operative mechanism	J. Ewart	403,929	May 28	2072	544	47	1063
Railway grip. Cable	J. H. Pendleton, C. Tiers, A. Bryson, Jr., and L. Moss.	404,499	June 4	196	47, 48	47	1261
Railway grip. Cable	C. Tiers, J. H. Pendleton, and A. Bryson, Jr.	404,576	June 4	315	75, 76, 77	47	1285
Railway-guard. Automatic	J. V. Reams	404,435	June 4	89	22	47	1243
Railway. Incline electric	R. M. Hunter	402,084	Apr. 23	2523	658	47	507
Railway-joint	J. Speicher	402,777	May 7	338	87	47	726
Railway mechanism. Cable	T. Bradwell	403,512	May 21	1467	385	47	956
Railway-motor	J. R. Valentine and A. T. Grigg	400,522	Apr. 2	142	37	47	30
Railway motor. Street	B. C. Pole	401,855	Apr. 23	2171	567	47	441
Railway. Pneumatic	M. Bodefeld	403,729	May 21	1778	467, 468	47	1018
Railway-rail	E. J. Knapp	402,022	Apr. 23	2427	633	47	488
Railway-rail fastener	C. Wetter	404,550	June 4	283	67	47	1278

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railway-rail fish-plate	T. A. Davies	402,724	May 7	249	66	47	711
Railway-rail joint	E. P. Jervey	404,487	June 4	177	41	47	1257
Railway-rail joint	O. L. Olds	405,675	June 18	1464	516	47	1627
Railway-rail tie and fastening	J. Frysinger	400,558	Apr. 2	104	52	47	41
Railway-rails. Electric connection for	C. J. Van Depoele	403,010	May 7	699	174	47	788
Railway-rails. Manner of jointing	C. R. Hastings	404,578	May 28	2626	682	47	1169
Railway-signal	T. A. Casey	403,515	May 21	1475	387	47	958
Railway-signal	S. T. Street	400,880	Apr. 2	674	164	47	129
Railway signal	A. J. Wisner	404,457	June 4	124	30	47	1249
Railway signal and switch connections. Compensator for	A. E. Mitchell and W. N. Stevens	402,080	Apr. 23	2441	636	47	491
Railway-signal. Automatic	J. T. Carter	402,398	Apr. 30	3002	779	47	606
Railway-signal. Automatic	J. Oxley	400,703	Apr. 2	398	108	47	78
Railway-signal. Electrical	J. C. White	405,815	June 25	2167	570	47	1672
Railway signals and points. Working and interlocking	J. Hill and J. P. O'Donnell	404,408	June 4	51	12, 14	47	1235
Railway-signals. Switch-instrument for	G. C. Steenbergh	403,619	May 21	1616	428	47	986
Railway signals. Tripping device for	J. T. Carter	402,505	Apr. 30	3172	822	47	639
Railway-signaling. Electrical	W. H. Waddell	400,525	Apr. 2	146	38	47	31
Railway-spikes. Finishing	H. Greer	401,346	Apr. 16	1386	.....	47	285
Railway splice-bar	J. T. Clark	403,251	May 14	1057	278	47	871
Railway. Street	L. M. Hosea	401,332	Apr. 16	1395	369	47	287
Railway. Street	W. L. Judson	402,933	May 7	560	148	47	766
Railway. Street	W. L. Judson	402,934	May 7	563	148, 149	47	769
Railway. Street cable	H. Flad	405,468	June 18	1625	428, 429, 430	47	1561
Railway. Suspended	J. Thomson	405,059	June 11	1006	266, 268	47	1432
Railway-switch	A. A. Ackerly	405,976	June 25	2421	634	47	1717
Railway-switch	A. A. Ackerly	405,977	June 25	2424	634	47	1717
Railway-switch	J. A. Duggan	405,020	June 11	949	253, 254	47	1420
Railway-switch	E. Gordon	401,345	Apr. 16	1396	367	47	285
Railway-switch	W. J. Kelly	405,361	June 18	1451	384	47	1526
Railway-switch	J. T. Richardson	404,864	June 11	725	185	47	1375
Railway switch and signal operating and interlocking device	H. and C. R. Johnson	403,271	May 14	1092	289, 290	47	877
Railway-switch appliance	M. B. Mills	404,214	May 28	2533	661	47	1172
Railway-switch. Automatic safety	J. H. Walt	405,513	June 18	1509	449	47	1517
Railway-switch stand	C. Alkins	400,816	Apr. 2	583	159, 160	47	111
Railway-switch stand	C. Alkins	401,671	Apr. 16	1897	494	47	378
Railway-switch stand	G. F. Gage	400,657	Apr. 2	320	90	47	66
Railway-switches. Apparatus for operating	A. H. Johnson	403,195	May 14	966	254	47	854
Railway-switches. Electric appliance for	M. Wuerpel	405,519	June 18	1709	451	47	1579
Railway-switches. Interlocking device for	H. B. Potter	400,943	Apr. 9	780	209	47	158
Railway-switches. Interlocking signal apparatus for	F. H. Treacy	401,666	Apr. 16	1890	492	47	377
Railway system. Electric	S. H. Short	401,796	Apr. 23	2095	546, 547	47	426
Railway systems. Electric-heating apparatus for	M. W. Dewey	401,482	Apr. 16	1591	420, 421	47	323
Railway-tie and fastening. Metallic	H. L. De Zeng	400,643	Apr. 2	304	86	47	63
Railway-tie. Metallic	A. J. Hartford	401,949	Apr. 23	2316	602	47	468
Railway-track	J. Haish	404,401	June 4	39	11	47	1233
Railway-track alarm. Electric	T. Taylor	401,472	Apr. 16	1579	418	47	321
Railway-track instrument	G. C. Steenbergh	401,664	Apr. 16	1887	492	47	376
Railway track. Street	R. Dansinger	403,741	May 21	1794	472	47	1021
Railway-tracks. Construction of	T. H. Gibbon	403,465	May 14	1390	364	47	933
Railway-train brake	J. K. Hardwicke	403,188	May 14	947	250, 251	47	849
Railway-trains. Automatic electric controller for	F. E. Kinsman	405,964	June 25	2396	628, 629	47	1712
Railway-trains. Device for indicating and recording the speed, &c., of	H. L. Currier	404,032	May 28	2225	583, 584, 502	47	1112
Railway-vehicles. Brake apparatus for	T. Cowburn and F. Tentschert	401,694	Apr. 16	1927	503, 504	47	383
Railway-wagon brake	W. S. Laycock	403,540	May 21	1515	397	47	965
Railways. Automatic signal for	G. Provost	403,370	May 14	1245	330	47	907
Railways. Block-signal system for	E. Blunt	402,556	May 7	4	2	47	604
Railways. Closed slotted conduit for electric	C. J. Van Depoele	405,028	June 18	1809	494, 495	47	1610
Railways. Conduit for cable	E. C. Phillips	400,482	Apr. 2	80	23	47	18
Railways. Conduit for cable or electric	W. J. Brewer	405,767	June 25	2106	552	47	1660
Railways. Conduit for driving mechanism of street	W. L. Judson	402,830	May 7	428	113	47	743
Railways. Connector for electric	L. Daft	403,092	May 14	800	212	47	822
Railways. Contact device for electric	F. E. Fisher	405,544	June 18	1750	462	47	1598
Railways. Current-collecting device for electric	R. M. Hunter	400,916	Apr. 9	736	199	47	151
Railways. Drip-pan for elevated	E. A. Trapp	404,751	June 4	549	140	47	1333
Railways. Endless belt for grips for cable	J. H. Pendleton, A. Bryson, Jr., C. Tiers, and L. Moss.	404,500	June 4	199	48	47	1262
Railways. Grip-slot closer for cable	C. Davis	403,651	May 21	1657	439	47	994
Railways. Guide-pulley for cable	J. H. Pendleton and L. Moss	404,498	June 4	193	47	47	1260
Railways. Means for operating trains upon cable	J. H. Pendleton and A. Bryson, Jr.	404,497	June 4	189	45, 46	47	1260
Railways. Metallic sleeper for	P. Kolgraf	404,043	May 28	2242	587, 588	47	1114
Railways. Pneumatic alarm for	T. Taylor	401,471	Apr. 16	1578	417	47	320
Railways. Sheaf-supporting frame for cable	J. Walker	401,966	Apr. 23	2366	615	47	478
Railways. Sheave or pulley for cable	T. H. Burridge	403,396	May 14	1163	314	47	885
Railways. Substructure for elevated	S. W. Robinson	404,017	May 28	2196	577	47	1107
Railways. System of elevated conductors for electric	S. H. Short	401,797	Apr. 23	2096	546, 548	47	426
Railways. Track-moistening apparatus for electric	E. D. Priest	404,559	June 4	294	70	47	1280

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railways. Trolley for electric	D. A. Ainslie	400,725	Apr. 2	431	117	47	85
Railways. Trolley for electric	T. Streat	403,969	May 28	2128	557	47	1094
Railways. Trolley for electrical	D. A. Ainslie	400,724	Apr. 2	430	116	47	85
Railways. Trolley for electrical	D. A. Ainslie	404,149	May 28	2416	631	47	1151
Railways. Tunnel-yoke for cable	C. A. Marshall	402,533	Apr. 30	3215	833	47	648
Railways. Underground conduit for electrical	F. H. Reed	401,515	Apr. 16	1638	433	47	331
Rake: *See* Hay-rake. Lawn-rake. Horse-rake.							
Rakes. Making	W. H. Cowdery	405,661	June 18	1944	511	47	1623
Ram. Ship's	J. F. Ward	403,806	May 21	1894	497	47	1041
Rammer. Steam road	F. W. Carter	402,063	Apr. 23	2492	651	47	501
Range	G. H. Phillips	404,502	June 4	202	48	47	1262
Ranges or stoves. Hot-water reservoir for	A. Hursh	403,270	May 14	1092	289	47	677
Ratchet-drill	H. Brinkmann	404,592	June 4	343	82	47	1290
Ratchet-drill	H. M. Glines	401,344	Apr. 16	1384	367	47	295
Ratchet-drill	W. G. Morgan	402,096	Apr. 23	2541	669	47	511
Ratchet-drill	W. S. Rogers and W. C. Jones	401,375	Apr. 16	1433	378	47	303
Ratchet-drill	T. N. Scott	401,465	Apr. 16	1569	415	47	319
Ratchet-stock	G. W. Glenn	405,469	June 18	1629	430	47	1562
Ratchet-wrench	W. H. Whitmore	400,729	Apr. 2	427	116	47	85
Rattan-machine	F. B. Alexander	405,226	June 18	1359	358	47	1507
Razor	F. Aschener	404,763	June 4	565	144	47	1337
Razor. Safety	H. B. Leach	402,463	Apr. 30	3114	808	47	628
Razor. Safety	H. B. Leach	402,946	May 7	578	152	47	773
Razor-strop	G. H. Coursen	403,648	May 21	1653	438	47	994
Razor-strop	J. Lamont	402,461	Apr. 30	3111	807	47	628
Razor-strop. Flexible	J. L. Pomeroy	402,033	Apr. 23	2447	637	47	492
Razor-stropping device	F., R., and O. Kampfe	405,961	June 25	2372	627	47	1712
Reapers and mowers. Cutter-bar for	J. I. Murray	401,714	Apr. 16	1960	511	47	390
Reaping and mowing machines. Apparatus for sharpening the cutters and fingers of	R. McGregor	404,976	June 11	886	231, 232	47	1407
Receptacle for bundles	L. M. Rose	401,071	Apr. 9	964	257	47	192
Reciprocating machinery. Mechanism for cushioning traversing beds of	H. P. Feister	404,394	June 4	29	8	47	1231
Reclining-chair	R. H. Arnold	403,318	May 14	1169	310	47	893
Record	H. C. Seely	401,661	Apr. 16	1884	491	47	375
Recorder: *See* Message and time Phonograph-recorder. recorder.							
Reed chair, &c	J. Lemman	401,959	Apr. 23	2330	605	47	471
Reed or rattan chair, &c	H. T. Leavis	401,958	Apr. 23	2329	605	47	471
Reel: *See* Bolting-reel. Paper-reel. Clothes-line reel. Sand-reel. Fishing-reel. Yarn-reel. Harvester-reel.							
Reel for machines for forming and reeling ropes or strands	M. H. Day	402,004	Apr. 23	2395	624	47	483
Reflector. Lamp	G. W. Pelton	405,173	June 11	1168	312	47	1463
Refrigerating and ventilating car	C. E. Lucas and A. A. Wood	400,863	Apr. 2	652	177	47	125
Refrigerating apparatus	N. W. Condict, Jr	402,809	May 7	3?8	102	47	736
Refrigerating apparatus	R. R. Graf	402,520	Apr. 30	3196	828	47	644
Refrigerating-tower	A. R. Pechiney	400,595	Apr. 2	238	64, 65	47	50
Refrigerator	M. S. Millard	404,854	June 11	706	181	47	1372
Refrigerator	W. R. Monroe	405,492	June 18	1668	440	47	1570
Refrigerator	J. Swetlisch	403,789	May 21	1868	491	47	1036
Refrigerator-car	W. H. H. Sisum	401,385	Apr. 16	1449	383	47	296
Refrigerator ice-holder and water-escape	U. Reiffer	401,589	Apr. 16	1755	463	47	353
Refrigerator packing-box	P. Hohmeier and J. Ball	400,768	Apr. 2	493	134	47	97
Regenerative burner	R. Wallwork and A. C. Wells	404,063	May 28	2284	598	47	1124
Regenerative burner	R. Wallwork and A. C. Wells	404,064	May 28	2288	599	47	1125
Regenerative furnace	W. B. Wright	405,936	June 25	2353	617	47	1705
Register: *See* Cash-register. Medicine-spoon register. Fare-register. Passenger-register. Hot-air register. Time-register. Hotel-room register.							
Register	H. S. Ross	401,518	Apr. 16	1641	474	47	332
Registering-lock	J. Loewenthal	405,105	June 11	1062	283	47	1443
Regulator: *See* Boiler-feed regulator. Electric-motor regulator. Feed-regulator. Electric-machine regulator. Gas-pressure regulator. Pressure-regulator. Electric machine or motor regulator. Temperature-regulator.							
Rein-holder	W. B. Adams	402,791	May 7	360	93	47	730
Rein-holder	W. F. Turman	404,579	June 4	324	78	47	1286
Rein-support	W. T. Sime	405,278	June 18	1339	354	47	1503
Respirator	H. Smith	403,966	May 28	2125	556	47	1093
Reversing mechanism. Automatic	J. G. Crawford	402,654	May 7	146	36	47	892
Revolvers. Cartridge-feed pack for	C. J. Ehbets	402,424	Apr. 30	3053	789	47	617
Rheostat	N. Benardos	401,405	Apr. 16	1479	391, 392	47	302
Rheostat	J. B. Entrikin	402,912	May 7	525	139	47	762
Rheostat	J. L. Gish	403,345	May 14	1206	321	47	900
Ribbon-holder	O. E. Sully	403,155	May 14	896	236	47	840
Rice-huller	H. Scholfield	400,604	Apr. 2	249	68	47	52
Rice. Treating	E. V. Donelson	400,835	Apr. 2	612	.....	47	117
Ring: *See* Curtain-ring. Lap-ring. Ear-ring. Packing-ring. Finger-ring. Umbrella-tip ring.							
Ring	F. Kaffeman	403,112	May 14	833	220	47	828

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Ring-dies. Making	F. Ecaubert	404,562	June 4	242	57	47	1270
Rings. Forming	J. B. Bowden	400,541	Apr. 2	167	44	47	35
Rivet	M. Bray	402,649	May 7	141	35	47	690
Rivet	A. Kirks	401,747	Apr. 23	2017	528	47	412
Rivet-holding device	J. P. Weidemeyer	402,288	Apr. 30	2929	738	47	575
Rivets. Manufacturing pronged	M. Bray	402,650	May 7	142	35	47	691
Riveting apparatus. Electric	E. E. Ries	403,374	May 14	1251	331	47	907
Riveting. Electric	E. E. Ries	404,306	May 28	2609	683	47	1196
Riveting. Hydraulic machine for	H. Smith	401,975	Apr. 23	2350	611, 612	47	475
Riveting-machine	H. S. Maxim	401,708	Apr. 16	1945	507, 508	47	386
Riveting-machine	J. J. Unbehend	405,929	June 25	2343	615	47	1703
Riveting-machine. Hand	F. H. Harris	403,348	May 14	1209	322	47	900
Roaster: *See* Coffee-roaster.							
Rock-drill	F. Buschmann	402,229	Apr. 30	2744	711	47	559
Rock-drill	A. J. Sypher	403,496	May 14	1441	377, 378	47	942
Rock-drill. Steam	A. J. Sypher	405,127	June 11	1094	291	47	1449
Rocking-chair	L. C. Gunn	400,564	Apr. 2	201	54, 55	47	43
Rocking-chair	W. L. Paine	400,478	Apr. 2	76	22	47	16
Rocking-chair and carriage	A. Pahlow	403,773	May 21	1844	484	47	1030
Rod: *See* Lightning-rod. Loom lease-rod.							
Rod-coiling apparatus	A. Rusbatch	405,433	June 18	1502	413	47	1548
Rod-coupler	A. G. Berry	402,132	Apr. 30	2607	675	47	532
Rods. Machine for manufacturing cylindrical	H. H. Post	404,654	June 4	422	104, 105	47	1306
Roller: *See* Card-grinding roller.							
Roller for leveling snow and roads	L. B. Babcock	404,671	June 4	445	112	47	1311
Roller-mill	H. A. Barnard	401,243	Apr. 9	1231	328, 329	47	241
Roller-mill feeder	R. Wilcox	402,049	Apr. 23	2470	644	47	497
Roller-mill. Reduction	M. Mastas	400,929	Apr. 9	759	204	47	154
Rolling bulb-webbed slot-rails. Rolls for	F. Colley	401,682	Apr. 16	1926	502	47	383
Rolling machine. Tire	J. Kennedy	403,431	May 14	1338	351	47	923
Rolling machine. Tire	J. Munton	401,713	Apr. 16	1956	510, 511	47	389
Rolling metals. Rolls for	J. Guest	400,845	Apr. 2	625	169	47	120
Rolling-mill	J. Guest	400,844	Apr. 2	624	169	47	120
Rolling-mill	J. Robertson	403,290	May 14	1123	298	47	883
Rolling-mill	J. S. Seaman	400,495	Apr. 2	96	26	47	22
Rolling-mill	F. H. Treat	402,784	May 7	347	90, 91, 92	47	728
Rolling-mill feed-table	J. Morgan	403,304	May 14	982	259, 260	47	857
Rolling-mill plants. Feed and transfer mechanism for	R. P. Dolan	402,146	Apr. 30	2630	681	47	536
Rolling-mill. Universal	J. Kennedy and H. Aiken	403,273	May 14	1098	290, 291, 292	47	878
Rolling three-flanged slot-rails. Rolls for	F. Colley	401,681	Apr. 16	1925	501	47	383
Rolling Z-shaped slot-rails. Rolls for	F. Colley	401,683	Apr. 16	1927	502	47	383
Roofing-cleat. Metallic	L. L. Sagendorph	405,605	June 18	1634	486	47	1605
Roofing. Felt	G. A. Herdman	403,588	May 21	1575	416	47	977
Roofing material	P. Carey	402,559	May 7	10	.....	47	665
Roofing. Metallic	M. F. Hamsley	403,750	May 21	1805	475	47	1023
Roofing-package	W. L. and H. Heberling	405,311	June 18	1386	365	47	1513
Roofing-plate. Metallic	G. Patten	403,444	May 14	1359	357	47	926
Roofing-plate. Metallic	L. L. Sagendorph	405,122	June 11	1088	290	47	1448
Roofing. Sheet-metal	J. W. Abrahams	403,890	May 28	2031	535	47	1075
Roofing. Sheet-metal	F. G. Caldwell	403,415	May 14	1319	345	47	920
Roofing. Sheet-metal	A. C. Kanneberg	403,844	May 21	1951	512	47	1051
Rope-clamp	A. Volk	405,686	June 18	1982	519	47	1630
Rope or cable	C. M. Thompson	400,970	Apr. 9	818	219	47	166
Rope-tightening device	W. F. Blakemore	404,158	May 28	2429	636	47	1155
Ropy form. Apparatus for delivering material in	I. E. Palmer	402,274	Apr. 30	2809	727	47	571
Rotary bolt	J. B. Cornwall	404,345	May 28	2729	708	47	1209
Rotary cutter	A. C. Heath and F. H. White	403,667	May 21	1678	445	47	999
Rotary engine	M. A. Buford	401,616	Apr. 23	2124	553, 554	47	430
Rotary engine	H. Haab	404,834	June 11	690	175, 176	47	1367
Rotary engine	J. F. Hines, Sr.	401,835	Apr. 23	2148	560	47	435
Rotary engine	W. N. Hutchinson	402,834	May 7	422	111	47	762
Rotary engine	J. W. Smallwood and D. R. Austin	402,625	May 7	165	25, 26	47	684
Rotary meter	P. Ball	404,374	June 4	2	1	47	1225
Rotary steam-engine	J. H. and H. H. Dow	403,335	May 14	1192	316	47	897
Rotary steam-engine	H. L. Phelps	404,557	June 4	292	69	47	1280
Routing and wood-working machine	H. M. Albee	404,945	June 11	837	217, 218	47	1297
Routing-machine	D. A. Sears	405,916	June 25	2322	610	47	1700
Rubber blankets. Refinishing	F. H. Kogge	403,942	May 28	2001	.....	47	1066
Rubber boot	E. F. Bickford	404,674	June 4	449	113	47	1312
Rubber boot or shoe	J. L. Joyce	404,416	June 4	68	16	47	1237
Rubber-dam clamp	J. D. Ennes	402,215	Apr. 30	2674	744	47	563
Rubber, &c. Production of material as substitute for India-	F. Greening	401,260	Apr. 9	1271	.....	47	240
Rubber shoe	H. J. Doughty	404,264	May 28	2602	677	47	1185
Rubber shoes. Mechanism for the manufacture of	H. J. Doughty	404,265	May 28	2603	677, 678	47	1185

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Rule. Dress-cutter's	T. I. Stockman	400,504	Apr. 2	112	30	47	25
Rule-holder	M. Murphy	404,924	June 11	809	208	47	1391
Rule-working machine	R. Atwater	400,818	Apr. 2	587	160	47	112
Ruler	A. Brown and P. C. Payette	404,593	June 4	343	82	47	1290
Ruler	N. Vermehren	401,392	Apr. 16	1450	385	47	298
Ruler and blotter. Combined	R. Lockwood	405,217	June 11	1241	320	47	1477
Ruler. Parallel	N. S. Phelps and C. L. Ellis	400,596	Apr. 2	240	62	47	50
Ruling device	M. H. Spear	404,315	May 28	2684	.....	47	1200
Ruling machine. Paper	H. A. Brissard	402,057	Apr. 23	2479	647, 648, 649	47	499
Ruling machine. Paper	J. C. Forman	401,151	Apr. 9	1091	290	47	214
Sad-iron	W. Bell	405,071	June 11	1092	273	47	1435
Sad-iron	A. Reinke	405,802	June 25	2151	563	47	1669
Sad-iron	A. Ross	400,796	Apr. 2	549	151	47	105
Sad-iron	C. A. Stockwell and W. D. Enser	405,617	June 18	1851	496	47	1607
Sad iron	A. W. M. Keen	403,050	May 7	722	188	47	800
Saddle	J. N. Anderson	405,649	June 18	1929	507	47	1620
Saddle-bag	H. Aschenbach and J. W. Theobald	404,669	June 4	442	111	47	1311
Saddle. Harness	J. W. Clark	401,134	Apr. 9	1060	284	47	209
Saddle. Harness	A. McKay	403,129	May 14	856	222	47	833
Saddle-tree	J. M. Fink	401,938	Apr. 23	2300	591	47	465
Saddle-trees. Forming flexible	J. L. Hall	402,590	May 7	59	14	47	675
Safe	P. F. King	405,562	June 18	1772	468, 469	47	1592
Safe-alarm	J. S. Minnis	403,688	May 21	1713	452	47	1006
Safe bolt-work. Device for operating	E. W. Fowler	403,527	May 21	1495	396, 397	47	962
Safe. Burglar-proof	P. F. King	405,563	June 18	1774	469	47	1593
Safe. Burglar-proof	P. F. King	405,564	June 18	1774	469	47	1593
Safe or vault	M. Sieradorfer	400,499	Apr. 2	104	28	47	24
Safes. Manufacturing fire-proof	J. Baum	405,655	June 18	1936	509	47	1622
Safes. Means for connecting spindles to the walls or doors of	H. Gross	402,587	May 7	56	13	47	674
Safety-burner	J. and H. Mason	402,202	Apr. 30	2794	738	47	568
Safety-pin	J. Alcock	402,051	Apr. 23	2472	646	47	497
Safety-pin	G. W. Herbert and S. Guinery	404,003	May 28	2179	573, 574	47	1104
Safety-pin	J. Jenkins	405,558	June 18	1768	466	47	1592
Safety-pin	E. Pickhardt and D. A. Carpenter	403,607	May 21	1597	423	47	982
Safety-pin	E. Pickhardt and D. A. Carpenter	403,608	May 21	1597	423	47	982
Safety-switch	L. Dunn	405,350	June 18	1439	383	47	1524
Sail. Ship's	J. Roberts	401,373	Apr. 16	1429	378	47	293
Sale of flexible articles. Apparatus for the automatic	P. Simons	402,773	May 7	332	86	47	725
Salt. Apparatus for the manufacture of	H. Williams, J. L. and L. R. Alberger	400,983	Apr. 9	838	224, 225	47	170
Sample-holder and box-pull	W. W. Johnson	403,535	May 21	1510	399	47	964
Sand. Apparatus for cleaning and assorting	T. Girvan	405,732	June 25	2057	540	47	1650
Sand-paper device	S. Ross, Jr.	401,215	Apr. 9	1184	316	47	233
Sand-reel	C. M. Thompson	402,631	May 7	115	28	47	686
Sash-balance	W. Kadow, Jr.	405,711	June 25	2025	532	47	1644
Sash-balance	J. McArthur	403,479	May 14	1414	370	47	937
Sash-balance. Spring	W. S. Jennings	400,918	Apr. 9	741	199	47	151
Sash-cord fastener	H. Morgan	403,361	May 14	1227	326	47	903
Sash-fastener	J. Abbott	404,145	May 28	2411	632	47	1150
Sash-fastener	J. W. Atwood	400,535	Apr. 2	161	41	47	34
Sash-fastener	R. J. Buchanan	404,467	June 4	146	34	47	1252
Sash-fastener	J. H. Buettner	403,645	May 21	1640	437	47	993
Sash-fastener	W. F. Elkins	400,554	Apr. 2	186	49	47	40
Sash-fastener	C. H. Foster	402,816	May 7	397	104	47	738
Sash-fastener	G. M. Griswold	403,102	May 14	814	216	47	824
Sash-fastener	L. K. Johnson	405,095	June 11	1050	280	47	1441
Sash-fastener	W. Koenen	404,910	June 11	800	185	47	1389
Sash-fastener	W. Livingstone	405,784	June 25	2128	559	47	1664
Sash-fastener	W. H. Murphy	401,393	Apr. 9	1306	347	47	256
Sash-fastener	W. E. Nageborn	405,319	June 18	1396	368	47	1515
Sash-fastener	R. A. Reisse	401,460	Apr. 16	1556	411	47	317
Sash-fastener	T. B. Ross	405,326	June 18	1406	370	47	1517
Sash-fastener	T. S. Smith	403,391	May 14	1289	337, 338	47	913
Sash-fastener	H. C. Trost and F. A. Weston	402,074	Apr. 23	2507	655	47	504
Sash-fastener	J. R. Whem	403,810	May 21	1898	498	47	1042
Sash-holder	O. P. Hammarlund and E. Larson	404,537	June 4	264	63	47	1274
Sash-holder	C. A. Krafft	405,101	June 11	1056	262	47	1442
Sash-holder	A. W. Nelson	404,977	June 11	887	232	47	1407
Sash-holder	E. Reed	405,180	June 11	1158	314	47	1464
Sash-holder	R. P. Waddell	405,512	June 18	1698	449	47	1577
Sash holder	J. Weathers	403,013	May 7	665	175	47	789
Sash-lift	W. A. Williamson	404,666	June 4	439	110	47	1310
Sash. Machine for grooving window	F. V. Phillips	400,597	Apr. 2	241	65	47	50
Sash ventilator. Storm	F. Straub	405,189	June 11	1200	319	47	1469
Satchel attachment	J. A. Yarger	400,624	Apr. 2	253	70	47	59
Saucepan-handle	W. H. Berger	402,131	Apr. 30	2606	675	47	532
Saw	J. Winger	404,242	May 28	2573	670	47	1179
Saw-blades, &c. Hardening apparatus for	S. T. Paul	401,206	Apr. 9	1173	312	47	231
Saw cleaner. Gin	G. P. Melchior	403,686	May 21	1710	452	47	1005
Saw-dressing device	W. Kirkpatrick	405,495	June 18	1653	436	47	1567
Saw-feeder. Treadle	H. Arndt and F. Stutzman	404,383	Apr. 30	2975	772	47	602
Saw filing, setting, and straightening machine	C. E. Wright	403,314	May 14	1159	308, 309	47	890
Saw for cutting tenons	T. Forsaith	400,906	Apr. 9	718	194	47	148
Saw-guide	A. Goulding	405,210	June 11	1233	327	47	1475
Saw-guide	C. W. Sleeper and R. M. Woodard	400,801	Apr. 2	556	153	47	107

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Saw guide. Band	C. R. Backer	403,172	May 14	990	242, 243	47	844
Saw guide. Band	R. McChesney	405,110	June 11	1070	285	47	1444
Saw. Hand-power	J. M. Vaughn	404,752	June 4	551	141	47	1334
Saw-jointer	W. A. Hunter	401,277	Apr. 9	1279	341	47	251
Saw-mill carriages. Offset mechanism for	W. Gowen	401,942	Apr. 23	2307	599	47	466
Saw-mill carriages. Offset mechanism for	D. Whitmore	402,705	May 7	294	59	47	706
Saw-mill carriages. Offsetting device for	W. Gowen	401,944	Apr. 23	2309	600	47	466
Saw-mill carriages. Offsetting device for	W. Gowen	401,945	Apr. 23	2310	600	47	467
Saw-mill feed-works	H. P. Heacock	404,002	May 28	2178	572	47	1103
Saw-mill set-works	W. A. Campbell	401,876	Apr. 23	2204	576	47	447
Saw or other steel blades. Apparatus for hardening	T. S. Diaston	401,138	Apr. 9	1064	285	47	210
Saw-set	F. C. Fricker	401,740	Apr. 23	2007	525	47	419
Saw-set	E. H. Ketchum	401,785	Apr. 23	2069	540	47	422
Saw-setting machine	M. Püschner	403,212	May 14	995	262, 263	47	860
Saw sharpener and gummer	M. I. Welch	404,329	May 28	2707	702	47	1204
Saw sharpening and gumming machine	J. F. Quinn	405,178	June 11	1175	313	47	1464
Saw-sharpening machine	G. Carlsen	402,560	May 7	10	3	47	665
Saw-swaging machine	T. B. Hite	404,623	June 4	385	93	47	1298
Saw-table gage	J. Harley	405,310	June 18	1384	365	47	1512
Saw-table gage	F. M. Teeguarden	404,231	May 28	2550	667	47	1177
Saw-teeth. Tool for manipulating	F. W. Cook	402,400	Apr. 30	3005	780	47	607
Saw-tooth-swaging device	J. B. Rhodes	402,770	May 7	325	84	47	724
Saws. Apparatus for straightening	D. Simonds	404,738	June 4	529	136	47	1328
Saws. Cleaner for cotton-gin	J. C. Godwin	404,016	June 4	377	90 91	47	1297
Saws. Device for jointing and dressing the teeth of	M. J. O'Brien	404,218	May 28	2540	663	47	1174
Saws. Table-top for circular	I. G. Marston	401,294	Apr. 23	2231	582	47	452
Saws. Work-feeder for band	A. B. Springstead	403,618	May 21	1614	427	47	985
Sawing machine. Circular	F. E. Farwell	403,980	May 21	1906	504	47	1060
Sawing machine. Tree	J. C. Schulte	402,036	Apr. 23	2449	638	47	493
Scaffold	H. Ayres	405,195	June 11	1208	321	47	1471
Scaffold-bracket	E. A. Brace	401,636	Apr. 16	1852	481	47	370
Scaffold fastening	C. W. and A. C. Henkle	405,734	June 25	2060	541	47	1651
Scaffold. Safety	J. Carmichael	401,410	Apr. 16	1487	394	47	303
Scaffolding	A. Bitterly	403,636	May 21	1639	434	47	990
Scale. Automatic grain	J. H. Forsyth	405,728	June 25	2050	539	47	1649
Scale-beam indicating weight, price, or number of bushels in a quantity of grain	W. G. McLaughlin	405,370	June 18	1465	388	47	1528
Scale. Hydrostatic weighing	F. Batter	403,452	May 14	1372	360	47	929
Scales. Automatic grain	C. H. Cooley	403,988	May 28	2154	562, 563, 564	47	1099
Scales. Grain-weighing	P. R. Grabill	403,748	May 21	1803	474	47	1022
Scales. Valve-operating mechanism for grain	C. H. Cooley	402,510	Apr. 30	3179	823	47	641
Scales. Weighing	F. Koch	404,290	May 28	2640	686	47	1192
Scarf-fastener	C. Strauss	402,868	May 7	471	123	47	750
Scarf-pin	J. C. Leibel	405,783	June 25	2127	559	47	1664
Scarf-protector	J. H. Meyer	402,011	Apr. 23	2443	637	47	491
Scissors	E. Peters	400,480	Apr. 2	79	22	47	18
Scoop. Weighing and measuring	L. Zwiesler	405,648	June 18	1928	507	47	1620
Scooper. Earth	S. W. Hall	403,661	May 21	1669	443	47	997
Scourer: *See* Grain-scourer.							
Scraper	E. L. Lefébure	401,442	Apr. 16	1531	405	47	312
Scraper	A. Stewart	401,911	Apr. 23	2260	588	47	457
Scraper	S. Thompson	403,025	May 21	1623	430	47	987
Scraper. Earth-leveling	D. M. Deneby and H. W. Childs	403,095	May 14	903	213	47	822
Scraper or cleaner	G. H. De Buisson	405,522	May 21	1487	390	47	960
Scraper. Road	H. C. Langebartels	401,356	Apr. 16	1403	371	47	288
Scraper. Road	G. N. Miller	403,888	May 21	2009	527, 528	47	1063
Scraper. Road	G. N. Miller	403,889	May 21	2011	528	47	1063
Scraper. Road	G. N. Miller	404,793	June 4	614	158	47	1345
Scraper. Road	O. E. Moats	403,890	May 21	2013	529	47	1063
Scraper. Road	O. E. Moats	403,891	May 21	2017	530	47	1064
Scraper. Road	O. E. Moats	404,794	June 4	615	158	47	1345
Scraper. Road	P. Raab	400,483	Apr. 2	81	23	47	19
Scraper. Wheel	T. Rebhola	400,791	Apr. 2	541	149	47	104
Scraper. Wheeled	F. A. Rathbun	401,658	Apr. 16	1881	489, 490	47	374
Scraper. Wheeled	C. H. Sawyer	401,907	Apr. 23	2254	587	47	456
Scraping machine. Road	M. G. Bunnell	404,774	June 4	584	150, 151	47	1340
Screen: *See* Car-window screen. Paper-pulp screen. Gravel-screen. Window-screen.							
Screen	W. J. Phillips and C. Humphrys	403,553	May 21	1528	401	47	968
Screen wiring machine. Door or window	J. H. Autrobus	402,864	May 7	480	129	47	755
Screens. Means for cleaning shaking	H. Seck	405,125	June 11	1092	291	47	1448
Screening mechanism	E. B. Coxe and S. Salmon	403,989	May 28	2159	565, 566	47	1092
Screening mechanism	E. B. Coxe and S. Salmon	403,990	May 28	2161	566, 567, 568	47	1100
Screw blanks. Manufacturing set	F. Mutimer	402,271	Apr. 30	2806	726	47	571
Screw-cutting die-head	W. J. Baker	401,106	Apr. 9	1021	273, 274	47	202
Screw-cutting machine	J. H. Sternbergh	401,600	Apr. 16	1791	470	47	359
Screw-cutting machine	J. H. Sternbergh and R. Pemberton	401,601	Apr. 16	1794	470	47	360
Screw-swaging machine	E. E. Quimby	403,072	May 7	764	201, 202	47	806

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Screw-tape. Machine for cutting	G. W. Tower	400,892	Apr. 2	677	184, 185	47	130
Screw-threading machine	K. C. Miller	402,759	May 7	308	80	47	721
Screw. Wood	H. Knueppel	402,333	Apr. 30	2901	751	47	588
Scroll and resawing machine. Combined	F. H. Crafts	402,067	Apr. 23	2408	652	47	502
Seal	C. A. Gildemeyer	405,730	June 25	2053	539	47	1649
Seal-lock	O. E. Davidson	400,445	Apr. 2	32	10	47	10
Seal-lock	W. I. Ludlow	401,286	Apr. 9	1289	344	47	253
Seat: *See* Car-seat. Locomotive-cab seat. Carriage-seat. Vehicle-seat. Jump-seat. Wagon-seat.							
Seat	G. J. Wolber	400,623	Apr. 2	281	79	47	59
Secondary battery	H. F. D. Cameron and T. Harris	404,168	May 28	2449	641	47	1158
Secondary battery	C. Desmazures	402,006	Apr. 23	2369	625	47	484
Secondary battery	W. W. Griscom	400,842	Apr. 2	620	168	47	119
Secondary battery	W. W. Griscom	401,744	Apr. 23	2011	536	47	411
Secondary battery	T. H. Hicks	405,213	June 11	1236	323	47	1475
Secondary battery	A. Jamieson	403,593	May 21	1579	417, 418	47	978
Secondary battery	W. P. Kookogey	401,953	Apr. 23	2322	603	47	469
Secondary battery	W. Main	401,280	Apr. 9	1293	345	47	254
Secondary battery	W. Main	401,290	Apr. 9	1298	346	47	254
Secondary battery	J. B. Price	403,957	May 28	2110	552	47	1090
Secondary battery	J. S. Sellon	401,466	Apr. 16	1570	415	47	319
Secondary battery	J. T. Van Gestel	405,751	June 25	2067	547	47	1656
Secretary and dresser. Combination folding	A. Shields	400,607	Apr. 2	255	60, 70	47	53
Seed crusher. Cotton	J. J. Woodward and P. B. Bibb	402,289	Apr. 30	2890	732, 733	47	575
Seed for planting. Preparing cotton	G. W. Newell	400,786	Apr. 2	532	.....	47	102
Seed huller. Cotton	W. R. Fee and J. S. Zerbe	404,696	June 4	479	121, 122	47	1319
Seed. Machine for delinting cotton	R. H. Collyer	402,232	Apr. 30	2748	716	47	560
Seed separator. Cotton	J. S. Zerbe	404,066	May 28	2292	599	47	1126
Seeder	J. W. Calef	401,128	Apr. 9	1051	280	47	207
Seeder. Broadcast	F. P. Spangler	402,993	May 7	635	168	47	784
Seeder. Hand	T. R. Parry	401,584	Apr. 16	1748	461	47	351
Seesaw	F. Spencer	401,798	Apr. 23	2098	548	47	426
Self-propelling motor	H. C. Hicks	405,553	June 18	1760	465	47	1590
Self-waiting table	A. Dahlstrom	401,820	Apr. 23	2129	555, 556	47	432
Semaphore-signal	J. G. Schreuder	405,682	June 18	1976	518	47	1629
Separator: *See* Corn and silk separator. Magnetic separator. Ore-separator. Fluid-separator. Seed-separator. Grain-separator. Slime-separator. Liquid-separator.							
Separator	C. Hallett	401,556	Apr. 16	1704	450	47	343
Separator	S. Stuart	403,704	May 21	1739	457	47	1011
Settee, ironing-board, and clothes-rack. Combined	W. Norriss	404,978	June 11	888	233	47	1407
Sewage. Apparatus for treating	O. E. Meyer and C. H. Weck	403,946	May 28	2096	549	47	1067
Sewage-purifier	J. J. Powers	401,458	Apr. 16	1550	410	47	315
Sewer-trap	A. E. Cohn and G. A. Merrill	403,459	May 14	1383	362	47	932
Sewer-trap	G. C. Hager	405,774	June 25	2115	554, 555	47	1662
Sewer-trap	D. Higgins	403,106	May 14	824	218	47	826
Sewers, &c. Adjustable frame for building	G. M. Graham	402,065	May 7	167	42, 43	47	695
Sewers. Apparatus for cleaning	O. Donnelly and C. T. Bride	402,908	May 7	519	137	47	761
Sewers. Cleaning pipe	O. Donnelly and C. T. Bride	402,662	May 7	162	41	47	694
Sewers. Mold for making	J. Raade	405,652	June 18	1932	508	47	1621
Sewing	A. Ortmayer	401,966	Apr. 23	2338	607	47	472
Sewing ingrain carpets. Apparatus for	H. S. Flint	405,834	June 25	2193	577, 578	47	1677
Sewing-machine	E. Brüncker	400,744	Apr. 2	461	122	47	91
Sewing-machine	J. W. Dewees	401,776	Apr. 23	2052	537	47	419
Sewing-machine	W. F. Dial, A. Steward, and G. H. Dimond.	405,205	June 11	1225	324, 325	47	1473
Sewing-machine	A. Faulkner	404,965	June 11	874	228	47	1404
Sewing-machine	A. Faulkner	404,966	June 11	876	228	47	1404
Sewing-machine	M. Gardner	402,432	Apr. 30	3069	794, 795	47	630
Sewing-machine	J. Heggan	405,776	June 25	2116	535, 536	47	1662
Sewing-machine	C. W. Weiss	403,163	May 14	906	236, 239	47	842
Sewing-machine	G. A. and J. G. Xander	401,989	Apr. 23	2370	615, 617	47	478
Sewing-machine-attachment holder	J. M. Griest	402,584	May 7	50	12	47	673
Sewing-machine. Boot or shoe	W. Comey	400,439	Apr. 2	23	8	47	8
Sewing machine. Broom	C. E. Lipe	402,337	Apr. 30	2905	753, 754	47	589
Sewing-machine. Button-hole	J. S. Freese	403,342	May 14	1201	310, 320	47	899
Sewing-machine. Button-hole	J. S. Freese	403,494	May 14	1329	346, 349	47	922
Sewing-machine button-hole attachment	G. D. Spielman	400,608	Apr. 2	256	70	47	54
Sewing-machine button-hole cutter	A. L. Traver	400,975	Apr. 9	826	220, 221	47	167
Sewing-machine cover	N. R. Van Horn	404,752	June 4	550	141	47	1333
Sewing-machine fan attachment	W. S. Elliott	404,964	June 11	873	227	47	1404
Sewing-machine feed mechanism	J. W. Dewees	400,833	Apr. 2	609	166	47	117
Sewing-machine feed mechanism	C. W. Weiss	405,448	June 18	1591	430	47	1554
Sewing-machine feeding device	L. Gundelach	401,271	Apr. 9	1273	340	47	249

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Sewing-machine feeding mechanism	F. T. Leilich	401,182	Apr. 9	1137	301, 302	47	223
Sewing-machine feeding mechanism	F. T. Leilich	402,230	Apr. 30	2790	723	47	568
Sewing-machine feeding mechanism	F. T. Leilich	404,358	May 28	2748	713, 714	47	1212
Sewing-machine for finishing button-hole pieces	G. S. Hill	400,914	Apr. 9	729	197	47	149
Sewing-machine for finishing button-hole pieces	J. Reece	404,863	June 11	722	185	47	1374
Sewing-machine for securing stay-cords and thrum ends.	A. Shea	405,228	June 11	1955	333	47	1479
Sewing machine. Glove	C. M. Boland	400,432	Apr. 2	12	4	47	5
Sewing-machine. Hand	G. L. Hubbell	402,597	May 7	67	16	47	677
Sewing-machine motor	W. H. Clayton and C. A. Loring	402,805	May 7	380	100	47	734
Sewing-machine needle-vibrating mechanism	L. Muther and R. G. Woodward	401,294	Apr. 9	1306	347	47	256
Sewing-machine. Overedge	W. Webster	402,497	Apr. 30	3161	818, 819	47	637
Sewing-machine plaiting attachment	T. L. Melone	403,359	May 14	1222	324, 325	47	903
Sewing-machine quilting attachment	C. Mandeville	400,699	Apr. 2	300	105	47	77
Sewing machine. Shoe	J. L. Treharn	404,448	June 4	106	26	47	1246
Sewing machine. Sole	J. Albrecht	405,453	June 18	1600	421, 422	47	1556
Sewing-machine stand	W. A. Mack	405,043	June 11	988	262	47	1498
Sewing-machine take-up	G. W. Baker	403,722	May 21	1770	465	47	1016
Sewing-machine take-up	J. F. McKenney	403,951	May 28	2102	550, 551	47	1089
Sewing-machine take-up mechanism	F. T. Leilich	404,357	May 28	2746	713	47	1212
Sewing-machine thread-cutting mechanism	C. F. Wilcox	401,399	Apr. 16	1468	387	47	300
Sewing-machine tuck creaser or marker	J. M. Griest	401,029	Apr. 9	904	242	47	182
Sewing-machine tuck creasing and marking attachment.	A. A. Crawford	400,751	Apr. 2	469	126	47	92
Sewing-machine. Wax-thread	W. Fiedler	404,079	May 28	2311	606	47	1130
Sewing-machines. Combination-cabinet for	T. Knudtz	405,568	June 18	1779	470	47	1584
Sewing-machines. Cutting device for button-hole	J. A. Osterhout and J. P. Hallenbeck.	402,610	May 7	86	20, 21	47	680
Sewing-machines. Cutting mechanism for button-hole	F. W. Ostrom and J. W. Boynton	404,427	June 4	77	19	47	1241
Sewing-machines. Glove-embroidering attachment for	C. E. Weyand	402,213	Apr. 30	2724	707	47	555
Sewing-machines. Guiding attachment for	A. H. Fritsch	403,831	May 21	1928	507	47	1047
Sewing machines. Horn-heating device for wax-thread	G. R. Peare	405,594	June 18	1818	481, 482	47	1602
Sewing-machines. Oscillating loop taker and spreader for	J. L. Follett	402,429	Apr. 30	3065	793	47	619
Sewing-machines. Presser-foot-lifting device for	J. Bartlett and G. B. Wiggin	403,725	May 21	1773	466	47	1016
Sewing-machines. Shuttle and race mechanism for	F. D. Parker	404,555	June 4	289	69	47	1280
Sewing-machines. Spool of thread for	G. H. Wilkins	405,726	June 25	2048	538	47	1648
Sewing-machines. Wax-heating device for	G. R. Peare	405,592	June 18	1814	480, 481	47	1601
Sewing-machines. Wax-heating device for	G. R. Peare	405,593	June 18	1816	481	47	1601
Shackle	J. James and A. D. Goodenough	404,544	June 4	276	66	47	1277
Shade-holder	G. E. Somers	401,910	Apr. 23	2270	588	47	457
Shaft. Apparatus for testing the accuracy of the adjustment of a rotating	B. A. Dobson	402,726	May 7	251	66	47	711
Shaft. Crank	C. Foedick	402,010	Apr. 23	2406	627	47	485
Shaft. Flexible	T. Gare	401,881	Apr. 23	2212	578	47	449
Shaft. Flexible power	O. J. Brown	401,681	Apr. 16	1910	497	47	380
Shaft-support	E. Clark	401,412	Apr. 16	1469	394	47	304
Shafts. Adjustable box for	E. H. Bridgman	401,408	Apr. 16	1484	393	47	303
Shafts. Anti-frictional bearing for	F. G. Myers	403,854	May 21	1965	516	47	1054
Shafts. Step-bearing for	C. A. Johansson	405,550	June 18	1769	467	47	1582
Shafting. Die for drawing	J. Rapp	401,206	Apr. 9	1177	313	47	232
Shank-stiffener	J. M. Watson	403,569	May 21	1548	408	47	972
Shaping irregular forms. Self-feeding machine for	W. and G. M. Reid	401,459	Apr. 16	1532	414	47	316
Shaping-machine	U. Eberhardt	402,574	May 7	35	9	47	670
Shaving-stand. Portable	H. Pincus	404,110	May 28	2362	620	47	1140
Shawl-strap	W. F. Harvey	405,998	June 25	2460	643	47	1723
Shawl-strap	M. Rubin	401,073	Apr. 9	966	257	47	193
Sheaf-carrier	H. E. Pridmore	401,902	Apr. 23	2345	585	47	455
Shear-knife	H. Aiken	402,381	Apr. 30	2973	771, 772	47	602
Shears: *See* Animal-shears. Metal-shears. Hoof-shears. Sheep-shears. Hydraulic shears.							
Shears	W. P. Hatch	401,163	Apr. 9	1112	295	47	218
Shears	H. Pattison	404,051	May 28	2264	592	47	1120
Shears, button-hole cutter, and ripper. Combined	M. S. Clark	404,109	May 28	2450	642	47	1158
Shears for cutting metal. Anvil	W. H. Adams	403,960	May 28	2143	560	47	1097
Shears for cutting metal bolts	W. Robinson	403,961	May 28	2117	554	47	1092
Sheep-shears	V. Petherick	405,500	June 18	1679	444	47	1573
Sheet-metal-bending machine	S. Y. Buckman	404,164	May 28	2437	638, 639	47	1156
Sheet-metal box	A. Stamm	405,443	June 18	1580	417	47	1552
Sheet-metal coating or galvanizing apparatus	E. A. Harvey	403,044	May 7	712	186, 187	47	798
Sheet metal. Die for hammering	I. E. Craig	403,918	May 28	2058	.....	47	1081
Sheet metal. Die for shaping	O. W. Swift	405,618	June 18	1852	490	47	1607
Sheet-metal package	F. G. Caldwell	404,596	June 4	349	84	47	1291
Sheet metal, &c. Tool for cutting	F. Ludloff	402,949	May 7	581	153	47	773
Sheet-metal vessel	H. S. Reynolds	401,211	Apr. 9	1180	314	47	232
Sheet-metal vessels. Mechaniam for forming and sizing	A. Slaysman	401,567	Apr. 16	1779	468	47	357
Shelf-bracket. Adjustable	A. N. Hovey	404,604	May 28	2180	573	47	1104
Shell. High-explosive	S. H. Emmons	400,903	Apr. 9	714	193	47	147

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Sled	L. B. Pickett	404,438	June 4	87	21	47	1242
Sled. Hand-	G. Lundgren	404,975	June 11	896	231	47	1407
Sled-propeller	F. Robbin	402,960	May 28	2115	553	47	1091
Sled runner. Bob-	T. G. Mandt	403,854	May 7	586	155	47	774
Sleigh	F. J. Mette	403,766	May 21	1834	491, 492	47	1028
Sleigh. Bob-	D. W. Scobie	402,963	May 7	690	163	47	781
Slicer. Vegetable-	T. Arndt	404,883	June 11	751	191	47	1379
Sliding gate	J. P. Norlin	403,694	May 21	1722	454	47	1007
Slime-separator	P. H. Dunagan	404,521	June 4	241	57	47	1270
Slip or lock joint for corrugated iron	J. Smith	405,379	June 18	1480	392	47	1538
Smoke and gas consuming furnace	J. Burns	403,874	May 21	1988	522	47	1058
Smoke-consumer	J. C. Butler	404,775	June 4	587	151	47	1341
Smoke-consumer	C. McGinniss	401,846	Apr. 23	2160	564	47	438
Smoke-stack	B. Vitalis	402,873	May 7	476	124	47	751
Smoker's set	W. S. Whiting	404,665	June 4	437	109, 110	47	1310
Smoking device	L. C. Lindeman	402,681	May 7	191	48	47	690
Smoothing and sad iron heater	A. Schmitt	402,197	Apr. 30	2098	701	47	550
Snap-hook	M. Codde	403,038	May 7	705	184	47	797
Snap-hook	J. R. Ryan	401,305	Apr. 9	1322	351	47	260
Snap-hook	J. B. Tainter and N. B. Noble	400,511	Apr. 2	120	32	47	27
Snap-hook and loop. Combined	L. Hewitt	405,887	June 25	2270	597	47	1691
Snatch-block	B. H. Naves	401,511	Apr. 16	1683	432	47	330
Snatch-block	A. Uren	402,208	Apr. 30	2719	705	47	554
Snow and cleaning streets. Machine for melting	A. Hentschel	401,496	Apr. 16	1612	425, 426	47	327
Snow and ice guard	S. R. Hawthorne	401,559	Apr. 16	1710	451	47	344
Snow-guard	T. O'Gara	401,302	Apr. 9	1160	311	47	230
Snow-plow	E. P. Caldwell	405,301	June 18	1370	361	47	1509
Snow-plow	J. Corbett	404,173	May 28	2459	644	47	1160
Snow-plow	J. W. Haughawout	403,665	May 21	1676	445	47	998
Snow-plow. Railway	C. A. McCarthy and J. P. Moran	400,589	Apr. 2	230	60	47	46
Snow-plow. Rotary	E. P. Caldwell	405,300	June 18	1369	360	47	1509
Snow-scraper	G. A. Birch	404,958	June 11	844	220	47	1399
Snow-scraper	G. J. Kopmeier	400,775	Apr. 2	503	130	47	99
Snow-shoe	H. Watson	405,516	June 18	1708	450	47	1578
Soap-holder	L. Terry	403,622	May 21	1621	429	47	987
Soap-receptacle	K. Huber	404,354	May 28	2743	712	47	1211
Soda-ash. Apparatus for reclaiming	L. D. Armstrong	402,643	May 7	131	32	47	689
Soda. Making	F. H. Gossage	401,689	Apr. 16	1934	.....	47	384
Soda. Manufacturing caustic	J. A. Bradburn	402,226	Apr. 30	2711	.....	47	539
Soda. Recovering	S. Wolf	405,754	June 25	2091	.....	47	1657
Soda-water apparatus	J. Conner	404,172	May 28	2458	643	47	1159
Soda-water apparatus	G. W. Gilbert	405,027	June 11	906	257	47	1423
Solder and flux. Combined	E. Norton and J. G. Hodgson	400,800	Apr. 2	661	179	47	127
Solder machine. Wire-	F. W. Schultz	405,914	June 25	2220	609, 610	47	1699
Soldering, brazing, and welding. Electric	E. Thomson	402,707	May 21	1744	459	47	1012
Soldering end pieces on cans. Machine for	J. A. Booth	405,622	June 25	2174	572	47	1673
Soldering-iron	A. Sundeen and S. B. Molander	400,509	Apr. 2	117	34	47	27
Soldering-iron. Self-heating	G. Heidel and G. Frey	400,455	Apr. 2	43	13	47	13
Soldering machine. Can-	J. Brown	401,195	Apr. 9	1043	279	47	205
Soldering machine. Can-	J. S. Hull	404,195	May 28	2462	652	47	1165
Soldering pipe-joints. Submarine apparatus for	F. Rann	400,484	Apr. 2	83	23	47	19
Soldering tin cans. Machine for	W. Hipperling	401,887	Apr. 23	2222	580	47	451
Soldering-tool	C. L. Wagandt	402,634	May 7	130	29	47	687
Sole-edge-trimming machines. Belt-tightener for	W. Lahey	402,250	Apr. 30	2775	718	47	564
Sole for rubber foot-wear. Protective	T. Regan	401,372	Apr. 16	1428	377	47	292
Sole-leveling machine	F. S. Strong	403,495	May 14	1439	377	47	942
Soles to uppers. Machine for uniting	L. Goddu	403,835	May 21	1933	509, 510	47	1048
Sound-board. Tensional	C. S. Weber	402,496	Apr. 30	3160	818	47	637
Sower. Broadcast seed-	L. Eberhart and J. D. Stevens	402,150	Apr. 30	2635	682, 683	47	537
Sower. Broadcast seed-	W. D. Guseman	402,922	May 7	403	106	47	739
Sower. Seed-	M. Freeman	403,882	May 21	1999	525	47	1040
Spade or shovel	J. A. Little	400,923	Apr. 9	749	201	47	153
Spark-arrester	J. B. Barnes	403,964	May 28	2140	561	47	1098
Spark-coil	F. H. Root	400,795	Apr. 2	547	151	47	105
Speaking-tube	J. Walter	405,061	June 11	1010	270	47	1433
Speaking tube, pipe, &c	J. H. Rush	404,868	June 11	731	187	47	1376
Spectacle-frame	J. E. Searing	400,957	Apr. 9	801	214	47	163
Spectacle-lens	A. Morck, Jr	400,783	Apr. 2	529	146	47	102
Spectacle or eyeglass frame	J. E. Searing	400,956	Apr. 9	798	213, 214	47	163
Spectacles. Electro-therapeutic	C. Brust	401,682	Apr. 16	1911	496	47	380
Speculum	W. Molesworth	400,589	Apr. 2	230	62	47	46
Speech or other sounds. Recording and reproducing articulate	G. W. Listlehales	404,850	June 11	700	180	47	1371
Speed-indicator	A. R. Sherman	405,437	June 18	1568	414, 415	47	1549
Speed-indicator	C. Spratt	404,992	June 11	904	237, 238, 239, 240	47	1411
Spherical trigonometry. Appliance for illustrating	F. Hawk	405,354	June 18	1443	382	47	1594
Spike-blank bar	J. T. Jones	403,049	May 7	721	188	47	800
Spike-machine	H. Greer	404,191	May 28	2486	650, 651	47	1164
Spindle-driving bands. Tension-regulating device for	A. T. Lawson and S. Dear	404,917	June 11	881	205, 206	47	1390
Spindle-driving bands. Tension-regulator for	P. L. Kenney	401,381	Apr. 9	1284	343	47	262
Spinning and twisting machines. Stop-motion device for	W. Lund	400,864	Apr. 2	654	177, 178	47	125

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Spinning and winding silk. Machine for	H. E. Conant	404,171	May 28	2456	643	47	1159
Spinning-bobbin, &c	L. C. Baldwin. (Reissue)	10,996	Apr. 23	2595	679	47	592
Spinning, doubling, and twisting machine	E. Kimmel and E. E. Claussen	401,382	Apr. 9	1285	345	47	252
Spinning frame. Ring	J. T. Meats	400,934	Apr. 9	764	200	47	156
Spinning frame. Ring	W. H. Saltmarsh and C. A. Bogardus	401,217	Apr. 9	1187	317	47	234
Spinning-frames, &c. Guide-tube for	S. Henderson	401,350	Apr. 16	1393	369	47	286
Spinning hemp, &c. Machine for	C. H. Tripp	402,785	May 7	351	92	47	729
Spinning machine. Cordage	A. Weber and C. Lambert	404,137	May 28	2399	628, 629	47	1148
Spinning-machine nipper	C. D. Clark	404,898	June 11	774	197	47	1384
Spinning-machine spindle	J. Hogg and A. H. Robinson	401,703	Apr. 16	1939	506	47	385
Spinning-machines. Band-tension regulator for	J. Gaunt	403,833	May 21	1930	508	47	1047
Spinning-machines. Saddle for top rolls of	G. A. Metcalf	405,584	June 18	1804	478	47	1589
Spinning machines. Top roll for	E. Lafloe	403,537	May 21	1512	396	47	965
Spinning-spindle	S. Smith and R. Gill	400,502	Apr. 2	109	29	47	25
Spinning-spindle and support therefor	J. E. Tynan	404,134	May 28	2396	628	47	1147
Spinning-spindle and support therefor	E. J. Carroll	401,686	Apr. 16	1917	499	47	381
Spinning-spindle support	J. Duffy	404,609	June 4	368	88	47	1295
Spinning-spindle support	J. H. Northrop	403,855	May 21	1946	516	47	1054
Spinning-spindle support	J. S. Richardson	403,902	May 21	1973	518	47	1055
Spinning-spindle support	F. H. Wheat	401,988	Apr. 23	2369	616	47	478
Spinning-spindle support	R. White	405,233	June 11	1261	334	47	1481
Spirometer. Coin-released	J. F. Blake	405,455	June 18	1604	423	47	1557
Spirometer. Coin-released	P. G. Williams and A. W. Roovers	403,978	May 28	2141	560	47	1096
Splicing device	J. C. Basel	401,244	Apr. 9	1226	320	47	242
Sponge-cup and sealer	J. C. Parker	400,941	Apr. 9	778	208	47	158
Spool-blanks. Machine for forming	C. A. Broughton	401,997	Apr. 23	2384	620	47	481
Spooling-machine	J. W. Foster	404,831	June 11	671	173, 174	47	1366
Spoon-holder	D. A. A. Buck	402,716	May 7	240	63	47	709
Spring: *See* Bed-spring. Bolster-spring. Buggy-top spring. Car-spring. Carriage-spring. Cart-spring. Door-spring. Draft-spring. Furniture-spring. Vehicle-spring. Vehicle side spring.							
Spring-hanger	A. White	401,398	Apr. 16	1467	382	47	300
Spring-jack switch	H. B. Thayer	400,969	Apr. 9	817	218	47	166
Spring-motor	R. Faries	404,526	June 4	249	59, 60	47	1271
Spring-motor	A. Meahl	401,047	Apr. 9	931	246, 247	47	187
Spring-motor	C. Nicholson	401,052	Apr. 9	939	250	47	188
Spring-motor	B. Turton	402,548	Apr. 30	3233	838, 839	47	651
Spring-washer	F. G. Johnson	404,284	May 28	2634	684	47	1190
Springs. Machine for coiling spiral	J. W. Kerr	403,940	May 28	2065	547	47	1085
Springs. Machine for making coiled	H. D. Millett	404,213	May 28	2528	659, 660	47	1172
Springs. Tempering spiral	F. Sedgwick	401,721	Apr. 16	1971	515	47	392
Sprinkler: *See* Automatic sprinkler. Cotton-sprinkler.							
Sprocket-wheel	J. R. Hersh and J. M. Staley	402,448	Apr. 30	3090	801	47	624
Sprocket-wheel	W. E. Selleck	405,607	June 18	1638	427	47	1605
Sprocket-wheel	W. E. Pratt	405,492	June 18	1561	412	47	1548
Square, bevel, and protractor. Center	E. B. Shepardson	404,312	May 28	2680	694	47	1199
Square, center-square, and bevel. Combined	S. W. Yates	403,404	May 14	1307	342	47	917
Square. Tailor's	J. Knight	402,745	May 7	288	73, 74	47	717
Stairs, &c. Metallic reversible covering for the treads of	G. V. Marshall	400,470	Apr. 2	62	18	47	15
Stairway. Spiral	W. M. Breeden	404,256	May 28	2591	674	47	1183
Stalk-cutter	H. A. Hughes	402,081	Apr. 23	2518	657	47	506
Stalks. Apparatus for removing end sections from	W. M. Dunaway	401,490	Apr. 16	1496	387	47	305
Stamp and punch. Combination coupon-ticket	B. Summers	404,574	June 4	313	75	47	1284
Stamp-canceler	I. B. Dodson	401,335	Apr. 16	1366	364	47	281
Stamp. Hand	E. W. Lehman	400,860	Apr. 2	647	175	47	124
Stamp. Hand	L. K. Scotford	402,771	May 7	306	85	47	724
Stamp. Hand	B. B. Hill	405,704	June 25	2013	529	47	1642
Stamp. Self-inking band hand	B. B. Hill	401,033	Apr. 9	912	244	47	183
Stamp. Time	L. K. Scotford	401,519	Apr. 16	1643	435	47	332
Stamps. Dating device for hand	H. R. McCalmont	401,961	Apr. 23	2333	606	47	471
Stamps. Device for protecting postage	L. J. Borie	405,393	June 18	1500	398	47	1536
Stamps, &c. Machine for affixing postage	T. J. Holmes	404,694	June 4	386	93	47	1299
Stamping or other machines. Safety apparatus for	C. L. Hart	402,668	May 7	172	44	47	696
Stamping-press	H. B. Stranahan	402,999	May 7	643	170	47	785
Stamping-press	L. L. Sagendorph	401,216	Apr. 9	1185	317	47	234
Stamping sheet metal. Roller-die for	A. F. Mears	403,122	May 14	845	224	47	830
Stanchion	W. Scott	401,307	Apr. 9	1394	352	47	261
Stanchion							
Stand: *See* Bottle-stand. Camera-stand. Music-stand. Railway switch-stand. Sewing-machine stand. Shaving-stand. Switch-stand.							
Staple-driver	E. M. Dean	405,537	June 18	1733	458	47	1583
Staple forming and clinching machine	J. Chantrell	405,342	June 18	1427	376, 377, 378	47	1521
Staple-making machine	W. Halkyard	405,090	June 11	1043	279	47	1439
Station-indicator	V. L. Cunningham	404,384	June 4	18	5	47	1228
Stationery-packet	H. W. Southworth	403,785	May 21	1864	490	47	1035
Stave-dressing machine	F. H. Kane	403,506	May 21	1582	419	47	979
Stave-jointing machine	A. M. Benson	401,874	Apr. 23	2200	575, 576	47	446
Staves. Machine for making barrel	M. Dallas	405,148	June 11	1123	299	47	1454
Steam and water motor	C. R. Hunt	403,430	May 14	1337	351	47	923

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Steam-boiler	M. W. Bailey	405,864	June 25	2237	589	47	1636
Steam-boiler	J. Baird	402,127	Apr. 30	2601	613, 614	47	531
Steam-boiler	J. Baird	402,887	May 7	492	130	47	755
Steam-boiler	W. T. Bate	400,720	Apr. 2	440	118	47	87
Steam-boiler	N. B. Clark and F. B. King	404,825	June 11	592	171	47	1364
Steam-boiler	N. B. Clark and F. B. King	405,341	June 18	1434	378	47	1522
Steam-boiler	H. Davey	404,176	May 28	2463	645	47	1161
Steam-boiler	A. M. Dimmick and E. Z. Smith	403,678	May 21	1993	524	47	1030
Steam-boiler	F. A. Gardner	405,209	June 11	1232	327	47	1474
Steam-boiler	J. L. Gill, Jr	400,448	Apr. 2	35	11, 12	47	10
Steam-boiler	S. P. Hedges	400,568	Apr. 2	205	56	47	44
Steam-boiler	H. A. Kroeschell	400,462	Apr. 2	51	15	47	13
Steam-boiler	L. W. and N. Lombard	402,491	Apr. 23	2535	661	47	510
Steam-boiler	W. McDonald	406,001	June 25	2466	645	47	1721
Steam-boiler	M. E. Otis	402,611	May 7	89	21, 22	47	681
Steam-boiler	J. Shackleton	402,350	Apr. 30	2939	761, 762	47	585
Steam-boiler	W. W. Sutcliffe	401,603	Apr. 16	1797	471	47	360
Steam-boiler. Sectional	C. Gorton	402,667	May 7	169	43	47	695
Steam-engine	R. T. Abell	403,714	May 21	1753	461	47	1013
Steam-engine	V. W. Beeson and W. B. Bonine	402,849	May 7	491	131	47	756
Steam-engine	W. Geib	404,190	May 28	2435	650	47	1164
Steam-engine	C. O. Heggem	400,847	Apr. 2	627	170, 171	47	121
Steam-engine	E. D. Leavitt, Jr	402,251	Apr. 30	2780	720	47	566
Steam-engine	J. McAllister	403,601	May 21	1589	490, 491	47	980
Steam-engine	M. Müller	401,364	Apr. 16	1413	373, 374	47	290
Steam-engine	J. A. Seymour and J. E. McIntosh	402,622	May 7	103	25	47	684
Steam-engine	C. A. Smith	401,326	Apr. 16	1451	383	47	297
Steam-engine	A. H. F. Straub	404,573	June 4	311	74	47	1284
Steam-engine. Compound	M. Coryell	400,641	Apr. 2	302	85	47	63
Steam-engine. Compound	F. A. Gardner	405,208	June 11	1231	326, 327	47	1474
Steam-engine. Compound	C. Holly	401,167	Apr. 9	1116	296	47	219
Steam-engine cylinder	W. F. Brown	403,642	May 21	1645	436	47	992
Steam-engine. Single-acting	F. W. Dodd	405,150	June 11	1126	299, 300	47	1455
Steam-exhaust head	E. F. Lyman and J. P. Warren	405,575	June 18	1791	474	47	1597
Steam-generating tubes. Apparatus for automatically regulating temperature of	T. L. Sturtevant	403,972	May 28	2133	558	47	1095
Steam-generator	M. C. Armour	401,102	Apr. 9	1012	271	47	200
Steam-generator	D. Dougherty	405,954	June 25	2365	625	47	1710
Steam-generator	J. A. Eno	404,521	June 4	946	58, 59	47	1270
Steam-generator	A. Hasbrouck	405,837	June 25	2198	578, 579	47	1678
Steam-generator	W. Snee	404,740	June 4	532	136	47	1339
Steam-generator	T. L. Sturtevant	403,971	May 28	2131	558	47	1094
Steam-generator. Superheating	A. Young	401,239	Apr. 9	1222	326	47	240
Steam-heater	E. T. Waggoner	402,635	May 7	121	29	47	687
Steam-jacketed receiver	W. F. Brown	403,644	May 21	1648	437	47	993
Steam-motor. Low-pressure	R. K. Evans	401,020	Apr. 9	891	238	47	179
Steam-trap	C. F. Brigham	401,772	Apr. 23	2048	536	47	418
Steam-trap	H. Creamer	404,174	May 28	2460	644	47	1160
Steam-trap	G. Dinkel	401,545	Apr. 16	1691	446	47	341
Steam-trap	B. W. Feldhousen	402,516	Apr. 30	3190	826	47	643
Steam-trap	J. F. McElroy	404,925	June 11	811	208	47	1392
Steam-trap	C. Richard	405,804	June 25	2152	566	47	1669
Steam-trap	W. A. Taylor	400,718	Apr. 2	423	114, 115	47	84
Steam trap and regulator	A. Weber	403,102	May 14	905	238	47	841
Steamer. Colander	G. L. Motter	401,712	Apr. 16	1956	510	47	389
Steel. Apparatus for the manufacture of	C. Law and C. E. Howe	405,492	June 18	1541	408, 409	47	1544
Steel balls. Machine for making	W. H. Wright	400,990	Apr. 9	853	228, 229	47	172
Steel direct from ore. Producing	W. F. M. McCarty	404,723	June 4	512	131	47	1325
Steel. Toughening forged articles of	J. Coffin	401,010	Apr. 9	879	.....	47	177
Steering apparatus	A. C. Dunn	404,472	June 4	152	35, 36	47	1254
Steering apparatus	H. and A. Lawson	404,008	May 28	2185	574	47	1105
Stencil	A. W. Smith	402,981	Apr. 30	2880	750	47	573
Stereoscope	H. C. White	401,607	Apr. 23	2113	551	47	498
Stereoscope. Coin-operated	C. E. Patterson	405,321	June 18	1338	308	47	1515
Stereotype-plates. Matrix for	G. Eastwood	401,738	Apr. 23	2405	625	47	410
Stereotyper's sawing, trimming, and grooving machine	J. R. Cummings and G. E. Lloyd	405,663	June 18	1945	511	47	1623
Stereotyping. Matrix for	F. Schreiner and A. Schott	404,584	June 4	301	71	47	1292
Stilt	H. Temple	401,806	June 4	639	162	47	1350
Stirrer and pulverizer	I. C. Ligett	403,118	May 14	841	223	47	830
Stirrup	E. A. Leinard and G. W. Sheets	403,945	May 28	2095	548	47	1087
Stitching. Book	H. L. Arnold	401,673	Apr. 16	1900	495	47	378
Stitching. Book	H. L. Arnold	402,218	Apr. 30	2731	706	47	537
Stitching books	H. L. Arnold	401,674	Apr. 16	1900	495	47	379
Stitching books	H. L. Arnold	401,675	Apr. 16	1902	496	47	379
Stitching books	H. L. Arnold	401,676	Apr. 16	1903	496	47	379
Stitching-clamp	C. Dose	405,349	June 18	1438	380	47	1523
Stocking-supporter	J. M. Rabitte	404,862	June 11	721	184	47	1374
Stone. Making artificial	P. Jochum	404,199	May 28	2498	.....	47	1167
Stone. Manufacturing artificial	W. R. Havens and S. E. Keough	404,040	May 28	2236	586	47	1113
Stone-sawing machine	R. L. Barney	404,335	May 28	2715	704	47	1205
Stone-sawing machine	J. W. Maloy	401,655	Apr. 16	1876	488	47	374
Stool. Camp	A. M. Abbott	402,709	May 7	230	60	47	707

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Stool. Hunter's portable	E. G. Purdy	401,302	Apr. 9	1319	351	47	269
Stool. Milking	O. G. Scriven	403,781	May 21	1853	487	47	1032
Stool or chair. Store	J. S. Sammons	401,379	Apr. 16	1442	381	47	295
Stool. Piano	H. Walther	400,528	Apr. 2	150	39	47	32
Stool. Sectional camp	C. F. Glocker	400,841	Apr. 2	618	168	47	118
Stool. Store	J. S. Sammons	401,380	Apr. 16	1444	381	47	295
Stools or chairs. Spring-back for	W. P. James	404,628	June 4	392	94	47	1300
Stop mechanism	L. C. Crowell	404,960	June 11	863	225; 226	47	1402
Stopper: *See* Bottle-stopper.							
Store-service apparatus	J. T. Cowley	402,567	May 7	25	7	47	668
Store-service apparatus	J. T. Cowley	402,568	May 7	27	7, 8	47	668
Store-service apparatus	J. T. Cowley	403,917	May 28	2055	541	47	1060
Store-service apparatus	P. L. Davis	405,351	June 25	2379	624	47	1709
Store-service apparatus	H. Eichbaum	402,575	May 7	36	9	47	670
Store-service apparatus	H. Eichbaum	402,576	May 7	39	10	47	671
Store-service apparatus	G. W. Price	403,070	May 7	762	201	47	806
Store-service apparatus	C. A. Whipple	404,882	June 11	749	191	47	1379
Stores. Retail-case and support for	G. W. Pyle	400,945	Apr. 9	784	209	47	159
Stove	R. H. Guhmann	402,123	Apr. 23	2592	672	47	521
Stove	H. Hopkins and J. R. Perry	402,451	Apr. 30	3095	803	47	625
Stove	J. H. Keyser	401,889	Apr. 23	2225	580	47	451
Stove	C. Newburgh	403,063	May 7	736	192	47	802
Stove	W. H. Owen, A. C. Boswell, and J. J. Carlock.	402,539	Apr. 30	3222	835	47	649
Stove	F. Veil	400,612	Apr. 2	263	72	47	55
Stove and grate. Combined cooking	I. N. Davis and G. Tweedy	404,177	May 28	2464	647	47	1161
Stove and utensils. Portable cooking	A. S. Tomkins	404,578	June 4	323	77	47	1286
Stove attachment. Gasoline	C. A. Stockstrom. (Reissue)	11,007	June 11	1278	337	47	1424
Stove. Foot	H. E. Welsh	403,014	May 7	666	175	47	789
Stove for railway-coaches	A. M. Spaulding	406,007	June 25	2477	647	47	1726
Stove. Gas	W. H. Pike	404,038	May 28	2266	592	47	1120
Stove. Gas or oil	B. G. Devoe and T. A. Dull	401,641	Apr. 16	1858	483	47	371
Stove. Gasoline	W. P. Dunham	401,016	Apr. 9	886	237	47	178
Stove. Gasoline	M. S. Sager	405,274	June 18	1334	359	47	1502
Stove. Gasoline	M. S. Sager	405,275	June 18	1336	353	47	1502
Stove-grate	W. C. Metzner	401,508	Apr. 16	1627	430; 431; 689; 691	47	329
Stove. Heating	R. A. Gartside and D. Gencse	404,273	May 28	2619		47	1187
Stove. Heating	A. S. Phelps	400,481	Apr. 2	79	22	47	18
Stove. Oil	A. F. Zimmerling	405,291	June 18	1355	357	47	1506
Stove or furnace. Oil-burning	C. M. Young and P. L. Gibbs	403,405	May 14	1308	342	47	918
Stove or range attachment	C. B. Tefft	404,748	June 4	544	139	47	1332
Stove-oven	P. Hoogerzeil, Jr., and D. F. Hinkley	403,938	May 28	2063	546	47	1065
Stove-pipe	W. S. Shipe. (Reissue)	11,005	May 28	2772	710	47	1218
Stove-pipe anchor and flue-cleaner	L. H. Oldfield	404,553	June 4	288	68	47	1279
Stove-pipe and collar holder	G. Koch and J. B. Korn	405,565	June 18	1776	469	47	1593
Stove-pipe former	H. S. Grannis	402,562	May 7	47	11	47	672
Stove-pipe formers. Adjustable box for	H. S. Grannis	402,563	May 7	48	12	47	673
Stove-pipe lock	E. Nash	403,425	May 14	1332	350	47	922
Stove-pipe thimble	A. Staub	402,778	May 7	339	87	47	726
Stove. Safety self-extinguishing car-heating	W. J. Locke and I. Thayer	401,358	Apr. 16	1405	372	47	289
Stove. Single-cylinder	J. H. Keyser	401,888	Apr. 23	2223	580	47	451
Stove-top	W. H. Wooldridge	404,065	May 28	2291	599	47	1136
Stove. Vapor	S. Daniels	402,409	Apr. 30	3017	783	47	610
Stove. Vapor	S. Daniels	404,961	June 11	660	230	47	1403
Stove. Vapor	Z. Davis	405,149	June 11	1195	293	47	1454
Stove. Vapor	C. S. Drake	401,258	Apr. 9	1254	334	47	246
Stove. Vapor	J. B. Wallace	403,562	May 21	1547	407; 408	47	972
Stoves and other purposes. Heater for	S. H. Altice, H. P. Roberts, and C. Reed.	401,006	Apr. 9	1003	268	47	199
Stoves. Automatic extinguisher for car	H. Levoy and F. Dagwell	404,420	June 4	66	17	47	1238
Stoves. Burner for gas	L. Kahn	401,783	Apr. 23	2066	540	47	422
Stoves. Oil-burner for	H. Schreiner	401,793	Apr. 23	2091	545	47	425
Stoves. Odor-preventing device for cooking	C. A. Holm	404,194	May 28	2491	651	47	1165
Stoves. Recess summer-piece for	J. H. Keyser	400,689	Apr. 2	378	102	47	75
Stoves. Safety oil-can attachment for vapor	H. Ruppel	404,439	June 4	95	24	47	1244
Straight-edge or darby	E. Moore	400,590	Apr. 2	231	63	47	48
Strainer	A. Kummle	405,567	June 18	1778	470	47	1594
Strainer. Detachable	P. Pfeil	405,373	June 18	1468	389	47	1529
Strainer for kettles, &c	W. F. Kendrick	405,216	June 11	1240	329	47	1476
Strainer. Julep	C. P. Lindley	404,204	May 28	2504	635	47	1168
Strap: *See* Box-strap. Metallic strap. Hose-carrying strap. Shawl-strap.							
Strap fastener and tightener for trunks, &c	C. Sparks	402,776	May 7	337	87	47	726
Strap-joint	C. T. Remus	400,572	Apr. 2	864	181	47	127
Strap-loop	A. C. Reeves	402,104	Apr. 30	2696	700	47	550
Straw-carrier	G. Akerson	404,460	June 4	135	32	47	1251
Straw-cutter	W. C. Bayless	404,379	June 4	10	3	47	1226
Straw-cutter	J. Töpfer	404,130	May 28	2390	626	47	1146
Straw goods. Waterproofing	R. Pratt, Jr	403,697	May 21	1728		47	1009
Straw-stacker	H. M. Coffee	402,807	May 7	383	101	47	735
Straw-stacker	A. A. Russell	400,798	Apr. 2	551	151; 152	47	105
Street-surfaces. Guide-bar for lining up the curves of	J. M. Mack	404,491	June 4	182	43	47	1259
Street-sweeping machine	C. Weiler	401,232	Apr. 9	1212	323	47	238
Stretcher-bar	E. Schmidt	404,988	June 11	901	236	47	1410
Stringed instruments. Bridge for	M. Durick	403,743	May 21	1798	472	47	1021
Stubble-shaver	J. Mallon	405,169	June 11	1161	310	47	1462

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Stuffing-box	W. E. Brockett	400,543	Apr. 2	109	44	47	36
Stuffing-box	L. C. S. Frick	404,599	June 4	283	61	47	1272
Stump-extractor	J. A. Paris and J. H. Dilday	401,850	Apr. 23	2164	565	47	439
Submarine search-light	A. L. Dutton	404,390	June 4	24	6	47	1240
Sugar, &c. Cleansing raw	A. Seyferth	405,610	June 18	1842	.....	47	1606
Sugar from sorghum by diffusion. Extracting	H. A. Hughes	402,083	Apr. 23	2521	658	47	507
Sugar granulating and drying machine	L. A. Morval, Jr.	401,363	Apr. 16	1410	373	47	290
Sugar. Lixiviating-battery for raw	C. Steffen	403,788	May 21	1867	491	47	1036
Sugar molding and refining apparatus	H. W. Walker and T. L. Patterson	401,612	Apr. 16	1812	474	47	363
Sugar production from sorghum	H. A. Hughes	402,082	Apr. 23	2519	657	47	506
Sulky	S. P. Southard	405,856	June 25	2226	586	47	1684
Sulphate of silver. Preparing	F. Gutzkow	401,898	Apr. 23	2140	.....	47	434
Supporter: *See* Belt-supporter. Stocking-supporter. Garment-supporter.							
Suppository-machine	W. J. Hull	401,838	Apr. 23	2150	561	47	436
Surface-gage	W. H. H. Norcross	402,703	May 7	314	81	47	722
Surgeon's knife	H. E. Gemrig	401,549	Apr. 16	1696	448	47	349
Surgical applicator	E. Lee	401,787	Apr. 23	2079	541	47	423
Surgical dressing. Turf-fiber	V. Fraucken and J. Pirnay	401,547	Apr. 16	1694	447	47	341
Surgical mirrors. Head-band for	J. L. Sardy	402,619	May 7	99	24	47	683
Surgical-needle case	E. Willbrandt	402,550	Apr. 30	3239	840	47	652
Surveyor's corner-stake	J. H. Howlett	401,782	Apr. 23	2065	539	47	421
Surveyor's target	S. C. Thompson	405,058	June 11	1005	268	47	1432
Suspenders	B. Goodman	402,580	May 7	45	11	47	672
Suspenders	H. Lisberthal	401,183	Apr. 9	1139	302	47	223
Suspenders	J. R. Pollock	405,374	June 18	1469	389	47	1529
Suspenders	E. B. Stimpson	403,230	May 14	1026	271	47	865
Suspension device	W. C. Homan	401,781	Apr. 23	2064	539	47	421
Swaging device	J. Taylor	402,045	Apr. 23	2465	642	47	496
Sweat-pad fastener	L. H. Scruggs	401,859	Apr. 23	2177	568	47	442
Swing	J. Carmody	403,914	May 28	2052	540	47	1079
Swing. Child's	J. M. McCord	405,496	June 18	1672	442	47	1571
Swinging gate	T. E. Brodt	400,631	Apr. 2	289	82	47	60
Swinging gate. Balanced	J. W. Fiers	404,270	May 28	2611	679	47	1186
Swinging gate. Hand-operated	W. C. Carter	405,302	June 18	1371	361	47	1500
Switch: *See* Automatic switch. Railway-switch. Electric switch. Safety-switch. Electric-current switch. Spring-jack switch. Telephone-switch. Electric-motor-trolley switch. Three-throw open split switch.							
Switch-boards. Testing apparatus for	W. E. McKivitt	405,221	June 11	1246	331	47	1478
Switch-lock	I. May, C. and T. Spikins	400,580	Apr. 2	218	59	47	46
Switch or circuit changer	W. W. Griscom	401,270	Apr. 9	1272	339	47	249
Switch-points. Mechanism for operating	J. M. Swem	404,446	June 4	102	25	47	1245
Switch-rail chair	A. A. Strom	401,312	Apr. 9	1309	353	47	262
Switch-signal	K. H. Wade	401,669	Apr. 23	2169	572	47	444
Switch-stand	F. C. Baker	402,293	Apr. 30	2834	734	47	576
Switch-stand signal	M. B. Hurly	402,328	Apr. 30	2894	750	47	586
Switch-stands. Lock-house for	W. J. McCarthy	404,646	June 4	411	101	47	1304
Switches. Tie-bar clip for split	A. O. Strom	403,497	May 21	2024	532	47	1066
Switches. Tie-bar clip for split	A. A. Strom	406,008	June 25	2479	648	47	1736
Swivel	H. E. Kelley	404,632	June 4	397	96	47	1301
Swivel	J. F. Sears and H. E. Kelley	404,630	June 4	430	107	47	1308
Swivel. Double-acting	M. Collins	400,749	Apr. 2	460	125	47	92
Syringe	J. H. Glascock	401,157	Apr. 9	1102	293	47	216
Syringe	O. Kloppe	405,100	June 11	1055	282	47	1442
Syringe	D. C. McNaughton	400,584	Apr. 2	227	61	47	47
Syringe	M. Overlach	404,105	May 28	2351	617	47	1136
Syringe and medicine-case. Combined	G. B. Ross	400,491	Apr. 2	91	25	47	21
Syringe. Hypodermic	H. Haussmann	401,950	Apr. 23	2316	602	47	468
Syringe. Insect-destroying	F. L. Zitschke	401,622	Apr. 16	1832	477	47	367
Syringe. Vaginal	O. G. Zerse and S. T. Yount	404,702	June 4	564	144	47	1336
Syringes. Tube-rest for	B. F. Sutton	402,285	Apr. 30	2896	731	47	574
Table: *See* Corpse-dressing table. Kitchen-table. Extension-table. Rolling-mill feed-table. Ironing-table. Self-waiting table.							
Table	J. M. Davis	404,689	June 4	473	119	47	1317
Table-cover fastener	E. B. Knapp and H. L. Thompson	401,283	Apr. 9	1286	343	47	252
Table or stand for exhibiting cloaks, &c	W. Bardsley	401,110	Apr. 9	1023	274	47	202
Table-slide	S. Pratt	402,967	May 7	602	158	47	778
Tack-feeding machine	L. D. Junkins	403,843	May 21	1970	512	47	1051
Tack-strips. Machine for making	M. Brock	402,058	Apr. 23	2481	649	47	499
Tack-strips. Machine for making	M. Brock	402,060	Apr. 23	2486	649	47	500
Tack-strips. Machine for making	M. Brock	402,061	Apr. 23	2488	650	47	500
Tack-strips. Machine for making	M. Brock	402,062	Apr. 23	2491	650	47	501
Tack-strips. Machine for making	J. A. Crosble	402,069	Apr. 23	2500	653	47	502
Tack-strips. Machine for setting	M. Brock	402,059	Apr. 23	2484	649	47	500
Tackle-block	G. A. Ford	401,150	Apr. 9	1090	290	47	214
Tackle-block	W. J. Lane	406,000	June 25	2464	645	47	1734
Tag	C. O. Dowst	401,485	Apr. 16	1596	421	47	324
Tag. Shipping	F. G. Roys	403,780	May 21	1853	487	47	1032
Tank: *See* Grinding-machine water-tank. Wash-boiler tank. Water-closet tank.							
Tank	H. W. Harry	400,566	Apr. 2	204	55	47	43
Tank-fountain	J. W. Pierson	405,271	June 18	1329	350	47	1500
Tank-heater	F. Funk	401,698	Apr. 16	1933	503	47	384
Tank-heater	H. Reynolds	405,092	June 11	998	266	47	1430
Tank-heater	A. J. Upham	402,633	May 7	118	29	47	696

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Tannic extracts. Purifying	L. Saarbach	404,440	June 4	97	.....	47	1244
Tanning	J. W. Hitt	401,434	Apr. 16	1518	.....	47	309
Tanning	E. Ollestad	401,715	Apr. 16	1961	.....	47	301
Tap. Bottle	E. H. Griswold	401,432	Apr. 16	1515	401	47	309
Tapping elbows and return-bends. Machine for	D. G. Langlands and O. E Mallion	403,199	May 14	972	256, 257	47	855
Tape-measure	E. G. Soltmann	400,961	Apr. 9	808	215	47	164
Targets. Machine for making bird	M. E. Pontious	400,870	Apr. 2	662	160	47	127
Tea-kettle	C. E. Costa	400,635	Apr. 2	295	83	47	61
Tea or coffee pot handle	M. Seips	403,782	May 21	1854	487	47	1033
Teeth. Adjustable pad for cleansing and polishing	G. F. Horsey	403,350	May 14	1242	322	47	901
Teeth. Filling	A. Robinson	402,352	Apr. 30	2934	760	47	594
Teeth. Filling	E. C. Taylor	404,745	June 4	540	138	47	1331
Teeth. Mold for the manufacture of artificial	W. R. Hall	404,763	June 4	488	123	47	1320
Teeth. Tool for removing shell-crowns from	C. H. Rosenthal	403,293	May 14	1128	299	47	883
Telegraph	J. Burry	404,165	May 28	2439	639, 640, 641	47	1156
Telegraph apparatus	E. B. Shafer	404,507	June 4	211	50	47	1264
Telegraph apparatus for ships	J. B. Willis	400,985	Apr. 9	844	226, 227	47	171
Telegraph cables from corrosion. Protecting the lead pipe of	A. E. Colgate	403,418	May 14	1322	346	47	920
Telegraph. Duplex fire	S. A. Chase	404,519	June 4	235	55	47	1268
Telegraph. Duplex fire-alarm	S. A. Chase	403,507	Apr. 30	3175	822, 823	47	640
Telegraph. Fire-alarm	S. A. Chase	404,518	June 4	232	55	47	1266
Telegraph-instrument	C. G. Burke	402,717	May 7	941	63	47	709
Telegraph-instrument	C. G. Burke	405,985	June 25	2437	638	47	1719
Telegraph-instrument	C. G. Burke	405,988	June 25	2443	639	47	1720
Telegraph. Railway	F. J. Crouch	402,408	Apr. 30	3015	783	47	609
Telegraph-sounder	F. L. Van Epps	403,626	May 21	1624	430	47	987
Telegraph system. Printing	C. J. A. Munier	402,099	Apr. 23	2544	663, 664	47	511
Telegraph-wire carrier	R. S. Donaldson	400,552	Apr. 2	184	50	47	39
Telegraphs. Circuit-closer for railway-car	G. I. Hopkins	402,222	May 7	415	109	47	741
Telegraphs. Exchange system for	J. H. Robertson	403,291	May 14	1126	298	47	883
Telegraphic instrument	C. G. Burke	405,986	June 25	2439	638	47	1720
Telegraphic instrument	C. G. Burke	405,987	June 25	2440	639	47	1720
Telegraphic instrument	C. G. Burke	405,989	June 25	2444	639, 640	47	1721
Telegraphy	C. G. Burke	405,984	June 25	2436	637, 638	47	1719
Telegraphy	P. B. Delany	401,334	Apr. 16	1363	364	47	280
Telegraphy	M. W. Dewey	402,414	Apr. 30	3025	785	47	611
Telegraphy	M. W. Dewey	402,415	Apr. 30	3028	785	47	612
Telegraphy. Autographic	M. W. Dewey	405,539	June 18	1736	450	47	1584
Telegraphy. Harmonic	F. Van Rysselberghe	400,523	Apr. 2	143	38	47	31
Telegraphy. Printing	Z. P. Hotchkiss	403,472	May 14	1399	366, 367	47	935
Telegraphy. Quadruplex	C. D. Haskins	405,211	June 11	1234	327	47	1475
Telegraphy. Vibratory	S. D. Field	403,238	May 14	1066	280, 281	47	872
Telephone	E. A. Woelk	402,121	Apr. 23	2787	670	47	520
Telephone and telegraph system. Combined	W. Burnley	402,298	Apr. 30	2840	735, 736	47	577
Telephone attachment	H. Konigslow	405,420	June 18	1538	407	47	1544
Telephone attachment	O. Konigslow	405,566	June 18	1777	470	47	1593
Telephone-circuit. Metallic	H. L. Burbank	405,461	June 18	1611	425	47	1558
Telephone combination-circuit	F. A. Pickernell	405,677	June 18	1967	516	47	1627
Telephone-exchange apparatus	F. G. Beach	405,967	June 25	2241	590	47	1686
Telephone-holding device	S. J. Adams	403,316	May 14	1167	309	47	892
Telephone. Mechanical	W. W. Nichols	403,547	May 21	1523	399	47	967
Telephone. Mechanical	G. Thomas	401,227	Apr. 9	1201	321	47	237
Telephone-support	C. W. Brown	404,660	June 4	459	115	47	1314
Telephone-support	P. E. Hall	400,911	Apr. 9	724	196	47	149
Telephone-switch	A. Stromberg	405,382	June 18	1483	393	47	1533
Telephone system	F. A. Holcomb	402,928	May 7	548	145	47	766
Telephone system	F. A. Holcomb	402,929	May 7	552	146	47	767
Telephone-transmitter	E. S. Drake	404,471	June 4	151	35	47	1253
Telephone-transmitter	W. Gillett	401,743	Apr. 23	2010	526	47	411
Telephone-transmitter	W. J. Morton	400,591	Apr. 2	232	63	47	48
Telephones. Arm-support for	C. R. Tuttle	400,520	Apr. 2	140	36	47	30
Telephones. Diaphragm for acoustic	H. P. Jones	405,483	June 18	1651	435	47	1566
Telephony and telegraphy. Combined	J. H. Robertson	403,292	May 14	1127	299	47	883
Telescopic glasses. Mirror attachment for	A. Janzon	400,571	Apr. 2	210	57	47	44
Tellurian	L. Deichmann	402,005	Apr. 23	2397	624, 625	47	483
Temperature-regulator	L. F. Easton	400,738	Apr. 2	477	128	47	93
Temperature-regulator. Electric	L. F. Easton	405,151	June 11	1128	300	47	1455
Temple for guiding the edges of fabrics	J. J. Schofield	401,972	Apr. 23	2347	611	47	475
Terret with separable shank	E. E. Hardy	404,403	June 4	42	12	47	1234
Testing-machine. Impact	W. J. Keep	403,676	May 21	1695	448, 449	47	1002
Testing machine. Tensile-strain	S. Jump	404,200	May 28	2499	653	47	1167
Tether	W. J. Neese	403,062	May 7	735	191	47	902
Textile fabrics. Apparatus for treating	W. Mather	402,757	May 7	304	78, 79	47	720
Textile fabrics. Apparatus for washing	J. S. Farmer	404,078	May 28	2309	605, 606	47	1130
Thermo-dynamic motor. Internal combustion	J. Hargreaves	401,161	Apr. 9	1107	294	47	217
Thermometer-case	C. J. Taglabue	400,717	Apr. 2	422	114	47	84
Thermometer. Clinical	R. H. Hunstock and E. Chavez	405,046	June 11	978	260	47	1426
Thermometer. Oven	C. Julier and J. O. Robinson	400,573	Apr. 2	211	57	47	45
Thermometer. Oven	J. C. Voss	403,710	May 21	1749	460	47	1012

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Thermometric indicator	W. R. Patterson	402,347	Apr. 30	2927	739	47	592
Thermoscopes. Attachment for electro-magnetic	H. J. Haight	401,348	Apr. 16	1389	368	47	286
Thermostat	C. F. Hilkier	403,837	May 28	2081	546	47	1085
Thermostat	J. H. Mallon	405,579	June 18	1787	476	47	1598
Thill-coupling	W. B. Bradsby	402,502	Apr. 30	3169	821	47	639
Thill-coupling	B. Fahrney	405,086	June 11	1039	277	47	1438
Thill-coupling	E. A. Farr	402,913	May 7	526	139	47	702
Thill-coupling	F. Gandy	401,896	Apr. 23	2139	558	47	434
Thill-coupling	J. A. Hinson	401,885	Apr. 23	2218	579	47	450
Thill-coupling	A. Homewood	405,414	June 18	1532	405	47	1542
Thill-coupling	G. H. Hutton	402,527	Apr. 30	3209	831	47	646
Thill-coupling	C. R. Jones	401,170	Apr. 9	1122	297	47	229
Thill-coupling	G. W. Lee	402,531	Apr. 30	3213	832	47	647
Thill-coupling	C. C. Munroe	405,108	June 11	1069	285	47	1444
Thill-coupling	D. Murray	405,109	June 11	1069	285	47	1444
Thill-coupling	W. T. Ross	402,974	May 7	611	160	47	779
Thill-coupling	S. G. Smith	402,545	Apr. 30	3231	837	47	651
Thill-coupling	D. K. Stone	400,878	Apr. 2	672	183	47	129
Thill-coupling	B. E. Wade	400,596	Apr. 2	148	39	47	32
Thill-jack	J. Fuller and J. Morrison	402,518	Apr. 30	3195	827	47	644
Thill. Sulky	S. Toomey	403,079	May 7	776	205	47	908
Thill. Vehicle	E. Warren	403,497	May 14	1444	378	47	943
Thills. Mechanism for detaching	A. Rammoser	405,799	June 25	2148	564	47	1608
Thimble	C. Horner	404,910	June 11	792	202	47	1388
Thrashing-machine	L. Bronson	402,801	May 7	375	98, 99	47	733
Thrashing-machine	W. King	401,705	Apr. 16	1942	506	47	396
Thrashing-machine	F. F. Landis	401,840	Apr. 23	2153	562	47	437
Thrashing machine. Bean	C. H. Bidwell	402,893	May 7	500	132	47	757
Thrashing-machines. Adjustable sieve attachment for	W. K. Dodd	405,018	June 11	946	252	47	1419
Thrashing-machines. Band-cutter platform for	A. B. Leeper	402,258	Apr. 30	2789	722	47	567
Thrashing-machines. Driving means for	H., J. H., and A. D. Gillett	405,309	June 18	1383	364	47	1512
Thread	L. Briggs	400,739	Apr. 2	455	121	47	90
Thread-cutting die	J. E. McCanna	401,962	Apr. 23	2324	606	47	471
Thread holder and cutter	M. E. West	402,492	Apr. 30	3163	819	47	637
Thread-protector	E. J. Colby	400,636	Apr. 2	296	83	47	62
Three-throw open split switch	G. L. Worth and J. B. Wyatt	403,238	May 14	1037	274, 275	47	867
Ticket	J. Keller	403,113	May 14	894	220	47	828
Ticket and stamp holder	A. Williamson	404,584	June 4	333	80	47	1268
Ticket. Cash-fare	A. I. Blanchard	405,820	June 25	2172	571	47	1673
Ticket-holder	J. G. Webb	403,234	May 14	1030	272	47	866
Ticket-holder. Railway	P. E. McDonald	402,702	May 7	313	81	47	722
Ticket-selling machine. Automatic	J. W. Vaughn	404,450	June 4	114	27	47	1247
Tide and lock power engine	A. F. Smith	400,500	Apr. 2	106	28, 29	47	24
Tie: *See* Loop-tie. Railway-tie. Railway cross-tie. Railway-rail tie.							
Tights. Full	S. T. Sutton	402,202	Apr. 30	2709	703	47	552
Tile frame. Illuminating	P. H. Jackson	405,778	June 25	2120	557	47	1663
Tile. Illuminating	J. Jacobs	402,830	May 7	557	146, 147	47	767
Tile. Illuminating	J. Jacobs	402,831	May 7	558	147	47	768
Tile-machine	W. D. Sherman	405,183	June 11	1182	315	47	1465
Tile-machine	W. D. Sherman	405,184	June 11	1186	316	47	1466
Tile-machine	W. D. Sherman	405,185	June 11	1188	316, 317	47	1467
Tile-machine	W. D. Sherman	405,186	June 11	1190	317, 318	47	1467
Tile or brick. Paving	C. M. O'Conner	400,477	Apr. 2	75	21	47	18
Tile. Roofing	J. E. Gnaten and C. W. Braun	403,837	May 21	1942	516	47	1050
Tiles. Device for handling green	J. W. Laughlin	403,276	May 14	1105	293	47	880
Tilting gate	M. A. Nelson	401,577	Apr. 16	1738	458	47	349
Timber. Compound for preserving	J. W. Putnam	404,302	May 28	2064	.....	47	1197
Time-lock	B. Free	401,272	May 28	2613	678, 680	47	1186
Time-piece	H. Rime	402,972	May 7	608	160	47	779
Time-piece. Electric self-winding	M. Carranza and J. M. Tinoco	401,606	Apr. 9	873	234	47	176
Time-piece key	M. Bock	405,004	June 11	922	244	47	1414
Time-register. Watchman's	H. W. Smith	402,359	Apr. 30	2942	763	47	596
Timing apparatus for race courses	R. O. Adams	402,291	Apr. 30	2832	733	47	575
Tin. Machine for slitting sheets of	W. Hipperling	403,533	May 21	1507	395	47	964
Tinning metals. Machine for	D. Caird and G. Larkins	402,899	May 7	508	124	47	758
Tire-shrinker	R. B. Langill	403,115	May 14	887	221	47	829
Tire. Wagon	A. N. Hopkins	401,275	Apr. 9	1276	341	47	250
Tire. Wheel	R. W. Dunmoyer	404,092	June 4	476	120	47	1318
Tobacco-cutter	J. B. Adt	400,723	Apr. 2	428	116	47	85
Tobacco-cutting machine	W. Krutzsch	402,088	Apr. 23	2532	660	47	509
Tobacco-hanger	W. S. Wootton	403,819	May 21	1909	502	47	1044
Tobacco-pipe	J. W. Dowling	403,561	May 21	1563	413	47	975
Tobacco-pipe	E. A. Gross	403,935	May 28	2080	546	47	1084
Tobacco-press. Portable	I. A. McKinley	401,448	Apr. 16	1536	400	47	313
Tobacco-tamp and pipe-stem cleaner. Combined	J. Strachan	400,986	Apr. 9	813	218	47	165
Toboggan	G. H. Chateayne	401,734	Apr. 23	1905	502	47	408
Toe-weight	F. H. Perry	404,109	May 28	2302	619	47	1140
Tongs	E. F. Barton	405,001	June 11	919	243	47	1414
Tongs. Roofing	C. G. Blum and P. Listeman	404,678	June 4	453	114, 115	47	1313
Tongs. Roofing	R. B. McConnell	401,963	Apr. 23	2335	606	47	472
Tongue-support	E. Hanshaw	402,443	Apr. 30	3062	799	47	623
Tongue-support	B. Rents	401,461	Apr. 16	1556	411	47	317
Tool. Combination	E. K. Beckwith	403,631	May 7	696	182	47	795
Tool. Combination	A. J. Bryant	401,327	Apr. 16	1353	361	47	277
Tool. Combination	A. Frömming	405,156	June 11	1145	305	47	1459

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Tool. Combination	E. E. Heacock	404,001	May 28	2177	571	47	1103
Tool. Combination	S. L. Heinold	401,821	Apr. 23	2133	557	47	432
Tool. Combination	A. D. Kimball	400,690	Apr. 2	389	103	47	75
Tool. Combination	H. L. Kincaid	402,939	May 7	572	150	47	771
Tool. Combination household	F. A. Huehn	402,327	Apr. 30	2893	749	47	586
Tool driver	C. H. Olson	402,538	Apr. 30	3221	835	47	649
Tool-handle	G. Carlisle	401,461	Apr. 16	1590	409	47	323
Tool-handle	C. D. Fuller	403,832	May 21	1929	506	47	1047
Tools. Tempering	Q. A. Button	405,887	June 25	2182	574	47	1675
Tools to handles. Device for securing	F. H. Thompson and G. P. Turmey	404,663	June 4	435	109	47	1309
Tooth. Artificial	C. H. Land	400,921	Apr. 9	744	200	47	152
Tooth-crown. Artificial	C. H. Land	403,597	May 21	1563	413	47	979
Tooth-crown. Artificial	C. H. Land	405,167	June 11	1158	306	47	1461
Tooth-holder	J. W. Harris	401,883	Apr. 23	2214	573	47	449
Tooth-pick machine	W. F. Hutchinson	404,282	May 28	2632	693	47	1190
Tooth-plug. Artificial	F. E. Hansen	403,428	May 14	1334	350	47	923
Top-spinner	F. L. Johnson	404,042	May 28	2241	587	47	1114
Torch	H. Wellington	401,805	Apr. 23	2111	550	47	428
Torpedo-staff	H. P. Young	401,810	Apr. 23	2117	552	47	429
Torpedoes. Net-cutting attachment for	S. A. Brown	401,773	Apr. 23	2049	536	47	418
Toy	A. L. Bernardin	405,988	June 25	2246	590	47	1687
Toy	J. C. Hall	405,333	June 18	1442	382	47	1524
Toy	D. W. Long	401,569	Apr. 16	1727	453	47	347
Toy	F. K. Way and W. T. Parker	403,232	May 14	1058	271	47	906
Toy car. Coin-operated	A. C. Rex	402,351	Apr. 30	2932	760	47	593
Toy. Mechanical	R. Teichmann	403,307	May 14	1148	304	47	888
Toy parachute	W. J. Kuntzsch	404,847	June 11	697	179	47	1370
Toy pistol	F. L. Gordon	404,275	May 28	2022	681	47	1188
Toy racket	G. D. Corey	404,599	June 11	777	198	47	1384
Toy railway-car	J. S. Wilkins, Jr	403,165	May 14	910	230	47	842
Trace-carrier	D. T. Bryan	405,460	June 18	1611	424	47	1558
Track-clearer	J. M. Christopher	402,405	Apr. 30	3011	782	47	608
Track-layer	S. W. Roberts and E. P. Caldwell	400,950	Apr. 9	790	211	47	160
Track-laying machine	F. F. Voigt	404,996	June 11	913	{241 242}	47	1412
Track-lifter	J. D. Williford	401,236	Apr. 9	1216	324	47	239
Track-switch shifter	L. W. Queitsch	402,856	May 7	451	118	47	747
Traction-engine	E. M. Birdsall	404,157	May 28	2427	{635 636}	47	1154
Traction-engine	C. O. Heggem	400,846	Apr. 2	626	170	47	120
Traction-wheel	E. M. Birdsall	403,321	May 14	1172	313	47	893
Transformers. Apparatus for regulating current or potential in secondary of	E. Thomson	400,515	Apr. 2	125	33, 34	47	28
Transformers. Regulating current or potential in secondary of	E. Thomson	400,516	Apr. 2	129	34	47	29
Transit. Road for rapid	M. A. Michales	403,687	May 21	1710	432	47	1005
Transit. System of rapid	H. Flad	405,306	June 18	1377	363	47	1510
Transit. System of rapid	H. Flad	405,467	June 18	1621	{427 428}	47	1560
Transit. System of rapid	H. Flad	405,769	June 25	2109	{552 553}	47	1660
Transmission apparatus	T. Bomm	403,637	May 21	1641	{434 435}	47	991
Transom-lifter	J. K. Sprague	404,020	May 28	2201	578	47	1107
Transparency	H. C. Rector	403,698	May 21	1729	455	47	1009
Transplanting-pot	J. Cook	402,722	May 7	246	65	47	710
Transportation. System of rapid	C. H. Barrows	403,505	May 21	1455	382	47	954
Trap: *See* Animal-trap. Fly-trap. Insect-trap. Mole-trap. Overflow-trap. Pipe-trap. Sewer-trap. Steam-trap.							
Trap	L. T. Follansbee	404,271	May 28	2612	679	47	1186
Trap	T. Griffin	402,585	May 7	51	12	47	673
Trap-doors. Device for opening	T. J. Jolly	402,932	May 7	559	147	47	768
Trapeze. Revolving	L. A. Valdis	402,495	Apr. 30	3158	{817 818}	47	636
Traveling-bag	M. Schwerin	402,861	May 7	456	120	47	748
Traveling-bag	A. P. W. Seaman	405,508	June 18	1692	447	47	1576
Tray. Child's	C. L. Wagandt	402,788	May 7	354	93	47	729
Tree-protector	H. L. Webber	404,757	June 4	558	143	47	1335
Trees. Device for protecting fruit	F. Harlan	405,552	June 18	1750	464	47	1590
Trestle. Adjustable	L. Maurer	402,175	Apr. 30	2671	693	47	544
Trestle. Folding	J. T. Miller	401,848	Apr. 23	2163	564	47	439
Trimmer: *See* Lumber-trimmer. Wick-trimmer.							
Trimming-board	F. Nathan	401,454	Apr. 16	1546	409	47	315
Trimming-machines. Rotary cutter for	M. D. Phelan	400,788	Apr. 2	535	147	47	103
Trough: *See* Feed-trough.							
Trough and rack. Combined	W. H. Critchfield and E. J. Emmons	402,145	Apr. 30	2626	679	47	535
Trousers, &c.	M. Fraenkel	403,746	May 21	1801	473	47	1022
Trousers-stretcher	J. Draper	402,813	May 7	395	103	47	737
Trousers-stretcher	D. F. McNair	404,648	June 4	416	103	47	1304
Truck	E. F. Strange	401,470	Apr. 16	1577	417	47	390
Truck-beam for railway-cars	J. Comp	404,031	May 28	2224	583	47	1111
Truck bolster. Car	J. Higginson	405,703	June 25	2012	529	47	1642
Truck brake. Car	J. Stephenson	403,298	May 14	1135	300	47	885
Truck. Brick	J. W. Weeks	401,396	Apr. 16	1464	{386 387}	47	299
Truck. Cable-car	J. Stephenson	403,294	May 14	1294	339	47	915
Truck. Car	G. E. Blaine	404,676	June 4	450	{113 114}	47	1312
Truck. Car	L. K. Jewett	401,354	Apr. 16	1400	370	47	288

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Truck. Car	L. K. Jewett	402,163	Apr. 30	2657	688	47	542
Truck. Car	M. Kennedy	402,459	Apr. 30	3106	806	47	627
Truck. Car	H. J. La Mothe	402,167	Apr. 30	2662	689	47	543
Truck. Car	H. J. La Mothe	402,169	Apr. 30	2665	690	47	543
Truck for cable-railway cars	S. A. Bemis	405,691	June 25	1909	504	47	1639
Truck. Gopher	S. R. Harry	405,960	June 25	2392	627	47	1711
Truck. Grand-piano	C. H. Martin	402,340	Apr. 30	2913	755	47	590
Truck. Hand	D. M. Macpherson	401,506	Apr. 16	1625	430	47	329
Truck-loader	J. D. Hill	400,457	Apr. 2	46	14	47	12
Truck. Railway-car	B. J. La Mothe	402,168	Apr. 30	2663	690	47	543
Truck. Railway car	J. W. Maloy	402,950	May 7	581	153	47	773
Truck. Railway-car	J. W. Maloy	402,951	May 7	583	154	47	774
Truck. Upright-piano	C. H. Martin	402,341	Apr. 30	2914	{755 756}	47	591
Trucks. Rung-socket plate for	G. Hoepfner and H. Wuest	405,474	June 18	1635	432	47	1563
Trunk-fixture	J. B. Porter	404,111	May 28	2363	630	47	1141
Trunk-lock	H. B. Plumb	401,062	Apr. 9	953	254	47	190
Trunks or packing-boxes. Follower for	K. L. Karo	401,439	Apr. 16	1528	404	47	311
Truss	A. Dallas	401,877	Apr. 23	2205	577	47	448
Truss	A. C. Haines	400,910	Apr. 9	722	196	47	148
Truss	J. Harden	400,454	Apr. 2	42	13	47	12
Truss	J. C. Borick	404,307	May 28	2673	693	47	1198
Tub: *See* Wash-tub.							
Tubs, &c. Cover for butter	H. C. Carter	404,597	June 4	350	84	47	1291
Tube: *See* Boiler-tube. Lamp-wick tube. Speaking-tube.							
Tube-coupling	G. N. Riley. (Reissue)	10,994	Apr. 16	1983	.....	47	395
Tube-cutter	J. E. Jerrold, Sr., and H. H. Barclay	401,279	Apr. 9	1292	342	47	251
Tube or conduit	G. H. and K. C. Gillette	401,154	Apr. 9	1098	291	47	215
Tube or pipe sections. Locking device for	J. W. Teetzel	400,513	Apr. 2	123	33	47	28
Tubes. Apparatus for making seamless	I. G. Platt	405,115	June 11	1077	287	47	1445
Tubes. Machine for finishing metal	L. F. Betts	402,133	Apr. 30	2609	676	47	532
Tubing. Apparatus for the manufacture of metal	J. H. Flagler	401,143	Apr. 9	1072	{286 287}	47	211
Tubing. Apparatus for the manufacture of metal	J. H. Flagler	401,144	Apr. 9	1075	287	47	212
Tubing. Apparatus for welding	J. H. Flagler	401,146	Apr. 9	1081	288	47	212
Tubing. Forming seamless	J. H. Flagler	401,145	Apr. 9	1078	{287 288}	47	212
Tubing. Machine for beating and polishing sheet-metal	W. G. Case	403,736	May 21	1787	470	47	1019
Tubing. Making metal	J. H. Flagler	401,142	Apr. 9	1070	286	47	211
Tug. Hame	L. Latil	401,957	Apr. 23	2328	605	47	470
Tug. Hame	E. B. Miner	403,947	May 28	2098	549	47	1098
Tug-holder for vehicles	A. B. Webster	405,136	June 11	1104	294	47	1451
Tunnel. Sub-river	A. W. Straub	400,804	Apr. 2	561	154	47	107
Turbine wheel	Z. W. Burnham	404,340	May 28	2733	706	47	1207
Turn-buckles. Blank for	J. H. Simpson	402,691	May 7	205	52	47	702
Turn-buckles. Die for making	J. H. Simpson	402,693	May 7	207	53, 54	47	702
Turn-buckles. Machine for making	J. H. Simpson	402,695	May 7	211	55	47	703
Turn-buckles. Machine for manufacturing	R. L. Barclay	404,152	May 28	2421	634	47	1153
Turn-buckles. Making	J. H. Simpson	402,692	May 7	205	52, 53	47	702
Turn-buckles. Making	J. H. Simpson	402,694	May 7	209	54	47	703
Turn-buckles. Making	J. H. Simpson	403,965	May 28	2124	{555 556}	47	1093
Turn-buckles. Manufacture of	J. H. Simpson	402,690	May 7	203	51, 52	47	702
Turning-machine	H., C., and J. Tucker	403,749	June 25	2083	{546 547 620 621}	47	1635
Turning tenons. Machine for	W. Rogers	404,113	May 28	2366		47	1141
Turning. Tool for spiral	E. Catlan	403,521	May 21	1486	390	47	960
Tuyere. Forge	W. H. Shank	403,149	May 14	885	233	47	818
Twine-holder	W. A. Tibball and W. H. Von Stein	402,206	Apr. 30	2717	705	47	554
Twisting fiber in hanks. Machine for	R. M. Macintosh	405,741	June 25	2070	543	47	1632
Type-case	H. Freeman	402,317	Apr. 30	2877	745	47	584
Type. Die for forming wood	W. H. Page and G. C. Setchell	402,850	May 7	439	116	47	745
Type. Die for forming wood	W. H. Page and G. C. Setchell	402,851	May 7	440	116	47	745
Type. Die for forming wood	G. C. Setchell	402,863	May 7	461	121	47	749
Type. Die for forming wooden	W. H. Page	402,852	May 7	441	116	47	746
Type setting and distributing machine	G. D. Rogers	405,273	June 18	1331	{351 352}	47	1501
Type setting machine	R. W. Nelson	402,537	Apr. 30	3220	835	47	649
Type-writer case	H. D. Pursell	402,106	Apr. 23	2561	665	47	514
Type-writing and matrix-making machine	W. Rennyson	403,075	May 7	770	{203 204}	47	807
Type-writing machine	J. W. Bartlett	403,823	May 21	1917	{503 504}	47	1045
Type-writing machine	L. G. Garrett	401,780	Apr. 23	2056	{538 539}	47	420
Type-writing machine	A. Grundy	404,833	June 11	678	175	47	1367
Type-writing machine	J. G. Parkinson	405,222	June 11	1246	331	47	1478
Type-writing machine	F. H. Richards	403,216	May 14	1000	{264 265 266}	47	861
Type-writing machine	C. E. Sargent	405,606	June 18	1695	467	47	1605
Type-writing machine	C. Spiro	400,716	Apr. 2	418	{113 114}	47	83
Type-writing machine	G. W. N. Yost	401,900	Apr. 23	2274	618	47	479
Type-writing machines. Copy-holder or easel for use with	N. C. Fowler, Jr.	402,518	Apr. 30	3194	827	47	644
Type-writing machines. Fraction-key for	A. Davis and J. H. W. Marriott	403,179	May 14	933	247	47	847
Type-writing machines. Inking-ribbon spool for	H. Ray	401,856	Apr. 23	2174	568	47	441

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Type-writing machines. Paper-holding attachment for	W. B. Northrop	404,103	May 28	2348	616	47	1138
Umbrella	C. W. Harris	404,039	May 28	2237	586	47	1113
Umbrella	G. A. Kittredge and W. P. Kilbourne	405,712	June 25	2027	532	47	1644
Umbrella	S. Schwartz	402,488	Apr. 30	3147	815	47	634
Umbrella-exhibitor	F. Harrington and B. L. Carter	404,480	June 4	166	39	47	1256
Umbrella-frame	W. W. Box	401,536	Apr. 16	1677	442	47	338
Umbrella or cane rack	W. Gable	402,013	Apr. 23	2409	628	47	485
Umbrella or parasol	W. B. Dimon	403,993	May 28	2165	569	47	1100
Umbrella or parasol	F. S. Evans	404,085	June 4	478	121	47	1318
Umbrella-tip ring	E. J. Lumley	403,355	May 14	1218	323	47	902
Umbrellas, &c. Appliance for holding	H. Hough	405,554	June 18	1702	463	47	1590
Umbrellas or analogous articles. Holder for	A. C. Porter	400,598	Apr. 2	943	66	47	51
Under-vest	C. F. North	404,551	June 4	284	67	47	1278
Underwaist. Padded	M. D. McDowell	405,588	June 18	1610	479	47	1600
Unison device	G. F. Oehmen	404,426	June 4	75	19	47	1240
Vacuum or pressure gage	M. Luscomb	403,543	May 21	1518	398	47	966
Vacuum-pan. Electrically-heated	G. B. and M. Johnson	403,110	May 14	892	230	47	828
Valve	L. Atwood	401,240	Apr. 9	1225	326 / 327	47	240
Valve	W. A. Babcock	404,895	June 11	754	192	47	1380
Valve	J. Burke	402,228	Apr. 30	2743	711	47	559
Valve	F. Egner and J. W. Harrison	404,392	June 4	27	6, 7	47	1230
Valve	R. Foster	401,647	Apr. 16	1869	485	47	372
Valve-actuating apparatus	J. W. Packard	401,582	Apr. 16	1744	460	47	350
Valve. Air-	G. M. Davis	404,961	June 11	872	227	47	1404
Valve. Air-brake operating and reducing	R. Solano	405,854	June 25	2222	585	47	1683
Valve and pressure-regulator. Reduction-	F. D. Conncely	405,833	June 18	1729	456 / 457	47	1583
Valve and seat. Steam-engine	R. C. Paul	402,472	Apr. 30	3130	811	47	632
Valve. Anti-freezing tank-	W. H. Barrett	404,420	June 11	657	170	47	1363
Valve attachment for power mechanisms. Automatic	S. N. Knight	401,202	May 28	2501	654	47	1167
Valve. Balanced-slide and cut-off	W. Simpkin	401,384	Apr. 16	1448	382	47	296
Valve-blanks. Die for compressing	J. Powell	403,696	May 21	1727	455	47	1008
Valve. Check-	C. B. Dudley and J. D. Bowman	405,250	June 18	1295	342	47	1494
Valve-controller. Electric	W. E. Norris	401,206	Apr. 9	1166	310 / 311	47	230
Valve. Cut-off	J. J. Tonkin	401,983	Apr. 23	2362	614 / 615	47	477
Valve. Cylinder relief	A. M. Barnum	401,477	Apr. 16	1585	419	47	322
Valve. Engine-	J. T. Halsey	402,922	May 7	538	142 / 143	47	764
Valve. Engine-	H. C. Sergeant	402,985	May 7	625	165 / 166	47	782
Valve. Engine-	J. H. Williams	401,400	Apr. 16	1469	388	47	300
Valve. Engineer's brake-	G. Westinghouse, Jr., and F. Moore	401,916	Apr. 23	2268	590	47	458
Valve for air-brakes. Locomotive-	G. A. Boyden	405,157	June 18	1939	510	47	1622
Valve for air-brakes. Release-	G. A. Boyden	404,768	June 4	573	147	47	1338
Valve for compound engines	S. M. Vauclain	406,012	June 25	2466	650	47	1727
Valve for evaporators. Automatic supply-	W. and W. A. Wilcox, Jr	405,449	June 18	1593	420	47	1555
Valve for filter constructions. Check-	J. W. Hyatt	405,670	June 18	1959	514	47	1630
Valve for gas-distributing pipes. Liquid safety-	J. C. Conroy	401,136	Apr. 9	1062	284	47	210
Valve for gas-meters. Slide-	J. Hearne	404,970	June 11	880	220	47	1405
Valve for meters. Fluid-seal	C. N. Dutton	404,347	May 28	2731	709	47	1249
Valve for pneumatic pipes or tubes	E. S. Boynton	401,660	Apr. 16	1909	497	47	380
Valve for reducing and regulating pressure of fluids	W. P. and R. P. Thompson	401,982	Apr. 23	2361	614	47	477
Valve for tanks. Cut-off	N. W. Krouse	400,920	Apr. 9	743	200	47	151
Valve for the steam-heating pipes of railway-cars	R. I. Hampton	405,959	June 25	2389	626	47	1711
Valve-gear	J. T. Arnold	405,939	June 25	2358	618	47	1706
Valve-gear	E. B. Benham	401,730	Apr. 23	1991	521	47	407
Valve-gear	E. M. Birdsall	403,455	May 14	1377	361	47	930
Valve-gear	F. A. Gardner	405,207	June 11	1230	326	47	1474
Valve-gear	J. T. Halsey	402,923	May 7	541	143	47	765
Valve-gear	M. I. Welch	404,453	June 4	118	28	47	1248
Valve-gear. Cut-off	W. F. Brown	402,557	May 7	5	2, 3	47	664
Valve-gear. Cut-off	A. L. Harrison	401,831	Apr. 23	2143	559	47	434
Valve-gear for compound engines	J. C. H. Stut	404,509	June 4	216	51, 52	47	1264
Valve-gear for steam-hammers	S. Trethewey	400,519	Apr. 2	137	36	47	30
Valve. Hopper-	C. Sturm	401,681	Apr. 9	976	261	47	195
Valve-indicator	D. Kennedy	404,814	June 11	692	178	47	1369
Valve. Pressure-regulating	G. A. Boyden	405,861	June 25	2422	635	47	1718
Valve. Pressure regulating or reducing	E. Andre	404,586	June 4	334	80	47	1288
Valve. Radiator-	W. E. Wood	405,861	June 25	2233	587 / 588	47	1685
Valve. Relief	F. T. Mueller	402,008	Apr. 23	2243	603	47	511
Valve-reseating tool	P. J. Wright	400,969	Apr. 9	852	228	47	172
Valve. Safety-	J. M. Colven	404,684	June 4	466	117	47	1316
Valve. Safety-	W. F. Cunningham	402,070	Apr. 23	2502	653	47	502
Valve. Safety-	M. Warren	402,702	May 7	219	57	47	705
Valve. Slide-	H. C. Reagan	401,309	Apr. 9	1178	313	47	232
Valve. Steam-	J. W. Melling	405,787	June 25	2132	560	47	1665
Valve. Steam-	J. H. Williams	405,641	June 18	1914	504	47	1618
Valve. Steam-actuated	J. W. Gheen	403,187	May 14	945	250	47	849
Valve. Steam engine	G. A. Barth	401,924	Apr. 23	2283	592	47	461
Valve. Steam-engine	S. M. Keplinger	400,919	Apr. 9	741	199 / 200	47	151
Valve. Steam-engine	W. S. Phelps	401,853	Apr. 23	2168	566	47	440
Valve. Straight-way	W. T. Kellogg	401,784	Apr. 23	2068	540	47	422
Valve. Time-	P. G. Hubert	404,542	June 4	275	65	47	1276
Valves. Rolling support for slide-	W. T. Reaser	404,363	May 28	2758	715	47	1214
Vapor-burner	C. H. Shultz	400,498	Apr. 2	103	28	47	23
Vapor-burner	C. H. Shultz	401,303	Apr. 16	1447	382	47	296
Vapor-burner	W. F. Steele	402,996	May 7	639	169	47	784

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Vaporizer	H. F. Williams	404,240	May 28	2570	670	47	1179
Varnish receptacle. Shoe-	J. Hoerle	402,326	Apr. 30	2392	749	47	586
Vat: *See* Dyeing-vat.							
Vault. Bank-	N. S. Amstutz	402,883	May 7	486	127 / 128	47	764
Vault-light mold	D. Barker	404,765	June 4	367	145	47	1337
Vault-light packing-rings. Machine for setting	H. A. Crossley	403,576	May 21	1560	419	47	974
Vault-lights. Tool for constructing	H. A. Crossley	401,331	Apr. 16	1358	360	47	279
Vegetable-cutter	J. A. W. Justi	402,740	May 7	280	72	47	716
Vegetable substances. Apparatus for treating	J. D. Tompkins	401,609	Apr. 16	1807	473	47	362
Vegetable substances. Apparatus for treating	J. D. Tompkins	401,610	Apr. 16	1808	473	47	363
Vehicle	H. Arenberg	404,461	June 4	136	32	47	1251
Vehicle attachment	D. M. and T. H. Parry	405,905	June 25	2304	606	47	1697
Vehicle-body	L. A. Melburn	401,847	Apr. 23	2162	564	47	439
Vehicle-brake	J. W. Martin	401,960	Apr. 23	2331	605 / 606	47	471
Vehicle-brake	F., Jr., and G. H. Schelp	404,238	May 28	2654	686	47	1176
Vehicle-brake	T. S. Smith	401,224	Apr. 9	1197	320	47	236
Vehicle-brake	A. H. Wilson	400,887	Apr. 2	990	267	47	133
Vehicle-brake. Automatic	L. R. Clark	404,075	May 28	2306	604	47	1129
Vehicle. Camping-	A. J. McMaster	404,101	May 28	2344	614 / 615	47	1137
Vehicle-coupling	S. H. Haas	403,427	May 14	1333	350	47	922
Vehicle dash-rail	A. Searle	405,915	June 25	2329	610	47	1700
Vehicle. Electrically-propelled	R. N. Allen	405,976	June 25	2426	635	47	1717
Vehicle. Folding	J. McBoyle	404,494	June 4	186	44	47	1249
Vehicle. Hand-propelled	J. Draper	402,812	May 7	394	103	47	737
Vehicle rub-iron	D. Guile	400,451	Apr. 2	40	12	47	11
Vehicle-runner	C. L. Peirce	401,367	Apr. 16	1419	375	47	291
Vehicle running-gear	F. A. Godfray	405,158	June 11	1147	306	47	1459
Vehicle running-gear	E. W. Jenkins	400,772	Apr. 2	498	135	47	98
Vehicle seat	J. Lea	401,179	Apr. 9	1134	300	47	222
Vehicle-seat lock	J. N. Corey	400,640	Apr. 2	302	85	47	63
Vehicle-seat. Shifting	F. Rightmyer	405,224	June 11	1251	332	47	1479
Vehicle side spring	G. B. Hamlin	401,272	Apr. 9	1274	340	47	250
Vehicle. Spring-	J. E. Balden and D. Barry	405,836	June 25	2196	578	47	1677
Vehicle. Spring-	J. H. Kennedy	402,838	May 7	571	150	47	771
Vehicle. Spring-	J. H. Talmadge	405,857	June 25	2227	586	47	1684
Vehicle-spring	G. E. Bartholomew	402,888	May 7	493	131	47	756
Vehicle-spring	C. A. Beblen	403,506	May 21	1460	383	47	955
Vehicle-spring	C. M. Blydenburgh	403,243	May 14	1044	276	47	809
Vehicle-spring	C. M. Blydenburgh	403,323	May 14	1174	312	47	884
Vehicle-spring	E. H. Booth	402,894	May 7	501	133	47	757
Vehicle-spring	E. Cliff	401,135	Apr. 9	1061	284	47	209
Vehicle-spring	A. E. Cook	401,818	Apr. 23	2127	555	47	431
Vehicle-spring	J. G. Gay	403,547	June 18	1753	463	47	1589
Vehicle-spring	G. E. Harris	401,495	Apr. 16	1610	425	47	327
Vehicle-spring	B. J. Healy	403,666	May 21	1677	443	47	999
Vehicle-spring	E. Hutchinson	402,833	May 7	421	110	47	742
Vehicle spring	S. H. Raymond	404,560	June 4	295	70	47	1291
Vehicle-spring	L. Stouffer	400,506	Apr. 2	114	30	47	26
Vehicle-spring	H. C. Swan	403,622	May 21	1640	429	47	986
Vehicle-spring. Torsion	C. N. Waterhouse	402,789	May 7	355	93	47	720
Vehicle-step. Folding	M. M. Marsh	401,815	Apr. 23	2150	563	47	438
Vehicle trace-loop	O. V. Blazier	400,630	Apr. 2	288	81	47	60
Vehicle. Two-wheeled	S. L. Kinsey	402,020	Apr. 23	2425	631	47	488
Vehicle. Two-wheeled	A. L. Lay	403,354	May 14	1216	323	47	901
Vehicle. Two-wheeled	W. Page	404,496	June 4	188	45	47	1260
Vehicle-wheel	R. W. and T. J. Cave	403,915	May 28	2654	540	47	1040
Vehicle-wheel	F. H. Harris	403,346	May 14	1207	321	47	900
Vehicle-wheel	J. O. Leck	403,763	May 21	1826	479	47	1027
Vehicle-wheel	J. B. Lott	405,424	June 18	1548	410	47	1546
Vehicle-wheel	J. Nipp, Jr	401,965	Apr. 23	2337	607	47	472
Vehicles. Drop-perch for	H. W. Pell	403,209	May 14	990	261 / 262	47	859
Vehicles. Head-block for	E. Hutchinson	402,737	May 7	275	71	47	715
Vehicles. Runner for wheeled	J. Blankart	403,322	May 14	1173	311	47	883
Vehicles. Runner for wheeled	J. B. Granger	401,429	Apr. 16	1510	400	47	308
Velocipede	F. M. Abbott	403,496	May 14	1310	342	47	918
Velocipede	C. E. Duryea	402,313	Apr. 30	2289	743 / 744	47	583
Velocipede	A. Easthope	404,693	June 4	476	120	47	1318
Velocipede	W. Goulden	404,838	June 11	677	174	47	1367
Velocipede	H. A. King	404,490	June 4	181	42	47	1258
Velocipede	W. H. Kitto	405,363	June 18	1455	385	47	1596
Velocipede	M. A. Norton	401,295	Apr. 9	1207	347	47	257
Velocipede	G. J. Taylor	404,123	May 28	2380	624	47	1144
Velocipede	C. E. W. Woodward	401,237	Apr. 9	1217	324	47	230
Velocipede. Marine	S. Curlin	401,736	Apr. 23	1998	523 / 524	47	409
Velocipede-saddle	J. B. Brooks	401,123	Apr. 9	1041	278	47	206
Velocipede-saddle	C. F. Swett	403,078	May 7	776	205	47	808
Velocipede-saddle and supporting device	J. Knoua	405,789	June 25	2152	558	47	1663
Vending apparatus	H. Bailey	402,644	May 7	132	32	47	689
Vending apparatus	W. Lang	401,891	Apr. 23	2228	581	47	452
Vending apparatus	S. Praschl	403,009	May 7	761	200	47	806
Vending apparatus	B. Wesselmann	403,015	May 7	667	176	47	789
Vending apparatus	J. A. Williams	402,374	Apr. 30	2960	768	47	599
Vending apparatus. Automatic	P. B. Bosworth	402,660	May 7	373	98	47	733
Vending apparatus. Liquid-	A. M. Butz and O. Pederson	401,230	Apr. 9	1242	331	47	244
Vending-machine	G. J. Dollinger	402,008	Apr. 23	2402	625 / 626 / 627	47	484

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Vending-machine	P. Everitt	402,515	Apr. 30	3188	{885 886}	{47	642
Ventilating apparatus for vehicles	J. J. Geraghty	400,559	Apr. 2	195	33	47	41
Ventilator: *See* Car-ventilator. Car-window ventilator. Sash-ventilator. Window-ventilator.							
Ventilator	B. Meriam	403,478	May 14	1412	309	47	937
Vessel-holder	J. P. Enstis	404,368	May 28	2669	476	47	1186
Vessel-holder	J. P. Enstis	404,694	June 4	478	121	47	1318
Vessels	F. D. F. Müller	405,792	June 25	2139	502	47	1666
Vessels. Air-tight chamber in	G. H. Steinbath	404,993	June 11	908	240	47	1411
Vessels. Apparatus for coupling	D. M. Scheffer	403,145	May 14	879	222	47	937
Veterinary file-holder	H. Haussmann	403,105	May 14	893	218	47	826
Veterinary incisor-cutter	B. Champlin	404,074	May 28	2306	604	47	1129
Veterinary instrument	G. W. Holand	403,534	May 21	1510	395	47	964
Veterinary instrument	C. E. Palmer	404,652	June 4	420	104	47	1306
Veterinary mouth-speculum	I. N. Woodle	405,642	June 18	1916	504	47	1618
Veterinary surgical instrument	J. W. Whiteleck	405,137	June 11	1105	294	47	1451
Veterinary syringe	C. A. Wiechert and R. Gabrielsky	401,670	Apr. 16	1894	{493 494}	{47	377
Vials. Machine for making	S. J. Dickson	405,879	June 25	2260	594	47	1690
Vine-fastener	P. N. Kohlsaat	402,746	May 7	290	74	47	718
Vinegar-generator	M. W. White	402,118	Apr. 23	2584	669	47	519
Violin-tail-piece fastener	M. W. White	405,816	June 25	2168	570	47	1672
Violins. Peg for	B. Holly	403,107	May 14	825	218	47	827
Vise	L. Daft	404,470	June 4	150	35	47	1253
Voltmeter	E. Hotchkiss	401,560	Apr. 16	1710	451	47	344
Waffle-iron	W. R. Watt	403,629	May 21	1628	431	47	988
Wagon-bed	W. S. Bourne	404,464	June 4	140	33	47	1252
Wagon-body raiser	S. E. Oviatt	402,183	Apr. 30	2682	695	47	546
Wagon-box corner-iron	P. Andersen	401,100	Apr. 9	1009	{268 270}	{47	200
Wagon-brake	W. S. Griffin	402,821	May 7	402	106	47	739
Wagon-brake	J. W. Hartman and H. P. Clay	400,675	Apr. 2	359	98	47	72
Wagon-brake	W. H. Means	405,583	June 18	1803	477	47	1599
Wagon-brake	P. Pilon	400,942	Apr. 9	779	208	47	158
Wagon-brake	L. Wetherbee	405,002	June 11	1011	270	47	1433
Wagon-brake. Automatic	W. Aylesworth, 1st	405,520	June 18	1710	{451 452}	{47	1579
Wagon-brake lever	W. A. and E. G. Haney	400,565	Apr. 2	203	55	47	43
Wagon-clip	J. B. Baynes and C. A. Hennicke	401,478	Apr. 16	1587	419	47	322
Wagon. Delivery	G. L. Howland	403,842	May 21	1950	512	47	1051
Wagon. Dumping	L. Busse	404,957	June 11	854	223	47	1400
Wagon. Dumping	W. W. Green	404,359	May 28	2741	{711 712}	{47	1210
Wagon. Dumping	W. Jachmann	401,437	Apr. 16	1522	403	47	311
Wagon. Dumping	B. Killeen	405,362	June 18	1452	384	47	1526
Wagon. Dumping	C. and A. B. Linn	402,532	Apr. 30	3214	833	47	647
Wagon. Dumping	L. Rodenhausen	402,034	Apr. 23	2448	{637 638}	{47	492
Wagon. Dumping	G. Worthington	405,974	June 25	2419	633	47	1716
Wagon-gear	G. S. Billings	405,819	June 25	2171	571	47	1673
Wagon-jack	G. W. Patton	403,485	May 14	1424	372	47	939
Wagon-jack	W. P. Pickering	404,223	May 28	2546	664	47	1175
Wagon-jack	M. D. Shipman and W. S. Reynolds	404,018	May 28	2108	577	47	1107
Wagon. Live-stock	E. J. Tracy	405,190	June 11	1200	319	47	1469
Wagon-rack, Hay	R. G. Stone	401,079	Apr. 9	975	260	47	194
Wagon-seat	E. A. Culver	400,831	Apr. 2	607	165	47	116
Wagons. Advertising-panel for delivery	J. H. Needles	403,953	May 28	2106	551	47	1049
Wagons. Shoveling-board for	P. Pilon and J. Plondke	401,061	Apr. 9	952	254	47	190
Walking-stick	R. S. Robbins and A. H. Broad	402,857	May 7	453	119	47	747
Wall protector	J. Twichell	400,521	Apr. 2	141	37	47	30
Walls or ceilings. Furring-strip for	C. W. Pierce	402,966	May 7	602	158	47	778
Wardrobe-hook	W. Watson, Jr	403,231	May 14	1027	271	47	866
Wardrobe-hook	B. F. Reynolds	404,561	June 4	296	79	47	1281
Warm-air furnace	F. Schopf	402,982	May 7	620	{162 163}	{47	721
Warmer. Hand	W. Bamford	405,654	June 18	1934	509	47	1621
Warp-beaming machine	J. E. Prest	402,278	Apr. 30	2817	729	47	573
Warping-machines. Drop-wire stop mechanism for	P. G. Hubert	404,541	June 4	273	65	47	1276
Wash-basin	S. Bingham	400,823	Apr. 2	596	162	47	114
Wash-board	G. P. Fuller	401,265	Apr. 9	1263	336	47	248
Wash-board	L. N. Poe	404,729	June 4	520	133	47	1327
Wash-board	W. W. Ford	401,879	Apr. 23	2209	578	47	448
Wash-boiler	W. E. Smith	405,509	June 18	1693	448	47	1576
Wash-boiler	A. F. Tarr	405,056	June 11	1002	267	47	1431
Wash-boiler	J. W. Anderson	400,425	Apr. 2	3	2	47	3
Wash-boiler tank	A. G. Robinson	404,984	June 11	894	234	47	1409
Wash-tub							
Washer: *See* Gas-washer. Ore-washer.							
Washer-coils. Making leather	G. H. Avery	404,949	June 11	841	219	47	1398
Washing, bleaching, and dyeing. Apparatus for	E. and G. E. Sutcliffe	403,305	May 14	1143	{303 304}	{47	887
Washing-machine	W. F. Belton	401,630	Apr. 16	1845	481	47	369
Washing-machine	D. H. Benjamin	402,222	Apr. 30	2735	709	47	558
Washing-machine	C. Brandtner	401,060	Apr. 9	867	232	47	175
Washing-machine	H. Broadwell	401,731	Apr. 23	1992	522	47	408
Washing-machine	B. Brobst	400,741	Apr. 2	457	122	47	90
Washing-machine	J. W and J. W. A. Calhoon	403,986	May 28	2151	562	47	1098
Washing-machine	S. M. Cole	400,637	Apr. 2	297	83	47	62
Washing-machine	L. Fleischhauer	403,829	May 21	1926	{506 507}	{47	1047
Washing machine	J. G. Henderson	402,927	May 7	548	145	47	766

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Washing-machine	C. Hesse	403,669	May 21	1681	446	47	999
Washing-machine	W. C. Huffman	403,473	May 14	1406	367	47	936
Washing-machine	R. Joel	404,545	June 4	277	68	47	1277
Washing-machine	H. Johnson	405,482	June 18	1649	435	47	1566
Washing-machine	W. S. Laney	401,956	Apr. 23	2327	604	47	470
Washing-machine	J. Q. Leffingwell	401,357	Apr. 16	1404	{371 372}	{47	288
Washing-machine	S. J. and C. Mantle	401,190	Apr. 9	1152	306	47	237
Washing-machine	R. Nash	400,702	Apr. 2	396	107	47	78
Washing-machine	Z. Randel	404,731	June 4	522	134	47	1327
Washing-machine	G. R. Roberts	402,687	May 7	199	50	47	701
Washing-machine	A. A. Rondle	403,614	May 21	1607	426	47	984
Washing-machine	H. Seaman	402,355	Apr. 30	2938	761	47	595
Washing-machine	H. E. Smith	402,865	May 7	468	122	47	750
Washing-machine	R. P. Starbuck	405,807	June 25	2155	567	47	1670
Washing-machine	J. Stine	402,041	Apr. 23	2461	641	47	495
Washing-machine	A. F. Telgen	405,292	June 18	1344	355	47	1504
Washing-machine	W. W. Terriff	402,783	May 7	346	90	47	728
Washing-machine	J. C. Thomas	404,061	May 28	2282	{597 598}	{47	1124
Washing-machine	F. W. Tiemann	401,228	Apr. 9	1202	321	47	237
Washing-machine	T. Waldron	401,769	Apr. 23	2044	534	47	417
Washing-machine	M. B. Wallace	405,830	June 25	2245	616	47	1704
Washing-machines. Reversing mechanism for	J. G. Crawford	403,649	May 21	1654	438	47	994
Watch-balance. Compensation	A. F. Pickert	402,032	Apr. 23	2445	637	47	492
Watch-case pendant	W. W. Bradley	403,511	May 21	1466	384	47	956
Watch-case pendant	E. C. Rohrer and I. Joseph	403,779	May 21	1652	436	47	1032
Watch-maker's lathe	S. Messerer	404,099	May 28	2342	614	47	1137
Watch-maker's staking-tool	G. Martel	403,840	May 21	1958	514	47	1053
Watch-maker's staking-tool	J. C. Rochelean	401,759	Apr. 23	2032	531	47	415
Watch-maker's tool	A. F. Thompson	404,837	June 11	828	214	47	1395
Watch or other cases. Machine for engraving	A. Zuahlen	402,380	Apr. 30	2970	771	47	601
Watch-pendant	P. Perret	402,473	Apr. 30	3131	811	47	632
Watch. Repeating	C. Morlet	402,343	Apr. 30	2916	756	47	591
Watch. Stem winding and setting	C. Bohnenstiel	401,815	Apr. 23	2123	553	47	430
Watch. Stem winding and setting	E. Seits	401,074	Apr. 9	967	256	47	193
Watch. Stem winding and setting	O. F. Stedman	403,787	May 21	1866	490	47	1035
Watch. Stem winding and setting	A. M. Yeakel	403,820	May 21	1911	502	47	1044
Watches. Magnetic shield for	H. P. Pratt	403,211	May 14	994	262	47	860
Watches. Safety attachment for	C. G. Krebsnm	403,843	May 28	2091	548	47	1068
Water. Apparatus for purifying	J. H. Blessing	402,224	Apr. 30	2737	710	47	558
Water-back	J. H. Spence	402,994	May 7	656	168	47	784
Water-bib	J. Dowling	404,266	May 28	2606	678	47	11-5
Water-closet	A. Elmendorf	404,393	June 4	27	7	47	1230
Water-closet	R. Weston	405,635	June 18	1883	498	47	1613
Water-closet and other tanks. Operating mechanism for valves of	P. W. Doherty	403,926	May 28	2069	543	47	1092
Water-closet and other tanks. Operating mechanism for valves of	P. W. Doherty	405,952	June 25	2380	624	47	1709
Water-closet. Siphon	W. Scott	403,490	May 14	1432	375	47	941
Water-closet tank	P. Connolly	401,640	Apr. 16	1855	{482 483}	{47	371
Water-closets. Cistern-valve for	J. Wicks	400,982	Apr. 9	837	224	47	170
Water-closets, &c. Floor-flange for	B. C. Smith	404,874	June 11	740	193	47	1377
Water-closets. Ventilating apparatus for	J. L. Hutchinson	404,196	May 28	2494	653	47	1166
Water-conductor support	J. Davis	402,063	Apr. 23	2385	623	47	483
Water-conveyer	F. D. Dowd	404,760	June 4	595	154	47	1342
Water-cooler	W. H. Fruen	401,263	Apr. 9	1261	336	47	247
Water-current motor	F. G. Johnson	404,488	June 4	178	41, 42	47	1258
Water-elevating apparatus	N. A. Conklin	404,030	May 28	2293	593	47	1111
Water-elevator	A. Hogeland	402,160	Apr. 30	2954	687	47	541
Water-elevator	A. Lathrop and L. A. Heard	404,649	June 11	999	260	47	1371
Water-elevator. Compressed-air	M. Wetzel	404,330	May 28	2709	703	47	1204
Water-gage	J. G. Blount	401,396	Apr. 16	1351	361	47	277
Water-gate	J. E. Caplinger	402,139	Apr. 30	2619	678	47	534
Water-gate	C. J. Cheney	405,079	June 11	1030	{275 276}	{47	1437
Water-gate	W. T. McCloskey	401,788	Apr. 23	2073	541	47	423
Water-gate	T. A. Niswonger	401,456	Apr. 16	1548	409	47	315
Water-heater	J. H. Dull	405,305	June 18	1376	362	47	1510
Water-heater	E. N. Gates	404,784	June 4	601	155	47	1343
Water-heater	C. G. Jewett	405,481	June 18	1648	{434 435}	{47	1566
Water-heater	P. H. Reed	403,138	May 14	871	{229 230}	{47	835
Water-heater	S. Spire	404,572	June 4	310	74	47	1224
Water-heater	W. A. White	402,490	Apr. 30	3163	820	47	657
Water heater. Circulating	J. Meathe	403,545	May 21	1590	{396 399}	{47	986
Water heater. Hot	E. Meddon and J. Urquhart, Sr	401,362	Apr. 16	1410	373	47	290
Water-heater. Steam	W. Means	403,124	May 14	846	224	47	831
Water-heating apparatus	J. Knoche	404,915	June 11	799	205	47	1389
Water-heating apparatus	G. Light	402,602	May 7	75	17	47	678
Water-meter. Rotary	J. J. Tyler	402,699	May 7	216	57	47	704
Water-meters. Sealing device for	G. S. Follansbee	404,305	June 4	31	8	47	1231
Water-motor	A. A. Besemer	402,035	Apr. 23	2476	{645 646}	{47	498
Water-motor	B. B. Bower	403,731	May 21	1782	469	47	1018
Water-motor	F. W. Tuerk, Jr	400,610	Apr. 2	259	71, 72	47	54
Water-motor	F. W. Tuerk, Jr	400,883	Apr. 2	679	185	47	130
Water-motor. Turbine	P. T. Sanford	404,869	June 11	733	187	47	1376
Water-power. Means for obtaining	D. N. Long	404,851	June 11	703	180	47	1371
Water-power. System for utilizing	W. Orr	400,940	Apr. 9	777	208	47	157
Water-proof material for coats	J. W. Lane	405,421	June 18	1540	408	47	1544

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Water-proof package	M. B. Church	405,871	June 25	2252	592	47	1688
Water-purifier	J. Davis	402,660	May 7	160	40	47	604
Water. Purifying	C. A. Doremus	404,180	May 28	2468	.....	47	1162
Water-purifying apparatus	O. S. Huwes	404,485	June 4	173	40	47	1257
Water-purifying apparatus	J. B. Love	401,126	Apr. 9	1142	303	47	294
Water-raising apparatus	A. B. Merrill	403,124	May 14	847	{224 / 225}	47	831
Water-raising apparatus	F. H. Merrill	403,125	May 14	850	225	47	832
Water-reservoir	H. Dane	404,386	June 4	30	5	47	1229
Water-tanks. Construction of	W. H. Harrelson	402,446	Apr. 30	3067	800	47	623
Water-wheel	W. G. Dodd	401,464	Apr. 16	1595	401	47	324
Water-wheel	F. Le Bean	401,751	Apr. 23	2023	529	47	413
Water-wheel	L. Middleton	404,642	June 4	408	{99 / 100}	47	1303
Water-wheel	J. T. Rohm	405,053	June 11	999	{266 / 267}	47	1431
Waves. Apparatus for utilizing the power of	E. J. Delaurier	403,579	May 21	1561	412	47	975
Wax. Machine for coating or impregnating bags with	A. Segal	403,295	May 14	1131	299	47	844
Weaner. Calf	E. H. Geisler and M. Simpson	403,186	May 14	944	250	47	849
Weaner. Calf	W. H. Predmore	404,931	June 11	849	218	47	1393
Weather-strip	H. W. Cook	405,347	June 18	1437	380	47	1523
Weather-strip	C. Polley	405,272	June 18	1340	350	47	1501
Weather-strip	A. M. Stodard	404,445	June 4	101	23	47	1245
Weather-strip	H. O. Woy	400,813	Apr. 2	579	136	47	111
Weather-strip and door-sill combined	H. W. Steiner	405,808	June 25	2156	567	47	1670
Weaving cane-work, &c. Machine for inserting diagonal strips in	H. D. Morris	401,050	Apr. 9	935	{249 / 250}	47	187
Weeding-machine	A. L. Saddlemyre	401,378	Apr. 16	1440	381	47	295
Weigher. Automatic grain	J. Henry	403,189	May 14	949	251	47	850
Weighing apparatus	J. H. Nolan	403,692	May 21	1718	454	47	1007
Weighing apparatus. Grain	J. E. Busenbarrick	405,402	June 18	1615	425	47	1559
Weighing apparatus. Grain	J. R. Creighton	403,519	May 21	1484	392	47	969
Weighing machine. Automatic grain	H. H. Benker	401,118	Apr. 9	1036	277	47	205
Weighing machine. Automatic grain	L. M. Buchanan	404,257	May 28	2592	678	47	1183
Weighing-machine. Coin-controlled	F. J. Lancaster	402,748	May 7	291	73	47	718
Weighing machine. Grain	L. C. Tryon	402,672	May 7	474	124	47	751
Weighing-machines. Steelyard for	H. Pooley	403,136	May 14	865	{228 / 229}	47	834
Welding	W. W. Lee	402,947	May 7	570	.....	47	773
Welding and brazing. Electric	E. Thomson	403,708	May 21	1747	458	47	1042
Welding and shaping of metals. Electric	E. Thomson	403,157	May 14	897	237	47	840
Welding. Electric	C. L. Coffin	401,639	Apr. 16	1854	485	47	371
Welding. Electric	C. L. Coffin	405,345	June 18	1435	378	47	1523
Welding-roll	B. Cartwright	400,928	Apr. 2	602	154	47	115
Welding the ends of boiler-flues. Device for	J. Cumming	403,520	May 21	1485	389	47	999
Welding together sections of pipe by electricity	E. E. Ries	402,107	Apr. 23	2562	660	47	514
Welding together sections of pipe by electricity	E. E. Ries	402,108	Apr. 23	2565	660	47	515
Well-borer	B. Andrews	401,404	Apr. 16	1478	391	47	301
Well boring and drilling. Machine for	C. S. Gardiner	403,097	May 14	806	214	47	823
Well-boring apparatus	A. L. Lowery and J. N. Wyant	400,466	Apr. 2	55	16	47	14
Well boring or drilling apparatus	J. E. Day	403,577	May 21	1092	523	47	1050
Well-curb attachment	J. T. Lenoir	401,040	Apr. 9	922	246	47	185
Well-drilling tool	H. H. McLane	403,052	May 28	2104	531	47	1069
Well-sinking apparatus	T. G. Chapman	405,199	June 11	1215	322	47	1472
Well-sinking apparatus	T. G. Chapman	405,200	June 11	1218	323	47	1472
Well-sinking apparatus	J. W. Hunt	403,047	May 7	716	{187 / 188}	47	799
Wells. Apparatus for removing gummy matter from oil-	J. P. Firth	403,183	May 14	943	249	47	848
Wells. Implement for boring	L. B. Hart	403,751	May 21	1806	475	47	1023
Wheat-cleaning machine	R. W. Welch	405,288	June 18	1350	354	47	1505
Wheat. Milling	O. C. Ritter	405,506	June 18	1690	447	47	1575
Wheat steaming apparatus	G. Littlefield	401,185	Apr. 9	1141	303	47	224
Wheel: *See* Belt-guide wheel. Car-wheel. Current-wheel. Fly-wheel. Game-wheel. Gear-wheel. Grinding-wheel. Metal wheel. Metallic wheel. Paddle-wheel. Sprocket-wheel. Traction-wheel. Turbine wheel. Vehicle-wheel. Water-wheel. Wind-wheel.							
Wheel	J. Bolick	403,908	May 28	2045	538	47	1078
Wheel	G. E. Crutchfield	402,723	May 7	247	65	47	710
Wheel	J. Frenier	400,107	Apr. 9	718	196	47	148
Wheel	A. Gillies	401,551	Apr. 16	1698	448	47	342
Wheel	G. W. Howell	405,093	June 11	1048	280	47	1440
Wheel	M. C. Root	404,657	June 4	427	107	47	1308
Wheel	W. N. Stroud	401,060	Apr. 9	976	260	47	195
Wheel	J. Walrath	403,864	May 21	1976	510	47	1056
Wheel-wrench	O. Shepherd and J. F. Holmes	402,989	May 7	631	167	47	783
Wheelbarrow	F. H. Harris	404,907	June 11	787	201	47	1387
Wheelbarrow	W. E. Kilborn	404,789	June 4	609	157	47	1344
Wheelbarrow. Metallic	J. Annin	400,534	Apr. 2	158	41	47	33
Whiffletree	W. J. Black	403,903	May 28	2040	535	47	1077
Whiffletree	W. J. Black	403,904	May 28	2041	537	47	1077
Whiffletree	J. H. Willey	402,638	May 7	126	30	47	688
Whiffletree and hook	A. T. Hatch	403,664	May 21	1674	444	47	996
Whiffletree-connection	D. D. Whitney	404,371	May 28	2770	718	47	1217
Whiffletree. Detachable	J. G. Goshorn	405,548	June 18	1754	463	47	1589
Whiffletree-hook	A. H. Eysaman	403,930	May 28	2074	546	47	1083
Whiffletree-hook	W. H. Murphy	403,364	May 14	1232	327	47	904
Whiffletree-hook	C. Wright	405,643	June 18	1917	504	47	1618
Whiffletree-iron	A. A. Acklen	404,147	May 28	2414	632	47	1151

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Whip-holder	A. Hall	400,452	Apr. 2	41	13	47	11
Whip-socket	E. Allen	404,668	June 4	441	111	47	1311
Whip-socket	F. E. Benton	405,594	June 18	1714	453	47	1580
Whip-socket	A. Searls	406,004	June 25	2473	646	47	1725
Whip-socket and rein-holder. Combined	A. Thompson	405,153	June 11	1100	293	47	1450
Whip-sockets. Attaching device for	D. D. Fraser	403,200	May 14	1073	281	47	873
Whistle-actuating mechanism	W. Eymer	401,377	Apr. 16	1438	380	47	294
Whistle. Steam	H. V. Smith	405,330	June 18	1411	372	47	1518
Whistle. Steam	E. R. Tomlinson	405,022	June 18	1838	{491 / 492}	47	1608
Whitewash	D. Brizzolari	401,192	Apr. 9	1041	.....	47	206
Wick lifter. Lamp	L. T. Lawton	402,945	May 7	577	152	47	773
Wick-raiser for central-draft lamps	C. A. Evarts	404,186	May 28	2481	649	47	1163
Wick-raiser for lamps	A. Tapila	404,121	May 28	2378	623	47	1144
Wick-raising attachment	P. J. Glynn	404,274	May 28	2630	691	47	1187
Wick-raising shaft	W. H. Clemes	405,078	June 11	1029	275	47	1436
Wick-trimmer	J. L. Sanford	404,736	June 4	527	135	47	1328
Wick-tubes. Former for restoring bent	J. S. White	401,234	Apr. 9	1214	323	47	239
Wind-wheel	W. Ecker	401,130	Apr. 9	1066	285	47	210
Wind-wheel	L. S. Ptomis	402,475	Apr. 30	3133	812	47	632
Winding drum. Rope	R. Schuls	402,688	May 7	200	51	47	701
Winding-gear. Apparatus for equalizing the strain on	G. Lansell	404,292	May 28	2645	{687 / 688}	47	1193
Winding yarn or thread on cards. Spindle for	J. J. Clark	405,077	June 11	1029	275	47	1436
Windlass	J. Knoche	401,914	June 11	798	204	47	1380
Windlass	C. G. Toense	405,446	June 18	1586	419	47	1553
Windlass	A. Voss	401,316	Apr. 9	1333	355	47	263
Windlass for clothes-lines	H. Fuchs	401,824	Apr. 23	2136	558	47	433
Windlass indicator. Ship's	D. H. Rivers	404,963	June 11	893	234	47	1409
Windlass. Steam and capstan	W. Miller	403,435	May 14	1346	{353 / 351}	47	925
Windlasses. Locking-gear for ships'	F. S. Manton	403,356	May 14	1219	324	47	902
Windmill	J. H. Aldrich	402,552	May 7	1	1	47	663
Windmill	E. C. Beebe and R. Stoner	400,695	Apr. 9	860	{230 / 231}	47	173
Windmill	A. J. Corcoran	404,604	June 4	359	86, 87	47	1293
Windmill	C. Schmelzer	402,353	Apr. 30	2935	760	47	594
Windmill	G. P. Thurston	401,867	Apr. 23	2186	571	47	443
Window	B. Aschinbach	400,447	Apr. 2	5	2	47	4
Window	G. J. Dollmer	404,179	May 28	2467	646	47	1162
Window	H. Maenrer	404,792	June 4	612	158	47	1345
Window	P. Weber	401,614	Apr. 16	1817	475	47	364
Window-cap	H. Symonds	405,232	June 11	1260	334	47	1480
Window casing and sash	J. Zalikowski	402,708	May 7	227	60	47	707
Window-chair	B. Jacob	404,355	May 28	2744	712	47	1211
Window-cleaner. Fountain	H. W. Münch	400,837	Apr. 9	774	207	47	157
Window-cleaner. Fountain	H. C. Rose	403,218	May 14	1006	266	47	862
Window-fixture	W. H. Elliot	402,911	May 7	524	138	47	761
Window. Removable bay	S. Schofield	400,805	Apr. 2	251	69	47	53
Window-screen	J. S. White	404,454	June 4	190	29	47	1248
Window screen and frame. Adjustable	C. H. Barrett	402,295	Apr. 30	2837	734	47	577
Window-screen. Extension	J. H. Burt and S. E. Holman	400,825	Apr. 2	599	163	47	114
Window-ventilator	J. F. Ogden	402,765	May 7	316	82	47	722
Window-ventilator	C. E. Rector	404,224	May 28	2517	664	47	1175
Window-ventilator	F. Grosbans	405,550	June 18	1756	464	47	1589
Window-ventilator	O. Iversen	405,313	June 18	1388	366	47	1513
Windows. Combination alarm-lock for	J. B. Finch	401,148	Apr. 9	1067	289	47	213
Wine-bin	G. King	401,175	Apr. 9	1130	299	47	222
Wire cables for suspension-bridges. Device for twisting	E. E. Runyon	404,934	June 11	825	212	47	1394
Wire-drawing machine	H. Smith	405,378	June 18	1478	{391 / 392}	47	1532
Wire-galvanizing. Automatic wiping device for	H. Smith	405,377	June 18	1475	391	47	1531
Wire-hook	R. Gorton	402,438	Apr. 30	3077	797	47	621
Wire into a continuous row of clamps. Machine for converting	W. Decker	403,923	May 28	2065	543	47	1068
Wire matting	I. Kinney	404,417	June 4	63	16	47	1237
Wire-netting	A. N. Pearson	403,774	May 21	1844	{484 / 485}	47	1030
Wire of one sectional form into wire of another sectional form. Drawing	W. Taylor	404,319	May 28	2690	699	47	1201
Wire-reeling machine	H. Smith	405,376	June 18	1473	390	47	1530
Wire rope. Machine for making	H. Root	405,744	June 25	2076	544	47	1654
Wire spokes. Machine for trimming	F. H. Harris	403,347	May 14	1208	321	47	900
Wire-straining implement	H. Perriman and C. F. Alger	405,796	June 25	2143	563	47	1667
Wire-stretcher	E. Guthridge	404,536	June 4	263	63	47	1274
Wire-stretcher	F. Stiles	403,620	May 21	1618	428	47	986
Wire stretcher, tightener, and splicer. Combined	J. P. Hays and H. E. Clemens	400,676	Apr. 2	380	98	47	72
Wire-tightener	H. W. Campbell	401,004	Apr. 9	872	233	47	176
Wire-twisting machine	D. T. Clark	401,411	Apr. 16	1488	394	47	304
Wire-weaving apparatus	H. Steedom, Jr	404,444	June 4	100	25	47	1245
Wire-weaving machines. Feed device for	O. R. Hunt	403,109	May 14	831	219	47	828
Wood. Apparatus for grinding	P. H. Schmidt	401,971	Apr. 23	2246	610	47	474
Wood. Convertible machine for grooving and sawing	E. F. Barnes	404,377	June 4	8	2	47	1226
Wood. Machine for bundling kindling	J. Fischer	402,428	Apr. 30	3062	792	47	618
Wood. Machine for ornamenting	E. W. Alleigh	400,423	Apr. 2	2	1	47	3
Wood, &c. Machine for ornamenting	E. W. Alleigh	400,625	Apr. 2	223	80	47	59
Wood-preserving composition	H. Stokes	403,449	May 14	1360	.....	47	929
Wood-preserving compound	J. W. Putnam	405,907	June 25	2307	.....	47	1696
Wood-preserving compound	J. W. Putnam	405,908	June 25	2308	.....	47	1696
Wood-rack	H. N. Wadsworth	404,327	May 28	2704	702	47	1204
Wood, &c. Two-part cylinder and die for ornamenting	E. W. Alleigh	400,626	Apr. 2	224	80	47	59
Wood-worker	G. W. Passel	403,308	May 14	1243	330	47	906

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Wood-working clamp	E. F. Godfrey	401,553	Apr. 16	1089	449	47	342
Wood-working tool	I. R. Joslin and G. T. Lawrence	404,449	June 4	180	42	47	1256
Wool-washing machine	S. C. Taft	405,619	June 18	1853	491	47	1606
Work-box	C. Latachar	401,637	Apr. 9	917	245	47	184
Work-case, Portable	J. N. Jefferson	405,884	June 25	2271	597	47	1692
Work-rest for benches, Adjustable	A. Watson	403,627	May 21	1625	430	47	968
Wrapper or envelope, Merchandise	L. P. Leclercq	402,335	Apr. 30	2903	752	47	588
Wrench: *See* Pipe-wrench. Wheel-wrench. Ratchet-wrench.							
Wrench	E. S. Boynton	404,709	June 4	575	147	47	1338
Wrench	S. Cook	401,819	Apr. 23	2128	555	47	431
Wrench	J. S. Henry	405,250	June 18	1311	346	47	1497
Wrench	V. J. McDonnell	402,265	Apr. 30	2797	724	47	549
Wrench	I. F. Peck	402,186	Apr. 30	2686	698	47	547
Wrench	C. Pomeroy	401,513	Apr. 16	1635	432	47	331
Wrench	W. R. Smith	404,895	May 21	2022	532	47	1065
Wrench and piston lubricator, Combined	T. J. and C. E. Baker	403,404	May 14	1312	343	47	818
Wrenches, Pipe-gripping attachment for	C. H. Thomas	401,605	Apr. 16	1601	472	47	361
Wringer: *See* Clothes-wringer.							
Writing-case	C. E. Hicks	402,244	Apr. 30	2767	716	47	563
Yarn-reel	J. A. Kaspar, Jr	405,560	June 18	1770	467	47	1502
Yarn-reeling machine	W. Schofield	400,494	Apr. 2	94	26	47	22
Yoke for draw-heads	R. Morris	400,474	Apr. 2	71	20	47	17
Yoke, Neck	J. E. Purdy	402,193	Apr. 30	2695	700	47	549
Zinc-furnace	G. M. Westman	401,988	Apr. 9	987	262	47	196
Zinc vapors and collecting the metallic zinc therefrom, Apparatus for condensing	E. Walsh, Jr	405,134	June 11	1101	294	47	1150
Zinc vapors and collecting the metallic zinc therefrom, Condensing	E. Walsh, Jr	402,210	Apr. 30	2720	706	47	555

ALPHABETICAL LIST OF DESIGNS.

Design.	Name.	No.	Date.	Official Gazette. Volume.	Official Gazette. Page.
Ash-receiver, &c	J. E. Dallon	19,047	Apr. 16	47	276
Ax	W. C. Kelly	19,056	Apr. 23	47	406
Bag	S. H. Howe	19,161	June 18	47	1490
Banjo	E. J. Cubley	19,080	May 7	47	602
Bell frame, Electric	W. H. Powell	19,118	May 28	47	1073
Book-mark	S. P. Spencer, Jr	19,072	Apr. 30	47	530
Bottle	W. Baker, Jr	19,125	June 4	47	1223
Bottle	J. Gulden	19,107	May 21	47	951
Bottle	W. W. Lowrey	19,182	June 25	47	1636
Bottle	C. B. Miller	19,108	May 21	47	951
Bottle	F. M. Underhill	18,997	Apr. 2	47	2
Bottle	E. J. S. Van Houten	19,038	Apr. 16	47	276
Bottle-case	W. Bettmann	19,089	May 14	47	818
Box	H. F. Whitman	19,143	June 4	47	1223
Bretzel or cracker	E. H. Sandt	19,059	Apr. 23	47	406
Bretzel or cracker	E. H. Sandt	19,060	Apr. 30	47	530
Brick, Building	W. H. Fish	19,055	Apr. 23	47	406
Bridle-bit	G. F. Eberhard	19,064	Apr. 30	47	530
Broom-holder	J. St. John	19,101	May 14	47	818
Brush or mirror back	H. Berry	19,062	Apr. 30	47	530
Brush or mirror back and handle	W. M. Welling	19,045	Apr. 9	47	144
Buttons, Surface ornamentation of glove	L. A. Douillet	19,174 to 19,176	June 25	47	1636
Canister	R. Staudinger	19,141	June 4	47	1221
Canteen	C. W. Ledig	19,050	Apr. 16	47	276
Card back, Playing	S. A. Cohen	19,173	June 25	47	1636
Carpet	L. Clémencet	19,089	May 14	47	818
Carpet	J. L. Folsom	19,007 to 19,015	Apr. 9	47	144
Carpet	J. L. Folsom	19,065	Apr. 30	47	530
Carpet	H. Horan	19,017 to 19,025	Apr. 9	47	144
Carpet	H. Hunt	19,026 to 19,028	Apr. 9	47	144
Carpet	H. Hunt	19,067	Apr. 30	47	530
Carpet	W. L. Jacobs	18,984 18,985	Apr. 2	47	2
Carpet	J. McMann	18,988	Apr. 2	47	2
Carpet	E. Poole	18,991 to 18,994	Apr. 2	47	2
Carpet	E. Poole	19,040 to 19,042	Apr. 9	47	144
Carpet	W. E. Sayers	19,070	Apr. 30	47	530
Carpet	L. W. Valentine	18,998	Apr. 2	47	2
Carpet	G. G. Wright	19,000 to 19,004	Apr. 2	47	2
Ceiling, Metallic	L. L. Sagendorph	19,155	June 11	47	1358
Chain bar, Watch	D. Whitford	19,085	May 7	47	602
Cigar-box	W. P. Wilcox	19,144	June 4	47	1223
Cloaking, &c, Fabric for	H. Topham	19,073	Apr. 30	47	530
Cloaking, &c, Fabric for	H. Topham	19,083 19,084	May 7	47	602
Cloaks, &c, Fabric for	F. T. House	19,091 to 19,094	May 14	47	818
Cloth for cloaking	M. Fatmah	19,178	June 25	47	1636
Cloth for cloaking, &c	M. Fatman	19,158 19,159	June 18	47	1490
Collar	W. Barker	19,157	June 18	47	1490
Collar	W. H. McFadden	19,163	June 18	47	1490
Collar or cuff	E. O. House	18,993	Apr. 2	47	2
Comb	A. Wallace	19,123	May 28	47	1073
Comb, Back of a	A. Wallace	19,124	May 28	47	1073
Curling and crimping comb	G. A. Scott	18,995	Apr. 2	47	2
Curtain, drapery, &c	C. Wheeler	19,074	Apr. 30	47	530
Curtain fabric	C. Wheeler	18,999	Apr. 2	47	2
Decorative fabric	C. H. Koster	19,152	June 11	47	1358
Desk-curtain	F. A. Coffin	19,172	June 25	47	1636
Dish	J. B. G. E. Coiffe	18,979	Apr. 2	47	2
Dishes, Ornamentation of	E. Gérard	19,066	Apr. 30	47	530
Drawer-pull	F. A. Coffin	18,978	Apr. 2	47	2

ERRATA FOR VOLUME XLVIII OF THE OFFICIAL GAZETTE.

ANNOUNCEMENTS—VOLUME XLVIII.

DISCLAIMERS—VOLUME XLVIII.

TEXT OF THE OFFICIAL GAZETTE, JULY 2 TO SEPTEMBER 24, 1889, INCLUSIVE.

INDEX TO THE DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS IN PATENT CASES.

DIGEST OF DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS IN PATENT CASES.

INDEX OF PATENTS AND PATENTEES FOR THE QUARTER YEAR, JULY TO SEPTEMBER, 1889.

ERRATA.

406,190, page 47, first claim, line 4, for "lathe-cutter" read *latter cutter.*

406,311, page 81, strike out all after number—title, drawings, and claims—and insert WITHDRAWN.

406,767, page 226, in title, name of inventor, for "William J. Ptorney" read *William J. Ptorney.*

406,926, page 282, in title, name of inventor, for "Gains L. Morrell" read *Gaius L. Merrell.*

406,972, page 295, in title, strike out "assignor of one-half to Winfield S. Kline, of Bolivar, Ohio."

407,197, page 362, in title, names of assignees, for "T. Brown Belfield" read *T. Broom Belfield.*

407,299, page 391, in title of invention, for "Sale-Slip" read *Paper-Clip;* and after residence of inventor insert *assignor to Hurlburt, Frink & Co.*

407,835, page 562, in title, strike out "said Mackenzie assignor to said Perry."

407,850, page 567, in title of invention, for "Water-Heater" read *Hot-Water Heating Apparatus.*

408,169, page 657, in title, name of inventor, for "James H. Dunn" read *James H. Drum.*

408,250, page 693, in title, residence of assignee, for "New York, N. Y." read *of New Jersey.*

408,788, page 860, in title, name of inventor, for "Théophile Backlejau" read *Théophile Backeljau.*

408,931, page 902, strike out all after number—title, drawing, and claims—and insert CANCELED.

409,090, page 947, tenth claim, line 5, strike out "one of" and insert the same after "partitions" in line 8, same claim; and, also, line 5, same claim, for "chambers" read *chamber.*

409,621, page 1108, in title, name of assignee, for "Marguret Howard Chase" read *Margaret Howard Chase.*

409,639, page 1113, in title, names of assignees, for "James S. Barrow" read *James S. Barron.*

410,046, page 1233, first claim, line 6, for "shaft" read *shafts.*

410,084, page 1243, in title, after residence of inventor, insert *assignor to the Dominion Tubular Lamp Company, Syracuse, N. Y.*

410,121, page 1257, second claim, line 6, for "pivot" read *point.*

410,724, page 1451, fourth claim, line 5, for the reference-letter "T" read *F.*

410,940, page 1515, claim, lines 1–2, for "sulphioxide" read *sulphinide.*

411,006, page 1545, in title, residence of inventor, for "Cannstad" read *Cannstadt.*

411,570, page 1710, in title, after residence of inventor insert *assignor of one-half to Jacob K. Smith.*

411,582, page 1714, strike out all after number—title, drawings, and claims—and insert WITHDRAWN.

19,203, design, page 120, name of assignee, for "F. M. Whitney & Co." read *F. M. Whiting & Co.*

19,243, design, page 542, after residence of inventor insert *assignor to the Unexcelled Fireworks Company, same place.*

The Official Gazette.

THE OFFICIAL GAZETTE is published every Tuesday, simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; since July 1, 1883, in quarterly volumes. All subscriptions must commence with the beginning of a volume; none taken for less than three months. Terms: To all subscribers within the United States and Canada, $5 per annum; to foreign subscribers, $7; single copies, 10 cents; bound semi-annual volumes, (prior to June 30, 1883,) full sheep, $4 per volume; bound quarterly volumes, (subsequent to July 1, 1883,) full sheep, $2.75 per volume. No club rates. *Payment in advance.* All orders should be addressed to "The Commissioner of Patents, Washington, D. C."

Indexes to Patents on Electricity.

Indexes to patents relating to electricity, covering the period of time from July 1, 1882, to June 30, 1887, have been issued, and are for sale. These indexes, arranged alphabetically, numerically, and by classes, comprise the following volumes, the prices of which are given below:

Vol. 1. Index to patents relating to electricity granted by the United States prior to June 30, 1881, with an appendix, July 1, 1881, to June 30, 1882. One volume, 250 pages. In paper covers, $3; bound, $5.

Vol. 2. Appendix No. 2, July 1, 1882, to June 30, 1883. One volume, 50 pages. In paper covers, $1.50.

Vol. 3. Appendix No. 3, July 1, 1883, to June 30, 1884. One volume, 60 pages. In paper covers, $1.50.

Vol. 4. Appendix No. 4, July 1, 1884, to June 30, 1885. One volume, 60 pages. In paper covers, $1.50.

Vol. 5. Appendix No. 5, July 1, 1885, to June 30, 1886. One volume, 54 pages. In paper covers, $1.50.

Vol. 6. Appendix No. 6, July 1, 1886, to June 30, 1887. One volume, 52 pages. In paper covers, $1.50.

Notice.

UNITED STATES PATENT OFFICE,
Washington, D. C., April 13, 1888.

To expedite the distribution of the mail in this Office, and to insure the prompt and certain delivery of communications to the divisions and officials having charge of the matters to which they relate, attorneys and correspondents are respectfully requested to enter upon the upper left-hand corner of amendments and other communications, if known to them, the number of the room and the name of the examiner or designation of the division to which the communication should be sent.

BENTON J. HALL,
Commissioner of Patents.

Issue of July 2, 1889.

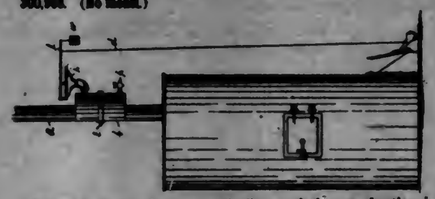
"The words 'BROMO CHLORALUM.'"

LABELS.

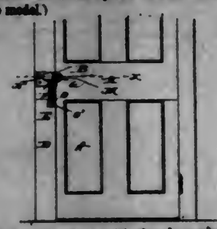
5,935.—Title: "THIS FLUID" (FOR CLEANING FABRICS.)—*E. J. Austin & Co.*, Three Rivers, Mich. Application filed November 20, 1884.



5,936.—Title: "OHMART'S LINIMENT."—*Samuel Ohmart*, Covington, Ohio. Application filed June 10, 1889.

5,937.—Title: "PORTLAND BOOT."—*Potter & Tillinghast*, Providence, R. I. Application filed June 7, 1889.

PATENTS

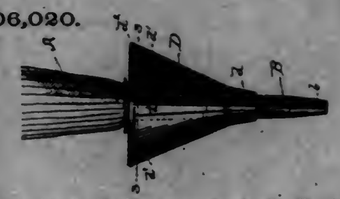


GRANTED JULY 2, 1889.

406,018. DEVICE FOR AUTOMATICALLY REGULATING COMBUSTION IN HOT-WATER AND HOT-AIR HEATING APPARATUS. J. C. F. AMATT, Nantucket, Mass. Filed Feb. 21, 1888. Serial No. 300,008. (No model.)

Claim.—A device for automatically regulating combustion in hot-water and hot-air heating apparatus, consisting of the air-chamber *b*, having one of its sides concaved to conform to the convex surface of the main pipe of said apparatus and adapted to be clamped thereto, and provided with the cock *p*, in combination with the bowl *i*, connected with said air-chamber and provided with flexible diaphragm *k*, and mechanism intermediate between said diaphragm and the damper or draft-opening of said heating apparatus, whereby the expansion and contraction of the air in said air-chamber closes or opens said damper or draft-opening, all as shown and described.

406,019. LATCH. RICHARD H. BARBER, Rich Hill, Mo., assignor of one-third to Robert Innis, same place. Filed Feb. 12, 1889. Serial No. 299,630. (No model.)

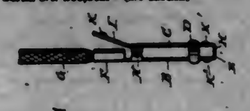


Claim.—1. The combination, with the door-plate B, vertically slotted, as at C, and attached to the edge of a door, of the frame-plate F, secured to the frame of the door, and provided with a flange G, having a slot H, which registers with the slot in the door-plate, and provided with the bearing X, arranged at an angle to the slot, and the rock-shaft mounted in the bearing in the frame-plate and provided with a laterally-projecting swinging tongue to engage the said registering slots, substantially as specified.

2. The combination, with a vertically-slotted door-plate affixed to the edge of a door and the flanged and slotted frame-plate affixed to the frame, of the rock-shaft provided with a tongue to engage the slots in the said plates, and the elongated knob affixed to the outer end of the rock-shaft and having its longer diameter parallel with the length of the tongue, substantially as specified.

3. The combination, with a vertically-slotted door-plate affixed to the edge of the door and the slotted frame-plate, of the rock-shaft provided with a tongue to engage the slotted plate and an elongated knob, and the turn-button O, to engage the said knob, substantially as specified.

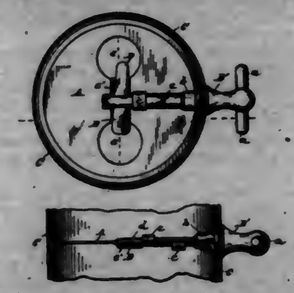
406,020. FLEXIBLE DRIP-CUP FOR UMBRELLAS. GEORGE A. DEAN, Chicago, Ill. Filed Aug. 27, 1888. Serial No. 283,258. (No model.)



Claim.—1. The flexible funnel-shaped drip D, having longitudinal strengthening-ribs *d'*, substantially as specified.

2. The flexible rubber funnel-shaped drip D, having longitudinal strengthening-ribs *d'* and transverse strengthening rib or bead *d²* at its upper rim, substantially as specified.

3. The flexible funnel-shaped rubber umbrella-drip D, having tapering elastic thimble *d*, adapted to fit over the tip of the umbrella, said funnel D being provided with longitudinal strengthening-ribs, substantially as specified.

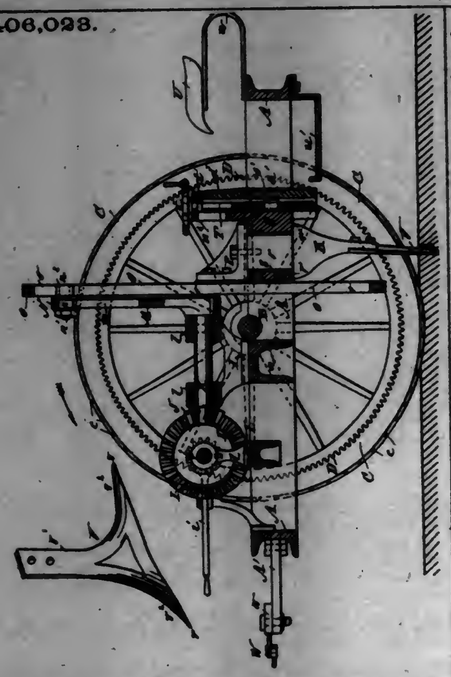


406,021. CLASP. JAMES H. BLEY, New York, N. Y. Filed Oct. 22, 1888. Serial No. 288,962. (No model.)

Claim.—1. In a clasp, the combination, with a tape, of two arms secured on the said tape, of which one is provided with an incline, and a slide fitted over the said arms to open and close the same, substantially as shown and described.

2. In a clasp, the combination, with a tape, of two arms secured on the said tape, of which one is provided with an incline, a slide fitted over the said arms to open and close the same, and stops formed on the said arms to limit the sliding motion of the said slide, substantially as shown and described.

406,022. STOVE-PIPE DAMPER. CLARK D. BENWORTH and JAMES F. FOSTER, Buffalo, N. Y. Filed June 26, 1888. Serial No. 278,269. (Model.)



Claim.—The combination of the disk A, having an end socket *b*, holes *c c*, and a depression *c'*, the spindle B, having the wide bearing B' and slots *d d*, and the tapering key or wedge D, adapted to set in depression *c'* and in slot *d*, the end or ends of said wedge bent down through holes *c c* in the damper to lock it in place, as specified.

406,023. PLOW. WILLIAM H. BRADSHAW, Orange, N. J. Filed Oct. 16, 1888. Serial No. 288,202. (No model.)

Claim.—1. The combination, in a plow, of a supporting-frame, a laterally-rotating arm thereon, a vertically-ranging yoke or guide engaged by the arm, a lateral guide or raceway on the frame and to

406,023.

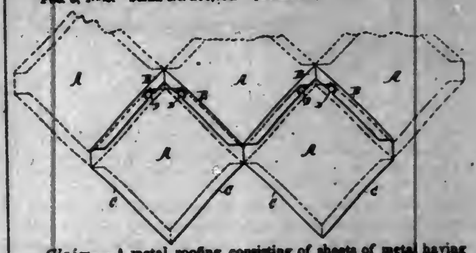
which the yoke is fitted for lateral reciprocation by the arm, and a double-pointed plow connected to the yoke and moving laterally with it a like distance each way from the axis of motion of the rotating arm, substantially as herein set forth.

2. The combination, in a plow, of a frame supported on wheels, a laterally-rotating arm on the frame and geared for operation by or from the wheels, a vertically-ranging yoke or guide engaged by the arm, a lateral guide or raceway on the frame and to which the yoke is fitted for lateral reciprocation by the arm, and a double-pointed plow connected to the yoke and moving laterally with it a like distance each way from the axis of motion of the rotating arm, substantially as herein set forth.

3. The combination, in a plow, of a supporting-frame, a laterally-rotating arm thereon, a vertically-ranging yoke or guide engaged by the arm, a lateral guide or raceway on the frame and to which the yoke is fitted for lateral reciprocation by the arm, and a double-pointed plow having no landside and connected to the yoke and moving with it a like distance each way from the axis of motion of the rotating arm, substantially as herein set forth.

4. The combination, in a plow, of a frame supported on wheels, a laterally-rotating arm on the frame and geared for operation by or from the wheels, a vertically-ranging yoke or guide engaged by the arm, a lateral guide or raceway on the frame and to which the yoke is fitted for lateral reciprocation by the arm, and a double-pointed plow having no landside and connected to the yoke and moving laterally with it a like distance each way from the axis of motion of the rotating arm, substantially as herein set forth.

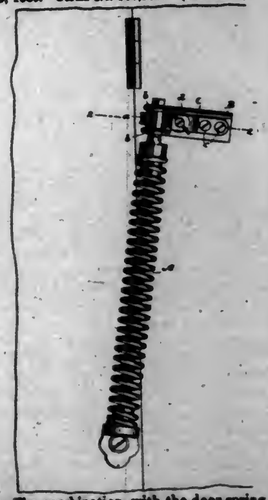
5. The combination, in a plow, of a main frame, wheels supporting it and provided with gears, a lateral shaft E on the frame and carrying pinions meshing with said gears, a shaft K, ranging about at right angles to the shaft E, and gearing driving it from said shaft, a lateral raceway or guide held to the frame, a plow-stock fitted for lateral reciprocation thereon, a vertical yoke or guide held to the plow-stock, and an arm held to and rotated by the shaft K and having a sliding connection with the vertical yoke or guide on the plow-stock, substantially as herein set forth.



6. The combination, in a plow, of a main frame, wheels supporting it and provided with gears, a lateral shaft E on the frame and carrying pinions meshing with said gears, a shaft K, ranging about at right angles to the shaft E, and gearing driving it from said shaft, a vertically-adjustable raceway or guide held to the frame, a laterally-movable plow-stock fitted to said raceway, devices, substantially as described, for vertically adjusting the raceway, a vertical yoke or guide held to the plow-stock, and an arm held to and rotated by the shaft K and having a sliding connection with the vertical yoke or guide on the plow-stock, substantially as herein set forth.

7. A plow made with a laterally-rotating arm, a lateral raceway or guide, a plow-stock held thereto and provided with a vertical yoke or guide, said arm having a head or block adjustable on the vertical yoke or guide for varying the extent of lateral reciprocation of the plow mold-board or cutter, substantially as herein set forth.

8. A plow made with a laterally-rotating arm, a laterally-extending and vertically-adjustable raceway or guide, a plow-stock held thereto and provided with a vertical yoke or guide, said arm having a head or block connecting it with the vertical yoke or guide of the plow-stock, substantially as described, whereby the depth of working of the plow cutter or mold-board may be regulated by raising or lowering the lateral raceway or guide of the plow-stock, as herein set forth.

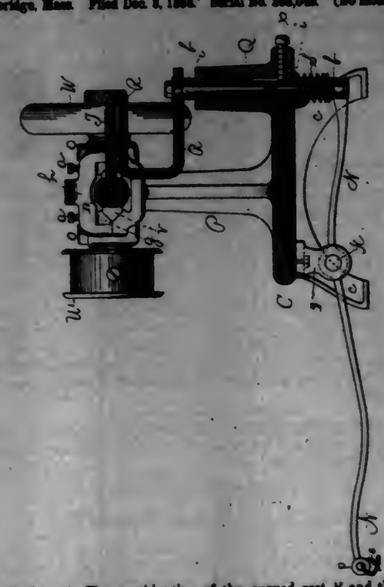


9. The combination, in a plow, of a supporting-frame, a lateral raceway or guide held thereto for vertical movement and provided with a nut d', a vertical guide d on the frame, and a screw T, held to said guide d and engaging the nut d', for adjusting the lateral raceway vertically, a double pointed plow connected to the yoke and moving laterally with it, and a laterally-rotating arm on the main frame engaging the plow-supporting yoke to reciprocate the plow laterally, substantially as herein set forth.

406,024. METAL ROOFING. JOHN D. BURTON, Pittsburg, Pa. Filed Feb. 5, 1889. Serial No. 298,781. (No model.)

Claim.—A metal roofing consisting of sheets of metal having their upper edges turned over upon themselves, forming a parallel fold and meeting in a point, and their lower edges turned under upon themselves, forming a parallel fold and meeting in a point, having the squared corners and the cut-out portions in the metal of the upper turned-over edge to allow the entrance of the fastening devices, substantially as described.

406,025. DOOR-SPRING. EDWARD A. CALAHAN, Brooklyn, N. Y. Filed Apr. 15, 1889. Serial No. 307,307. (No model.)

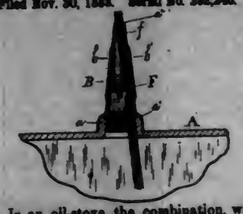


Claim.—1. The combination, with the door-spring, of the worm and wheel adjusting devices for giving a torsion or twist to the spring.

2. The combination of the spring, the plate B, the toothed wheel with which the spring is connected so as to turn with it, and the worm engaging the wheel to turn it in either direction.

3. The combination of the spring, the plate or support B, the wheel, the worm, the bracket in which the worm has its bearing, and the screws c, for securing the bracket in place, whereby upon the removal of the screws the bracket and worm may be turned down to disengage the worm from the wheel.

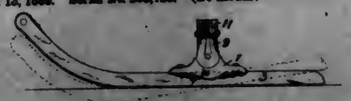
406,026. BURNISHING-MACHINE. EDWARD H. CARPENTER, Southbridge, Mass. Filed Dec. 8, 1888. Serial No. 292,949. (No model.)



Claim.—1. The combination of the curved rest K and the connected spring-lever N, as and for the purpose set forth.

2. The combination of a reciprocating tool T with a movable spring-actuated rest R, substantially as described.

3. The combination of the tool T and means for rapidly reciprocating it with the movable rest R and the lubricating can and tube H and l, to constitute a burnishing-machine, all substantially as set forth.



406,027. WICK-TUBE FOR OIL-STOVES. WILLIAM H. GLEESE, Cleveland, Ohio, assignor to the Taylor & Boggis Foundry Company, same place. Filed Nov. 30, 1888. Serial No. 292,246. (No model.)

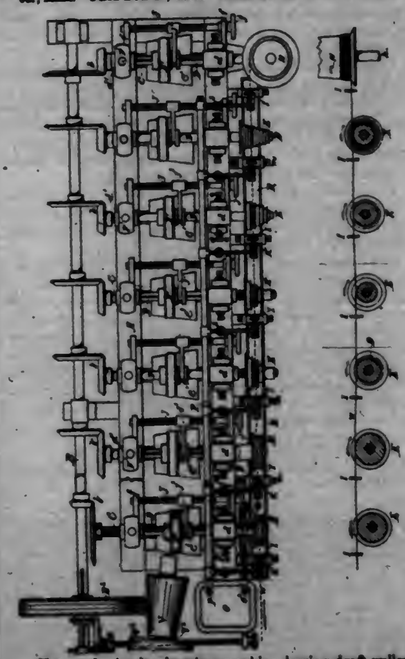
Claim.—1. In an oil-stove, the combination, with top A, provided with the upwardly-extending flange a, of the wick-tube B, formed in sections, each said section having integral with it at its lower edge the angular burner-plate a', said plate having an outwardly-extending portion formed angularly to the wick-tube, and a downwardly-extending lower extremity formed parallel with the wick-tube, said parallel lower extremity of the said burner-plate fitting over said flange, substantially as set forth.

2. In an oil-stove, the combination, with the top A, provided with the upwardly-exteeding flange a, of wick-tube B, formed of sections $b\,b'$, each said section provided with the plane-faced upper portion c', and provided at its lower portion with the burner-plate section a', of angular formation, integral therewith, and provided intermediate of said upper portion and said burner-plate section with the series of vertical wick-guiding corrugations d, and the wick-raising shaft F, located between the opposite longitudinal walls of the wick-tube and in the same transverse plane with said corrugations, said shaft provided with a series of wick-engaging projections, respectively located opposite corresponding depressions of said corrugations, substantially as set forth.

406,028. BOB-SLEIGH. CHARLES W. CRISAP, Ryota, Miss. Filed Feb. 13, 1889. Serial No. 299,720. (No model.)

Claim.—1. The combination, with the runner of a bob-sleigh, of the saddle 1, provided with the flanges 4 and the tenon, the post 9, secured to the beam 11 and provided with the tapering mortise 7, adapted to receive the tenon 6 and having its bottom of cylindrical form to fit into and turn in the saddle 1, substantially as described.

2. An oscillating bob-sleigh knee comprising, in combination, the post 9, secured to the cross-beam of the sleigh, and the saddle 1, secured to the runner, said post and saddle being connected together by a knuckle-joint and cylindrical bearing at the runner, allowing an oscillating movement of the runner in a substantially vertical plane.



3. In a bob-sleigh, the combination, with the cross-beam 11, of the post 9, secured thereto, the runner 3, the saddle 1, secured to said runner and supporting said post in an open cylindrical bearing at the runner, and the tapering tenon 6, made integral with said saddle and adapted to swing in a mortise in said post, laterally, substantially as described.

406,029. STEAM-PRESSURE REGULATOR. NELSON CURTIS, Boston, Mass. Filed Nov. 7, 1888. Serial No. 290,230. (No model.)

Claim.—In a steam-pressure regulator containing a steam passage-way and a piston-valve therein and provided with a regulating device consisting, essentially, of a compression-spring and screw-rod therefor located in a cap or projection of the shell of said regulator, in combination with said compression-spring and screw-rod, the collar J' on said screw-rod, the ring or shoulder G', projecting from said cap beneath said collar, the laterally-threaded sleeve K on the outside of said ring or shoulder G', provided with a shoulder K' above said collar J', and nut N, substantially as described, for the purpose specified.

406,030. WIRE-DRAWING MACHINE. FRED H. DANIELS, Worcester, Mass. Filed Dec. 17, 1888. Serial No. 293,773. (No model.)

Claim.—1. A wire-drawing machine having draft-pulley arbors provided with movable friction-wheels, in combination with operator-shafts provided with conoidal drums, and in which the revolution of the draft-pulley can be varied by shifting the friction-wheel endwise

on its arbor while in contact with the conoidal drum of the operator-shaft which imparts motion thereto, substantially as set forth.

2. In a wire-drawing machine, the combination, with a conoidal-drum operator, of the draft-arbor for supporting the wire-drawing pulley mounted in a pivoted bearing at one end and in a sliding bearing at the other end, and a spring or equivalent means for forcing said sliding bearing toward the operator-shaft, for the purpose set forth.

3. The combination of the operator-shaft having a conoidal drum, the draft-pulley arbor provided with a friction-wheel that is movable longitudinally on said arbor and peripherally in contact with said drum, supporting-bearings for said arbor which afford a yielding action, and a connection for effecting endwise adjustment of the friction-wheel in relation to the arbor and conoidal drum, substantially as set forth.

4. In a wire-drawing machine, the screw-shaft J and engaging-arm J', combined with the friction-wheel D' and arbor D, for effecting endwise adjustment of said friction-wheel on the arbor, substantially as set forth.

5. In a wire-drawing machine, the combination, with the draft-pulley, draft-arbor, its friction-wheel, the operator shaft and drum, and adjusting-screw shaft and wheel-shifting arm J', of the housings F F' the arbor-bearings d d', supported in the respective housings in the manner shown, the spring G, and set-screw G', for the purposes set forth.

6. In a wire-drawing machine, in combination with the wire-reducing dies, the draft-pulleys having their working-faces formed as cones or steps of offsetting fillets, adapted for arranging the wire thereon at different positions relatively to the coned surface, whereby the speed of draft can be varied without changing the number of revolutions of the drawing-arbors or the draft-pulleys, substantially as set forth.

7. In a machine for drawing wire, the wire-drawing roll or draft-pulley having its face formed as a cone or series of offsetting fillets of different diameters, in combination with the wire-reducing die and a rotatable supporting-arbor, whereon said draft-pulley is adjustable longitudinally, substantially as and for the purpose set forth.

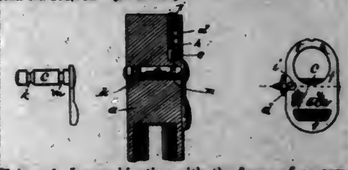
8. In a machine for drawing wire, in combination with the draft-pulley and wire-drawing die, the die-holder consisting of a head-piece having a socket for supporting a wire-drawing die, connected by pivots or trunnions with an adjustable standard, which standard is capable of endwise and rotative adjustment, substantially as set forth.

9. In a wire-drawing machine, the combination of a draft-pulley having its face formed as a cone or offsetting series of fillets, a wire-reducing die, and a rocking die-holder mounted upon a rotatively adjustable supporter.

10. In a machine for drawing wire by continuous operation, a series of wire-drawing rolls or draft-pulleys having faces formed as cones or in offsetting fillets of varying diameter, in combination with a series of wire-reducing dies and adjustable die-holders for supporting said dies, which afford facility for placing the dies at right angles to the direction of the wire, whether running onto the larger or smaller portion of the draft-pulleys, substantially as set forth.

11. In a wire-drawing machine, the combination, with the draw-block, of the rotatable arbor D, provided with an adjustable friction-roll *n*, that engages a surface or disk connected with said draw-block for imparting motion thereto, substantially as set forth.

12. In a continuous wire-drawing machine, the combination of a series of drawing-dies, a series of arbors carrying draft-pulleys, a main shaft with operating mechanism for imparting rotative motion to said series of arbors and draft-pulleys from said main shaft, a driving-shaft provided with a pulley or pulleys for the drive-belt, a friction-drum of varying diameter and an adjustable friction-wheel for transmitting power and motion from said driving-shaft to said main shaft, and a shifter for changing the relative engaging position of the friction-surfaces of said wheel and drum to vary the number of revolutions of said main shaft relatively to the speed of the driving-shaft, for the purpose set forth.

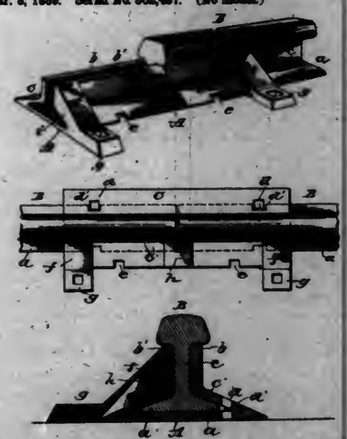


406,081. BREECH-LOADING FIRE-ARM. WILLIAM H. DAVENPORT, Norwich, Conn. Filed Nov. 24, 1888. Serial No. 291,740. (No model.)

Claim.—1. In combination, in and with the frame of an arm, a vertically-movable breech-block carrying a firing-pin, a guard-lever pivoted in said frame, and a link connecting said block and guard-lever, said link being provided with a multiple of holes suitably disposed, as set forth, whereby the position of the firing-pin relative to the cartridge-head may be governed.

2. In combination with the frame of an arm, a barrel fitted therein, a cartridge-ejector longitudinally movable in said barrel, a crank-lever pivoted in said frame, having its ejector-engaging end formed as a spring-pressed pin, as set forth, and mechanism for actuating said crank-lever, all substantially as specified.

3. In combination with the frame of an arm, a barrel fitted therein, a cartridge-ejector longitudinally movable in said barrel, a crank-lever pivoted in said frame, having its ejector-engaging end provided with a spring-pressed pin, as set forth, a breech-block at the rear of the barrel, a guard-lever pivoted in said frame, and a link connecting said breech-block and guard-lever, all substantially as and for the purpose specified.

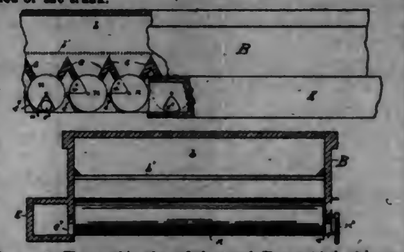


406,082. MECHANISM FOR FASTENING BARRELS TO GUN-STOCKS. WILLIAM H. DAVENPORT, Norwich, Conn. Filed Nov. 24, 1888. Serial No. 291,741. (No model.)

Claim.—1. In combination with the frame of an arm, a barrel fitted therein, an annularly-grooved pin (seated in said frame) passing across said barrel to interlock said frame and barrel, and a spring-pressed plug seated in said frame having its end coincident with and adapted to engage said annular groove, substantially as and for the purpose specified.

2. In combination with the frame and barrel of an arm, a locking-pin passing through the frame and across the barrel and having two annular grooves, as set forth, and a spring-pressed plug seated in said frame having its end bearing against said locking-pin when the parts are assembled, the said annular grooves being located in such relation to each other that said spring-pressed plug enters one of said grooves when said pin is withdrawn and the other when said pin is forced forward into its seat, substantially as and for the objects specified.

406,083. RAIL-JOINT. BENJAMIN F. DAVIS, Trusheart, Tex. Filed Mar. 8, 1888. Serial No. 302,467. (No model.)



Claim.—1. A fish-plate composed of a single piece of metal adapted to embrace the flange and web of the rail, having perforations in one side to align with notches in the rail-flange and notches on the other side out of line with the rail-flange, ribs on one side of said fish-plate, and perforated lugs extending from said ribs for the reception of spikes, substantially as set forth.

2. The combination, with a railroad-rail having notches in its flange, of a fish-plate composed of a single piece of metal adapted to embrace the flange and web of the rail, said fish-plate being plain on one side and provided on the other side with ribs, perforated lugs projecting from the ribs at the ends of the fish-plate, said fish-plate being provided with perforations on one side to align with notches in the rail-flange, and notches in the other side out of alignment with the rail-flange, substantially as set forth.

406,084. MACHINE FOR OPENING AND CLEANING COTTON. HENRY A. DAVIS and HAVEN C. PINKHAM, Lowell, Mass., assignors to the Kitson Machine Company, same place. Filed Aug. 14, 1888. Serial No. 210,901. (No model.)

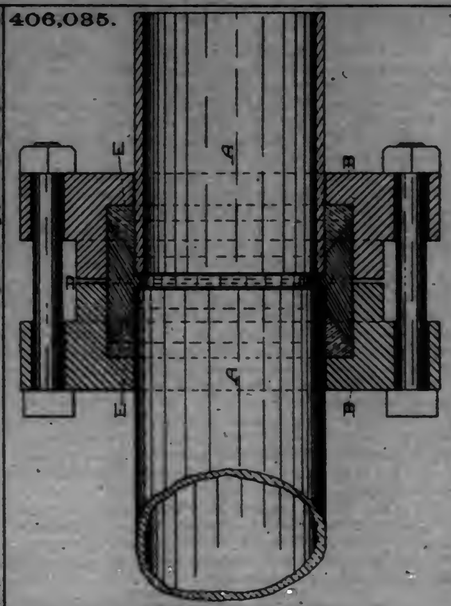
Brief.—The object of the invention is to facilitate the cleaning of the dust-chambers in the trunk without being obliged to stop the operation of the trunk.

Claim.—1. The combination of the trunk B, provided with passage *b*, and screen *b'* beneath it, partitions *c c*, forming sides of a chamber beneath the screen, and the movable receptacle *n*, beneath the latter, provided with an opening *n'*, adapted to alternately connect receptacle *n* with the chamber between partitions *c c* above, and to connect said receptacle with the space below after its connection with the chamber between partitions *c c* is fully closed, substantially as described.

2. The combination of trunk B, provided with passage *b*, and screen *b'* beneath it, partitions *c c*, receptacle *n*, constituting a movable bottom beneath said partitions and forming therewith a chamber below said screen, said receptacle being provided with openings, substantially as described, and means whereby one of said openings of receptacle *n* may be connected with said chamber while said receptacle is closed elsewhere, and whereby said connection may be closed fully and said receptacle thereafter may be opened elsewhere outside of said chamber, substantially as described.

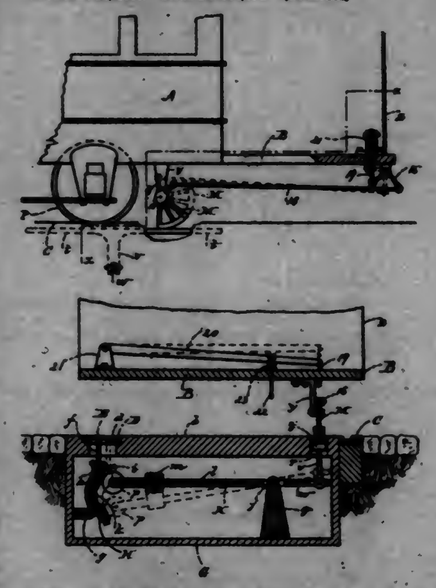
3. The combination of trunk B, provided with passage *b*, and screen *b'* beneath it, partitions *c c*, receptacle *n*, constituting a movable bottom beneath said partitions and forming therewith a chamber below said screen, said receptacle being provided with openings, substantially as described, tube E, provided with fan E', and means whereby said receptacle may be connected with said chamber after being closed elsewhere, and may be connected with said tube E after being entirely shut off from said chamber, substantially as described.

4. The combination of trunk B, provided with passage *b*, and screen *b'* beneath it, partitions *c c*, and revolving cylindrical receptacle *n*, provided with opening *n'*, substantially as described.



5. The combination of trunk B, provided with passage *b*, and screen *b'* beneath the same, partitions *c c*, revolving receptacle *n*, provided with opening *n'*, and partition c^3, forming a casing or cover upon the exterior of said receptacle, substantially as described.

6. The combination of trunk B, provided with passage *b*, screen *b'* beneath the same, and openings c^3 c^4, partitions *c c*, revolving receptacle *n*, provided with opening *n'* and openings n^2 n^4, and pipe E, provided with fan E', substantially as described.



406,085. PIPE-COUPLING. SOLOMON R. DRESSER, Bradford, Pa. Filed Aug. 18, 1887. Serial No. 247,207. (No model.)

Claim.—1. A pipe-coupling formed of two sections and having a compressing-ring with inclined or beveled inner faces, and compressible rings having inclined or beveled outer faces and conforming before compression to the shape of and fitting in the space between the inside of the coupling-sections and the compressing-ring, substantially as described.

2. A pipe-coupling formed of two sections and having a compressing-ring with inclined or beveled inner faces and an inner rim or lugs at or near the center of the inside, and compressible rings having inclined or beveled outer faces and conforming before compression to the shape of and fitting in the space between the inside of the coupling-sections and the compressing-ring, substantially as described.

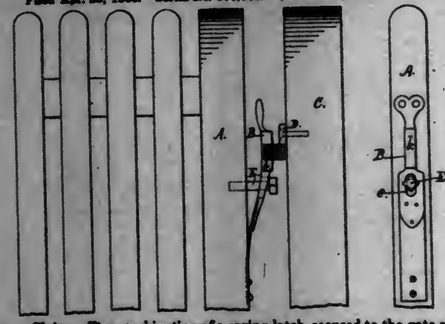
406,086. RAILWAY-SWITCH. JAMES F. DUGGAN, Quincy, Mass. Filed Mar. 28, 1888. Serial No. 304,304. (No model.)

Claim.—1. In a switch, the combination of a box in the road-bed, a switch-tongue, a rod projecting from said tongue into said box, a vertical cam-lever provided with a groove for said rod, a lever in said box provided with a roll for actuating said cam-lever, and a horizontal bar pivoted to said lever and adapted to be engaged by a projection on the car-body, substantially as described.

2. In a switch, the combination of a switch-box, a switch-tongue and transverse slot in the bed-plate, a rod on said tongue projecting through said slot into said box, a cam-lever in said box provided with a groove in which said rod works, a counterbalanced lever provided with a roll in engagement with said cam-lever, a horizontal bar pivoted to said counterbalanced lever and working in an opening in the top of the switch-box, and a segment pivoted on the car in position

to be projected into said slot and engage said bar, substantially as described.

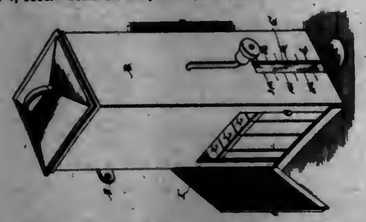
3. In a device of the character described, the combination of a spring-cushioned foot-lever on the car-platform, a bell-crank lever pivoted below said platform, a pivoted rod connecting said levers, a horizontal rod pivoted to said bell-crank lever, and a segment journaled on the car-body, whereby said wheel may be projected into an opening in the road-bed and actuate a switch mechanism when said foot-lever is depressed, substantially as described.



4. In a device of the character described, a horizontal bar working vertically in an opening in the switch-box in position to be engaged by a segment on the car-body, in combination with a roll-bearing counterbalanced lever pivoted to said bar, adapted to actuate a cam-lever connected with the switch-tongue, substantially as described.

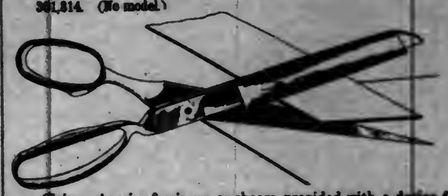
5. In a device of the character described, the combination of a switch-box, a switch-tongue disposed thereon, a rod projecting from the switch-tongue into said box, a cam-lever for moving said tongue, a lever pivoted in said box and bearing a roll in engagement with said cam-lever, a horizontal bar working in an opening in said box and pivoted to said lever in position to be engaged by a projection on the car and move the switch-tongue, and a counterbalance-weight on said roll-lever for returning the same when said bar is released, substantially as described.

6. In a switch, the combination of the box G, the switch-plate D, having the tongue E and groove *d*, the rod *f* on said tongue, the cam-lever H, provided with the groove *h*, the lever K, having the weight *m* and roll *p*, and the bar *t*, working in the slot *r* and pivoted to said lever, substantially as described.



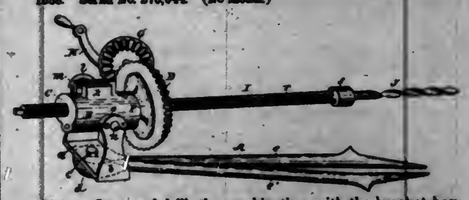
7. In a device of the character described, the combination of the car A, the segmental wheel M, journaled thereon and provided with the arm 17, the spring-cushioned lever 20, pivoted to the car-platform, the rod 19, bell-crank lever 15, and rod 16, all being arranged to operate substantially as described.

406,087. GATE-LATCH. JOHN G. DULEBOHN, Elizabethtown, Pa. Filed Apr. 26, 1888. Serial No. 308,316. (No model.)



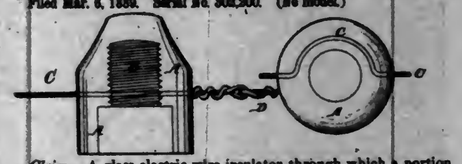
Claim.—The combination of a spring-latch, secured to the gate at the lower end and having a slot cut through it above that end, and a set-screw passing through said slot and engaging the post of the gate, substantially as and for the purpose specified.

406,088. FLOUR-BIN. ELIJAH P. ELLIS, Oak Hall, Kans. Filed July 7, 1888. Serial No. 279,267. (No model.)



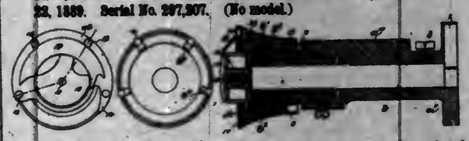
Claim.—The herein-described flour-bin and measuring device, comprising the rectangular body A, having its upper portion forming a flour-bin, the curved sieve and rotary stirrer mounted in said body at the bottom of the bin, and stationary receiver C, arranged beneath the sieve and secured to sides of the said body at the base of the bin and having its bottom provided with a slide, said receiver being narrower than said body, and its sides being formed of vertical walls flaring at their upper ends, where they are secured to the rectangular body, the transparent panel G in the side of said body, and the graduated scale, substantially as described.

406,089. ATTACHMENT FOR SHEARS. JOHN W. [illegible], Eaton Rapids, Mich. Filed July 15, 1887. Renewed Mar. 1, 1889. Serial No. 301,814. (No model.)



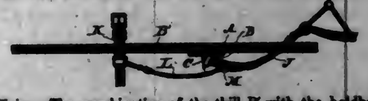
Claim.—A pair of scissors or shears provided with a device for attaching labels, the same consisting of a single strip bent to form the presser-plate C, secured to the blade of the scissors, the securing-flange E, secured to the upper edge of said blade, and the brace D, extending between the free edges of the plate and the flange, the corner formed by the brace and the plate being rounded, substantially as specified.

406,040. COAL-DRILL. DANIEL GIBBS, Peoria, Ill. Filed Apr. 14 1888. Serial No. 270,644. (No model.)



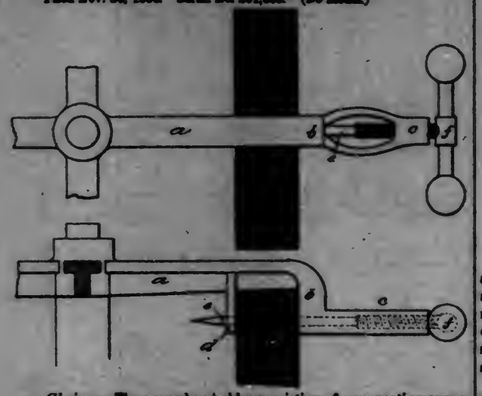
Claim.—In a coal-drill, the combination, with the bracket having a pivot-bolt, of the brace having its members twisted into a loop or eye at their inner ends, which receives said bolt, the outer portions of said members diverging from each other and having laterally-projecting spurs or projections, substantially as and for the purpose set forth.

406,041. INSULATOR FOR ELECTRIC WIRES. JAMES C. GILL, Covington, Ky., assignor to the Hemingray Glass Company, same place. Filed Mar. 6, 1889. Serial No. 302,200. (No model.)



Claim.—A glass electric-wire insulator through which a portion of the line-wire is cast, in combination with the main wires, substantially in the manner and for the purpose described.

406,042. ROTARY SHUTTLE-ACTUATING MECHANISM FOR SEWING-MACHINES. HORACE W. HADLEY, Orange, Mass. Filed Jan. 22, 1889. Serial No. 297,207. (No model.)

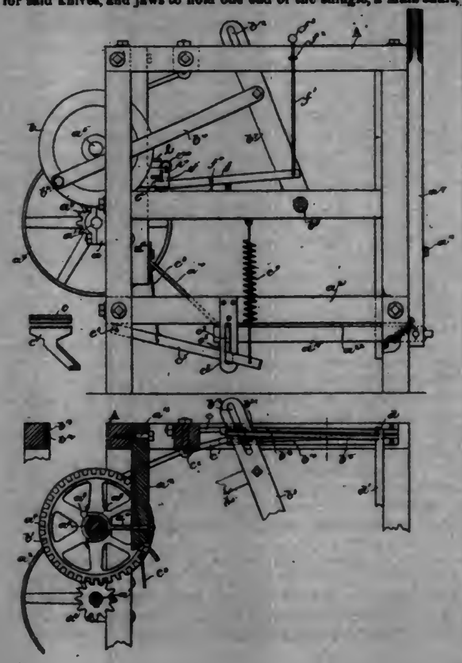


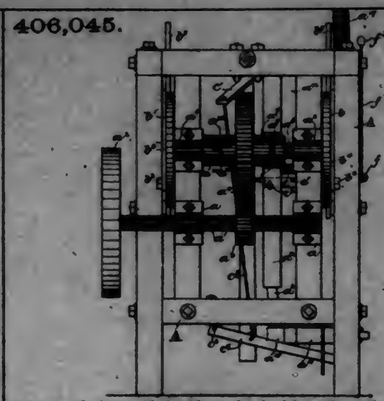
Claim.—The shuttle provided with holes angular to the axis of rotation of the shuttle, the shaft *b*, means to rotate it, and the head, combined with the locking-slides and means to move them in an angular direction with relation to the said shaft *b*, whereby the ends of the slides enter said holes in the shuttle and lock the latter against lateral movement as the latter is being rotated and carried through the loop of needle-thread by the said slides, substantially as described.

406,043. HOLDBACK FOR VEHICLES. JOHN B. HAIR, Edgerton, Wis. Filed Oct. 2, 1888. Serial No. 286,973. (No model.)

Claim.—The combination of the thill B' with the holdback attachment, consisting of the plate A, keeper-retaining springs F, and keeper C, with the holdback-strap J, thill-strap K, and connecting-strap L, said holdback-strap J being connected at its front end with the strap-hook B and at its rear end with the rear part of the harness, said strap L being connected at its rear end with said strap J and at its front end with said holdback-strap K, all substantially as and for the purpose specified.

406,044. PAPER-BAG HOLDER. HENRY T. HARE, Berlin, Conn. Filed Nov. 26, 1888. Serial No. 291,602. (No model.)



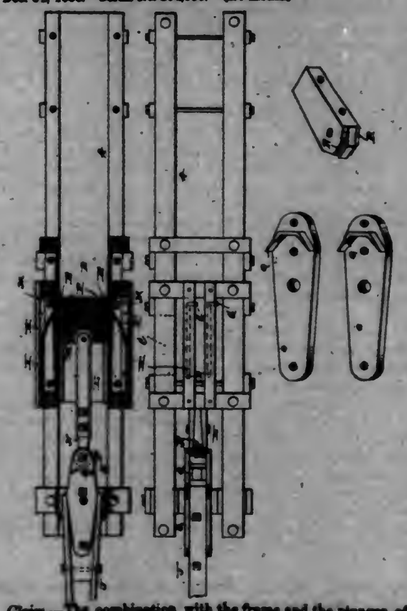


Claim.—The paper-bag holder consisting of a supporting-arm *a*, having means to secure it to a support, and formed with an elbow *b* and threaded extensions *c*, and provided with the perforated shoulder *d*, and the threaded shaft *e*, projected through the threaded extension and the perforated shoulder, substantially as described.

406,045. MACHINE FOR TREATING SHINGLES. WILLIAM H. HEATH, Taunton, Mass. Filed Nov. 1, 1888. Serial No. 289,770. (No model.)

Claim.—1. In a machine for treating shingles, the combination, with a knife, of a guide inclined from one toward the opposite end of the machine and in which the said knife travels, levers on opposite sides of the machine, to which the said knife is secured, and jaws to hold one end of the shingle, a main shaft, a counter-shaft provided with a clutch driven from the main shaft and adapted to rotate the counter-shaft, and a shipper mechanism connected to said clutch, substantially as described.

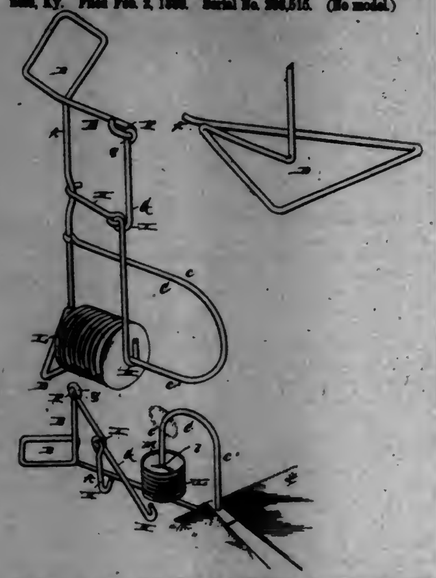
2. In a machine for finishing shingles, the combination, with knives, of converging guides in which the said knives travel, carriers for said knives, and jaws to hold one end of the shingle, a main shaft,



a counter-shaft provided with a clutch driven from the main shaft and adapted to rotate the counter-shaft, a shipping mechanism connected to said clutch, and a stop carried by the counter-shaft to act on the shipping mechanism and automatically disengage the clutch to stop rotation of the counter-shaft, and thereby travel of the knives, substantially as described.

3. In a machine for finishing shingles, the combination, with knives, of converging guides in which the said knives travel, carriers for said knives, and jaws to hold one end of the shingle, a main shaft, a counter-shaft provided with a clutch driven from the main shaft and adapted to rotate the counter-shaft, and a shipping mechanism connected to said clutch, a locking-bar secured to the shipping mechanism, a lever *f* to act on said bar to disengage the shipper mechanism to stop the travel of the knives, substantially as described.

4. In a machine for finishing shingles, the combination, with knives, of converging guides therefor and carriers for said knives, a fixed jaw and a movable jaw to hold the shingles, and a lever, as c^4, connected to the movable jaw, a lock for said lever, a main shaft, a counter-shaft provided with a clutch driven from the main shaft and adapted to rotate the counter-shaft, a shipping mechanism connected to said clutch, a stop carried by the counter-shaft to act on the shipping mechanism and automatically disengage the clutch to stop rotation of the counter-shaft, and a projection on the shipping mechanism to act on the lever connected to the movable jaw and release the said lever, substantially as and for the purpose specified.



406,046. BALING-PRESS. JOHN W. HEATH, Macon, Miss. Filed Dec. 31, 1888. Serial No. 294,969. (No model.)

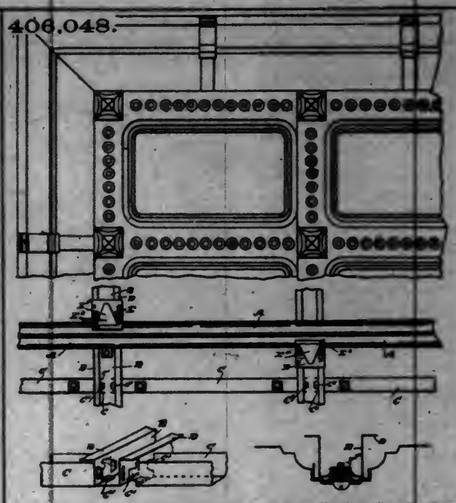
Claim.—The combination, with the frame and the plunger, of the

pitman pivoted to the plunger, the casting secured to the end of the pitman, the power-lever, the re-enforcing plates secured to the ends of the lever and having U or V shaped ribs on their opposing faces engaging recesses in the ends of the lever, the pivot-pin passed through the ends of the re-enforcing plates and the casting secured to the pitman, and the king-bolt passed through the front end of the frame and through the re-enforcing plates and the end of the lever, as specified.

406,047. BAG-HOLDER OR BILL-FILE. JAMES S. JOHNS, Crutchfield, Ky. Filed Feb. 2, 1888. Serial No. 262,515. (No model.)

Claim.—1. In a bag-holder or bill-file, the combination, with means for supporting the same, of a horizontal guide-rod having an enlarged base at one end, of disks movably mounted on said guide-rod, and a spring normally pressing said disks against said base, as and for the purpose set forth.

2. In a bag-holder or bill-file, the combination, with a frame comprising a substantially-vertical body A, a U-shaped guide-rod C, its arms standing at right angles to said body, its lowermost extremity being integrally connected therewith and its uppermost extremity being clamped thereto, of the disks L, movably mounted upon the lowermost arm of said guide-rod, and a spring G, connected to the frame and pressing said disks normally against the body A, as and for the purpose set forth.

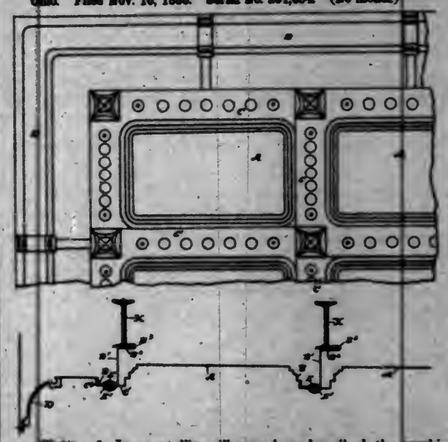


3. In a bag-holder or bill-file, the combination, with a frame comprising a substantially-vertical body A and a U-shaped guide-rod C, its arms standing at right angles to said body, its lowermost extremity being integrally connected therewith and its uppermost extremity being clamped thereto, of the disks L, movably mounted upon the lowermost arm of said guide-rod, the spring-arm G, pivotally connected at its upper end to said body S and its lower end bearing against the outer of said disks, and the hook K, attached to said spring-arm intermediately between its ends and adapted to engage the body A, to deflect the arm G and cause it to exert a yielding pressure upon said disks, as and for the purpose set forth.

4. In a bag-holder or bill-file, the combination, with the guide-rod C, having the integral base D, of the disks L, mounted on said guide-rod and provided with flanged peripheries M, and a spring-arm pressing said disks toward said base to hold them in contact, as and for the purpose set forth.

5. In a bag-holder or bill-file, the combination of the frame A, provided at its upper end with an eye B and a lateral arm E and at its lower end with a curved guide-rod C, all said parts being integral, the loose disks L, mounted on said guide-rod, the spring-arm G, pivoted at its upper end to an eye in said lateral arm E and provided at its lower end with a hook H and at its center with a coil I, and the hook K, pivoted to said coil I and adapted to engage the body of the frame A for causing said hook to bear with yielding pressure against the disks L, as and for the purpose set forth.

406,048. METALLIC CEILING. WILLIAM R. KINNEAR, Columbus, Ohio. Filed Nov. 16, 1888. Serial No. 291,053. (No model.)

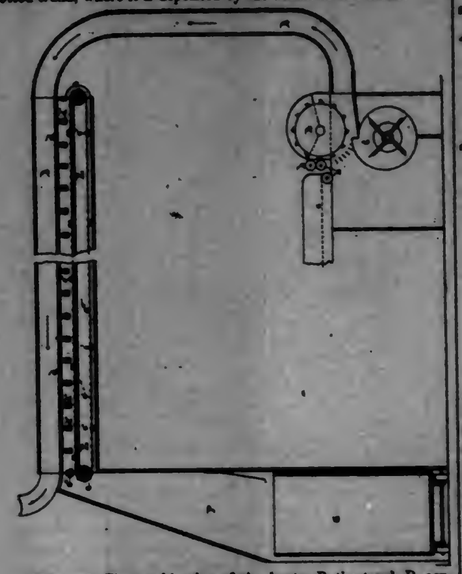


406,048.

Claim.—1. In a ceiling such as described, the hanging structure, consisting in the combination of the strips B being suspended from the beams of the building structure, the strips C, extending between the said strips B, and suitable connections for suspending the strips C upon the strips B, substantially as set forth.

2. In a ceiling such as described, the hanging structure, consisting in the combination of the strips B, suspended from the beams of the building structure and provided at predetermined intervals with slots in the sides, and the strips C, extending between the strips B and provided upon their ends with lugs C', for being inserted in the said slots in the sides of the strips B, to support the strips C, substantially as set forth.

406,049. METALLIC CEILING. WILLIAM R. KINNEAR, Columbus, Ohio. Filed Nov. 16, 1888. Serial No. 291,054. (No model.)



Claim.—1. In a metallic ceiling such as described, the combination of panels provided at the sides with margins adapted to be fitted over the margins of the adjoining panels and having on one or more sides an extension which is secured to the building structure, and fastenings for securing the fitted margins together, the exposed parts of which are incorporated into the design and ornamentation of the said panels, substantially as described.

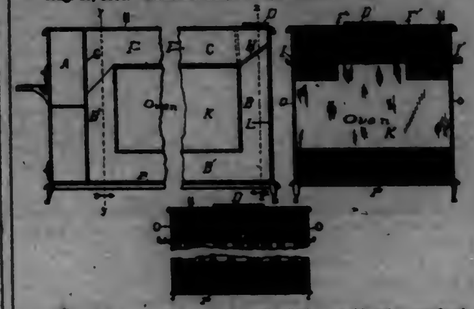
2. In a metallic ceiling such as described, the combination of panels provided on the sides with the margins B and C, the extensions E', extending from the said margins B and secured to the building structure, and fastenings to hold the said margins together, substantially as described.

3. In a metallic ceiling such as described, the combination of panels provided on the sides with margins B and C, the extensions E', extending up from the said margins B, hooks engaging the beams of the building structure and attached to the said extensions, and fastenings to hold the said margins together, substantially as described.

406,050. MACHINE FOR OPENING COTTON. RICHARD KNOWL, Lowell, Mass., assignor to the Kitson Machine Company, same place. Filed Sept. 11, 1888. Serial No. 284,314. (No model.)

Brief.—The object of the invention is to provide improved means for conveying away the dirt and leaf from the dirt-chambers of the cotton-trunk, where it is deposited by the action of the trunk.

Claim.—1. The combination of the beater B, the trunk D, containing the horizontal air and fiber passage, the screen-bottom d beneath the same, and the transverse partitions d' d', which form with the trunk and screen-bottom d chambers beneath the latter, the dust-passage running longitudinally along said trunk beneath said screen-bottom, connected to said chambers and adapted to receive the dust and impurities discharged therefrom and conduct the same to the dust-chamber F, and the latter adapted to receive the dust and impurities discharged into it from said dust-passage and prevent them from reaching fresh fiber while being fed past the beater, substantially as described.



2. The combination of the feed-apron c, feed-rolls b b, the beater B, the trunk D, containing the horizontal air and fiber passage, screen-bottom d beneath the same, and transverse partitions d' d', which form with the trunk and screen-bottom d chambers beneath the latter, and the dust-passage running longitudinally along said trunk beneath said screen-bottom and connected to said chambers and adapted to receive the dust and impurities discharged therefrom and to conduct the same to the dust-chamber F, and the latter adapted to receive the dust and impurities discharged into it from said dust-passage and prevent them from reaching fresh fiber while being fed over said feed-apron and past said beater, substantially as described.

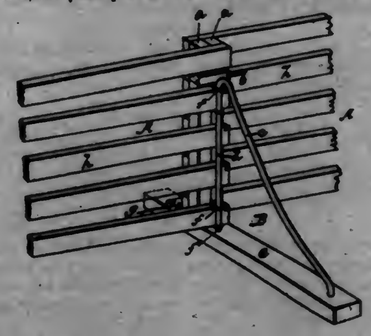
3. The combination of the beater B, the trunk D, containing the horizontal air and fiber passage, the screen-bottom d, and the transverse partitions d' d', which form with the trunk and screen-bottom d chambers beneath the latter, the dust-passage running longitudinally along said trunk beneath said screen-bottom, connected to said chambers and adapted to receive the dust and impurities discharged therefrom and to conduct the same to the dust-chamber F, and means whereby said dust and impurities may be conveyed to said dust-chamber F through and out of said dust-tube, with the chamber adapted to receive said dust and impurities discharged into it from said dust-passage and prevent them from reaching the fiber being fed past the beater, substantially as described.

4. In a cotton-trunk, the combination of the air and fiber passage, the screen-bottom d beneath the same, the partitions d' d', forming with the trunk and screen-bottom chambers below the latter, the dust-passage below said chambers running longitudinally along said trunk beneath said screen-bottom and connected with said chambers and adapted to receive the dust and impurities discharged therefrom, and one or more scrapers d', adapted to traverse said dust-passage and clear out the same, with mechanism for operating said scrapers, substantially as described.

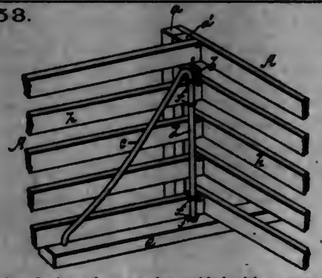
5. In a cotton-trunk, the combination of the air and fiber passage, the screen-bottom b beneath the same, the partitions d' d', forming with the trunk and screen-bottom chambers below the latter, the dust-passage below said chambers running longitudinally along said trunk beneath said screen-bottom and connected with said chambers and adapted to receive the dust and impurities discharged therefrom, the dust-chamber F, connected to said dust-passage, and one or more scrapers d', adapted to traverse said dust-passage and move its contents forward to said dust-chamber, with mechanism for operating said scrapers, substantially as described.

406,051. COOKING-STOVE. WILLIAM LANE, Downey, Cal. Filed Aug. 13, 1888. Serial No. 282,577. (No model.)

Claim.—In a stove such as described, the combination, set forth, of the oven, fire-box, and walls of the stove, the two side flues E E', leading from the fire-box A across the top of the oven, the descending flue B, coextensive with the rear of the oven, the bottom flue B', coextensive with the bottom of the oven, the ascending flue B'', coextensive with the front of the oven, the middle flue C, connecting the ascending flue B'' with the smoke-outlet D and the descending flue B, the smoke-outlet D, arranged above the junction of the flues B and C, the partitions M M', separating the flues E E' from the ascending flue, the partitions F, F', and G, the dampers I I', arranged to close the flues E E', and the damper H, arranged to close the flue C in front of and below the outlet D, as and for the purpose set forth.



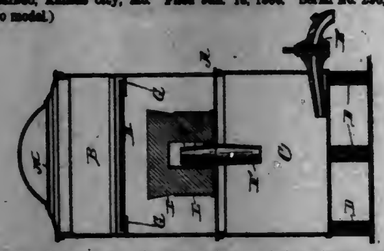
406,052. HOBBLE FOR ANIMALS. VINCENT A. MARSOLETTI, Simonsville, Tex. Filed Sept. 21, 1888. Serial No. 285,960. (No model.)



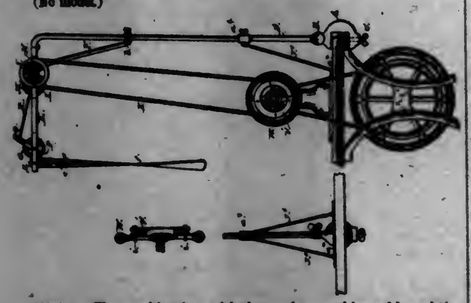
Claim.—The improved hobble herein described and shown, comprising the bars B C, the hinge D, secured to the under sides of said bars and connecting the adjacent ends of the same, the bar B having a slot G at its rear end for the girth the staple I near the front end of the bar B for the neck-strap, the strip K on the bar B, having the points L, the ring E, secured to the free end of the bar C, and the snap-hook carried by said ring and adapted to engage the halter-strap, as set forth.

406,053. PORTABLE FENCE. PEARRE M. MEHLER, Hagerstown, Md. Filed Feb. 7, 1889. Serial No. 299,973. (No model.)

Claim.—The within-described portable fence, comprising the panels A A, one panel provided with a post a, having the angular



406,053.

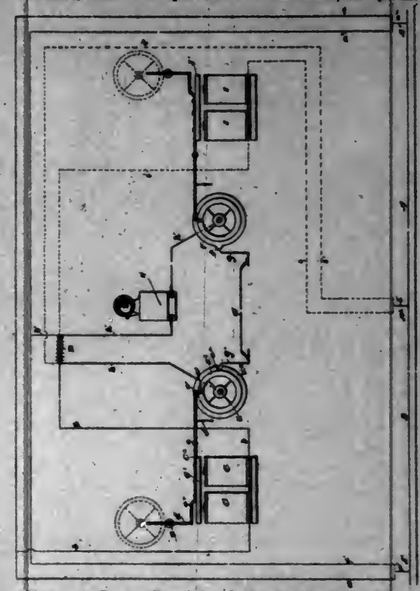


fastening-plate *b*, the other panel provided with a post *a'*, having staples *f f*, the angular brace B, formed of the single vertical portion *d* and the diagonal portion *c*, the sill *e*, and the fixed block *g*, the whole combined and arranged as shown, described, and for the purpose specified.

406,054. COMBINED WATER COOLER AND FILTER. LEWIS W. MOORE, Kansas City, Mo. Filed Jan. 16, 1889. Serial No. 296,689. (No model.)

Claim.—In a water-cooler, the casing consisting of two sections, the outlet-tube F, depending from the upper section, the feed-tube K, registering with the outlet-tube and projecting upward in the upper section, the filtering-block having a recess J fitting over the feed-tube, and the cap L, fitting closely around the lower portion of the filtering-block, all arranged and operating substantially as specified.

406,055. FAN ATTACHMENT. ARTHUR W. MCCOMAS and HENRY A. FITZHUGH, Austin, Tex. Filed May 16, 1887. Serial No. 238,413. (No model.)



Claim.—The combination, with the sewing-machine table and the upright of the fan-supporting frame, of the triangular brace provided with a rubber-covered base hinged to a sleeve adjustably fitted upon said upright, as and for the purpose set forth.

406,056. SEAL FOR ENVELOPES. HUGH F. MCDERMOTT, Jersey City, N. J. Filed Nov. 23, 1886. Serial No. 202,092. (No model.)

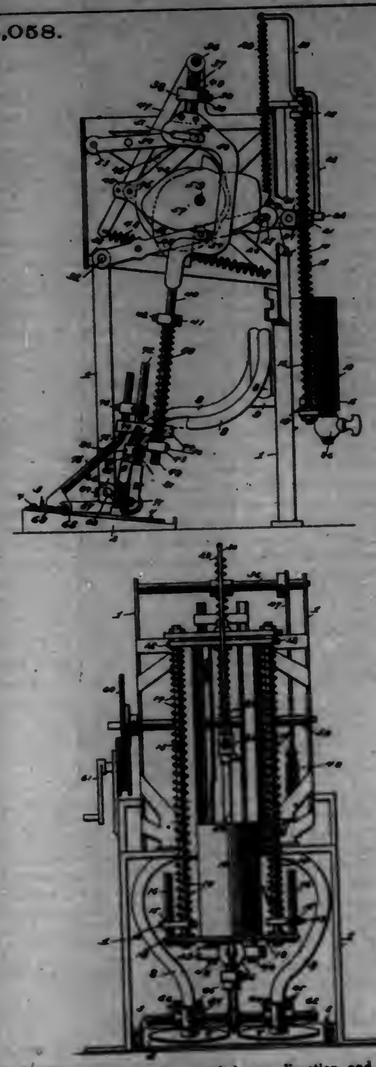
Claim.—The herein-described seal formed of two disks A and C, the first mentioned being provided with projecting spurs tangentially inclined and at an angle to the face of the disk and the last mentioned being provided with inwardly-bent slotted ears and adapted to receive the spurs, as specified.

406,057. ELECTRIC SIGNALING DEVICE. JAMES C. O'NEIL, Cleveland, Ohio. Filed Sept. 20, 1886. Serial No. 214,770. (No model.)

Claim.—1. In a railroad-signal, the combination, with circuit-closers located in proximity to and on opposite sides of a crossing, a metallic circuit including both of said circuit-closers, and a battery of an electro-magnet in circuit with either of said circuit-closers, an armature, a mechanically-driven circuit-closer controlled by said magnet, a mechanically-driven circuit-breaker, an electro-magnet for controlling the same, a circuit including the mechanically-driven circuit closer and breaker, the battery and an alarm, a track circuit-closer at the crossing, and a circuit including the latter-named circuit-closer, the battery and electro-magnet of the mechanically-driven circuit-breaker, substantially as set forth.

2. In a railroad-signal, the combination, with electric circuits adapted to be made and broken by a passing train, electro-magnets, and armature-lever carrying armature, of mechanically-driven motors, a revoluble circuit-closer comprising two disks carried by a shaft of one of said motors, one of said disks being provided with a notch for the reception of one end of an armature-lever, and the other disk having a notch for the accommodation of a contact-spring, a revoluble circuit-breaker carried by a shaft of the other motor and comprising two disks, one of said disks having a notch for the reception of the end of an armature-lever, and a projection on the other disk to engage a contact-spring, and a circuit including both the revoluble circuit closer and breaker, the battery, and a signal, substantially as set forth.

406,058. FEEDER FOR POWER PRINTING-PRESSES. LEVI OSBER, Galveston, Tex. Filed Dec. 20, 1887. Serial No. 258,204. (Model.)



Claim.—1. In a feeding mechanism for power printing-presses, the combination, with a rod or support carrying the paper-holders, of a combined mechanism for raising the holder rod or support, swinging it horizontally, and lowering it, consisting of a horizontally-swinging lever suspended from a rock-shaft, and a reciprocating lever sliding in coupling-sleeves secured to the horizontally-swinging lever, cams for operating said levers in one direction, and reacting springs for moving them in the opposite direction, substantially as described.

2. The combination, with the pneumatic paper-holding tube, of a thin flexible disk on the lower end thereof to establish an air-tight connection between the tube and sheet by atmospheric pressure on its upper side when the suction in the tube begins, substantially as set forth.

3. A suction paper-holding disk for printing-presses, consisting of a disk of flexible material, concave in the center and flat at the edges, and having its connecting-tube projecting therein, substantially as described.

4. In a feeding-machine for power printing-presses, a mechanism for raising and lowering the paper-holders, consisting of a vertically-reciprocating lever connected to a pivoted lever by a sliding-pin connection, a cam moving in a slot and bearing against a friction-roller

406,058.

in the reciprocating lever to move it in one direction, and a retracting-spring, substantially as described.

5. In a feeding mechanism for power printing-presses, a mechanism for swinging the paper-holders horizontally and moving them vertically, consisting of a horizontally-swinging vertical lever, a rock-shaft having bearings in which said lever slides, a cam for moving said lever in one direction, and a reacting spring actuating the rock-shaft, substantially as described.

6. In a feeding mechanism for power printing-presses, a mechanism for swinging the paper-holders horizontally, consisting of a horizontally-swinging vertical lever suspended from a rock-shaft having an adjustable reacting spring, and a cam acting on a friction-roller in a slot in said horizontally-swinging lever, substantially as described.

7. In a feeding-machine for power printing-presses, the combination, with pneumatic holders, of a vacuum-producing mechanism consisting of a vacuum-pump, a cam, a lever forced down thereby and having a cam-joint connecting it with a sliding sleeve on the piston-rod, said cam-joint engaging the piston-rod when its lever is forced down, and reacting springs to raise the piston-rod, and a mechanism for raising and lowering the holders, consisting of a horizontally-swinging lever suspended from a rock-shaft, and a vertically-reciprocating lever sliding in sleeves coupling the levers together, cams for operating the levers in one direction, and reacting springs for moving them in the opposite direction, substantially as described.

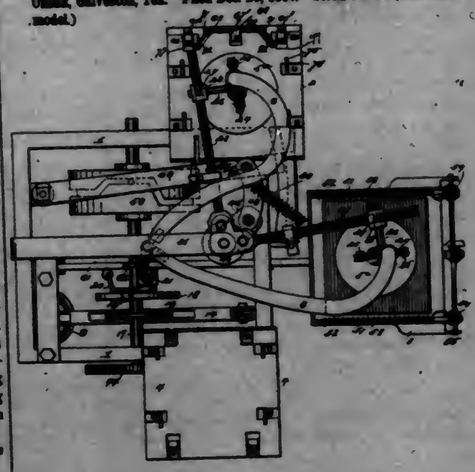
8. In a feeding-machine for printing-presses, a turner mechanism for turning up the paper-holding disks, consisting of a frame provided with a horizontally-vibrating lever having a foot-piece and a rod carrying the paper-holding disks, and a stop on the frame to limit the upward movement of the forward end of the vibrating lever, substantially as described.

9. In a feeding-machine for printing-presses, a vacuum-producing device, consisting of a vacuum-pump, a cam, a lever having a cam-joint to engage the piston-rod and provided with reacting spring, and a sliding sleeve on the piston-rod and to which the said joint is connected, a projection on said sleeve adapted to strike against a stop, and reacting springs to raise the piston, substantially as described.

10. In a feeding-machine for power printing-presses, the combination, with a vertically-reciprocating lever operated by a cam and reacting spring, of a device for turning up the paper holders or disks, consisting of a vertical rod secured in a sleeve on the vertical reciprocating lever and moving in a sleeve secured to a bent arm pivoted to a foot-piece having a pivoted lever in which the holder-rod is mounted, and connected by a slotted joint with the vertical rod, substantially as described.

11. In a feeding-machine for power printing-presses, the combination, with a vertically-reciprocating lever operated by a cam and reacting spring, of a mechanism, substantially as described, for turning up the paper-holders, substantially as described.

12. In a feeding-machine for power printing-presses, a turner mechanism consisting of rod 62, lever 67, foot-piece 69, arm 76, sleeves 74 77, set-screws 75 78, rod 73, adjusting-sleeve 80, set-screw 81, and arm or rod 79, substantially as described.



13. In a feeding-machine for printing-presses, the combination, with suction-disks having freely-movable connecting-tubes and mounted on horizontally-swinging vertical levers, one of which reciprocates in sleeves coupling the levers together, of a vacuum-pump, a cam, a lever connected with a sliding sleeve on the piston-rod by a cam-joint to engage the piston-rod, and having a reacting and releasing spring for raising the piston, and a stop for limiting the upward movement of the sleeve, substantially as described.

14. In a feeding-machine for printing-presses, a vacuum-producing and cut-off device consisting of cam 35, lever 28, operated thereby, cam-joint 25, spring 29, sleeve 21, to which the said joint is pivoted, projection 22 on the sleeve, stop 23, piston-rod 20, operated by the cam-joint and on which the sleeve slides, and piston 11, cylinder 10, cross-head 12, rods 13, and springs 14, substantially as described.

15. In a feeding-machine for printing-presses, a horizontally-swinging vertical lever suspended from a rock-shaft provided with a reacting spring adjustable thereon as to tension by means of a sleeve and set-screw, said swinging lever being actuated by a cam, substantially as described.

16. In a feeding-machine for power printing-presses, the combination of the shaft 59, driven by suitable power and having cams 35, 46, and 57, rock-shaft 36, having reacting spring, and arm 37, with sleeve 38, lever 40, secured to sleeves 38 and 41 and sliding in sleeve 43, lever 49, having a slotted connection with lever 54 and sliding in sleeves 38 41, and secured to the sleeve 43, and provided with a reacting spring 58, with a turner mechanism consisting of a rod secured in sleeve 43, carrying a sleeve, and a system of rods and levers, substantially as described, with a foot-piece, all connected to the paper-holder rod, as shown and described.

406,059. FEEDER FOR TREADLE PRINTING-PRESSES. LEVI OSBER, Galveston, Tex. Filed Dec. 20, 1887. Serial No. 258,203. (No model.)

Claim.—1. In a feeding mechanism for printing-presses, the combination, with the feed plate or table, the platen, and a receiver or holder, of two horizontally-oscillating vertically-movable paper-holders simultaneously actuated to respectively transfer a sheet from the platen to the receiver or holder, and from the feed plate or table to the platen, and mechanism, substantially as described, for so actuating the paper-holders, substantially as set forth.

2. The combination, with the feed plate or table, the platen, and the receiving or holding plate or table, of a vertical rock-shaft, two vertically-movable lifter-arms oscillated horizontally by said shaft, and a paper-holder on each lifter-arm, substantially as set forth.

3. The combination, with the feed plate or table, the platen, and the receiving or holding plate, of two horizontally-oscillating lifter-arms, a holder at the outer end of each arm, a vertical rock-shaft for oscillating said arms, and on which the arms move vertically, and a spring connecting said arms, substantially as set forth.

4. The combination, with the feed plate or table, the receiving or holding plate or table, and the platen between the two, of the horizontally-swinging lifter-arms having pneumatic holders at their outer ends, flexible pipes leading from said holders, a valved pipe with which they communicate, an air-exhaust pump for said pipe, levers for operating the pump and valve, and cams for operating said levers, substantially as set forth.

5. In a feeding mechanism for printing-presses, the combination, with a rotating cam and a lever and sliding sleeve operated by a cam, of vertically-reciprocating rods carrying lifter-arms on which paper-holders are mounted, substantially as described.

6. In a feeding mechanism for printing-presses, the combination, with the paper-holders, of a mechanism for swinging said holders laterally, consisting of a slotted cam, a horizontally-vibrating lever actuated thereby, a link, and crank-arm, and a rotating shaft carrying vertically-reciprocating rods on which the holder-arms are mounted, substantially as described.

7. In a feeding mechanism for printing-presses, the combination, with a combined mechanism for raising the paper-holding arms, swinging them laterally, and lowering them, consisting of a cam, a vertically-swinging lever, a sliding sleeve mounted on a rotating shaft, and vertically-sliding rods to which the holder-arms are attached raised by the sliding sleeve and lowered by reacting springs, of a slotted cam, a horizontally-vibrating lever actuated thereby, a pivoted link-connection, a crank-arm, and a rotating shaft on which the crank-arm is mounted, and which carry by means of sleeves the vertically-reciprocating rods and paper-holding arms, substantially as described.

8. The combination, with the platen and the feed and holding plates or tables at opposite sides of the same, and the two vertically-movable paper-holders spaced apart to correspond with the platen and plates, and horizontally-oscillating lifting-arms to which said paper-holders are secured, of paper-clamps at opposite sides of the platen, an operating-lever, connections between the lever and clamps, and a cam acting on said lever to open the clamps and allow the paper-holders to respectively remove and deposit a sheet from or on the platen, substantially as set forth.

9. In a feeding mechanism for printing-presses, a platen having a device to hold down the sheet when being printed, consisting of pivoted clamps, springs which hold the clamps against the paper, pulleys on the axes of the clamps, a cord operated by a cam, and a connecting-lever to open the clamps, substantially as described.

10. In a feeding mechanism for printing-presses, a feed-plate provided with adjustable brushes at its edge, whereby but one sheet may be lifted at a time, substantially as described.

11. In a feeding mechanism for printing-presses, a feed-plate having its edges provided with adjustable brushes and gage-blocks, substantially as described.

12. In a feeding mechanism for printing-presses, a feed-plate having a device for permitting the release of one sheet at a time, consisting of a plate secured to said feed-plate, having brushes projecting over the edge of the feed-plate, substantially as described.

13. In a feeding mechanism for printing-presses, the combination, with the feed-plate 2, having slots 73 and 77, of the plate 63, having slots 64 and 68, blocks 67, elastic blocks 67', bolts 69, nuts 69', rod 70, brushes 72, brush-clamps 71, blocks 65, elastic blocks 65', bolts 66, and nuts 66', substantially as described.

14. In a feeding mechanism for printing-presses, a feed-plate having straight and inclined slots on its edges, in combination with a plate having inclined brushes which fit in the inclined slots in the feed-plate and overlap it, substantially as described.

15. In a feeding mechanism for printing-presses, a feed-plate provided with adjustable brushes inclined to the edges of said feed-plate, substantially as described.

16. In a feeding mechanism for printing-presses, the combination, with suction-disks for holding the paper, of a vacuum and cut-off mechanism consisting of a cylinder and piston, a piston-rod having a cross-head, and reacting springs to move the piston up, a lever and actuating-cam to move the piston down, tubes connecting the suction-disks with a main tube communicating with the cylinder, and a stop-cock in the main tube, and actuating-cam and reacting spring to close and open the vacuum, substantially as described.

17. In a mechanism for raising and swinging laterally and lowering paper-holding clamp-arms in printing-press feeders, a vertical rotating rod, a vertically-sliding sleeve thereon, sleeves or blocks secured to the vertical rotating shaft, and vertically-sliding rods moving in the sleeves or block and resting upon or moved by the sliding sleeve, and carrying sleeves or blocks secured thereto and moving on the rotating shaft, with reacting springs which carry the sliding rods downward, substantially as described.

18. In a feeding mechanism for printing-presses, the combination, with the lifter-arms, of the suction-disks adjustable longitudinally thereon and at an angle thereto, substantially as set forth.

19. In a feeding mechanism for printing-presses, the combination, with the arms for holding the suction-disks, of the disks having a projecting arm, adjusting-block, and set-screw movable on the disk-holding arm, substantially as described.

20. The combination, with the feed-plate having one edge recessed or notched, of a sheet-separating brush projecting into said notch, substantially as set forth.

21. A feeder for printing-presses comprising the frame, the feed-plate, the platen, and the receiving or holding plate, a vertical rock shaft or rod, lifter-arms connected therewith at an angle to each other and movable vertically, suction-disks on said arms, tubes leading therefrom, a valved tube into which said tubes lead, and a piston and cylinder, paper-clamps at opposite sides of the platen, a transverse shaft journaled in the frame and having five fixed cams, levers acted upon by said cams and connected, respectively, with the piston, the clamps, the pipe-valve, the vertical rock shaft or rod, and the vertically-movable lifter-arms, substantially as set forth.

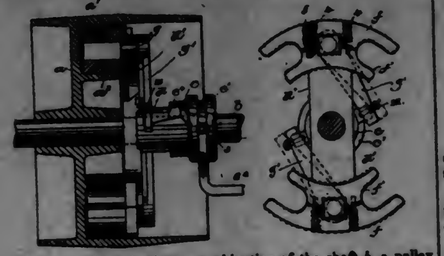
22. The combination, with a vertical rock shaft or rod, of a lifter-arm oscillated horizontally thereby and movable vertically thereon, and a suction paper-holder on said arm, substantially as set forth.

406,060. DETACHABLE PIPE-COUPLING. ISAAC R. POTTS, Columbus, Ohio. Filed Mar. 23, 1889. Serial No. 304,525. (No model.)

Claim.—In a pipe-coupling, the combination, with the part *c*, formed with screw-threaded outer end *d* and tapered inner end *g*, of the coupling-nut *f*, received upon said part *c* and formed with an interior taper or inclined seat *h*, and narrow collar *i*, which collar fits wholly within the nut *f* upon the seat *h* thereof and is split at an angle longitudinally of its length, as at *i'*, and is formed with a cone-shaped exterior corresponding to the taper of the said seat *h* of the nut *f* and an interior taper to correspond with the taper of the end *g* of the part *c*, as described, for the purposes specified.

406,061. NOSE-RING FOR CATTLE. EDMUND K. REA, Cowgill, Mo. Filed Feb. 7, 1889. Serial No. 299,000. (No model.)

Claim.—1. The nose-ring herein described, the same comprising the section A, bifurcated at its free end and provided with the transverse pin D, passing through the section at the base of and being exposed within said bifurcation, and the section A', provided with a tongue C at its free end, said tongue having a notch E in its inner face, adapted to engage said pin, said bifurcated ends and said tongue being beveled on their inner sides and carried into sharp points at the periphery of the ring, as and for the purpose set forth.

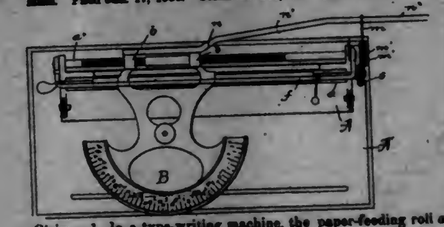


2. A nose-ring comprising the section A, bifurcated at its free end and provided with the notches G G and the transverse pin D, and the section A', provided with a tongue to fit in the bifurcation of the other section and having a notch E to engage the pin D, the section A' being further provided on opposite sides of its tongue with the inclined spurs F F to engage the notches G G in the end of the section A, all constructed and arranged substantially as specified.

406,062. DISINFECTANT. ISAIAH L. ROGERS and HENRY L. ROGERS, Brooklyn, N. Y. Filed Mar. 8, 1889. Serial No. 302,632. (No specimens.)

Claim.—1. As a new article of manufacture, a disinfectant-block composed of plaster-of-paris and permanganate of potash, substantially as described.

2. As a new article of manufacture, a disinfectant composed of plaster-of-paris and asbestus and a permanganate, substantially as described.



406,063. FRICTION-CLUTCH PULLEY. GEORGE L. ROLLINS, Bridgewater, Mass. Filed Feb. 7, 1888. Serial No. 263,353. (No model.)

Claim.—1. In a clutch, the combination of the shaft *b*, a pulley loosely mounted thereon having a peripheral and a concentric internal flange, a guide-arm, and a pair of normally contiguous friction-plates sliding thereon, combined with an oscillating shaft *g*, interposed between the said friction-plates, one of the diameters of which is greater than another, an arm *g'*, fixed to said shaft *g* at a right angle, and thereby moving in a plane at right angles to the shaft *b*, the longitudinally-sliding sleeve, and the inclined-surfaced block thereon for moving said arm *g'* to oscillate the shaft *g* and thereby separate the friction-plates, all substantially as described.

2. In a clutch, the shaft *b*, the flanged pulley loose thereon, the guide-arms, and friction-plates sliding thereon, and the quadrangular oscillating shafts *g* for moving the said friction-plates, said shaft lying parallel with the shaft *b*, combined with the arms *g'*, fixed at right angles to the shafts *g* and having the adjusting-screws 22, and the longitudinally-sliding sleeve having the inclined-surfaced blocks thereon for moving said arms *g'*, all substantially as and for the purposes specified.

406,064. TYPE-WRITING MACHINE. IRA A. SALMON, Boston, Mass. Filed Jan. 17, 1888. Serial No. 260,972. (No model.)

Claim.—1. In a type-writing machine, the paper-feeding roll *a*, ratchet-wheel 6, fixed thereon, loose disk 5, mounted upon said wheel, the guide-rod *a'*, parallel to said roll, the longitudinally-sliding index-plate mounted thereon, and the inclined rod *n'*, attached to said index-plate, combined with the hooked arm *m*, through which said rod *n'* loosely passes, and guide-plates *m'* for said arm, longitudinal movement of the index-plate and rod *n'* actuating the arm *m* to rotate the paper-feeding roll intermittingly, substantially as described.

2. In a type-writing machine, the paper-feeding roll, ratchet-wheels 6, fixed thereto, and disk 5, mounted loosely on said wheel, and having one or more pins 4 upon one side and a spring-pawl upon its other side to engage the said ratchet-wheel, combined with the arm or pawl *m* to engage the said pins to rotate the roll in one direction, and with means, substantially as described, controlled by the movement of the index-plate, for moving the said arm or pawl *m*, substantially as described.

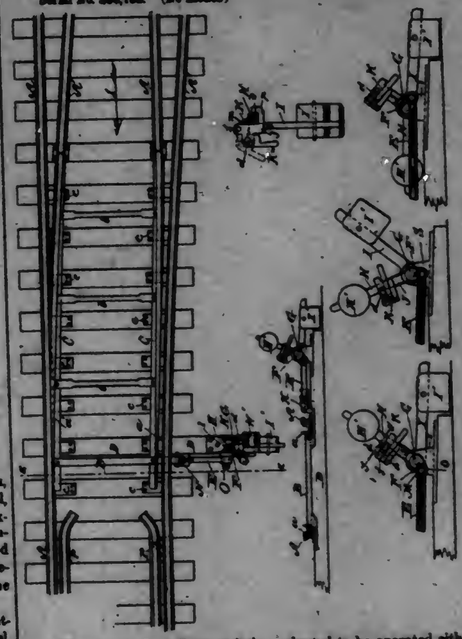
3. In a type-writing machine, the paper-feeding roll, the disk 5, carried by it, having several pins, as 4, located at different distances from the center, combined with the arm *m* and means, substantially as described, controlled by the index-plate, for moving the said arm *m* to effect the rotation of the said roll, substantially as described.

4. In a type-writing machine, the paper-feeding roll *a*, the disk 5, having several pins 4 at different distances from the center, and arm *m*, adapted to engage the pins upon the disk 5 to rotate the paper-feeding roll *a* different distances, as described, combined with the inclined rod *n*, for moving the said arm, substantially as described.

5. In a type-writing machine, the paper-feeding roll *a*, the plate B, the arm *m*, and inclined rod, combined with the fulcrum-pin 2, upon which the arm may rock when the plate B is tipped back, substantially as and for the purpose set forth.

406,065. TAPE-MEASURE. EDWARD G. SOLTMANN, New York, N. Y. Filed Apr. 22, 1889. Serial No. 308,057. (No model.)

Claim.—1. In a tape-measure, the combination, with the reel-handle, of a movable finger-piece, substantially as described.



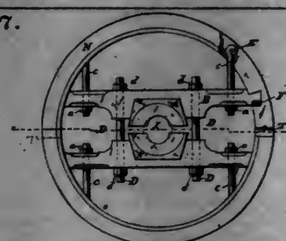
2. In a tape-measure, the combination, with the reel-handle, of an adjustable finger-piece and means for rigidly securing the same to the reel-handle, substantially as described.

3. In a tape-measure, the combination, with the reel-handle, of a finger-piece provided with a longitudinal slot and screws for securing the finger-piece to the reel-handle, substantially as described.

4. In a tape-measure, the combination, with the reel-handle, of a movable finger-piece and means for rigidly securing the same to the reel-handle, substantially as described.

406,066. RAILROAD-SWITCH. WILLIAM SPILMAN, Newark, N. J., assignor to C. Morris Ashworth, same place. Filed Sept. 20, 1888. Serial No. 286,732. (No model.)

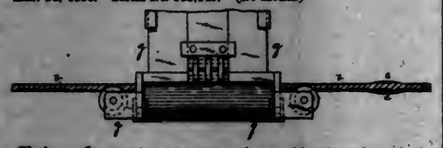
Claim.—1. In railway-switches adapted to be operated either automatically by the flange of a car-wheel or by hand, the combination of the switch-rails with a switch-stand, consisting of two weighted levers engaging and disengaging with each other, one of which, acting upon the switch-rails, may be operated by hand, and the other, serving to retain the switch-rails constantly in one position, being operated sufficiently by hand or by the flange of a car-wheel to allow the cars to pass, substantially as herein described.



2. In a railroad-switch adapted to be operated automatically by the flange of a car-wheel or by hand, a weighted lever composed of two arms I and J, adapted to be engaged or disengaged with the weighted lever H by means of the catch K, attached to the arm J of the lever I, as and for the purposes set forth.

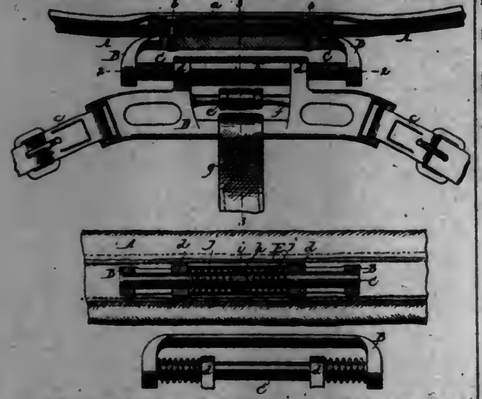
3. In a railroad-switch adapted to be operated either automatically by the flange of a car-wheel or by hand, the combination of the switch-rails *a a'* and shift-bar B with the connecting-rod E, crank F, rod G, and levers H and I, to the arm J of which lever I is attached the catch K, adapted to be engaged and disengaged with the lever H, and thus connect and disconnect said levers H and I, substantially as and for the purposes set forth.

406,067. WOOD SPLIT PULLEY. DAVID A. SPRINKLE, Pennsborough, W. Va. Filed Jan. 17, 1889. Serial No. 296,693. (Model.)



Claim.—The herein shown and described pulley, composed of two rim-sections which are joined at their ends by a horizontal and

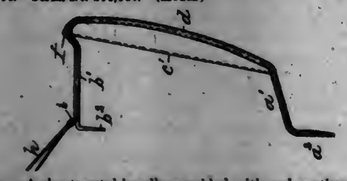
406,067.



vertical tongue and groove, each rim-section comprising a plurality of rings that are joined at their ends by dowel-blocks, the two arms fastened to the said rim-sections by bolts and dovetail tenons and cavities, said arms having notches midway of their ends with sloping sides, the hub composed of halves, each half fitting in said notches and having sloping sides, and the bolts passing through the said arms for drawing them and the said rim-sections together, substantially as and for the purpose described.

406,068. WIRE CABLE. DAVID TUFTS, Pittsburg, Pa. Filed Mar. 28, 1888. Serial No. 305,149. (No model.)

Claim.—In traction apparatus, the combination of a gripping device and a traction-cable whose diameter is made to enlarge and diminish at recurring intervals in its length, substantially as and for the purposes set forth.

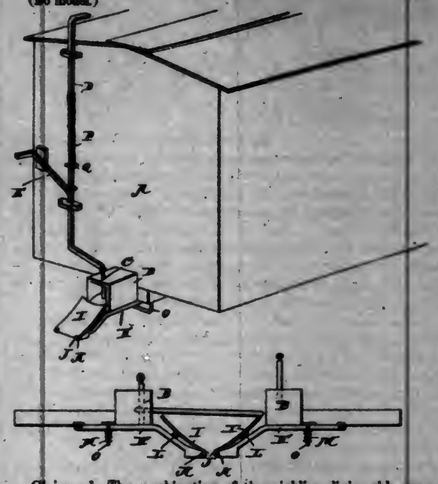


406,069. BREAST-COLLAR IRON. GARRETT VAN WAGENEN, Monroe, Wis. Filed Mar. 25, 1889. Serial No. 304,735. (No model.)

Claim.—1. The yoke B, in combination with a casting D, provided with ears *d*, rod C, and springs on the rod, substantially as and for the purposes specified.

2. The yoke B, in combination with a casting D, provided with ears *d*, rod C, coiled springs *j*, encircling the rod, collar A secured to the rod C, and case E, substantially as and for the purposes specified.

406,070. HANDLE. GEORGE VOGL and JOHN HESS, Newark, assignors of one-third to Andrew H. Fisher, Jersey City, N. J. Filed Mar. 22, 1888. Serial No. 268,067. (Model.)



Claim.—A sheet-metal handle provided with end portions *a'* and *b'* and intermediate open-channeled portion *c'*, with the portion *b'* bent acutely toward the end *a'* and outward from the portion *c'* to form the thumb-piece *f*, substantially as shown and described.

406,071. HAIR DYE AND TONIC. EDWARD A. VOGT, Frostburg, Md. Filed Mar. 16, 1889. Serial No. 303,860. (No specimens.)

Claim.—A compound hair dye and invigorator, consisting of the fluid extracts of green or unripe walnuts and fresh burdock-roots mixed with glycerole of Spanish pepper, in about the proportions set forth.

406,072. CAR-COUPLING. THOMAS H. WASH and NATHAN R. H. WASH, Medina County, Tex. Filed Mar. 18, 1889. Serial No. 303,702. (No model.)

Claim.—1. The combination of the yielding link-guide support and the yielding link-guide mounted on the outer end of the same, as set forth.

2. The combination of the link-guide support and the curved link-guide pivoted to the front end of said support, as set forth.

3. The combination of the yielding link-guide support, the link-guide pivoted to the front end of said support, and the spring arranged between the guide and the support, as set forth.

4. The combination of the link-guide support pivoted to the under side of the car, the link-guide pivoted to the front end of the support, the spring arranged between the guide and the support, the yoke secured to the car, and the spring supported by said yoke and bearing against the link-guide support, as specified.

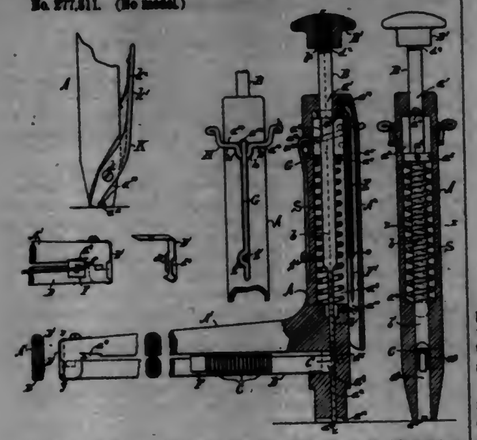
406,073. SAND-BAND. FRANK WERNER and RICHARD OSBORNE, Minneapolis, Minn. Filed Apr. 8, 1889. Serial No. 306,418. (No model.)

Claim.—1. In a wheel-hub, the combination, with the end hub-bands 6 and 7, having their outer surface screw-threaded, of the bands 8 and 9, having their inner surface screw-threaded and adapted to surround and engage with the bands 6 and 7, respectively, the band 8 having a closed end and the band 9 a flaring and open end, and both bands formed with the recesses 15 to form waste-oil receptacles, substantially as described.

2. The combination, with a wheel-hub, of the screw-threaded bands 6 and 7, provided with the spurs 10, of the closed screw-threaded band 8, adapted to fit upon and engage with the band 6 and having the flange 13 and the head 12 inclosed by said band, and the screw-threaded band 9, adapted to fit upon and engage with the band 7 and provided with the shoulder 17 and the slots 16, substantially as described.

3. The combination, with the hub, of the band 7, secured thereto and exteriorly screw-threaded, and the band 9, interiorly threaded to fit the threads of the band 7 and formed with an oil-space 15, and a shoulder 17 between said space and the end of the band, the portion of the band from said shoulder outward being flaring, substantially as and for the purposes set forth.

406,074. NUT-LOCK. SAMUEL WEBBER, WILLIAM G. HOLT, and PALMER B. GILBERT, Cranville, Wis. Filed Sept. 5, 1888. Serial No. 284,677. (No model.)



Claim.—1. In a nut-lock, the combination, with the threaded bolt A, provided with a longitudinal groove *a'*, of the nut B, provided upon

406,074.

each of its sides with a groove *b*, the cap C, recessed to adapt the same to fit over the nut, said cap being provided with a central perforation for the passage of the bolt, a tongue or tenon *c'*, adapted to fit within the groove *a'* of the bolt, and two apertures *c²*, which, when said cap is placed over the nut, align with one of the grooves *b*, and the locking pin or key D, adapted to pass through the aligned groove and openings, for the purpose specified.

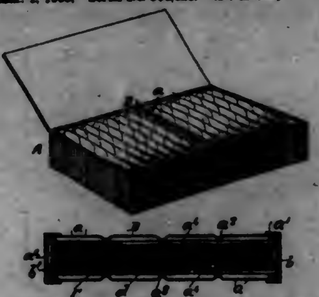
406,075. STAPLE-DRIVER. ALBERT WHITE, Lowell, Mass., assignor to Frederick Taylor, same place. Filed June 21, 1888. Serial No. 277,511. (No model.)

Claim.—1. The combination of the plunger provided with notches, the spring to return the same, and a spring-pawl engaging said notches to prevent the return of said plunger to its starting-point, as and for the purpose specified.

2. The combination of the frame provided with a staple-guiding groove and with a hole opening laterally into said groove to admit staples, the plunger provided with a collar, a spring surrounding said plunger within a central cavity, with which said frame is provided, and compressed between said collar and a shoulder in said central cavity, said plunger being provided with notches, and a spring-pawl to engage said notches and prevent said plunger when forced downward from rising above said hole and admitting a second staple below said plunger, as and for the purpose specified.

3. The combination of the frame provided with a staple-guiding groove and with a hole opening laterally into said groove to admit staples, the plunger provided with a collar, a spring surrounding said plunger within a central cavity, with which said frame is provided, and compressed between said collar and a shoulder in said central cavity, said plunger being provided with notches, a spring-pawl to engage said notches and prevent said plunger when forced downward from rising above said hole and admitting a second staple below said plunger, and a lever turning on said frame to force said pawl out of said notches to allow said plunger to be raised, as and for the purpose specified.

4. The combination of the frame, the staple-carrying bar removable therefrom, and the spring-impelled follower arranged to travel on said bar, said frame having an arm arranged above said staple-carrying bar and provided with a notch to secure said follower to said frame while said staple-carrying bar is removed therefrom and to hold said follower in a position to receive said staple-carrying bar when said bar is replaced in said frame, as and for the purpose specified.

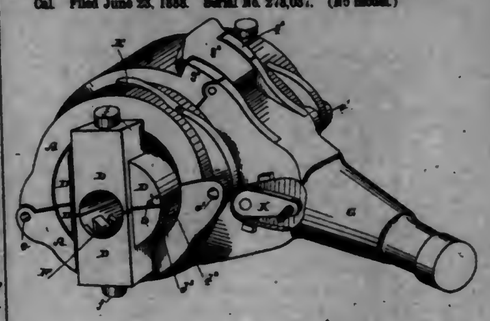


5. The combination of the frame, the plunger movable therein, a spring attached to said frame and provided with a loop, a cord one end of which is attached to said frame and the other end of which is attached to a follower, said follower, and a staple-carrying bar on which said follower travels, said cord passing through said loop to draw said follower on said bar toward said plunger to feed staples on said bar under said plunger, as and for the purpose specified.

6. The combination of the frame provided with a horizontal arm and with a hole, a spring secured to the free end of said arm, and a staple-carrying bar adapted to be engaged by said hole and said spring and to be held in place thereby, as and for the purpose specified.

7. The combination of the frame provided with a horizontal arm and with a vertical staple-guiding groove and with a hole opening into said groove, a staple-carrying bar having the top of its inner end beveled off, said inner end being adapted to enter said hole and to be held centrally therein by staples on said bar, a spring secured to the free end of said horizontal arm to engage the outer end of said staple-carrying bar, and a plunger moving in said frame at right angles to said staple-carrying bar, as and for the purpose specified.

8. In a staple-driver, the combination of the frame provided with a groove to receive the wire to be secured by staples, and a gripping-lever pivoted on said frame within a recess formed in said frame to grasp a wire between said lever and the side of said groove, as and for the purpose specified.



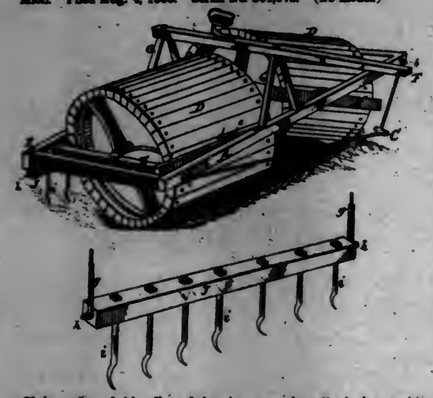
406,076. CIGAR-MOISTENER. CHARLES A. ALLEN, Chicago, Ill. Filed Mar. 1, 1889. Serial No. 301,689. (No model.)

Claim.—1. In a cigar-moistener, the combination, with the outer perforated tube provided interiorly with annular corrugations, of the wire-gauze tube removably inserted in and inclosed by said outer tube, the gauze tube being filled with an absorbent material, substantially as and for the purpose set forth.

2. In a cigar-moistener, the combination, with the outer perforated tube, provided interiorly with annular corrugations and capped or closed at both ends, of the wire-gauze tube capped at one end, as described, and loosely inserted in the outer tube, one end of the gauze tube being rigidly attached to the corresponding cap end of the outer tube, so as to be removable therewith, substantially as and for the purpose set forth.

406,077. PIPE-CUTTER. ADOLPH V. ANDERSON, San Francisco, Cal. Filed June 23, 1888. Serial No. 278,037. (No model.)

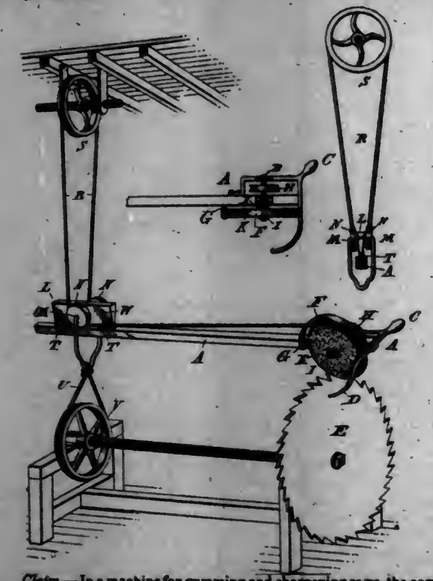
Claim.—1. An improved pipe-cutter consisting of the combination of a two-part hinged stock having the groove a^4 formed in one end thereof, the two-part bearing-ring fixed in said grooved part, said bearing-ring having one of its sections or parts provided with a hook *d*, adapted to fit a slot in the adjoining section, and the cutting-bit and opposing guide-jaw in the opposite end of the stock, and the set-screws for adjusting the jaws, as herein described.



2. An improved pipe-cutter consisting of the combination of a two-part hinged stock, the adjustable jaws seated in one end of the stock, and a groove a^3, formed in the opposite end of the stock, a two-part separable bearing-ring fitted in the grooved end of the stock, the V-shaped jaws adjustably secured in the bearing-ring, and the spring-actuated catches E, bearing against the section of the bearing-ring, as herein described.

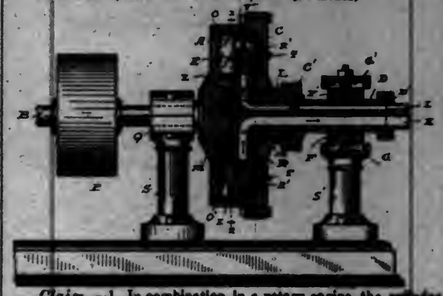
3. An improved pipe-cutter consisting of the combination of a two-part hinged stock carrying at one end the adjustable jaws B and C, and having a groove a^3 formed in the opposite end, the two-part separable bearing-ring secured in said groove and provided with adjustable V-shaped jaws F, said ring having one of its sections provided

with the hook *d*, and the opposite section formed with an engaging-slot *d'*, and both sections having the sockets *d²*, and the spring-actuated catches E, secured to the stock and working through slots therein, whereby they engage the sockets *d²*, substantially as herein described.



4. An improved pipe-cutter consisting of the combination of a two-part hinged stock having at one end the groove *a²*, a two-part ring D, fitted in said grooves and provided with adjustable jaws F, the adjustable jaws B and C in the opposite end of the stock, the spring-actuated catches bearing against the sections of the ring, the operating-handle with its jointed strap pivoting it to the stock, the pawls in the handle engaging the ratchet-teeth of the stock, and cam for governing the pawls, all constructed and arranged to operate as herein described.

406,078. FIELD-ROLLER. ALBERT G. BARTON, Three Rivers, Mich. Filed Aug. 4, 1888. Serial No. 281,972. (No model.)

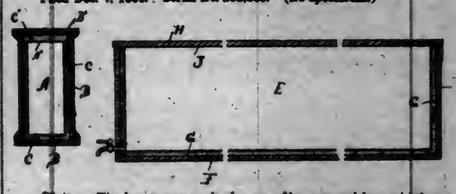


Claim.—In a field-roller of the character described, the combination, with the frame of the machine, of the bar hung therefrom by eyebolts and provided with hook-pointed scratching-teeth, substantially as specified.

406,079. SAW GUMMING AND SHARPENING MACHINE. HENRY T. BAKER, Decaturville, Ohio. Filed Jan. 12, 1889. Serial No. 296,904. (No model.)

Claim.—In a machine for gumming and sharpening saws, the combination, with frame A, having handle C, rod D, fender F, and hinged plate I, attached thereto, of the grinding-disk journaled in said frame, and the pulleys, and endless rope, all arranged and operating substantially as shown and described.

406,080. ROTARY ENGINE. JOSEPH J. BENTLEY, Galena, Ill. Filed Feb. 18, 1889. Serial No. 300,262. (No model.)



Claim.—1. In combination in a rotary engine, the cylinder, a suitable abutment within the cylinder mounted on a shaft normally in line with the axis of said cylinder, a collar on said shaft at a suitable distance from that end of said shaft which is within the cylinder, and bolts pressing through the abutment and through the aforesaid collar, substantially as described.

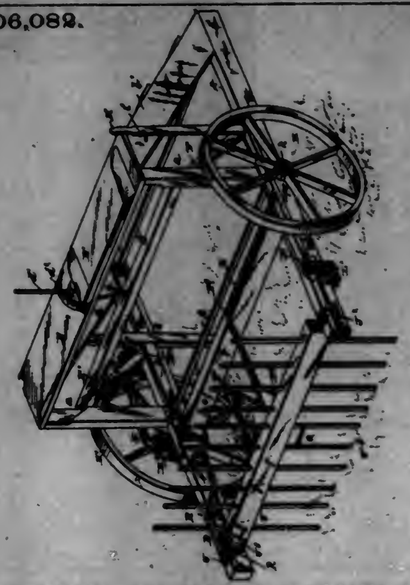
2. In combination with the cylinder of a rotary engine, a suitable abutment within said cylinder, the shaft on which said abutment is mounted, and the spring-bearing for said shaft, together with the hinged valve-pistons turning on axes at one end of the cylinder and arranged radially thereto, together with a face-plate at the other end of the cylinder adjustable in the direction of the axis of said cylinder, and at any slight angle to said axis, substantially as described.

3. In a rotary engine, the combination of the cylinder, the spring-pressed face-plate, the abutment within said cylinder, the shaft on which said abutment is mounted, and the bearing for said shaft, within which the shaft is automatically adjustable in the line of its axis, substantially as described.

406,081. ART OF MAKING BUTTER. JOHN BOYD, Elmhurst, Ill. Filed Dec. 7, 1888. Serial No. 292,883. (No specimens.)

Claim.—The improvement in the art of butter-making, which consists, first, in preparing a starter from skimmed milk by inclosing the same at a proper temperature in a vessel with non-conducting walls; secondly, mixing the starter so prepared in small proportion with cream, and inclosing the mixture at a proper temperature, as indicated, in a non-conducting vat, permitting the same to ripen therein, and, lastly, churning the ripened cream into butter, substantially as specified.

406,082. COMBINED STALK-CUTTER AND RAKE. ARCHAMBLE T. BOYKIN, Odee, Tex. Filed Sept. 3, 1888. Serial No. 284,590. (No model.)



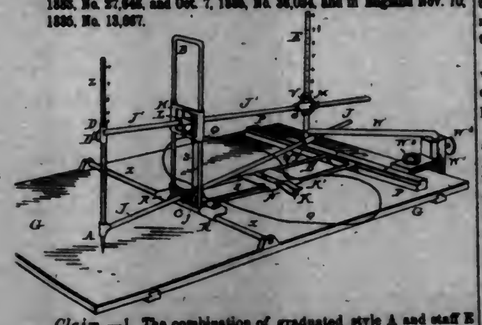
Claim.—1. The combination, with the main frame, the seat, a rotary stalk-cutter, and the frame therefor, of the drum journaled to the seat and provided with a handle, a cord attached at one end to said drum and at the other to the cutter-frame, and a segmental rack on the seat engaging said handle, substantially as shown and described.

2. The combination, with a main frame, of a rotary rake journaled thereto, the outer end of one of the rake-journals being provided with an arm fixed thereto, a sliding bar, and means for moving said bar in and out of the rotary path of the arm aforesaid, substantially as described.

3. The combination, with a main frame, of a rotary rake journaled thereto, the outer end of one of the rake-journals being provided with an arm fixed thereto, a sliding bar, a rock-shaft provided on one end with a crank in engagement with the sliding bar and provided on the other end with a right-angled weighted extension, said weighted extension lying in front of the path of the rake, the sliding bar being movable in and out of the path of the arm aforesaid, substantially as described.

4. The combination, with a main frame, of a rotary rake journaled thereto, the outer end of one of the rake-journals being provided with an arm fixed thereto, a sliding bar having a downwardly-extending front piece on its rear end, as specified, a rock-shaft provided on one end with a crank in engagement with the sliding bar

406,082.

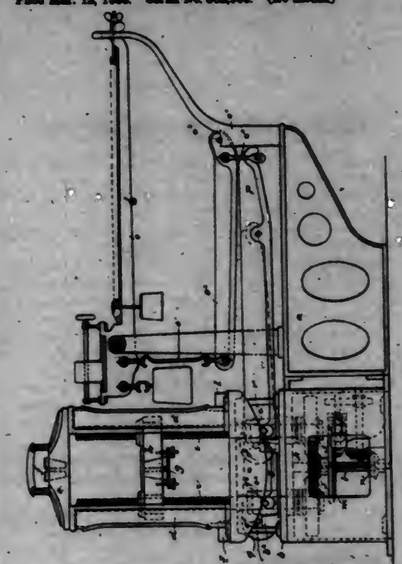


aforesaid, the other end of said shaft being provided with a right-angled rearwardly-extending weighted arm, the sliding bar being movable in and out of the path of the sliding bar aforesaid, substantially as described.

5. The combination, with a main frame, of a rotary rake journaled thereto, the outer end of one of the rake-journals being provided with an arm fixed thereto, a sliding bar having a downwardly-extending front piece on its rear end, as specified, a rock-shaft provided on one end with a crank in engagement with the sliding bar aforesaid, the other end of said shaft being provided with a right-angled rearwardly-extending weighted arm, the sliding bar being movable in and out of the path of the sliding bar aforesaid, the rake being provided with loops, the rotary path of said loops lying in the path of the weighted arm aforesaid, substantially as described.

6. The combination, with the main frame, of a rotary rake, means for alternately retarding the movement of the rake and releasing the same, and a spring-actuated rod R, attached to the inner side of the main frame, with one end bearing on the under side of the rake-beam for supporting the rake, substantially as described, and for the purpose set forth.

7. In a device for the purpose described, a rotary stalk-cutter, consisting of a frame in the form of a double cross, and cross-blades on the outer ends of said crosses, said blades being formed with their ends bent at right angles to the length of the body of the blade, and said ends being in turn bent and screw-threaded and screwed into the face of the arms of the crosses, substantially as described.



406,083. DEVICE FOR DRAWING IN PERSPECTIVE. ALEXANDER BRIX, Frankfort-on-the-Main, Prussia, Germany. Filed Dec. 31, 1885. Serial No. 187,298. (No model.) Patented in Germany Oct. 12, 1883, No. 27,646, and Oct. 7, 1885, No. 36,034, and in England Nov. 10, 1885, No. 13,067.

Claim.—1. The combination of graduated style A and staff E with laterally-movable frame B B', with plate N, movable backward and forward on said frame, drawing-point K, carried by said plate, slide H, movable up and down on said frame, cord S, connecting said frame to said plate, spring Q, drawing said plate away from style A, rods J and J', and sleeves connecting each of said rods to said style and staff, the latter rod being also double-jointed to said slide, adjustable on said style and freely movable on said staff, substantially as set forth.

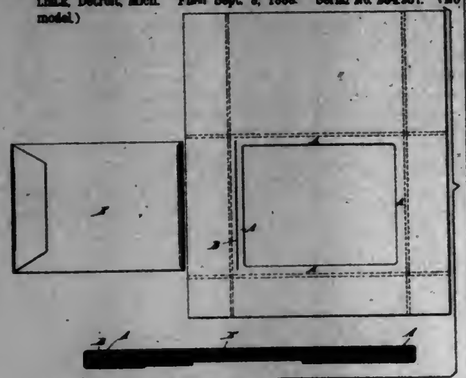
2. In a perspectograph, a graduated staff E, which is adjustable vertically and laterally, but held stationary after adjustment, in combination with its adjusting devices, a graduated style A, which is freely movable, a rod J', adjustable at one end on said style and freely movable at the other on said staff, a drawing-point K, and intermediate devices connecting it to an attachment of said rod, a spring Q, drawing said point away from said style, a frame B B', connected to said rod and supporting said point, and a transverse rod on which said frame is movable laterally, substantially as set forth.

406,084. TESTING-MACHINE. CHARLES R. DUDLEY, Philadelphia, Pa., assignor to Henry R. Richie and Frederick A. Richie, same place. Filed Mar. 12, 1888. Serial No. 302,900. (No model.)

Claim.—1. In a testing-machine, the combination, with the screws, the table, lugs on said table, and the bed or frame and lugs thereon, of two levers of equal or substantially equal length arranged one within the other, and having pairs of knife-edges co-operating with lugs on the table and on the bed and arranged on opposite sides of a central longitudinal line relatively to the machine and in planes coincident with the axes of the said screws, substantially as described.

2. In a testing-machine, the combination, with the screws, the table, and the bed or frame, and lugs on said table and bed, of two levers of equal or substantially equal length arranged one within the other, and having pairs of knife-edges arranged in a plane common to all and on opposite sides of a central longitudinal line relatively to the machine and in planes coincident with the axes of the said screws and co-operating with the lugs on the table and on the bed, substantially as described.

3. In a testing-machine, the bed and a movable table, combined with interposed levers of substantially equal length for supporting the said table, one of said levers being fulcrumed within the other and projecting beyond it, substantially as described.



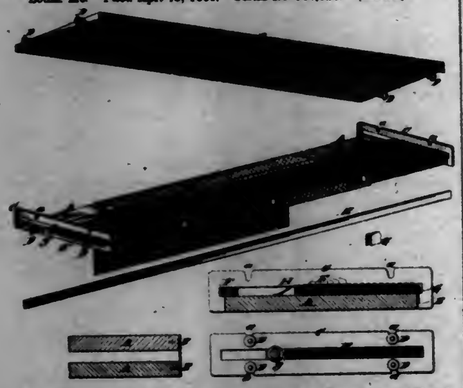
4. In a testing-machine, the bed or frame, screws mounted therein, and a movable table, combined with levers interposed between the bed and the table, and having pivot-edges disposed on opposite sides of a line drawn through the longitudinal center of the machine, and having those pivot-edges which co-operate directly with the table arranged in planes coincident with the axes of the said screws, substantially as described.

5. In a testing-machine, a bed or frame and a movable table, combined with pistons rigidly secured to the bed and rising above the table, and cylinders fitted air-tight to said pistons and loosely placed upon the table, whereby the table is cushioned against recoil under sudden rupture of the specimen, substantially as described.

6. In a testing-machine, a bed or frame and a movable table, combined with pistons rigidly secured to the bed and rising above the

table, and cylinders fitted air-tight to said pistons and loosely placed upon the table and provided with escape-valves, substantially as described.

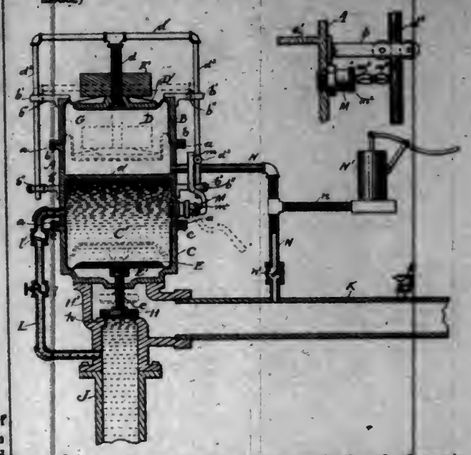
406,085. PHOTOGRAPHIC-PLATE HOLDER. GEORGE H. CARLILE, Detroit, Mich. Filed Sept. 3, 1888. Serial No. 284,967. (No model.)



Claim.—1. An envelope for photographic dry plates made of material impervious to actinic rays, having one side cut away to form an opening nearly as large as the plate, and having a slit near one end through the portion of the side remaining of the cut-away side for the introduction of a covering-piece, and combined with said covering-piece, substantially as and for the purposes described.

2. The combination of an envelope made of material impervious to actinic rays, having one side cut away to form an opening through which to make exposure of the inclosed plate, a covering-piece arranged to cover said opening, and a case to hold one or more of said combined envelopes and covering-pieces, the said case having a slide-covered opening in front and a slide-covered opening at the side for the insertion of the combined envelope and covering-piece.

3. The combination of an envelope made of material impervious to actinic rays, having one side cut away to form an opening through which to make exposure of the inclosed plate, a covering-piece arranged to cover said opening, and a case to hold one or more of said combined envelopes and covering-pieces, the said case having a slide-covered opening in front and an opening at the side, substantially as and for the purpose described.



406,086. PLAITING APPARATUS. MATTIE E. CARTWRIGHT, St. Louis, Mo. Filed Apr. 13, 1889. Serial No. 307,126. (Model.)

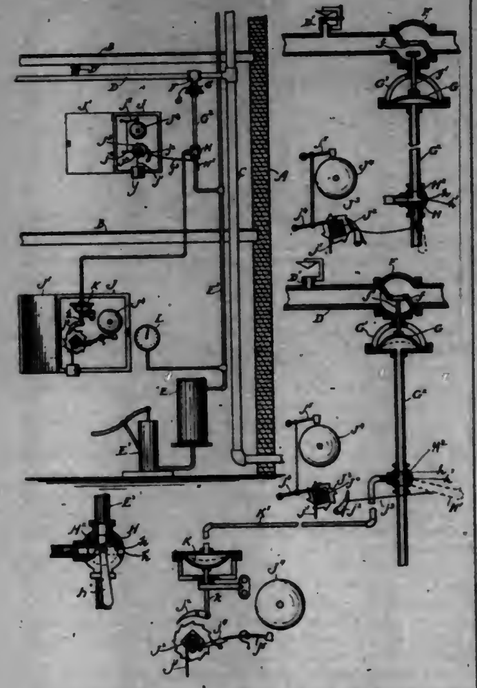
Claim.—1. In a plaiting-machine, thin metallic plaiting-strips, in combination with a base-board having a binding-strip on one edge, slotted retaining-plates on the ends of the base-board to secure and retain the plaiting-strips, and an adjustable clamp-bar working on and lengthwise of the base-board, all substantially as described.

2. In a plaiting-machine, thin metallic plaiting-strips, in combination with two base-boards of exactly similar size and construction, each with a binding-strip on a corresponding edge, slotted retaining-plates, means of securing the retaining-plates to or releasing them from the ends of both or either base-board whenever desired, and an adjustable clamp-bar working in the slot of the retaining-plates lengthwise of the base-board, all substantially as described, and for the purpose specified.

406,087. AUTOMATIC VALVE. JOSEPH CLAPP, Evanston, Ill., assignor to the Clapp Automatic Fire-Extinguisher Company, of Illinois. Filed Aug. 25, 1888. Renewed May 17, 1889. Serial No. 311,166. (No model.)

Claim.—1. The combination, with a supply-pipe of a fire-extinguishing system, of a water-chamber, a diaphragm therein in operative connection with the valve which governs the flow of water to the supply-pipe and having a larger area than said valve, a branch pipe or lateral way forming direct communication between said water-chamber and supply-pipe independently of the position of said supply-valve, whether closed or open, and means, substantially as described, for releasing the water from said chamber.

2. The combination, with a supply-pipe, of a valve to govern the flow of water therein, a water-chamber, a diaphragm of larger area than and in operative connection with the valve governing the flow of water in the supply-pipe, a branch pipe or lateral way forming direct communication with said water-chamber and supply-pipe, a normally-closed eduction-pipe of a size to permit the water to flow from the chamber faster than it can enter from said branch pipe, and means, substantially as specified, for opening said eduction-pipe upon the opening of a sprinkler-head, substantially as shown and described.



3. The combination, with the supply and distributing pipes of an automatic fire-extinguishing system, of a valve for normally closing said supply-pipe, a water-chamber upon the opposite side of said valve and in direct communication therewith, a diaphragm of larger area than said valve located in said chamber and attached to said valve, a normally-closed outlet larger than the inlet for releasing the water from said chamber, and means, such as described, for permitting the same to open upon the escape of air from the distributing-pipes, substantially as shown and described.

4. The combination, with the supply and distributing pipes of an automatic fire-extinguishing apparatus, of a valve for normally closing the supply-pipe, the chamber C, a flexible diaphragm therein attached to said valve, a pipe connecting the supply-pipe with said chamber and having a check-valve therein for preventing a back flow of water from said chamber, an independent outlet of larger capacity than the pipe L leading from said chamber, and means, such as the lever *m*, and a movable frame held normally in a given position by means of a flexible diaphragm in operative connection therewith and with a chamber of compressed air communicating with the distributing-pipes, whereby upon the escape of air from said pipes said frame may be permitted to fall, thus releasing said lever and opening said outlet, substantially as shown and described.

5. An automatic valve for normally preventing the water from entering the distributing-pipes of an automatic fire-extinguishing system, consisting of a chamber in communication with the supply-pipe, a normally-closed eduction-pipe, a flexible diaphragm in said chamber attached to the supply-pipe valve, an air-chamber communicating with the distributing-pipes, a weighted flexible diaphragm, a movable frame attached to said diaphragm, and means—such as a cap and lever—in operative connection with said frame for closing said eduction-pipe, whereby the movement of said frame upon the escape of air will release said lever, substantially as shown and described.

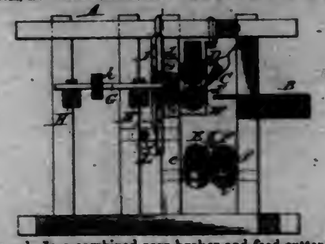
6. The combination, with the supply and distributing pipes of an automatic fire-extinguishing system, of the chambers C G, the former in direct communication with the supply-pipe and the latter with the distributing-pipes, flexible diaphragms E D, in communication with said chambers respectively, an outlet-pipe connecting with the chamber C, means—such as a cap and lever—for closing the same, a movable frame attached to the diaphragm D, for normally holding said lever in position to close said pipe, and a valve attached to the diaphragm E, for normally closing the supply-pipe, substantially as shown and described.

406,088. AUTOMATIC FIRE-EXTINGUISHING APPARATUS. JOSEPH CLAPP, Evanston, assignor to the Clapp Automatic Fire-Extinguisher Company, Chicago, Ill. Filed Sept. 1, 1888. Renewed May 17, 1889. Serial No. 311,167. (No model.)

Claim.—1. The combination, with the distributing-pipes of a fire-extinguishing apparatus of the class described, of one or more valves of differential area for shutting off the flow of water to the distributing-pipes, a source of compressed air connected therewith by a suitable pipe or pipes, and one or more valves normally closed for admitting said compressed air thereto, substantially as shown and described.

2. The combination, with the distributing-pipes of a fire-extinguishing apparatus of the class described, of one or more valves of differential area for shutting off the flow of water to the distributing-pipes, a source of compressed air connected therewith by a suitable pipe or pipes, one or more valves normally closed for admitting said compressed air thereto, and means, as an escape-valve, for permitting the escape of air from the shut-off valves when it is desirable to open the same, substantially as shown and described.

3. The combination, with the distributing-pipes of a fire-extinguishing apparatus of the class described, of one or more valves of differential area for shutting off the flow of water to the distributing-pipes, a source of compressed air connected therewith by a suitable pipe or pipes, one or more valves normally closed for admitting said compressed air thereto, means for permitting the escape thereof from said shut-off valve when it is desired to open the same, and an alarm mechanism in operative connection with said valve or valves by which the flow of air is regulated, substantially as shown and described.



4. The combination, with the distributing-pipes of an automatic fire-extinguishing system, of one or more normally-open differential valves for shutting off the flow of water to the distributing-pipes, a source of compressed air, a pipe or pipes for conducting the same to said differential valves, normally-closed shut-off valves located in said pipe and in operative communication with an automatic alarm mechanism, and means, as described, for inclosing and locking said alarm mechanism, whereby the opening of said shut-off valve may close said differential valves and sound an alarm by means of a mechanism protected from unauthorized interference, substantially as specified.

406,089. COIN-RELEASED SPIROMETER. EDWARD J. CHENY, Chicago, Ill. Filed July 30, 1888. Serial No. 281,466. (No model.)

Claim.—In a coin-controlled lung-tester, the combination of a dial with indicating-hand thereon and coin-slot therein, with a blowing apparatus, a pinion on the shaft which supports the hand, and a rack connected with such blowing apparatus, a spring to restore such rack to its place after operation, and a pivoted dog and cam which locks such pinion from motion, a coin-slide, an arm from such dog in the path of the coin, and a rock-shaft with arm and push-button, so as to force said coin along its slide, and thus trip the dog and permit the parts to operate.

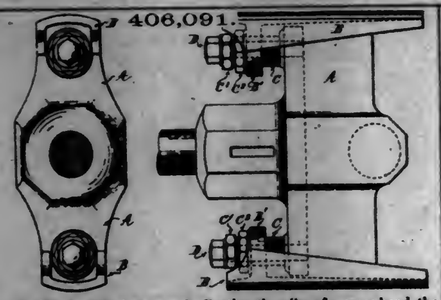
406,090. CORN-HUSKER AND FEED-CUTTER. FRED I. COLLIN, Freedom, Ill. Filed June 30, 1888. Serial No. 278,096. (No model.)

Claim.—1. In a combined corn-husker and feed-cutter, the combination of the husking-rollers having spiral grooves, the cutting devices consisting of the radial knives secured to the rotary horizontal shaft and moving in a vertical plane, and a rigid horizontal cross-piece located in proximity to said knives, all substantially as described.

2. In a combined corn-husker and feed-cutter, the combination, with the husking-rollers, of a depending knife located in front of the same and adapted to cut up any stalks that are presented sidewise to the rollers, substantially as described.

3. In a combined corn-husker and feed-cutter, the combination of the husking-rollers having spiral grooves thereon, the depending knife forward of the husking-rollers, and the fodder-cutting devices consisting of the radial knives I, secured to a rotary shaft, and the rigid cross-piece J, all substantially as described.

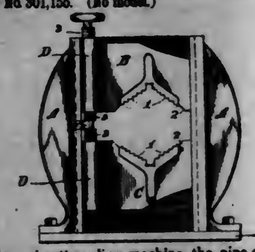
4. In a combined corn-husker and feed-cutter, the combination of the husking-rollers D D', having spiral grooves, the cutting mechanism consisting of the radial knives secured to a horizontal shaft and the inclined pair of lower rollers E F, which convey the ears of corn to the elevator, one of said rollers having projecting teeth and the other being spirally grooved, all substantially as described.



5. In a combined corn-husker and feed-cutter, the combination of the main frame A, feed-table B, located in the front portion thereof, the depending knife C above the feed-table, the husking-rollers D and D', having spiral grooves, the radially-arranged fodder-cutting knives I, secured to a rotary shaft, the horizontal cross-piece J, and the inclined lower rollers E F, for feeding the ears of corn to the elevator, substantially as described.

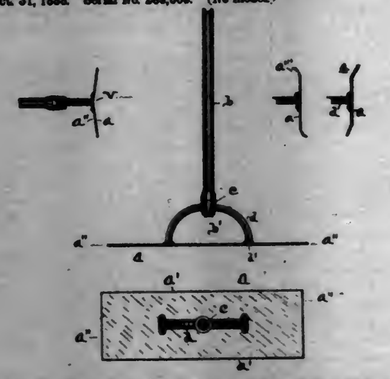
6. In a combined corn-husker and feed-cutter, the combination of the husking-rollers D D', carried on shafts *d* and *d'*, journaled in yielding bearings, the radially-arranged cutting-knives secured to a rotary shaft, the inclined lower rollers E F, for conveying the ears of corn to the elevator, and suitable connecting-gearing whereby all of the parts just mentioned are simultaneously actuated, substantially as and for the purpose described.

406,091. ADJUSTMENT OF GIBS OF CROSS-HEADS OF STEAM-ENGINES. EMILY A. CORLISS, Providence, R. I., administratrix of George H. Corliss, deceased. Filed July 13, 1888. Serial No. 279,893. (No model.)



Claim.—1. The hollow externally-threaded sleeve C, bolt D, and a check-nut C', combined with each other and with a gib B, provided with an ear B', said ear being tapped to receive said sleeve, and said check-nut taking its bearing against the outer face of said ear B' and serving, as specified, to rigidly secure said sleeve after adjustment of the latter.

406,091.

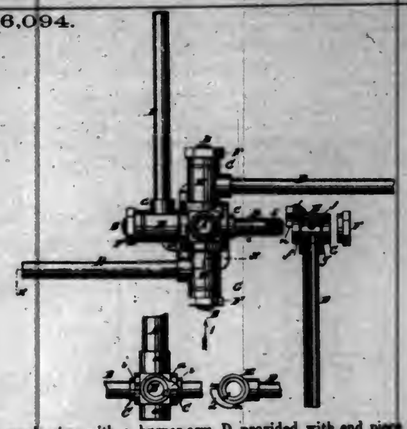


2. The described means of adjusting the gibe of a cross-head, the same consisting of a hollow sleeve C, externally threaded, and the bolt D, threaded at one end, combined with each other and with the gib B and cross-head A, all arranged as shown, and adapted to serve as specified.

406,092. PIPE-THREADING MACHINE. RODERICK P. CURTIS, Southport, assignor to Curtis & Curtis, Bridgeport, Conn. Filed Feb. 25, 1889. Serial No. 301,155. (No model.)

Claim.—In a pipe-threading machine, the pipe-clamping jaws having bearings within the casing, the front bearings being shorter than the rear bearings, and extended a slight distance beyond the grasping-points of the jaws, the heel ends of said jaws having elongated bearings and screw-housings extending the full length of said jaws, substantially as set forth.

406,093. SCRAPER. PETER VAN-ISM HERBERT, Geneva, N. Y. Filed Oct. 31, 1888. Serial No. 289,669. (No model.)



Claim.—The described scraper, consisting of the blade *a*, the forked arms *d*, provided with transverse extensions at their ends by which the arms *d* are fixed to the blade, the arms being united at their junction by the handle-holder *c*, which is provided with the socket *b'*, in which the handle *b* is fixed, as set forth.

406,094. FOLDING JOINT FOR CHANDELIERS. MOSES F. GALE, Brooklyn, N. Y. Filed Mar. 17, 1887. Serial No. 231,226. (No model.)

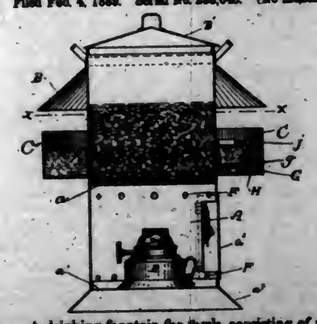
Claim.—1. In a chandelier, the combination, with a stationary supply-pipe, of a burner branch or arm hinged or pivoted to the said supply-pipe so as to fold upon the same and cut off the supply to the burners and to unfold into position for use and admit supply to the burners, provided with stop-valve K, substantially as and for the purpose set forth.

2. In a chandelier, the combination of the supply-pipe A, having nipple B, with side opening communicating by a channel *c* with the

406,094.

said supply-pipe, with a burner-arm D, provided with end piece E, having bore *e*, fitting the said nipple and placing the said channel *c* in communication with the bore in the said arm D when unfolded, substantially as specified.

3. In a chandelier, the combination of the supply-pipe A, having threaded nipple B, with shoulder C, and side opening communicating by a channel *c* with the said supply-pipe, and with an arm D, provided with an end piece E, having bore *e*, with end rabbets *f* and packing *g*, the ring G, and nut F to make a movable and tight-fitting joint between the said supply-pipe and its arm.

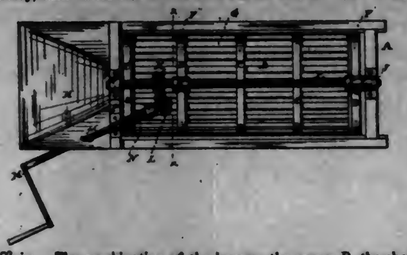


4. In a chandelier, the combination of the supply-pipe A, having threaded nipple B, with shoulder C, and side opening communicating by a channel *c* with the said supply-pipe, with an arm D, provided with an end piece E, having bore *e*, with end rabbets *f* and packing *g*, the ring G and nut F, and the screw H, threaded in an end socket in the nipple B with threads wound reversely to those of the nut F and nipple B and bearing with its head directly upon the end surface of the said nut.

5. In a chandelier, the combination of the supply-pipe A, having stops *i*, nipple B, with side opening communicating by a channel *c* with the said supply-pipe, with an arm D, provided with lugs *m n*, and an end piece E, having bore *e* fitting the said nipple and placing the said channel *c* in communication with the bore in the said arm D when unfolded, substantially as specified.

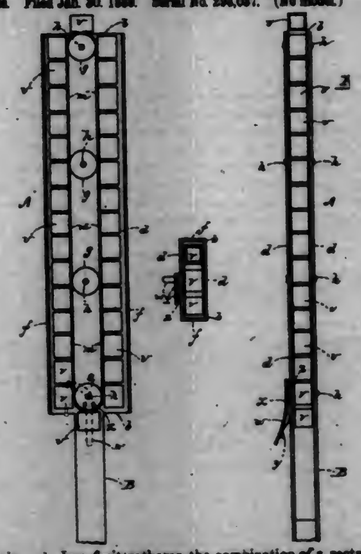
6. In a chandelier, the combination of the supply-pipe A, having chamber *a*, and four nipples B, having channels *c*, as described, with the four arms D, having T-joints E and pivoted one upon each of the said nipples, the said chamber *a* being provided with stationary stops *i* and each of the said arms being provided with two stops *m n*, substantially as specified.

7. In a chandelier, the combination of the supply-pipe A, having stops *i*, nipple B, with shoulder C, and side opening communicating by a channel *c* with the said supply-pipe, with an arm D, provided with an end piece E, having lugs *m n*, bore *e*, with end rabbets *f* and packing *g*, the collar G, and means for pressing the said collar inward upon the said nipple to make a movable and tight-fitting joint between the said supply-pipe and arm, substantially as specified.



406,095. DRINKING-FOUNTAIN FOR FOWLS. WILLIAM F. HEWES, Shirley, Mass., assignor of one-half to Joseph S. Cherry, same place. Filed Feb. 4, 1889. Serial No. 298,645. (No model.)

Claim.—A drinking-fountain for fowls, consisting of a lower section or base to receive means for heating the water, and provided

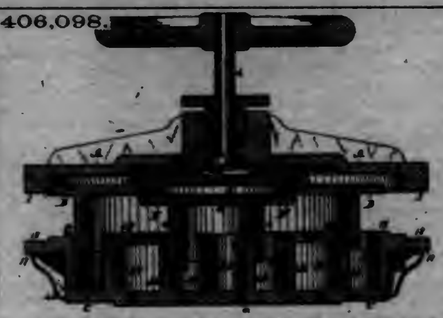


with a door and air-holes to regulate the heat, an upper section or tank to contain water and provided with a cover loosely closing the tank, an annular drinking-trough surrounding the tank and provided with an educt leading from the water-tank to the said trough, and a valve and float for automatically regulating and controlling said educt, substantially as set forth.

406,096. POTATO SCREEN AND SEPARATOR. ISAAC W. HOOVER, Avery, Ohio. Filed Sept. 24, 1888. Serial No. 286,202. (No model.)

Claim.—The combination of the hopper, the screen B, the shaft I, the oblique shaft N, having the crank thereon at the side of the hopper, and the bevel-gear K L, arranged within the screen, whereby the gearing is placed out of the way of the operator and material and the operator is enabled both to feed and to rotate the screen.

406,097. FRUIT-GATHERER. ALVIN C. HOWES, Middleborough, Mass. Filed Jan. 30, 1889. Serial No. 298,087. (No model.)



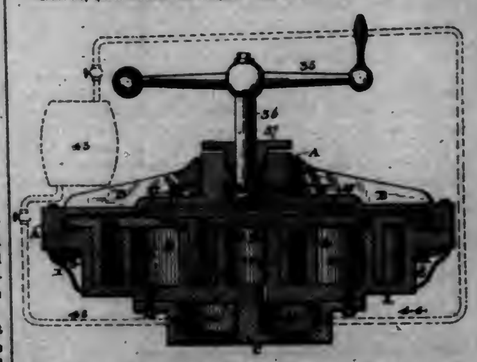
Claim.—1. In a fruit-gatherer, the combination of a rectangular body open at both ends and provided with a handle, wheels journaled centrally in said body, an endless belt traveling in the body on said wheels, a series of cups or holders secured to said belt, and a spring-actuated catch mounted on the body for preventing said belt from traveling on said wheels, substantially as described.

2. In a fruit-gatherer, the combination of the body A, open at *b b* and having the handle B, the wheels *g*, journaled in said body, the endless belt *m*, traveling in the body, disposed on said wheels and provided with the holders *v*, the lever *w*, pivoted on the body and provided with the pin *z*, and the spring *y*, for projecting said pin into the path of said holders, substantially as described.

406,098. STEAM-PUMP. EDWARD C. JOHNSON, Macon, Ga. Filed Aug. 31, 1887. Serial No. 248,208. (No model.)

Claim.—1. A steam-pump consisting, essentially, of a casing having two concentric chambers each divided by a radial partition, and each provided with inlet and outlet ports, and a piston consisting of a disk of greater diameter than the largest chamber, said disk having two concentric flanges extending into the chambers of the casing, as described, the disk extending over the outer and inner walls of the steam and water chamber in all positions of the piston, the parts combined and operating substantially as described.

406,098.



2. A steam-pump consisting, essentially, of a casing having two concentric chambers divided as described, said chambers separated by a non-conducting space, and having separate inlet and exhaust ports, and a piston consisting of a disk of greater diameter than the widest chamber, said disk having concentric flanges extending into each chamber in the casing, all combined substantially as described.

3. In a steam-pump, a cylinder containing concentric steam and water chambers formed by vertical concentric partitions inclosing spaces 24 and 25, ports for the ingress and egress of steam and water, and an orifice connecting the space 25 with the water-reservoir, substantially as described.

4. A steam-pump consisting of the casing having two concentric annular chambers divided as described and having separate inlet and exhaust ports, and a piston having a disk of greater diameter than the largest chamber and extending over the walls thereof in all positions of the piston, and having concentric annular flanges extending into the steam and water spaces, as described, said piston having a passage by which steam is admitted between the outer face of the disk and the casing to balance the pressure, all in combination, substantially as described.

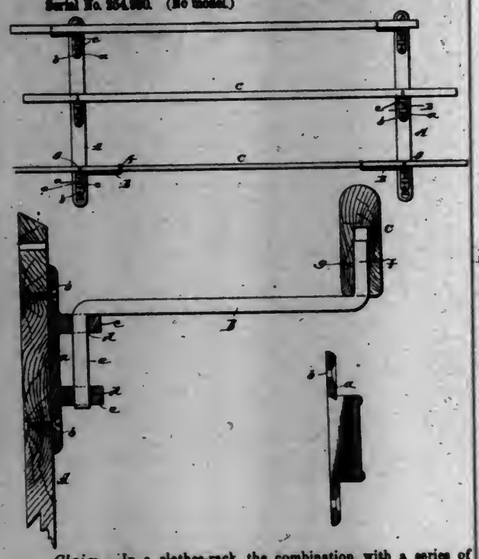
5. In a steam-pump, the combination of a casing having concentric annular steam and water chambers divided by partitions and provided with inlet and outlet ports, as described, and a piston having a disk of greater diameter than the largest chamber extending over the walls thereof in all positions of the piston, said disk having concentric flanges extending into the chambers of the casing, but in eccentric relation thereto, the flange in the steam-chamber having passages *b' d* for steam in proximity to the steam-ports in the chamber, all substantially as described.

406,099. STEAM-PUMP. EDWARD C. JOHNSON, Atlanta, Ga. Filed Nov. 20, 1888. Serial No. 291,416. (No model.)

Claim.—1. In a steam-pump of the character described, the combination of a casing having concentric annular steam and water chambers partitioned and provided with ports, as described, and a compound piston consisting of independent broken rings in said chambers provided with caps and coupled to move together, substantially as described.

2. In a steam-pump, the combination, with the casing having steam and water chambers of the character described and provided with inlet and outlet ports, of the steam-piston ring having a cover extending across the ring from side to side, and the water-piston ring having a similar cover, and a water-passage by which fluid-pressure is admitted between the covers, substantially as described.

3. The combination, with the casing and the gyrating compound piston described, of a projection on the piston and a starting-lever



passing through the case and having a bearing-face to engage said projection on the piston.

4. In a steam-pump of the character described, the combination, with the casing and compound piston, of a projection on the piston and a shaft passing through the cover of the casing, said shaft having a shoulder in position to engage the projection on the piston, and an incline by which the starting-shaft may be automatically thrown out of engagement.

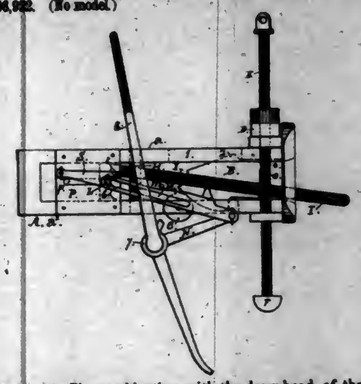
5. The combination, with the casing having annular steam and water chambers partitioned, as described, and having ports, as stated, and the balanced compound piston having overhanging covers, of the partitioned space between the walls of the chambers, whereby the balancing-pressure may be adapted to the conditions of the work.

6. In a pump of the character described, the combination of the annular steam and water chambers partitioned, as described, and having inlet and outlet ports, the broken ring-pistons in said chambers having caps covering the chamber-walls, and a passage leading above the water-cap from the delivery side of the pump, substantially as set forth.

406,100. CLOTHES-DRIER. JOSEPH L. JONES, Utica, N. Y., assignor of one-half to Foster Brothers, same place. Filed Nov. 11, 1887. Serial No. 254,990. (No model.)

Claim.—In a clothes-rack, the combination, with a series of plates arranged in two vertical rows and in pairs horizontally, each plate having a socket therein, of the arms having downwardly-turned ends loosely resting in said sockets and upwardly-turned ends, horizontal cross-bars each loosely supported upon the upwardly-turned ends of a pair of arms, the said cross-bars being in different horizontal planes, whereby each bar can be moved toward or away from the wall or other support independently of the other bars, substantially as and for the purpose set forth.

406,101. VEHICLE-AXLE. HERMAN F. KARTOWITZ, Donaldson, Minn. Filed Feb. 6, 1889. Serial No. 298,791. (No model.)



Claim.—1. An axle constructed in two parts A and B, the one entering the other and adapted to move vertically therein, the part A being provided with a tongue G, and the part B being provided with a cap K, in combination with elastic rubber cushions H and I, all constructed and arranged substantially as described.

2. An axle A, having bifurcated ends forming side walls C C, provided with one or more vertical recesses in the inner surfaces of the walls, and a tongue G, in combination with an axle-spindle B, terminating in an end E, having a chamber D, and provided with guides F F, a cap K, secured rigidly to the end E, and elastic cushions H and I, substantially as described.

406,102. LEATHER-POLISH. GUSTAV LANGENHAGEN, Leipsic, Saxony, Germany. Filed Jan. 26, 1887. Serial No. 225,570. (No specimens.)

Claim.—A leather-polish consisting of forty per cent. of carnauba-wax, one per cent. of steatite, thirty per cent. of oil of turpentine, five per cent. of aniline, (nigrosine,) two per cent. of Congo black, eight per cent. of almond-kernel oil, four per cent. of beeswax, and ten per cent. of ozocerite, substantially as described.

406,103. CAR-COUPLING. SIMON S. LEHMAN, Martinsville, and CHRISTIAN K. HERR, West Lampeter, Pa. Filed Feb. 6, 1888. Serial No. 263,922. (No model.)

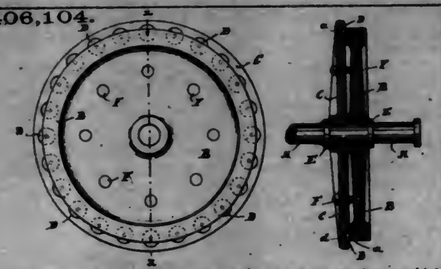
Claim.—1. The combination, with the draw-head, of the sliding block, a roller pivoted in the bottom of the draw-head and upon which the sliding block rests, the coupling link and pin, a yoke for raising the pin when the coupling is to be engaged, and a lever for operating the yoke, substantially as and for the purpose specified.

2. In a draw-head, the combination, with the coupling-pin and a yoke for raising the same, of a movable plate which forms a bearing for the rear end of the coupling-link and a device whereby the yoke may be raised and the said plate moved backward or forward, substantially as and for the purpose specified.

3. In a draw-head, the combination, with the coupling-pin, the yoke for raising the same, and a movable bearing-plate for the rear end of the link, of the rock-shaft, mechanism for operating the same, and connections between the rock-shaft and the yoke and bearing-plate, whereby the shaft may raise the yoke and move the plate longitudinally in the draw-head, substantially as and for the purpose specified.

4. In a draw-head, the combination, with the yoke for raising the coupling-pin and the movable bearing-plate for the inner end of the coupling-link, of the rock-shaft, a lever for engaging with and raising the yoke, plates M, connected with the rock-shaft and provided with longitudinal slots, and projections from the sides of the said bearing-plate which engage the longitudinal slots in the plates M, all arranged and constructed substantially as and for the purpose specified.

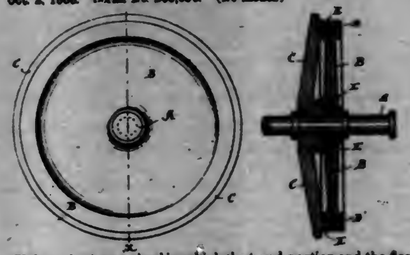
5. In a draw-head, the combination, with the movable plate placed therein as a bearing for the inner end of the coupling-link and the rock-shaft, of slotted plates M, pivotally connected with the rock-shaft, and projections from the sides of the said bearing-plate which engage the longitudinal slots in the plates M, substantially as and for the purpose specified.



6. In a draw-head, the combination, with the rock-shaft and the bearing-plate for the rear end of the coupling-link, of slotted plates M, connected with the rock-shaft, projections from the sides of the bearing-plate which engage the slots in the plates M, and latches adapted to engage the projections from the sides of the bearing-plate when occupying its most forward position, the upper edges of the plates M being constructed to raise the latches as the said plates are moved backward, substantially as and for the purpose specified.

406,104. CAR-WHEEL. HOSEA W. LIBBEY, Boston, Mass. Filed Oct. 2, 1888. Serial No. 286,956. (No model.)

Claim.—1. A wheel formed of two independent parts B C, bolted together, with a series of disks D arranged around the inner face of the flange portion and projecting below the tread, substantially as and for the purposes set forth.



2. In a car-wheel, the tread portion B and flange portion C, provided with a series of circular recesses, in combination with the disks D, substantially as and for the purposes set forth.

406,104.

3. A car-wheel provided with a series of disks in the flange, which project below the tread, substantially as and for the purposes set forth.

406,105. CAR-WHEEL. HOSEA W. LIBBEY, Boston, Mass. Filed Oct. 2, 1888. Serial No. 286,956. (No model.)

Claim.—1. A car-wheel in which the tread portion and the flange portion are independent of each other and both mounted upon the axle with anti-friction rollers let into the inner face of one portion and running on the adjacent face of the other portion, substantially as and for the purposes set forth.

2. In a car-wheel, the flange portion C, in combination with the tread portion B, provided with radial recesses, the anti-friction rollers E, and axle A, substantially as shown and described.

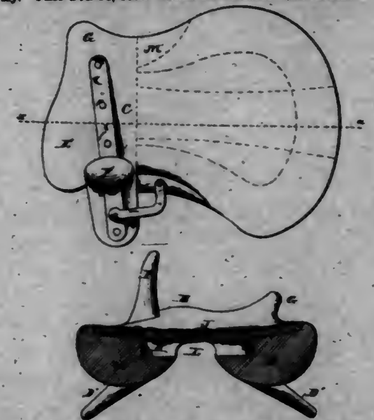
3. In a car-wheel, the independent flange portion C and tread portion B, in combination with anti-friction rollers E, substantially as and for the purpose set forth.

406,106. BELT-FASTENER. BENJAMIN LYON, Bridgeport, assignor, by mesne assignments, to George B. Smith, Norwich, Conn. Filed Dec. 19, 1888. Serial No. 294,055. (No model.)

Claim.—A machinery-belt having its meeting edges united by a series of interlocked T-headed flaps and open button-holes and secured by end joints, which consist of T-headed flaps interlocked with opposite closed button-holes, as and for the purposes hereinbefore set forth.

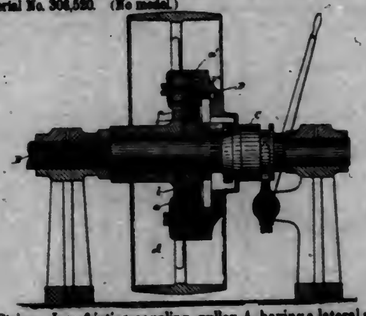
406,107. LAMP-STANDARD. CHARLES MASCHMEYER, Meriden, Conn., assignor to Edward Miller & Company, same place. Filed Dec. 29, 1888. Serial No. 294,967. (No model.)

Claim.—1. In a standard for a lamp or other article, the combination of an outer tube, an inner telescoping tube or rod, a clamp normally engaging with said inner rod, and a sleeve on said inner rod fixed as to rotary motion thereon and supported as to longitudinal motion by said clamp, said sleeve and said clamp being provided one



406,107.

with a projecting hub, the other with a saddle-shaped portion, whereby under the rotation of said sleeve said clamp may be freed from engagement with said inner rod, substantially as described.

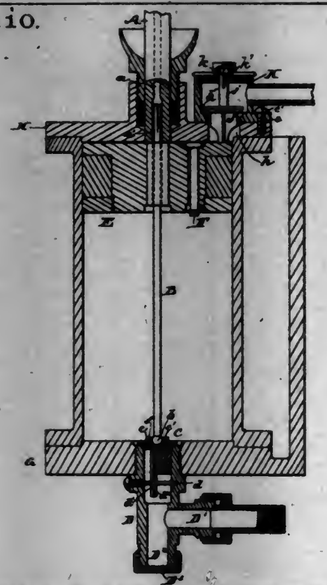


2. In a clamping device adapted to engage an inner telescoping tube or rod, the combination of a clamp adapted to lock said inner rod against longitudinal motion, and a sleeve supported by said clamp and adapted to receive rotary motion from the axial rotation of said inner rod, said clamp and said sleeve being provided one with a projecting hub, the other with a saddle-shaped portion, whereby under the rotation of said sleeve said clamp may be freed from engagement with said inner rod, substantially as described.

406,108. SIDE-SADDLE TREE. MICHAEL J. MORAN, Covington, Ky. Filed Dec. 26, 1888. Serial No. 294,899. (No model.)

Claim.—The herein-described improved side-saddle, composed of the side bars A, having recesses K, cut or rabbeted into their upper adjacent faces, thereby affording a free and extended ventilating-space below the seat, the cantle B, connecting the rear ends of said side bars, the front cross-bar C, connecting the forward ends of said bars provided with the horns F and G, and the front bow E and the veneer seat J, secured to said side bars, cantle, and front bar, affording a broad continuous seat, substantially as shown and described.

406,109. FRICTION-CLUTCH. ANTHONY NELSON, Boston, Mass., assignor to James Bennett Forsyth, same place. Filed Apr. 26, 1889. Serial No. 308,520. (No model.)

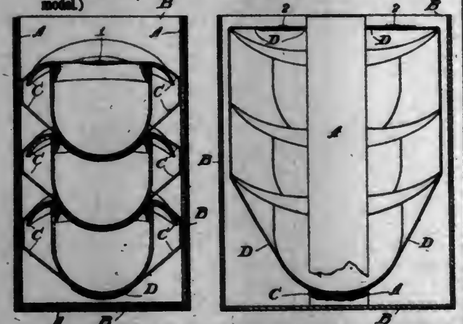


Claim.—In a friction-coupling, pulley A, having a lateral annular threaded flange *d*, combined with a screw-cap F and a locking device *f f*, the flange and cap forming a chamber, all substantially as and for the purpose set forth.

406,110. VACUUM-PUMP. JAMES W. PACKARD, Brooklyn, N. Y., assignor of one-half to Norman Hubbard, same place. Filed Sept. 28, 1887. Serial No. 250,932. (No model.)

Claim.—1. In a mechanical air-pump, the combination of the cylinder, the piston, the valve in the piston, and the projecting valve-

406,110.



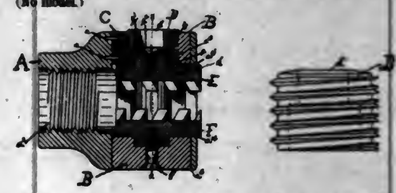
stem, which strikes the cylinder-head as the piston approaches one extremity of its travel, substantially as described.

2. In a mechanical air-pump, the combination of the cylinder, the piston, the positively-operated induction-valve at one end of the cylinder, the valve in the piston, together with its projecting valve-stem, which strikes the cylinder-head, and the eduction-valve at the other end of the cylinder, together with its projecting valve-stem, which is struck by the piston, substantially as described.

3. In a mechanical air-pump, the combination of the cylinder, the piston with its hollow piston-rod bored to different diameters at different points in its length, the valve in the cylinder-head, the valve-stem, which extends into the hollow piston-rod and has frictional contact therewith, and the universal joint between said valve-stem and valve, whereby said valve is positively operated in both directions, substantially as described.

4. In a mechanical air-pump, the combination of the cylinder, the piston with its hollow piston-rod, the valve in the cylinder-head, the valve-stem, which extends into the hollow piston-rod and has frictional contact therewith by means of the split and expanded end of said valve-stem, and the universal joint between said valve-stem and valve, substantially as described.

406,111. HAT-PACKING SUPPORT. COLA G. PECK and EDWARD S. DAVIS, Danbury, Conn. Filed Mar. 25, 1889. Serial No. 304,741. (No model.)



Claim.—1. A hat-packing support comprising a frame snugly fitting within a band-box and removable therefrom, and a series of flexible rings secured one above the other to opposite sides of said frame, substantially as set forth.

2. A hat-packing support comprising a frame snugly fitting within a band-box and removable therefrom, a series of flexible rings secured one above the other to opposite sides of said frame, and a single strip of paper or other flexible material extending beneath the lower ring and at right angles thereto and adapted to be drawn up snugly against the front and rear edges of the brims, substantially as shown and described.

3. A hat-packing support comprising a frame, a series of flexible rings secured within said frame one above the other, and a single flexible ring extending around said series in a plane at right angles thereto, substantially as shown and set forth.

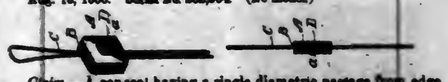
406,112. DRILL-CHUCK. LOUIS REDER, Baltimore, Md., assignor to Clarence M. Kemp, same place. Filed Apr. 23, 1888. Serial No. 308,382. (No model.)

Claim.—1. A screw-body having two threads, both inclined to the right or both inclined to the left, one of the threads being of double pitch to the other thread, in combination with two threaded bodies, one of which has thread of double pitch to the other, with both of which the screw-body has threaded engagement at the same time.

2. A chuck having its operating-screw threaded with two right-hand threads or two left-hand threads, one of the threads having double the pitch of the other.

3. A chuck having two jaws and but one operating-screw, which has its threads inclined only in one direction, the operating-screw being placed directly over the line of strain, whereby its power is applied in the straightest and most direct manner to the work.

4. The combination of a chuck-body with a sleeve in which the jaws are placed, the sleeve having a movement in the chuck-body at right angles to its axis.



5. The combination of chuck-body A with dog C, sleeve B, and screw D.

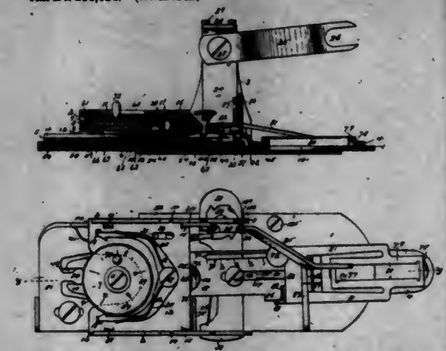
6. The combination of chuck-body A with dog C, sleeve B, screw D, and jaws E and F.

7. The combination of screw D with jaw E, having surface K, shoulder *c*, and ring c^3, washer c^4, and screw c^5.

8. Interlocking jaws of a chuck having their projections and recesses obliquely disposed across the face of the jaws, as described, producing the fullest distribution of the frictional surfaces, as and for the purpose described.

406,113. CAR-SEAL. THEODORE SAUNDERS, Danbury, Conn. Filed Aug. 16, 1888. Serial No. 282,904. (No model.)

Claim.—A car-seal having a single diametric passage from edge to edge for the reception of both ends of the sealing-wire, and a central opening at which both portions of the wire may be crimped, bent, or upset, substantially as described, said single passage facilitating the wiring of the seal and enabling the two portions of the wire to be twisted together, either above or below the central opening, or both above and below the point at which the wire is upset.



406,114. PRESS FOR CAR-SEALS. THEODORE SAUNDERS, Danbury, Conn. Filed Aug. 16, 1888. Serial No. 282,905. (No model.)

Claim.—1. In an implement of the character described, the stationary lever provided with two arms, in combination with a presser-lever pivoted to the lower of said arms and carrying a punch capable of sliding in said presser-lever independent thereof, and an actuating-lever pivoted to said lower arm of said stationary lever and provided with cam-surfaces adapted to first operate the punch and then the presser-lever, as specified.

2. In an implement of the character described, the stationary lever terminating in two arms, one adapted to imprint a seal, the other forming bearings for the movable parts of the device, in combination with the lever D, pivoted to the latter arm, the punch carried by said lever, the actuating-lever adapted to operate the lever D and punch, a spring for disteeding the actuating-lever, and a strap connected to the lever D and embracing said actuating-lever, as and for the purpose specified.

406,115. BUTTON-HOLE ATTACHMENT FOR SEWING-MACHINES. CARL J. A. SJOBERG, Bridgeport, Conn., assignor to the Smith & Egge Manufacturing Company, same place. Filed Mar. 12, 1887. Serial No. 230,621. (No model.)

Claim.—1. In a button-hole-sewing attachment for sewing-machines, the combination, with a pivoted work-carrier provided with a single rack, and means for vibrating said carrier to produce the over-edge stitch, of a laterally-shifting plate, a feed-wheel and pinion journaled within and carried by said plate, and means controlled by the work-carrier and operated by the primary oscillating lever for shifting said plate and carrier when the latter has reached the respective limits of its forward and backward movements, whereby the bar-ring is effected and the opposite rows of overedge stitches are sewed, substantially as set forth.

2. In a button-hole attachment, the combination, with a pivoted work-carrier provided with a rack, and means for vibrating said work-carrier to produce overedge stitches, of a pinion and feed-wheel for feeding said work-carrier lengthwise, operating mechanism for said feed-wheel, a reversing-plate by which said pinion and feed-wheel are carried, and automatically-operating appliances for moving said reversing-plate laterally when the end of a button-hole is reached to effect the shipper movements of the said work-carrier.

3. In a button-hole attachment, the combination, with a work-carrier having a rack, of a pinion engaging said rack, a feed-wheel connected with said pinion and having reverse sets of teeth, a feed-plate having alternately-operating pawls to actuate said feed-wheel, a feed-slide to operate said feed-plate, a feed-lever engaging said feed-slide, and an operating-lever having an adjustable connection with said feed-lever.

4. In a button-hole attachment, the combination, with a work-carrier having a rack, of a pinion engaging said rack, a feed-wheel connected with said pinion and having reverse sets of teeth, a feed-plate having alternately-operating pawls to actuate said feed-wheel, a feed-slide to operate said feed-plate, a feed-lever engaging said feed-slide and provided with adjusting or set screws, and an operating-lever for the said feed-lever.

5. In a button-hole attachment, the combination, with a work-carrier provided with a rack and with stumps or projections, a pinion for engaging said rack, and means for intermittingly rotating said pinion in opposite directions, of a reversing-plate on which the said pinion is mounted and which is provided with separated sets of reversely-arranged teeth, a double-pointed reversible pawl in position to be engaged by said stumps or projections, a moving part, as lever 42, to which the said pawl is pivoted, and means for actuating said moving part to operate said pawl.

6. In a button-hole attachment, the combination, with a work-carrier provided with a rack and with stumps or projections 63 65, a pinion engaging said rack, and means for operating said pinion, of a reversing-plate by which the said pinion is carried, and which is provided with two separate and reversely-arranged sets of teeth, a double-pointed reversible pawl 43 in position to be engaged by said stumps or projections, a lever 42, by which said pawl is carried, the cross-slide 33, connected with said lever, and means for reciprocating said cross-slide.

7. In a button-hole attachment, the combination, with a work-carrier provided with a rack and with stumps or projections 63 65, a pinion engaging said rack, and means for operating said pinion, of the pivoted reversing-plate 10, by which the said pinion is carried, and which is provided with the separated sets of teeth 55 56, the lever 42, the cross-slide 33, connected with said lever, means for operating said cross-slide, the reversible double-pointed pawl 43, carried by said lever and having the lug 64 and the V-shaped projection 57, and the spring 58, to engage the opposite sides of said projection.

8. In a button-hole attachment, the combination, with a work-carrier provided with a rack and with the stumps or projections 63 65, one of which is adjustable, of a pinion engaging said rack, means for intermittingly rotating said pinion in opposite directions, a pivoted reversing-plate by which said pinion is carried, and which is provided with reverse sets of ratchet-teeth, a reversible double-pointed pawl in position to be engaged by said stumps or projections, the lever 42, by which said pawl is carried, and means for operating said lever.

9. In a button-hole attachment, the combination, with a work-carrier provided with a rack and stumps or projections 63 65, of a pinion engaging said rack, means for operating said pinion, the pivoted reversing-plate 10, having two reverse sets of ratchet-teeth and slot 53, the bed-plate having the pin 54, a reversible double-pointed pawl in position to be engaged by said stumps or projections, a movable part by which said pawl is carried, and means for operating said movable part.

10. In a button-hole attachment, the combination, with a work-carrier 4, having the rack 5, of the pinion 6, the feed-wheel 7, having the reverse sets of teeth 8 9, the pivoted reversing-plate 10, by which the said pinion and feed-wheel are carried, means for shifting said reversing-plate laterally, the feed-plate 12, having the slot 32, the spring-pressed pawls 16, carried by said plate, the feed-slide 21, having teeth 22 and pin 31, the feed-lever having teeth 23, and the operating-lever 25.

11. In a button-hole attachment, the combination, with a work-carrier 4, having the rack 5 and the stumps or projections 63 65, of the pinion 6, the feed-wheel 7, having reverse sets of teeth 8 9, the pivoted reversing-plate having the reverse sets of teeth 55 56, separated from each other, the feed-plate 12, having the slot 32 and the spring-pressed pawls 16, the feed-slide 21, having the pin 31, means for reciprocating said slide, the double-pointed reversible pawl 43, the lever 42, by which said pawl is carried, the cross-slide 33, connected with said lever, and means for reciprocating said cross-slide.

12. In a button-hole attachment, the combination, with a work-carrier provided with a rack and with stumps or projections, a pinion engaging said rack, and means for rotating said pinion in opposite directions, of a reversing-plate by which said pinion is carried, and which is provided with two sets of teeth, a reversible pawl in position to be engaged by said stumps or projections, a moving part, as lever 42, by which said pawl is carried, means for operating said moving part, and spring 52, pressing against said reversing-plate and serving to hold it in the different positions to which it may be moved by said pawl.

13. In a button-hole attachment, the combination, with the work-carrier 4, having the rack 5 and the stumps or projections 63 65, of the pinion 6, the feed-wheel 7, having reverse sets of teeth 8 9, the feed-plate 12, having slot 32 and pawls 16, the feed-slide 21, having pin 31 and the pawl 40, means for reciprocating said feed-slide, the reversing-plate 10, having sets of teeth 55 56, the spring 52, the cross-slide 33, having a yoke or opening, the cam 36, and the ratchet-wheel 37, with which the said cam rotates.

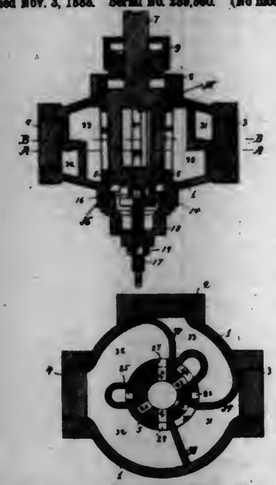
14. The combination, with a button-hole attachment, of a cutting-blade of proper length to cut an entire button-hole at a single stroke, a removable cutter-holding plate by which the said blade is carried, and supports on said attachment for removably holding said plate in place on the attachment, with the cutting-blade in cutting position beneath the needle-bar of the sewing-machine.

15. The combination, with a button-hole attachment, a cutter-holding plate 91, and means for removably supporting the same on the attachment, said plate being provided with a cutter-retaining flange 97, of the blade or cutter 96, having the slot 99, and the set-screw 98, for detachably securing said blade to said flange.

16. In a button-hole attachment, the combination, with the bed-plate 1, having the slot 101, of the cap having the loop or upturned projection 95, the work-carrier having the standard 86, and the removable cutter consisting of the plate 91, having an opening or slot to receive said standard, the arm or shank 94, to engage said loop or projection, and the needle-holes 98, and a cutting-blade or cutter proper 96.

17. In a button-hole attachment, the combination, with the work-carrier, its rack and pinion, and operating mechanism for the latter, of the pivoted reversing-plate by which said pinion is carried, an adjustable fulcrum for said plate, and means for swinging said plate laterally on its fulcrum when the end of a button-hole has been reached.

18. In a button-hole attachment, the combination, with a work-carrier provided with a rack, of a pinion engaging said rack, means for operating said pinion, a pivoted reversing-plate by which said pinion is carried, and which is provided with the slot 49, the adjustable plate 51, having the stump or projection 50 extending into the



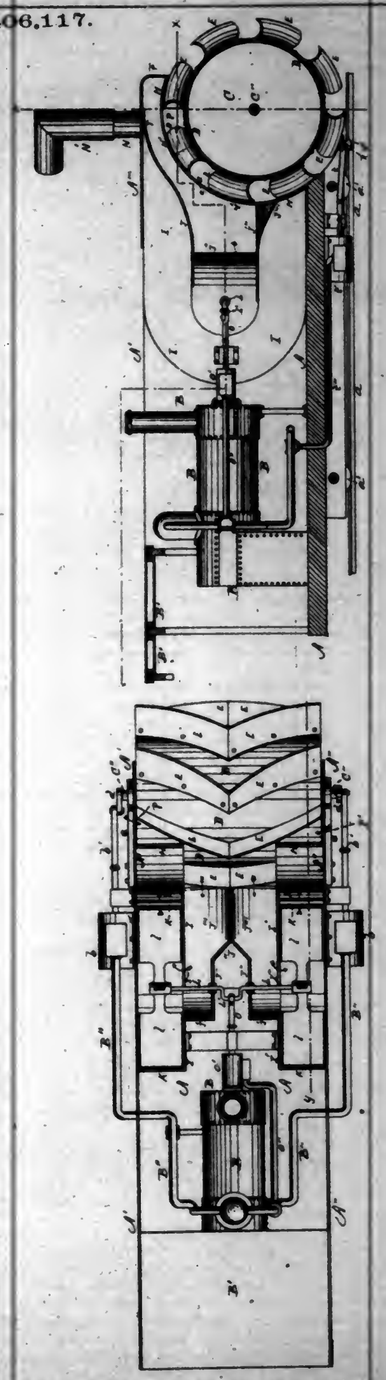
said slot 49 and serving as a fulcrum for said reversing-plate, and means for swinging the said reversing-plate laterally on its fulcrum stump or projection when the end of a button-hole has been reached.

19. In a button-hole attachment, the combination, with the work-carrier having a rack, of a pinion engaging said rack, a feed-wheel connected with said pinion and having reverse sets of teeth, operating mechanism for said feed-wheel, a reversing-plate by which said pinion and feed-wheel are carried, means for operating said reversing-plate, a feed-plate provided with openings 19, and two spring-pressed pawls having lugs extending into said openings, and thereby having their movements limited.

20. In a button-hole attachment, the combination, with a gage 70 and a work-carrier having a rack, of a pinion engaging said rack, a feed-wheel connected with said pinion and having a gage 69, mechanism for operating said feed-wheel and for reversing the direction of its rotation, and the cap or housing having an opening 60, and a point 74, to serve as an indicator in connection with the said gage 69.

21. In a button-hole attachment, the combination, with a work-carrier provided with a rack and with the reversing stumps or projections 63 65, and having also a slot 71, in which stump 65 is adjustable, and a gage 70, adjacent to said slot, of a pinion engaging said rack, a feed-wheel connected with said pinion and provided with a gage 69, a reversing-plate by which said feed-wheel and pinion are carried, means for operating said feed-wheel and reversing-plate, and a cap having a point 74, to serve as an indicator for the said feeding-wheel gage.

406,116. **BALANCE-VALVE.** CHARLES A. SOUTHWICK, Peabody, Mass. Filed Nov. 3, 1888. Serial No. 289,860. (No model.)



Claim.—1. The balance-valve herein described, consisting of the valve-case, having inlet and outlet branches 2, 3, and 4, a central annulus 5, provided with diametrically-opposed ports 25 26 and 27 28, the diaphragms or partitions 37 38 39, extending from the exterior of the annulus to the interior of the valve-case and forming three separate chambers 31, 32, and 33, intervening between said annulus and valve-case, and the rotary valve-plug 6, having imperforate upper and lower ends, a hollow center 34, and diametrically opposed ports 20 23 and 21 24, all of which open into the hollow center of the valve-plug, substantially as described.

2. A balance-valve consisting of a valve-case having inlet and outlet branches, a central annulus, comprising a central cylindrical shell, separated from the interior of the case and having a series of lateral ports through its side wall, a series of diaphragms or partitions extending from the exterior surface of the annulus to the interior surface of the case and forming a series of separated chambers intervening between the annulus and case, and a rotary valve-plug having imperforate upper and lower ends, a hollow center, and a series of lateral ports opening through its side wall, and all of which open into the hollow center of the valve-plug, substantially as described.

406,117. **RAILWAY SNOW-PLOW.** LOUIS E. TEISSONNI, Bristol R. I. Filed Sept. 28, 1888. Serial No. 286,061. (No model.)

406,117.

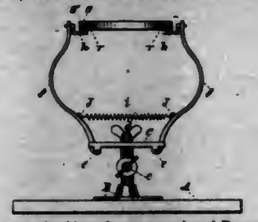
Claim.—1. The trough-shaped clearers E, of the inverted-V shape shown, in combination with the cylinder D and wheels C C, substantially as and for the purpose set forth.

2. The combination, with the clearers E, cylinder D, and wheels C C, of the partition H, extending from the front piece F rearward outside the path of the clearers and provided with the central opening H', substantially as and for the purpose described.

3. The combination, with the carriage, of the partition H, provided with the opening H', the roof portion J, floor J'', V-shaped vertical portion J' J'', and partitions I I', substantially as and for the purpose set forth.

4. The combination, with the carriage whose sides A' A'' are provided with the openings P P', of the partitions I I', provided with the openings I'', fans *l*, provided with means whereby they may be rotated, partitions K K'', of the shape shown, partition H, and pipes N N', substantially as and for the purpose described.

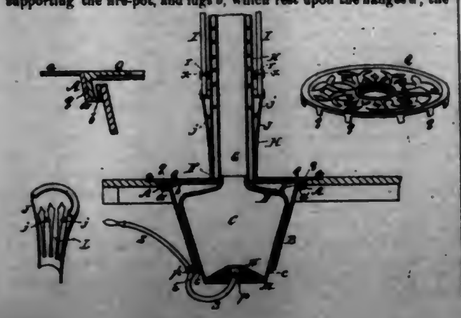
5. In a railway snow-plow, the combination, with rotary clearers and a fan apparatus for driving the snow into passages leading from the outside, of the sides A' A'', provided with the openings P P' next the path of the revolving clearers, but non-coincident or not opposite each other, substantially as and for the purpose set forth.



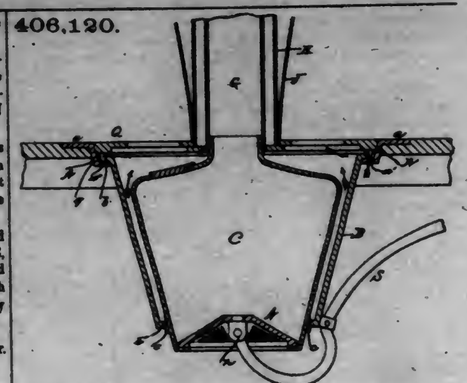
6. The combination of the carriage whose sides are provided with the openings P P', the cylinder D, wheels C C, and clearers E, the partition H, provided with the opening H', centrally-depressed floor J'', V-shaped partition J' J'', roof J, partitions I I', provided with the openings I'', fans *l*, partitions K K'', and pipes N N', substantially as and for the purpose described.

406,118. **INHALER.** HENRY T. WELCH, San Jose, Cal. Filed Mar. 7, 1889. Serial No. 302,310. (No model.)

Claim.—An inhaler consisting of a covering or casing fitted to the nose, the movable drawer seated in the base of the covering or casing below the nostrils and containing the medicinal preparation, and the breathing-apertures in the front and sides of the covering or casing above the drawer, whereby the air drawn in through said apertures is impregnated with the rising fumes from the medicinal preparation, substantially as described.



406,119. **EMBROIDERY-FRAME.** JOHN H. WHITE, Greene County, Ill. Filed Apr. 6, 1889. Serial No. 306,454. (No model.)



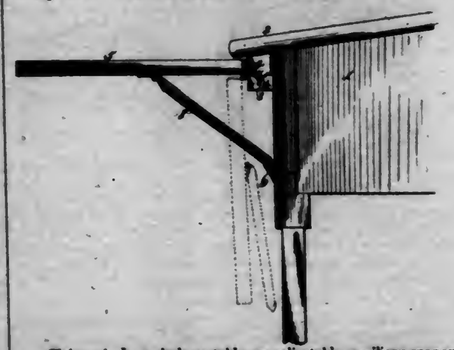
Claim.—In an embroidery-frame, a pedestal B, secured to the central part of a lap-board A and provided with a joint *c*, as described, a cross-bar C, centrally pivoted thereon, so as to revolve or vibrate in a plane at right angles to the axis of the inclinable part of said pedestal, arms *f f*, pivotally secured, as shown, to the ends of the cross-bar C, a spring *i*, adapted to draw the arms *f f* toward each other, and a distender or stretcher supported by removable trunnions journaled in the upper extremities of the arms *f f*, all of said parts constructed, combined, and adapted to operate substantially as and for the purpose set forth.

406,120. **CAR-HEATER.** JOHN ZIMMERMAN, Cincinnati, Ohio, assignor to the Zimmerman Machine Company, same place. Filed Aug. 13, 1888. Serial No. 282,536. (No model.)

Claim.—1. In a car-heater, the combination of a ring A, provided with flanges *a* and *a'*, the former adapted to rest upon the car-floor, and the latter provided with perforations *a''*, casing B, with legs *e* for supporting the fire-pot, and lugs *b*, which rest upon the flanges *a'*, the

406,120.

fire-pot C, resting in casing B, with an air-space between said fire-pot and casing, and a grating or register Q, provided with legs *q*, substantially as described.

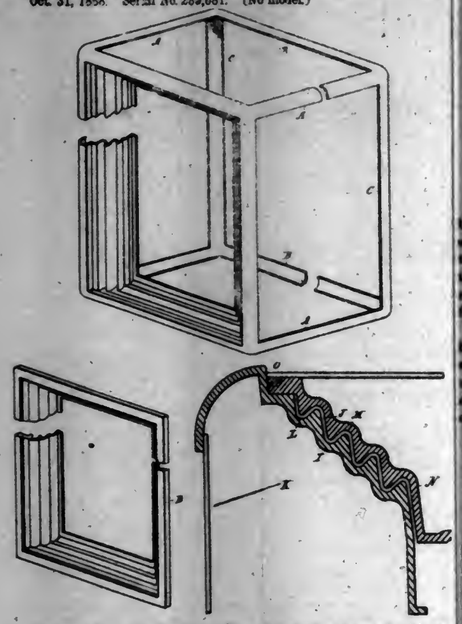


2. In a car-heater, the combination of a fire-pot, a casing supporting the same, and a ring supporting the casing constructed to rest upon the car-floor and provided with openings intermediate of the casing and the car-floor, whereby the outside air may pass therethrough to cool the parts adjacent the floor, as set forth.

3. In a car-heater, the combination of a fire-pot, ring A, for supporting the said fire-pot, provided with flanges *a* and *a'*, the former adapted to rest on the car-floor, and the latter provided with perforations *a''*, through which cold air outside the casing is admitted, and the grating or register Q, supported in said ring A above the perforations, substantially as shown and described.

4. In a car-heater, the combination of a ring A for supporting the casing of a fire-pot, provided with flanges *a* and *a'*, the former adapted to rest on the car-floor, and the latter provided with perforations *a''*, through which cold air outside the casing is admitted, and the grating or register Q, having its outer edge made solid and fitting snugly in the ring, whereby cold air is directed inwardly to be mixed with heated air, substantially as described.

5. In a car-heater, the combination, with a smoke-pipe and a protecting-pipe H, and slats I, of a truncated-cone-shaped bracket J, surrounding the lower part of said pipes, flanged horizontally at its upper end to support the slats I and provided with lug *j* at its interior to rest against the pipe H, substantially as described

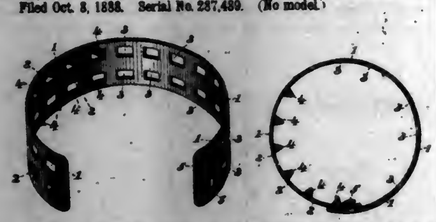


406,121. **ATTACHMENT FOR DESKS.** HARRY R. ADAMS, Wheeling, W. Va. Filed Nov. 28, 1888. Serial No. 292,074. (No model.)

Claim.—1. In a desk or table, an adjustable auxiliary support consisting of a shelf having a ribbed strip hinged to one edge and inserted between a grooved rail fastened upon the front of the desk or table beneath the projecting edge of the top, said support being provided with a brace or arm engaging with a bracket-rail mounted on the desk-front beneath the grooved rail, substantially as described.

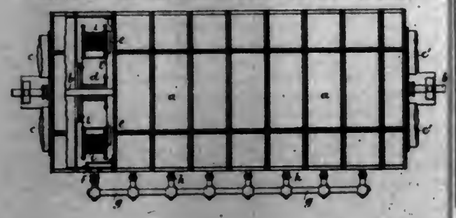
2. In a desk or table having a top 2, the edge of which projects over the front of the desk and provided with a grooved rail 3, fastened to the body of the desk below said projecting edge, a support or shelf 5, having a ribbed strip 6 hinged to its edge and engaging in the space between the grooved rail and the projecting edge of the desk, and an arm 8 hinged at one end to the under face of the shelf, its other end engaging a bracket-rail 9, substantially as described.

406,122. SAFE. JOHN J. BROWN, West Covington, Ky. Filed Oct. 31, 1888. Serial No. 289,681. (No model.)



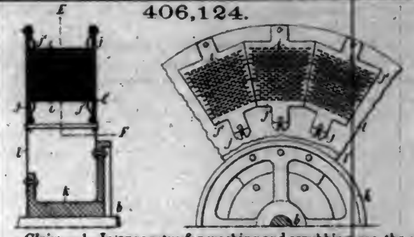
Claim.—1. A safe having a fluted jamb cast integral with the entire safe-skeleton, substantially as herein set forth.

2. A safe having a fluted jamb cast integral with the entire safe-skeleton, in combination with a door-frame having fluted meeting faces, substantially as herein set forth.



3. A safe having a fluted jamb cast integral with the entire safe-skeleton, in combination with a door frame or skeleton having fluted meeting faces cast integral with the door-frame, substantially as herein set forth.

406,123. HORSE-TAIL BAND. ARTHUR W. CASE, Bridgeport, Conn. Filed Oct. 8, 1888. Serial No. 287,489. (No model.)



Claim.—A horse-tail band, the same consisting of a single strip of resilient metal having therein at regular intervals and throughout its entire length a series of perforations, whereby the resiliency of the band is equalized, a series of teeth projecting inward from the surface of the band for a portion of its length, and hooks for the securing of the band about the tail, substantially as set forth.

406,124. APPARATUS FOR WASHING AND SCRUBBING GAS. SAMUEL CHANDLER, Sr., SAMUEL CHANDLER, Jr., and JOSIAH CHANDLER, London, England, assignors to Kirkham, Hulett & Chandler, (Limited,) same place. Filed Feb. 6, 1889. Serial No. 298,841. (No model.)

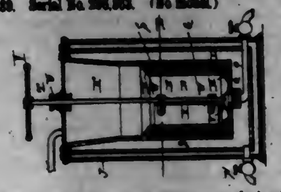
406,124.

Claim.—1. In apparatus for washing and scrubbing gas, the combination of one or more buckets secured to the side of a revolving scrubber, with a trough on the inner side of the casing, and into which the said bucket or buckets is or are adapted to discharge, the said trough being suitably connected by a pipe or channel with one or more of the bays or chambers of the apparatus, substantially as and for the purpose hereinbefore described.

2. In apparatus for washing and scrubbing gas, comprising a number of bays or chambers, as set forth, a series of scrubbing devices, each of which is essentially constructed of a number of sections built up of bars or laths carried between suitable side plates and disks, or disks alone, the bars of one layer being disposed opposite the spaces of the next adjacent layer, and whereby, as the scrubbing devices rotate, a large area of wetted surface is provided, and whereby a very zigzag course is given to the gas in passing through the apparatus, the gas being thereby thoroughly broken or split up and brought into very intimate contact with the said wetted surfaces, substantially as described.

3. Scrubbing devices for machines for washing and scrubbing gas, adapted to be mounted on a rotary wheel and severally composed of a series of laths or bars disposed with those of one layer opposite the spaces of the next adjacent layer, as shown and described, and secured to and carried between segmental side plates slotted to receive them.

4. The combination, with the casing having a series of chambers, of revolving scrubbers having segmental sections and having buckets secured to their sides, a trough on the inner side of the casing, a pipe extending from said trough to the several chambers, and cocks adapted for shutting off the liquid from any one of the chambers, the bars of the scrubber being slotted side plates, and those of one layer being placed opposite the spaces existing between the bars of the next adjacent layer, all substantially as set forth.

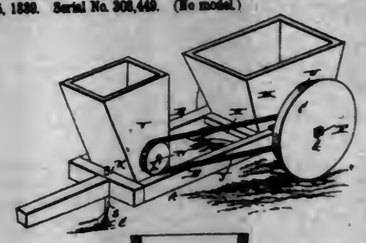


406,125. CRADLE. ANDREW M. CHRISTENSEN, Provo, Utah. Filed Dec. 13, 1888. Serial No. 293,458. (No model.)

Claim.—1. The combination, with a cradle provided with heads having circular guide-grooves F in their inner sides, of the folding screen formed in sections, which comprise the frames composed of the arc-shaped side bars $e\ e$ and top and bottom bars $e'\ e^2$, and the wire screen or gauze within the frame, the side bars of the frame fitting and sliding in the grooves F, and the catch comprising the upright perforated ears $g\ g$, affixed to the centers of the upper bars of the frames and the spring-tongue fitting in and engaging the said ears, substantially as specified.

2. In a cradle, the heads B, having circular guide-grooves F in their inner faces, the stops H at the upper central points of said grooves, and the stops I at the lower central points thereof, in combination with the screen D, comprising the curved side bars $e\ e$, each constituting one-quarter of a circle and sliding in said grooves, the top and bottom bars $e'\ e^2$, and the netting e^3, and with the catch G, comprising upright perforated ears g, one carried by each top bar e', and the spring-tongue g', secured to one of said top bars, projecting through the perforation in the ear thereon and adapted to engage the perforation in the other ear, as and for the purpose set forth.

406,126. WATER-FILTER. JOHN J. CORBAN, Toledo, Ohio. Filed Jan. 19, 1889. Serial No. 296,953. (No model.)



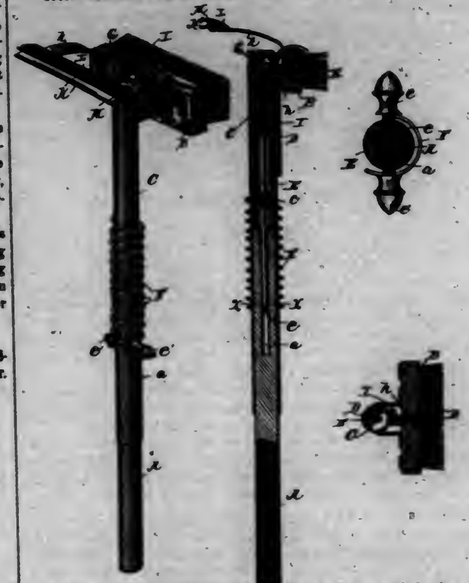
Claim.—1. In a water-filter, an inner receptacle having perforations near its lower extremity and carrying within its walls an outwardly-discharging porous filter, in combination with an outer case, the said outer case and the said inner receptacle being removably connected at their upper extremities and the said inner receptacle being adapted to be screwed into position by means of a central screw and nut at its lower extremity and connecting with the said outer case, substantially as shown and described.

2. In a water-filter, an inner water-receptacle having perforations near its lower extremity and carrying within its walls an outwardly-discharging porous filter, between which and the said water-receptacle is an open space sealed above and below against the passage of water, except in a filtered state, in combination with an outer storage-reservoir, substantially as shown and described.

3. The inner water-receptacle F, having perforations near its lower end, the porous filter E, and the perforated jacket surrounding and tightly fitting said filter, said jacket and its contained filter being located within said receptacle F, with the annular space G between them, in combination with an outer casing J, surrounding said inner receptacle and forming a reservoir M, substantially as described.

406,127. COMBINED SEED-PLANTER AND FERTILIZER-DISTRIBUTER. HENRY J. DAVIS, Jr., Central Institute, Ala. Filed Mar. 15, 1889. Serial No. 303,449. (No model.)

Claim.—1. In a cotton-seed planter, the combination of the frame, the hopper mounted upon the same, and the wheels, the hubs of which are provided with cylindrical sleeves or extensions journaled in suitable boxes or bearings in the frame, and provided within the hopper with stirrers or agitating-fingers, and the shaft or axle extending through the hubs and sleeves of the wheels and provided with nuts at each end, substantially as set forth.



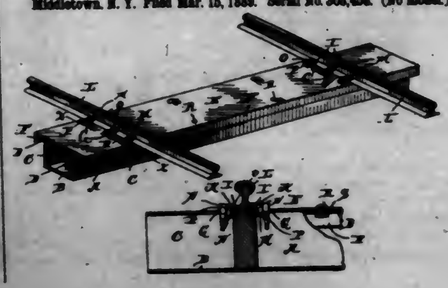
2. In a cotton-seed planter, the combination, with a frame and hopper, of the independently-revoluble wheels having cylindrical sleeves extending into the hopper, and provided with the stirrers or agitating-fingers, substantially as set forth.

3. In a cotton-seed planter, the combination, with the frame and hopper, of the guard-plates extending downwardly from the frame on either side of the hopper, the transverse shaft having cranks at either end, the tongue or cut-off plate mounted upon the said shaft, and the radially-ribbed cam-plates mounted upon the inner sides of the wheels and adapted to engage the said crank-shaft, substantially as set forth.

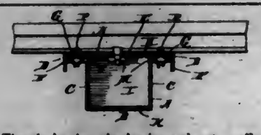
4. In a cotton-seed planter, the combination, with the frame and hopper, of the independently-revoluble wheels mounted in the frame and having cylindrical sleeves extending into the hopper and provided with stirrers or agitating-fingers, the guard-plates extending downwardly on either side of the hopper, the crank-shaft journaled transversely in said guard-plates and having the vibrating tongue or cut-off plate secured thereto, and the cams secured to the inner sides of the wheels and adapted to engage the crank-shafts, substantially as set forth.

5. In a planter, the combination, with the frame and hopper, of the independently-revoluble wheels, each operating a separate seeding mechanism, and said wheels having broad inclined rims or treads to cover and compress the soil about the seeds, substantially as set forth.

406,128. BRUSH FOR WASHING WINDOWS. HENRY DIXON, JOHN W. DIXON, and HENRY S. KOPP, Dayton, Ohio. Filed Sept. 30, 1888. Serial No. 286,747. (No model.)



Claim.—1. The combination, with the brush provided with a suitable handle, of the cylinder communicating at one end with a perforated tube in the brush and the plunger operating in the cylinder and provided with a spring to gradually force it upward to expel the contents of the cylinder into the brush, substantially as specified.

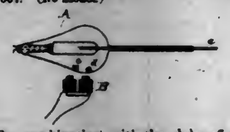


2. In a window-brush, the combination of the perforated supply-tube arranged in the brush, the cylinder connected at its upper end to the supply-tube and provided with a removable screw-cap, the plunger operating in the cylinder and provided with a suitable rod, the vent-tube communicating with the lower end of the cylinder and discharging into the brush, and the contractile spring connected to the plunger-rod, substantially as and for the purpose specified.

3. In a window-brush, the combination, with the brush and handle attached thereto, of the perforated supply-tube arranged in the brush, the cylinder connected to the supply-tube, the plunger operating in the cylinder and provided with a plunger-rod, the cross-bar attached to the rod and operating in a slot in the handle, and the contractile spring connected to the said cross-bar, all constructed and arranged substantially as specified.

406,129. METALLIC RAILWAY-TIE. THEODORE R. DURNING, Middletown, N. Y. Filed Mar. 15, 1889. Serial No. 303,458. (No model.)

406,129.



Claim.—1. The tie having the horizontal outwardly-extending flanges D at its sides and the removable top plate or cover adapted to fit on the tie, and having the depending flanges F engaging the flanges D, substantially as described.

2. The tie made of metal and having its upper side open, in combination with the top plate or cover on the upper side of the tie, and the supporting-blocks arranged transversely in the tie and bearing on the cover at points below the track-rails, substantially as described.

3. The combination, with the hollow metallic tie and the removable cover or top plate, of the supporting-blocks arranged in the tie and having the studs engaging openings in the ties and top plates, substantially as described.

406,130. MANUFACTURE OF INCANDESCENT ELECTRIC LAMPS. THOMAS A. EDISON, Llewellyn Park, N. J. Filed Aug. 11, 1886. Serial No. 210,607. (No model.)

Claim.—1. The combination, with the globe of an incandescent electric lamp and the filament inclosed thereby, of a transparent conducting-film on the interior of said globe, substantially as set forth.

2. The combination, with an incandescent electric-lamp globe and the filament inclosed thereby, of a transparent adhesive conducting-film on the interior of said globe, substantially as set forth.

3. The combination, with an incandescent electric-lamp globe and the filament inclosed thereby, of a film of adhesive phosphoric anhydride on the interior of said globe, substantially as set forth.

4. The method of producing a coating on the interior of an incandescent electric-lamp globe, consisting in placing an adhesive semi-liquid substance within said globe and moving a magnetic body into and out of said substance by external magnetic attraction, substantially as set forth.

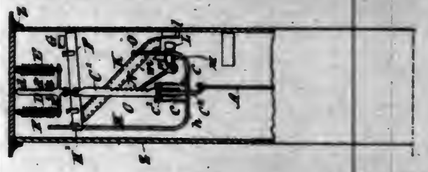
406,131. RACK FOR DISPLAYING DRY GOODS. ERNEST C. FAIR, Granbury, Tex. Filed Jan. 3, 1889. Serial No. 295,279. (No model.)

Claim.—1. The combination, in a rack for displaying dry goods of the supporting-rods G, arranged in pairs, the arms H, adapted to bear on the said rods and having the hooks I at the inner ends to engage the same, and provided, further, with the sockets or bearings K in their outer ends, and the trunnions N, having the clamps or arms adapted to engage the ends of a bolt of cloth, said trunnions being adapted to engage the bearings of the supporting-arms, for the purpose set forth, substantially as described.

2. In a rack for displaying dry goods, the trunnions having the arms or clamps at its inner end to engage the bolt of cloth, for the purpose set forth, substantially as described.

3. In a rack for displaying dry goods, the trunnions having the spring-arms at their inner ends, for the purpose set forth, substantially as described.

4. In a display-rack for dry goods, the combination, with the arms R, having the notches S, of the guide T, supported in said notches and having the parallel proximate sides between which the cloth may be passed, substantially as described.



5. The rack or frame for displaying dry goods, having the supporting-arms for the bolts of cloth, the studs X on the ends of the frame, and the yoke V, with arms bearing on and having the hooks W to engage said studs, for the purpose set forth, substantially as described.

6. In a rack for displaying dry goods, the case, cabinet, or frame having the longitudinal rods G, with the supporting-arms attached to and adjustable on said rods, for the purpose set forth, substantially as described.

7. The case, cabinet, or frame having the longitudinal rods G, the supporting-arms attached to said rods, and the trunnions adapted to be attached to the ends of bolts of cloth and to be journaled in the supporting-arms, substantially as described.

8. In a rack for displaying dry goods, the detachable trunnion for a bolt of cloth, in combination with a rack, frame, or cabinet having arms provided with bearings for said trunnions, substantially as described.

406,132. COIN-CONTROLLED WEIGHING-MACHINE. JEAN C. J. C. FAVRE, Montreal, Quebec, Canada, assignor, by mesne assignments, to the American Automaton Weighing Machine Company, of New York. Filed Sept. 29, 1886. Serial No. 214,880. (No model.) Patented in Canada Oct. 16, 1886, No. 25,147.

Claim.—1. In a coin-controlled weighing-machine, the combination, with a weighing mechanism, of a locking device normally engaging said mechanism to hold it from operation, and adapted to be moved by the gravity of a coin inserted into the machine, so as to release said mechanism, substantially as described.

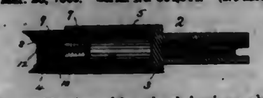
2. In a weighing-machine, the combination, with weighing mechanism, of a pivoted lever normally engaging said mechanism to hold it from operation, and adapted to be moved by the gravity of a coin inserted in the machine, whereby said mechanism is released, substantially as set forth.

3. In a weighing-machine, the combination, with weighing mechanism, of a pivoted lever normally engaging said mechanism to hold it from operation and situated in the path of a coin inserted in the machine, whereby such coin will move said lever to release such mechanism, substantially as set forth.

4. In a weighing-machine, the combination, with weighing mechanism, of a weighted lever normally engaging said mechanism to hold it from operation, and adapted to be moved by the force of a coin inserted in the machine, so as to release said mechanism and thereafter to return to its normal position, substantially as set forth.

5. In a weighing-machine, the combination, with weighing mechanism, of a coin-passage, a lever normally closing such passage and engaging with said mechanism to hold it from operation, and adapted to be moved by the gravity of the coin, so as to release such mechanism and also to permit the passage of the coin, substantially as set forth.

6. In a weighing-machine, the combination, with weighing mechanism, of a locking device normally holding such mechanism from operation, and adapted to release the same when a coin is inserted in the machine, and means for moving the locking device to lock the weighing mechanism, substantially as and for the purpose set forth.



7. In a weighing-machine, the combination, with the actuating-rod made in two parts joined by springs, one of which parts is normally locked from movement, of the coin-conduit and the discharging-arm carried by the normally-movable portion of said rod for removing any foreign body from said conduit, substantially as set forth.

8. In a weighing-machine, the combination, with the actuating-rod, of a three-armed lever, one arm of which normally engages said rod to hold it from movement, a rack moving with said rod and

adapted to engage another arm of said lever, and the third arm being in the path of a coin inserted in the machine, substantially as set forth.

9. In a coin-controlled weighing-machine, the combination, with an inclined coin-conduit having separable sides, connected together, of a separating device lying between said sides, and a lever for depressing said device to spread the sides of the conduit apart, substantially as described

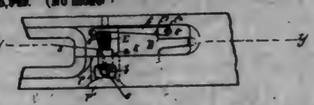
406,133. EDGE-BURNISHING TOOL. JOHN R. FOSS, Weymouth, Mass. Filed Mar. 23, 1889. Serial No. 304,511. (No model.)

Claim.—1. In combination with a shank having a chamber 5 to contain wax, an iron filling the end of said chamber and having a passage from its outer face to said chamber, and a valve for closing said passage, substantially as set forth.

2. In combination with a shank having a chamber in its end for containing wax, an iron screwed into said end and having a passage from its working-face to the said chamber, a valve closing said passage, and a valve-spring for holding said valve in a closed position until released, for the purpose set forth.

3. The tool-shank 3, provided with chamber 5 and burnishing-iron 4, combined with a spring-actuated valve 10, longitudinally of said head and provided with a stem 12, which projects beyond the active surface of the tool and rests against the material in the act of burnishing the latter, substantially as herein specified.

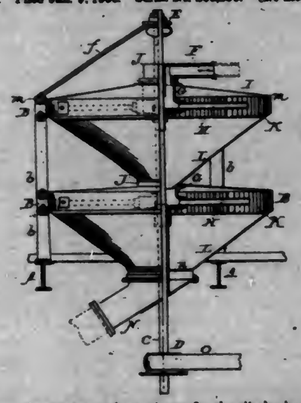
406,134. AWNING-BLIND. JAMES C. GITTINGS, WILLIAM J. POHLMAN and GEORGE YAKEL, Baltimore, Md.; said Pohlman and Yakel assignors to said James C. Gittings. Filed June 23, 1888. Serial No. 278,027. (No model.)



Claim.—1. In an awning-blind, the combination, with a series of parallel slats, flexible chain-connections therefor, the individual slats being pivotally suspended at their ends only in said chain-connections and provided near their upper edges with rings and fasteners, and pulleys p p' to support the lifting and adjusting cords of the blind, of a stretcher-bar pivoted to the window-frame and loosely connected to the lowermost slat, lifting cords or chains attached to said slat and passed loosely through guide-rings of the slats above it to raise the lower end of the blind, and the attached stretcher-bar and adjusting-cords r r', attached to the upper ends of the flexible connection and passed through the said pulleys to raise and lower the blind from the top, substantially as described.

2. In an awning-blind, a head-block and sheaves thereon, a pivoted stretcher-bar, an intermediate series of slats and flexible connections therefor, consisting of chains, each slat being provided at its ends only with projecting fasteners, each extended through and having bearings in one of the links of the said chain-connections to form horizontal pivots for each slat, the links forming bearings for the pivots, and intermediate guide-rings for the slats, combined with the lifting-cords r^2 r^3, attached to the lowermost slat and passed loosely through the guide-rings of the slats above it and around sheaves on the head-block to convert the blind into an awning, substantially as described.

3. The combination, with the slat of a blind and a chain, of a fastener consisting of a metallic strip or wire bent at each end to form a prong to enter the slat, and also bent to form an eye and leave a projecting neck beyond the slat to enter a link of the chain, the said link forming a bearing for the neck to operate, substantially as described.



4. The combination, with the slat of a blind and a chain, of a fastener consisting of a metallic strip or wire bent at each end to form a prong to enter the slat, and bent to form an eye and leave a projecting neck to enter a link of the chain and rotate therein, and with a retaining device in the said eye to retain the neck in the link, substantially as described.

406,135. TENSION-REGULATING DEVICE FOR LOOM-SHUTTLES. GEORGE GOODLINE, Paterson, N. J. Filed Mar. 20, 1889. Serial No. 303,949. (No model.)

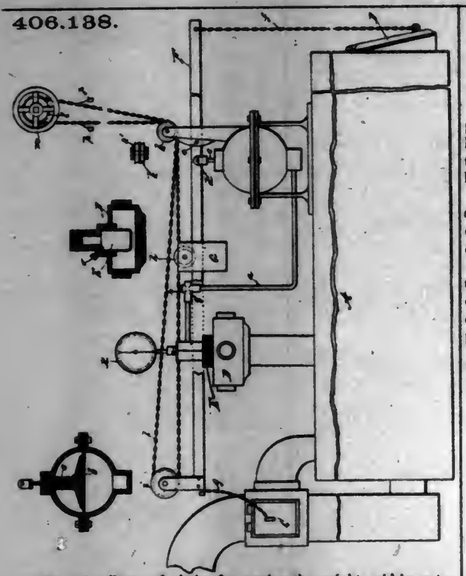
Claim.—The combination, with the shuttle-body having the race F and recess G formed therein, of the eyes a and b, the tuft E in said eye a, the lever C, having eye C' in its free end, and having said free end arranged to play in the race F between the eyes a and b, and spring D, part of which enters the recess G, all substantially as described.

406,136. PULP-ENGINE. ADOLPH HEMPEL, Cöslin, Prussia, Germany. Filed Jan. 9, 1888. Serial No. 260,250. (No model.)

Claim.—In a paper-pulp engine, a fixed cylinder having corrugations on its inner surface and a funnel extending downward therefrom and open at the bottom, in combination with a vertically-rotary shaft extending through said cylinder and funnel, a hollow hub mounted on said shaft within said cylinder, tubular radial arms extending from said hub nearly to said corrugations, and a feed-pipe supplying said hub with the material to be acted upon, substantially as set forth.

406,137. PUMP ATTACHMENT. ANDREW HOLLMAN, Elwood, Nebr. Filed Oct. 31, 1888. Serial No. 290,643. (No model.)

Claim.—1. The combination, with the pump-rod and a fixed stop, of the threaded tube adjustable on said pump-rod, a nut adjustable on said tube, and a spring arranged between the said stop and the nut, substantially as and for the purpose described.



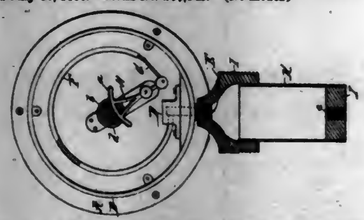
2. The combination, with the pump-rod having a threaded tube connected therewith, of a nut adjustable on said threaded tube, and a spring having connection with and placed between said nut and a stop, as G, substantially as and for the purpose described.

406,138. DRAFT-REGULATOR. JOHN HOPSON, Jr., New London, Conn. Filed May 22, 1888. Serial No. 274,721. (No model.)

Claim.—1. In a draft-regulator, a vessel containing liquid vaporizing at a lower degree of heat than water, a movable imperforate diaphragm actuated by said liquid and preventing escape thereof, a lever or arm moved by said diaphragm, a traveling weight mounted on said lever, pulleys also mounted on the lever, and chains or lines for adjusting the weight, and a draft-door connected with one end of the lever, these parts being combined and arranged to operate substantially as explained.

2. In a draft-regulator, the lever or arm carrying an adjustable

406,188.

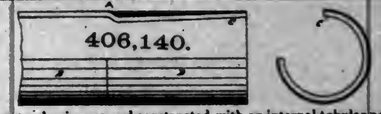


weight, and pulleys and chains for moving the weight, said lever being operated by the pressure of vapor from an easily-vaporizing medium—such as alcohol, &c.—confined by a movable imperforate diaphragm, said lever being connected on one side of its hinge-point with a draft-door and on the other side of its hinge-point with a check-draft door, these parts being combined and arranged substantially as explained.

3. In a draft-regulator, the closed vessel for containing alcohol or other easily-vaporizing material, the gage communicating with the interior thereof and operated by the pressure therein, an imperforate diaphragm, a lever connected with said diaphragm, the adjustable weight and pulleys and chains for moving said weight upon the lever, and the draft-door, combined and arranged substantially as shown and described.

4. In a draft-regulator, the combination, with the operating lever or arm and its actuating-diaphragm, of the adjustable weight mounted upon said lever or arm, the adjusting-chains connected with said weight, and the pulleys located one near the end of the lever and the other near the hinge-point, substantially as and for the purposes set forth.

406,189. THERMOMETER. JOHN HOPSON, Jr., New London, Conn. Filed July 16, 1888. Serial No. 280,143. (No model.)



Claim.—1. In a thermometer, the Bourdon tube, the large externally-screw-threaded nut, the cylinder fitted to the interior of the externally-screw-threaded end of the nut, provided with a plug having an opening adapted to be sealed, substantially as specified.

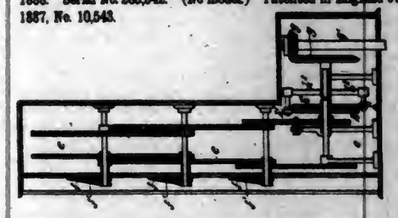
2. In a thermometer, the combination of the tube, block, nipple, and externally-screw-threaded nut with a vessel having a correspondingly-threaded opening and with the enlarged cylinder having at its outer end a plug provided with a filling-orifice adapted to be sealed, all as set forth, whereby the instrument can be conveniently filled and plugged and sealed after the expulsion of air and then connected directly to the vessel.

406,140. TUBE FOR BOILERS, &c. SAMUEL E. HOWELL, Sheffield, County of York, England. Filed Dec. 10, 1888. Serial No. 293,076. (No model.)

Claim.—1. A metallic tube for steam-boilers and other like apparatus, having an end constructed with an internal tubular portion of hard metal and an external drawn tubular portion of ductile metal, the latter fast upon and consolidated with the metal of the former, as hereinbefore specified, for the purposes set forth.

406,140.

2. A metallic tube for steam-boilers and other like apparatus, constructed with a reduced end, and provided with a drawn sleeve of ductile metal fast on said reduced end and consolidated with the metal of the tube, substantially as hereinbefore specified.

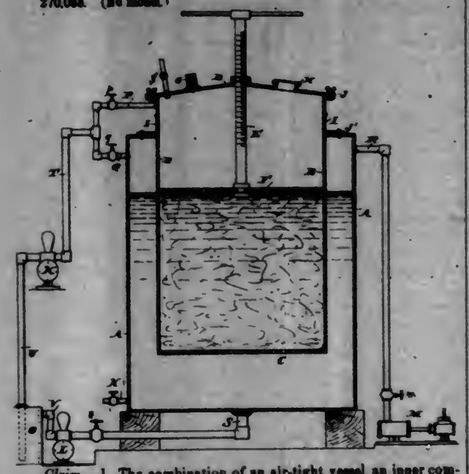


3. A metallic tube for steam-boilers and other like apparatus, constructed with a non-cylindrical reduced end, and provided with a drawn sleeve of ductile metal fast on said reduced end and consolidated with the metal of the tube, as hereinbefore specified, for the purpose set forth.

406,141. THREE-WAY VALVE. CHARLES W. JOHNSON, Holyoke, Mass. Filed Apr. 2, 1888. Serial No. 269,227. (No model.)

Claim.—The three-way valve herein described, consisting of shell A, having the tubular extension A', and having the chamber A^3, terminating at its inner end in the annular beveled seat *a*, pipes D E, having their ends suitably connected with said shell, and having their interiors connected with said seat *a* by means of ducts *d e*, pipe F, communicating with chamber A^3, near the outer end thereof, flattened disk C, having the stem B, and having its periphery beveled to correspond with seat *a*, said disk being provided with port *c*, extending between two points in the periphery thereof, and with port *c'*, extending from the outer side to the periphery thereof, cap H, closing the outer end of the shell, and spring H', bearing at one end against said cap and at its opposite end against disk C, at the center of the latter, combined and operating substantially as set forth.

406,142. PASSENGER-REGISTER. HENRY KERSHAW and THOMAS SUTCLIFFE, Rochdale, County of Lancaster, England. Filed Aug. 23, 1888. Serial No. 283,542. (No model.) Patented in England July 30, 1887, No. 10,543.



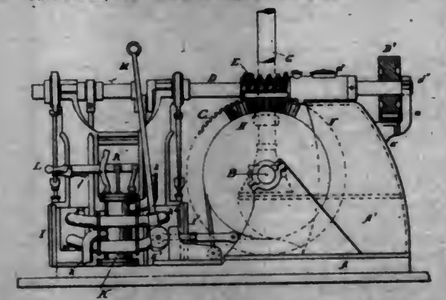
Claim.—1. The combination, with the dials, the vertical shafts *g'*, having bevel-wheels *h* h^3, and connecting-gearing, of the revolving shaft *i*, the sliding and revolving bevel-wheels *p r*, the pivoted levers *n*, connected by intermediate devices with the sliding bevel-wheels, the rotary screw *j*, and the screw-nut *l* on the screw for operating the levers, substantially as described.

2. The combination, with the dials and the vertical shafts *g'*, having bevel-wheels *h* h^3, of the shaft *i*, having sliding and revolving bevel-wheels *p* and *r*, the screw *j*, having the traveling screw-nut *l*, and lever mechanism operated by the nut to successively throw the sliding bevel-wheels out of gear with the bevel-wheels on the vertical shaft, substantially as described.

3. The combination, with the dials and the vertical shafts *g*, having bevel-wheels *h* h^3, of the shaft *i*, having sliding and revolving bevel-wheels *p r*, the screw *j*, having a screw-nut *l*, lever mechanism operated by the nut to successively shift the sliding bevel-wheels, the vertical shaft geared to the screw and driven by an axle, and the turnstile geared to the shaft carrying the sliding bevel-wheels, substantially as described.

4. The combination, with the dials and the vertical shafts *g'*, having bevel-wheels *h* h^3, of the horizontal shaft *i*, having sliding and revolving bevel-wheels *p r*, the screw *j*, driven from an axle and having the screw-nut *l*, provided with studs *m*, the forked levers *n*, the connecting-rods *o*, the parallel levers *o'*, the forked levers *o*^{3}, engaging the sliding bevel-wheels, and the turnstile *d*, geared to the shaft carrying the sliding bevel-wheels, substantially as described.

406,143. APPARATUS FOR TREATING TEXTILE FABRICS. JOHN H. LORIMER, Philadelphia, Pa. Filed Apr. 9, 1883. Serial No. 270,088. (No model.)

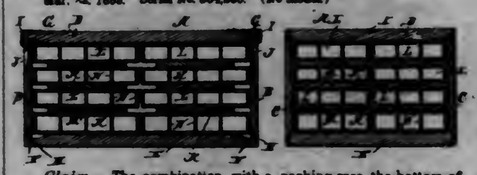


Claim.—1. The combination of an air-tight vessel, an inner compartment within said vessel having a perforated bottom, a vacuum-pump connected with said vessel and adapted to exhaust the air therein, and pipes opening, respectively, into the upper part of said inner compartment and the lower part of said vessel, and a pump connected with said pipes and adapted to circulate liquid through said pipes and inner compartment.

2. The combination of an air-tight vessel, an inner compartment within said vessel having a perforated bottom, a movable diaphragm in said compartment, a vacuum-pump connected with said vessel and adapted to exhaust the air therein, and pipes opening, respectively, into the upper part of said inner compartment and the lower part of said vessel, and a pump connected with said pipes and adapted to circulate liquid through said pipes and inner compartment.

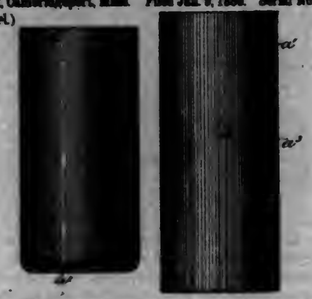
3. The combination of an air-tight vessel, an inner compartment within said vessel having a perforated bottom, a vacuum-pump connected with said vessel and adapted to exhaust the air therein, and pipes opening, respectively, into the upper part of said inner compartment and the lower part of said vessel, a pump connected with said pipes and adapted to circulate liquid through said pipes and inner compartment, and a reservoir connected with the pipe from the vessel into which the liquor may be run off from said vessel.

4. The combination of an air-tight vessel having a compartment with an adjustable portion for holding materials to be treated against disturbance, pipes leading to and from said vessel for supplying a gas to the material in the compartment, a vacuum-pump to extract the air and assist the flow of the gases, and a liquid passage or conduit connecting with the two opposite ends of the vessel, and a pump to force the liquid through the material in the vessel prior to admitting the gases.



406,144. SHIP-WINDLASS. FRANK S. MASTON, Providence, R. I. Filed Dec. 22, 1888. Serial No. 294,440. (No model.)

Claim.—1. In a steam-windlass, the combination, substantially as hereinbefore described, of the bed-plate, the ship's windlass mounted crosswise on said plate, the driving-shaft lengthwise of said plate and coupled to the windlass by a worm and gear, a pair of vertical engines mounted closely side by side on said plate in a line at right angles to the windlass and coupled to cranks on said driving-shaft, and a reversing-valve mounted on said plate at the one side of and connected with the cylinders of both engines and in close proximity thereto, as and for the purposes specified.

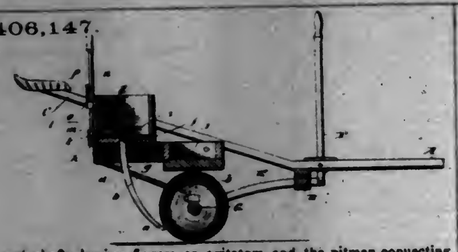


2. The combination, substantially as hereinbefore described, of a ship-windlass having its shaft athwart ship, a vertical capstan-shaft geared thereto, hand brake-levers for controlling the wild-cats of the windlass, a pair of vertical engines side by side on a line at right angles to the windlass-shaft and coupled thereto by means of a crank-shaft, worm, and gear, and a reversing-valve mounted at one side of and connected with the cylinders of both engines, and having a hand-lever located adjacent to the brake-lever, whereby one person, while controlling one wild-cat, may maintain constant control of the other wild-cat or the capstan, or both, and cause them to be rotated in either direction or to stand at rest, as and for the purposes specified.

406,145. PACKING-CASE. HENRY A. MOSS, Seguin, Tex. Filed Mar. 22, 1889. Serial No. 304,260. (No model.)

Claim.—The combination, with a packing-case the bottom of which is provided with transverse grooves near the ends and the ends of the top of which are rabbeted on their under sides, of the removable ends shouldered at their lower edges, and the spring-catches attached to the upper side of the top of the case, substantially as set forth.

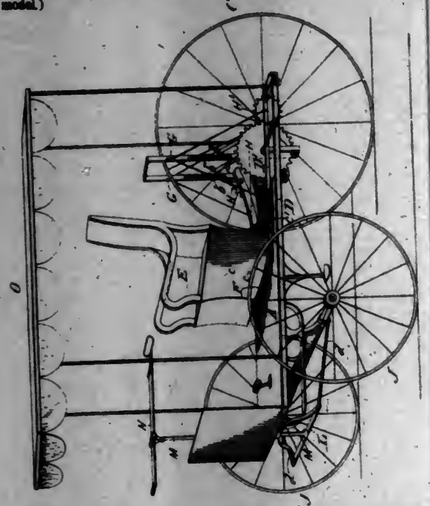
406,146. METHOD OF MAKING LEAD TRAPS. ALPHEUS A. ROBINSON, Cambridgeport, Mass. Filed Jan. 9, 1889. Serial No. 296,574. (No model.)



Claim.—1. The improved method of forming the bottoms of lead traps, consisting in taking a tube or cylinder of a sufficient length and in spinning an end section of the cylinder or tube of sufficient length to or beyond the center of the tube or cylinder and under a pressure or friction sufficient to cause the metal to flow and unite and form a homogeneous seamless and complete bottom, as and for the purposes specified.

2. The improved method of forming lead-trap bodies, comprising the taking of a cylinder or tube of sufficient length to form the wall of proper height and a continuous homogeneous bottom and forming the homogeneous bottom by spinning in under heat produced by pressure or friction of the spinning-tool during the spinning operation an end section of the tube or cylinder sufficiently large to form the homogeneous bottom, and continuing said spinning operation under said heat past or beyond the center of the bottom, whereby all the metal of the spun-in section forms a part of the bottom of the trap, and subsequent melting or soldering of the bottom of the trap to close a hole dispensed with, substantially as described.

406,147. SEEDING ATTACHMENT FOR DISK HARROWS. JONATHAN J. ROGERS and OLIVER S. KENNEDY, Fort Worth, Tex. Filed Nov. 13, 1888. Serial No. 290,718. (No model.)



Claim.—The combination of the axles having their outer ends journaled in stationary and their inner ends in longitudinally-adjustable bearings and provided with the harrow-disks, the weight-boxes I, mounted on vertical standards above said axles and having rearward-extending arms or braces, the seed-boxes mounted upon said braces above and in rear of the weight-boxes and having downwardly-extending forwardly-curved drill-tubes, the adjustable seed-slides, the

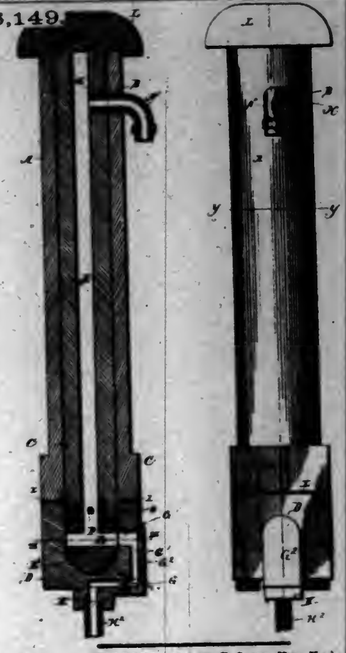
406,147.

rock-shafts having fingers or agitators, and the pitman connecting cranks upon the rock-shafts with cranks upon the axles, substantially as set forth.

406,148. VELOCIPEDE. JOHN D. RULLMANN and GEORGE BOKENROTH, San Antonio, Tex.; said Rullmann assignor to said Bokenroth. Filed Mar. 13, 1886. Renewed Jan. 13, 1889. Serial No. 296,792. (No model.)

Claim.—1. As an improvement in velocipedes, the combination, with a rocking-chair mounted upon a platform of the vehicle and retained in position by the slotted curved guides F and pins *c'*, of the rods *b*, pivoted to the rockers of said chair and to a cross-head moving in vertical guides, the rods *b'*, connecting said cross-head with the crank-pin of a gear-wheel H, the pinion H', and propelling-wheel C, all constructed and arranged substantially as and for the purpose shown and described.

2. As an improvement in velocipedes, the platform A and frame B, in combination with the steel band D, encircling three sides of said frame and platform and extending in rear thereof to form the supports for the propelling-wheel and its gearing, as set forth.

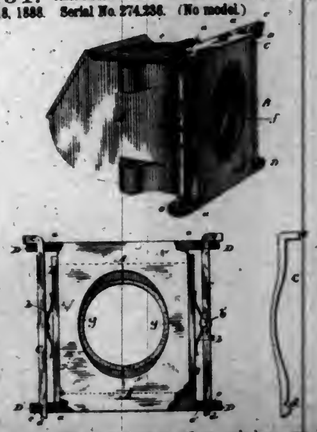


3. As an improvement in steering-gear for velocipedes, the combination, with the front axle, of the lever L, its connections with said axle, the standard M, provided with a loop at its upper end, and the sliding handled lever N, all arranged and operated as shown and described.

406,149. HYDRANT. JACOB SCHUSTER, St. Clair, Pa. Filed June 8, 1888. Serial No. 276,109. (No model.)

Claim.—The combination, with the valve having the transverse channel and vertical opening, of the valve seat or block having the laterally-extending channels F G and the extension G' of the latter formed by recesses in the side and bottom of the seat or block, the angular covering-plate G^2, having collar H, and the supply-pipe coupled to said collar, substantially as and for the purpose set forth.

406,149.

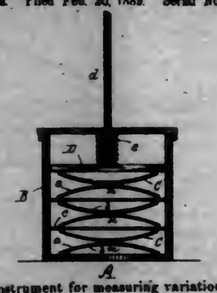


406,150. NUT-LOCK. NELSON T. SCOTT, New York, N. Y. Filed July 29, 1886. Renewed Dec. 11, 1888. Serial No. 293,325. (No model.)

Claim.—The combination, with a screw-threaded bolt, of a nut having a shouldered recess in its inner face and a conical washer projecting originally beyond the face of the nut and having a toothed inner edge and a flange at its base fitting the recess in the nut, whereby, when the nut is screwed home, the washer is forced into the recess, so as to become practically integral with the nut and bolt, substantially as shown and described.

406,151. CAR-AXLE BOX. DAVID S. STINSON, Kittery, Me. Filed May 18, 1888. Serial No. 274,336. (No model.)

Claim.—1. The combination of an axle-box provided with a dust-guard chamber having vertical slots in its opposite sides and with lateral slotted ears adjacent to said chamber, a sectional dust-guard adapted to be inserted or withdrawn in sections through the vertical slots in the sides of the chamber, and spring-holders engaging the slots of said ears and pressing upon the flanges or outer ends of the dust-guard sections.



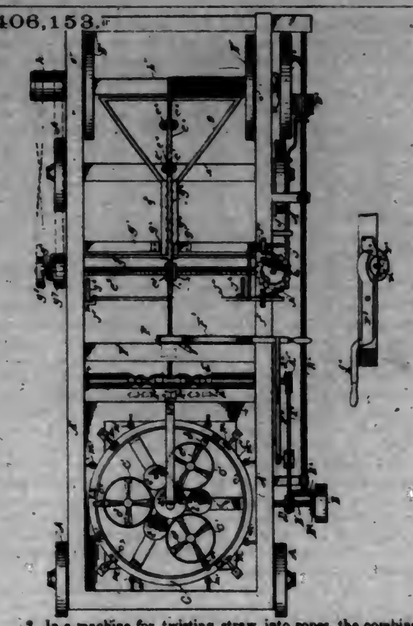
2. The combination of an axle-box provided with a dust-guard chamber having vertical slots in its opposite sides and with lateral slotted ears adjacent to said chamber, a sectional dust-guard adapted to be inserted or withdrawn in sections through the vertical slots in the sides of the chamber, and spring-holders engaging the slots of said ears and pressing upon the flanges or outer ends of the dust-guard sections, each of said holders being provided with a hook at its upper end and with a notch at its lower end for engaging the slotted ears.

3. The combination of an axle-box provided with a dust-guard chamber and with laterally-projecting slotted ears adjacent to said chamber, a sectional dust-guard, bars engaging said slotted ears, and springs interposed between said bars and the outer ends of the sections of the dust-guard.

4. The combination of an axle-box provided with a dust-guard chamber and with laterally-projecting slotted ears adjacent to said chamber, a sectional dust-guard, bars provided with hooks engaging the upper slotted ears and with notches engaging the lower slotted ears, and springs interposed between said bars and the ends of the dust-guard.

5. The combination of an axle-box provided with a dust-guard chamber and with laterally-projecting slotted ears adjacent to said chamber at the top and bottom of the box, the ears at the bottom being provided with ribs at the outer ends of their slots, a sectional dust-guard, and spring-holders for retaining the dust-guard sections, said holders being provided at their upper ends with hooks, which engage the ears at the top of the box, and at their lower ends with notches which engage the ribs of the ears at the bottom of the box.

406,152. METALLIC THERMOMETER. THOMAS L. STURTEVANT, Framingham, Mass. Filed Feb. 20, 1889. Serial No. 300,526. (No model.)



Claim.—1. An instrument for measuring variations of temperature, consisting of a series of co-operating elements, each element formed of two metallic plates with unequal coefficients of expansion, said plates having initial curvature, arranged oppositely in couples and capable of multiplication, in combination with a piston resting on said elements, an indicating-rod attached to said piston and movable therewith, and a returning-spring bearing on said piston, substantially as and for the purposes herein described.

2. An apparatus for indicating variations of temperature, as herein described, consisting of a series of confined metallic plates formed of two metals having unequal expansion, a series of flat plates alternating with said bimetallic plates, and a piston and indicator-rod actuated by the expansion and contraction of said bimetallic plates, substantially as specified.

3. The combination, with the box B, its piston D, the rod *d*, and its spring *c*, of a series of elements C, composed of two metals *a b*, with unequal expansion, united together, and the intervening flat plates *c*, between which a single bimetallic plate or pair of plates may be disposed, substantially as herein set forth.

406,153.

406,153. MACHINE FOR TWISTING STRAW, &c., FOR FUEL. LAWRENCE SULLIVAN, Stillwater, Minn. Filed Dec. 10, 1885. Serial No. 185,214. (No model.)

Brief.—The object of the invention is to provide an improved machine for twisting straw, &c., into rope and winding the same upon spools, to be cut up as desired for fuel.

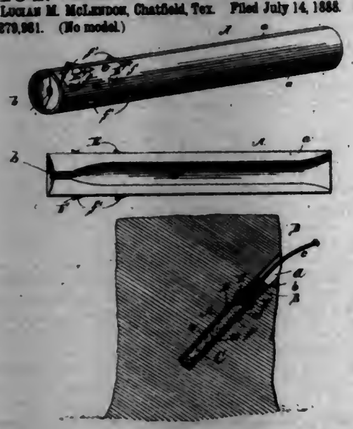
Claim.—1. In a hay or straw twisting machine, the combination of the main frame, a revolving platform placed thereon and provided with a gear-wheel, a driving-shaft provided with a gear-wheel engaging the gear-wheel upon the revolving platform, funnels journaled in the platform, gear-wheels secured to their lower ends, and a stationary gear-wheel placed at the center of the circle described by the lower ends of the funnels, and with which the said gear-wheels secured to the funnels engage, whereby a rotary motion is imparted to the platform and funnels through the medium of the driving-shaft, substantially as shown and described.

2. In a machine for twisting straw into ropes, the combination of the main frame, the platform, one or more funnels journaled thereto, gear-wheels secured to their lower ends, a gear-wheel journaled at the center of the platform which engages the gear-wheels on the ends of the funnels, a driving-shaft journaled in the frame, and a gear-wheel secured to the inner end of the shaft which engages the said gear-wheel at the center of the platform, whereby the platform remains stationary and the funnels revolve for producing single ropes, substantially as shown and described.

3. The combination of the frame, a revolving circular platform journaled thereon, a number of funnels in which the straw is placed, journaled in the revolving platform, gear-wheels secured to the lower ends of the funnels, a driving-shaft journaled in the frame, a gear-wheel secured to the inner end of the shaft, a gear-wheel secured to the circular platform engaging the said gear-wheel upon the shaft, and a stationary gear-wheel engaging the gear-wheels upon the lower ends of the funnels, an inverted conical guide or funnel secured to the frame approximately to the center of the circle described by the funnels for the purpose of bringing the several ropes from the funnels to a common point and twisting them together, and guiding-pulleys for supporting the twisted rope, substantially as set forth.

4. The combination of the frame, the revolving platform journaled thereon, a gear-wheel secured to it, the funnels journaled in the platform, gear-wheels secured to lower ends of the funnels, a stationary gear-wheel engaging the said gear-wheels, a driving-shaft journaled in the frame, a gear-wheel upon its inner end engaging the platform gear-wheel, an inverted cone placed below the revolving platform, guiding-pulleys d', the rollers d^3, between which the rope passes, pulley d^7 upon the driving-shaft, the pulley d^8, secured to one end of one of the rollers, and the belt d^9, whereby the rope is automatically drawn from the funnels as rapidly as finished, substantially as specified.

5. The combination of the frame, the revolving platform, a gear-wheel secured thereto, a driving-shaft provided with a gear-wheel upon its inner end engaging the platform gear-wheel, a number of funnels journaled in the platform, gear-wheels upon their lower ends, a stationary gear-wheel placed at the center of the circle described by the funnels and engaging the gear-wheels secured thereto, the inverted cone placed below the funnels, the guiding-pulleys d' and rollers d^3, between which the rope passes, the pulleys d^7 d^8, belt d^9, the stationary knife F^3, and pivoted knife F^4, and the arms f^4, pivoted to the frame A', tightening-pulley secured to its free end for engaging the belt and having its opposite end engaged by the pivoted handle of the knife F^4, whereby when the knife-blade is forced downward to sever the rope by raising the handle upward the belt d^9 is loosened and the rollers d^3 stopped, for the purpose described.



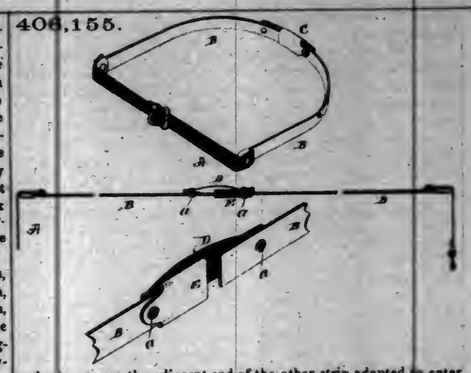
6. In a machine for twisting hay and straw into ropes, the combination, with revolving funnels for twisting the material into ropes, of a winding mechanism consisting of a receiving spool or shaft, a friction-disk secured thereto, a counter-shaft driven by the main shaft,

a sliding friction-pulley upon said shaft engaging the said friction-disk, a pivoted guiding-lever, through which the rope passes, a ratchet-wheel, a sliding bar carrying ratchets which engage and revolve the ratchet-wheel, a revolving screw-shaft, a screw-block thereon which engages the sliding bar and moves it back and forth, and also the inner end of the guiding-lever, a shifter having one end to engage the rope upon the spool, and which is moved endwise by the accumulation of rope thereon, a sliding bar engaging the opposite end of the said shifter, and clutches upon the end of the screw-shaft, whereby the revolution of the shaft is reversed alternately by the movement of the shifter, a gear-wheel secured to the ratchet-wheel, and a fork engaging the said gear-wheel, and the sliding friction-pulley for moving it along its shaft and across the face of the friction-disk, for the purpose substantially as shown and described.

7. The combination, in a machine for twisting straw into ropes, of the frame, the revolving platform, the funnels journaled therein, the driving-shaft for revolving the platform by means of gear-wheels, the counter-shaft driven by the driving-shaft, guiding-rollers for the rope, the spool upon which the twisted rope is wound, the guiding-lever pivoted to the frame and through which the rope passes, a screw-shaft, a screw-block placed upon the shaft and engaging the inner end of the guiding-lever, the coupling-shifter g^4, clutch-pulleys g^7 g^8, and coupling g^6, placed upon one end of the screw-shaft, the shifter g, having shoulders g^5, which engage the projections g^6 upon the coupling-shifter g^4 as it is forced inward, the ratchet-wheel f, carrying a gear-wheel, the shifting-fork j, having one end to engage the pulley B^3 and its opposite end formed into a rack and engaging the gear-wheel, and the sliding bar j^3, provided with pawls for operating the ratchet-wheel, and with projections at each end, with which the screw-block engages at each end of its movement upon the screw-rod, the pulley B^3, and friction disk B^4, all combined to operate in the manner substantially as shown and described.

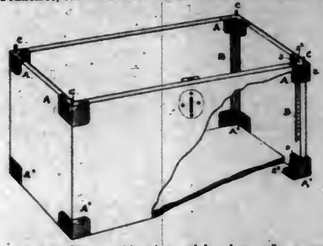
8. In a hay or straw twisting machine, the combination of the main frame, a revolving platform placed thereon and provided with a gear-wheel, a driving-shaft provided with a gear-wheel engaging the gear-wheel upon the revolving platform, a suitable number of funnels journaled in the platform, gear-wheels secured to their lower ends, and a stationary gear-wheel placed at the center of the platform, and with which the said gear-wheels secured to the funnels engage, and radial arms within the funnels for preventing the straw from turning with them, for the purpose substantially as specified.

406,154. BLASTING-CARTRIDGE. JAMES P. TODD, JOHN S. WELCH, and LUCIAN M. MCLENDON, Chatfield, Tex. Filed July 14, 1888. Serial No. 279,961. (No model.)



Claim.—A blasting-cartridge composed of two similar semi-cylindrical sections having flat smooth faces their entire length, adapted to rest or bear against each other and grooved to form the cylindrical fuse-opening, and the bore tapering from said fuse-opening to the bottom or inner end of the shell, said semi-shells being provided on their outer sides and at their front ends for a portion of their lengths only with sharp-pointed spurs or projections having vertical front walls and sharp inclined rear edges, substantially as and for the purpose set forth.

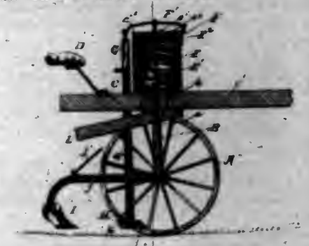
406,155. FOLDING DRESS-EXTENDER. JACOB W. WEEKS and LULU A. WEEKS, Detroit, Mich.; said Jacob W. Weeks assignor to said Lulu A. Weeks. Filed Feb. 23, 1888. Serial No. 300,956. (No model.)



Claim.—As an improved article of manufacture, the folding dress-extender consisting of two spring-strips B B, an elastic connection D, a sheath E, rigidly secured to the end of one of said strips,

406,155.

and a tongue on the adjacent end of the other strip adapted to enter said sheath, all as specified.



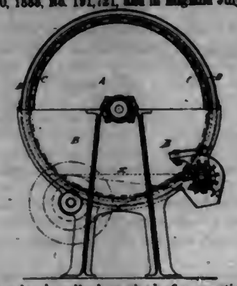
406,156. METAL CORNER-PIECE FOR BOXES. JAMES C. WEIR, San Francisco, Cal. Filed Oct. 16, 1888. Serial No. 288,275. (No model.)

Claim.—1. The combination, with a box, of a corner-piece for the upper corner, consisting of two parallel angle-plates and a connecting-web, an angle-piece for the lower corner, consisting of two parallel angle-plates, a connecting-web, and a projecting flange extending inward on a line with the web, and a corner angle-iron B, connecting the inside angle-plates of the upper and lower corner-pieces, as and for the purpose set forth.

2. A metal corner-piece for boxes and trunks, consisting of two parallel angle-plates a a, a connecting-web a^3, uniting the angle-plates on one side, and a projecting flange a^2, extending inward on a line with the web a^3, as set forth.

406,157. COTTON-CHOPPER. JOSEPH S. ARNELL, Fulton, Ark., assignor of one-half to Adolphus B. Galloway, same place. Filed Mar. 1, 1889. Serial No. 301,600. (No model.)

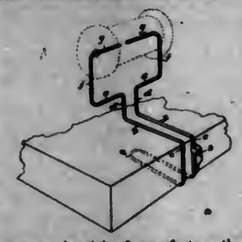
Claim.—1. In a cotton chopper and cultivator, the combination, with the axle and supporting-beam, of the box on the same, the spring-actuated rod in the box, the lever resting on the rod, the swinging frame on the lever having teeth on its lower end, and a handle on the frame, substantially as described.



2. The combination of the axle, the box E, the spiral spring in the box, the rod connected with the movable top of the box, the lever resting on the rod, and the frame G on the lever having teeth on its lower end and a handle and stirrups by which it is operated, substantially as described.

3. The combination of the axle, the box, the spring-actuated rod passing through the box, the lever resting on the rod, the frame, as G, suspended from the lever in the rear of the box, the seat in the rear of the lever, the plows below the seat attached to the axle, and the lever K, for moving the plows up or down, substantially as described.

4. The combination, with the frame and the spring-actuated rack G, of the ring on its lower end, teeth on the ring, and feeders, as N, on the ring outside the teeth, substantially as described.



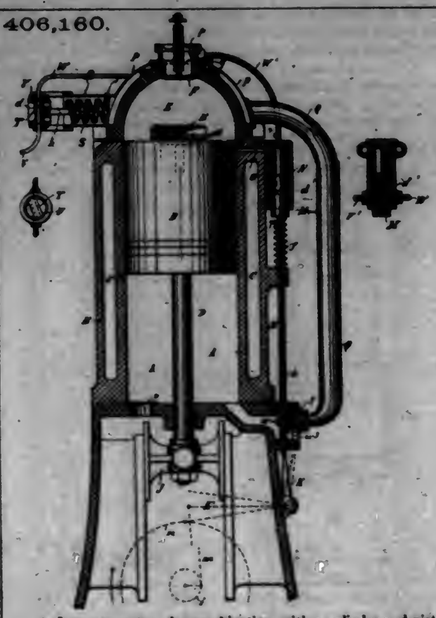
5. The combination of the axle, as B, the supporting-beam C, the box E, the spring in the box, the movable top of the box, the rod extending through the box and secured to the top, the clip F, the lever F', the frame G on the lever, the ring on the bottom of the frame, the handle and stirrups on the frame, the two plows, the arch J', connecting the plows, and the lever K, substantially as described

406,158. PROCESS OF PURIFYING FATTY ACIDS. CHARLES BARDY, Paris, assignor to Marie Victoire Brisset, Petit, St. Denis, France. Filed Aug. 10, 1888. Serial No. 282,430. (No specimens.) Patented in France July 10, 1888, No. 191,731, and in England July 16, 1888, No. 10,296.

Claim.—The herein-described method of separating solid from liquid fatty acids, which consists in dissolving the mixed acids in a solvent soluble in water, as alcohol or wood-spirit, for example, under the influence of heat and then cooling the solution until the solid acid crystallizes, then removing the crystals, then adding water to the mother-liquor, whereby it is diluted and the liquid acids are thus caused to separate from the solvent, and then removing said liquid acids, substantially as set forth.

406,159. SPOOL-HOLDER. JOHN BLAKEATE, Cleveland, Ohio. Filed Apr. 13, 1889. Serial No. 306,970. (No model.)

Claim.—As an improved article of manufacture, the spool-holder herein described, consisting, essentially, of a single piece of wire bent and forming the tongue a, shoulders c c at right angles to the tongue portion a, central stems b b, at right angles to the shoulders c, and substantially parallel to the tongue portion, to fasten the holder to a table or the like, shank portions d d at right angles to the stems b b and extending outward from the plane of the tongue a, and the portions e e, f f, and g g, for holding the spool, the ends of the wire being arranged to project into the spool, substantially as set forth.



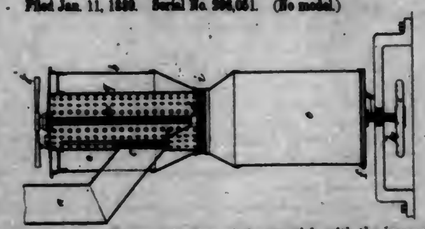
406,160. GAS-MOTOR. EMIL CAPITAINE, Berlin, Germany. Filed Nov. 14, 1888. Serial No. 290,790. (No model.) Patented in Germany Aug. 15, 1888, No. 45,129.

Claim.—1. In a gas-engine, the combination, with a cylinder and piston, of a combustion-chamber on the cylinder, a jacket surrounding said combustion-chamber, and pipes for conducting air into and out of the jacketed space, a thermostat in said air-outlet pipe, and a water-valve governed by said thermostat, substantially as set forth.

2. In a gas-engine, the combination, with a cylinder and piston, of an explosion-chamber on one end of the cylinder, tubes for conducting air into and out of said explosion-chamber, a thermostat in the outlet-tube, a valve mounted to rock on its center and connected with said thermostat, and two water-conducting pipes connected with the valve-casing at opposite points, substantially as set forth.

3. In a gas-engine, the combination, with a cylinder and piston, of a combustion-chamber, a jacket surrounding said combustion-chamber, a pipe for conducting air into said jacket, a valve controlling said pipe, a rod on which said valve is secured, a piston on the upper end of said rod, and a cylinder in which the piston works, said cylinder being connected with the upper part of the main cylinder of the machine, substantially as set forth.

406,160.

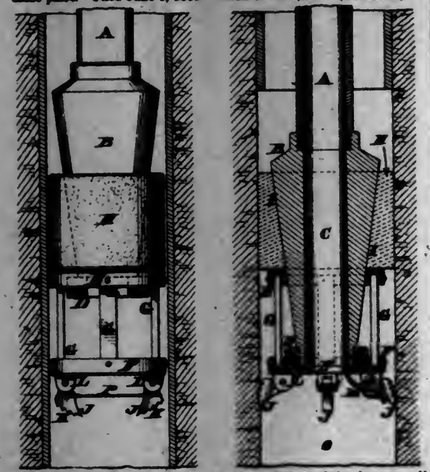


4. In a gas-engine, the combination, with a cylinder and piston, of a combustion-chamber, a jacket surrounding said combustion-chamber, a pipe for conducting air into said jacket, a valve controlling said pipe, a rod on which said valve is secured, a piston on the upper end of said rod, and a cylinder in which the piston works, said cylinder being connected with the upper part of the main cylinder of the machine, a water-supply pipe controlled by said piston, leading to the explosion-chamber, substantially as set forth.

5. In a gas-engine, the combination, with a cylinder and piston, of an explosion-chamber on said cylinder, a jacket surrounding the explosion-chamber, a pipe for conducting air into said jacket, a valve controlling said pipe, a rod on which said valve is secured, a piston on the upper end of said rod, a cylinder in which said piston works, said cylinder being connected with a channel in the upper part of the main cylinder, and a spring for pressing the piston of said additional cylinder upward, substantially as set forth.

6. In a gas-engine, the combination, with a cylinder and a piston, of an explosion-chamber on said cylinder, a jacket surrounding said explosion-chamber, a cylinder connected with the top of the main cylinder, a piston in said additional cylinder, a rod connected with said additional piston, an angle-lever having one arm below said rod, and an eccentric on the main shaft governing said angle-lever, and a water-supply pipe extending from the additional cylinder to the jacket of the explosion-chamber, substantially as set forth.

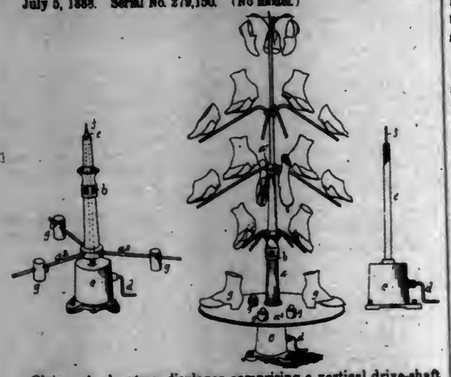
406,161. APPARATUS FOR SEPARATING, FILTERING, AND DISINFECTING FECAL MATTERS. JEAN CHABANEL, Paris, France. Filed Jan. 11, 1889. Serial No. 296,051. (No model.)



Claim.—1. The combination of the vessel b, with the inner perforated cage g, with the inlet-pipe a, leading into said cage, and with the piston d within said cage, said piston being provided with the lower packing-ring k and the circumferential scraper p, substantially as and for the purpose herein shown and described.

2. The combination of the vessel b and inner perforated cage g, and inlet-pipe a, leading to said cage, with the piston d, adapted to move within said cage, and with the slide c, which is adapted to be moved up and down by said piston to open and close the inlet-pipe, as specified.

3. The combination of the vessel *b*, inner perforated cage *q*, inlet-pipe *a*, slide *c*, and piston *d*, with the lower vessel *e*, table *f*, and screw *g*, substantially as and for the purpose specified.

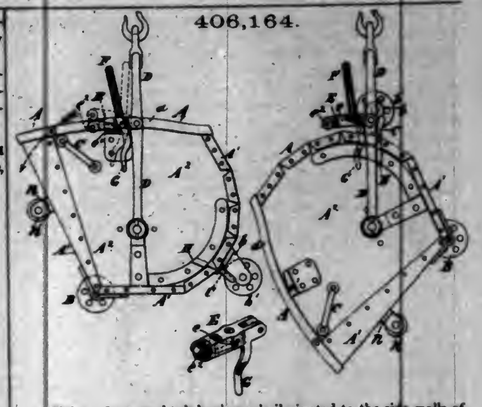


4. The combination of the vessel *b*, inner perforated cage *q*, inlet-pipe *a*, leading to said cage, slide *c*, piston *d*, and overflow-pipe *r*, having branch *u*, with the lower receiving-vessel *e*, and vertically-movable table *f*, for supporting said vessel *e*, as specified.

406,162. COMBINED WELL PACKING AND ANCHOR. WILLIAM A. DONNELL, Greensburg, Ind., assignor of one-half to Joseph Drake, same place. Filed June 8, 1888. Serial No. 276,509. (No model.)

Claim.—A well packer and anchor consisting of the downwardly tapering plug B, having an axial bore C, a pipe A, secured to the upper end of said plug, and a nut D, screwed to its lower end, in combination with an open cage composed of an upper ring E and lower ring F, united by a system of bars G, the lower ring F being provided with a series of self-acting dogs J, and the upper ring E carrying an elastic packing H, having a longitudinal bore I, traversed by said tapering plug B, all as herein described, and for the purpose stated.

406,163. DISPLAY-RACK. ROBERT FARIES, Decatur, Ill. Filed July 5, 1888. Serial No. 279,150. (No model.)



Claim.—1. A rotary displayer comprising a vertical drive-shaft, a displayer resting on the upper end of the drive-shaft in stable equilibrium, and a support on the displayer for movable weights, as and for the purpose set forth.

2. A rotary displayer comprising a vertical drive-shaft and a displayer on a tubular standard that rests on the upper end of the shaft and encompasses the same, the said displayer being adapted to support movable weights, as and for the purpose set forth.

3. A rotary displayer comprising a vertical drive-shaft and a displayer on a tubular standard that rests on the upper end of the shaft and encompasses the same, the displayer being adapted to support shifting weights, and the standard being perforated to expose the drive-shaft, as and for the purpose set forth.

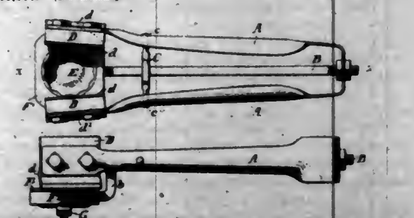
406,164. COAL-TUB. GEORGE FORST, Hoboken, N. J. Filed Oct. 15, 1888. Serial No. 288,184. (No model.)

Claim.—1. A coal-tub having a bail pivoted to the side walls of the same, latches pivoted to the said bail on each side of the tub, each provided with a roller at its free end, which latches are connected by an arm or bail extending from the latch on one side to the latch on the other, and lugs attached to the side walls of the tub, substantially as described.

2. A coal-tub having a bail pivoted to the side walls of the same, a latch pivoted to the said bail on each side of the tub, an arm or bail extending from the latch on one side to the latch on the other side of the tub, an arm extending from each of said latches downward, and a lug attached to each side of the tub, substantially as described.

3. A coal-tub having a bail pivoted to the side walls of the same, a latch pivoted to the said bail on each side of the tub, an arm or bail extending from the latch on one side to the latch on the other side of the tub, arms extending from the said latches downward, a lug attached to each side of the tub, and a fixed stop attached to the bottom part of the tub, substantially as described.

4. A coal-tub having a bail pivoted to the sides of the tub, a latch pivoted to said bail on each side of the tub, an arm or bail extending from the latch on one side to the latch on the other side, an arm extending downward from one of said latches, and a lug on each side of the tub, substantially as described.



5. A coal-tub having a bail pivoted to the sides of the tub, a latch pivoted to said bail on each side of the tub, an arm or bail extending from the latch on one side to the latch on the other side, and a lug on each side of the tub, substantially as described.

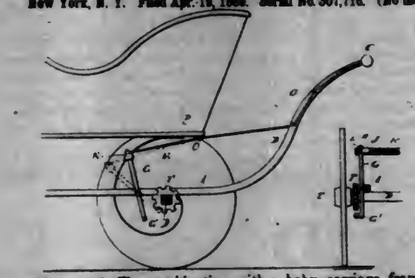
6. A coal-tub having a bail pivoted to the sides of the tub and a fixed lug on each side of the tub, a latch pivoted to said bail on each side of the tub, an arm or bail extending from the latch on one side to the latch on the other side, and an arm extending downward from one of said latches, substantially as described.

7. A coal-tub having a bail pivoted to the sides of the tub and a fixed lug on each side of the tub, a latch pivoted to said bail on each side of the tub, and an arm or bail extending from the latch on one side to the latch on the other side, substantially as described.

8. A coal-tub having a bail pivoted to the side walls of the same, a latch pivoted to the said bail on each side of the tub, an arm extending down from one of said latches, and a lug attached to each side of the tub, substantially as described.

406,165. DEVICE FOR MOLDING ARTICLES FROM GLASS. WILLIAM S. FOX, Philadelphia, Pa. Filed Mar. 27, 1889. Serial No. 305,000. (No model.)

Claim.—1. The combination of a central rotating mold, a lateral non-rotating mold-block, and means, substantially as set forth, whereby the mold-block may be moved transversely to the axis of rotation of the mold during the rotation of the latter.



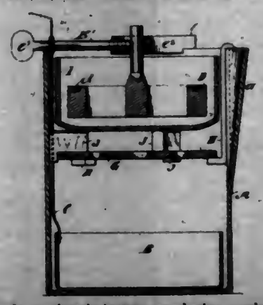
2. The combination of a pair of tongs, a pair of mold-blocks attached to the free ends of said tongs, a mold-carrier suitably mounted upon said tongs, and a rotating mold freely mounted within said carrier, substantially as set forth.

3. The combination of a pair of spring-tongs, a pair of mold-blocks mounted upon the free ends of said tongs, a rod attached to the center of said tongs, a guide and stop piece arranged upon said rod, a mold-carrier mounted upon said rod and having a horizontal flange on which said mold-blocks move, and a rotating mold freely mounted within said mold-carrier, substantially as set forth.

406,166. OBTAINING CATTLE-FOOD FROM STARCH REFUSE. PAUL H. GRIEM, Glen Cove, N. Y., assignor to the Glen Cove Manufacturing Company, same place. Filed Apr. 12, 1888. Serial No. 307,026. (No specimens.)

Claim.—The process herein described of obtaining dry feed for animals from the refuse of the starch and glucose manufactures; consisting in first subjecting the coarse refuse to pressure to free it from water, next adding to this coarse refuse freed from water the fine refuse containing the glutinous and nitrogenous parts of the grain, afterward subjecting the said coarse refuse and fine refuse together to pressure to express the greater part of the moisture therefrom, and finally subjecting them to the action of heat for the purpose of evaporating the moisture therefrom, substantially as herein set forth.

406,167. BRAKE FOR BABY-CARRIAGES. ROBERT T. HAWKINS, New York, N. Y. Filed Apr. 19, 1888. Serial No. 307,716. (No model.)

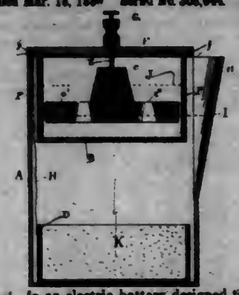


Claim.—1. The combination, with a baby-carriage frame, of wheels having toothed disks or wheels on their hubs, a locking-lever pivoted to the side bars of the supporting-frame of the carriage at each hub, to swing in a plane parallel with that of the side bar, a laterally-projecting lug on the lower end of each lever adapted to engage the teeth of the disks, and straps connecting with said levers and extending to the handle-bar of the carriage-frame, substantially as set forth.

2. The combination, with a baby-carriage frame and its wheels, of toothed disks or wheels secured to the hubs, locking-levers adapted to engage the toothed wheels or disks on the hubs, a cross-bar uniting said levers, and a strap secured to said bar and to the handle-bar of the frame, substantially as set forth.

3. The combination, with a baby-carriage frame and wheels, of toothed disks or wheels F on the hubs, pivoted locking-levers G, having screw-threaded stems N on their upper ends and having their lower ends adapted to engage the toothed disks or wheels F, the cross-bar K, having longitudinal slots through which the screw-stems H are passed, the nuts L, screwed on said stems, and straps extending from the bar K to the handle-bar, substantially as set forth.

406,168. ELECTRIC BATTERY. CHARLES A. HUSSEY, New York, N. Y. Filed Nov. 17, 1888. Serial No. 291,143. (No model.)

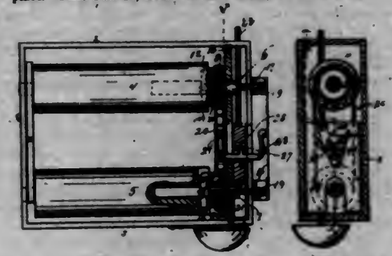


Claim.—1. In an electric battery employing a solution of a salt of copper, the combination, with a cell and positive and negative elements, of a porous diaphragm arranged in the upper part of the cell below the positive element, and a piece of metal which is arranged below the porous diaphragm and will decompose the salt-of-copper solution, substantially as specified.

2. In an electric battery employing a solution of a salt of copper, the combination, with a cell and positive and negative elements, of a porous diaphragm arranged in the upper part of the cell below the positive element, and a piece of iron or steel arranged between the porous diaphragm and the negative element, substantially as specified.

3. In an electric battery employing a solution of a salt of copper, the combination, with positive and negative elements, of a piece of iron or steel interposed between the said elements, substantially as specified.

406,169. ELECTRIC BATTERY. CHARLES A. HUSSEY, New York, N. Y. Filed Mar. 18, 1889. Serial No. 303,644. (No model.)



Claim.—1. In an electric battery designed for two fluids, a porous diaphragm for separating the two fluids and extending solely in a horizontal or approximately horizontal plane and having non-porous vertical walls, substantially as specified.

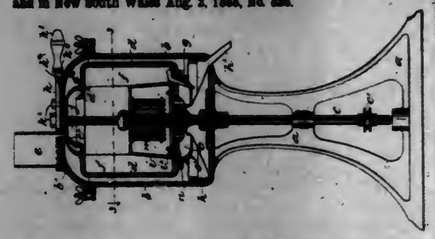
2. In an electric battery designed for two fluids, the combination, with a cell, of a cup having a porous bottom portion and an upper non-porous portion, substantially as specified.

3. In an electric battery designed for two fluids, a cell made of porous material, the upper portion being made non-porous by the application of a material closing the pores and resisting the fluids in the battery, substantially as specified.

4. In an electric battery designed for two fluids, the combination, with a cell provided with a spout, of a cup arranged in the upper part of the cell, its bottom being above the lower portion of the spout, substantially as specified.

406,170. STATION AND STREET INDICATOR. CHARLES H. JESSE, Indianapolis, Ind., assignor of one-half to Norman S. Braden, same place. Filed Dec. 17, 1888. Serial No. 293,767. (No model.)

Claim.—1. In an indicator of the character described, the main casing, a vertical gravitating block at the side thereof, a crank-shaft passing through said block, and a yoke-lever on the inner end thereof, in combination with rollers within said casing, an apron on said rollers, for the purpose set forth, and means for imparting rotary motion to said rollers.



2. In an indicator for street-cars, &c., the main casing, rollers therein, sprocket-wheels mounted on the ends of said rollers, and an endless sprocket-chain engaging said sprocket-wheels, in combination with a block located at the side of the main casing and formed with an opening, a V-shaped spring in said opening, a crank-shaft having an upwardly-projecting pin adapted to engage said spring, a yoke-lever secured on the inner extremity of said crank-shaft, and a rope or chain having its end secured to said block, all substantially as and for the purposes set forth.

3. In an indicator for street-cars, &c., the main casing, rollers journaled therein, hollow spindles at the extremities of said rollers, and an apron connecting said rollers and adapted to serve the purpose specified, in combination with sprocket-wheels mounted on said

spindles and having their inner faces formed with crown-teeth, an endless sprocket-chain engaging said sprocket-wheels, and pawls, one member of each of which is pivoted within one of said hollow spindles, and the other member extends out therefrom and is adapted to engage the crown-teeth of one of said sprocket-wheels, as set forth.

4. In an indicator for street-cars, &c., the main casing, rollers mounted therein and located one above the other, apron on said rollers, for the purpose specified, sprocket-wheels mounted on the journals of said rollers and having crown-teeth on their inner faces, and an endless sprocket-chain, in combination with hinged pawls located partially within the ends of said rollers and adapted to engage the crown-teeth of said sprocket-wheels, sliding plates, and rods connecting said plates and pawls, all substantially as and for the purposes specified.

406,171. CENTRIFUGAL BUTTER-EXTRACTOR. CARL A. JOHANSSON, Stockholm, Sweden, assignor to the Aktiebolaget Extraktor, same place. Filed Feb. 14, 1889. Serial No. 299,855. (No model.) Patented in Sweden Jan. 21, 1887, No. 1,059; in England Mar. 15, 1888, No. 3,994; in Norway May 24, 1888, No. 1,058; in France May 29, 1888, No. 190,886; in Belgium May 31, 1888, No. 81,987; in Finland June 6, 1888, No. 311, and in New South Wales Aug. 2, 1888, No. 326.

Claim.—1. In a centrifugal apparatus for the separation of butter from milk, the combination of the revolving drum provided with a partition arranged within it, which separates the cream layer from the layer of blue milk, and an adjustable cream-disturber, which is arranged within the drum and projects into the revolving layer of cream and breaks up the same, as set forth.

2. In a centrifugal apparatus for the separation of butter from milk, the combination of the revolving drum provided with an outlet at its bottom for the blue milk, and another outlet at its bottom for the butter separated from the milk, an annular butter-receiving chamber connected with and arranged below said drum, an adjustable butter-removing tube, the receiving end of which projects into said butter-receiving chamber, and a cream-disturber arranged within said drum and adapted to project into the cream layer or wall, as set forth.

3. The combination of the revolving drum *d*, provided with an upright annular partition concentric with the axis of the drum to separate the cream layer from the layer of blue milk, said partition having apertures in it near its base for the passage outward of such blue milk as may have passed over with the cream, and a cream-disturber arranged in said drum and within the space included within said partition.

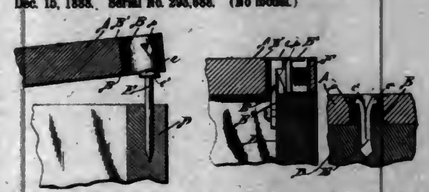
4. The combination, with the fixed outer casing and the receiver for the blue milk arranged within said casing, of the revolving drum, the cream-disturber arranged therein, and the annular chamber *o*, fixed to the under side of said drum and receiving the butter therefrom, said butter-receiving chamber having an outlet opening into the blue-milk receiver for the passage of such blue milk as may be pressed out of the butter in said chamber, as set forth.

5. The combination of the fixed casing, the revolving drum mounted therein and having an annular butter-receiving chamber *o*, the cream-disturber within said drum, whereby the butter is separated from the milk, the adjustable butter-removing tube *p*, mounted rotatively in the bottom of the casing, with its axis parallel with the axis of the drum, and its receiving end bent laterally and entering the butter-receiving chamber, and the handle *q*, whereby said tube may be rotated axially, as set forth.

6. The combination, with the casing *b* and its cover, provided with an undercut guide k^3, of the trundle-wheel, its shaft *j*, the operating-lever *k*, fulcrumed in the cover of the casing and provided with a screw-threaded stem, a sliding piece k^4 on said stem, which takes under the overhanging portion of said guide, and the socketed handle portion k^5 of the lever screwed onto the stem of said lever, whereby a brake is formed for holding the lever in any desired position, as set forth.

406,172. ELECTRIC REGISTERING APPARATUS. JOHN A. LARNER, Cleveland, Ohio. Filed Dec. 20, 1886. Serial No. 222,073. (No model.)

406,172.



Claim.—1. In an electric registering apparatus, a registering-surface having a separate column for each of the units, in combination with separate columns for each of the tens, and running in the direction that the registering-surface is moved, substantially as set forth.

2. In an electric registering apparatus, a registering-surface having a separate column for each of the units and a separate column for each of the tens, in combination with a registering device to register from one to nine in units-column and from ten to ninety-nine in both units and tens columns, substantially as set forth.

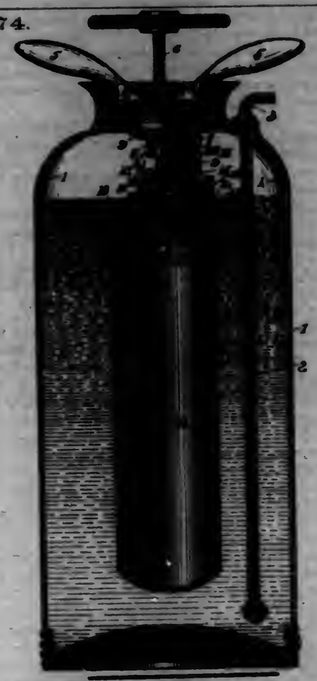
3. In an electric registering apparatus, a shaft carrying a marking device to register units in different planes, clock-work to turn the shaft, an escapement-wheel connected with the shaft of the marking device, an anchor having arms to hold the escapement-wheel, a registering-arm pivoted to swing against the marking device and make the impressions, and connections between the registering-arm and the marking device, and actuated by the arm to release the marking device and allow it to move to its original position, substantially as set forth.

4. In an electric registering apparatus, a shaft carrying a registering device formed in a single piece to register in different planes, clock-work to turn the shaft, an escapement-wheel connected with the clock-work and the shaft of the registering device, an anchor having arms to hold the escapement-wheel, and a single registering-arm pivoted to swing against the marking device and make the impressions in different planes, substantially as set forth.

406,173. BOX-CATCH. WILLARD C. LIPE, Syracuse, N. Y. Filed Dec. 15, 1888. Serial No. 293,668. (No model.)

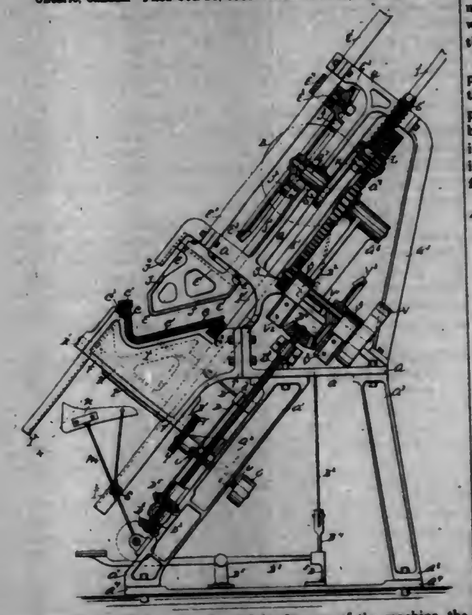
Claim.—1. The combination of an eyelet secured in the top of the cover, a shoulder provided upon said eyelet, a stud or projection secured to the body of the box, and a spring for removably engaging said projection with the eyelet, substantially as and for the purpose specified.

2. The combination of an eyelet secured in the cover of the box, a shoulder provided on the eyelet at a point below the top surface thereof, with a stud secured to the body of the box and held in removable engagement with the shoulder provided on the eyelet, substantially as and for the purpose specified.



3. The combination of the eyelet secured to the cover of the box, shoulders provided on the interior of the eyelet with an interposed space between said shoulders, with a stud secured to the body of the box and registering with said interposed space between the shoulders of the eyelet, said stud and shoulders being removably engaged, substantially as and for the purpose specified.

406,174. FIRE-EXTINGUISHER. HENRY A. MANSFIELD, Bridgeport, assignor of one-half to Samuel Babcock, Middletown, Conn. Filed Jan. 26, 1888. Serial No. 297,804. (No model.)



Claim.—1. The combination, with the outer liquid-holding cylinder and a discharge-pipe leading therefrom, of the screw-threaded cap adapted to fit the top of said cylinder, a valve-stem extending downward through said cap, an air-holding cylinder suspended within the liquid-holding cylinder and provided with a valve and valve-stem, and a removable connection between the upper and lower valve-stems, substantially as set forth.

2. The combination, with the outer liquid-holding cylinder, of a cap secured thereon and a valve-stem extending through said cap, a bracket open as to one side thereof depending from the said cap, an air-holding cylinder having a valve and stem and a flange near its upper end adapted to engage the bracket, and a coupling embracing the ends of the two valve-stems, and whereby the lower stem may be rotated by the upper stem and the lower cylinder retained against displacement on the bracket, substantially as set forth.

406,174.

406,175. CRIMPING-MACHINE. ROBERT MARSHALL, Hamilton, Ontario, Canada. Filed Oct. 26, 1888. Serial No. 289,223. (No model.)

Claim.—1. The combination of the frame *a* of the machine, the trix with its rod and longitudinal slotted bar E^4, bevel-wheel E^3, with its cam J^3, with and for reciprocating the double press-plates J, substantially as described.

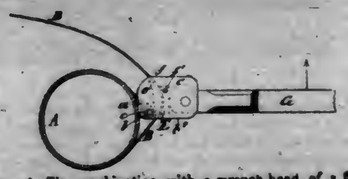
2. The combination of the sliding molds *c'*, grooved bearings c^2, secured to the rigid mold of the machine, the guide-bar c^3, springs *c*, the double screw-shaft D', nuts D^2, levers D, angle-shaft D^3, with its wheels keyed onto the same, and all driven by the mechanism, substantially as herein described.

3. The combination, with the frame of the machine, of the rubber rollers and bearings, spur-wheels T and T', shaft U, with its pulley U', the large pulley V on shaft V', driven by the mechanism of the machine, as described.

4. The combination, with the frame of the machine, of the matrix I, with its rod I', the longitudinal cross-bars L, spiral springs S', the crank K, and the guide-bars P, substantially driven as herein described.

5. The combination of the under side-pressure surface-plates N N, their arms M M, the double-screwed movement-shaft O, and the trix E, with its rod E', and the bevel-wheel E^2, all driven by the mechanism of the machine, as described.

6. The combination of the trix E, with its rod E', the sliding molds *c'*, with their springs C, the rigid molds F, bolted to the frame *a* and provided with the corrugated-metal plates H H, with rubber backings, the matrix I and its rod I', the double press-plates J, with rods J', and the under-pressure surface-plates, all driven by the mechanism, as herein described and set forth.

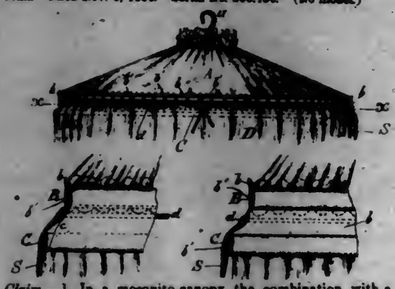


406,176. ALE OR BEER MEASURE. OSCAR MAYER, New York, N. Y. Filed May 10, 1889. Serial No. 310,234. (No model.)

Claim.—1. The combination, with the body of the measure and the gage G thereon, of the plain removable slide *j*, mounted in keepers on the inner face of the body and serving as a partition between the gage-chamber *g'* and the interior of the measure, said slide being cut away at *j'* to form a contracted passage for the liquid from the measure to the gage-chamber and standing out of contact with the wall of the body *a* at its upper end, whereby the outlet *l* is formed for the escape of air from the gage-chamber, as set forth.

2. The combination, with the body of the measure having a depressed annular portion or channel *b'* in its bottom *b*, and the gage G, the chamber in which extends below the level of the bottom *b*, of the plain removable slide *j*, mounted in keepers on the inner face of the body and serving as a partition between the gage-chamber and the interior of the measure, said slide having a contracted passage under its lower end connecting the channel *b'* with the gage-chamber, as set forth.

406,177. PIPE-WRENCH. MELVIN W. MORRISSON and MORRAD S. KELLOGG, Brooklyn, N. Y. Filed Sept. 20, 1888. Serial No. 285,941. (No model.)



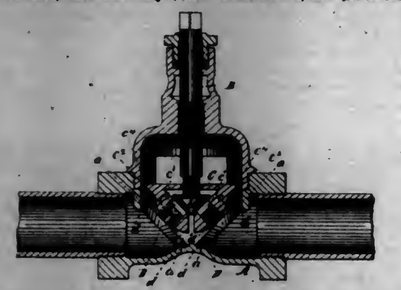
Claim.—1. The combination, with a wrench-head, of a flexible metallic gripper secured near one end to said head and having one of its ends free to be passed about a pipe, and a clamping device, substantially as described, for securing the free end of the gripper to the head after the same has been passed about the pipe, substantially as specified.

2. The combination, with a wrench-head, of a flexible metallic gripper having a pivotal connection near one of its ends with said head and having its other end free to be passed about a pipe, and a clamping device, substantially as described, for securing the free end of the gripper to the head after the gripper has been passed about a pipe, substantially as specified.

3. The combination, with a wrench-head, of a flexible metallic gripper connected near one of its ends to said head and having its other end free to be passed about a pipe, and a clamping device, substantially as described, for securing the free end of the said gripper to the head after it has been passed about a pipe, and a lever fulcrumed upon said head and provided with a cam-surface adapted to bear against said clamping device, substantially as specified.

4. The combination, with a wrench-head provided with a cam-surface adapted to bear against a pipe, of a flexible metallic gripper secured near one of its ends to said head and having its other end free to be passed about a pipe, and a clamping device, substantially as described, for securing the free end of the gripper to the head after the same has been passed about a pipe, substantially as specified.

406,178. MOSQUITO-CANOPY. ISAAC B. PALMER, Middletown, Conn. Filed Nov. 6, 1888. Serial No. 290,136. (No model.)



Claim.—1. In a mosquito-canopy, the combination, with a top portion, of a frame by which the same is distended, and a body portion depending from the top portion and detachably secured thereto, substantially as specified.

2. In a mosquito-canopy, the combination, with a top portion, of a hook-like frame by which the same is distended, and a body portion depending from the top portion and detachably secured thereto, substantially as specified.

3. In a mosquito-canopy, the combination, with a top portion, of a frame by which said top portion is distended, a hoop supported from said top portion, and a detachably body portion supported between said top portion and the hoop, substantially as specified.

4. In a mosquito-canopy, the combination, with a top portion, of a hoop by which said top portion is distended, a second hoop supported from the top portion below the hoop first named, and a detachable body portion supported between said hoops, substantially as specified.

406,179. STRAIGHT-WAY VALVE. WILLIAM PORTEOUS, Elmwood Place, Ohio. Filed May 4, 1888. Serial No. 272,759. (No model.)

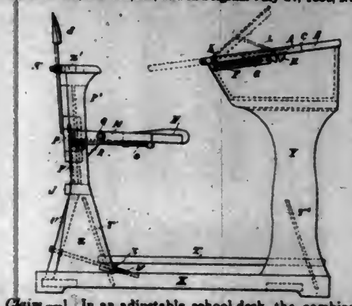
Claim.—1. In a straight-way valve, the combination, with a shell or casing, of a valve-stem provided with a wedge-piece, a divided valve-carrier loosely connected to the stem, and valve-disks swiveled in the carrier, substantially as and for the purpose described.

2. In a straight-way valve, the combination, with the shell or casing provided with valve-seats at an angle of about forty-five degrees, of a valve-stem provided with a wedge-piece, a divided valve-carrier connected with the stem and adapted to move a limited distance relatively thereto, and a valve-disk swiveled in each half of the carrier.

3. In a straight-way valve, the combination, with a shell or case provided with inclined valve-seats, of a valve-stem provided with a wedge-piece, a valve-carrier loosely mounted upon the stem and divided transversely at right angles to the bore of the valve, and valve-disks swiveled in the carrier.

4. In a straight-way valve, the combination, with a shell or casing provided with inclined valve-seats, of a stem screwing into the shell and provided with a wedge-piece at its lower end, a divided valve-carrier provided with a recess to receive the wedge-piece and to permit a limited independent movement thereof, and valve-disks swiveled to the carrier.

5. In combination with a case or shell provided with inclined valve-seats, a valve-stem provided with a wedge-piece and screwing into the shell, a divided valve-carrier loosely connected to the stem, and valve-disks swiveled to the carrier.



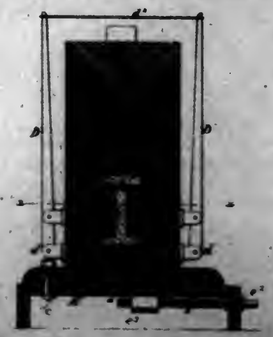
6. The combination, in a straight-way valve, of a valve-stem, a wedge-piece, a sectional valve-carrier, rotary valve-disks supported thereby, and a valve-case having inclined valve-seats, substantially as and for the purpose specified.

7. The combination, in a straight-way valve, of a threaded valve-stem, a coniform wedge-piece carried thereby, a sectional valve-carrier having inclined external faces, rotary valve-disks secured to the respective sections of the valve-carrier, and a valve-case having inclined valve-seats, substantially as specified.

8. In a straight-way valve, the combination of the sectional valve-carrier C, the rotary valve-disks D, having grooved stems d', and the pins c^3, substantially as and for the purpose specified.

9. In a straight-way valve, the threaded valve-stem B, wedge-piece A, the sectional valve-carrier C, the rotary valve-disks D, the guides d' c^3, substantially as and for the purpose specified.

406,180. ADJUSTABLE SCHOOL-DESK. FRANS T. SELANDER, Gothenburg, Sweden. Filed Aug. 15, 1888. Serial No. 282,722. (No model.) Patented in Sweden Apr. 16, 1888, No. 1,530; in England July 23, 1888, No. 10,640; in Norway July 26, 1888, No. 1,048; in France July 26, 1888, No. 192,047, and in Belgium July 27, 1888, No. 81,718.



Claim.—1. In an adjustable school-desk, the combination, with the standards, of the desk-top mounted in guides thereon, and the locking or stop device for the desk-top, said device consisting of the slotted guide-plate G on the standard, the T-headed bolt F in said slot, the nut F', into which said bolt is screwed, and the notched lug H on the desk-top, arranged to engage said bolt, substantially as set forth.

2. In an adjustable school-desk, the combination, with the seat-supports, of the seat constructed of two parts, the one part provided with tongues matching with grooves in the other part, and with an adjusting-screw collared at its ends in bearings on one part and passing through a nut on the other part, whereby rotation of said screw causes one part to play over the other.

3. In an adjustable school-desk, the combination, with the seat-standards and the desk-standards provided with parallel inclined guides, and the slotted guide-bar U' between said seat-standards, of a foot-rest mounted in said guides and provided with a nut, and a clamping-screw passing through said nut on the foot-rest, and also through the slot in said guide-bar, whereby said foot-rest may be supported at any desired elevation on the guides, substantially as set forth.

406,181. MOLD FOR MAKING STEEL CASTINGS. WILLIAM R. SHEDIKER, Trenton, N. J. Filed Dec. 22, 1888. Serial No. 294,417. (No model.)

Claim.—In a mold, the combination, with an upper divided portion, of a lower divided portion made separate from the upper divided portion, distance-pieces interposed between said upper and lower portions, and upon which the upper portion rests, and levers fulcrumed upon one of said portions and connected to the said distance-pieces, which levers may be operated to withdraw the distance-pieces from between said upper and lower portions of the mold, substantially as specified.

406,182. SEAT FOR VEHICLES. FREDERICK C. STRAUB, Syracuse, N. Y. Filed Dec. 3, 1888. Serial No. 292,435. (No model.)

Claim.—1. The combination, with the ordinary seat of a vehicle, of an extension-seat hinged to a swinging supporting-standard and adapted to fold under the ordinary seat and be withdrawn therefrom to operative position, substantially as specified.

2. The combination, with the ordinary seat of a vehicle, of a guideway beneath the ordinary seat, an auxiliary seat, and a supporting-standard for said seat hinged to the guideway, substantially as and for the purpose specified.

3. The combination, with the ordinary seat of a vehicle, of a hinged auxiliary seat adapted to fold over and a supporting-standard for the auxiliary seat, said standard hinged at its lower extremity and adapted to fold under the ordinary seat and be withdrawn therefrom to operative position, substantially as specified.

4. The combination, with the ordinary seat of a vehicle, of a supporting-standard, an auxiliary seat hinged thereto, and a swinging bar K, secured to the seat and automatically abutting against shoulders on said supporting-standard, retaining the seat in operative position, said bar being adapted to be disengaged from abutment with the standard when the seat is folded, substantially as and for the purpose set forth.

5. The seat H, a guideway e, and the supporting-standard G for the seat H, said standard hinged to the guideway and held from movement when in operative position, substantially as and for the purpose set forth.

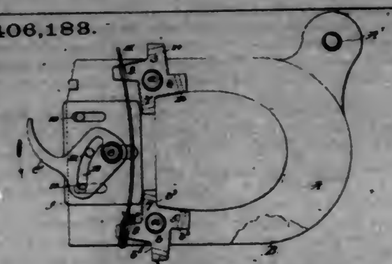
6. The combination, with the ordinary seat of a vehicle, of an auxiliary seat, a guideway beneath the ordinary seat, and a swinging supporting-standard for the auxiliary seat, provided with a pivotal pin or stud for engaging the said guideway and guiding the swinging support, substantially as and for the purpose specified.

7. The combination, with the ordinary seat of a vehicle, of an auxiliary seat, guideways beneath the ordinary seat, and a supporting-standard interposed between the guideways, and having a pin F riding in said guideways for guiding the supporting-standard and hinging the same thereto, substantially as and for the purpose specified.

8. The combination, with the ordinary seat of a vehicle and a guideway beneath said seat, of an auxiliary seat, a supporting-standard for said seat, a pin or stud for pivoting said supporting-standard to the guideway and guiding the same beneath the ordinary seat, and means, substantially as described, for retaining the pivoted supporting-standard in its upright position when withdrawn from the ordinary seat, substantially as and for the purpose specified.

9. The combination, with the bar or support C, of an auxiliary seat H and a rocking standard G, having an open slot L, adapted to register with the bar C when the seat is in operative position, substantially as and for the purpose described.

10. The combination, with the ordinary seat of a vehicle, of an extension-seat and a swinging standard G, having a lug or pin F secured thereto and guided in a way beneath the ordinary seat, substantially as described.



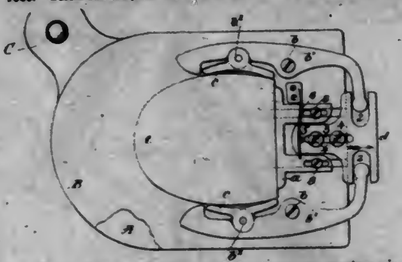
11. The combination, with the ordinary seat of a vehicle, of the parallel guideways e, the standard G, the pins or lugs F, projecting from said standard and guided in said ways, and an extension-seat hinged to said standard G, substantially as and for the purpose set forth.

12. The combination, with the ordinary seat of a vehicle, guideways e, having the extension e', and a bar or support C, of the auxiliary seat H and the standard G, guided in the ways E and e, said standard being engaged with the bar C when guided to the extension e', substantially as and for the purpose set forth.

406,183. TOP-LIFT HOLDER. RAPHALET A. TRIPP, New Bedford, assignor to James W. Brooks, trustee, Cambridge, Mass. Filed Mar. 2, 1888. Serial No. 301,773. (No model.)

Claim.—1. The combination, with a top-lift plate, of pivoted dogs having each two or more seats and holding-faces, whereby the said dogs are adapted to receive and hold the breast corners of top lifts of various sizes, and means, substantially as described, to close the dogs upon the top lift, substantially as described.

406,188.



2. The combination, with the top-lift plate and pivoted dogs having each two or more seats to hold the breast corners of a top lift, of a spring to normally keep the said dogs closed upon the top lift, substantially as described.

3. The combination, with the top-lift plate and pivoted dogs having each two or more seats to hold the breast corners of a top lift, of a spring connected therewith to normally keep the said dogs closed upon the top lift, and with a movable plate to act upon the said dogs and move them apart to receive a top lift, substantially as described.

4. The combination, with the top-lift plate and pivoted dogs having each two or more seats to hold the breast corners of a top lift, of a spring to normally keep the said dogs closed upon the top lift, and with a movable plate to act upon the said dogs and separate them for the reception of a top lift, and with a lever to move the said plate, substantially as described.

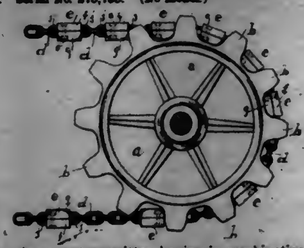
406,184. TOP-LIFT HOLDER. RAPHALET A. TRIPP, New Bedford, assignor to James W. Brooks, trustee, Cambridge, Mass. Filed Mar. 2, 1888. Serial No. 301,774. (No model.)

Claim.—1. The top-lift plate and the levers or carriers pivoted thereon, combined with the rocking blocks mounted upon the said levers to contact with the side edges of the top lift, and with means, substantially as described, to operate the said levers in unison, substantially as set forth.

2. The top-lift plate, the levers pivoted thereon, and the rocking blocks carried by the said levers, combined with the spring-actuated plate to engage both of the said levers and move them in unison, substantially as described.

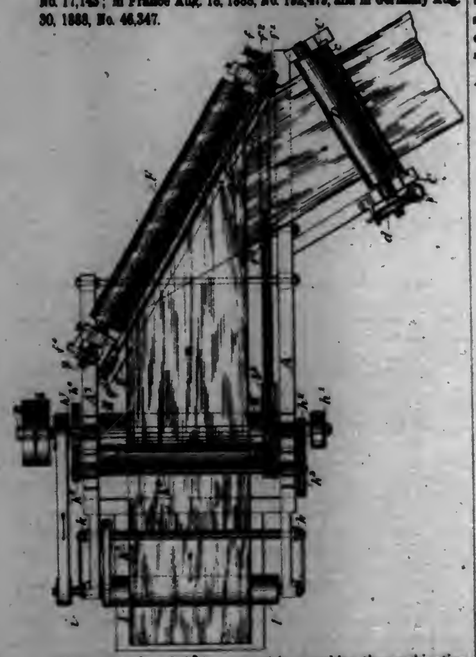
3. The top-lift plate, the levers mounted thereon, and rocking blocks carried by the said levers, combined with the adjustable breast-gage mounted upon the top-lift plate and with means to move the said levers, substantially as described.

4. The top-lift plate and levers attached thereto and recessed, as shown, at their inner sides, and means to actuate the said levers, combined with rocking blocks pivoted in the said recesses, to operate substantially as described.



5. The top-lift plate, the levers pivoted thereon and having their ends beveled, as shown, for the easy introduction of the top lift, and means to actuate the said levers, combined with rocking blocks mounted on the said levers and contained wholly back of the beveled ends thereof, and with a breast-gage, to operate substantially as described.

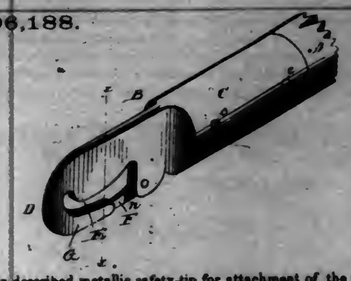
406,185. BALL-CASTER. JAMES C. WEIR, San Francisco, Cal. Filed Sept. 4, 1888. Serial No. 284,564. (No model.)



Claim.—The herein-described ball-caster, consisting of the socket A, having the separate internal recesses a^2 and the flange a, the bottom plate B, ball C, and the bearing-rollers D D^x, mounted on hoops E, all constructed and combined for operation as set forth.

406,186. CONVEYER-CHAIN. CHARLES S. WELLS, Bay City, Mich., assignor of three-fifths to Harry W. Garland, same place. Filed June 1, 1888. Serial No. 275,735. (No model.)

Claim.—A power-transmitter having in combination the following elements, namely: an endless link chain comprising oval links at right angles to each other, a series of engaging-blocks consisting of the sections *f* and *g* applied on opposite sides of such chain, each section having, as described, a transverse recess in which the links lie loosely, and both such sections having their adjacent faces held firmly together by bolts or rivets, but leaving the links free to rock or move in their recesses, all substantially as described.



406,187. MACHINE FOR BRUSHING AND WAPPING FABRICS. JAMES WORRALL, Ordsall, Salford, County of Lancaster, and JOHN KERSHAW, Hebden Bridge, County of York, England. Filed Sept. 25, 1888. Serial No. 276,326. (No model.) Patented in England Dec. 13, 1887, No. 17,143; in France Aug. 18, 1888, No. 192,479, and in Germany Aug. 30, 1888, No. 46,347.

Claim.—1. In a finishing and raising machine, the combination, with a guide-roller for leading in the cloth and a drawing-roller for passing it out of the machine, of a transverse diagonal bed or bar over the edge of which the cloth is drawn, and a rotary finishing-brush or card-roller arranged to work parallel thereto, as and for the purpose above set forth.

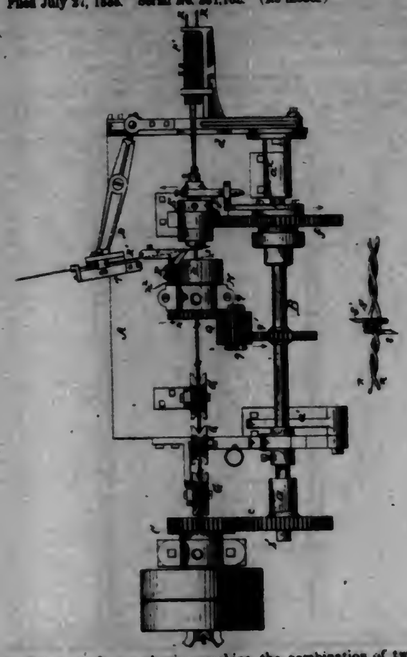
2. The combination, with the diagonal bed or bar E, of the smoothing-roller G, and means, substantially as described, for rotating the said roller, as and for the purpose above set forth.

406,188. SAFETY-TIP FOR VEHICLE-TONGUES. THOMAS AUBURN, Pittsville, Wis. Filed Mar. 16, 1889. Serial No. 303,709. (No model.)

Claim.—1. The combination, with a vehicle pole or tongue, the herein-described metallic safety-tip for attachment of the neck-yoke therein, consisting of the rearwardly-extending tubular portion adapted to fit over and be removably secured to the vehicle-tongue, and of the flat or reduced outer portion having an open loop formed thereon to permit of the reception of the neck-yoke ring, of the tongue pivotally secured in the downwardly-extending portion and adapted to close the opening of the loop for the retention of the neck-yoke ring therein, and the walls having grooves or recesses formed therein and into which the end of the said tongue fits in its raised or lowered position, substantially as and for the purpose herein set forth.

2. The herein-described safety-tip for neck-yokes, consisting of the rearwardly-extending tubular portion fitting over the vehicle-tongue and adapted to be secured thereto, the flat or reduced outer portion, said outer portion having the inner depending slotted wall and the outer turned-under or hooked portion, forming a longitudinal curved slot between the upper edge of the hook and the under edge of the body of the flat head of the tip, said under edge having a recess therein, the longitudinal slot also terminating at its forward end in an enlargement; in combination with the lever or tongue pivoted in the depending slotted wall and adapted to close the opening between said depending wall and the inner end of hook and to have its free end rest in a recess formed in the upper edge of the end of said hook, as set forth.

406,189. WATER-FILTER. FRED W. BAKER, Rochester, N. Y. Filed Apr. 17, 1888. Serial No. 270,975. (No model.)



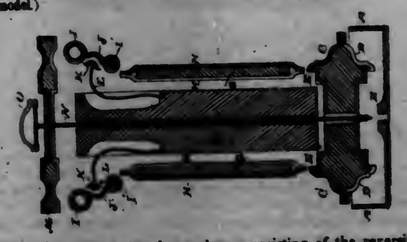
Claim.—1. The combination, with the water-receiver A, of the sponge-receptacle B, the receptacle C, containing filtering material and divided into two compartments C' C^2 by the perforated partition C^3, and having the discharge-openings *e* in the upper part of the compartment C^2, and the sediment well or receptacle E, surrounding the two-part receptacle C and having overflow-openings near its upper end, substantially as described.

2. The receptacle C, containing the filtering material and divided into two compartments by the vertical perforated partition and having the removable imperforate cap constituting its bottom, substantially as described.

3. The receptacle C, containing the filtering material and divided into two compartments by the vertical perforated partition, and having the removable imperforate cap constituting its bottom, in combination with the sediment well or receptacle surrounding said receptacle C and having the overflow-openings near its upper end, substantially as described.

4. The combination, with the water-receptacle A, of the sponge-cup B, the receptacle C, containing filtering material and having the vertical perforated partition and the removable imperforate screw-cap for its bottom, the sediment well or receptacle surrounding said two-part receptacle and having the overflow-openings near its top, and the main filter, all constructed and arranged substantially as described.

406,190. BARB-WIRE MACHINE. ALBERT J. BATES, Joliet, Ill. Filed July 27, 1888. Serial No. 281,162. (No model.)



Claim.—1. In a barb-wire machine, the combination of two reversely-rotatable coilers placed in the same longitudinal line, one of said coilers having a cutter with a barbing-wire guide, and a cutter placed to one side of said coilers, the guide and lathe-cutter being both stationary, whereby, when the barbing-wire is fed to the coilers, a piece is first cut from the wire and then turned about the main strands in reverse direction, as set forth.

2. In a barb-wire machine, the combination of the coiler E, the coiler N, carrying the cutter P, and the stationary cutter *p*, as set forth.

3. In a barb-wire machine, the combination of the table A, the bearing *o*, the coiler N, consisting of the neck n^2, the gear-wheel *n*, and the head *n'*, and having the cutter P, the stationary cutter *p*, and the coiler E, as set forth.

406,191. CASKET-PEDESTAL. HARRY B. BELDEN and MELVIN A. TAYLOR, Oakland, Cal. Filed Feb. 6, 1889. Serial No. 298,883. (No model.)

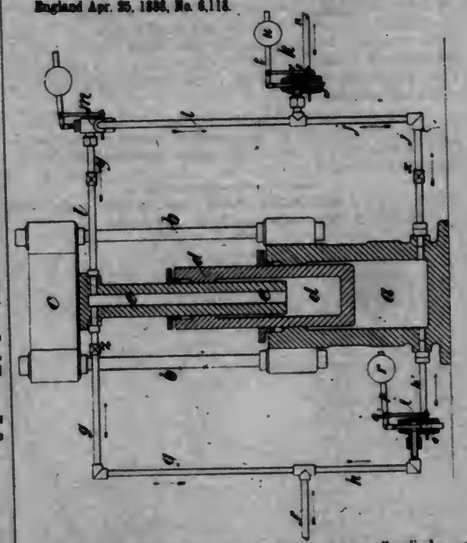
Claim.—1. A pedestal or column consisting of the reversible base having the upper and lower surface of contrasting colors, the flexible and reversible capital, and the intermediate flexible and reversible column having an inner and outer surface of contrasting color, substantially as described.

2. The column having the plinth made reversible, with its inner and outer surfaces of contrasting colors, substantially as described.

3. The column, with the reversible base having an upper and lower surface of contrasting colors, the flexible reversible shaft-covering having an inner and outer surface of different colors, the reversible capital and cornice or entablature having its upper and lower surfaces of different colors, substantially as described.

4. The reversible base, the shafts consisting of the longitudinal rigid strips having a flexible covering, so united between the strips that the covering may be bent into a circular form in either direction, and a capital formed of the upper and lower rigid rings and the intermediate flexible portion, so that these parts may be reversible, substantially as described.

5. The reversible capital consisting of the upper and lower rings with intermediate flexible portion, whereby the capital may be reversed so as to present either side outwardly, in combination with the circular segments fitted into the intermediate flexible portion of the capital, substantially as described.



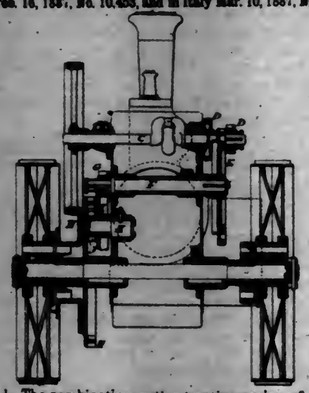
6. The reversible base having its opposite sides of different color, the central shaft, and the surrounding flexible and reversible shaft-covering having its inner and outer surfaces of contrasting color, the reversible capital with the upper and lower rigid rings and the intermediate flexible one, in combination with the segments mounted upon springs which are supported from the central column, said segments being fitted to expand and make rigid the intermediate flexible portion of the capital, substantially as described.

406,192. PROCESS OF REVIVIFYING GAS-LIME. JOSEPH BELL, Brooklyn, N. Y. Filed Dec. 3, 1888. Serial No. 292,543. (No specimens.)

Claim.—1. The herein-described process of revivifying gas-lime by incorporating it with fresh slaked lime, and burning it, substantially as described.

2. The herein-described process of revivifying gas-lime by mixing it with fresh slaked lime and fuel, and burning the whole in a furnace, substantially as described.

406,193. APPARATUS FOR HYDRAULIC PACKING-PRESSES. EDWARD L. BELLHOUSE, Manchester, County of Lancaster, England. Filed May 20, 1888. Serial No. 275,512. (No model.) Patented in England Apr. 25, 1888, No. 6,116.

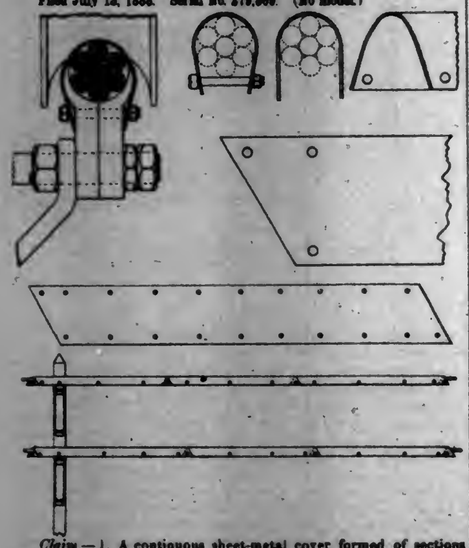


Claim.—1. The combination of a large and a small cylinder, an intermediate hollow piston sliding in the large cylinder and on the small cylinder, with a supply-pipe having two branches, one valved, and communicating with the large cylinder and the other communicating with the small cylinder, two other branches leading to a hydraulic press, one branch being valved and leading from the small cylinder and the other leading from the large cylinder, and suitable check-valves, all substantially as described.

2. The combination of a large and small cylinder, an intermediate hollow piston sliding in the large cylinder and on the small cylinder, with a supply-pipe having two branches, one communicating with the large cylinder and the other with the small cylinder, and an automatic valve on the latter branch, two other branches leading to a hydraulic press, one branch leading from the small cylinder and the other from the large cylinder, suitable check-valves, and an automatic valve on the branch leading from the small cylinder loaded to a greater

extent than the valve on the branch leading to the large cylinder, all substantially as described.

3. The combination of a small and large cylinder, an intermediate hollow piston sliding in the large cylinder and on the small cylinder, with a supply-pipe having two branches, one valved and communicating with the large cylinder and the other communicating with the small cylinder, two other branches leading to a hydraulic press, and one being valved and leading from the small cylinder and the other leading from the large cylinder, suitable check-valves, and a regulating-valve on the piping leading to the press, all substantially as set forth.



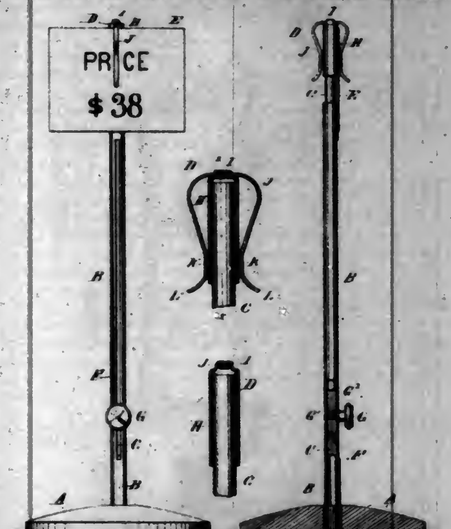
406,194. COMBINED TRACTION-ENGINE AND DIGGING-MACHINE. FREDERICK J. BURRELL, Thetford, County of Norfolk, England. Filed June 21, 1887. Serial No. 242,056. (No model.) Patented in England July 12, 1886, No. 9,059; in France Jan. 11, 1887, No. 180,517; in Spain Feb. 16, 1887, No. 10,453, and in Italy Mar. 10, 1887, No. 21,234.

Claim.—1. The combination, with a traction-engine, of the horn-plates A', having journal-bearings for crank-shafts C, rotary shafts F, shaft-carrying eccentric K, shaft M, and the main shaft carrying the wheels supporting the rear portion of the structure, substantially as shown and described.

2. The combination, with a traction-engine, of the crank-shaft C, pinions D D, double spur-wheel E, mounted on the counter-shaft F, pinion G, gear-wheel H, gear-wheel I, pinion J, and eccentric bush K substantially as shown and described.

406,195. SUSPENSION-TRACK. CHARLES CARR, Boston, Mass. Filed July 12, 1888. Serial No. 279,869. (No model.)

Claim.—1. A contiuous sheet-metal cover formed of sections united and secured to each other by bolts, in combination with a continuous cable to form a suspension-track, substantially as described.

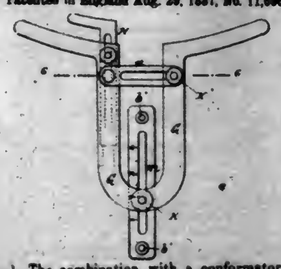


2. The cable-track-covering sections formed with overlapping ends, in combination with holding-bolts passing through both sections and the cable, substantially as described.

3. The cable-track covering as cut or formed with diagonal ends and bolt-holes, in combination with the cable and bolts, substantially as described.

4. A cable-track cover or jacket made continuous by means of interlocking bolts through projecting ends, in combination with the cable, substantially as described.

5. The combination of a continuous cable and a continuous sheet-metal covering formed of sections united to each other by bolts at their ends, and secured directly to the cable by means of said bolts and other transverse bolts, substantially as described.

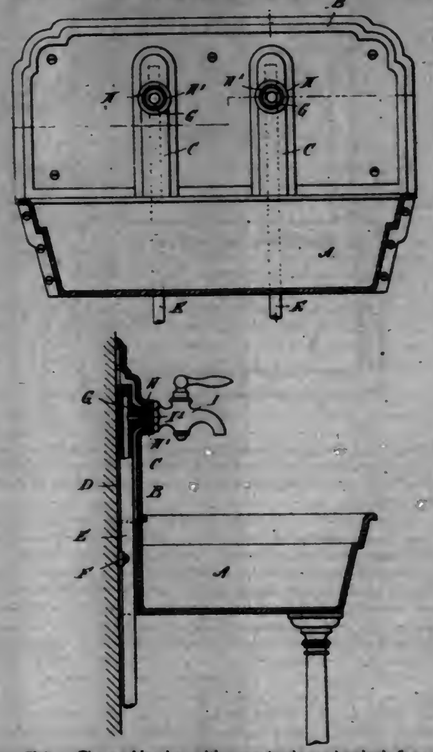


406,196. CARD-HOLDER. JOHN CLAYTON and JACOB ABRAHAM, New York, N. Y. Filed Feb. 21, 1889. Serial No. 300,851. (No model.)

Claim.—1. In a card-holder, the combination, with a vertically-adjustable rod, of a holder comprising a shell fitted on the upper end of the said rod and a spring-wire secured on the said shell and pressing with its ends against part of the said shell, substantially as shown and described.

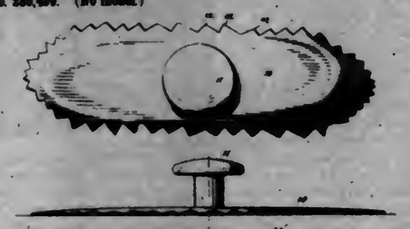
2. In a card-holder, a holder comprising a shell and a lyre-shaped spring-wire secured in its middle to the upper end of the said shell and extending downward at its ends outside the said shell, substantially as shown and described.

406,197. ADJUSTABLE GARMENT-PATTERN. JULES COUTEAU, Béziers, Hérault, France. Filed Oct. 20, 1887. Serial No. 252,894. (No model.) Patented in England Aug. 29, 1887, No. 11,696.



Claim.—1. The combination, with a conformator having a vertically-slotted and graduated plate at the upper portion of its back section, of a vertically-adjustable forked collar-guide sliding in and along said slotted plate, said guide having its upper ends curved to conform to the shape of a collar.

2. The combination, with a conformator having a vertically-slotted and graduated plate at the upper portion of its back section, of a vertically-adjustable forked collar-guide sliding in and along said slotted plate, the two forks of said guide being pivoted together, and an adjustable fastening slotted link connecting the said forks.



3. The combination, with a conformator, of a vertically-adjustable guide at the top of the back section and a slide adjustable vertically relatively to said guide and adapted to indicate the height of the collar.

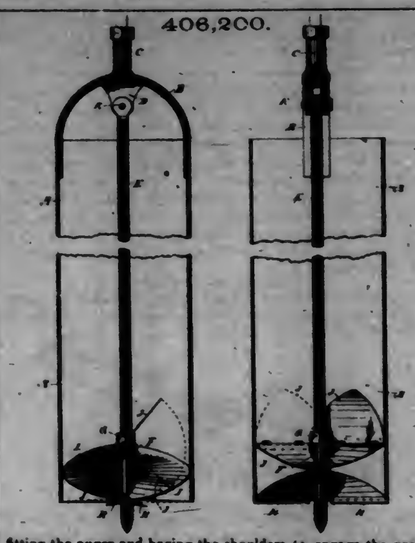
406,198. SINK-BACK. THOMAS F. COTER, Brooklyn, N. Y. Filed Feb. 13, 1889. Serial No. 299,704. (No model.)

Claim.—The combination, with a supply-pipe and a nipple formed on the said supply-pipe, of a sink-back having a recess in its rear for the reception of the said supply-pipe, and an apertured offset or rosette connecting with the said recess and forming a passage for the said nipple, substantially as shown and described.

406,199. IMPLEMENT FOR SEPARATING CHECKS, TICKETS, &c. ALFRED H. CRIDGE, New York, N. Y. Filed Oct. 30, 1888. Serial No. 289,499. (No model.)

Claim.—1. A detacher or tearing implement having an irregularly-serrated edge.

2. A detacher or tearing implement having a surrounding serrated edge, the teeth or projections forming said edge varying in form.

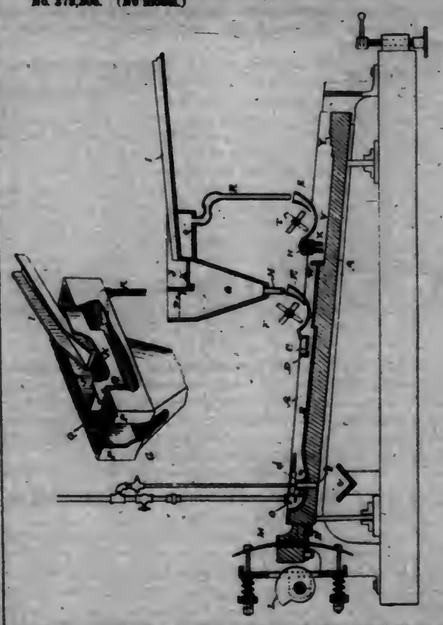


3. A detacher or tearing implement having a concave under surface and a serrated edge.

4. A detacher or tearing implement having a concave under surface and an irregularly-serrated edge.

406,200. WELL-BORING APPARATUS. JEREMIAH R. DAY, San Francisco, Cal., assignor of one-half to Joseph Prasy, same place. Filed Feb. 11, 1889. Serial No. 299,493. (No model.)

Claim.—1. The auger having the cutting blades or bits of greater length than the diameter of the auger, the inclosing case or barrel

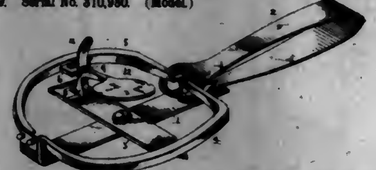


406,200.

fitting the auger and having the shoulders to engage the projecting blades, the bail by which the upper end of the barrel is connected with the operating-rods, the lugs projecting downwardly from the center of the bail, and the auger-rod connected with said lugs by a bolt, substantially as and for the purpose herein described.

2. The exterior barrel or casing, with a bail for connecting the upper end with the boring-rods, lugs projecting downwardly from the center of said bail, an auger fitting the interior and lower end of the barrel and having its shank detachably connected with the lugs, and bits or cutters fitted to the lower ends of the auger-blades and extending beyond the bottom of the barrel and engaging the shoulders thereon, in combination with the valves hinged to the upper edges of the auger-blades and closing upon the spiral surface thereof, substantially as described.

406,201. ORE-CONCENTRATOR. MILES B. DOREE, San Francisco, Cal., assignor to Parks & Lacy, same place. Filed July 6, 1888. Serial No. 279,202. (No model.)



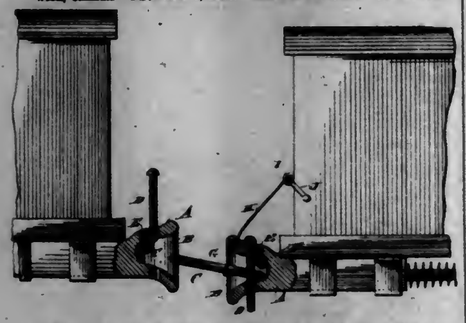
Claim.—1. The hopper G, provided with the box J, the screen K, and the troughs Q upon each side of the hopper, said troughs har-

ing the overflow-edges P, in combination with the perforated plug H, for regulating the discharge from the hopper, substantially as herein described.

2. The hopper or receiver G, provided with the screen K, the overflow-passages, and a regulating discharge-plug H, in combination with the segmental receiver E, the rotary distributing-arms F, and the box D, placed between the receiver E and the table B, and having perforations C made through it, so as to leave space for the downward flow of material on the surface of the table B between the points where the pulp is supplied to the table, substantially as herein described.

3. The hopper G, provided with the screen K, the overflow pipes or passages, and the discharge-pipe R, in combination with the supplemental receiver S, distributer T, discharging upon the surface V of the table below the riffle W, and the stirrers or agitators X, substantially as herein described.

406,202. JAW-TRAP. THOMAS DOULON, Cortland, N. Y., assignor to the Hitchcock Manufacturing Company, same place. Filed May 16, 1889. Serial No. 310,980. (Model.)

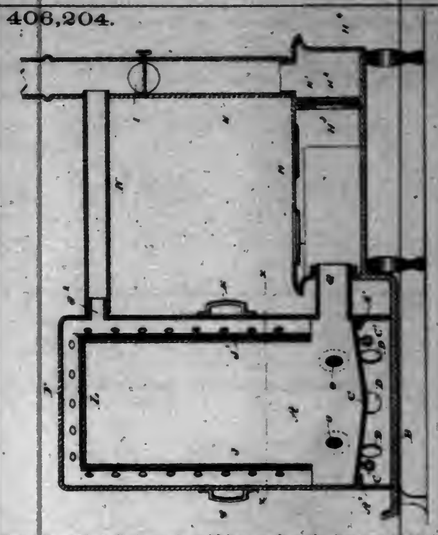


Claim.—1. In a jaw-trap, an inwardly-extending loop on one of the jaws, a catch pivoted to the base or bar, having a head which rests on this loop when the trap is set, and a bait-pan connected to said catch and acting to swing the head of the catch off from the loop on the jaw with either an upward or a downward movement of said pan, all in combination, substantially as described.

2. In a jaw-trap, a jaw having an inwardly-projecting loop, a catch pivoted to the base and having a head engaging said loop, an upwardly-extending head on said catch about in the path of movement of the jaw, and a bait-pan rigidly connected to said catch, all combined substantially as described.

3. In an animal-trap, the combination of a jaw having an inwardly-projecting loop with arms therefrom, a pivoted catch having a neck capable of swinging through said passage, and a head above the same too broad to enter said passage, and an upward projection of said head about in line of movement of said jaw, and a bait-pan rigidly connected to said catch, all in combination, substantially as described.

406,203. CAR-COUPLING. PATRICK J. BEAN, Carleton, New Brunswick, Canada. Filed Jan. 7, 1889. Serial No. 295,616. (No model.)



Claim.—In a car-coupling, the combination, with a draw-head provided with a pin-opening and a coupling-pin working therein, of the block E, of elastic material, rigidly secured in the draw-head in rear of and adjacent to the pin-opening, and provided with a shoulder, which when the block is in its normal position is in alignment with the said pin-opening, substantially as described.

406,204. STOVE. NICHOLAS J. EGELER, Ipswich, Dak. Filed Feb. 28, 1889. Serial No. 301,469. (No model.)

Claim.—1. In a stove of the class described, the combination, with a shell having a cone-shaped bottom and a smoke-pipe leading from the said bottom, of perforated pipes held in the said shell and connecting with the chimney-pipe, substantially as shown and described.

2. In a stove of the class described, the combination, with a shell provided with a heater or cooking-stove having a chimney-pipe, and also provided with a cone-shaped bottom, of a smoke-pipe leading

from the said shell above the said bottom into the heater or cooking-stove, and perforated pipes held in the said shell and connecting with the chimney-pipe of the said heater or stove, substantially as shown and described.

3. In a stove of the class described, the combination, with a heater or cooking-stove provided with a chimney-pipe, a base, and a shell resting on the said base and provided near its bottom with apertures, of a cone-shaped bottom suspended in the said shell above the said apertures, a smoke-pipe leading from the said shell above the said cone-shaped bottom into the heater or cooking-stove, and perforated pipes held in the said shell and connected with the chimney-pipe of the heater or cooking-stove at their upper ends, substantially as shown and described.

4. In a stove of the class described, the combination, with a heater or cooking-stove provided with a chimney-pipe, a base, and a shell resting on the said base and provided near its bottom with apertures, of a cone-shaped bottom suspended in the said shell above the said apertures, a smoke-pipe leading from the said shell above the said cone-shaped bottom into the heater or cooking-stove, perforated pipes held in the said shell and connected at their upper ends with the chimney-pipe of the heater or cooking-stove, and dampers held on the said shell above the said cone-shaped bottom, substantially as shown and described.

5. In a stove of the class described, a heater or cooking-stove provided with a transverse partition having an aperture, a damper held in the said transverse partition to open or close said aperture, and a chimney-pipe held on the said heater or cooking-stove and into which discharges said opening, in combination with a base held in front of the said heater, a shell closed at the top and resting with its open bottom on the said base, a cone-shaped bottom suspended in the lower end of the said shell, a smoke-pipe leading from the said shell above the said bottom into the said heater, and perforated pipes extending vertically in the said shell connected with said chimney-pipe, substantially as shown and described.

6. In a stove of the class described, a heater or cooking-stove provided with a transverse partition having an aperture, a damper held in the said transverse partition to open or close said aperture, and a chimney-pipe held on the said heater or cooking-stove and into which discharges said aperture, in combination with a base held in front of the said heater, a shell closed at the top and resting with the open bottom on the said base, a cone-shaped bottom suspended in the lower end of the said shell, a smoke-pipe leading from the said shell above the said bottom into the said heater, perforated pipes extending vertically in the said shell connected with said chimney-pipe, and dampers held in the said shell above the said bottom, substantially as shown and described.

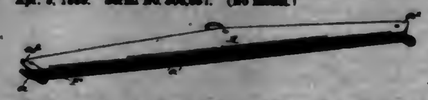
406,205. CULTIVATOR AND SEEDER. LOUIS S. PLATAU, Pittsburg, Tex. Filed July 10, 1888. Serial No. 279,580. (No model.)

Claim.—1. The combination, with the side bars or beams suitably connected together at their rear ends and at their forward ends by a cross bar or yoke provided at its ends with clips or staples, of the side draft-connections applied to said beams or side bars and passed through said clips and connected to singletrees, substantially as set forth.

406,205.

2. In a combined planter and cultivator, the combination, with the bar B, having clips *c* at its ends, and the parallel plow-beams A A, secured thereto at their forward ends, connected at their rear ends by a bar or rod, and provided with plow-standards, of the inclined bars C, secured at their rear ends to the said beams between the ends thereof and extending through the clips *c*, substantially as set forth.

3. In a combined wheel cultivator and planter, the combination, with the frame and plows, the hopper supported on the frame, and the oscillating agitator or stirrer in the bottom of the hopper, having a gear J, of the wheel-axle having an eccentric I^1, the ring or strap I^2, embracing the eccentric and having a rod I^3, and the rocking segment K, having a tubular arm I^4, receiving the rod I^3 to be oscillated thereby, substantially as set forth.

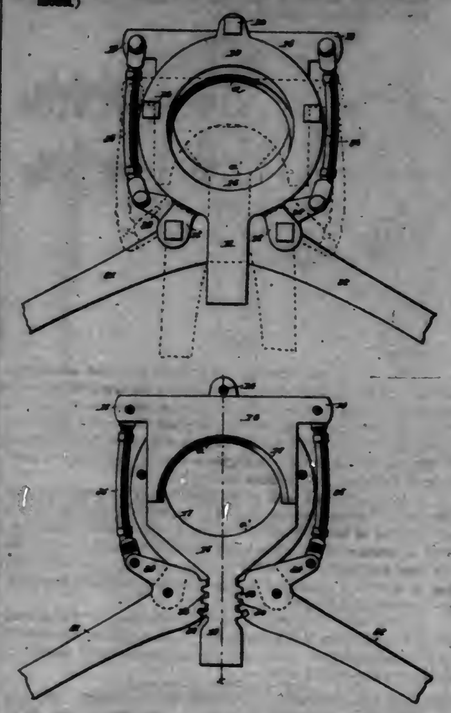


4. A combined cultivator and planter comprising the parallel plow-beams A A, the cross-bar B at the forward ends thereof, the plow-standards, the curved bars *l*, secured to the bar B between the standards, curved downward and provided with a plow, the braces O, connecting the bars *l* with the beams A A, the hopper G, secured between the bars *l* and having a chute *j* and depending arms *k k*, the wheel H, having its axle journaled in said arms and provided with an eccentric k^1, the vertical conical stirrer or agitator in the bottom of the hopper and having inclined fingers, and a connected gear J below the hopper, the rocking segmental gear K, meshing with said gear J and having a depending arm k^2, and a ring k^3 on the eccentric provided with an arm or rod k^4, having a sliding connection with the arm k^4, substantially as set forth.

406,206. BALING-PRESS. LOUIS S. PLATAU, Pittsburg, Tex. Filed Dec. 14, 1888. Serial No. 293,615. (No model.)

Claim.—In a baling-press, the combination of the press box or frame, the frame M, secured to said box or frame, and having an arm *m*, an arm *m'*, and a distance-sleeve M^3, extended from arm *m'* and provided with a pin or stud m^3, the follower provided with a screw-shaft extended through distance-sleeve M^3 and arm *m*, a bevel-gear K on said shaft between the sleeve M^3 and arm *m*, and the shaft L, having a wheel *l*, meshing with the wheel K, such shaft L being journaled at its lower end on the pin or stud m^3, all substantially as and for the purposes set forth.

406,207. WHIFFLETREE. LOUIS S. PLATAU, Pittsburg, Tex. Filed Apr. 9, 1889. Serial No. 306,857. (No model.)



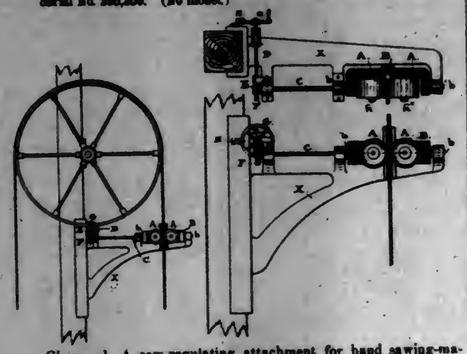
Claim.—1. The combination of a whiffletree formed of a single metal plate having the perforations and bent to form a hollow tree, the hooks and ring having the enlarged perforated ends, and the rivets, substantially as set forth.

2. The combination of a whiffletree formed of a metal plate having the longitudinal end recesses and bent to form a hollow tree, and the hooks pivoted in the said recessed ends, substantially as set forth.

3. The combination of a whiffletree formed of a metal plate having the longitudinal and semicircular end recesses and the perforations and bent to form a hollow tree, the end hooks and the ring having the perforated enlarged ends, and the rivets, substantially as set forth.

406,208. IMPLEMENT FOR DEHORNING CATTLE. JAMES W. PEARL, Lawrence, Kans. Filed Mar. 28, 1888. Serial No. 268,361. (No model.)

Claim.—1. In a dehorning implement, the combination, with a frame having a circular opening therein, of an upper and a lower cutter held to slide one upon the other in opposite directions and having semicircular cutting-edges, and means, substantially as shown and described, for simultaneously manipulating the said cutters, as and for the purpose specified.



2. The combination, with a frame provided with a central opening, and an upper and a lower cutter held to slide one upon another within the said frame, provided with opposed concaved cutting-edges, of levers contacting with the lower cutter and capable of moving the same, and a pitman-connection between said levers and the upper cutter, all combined for operation substantially as shown and described.

3. The combination, with a frame provided with a central opening, and an upper and a lower cutter held to slide one upon the other within the said frame, provided with opposed concaved cutting-edges, of levers having a toothed head capable of contact with the lower cutter, a horn projected from the said lever-heads, and a pitman-connection between the said horns and the upper cutter, substantially as shown and described.

4. The combination, with a frame provided with a central opening, and an upper and a lower cutter held to slide within the said frame provided with opposed semicircular cutting-edges, the lower cutter having integral therewith at the bottom a downwardly-extending shank provided with toothed side edges, of levers fulcrumed within the frame having a toothed head capable of contact with the teeth of the lower cutter, and a pitman-connection between said heads of the levers and the upper cutter, all combined for operation substantially as and for the purpose specified.

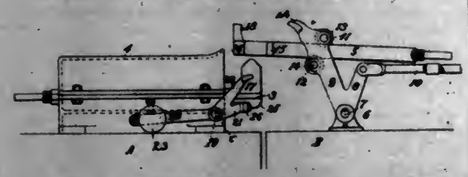
5. The combination, with a frame consisting of two spaced united rings having a shank integral with the lower periphery at the center, and a lug at each side of the said shank, an upper and a lower cutter held to slide one upon the other between the rings, provided with opposed concaved cutting-edges, and a shank integral with the lower edge of the lower cutter at the center, having teeth produced in each side edge, of a lever fulcrumed upon the lugs of the rings provided with a head having teeth meshing with the teeth of the lower cutter, a horn outwardly projected from the upper portion of the said lever-heads, and a pitman-connection between the said horns and the upper end of the upper cutter, all combined for operation substantially as shown and described, and for the purpose specified.

406,209. SAW-REGULATING ATTACHMENT FOR BAND SAW-ING-MACHINES. ELIJAH S. GILMORE, San Francisco, Cal., assignor of two-thirds to Nathan W. Spaulding, same place. Filed Jan. 3, 1888. Serial No. 295,260. (No model.)

Claim.—1. A saw-regulating attachment for band sawing-machines, consisting of two rollers adapted to grip the saw-blade between them and capable of angular adjustment with respect to the plane in which the saw-blade runs, whereby they can be set to rotate at an angle across the saw-blade, in combination with means for setting and holding the rollers at different angles across the saw-blade, substantially as described, for operation as set forth.

2. In combination with a band-saw, a pair of gripping-rollers adapted to embrace and run with the saw-blade, and mounted in a tilting frame or carrier which is capable of adjustment to change the angle of rotation of the rollers with respect to the plane in which the saw runs, and mechanism connected with said tilting carrier for setting it at different angles of elevation and depression, as described for operation as set forth.

3. In a band sawing-machine, the combination of the pivoted tilting frame or yoke having studs h $h^{\times}$, rollers A A, setting-shaft D, shaft C, connecting the yoke with the setting-shaft, and gears E F, arranged for operation as set forth.



406,210. PROCESS OF REDUCING METALLIC ORES. MATTHEW GRAFF and JAMES JOHNSON, Pittsburg, Pa. Filed May 10, 1888. Serial No. 273,445. (No specimens.)

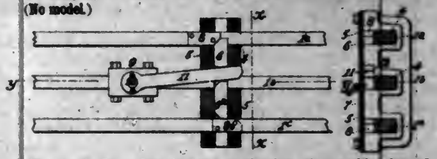
Claim.—1. The herein-described method of reducing and smelting ores, which consists in intimately mixing the ore with carbonaceous material protected as against rapid combustion by a coating of suitable material, and with a suitable flux adapted to combine with the protecting coating, and then subjecting the mixture to the action of a reducing-flame in a suitable furnace, substantially as set forth.

2. The herein-described method of reducing and smelting ores, which consists in intimately mixing the ore with carbonaceous material coated with lime and adding thereto a suitable flux, and then subjecting the mixture or charge to the action of a reducing-flame, substantially as set forth.

3. The herein-described method of reducing and smelting ores, which consists in intimately mixing the ores with carbonaceous material protected by a coating of suitable material as against rapid combustion, and with borax, and then subjecting the mixture or charge to the action of a reducing-flame in a furnace having a carbonaceous bottom coated with a material adapted to retard the combustion thereof, substantially as set forth.

406,211. COUPLING FOR SIGNAL-RODS. JAMES T. HANBAY, Wilkinsburg, assignor to the Union Switch and Signal Company, Pittsburg, Pa. Filed Nov. 20, 1888. Serial No. 291,357. (No model.)

Claim.—1. The combination of a series of signal-rods provided with a series of vertically-movable sections and a like series of sections stationary as against vertical movement, each of said sections being provided with interlocking lugs, substantially as set forth.



2. The combination of a series of movable signal-rod sections, a like series of sections stationary as against vertical movement, said sections being constructed to engage each other when in normal position, the movable sections being provided with stops to prevent their disengagement when shifted longitudinally out of normal position for the purpose of setting a signal, substantially as set forth.

3. The combination of a stationary guide-box, a series of signal-rod sections longitudinally movable through said box, a like series of vertically-movable signal-rod sections, said sections being provided with interlocking lugs, vertically-movable sections being provided with toes to prevent any vertical movement when shifted within the box, substantially as set forth.

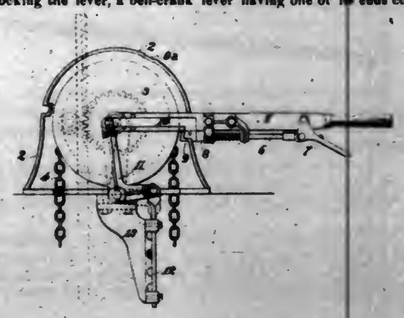
4. The combination of signal-rod sections stationary as against vertical movement, corresponding vertically-movable sections, a shaft provided with grooved rollers for supporting and guiding the vertically-movable sections, and arms for raising and lowering said shaft, substantially as set forth.

5. The combination of a series of two or more signal-rods formed of a series of two or more sections stationary as against vertical movement, and a series of two or more vertically-movable sections adapted to interlock in a vertical plane with the sections of the first series, a vertically-movable support for the movable series, and a lock for the stationary series controlled by such movable support, substantially as set forth.

406,212. SWITCH AND SIGNAL INTERLOCKING APPARATUS. JAMES T. HANBAY, Wilkinsburg, assignor to the Union Switch and Signal Company, Pittsburg, Pa. Filed Feb. 21, 1889. Serial No. 300,704. (No model.)

Claim.—1. In an interlocking mechanism, the combination of a series of three or more longitudinally-movable locking-bars, dogs secured to two or more of said bars, a finger or fingers pivotally attached to one or more of said bars, and a series of two or more movable locking-blocks, substantially as set forth.

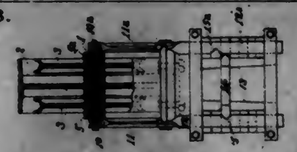
2. In an interlocking mechanism, a frame having a series of two or more transverse slots and a groove formed at an angle to the slots, a series of three or more longitudinally-movable locking-bars arranged in said slots, dogs secured to two or more of said bars, a finger or fingers pivotally attached to one or more of said bars, and a series of two or more movable locking-blocks arranged in the groove of the frame, substantially as set forth.



3. In an interlocking mechanism, the combination of a series of three or more longitudinally-movable locking-bars, dogs secured to two or more of said bars, a notched finger or fingers pivotally attached to one or more of said bars, and a series of two or more movable locking-blocks, substantially as set forth.

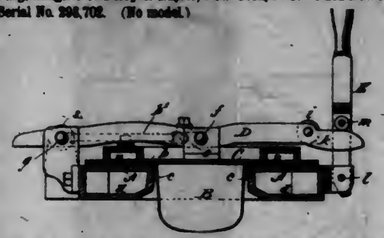
4. In an interlocking mechanism, the combination of a series of three or more longitudinally-movable locking-bars, dogs secured to two or more of said bars, a finger or fingers pivotally attached to one or more of said bars, and a series of two or more independently-movable locking-blocks, substantially as set forth.

5. In combination with any of the known systems of interlocking, dogs secured to two or more of the locking-bars thereof, a finger or fingers pivotally attached to one or more of said locking-bars, and a series of two or more movable blocks, substantially as set forth.



406,213. SWITCH AND SIGNAL APPARATUS. JAMES T. HANBAY, Wilkinsburg, assignor to the Union Switch and Signal Company, Pittsburg, Pa. Filed Feb. 21, 1889. Serial No. 300,707. (No model.)

Claim.—1. In a horizontal-lever machine for operating switches and signals, the combination of an operating-lever, a movable block for locking the lever, a bell-crank lever having one of its ends connected to said block and movable thereby into and out of line with the center of movement of the lever, and an interlocking mechanism operated by the bell-crank, substantially as set forth.



2. In a switch and signal apparatus, a series of two or more horizontal-lever machines separated to form a passage-way between adjacent machines, each machine having two levers interlocked with each other, in combination with interlocking mechanism for interlocking the levers of one machine with those of another machine, substantially as set forth.

406,218.

406,214. PRESS FOR HAT-BRIMS. WILLIAM G. HARMER, Newburg, assignor to Perry & Napier, New York, N. Y. Filed Feb. 5, 1889. Serial No. 298,702. (No model.)

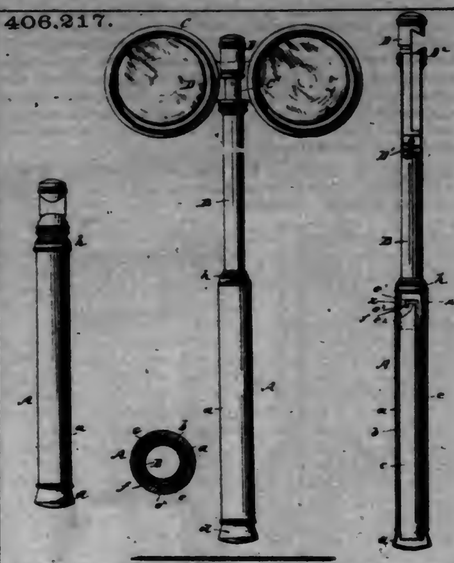
Claim.—In a press for pressing and finishing the brims of felt and other like hats, the combination, with the bed A, having a hat-body-receiving aperture c, and steam or other heating jacket d on its under side outside of said aperture, of the hinged platen C, having a steam or other hollow heating-belt n on its top for operation in connection with the heating-jacket on the under side of the bed upon the brim of the hat, as described, and the heating-medium-circulating pipes b' c', connected at their forward ends with the belt n of the platen and supported by and adapted to turn in sockets in the rear in axial line with the hinge-pin of the platen, substantially as specified.

406,215. PLASTERING COMPOUND. ISAAC C. HART, Cincinnati, Ohio, assignor of one-half to William Grey Wade, same place. Filed Mar. 20, 1889. Serial No. 304,040. (No specimens.)

Claim.—1. A plastering compound composed of sand, plaster-of-paris, lime, and asbestos, prepared substantially as hereinbefore set forth.

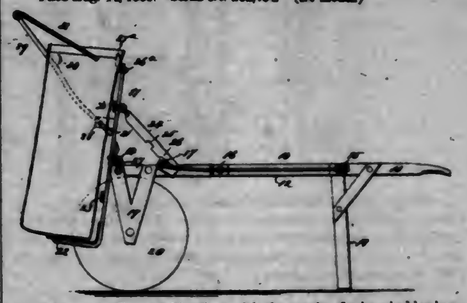
2. The hereinbefore-described plastering compound, consisting of equal parts, by measure, of sand, plaster-of-paris, lime, and asbestos mixed together in a dry state, substantially as and for the purpose set forth.

406,216. APPARATUS FOR COOLING, WARMING, MOISTENING, OR SATURATING AIR. JAMES HOWORTH, Farnworth, County of Lancaster, England. Filed Dec. 4, 1888. Serial No. 292,861. (No model.) Patented in England Mar. 5, 1886, No. 3,134.



Claim.—An apparatus for cooling, heating, or moistening air, consisting of a box divided by a dividing-plate into two compartments at its lower part, the dry compartment having an air-inlet at the bottom and containing a coil of pipe for steam or refrigerating-liquid, and at the top a hood or deflecting-plate extending over the dividing-plate to deflect the air into the wet compartment, which latter contains a steam-pipe and stop-cocks for the pipes, as and for the purposes set forth

406,217. OPERA-GLASS HOLDER. GIDEON ISLEY, Jersey City, N. J., assignor to Edwin Terry, Brooklyn, and Leo Wormser, New York, N. Y. Filed Feb. 5, 1889. Serial No. 298,712. (No model.)



Claim.—1. The handle A, having the continuous intermediate tube b and the inner tube c, formed with slot c c', in combination with the sliding section B, having stud f, substantially as described.

2. The handle A, having the outer ornamental tube a, intermediate continuous tube b, extended at d, and the inner tube c, slotted at c c', in combination with the sliding section B, having stud f, substantially as described.

406,217.

406,218. RACKING APPARATUS. THOMAS B. JONES, Radnor, Ohio. Filed Aug. 14, 1888. Serial No. 282,734. (No model.)

Claim.—1. The combination, with the truck, of a bag-holder having vertically-extending uprights or arms connected between their ends to the front end of the truck-body and extending at their lower ends below said body, substantially as set forth.

2. The combination, with the truck, of a bag-holder connected between its ends to the front end of the truck-body to rock vertically above and below the same, and having a forwardly-projecting platform at its lower end to support the bag and devices at its upper end to engage the mouth of the bag, substantially as set forth.

3. The combination, with the truck having a cross-rod on the front end of its body, of a bag-holder having suspension hooks or cleats on its rear side between its ends engaging said rod, substantially as set forth.

4. The combination, with the truck, of the vertically-rocking bag-holder pivotally suspended between its ends on the front end thereof, and an adjustable latch connecting the holder and truck beyond their point of connection, substantially as set forth.

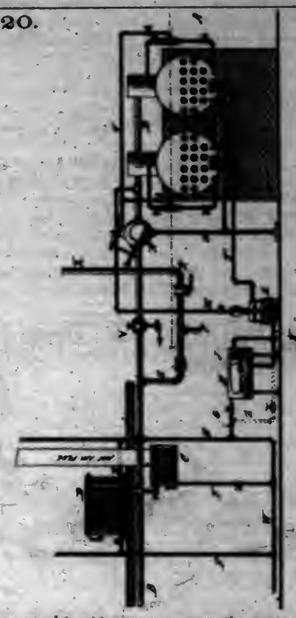
5. The combination, with a bag-holder, of arms pivotally connected thereto and having an inwardly-extending shield connected therewith, for the purpose set forth.

6. The combination, with the spaced uprights having hooks at their upper ends, of the U-shaped arm 29, pivoted near its ends to the standards and extending outward and upward above the standards, and the shield 31, pivotally connected with the cross-piece of said arm 29, and extending inwardly toward the uprights, substantially as set forth.

7. The combination, with a truck provided with a rearwardly-inclined cross-bar, of a frame detachably attached to the front of said truck, a platform secured to the lower end of the frame and upon the upper end of the same, a latch engaging the cross-bar, an essentially U-shaped arm pivoted to the frame, hooks secured to said U-bar, and a shield hinged to the same, all combined to operate substantially as shown and described.

8. The combination, with a truck provided with a rearwardly-inclined cross-bar, of a frame provided with cleats detachably attached to the truck, a platform at right angles to the frame, hooks secured to the upper end of the frame, and a latch pivoted to the rear of said frame provided with spaced recesses, an essentially U-shaped arm pivoted to the front face of the frame, teeth secured to the members of said arm, and a shield hinged to the body of the same, substantially as shown and described.

406,219. **MACHINE FOR FORMING ORNAMENTAL SPIRAL GROOVES.** RALPH W. JORDAN, Thomaston, Conn. Filed Feb. 6, 1889. Serial No. 298,861. (No model.)



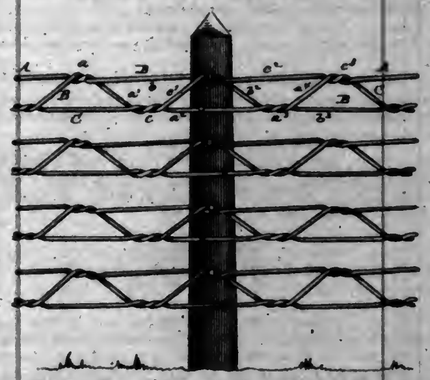
Claim.—1. The combination, with a revoluble shaft provided with spurs or retaining attachments, of a tool-carrier mounted above the shaft, levers upon which the tool-carrier is supported, cords or strips wound upon the shaft, and connections between said cords and the levers, substantially as described.

2. The combination, with a shaft provided with prongs or projections 15, of a tool-carrying strip mounted above the shaft, levers to which the tool-carrying strip is connected, connections between the levers and the shaft, and apertured tool-carrying blocks carried by the strip, substantially as described.

3. The combination, with a shaft provided with prongs or projections, of a tool-carrying strip mounted above the shaft, pivotally-mounted levers to which the tool-carrying strip is pivoted, cords or strips wound in opposite directions upon the shaft, and adjustable connections between the cords and the levers, substantially as described.

4. The combination, with a shaft provided with prongs or projections, of a tool-carrying strip mounted above the shaft, pivotally-mounted levers to which the tool-carrying strip is pivotally connected, cords wound upon the shaft, connections between the cords and the levers, segmental racks, and limit pins or stops carried by said racks, substantially as described.

406,220. **AUTOMATIC RETURN STEAM-HEATING SYSTEM.** TIMOTHY J. KIELEY, New York, N. Y. Filed Apr. 18, 1887. Serial No. 235,288. (No model.)



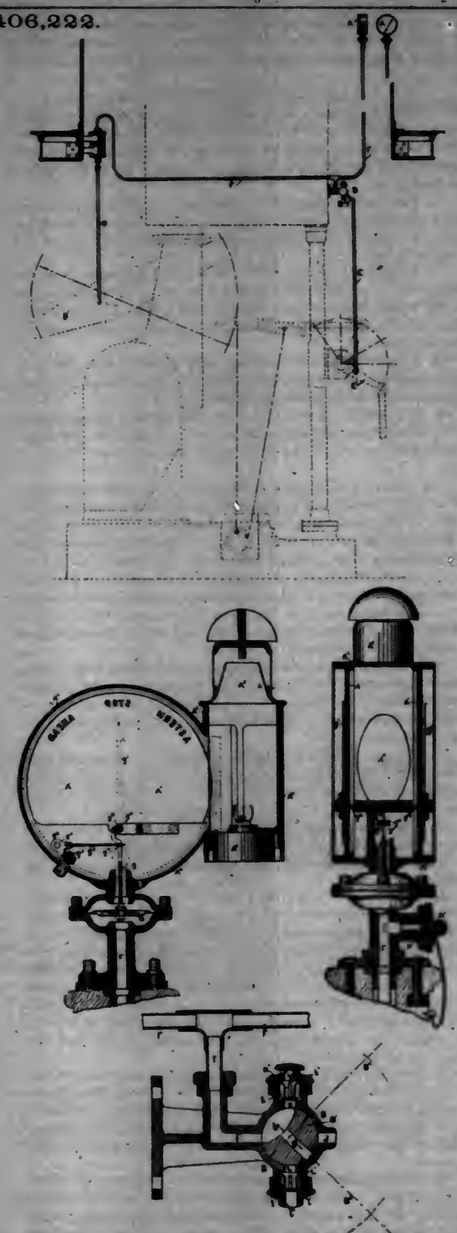
Claim.—1. The combination, in a steam-heating system, of a main steam-supply pipe, a main return-pipe, and a pump in said main return for forcing the water back to the boiler, a steam-pipe carrying steam to said pump, a boiler-feed governor operating the valve of said steam-pipe, a connection from the bottom of said boiler-feed governor below the water-level of the boiler, and a connection from the top of said boiler-feed governor to the boiler at the level at which it is desired to maintain the water in the same, substantially as described.

2. In a steam-heating system, the combination of a boiler, a main steam-supply pipe, and a main return-pipe connecting the boiler and radiators, a pump in the main return-pipe for forcing the water back to the boiler, a steam-supply pipe connecting with said pump, a controlling-valve in the steam-pipe for the pump, and a boiler-feed governor connected with said valve to operate the same, substantially as described.

3. The combination of the boiler A, main steam-supply pipe B, main return-pipe W, pump L in said main return-pipe for forcing water back to the boiler, the boiler-feed governor N, provided with a float-connection O from said governor below the water-level of the boiler, connection Y from said governor to the boiler at its water-level, and the automatic supply-tank H, communicating with the pump, substantially as described.

406,221. **WIRE FENCE.** MELVIN D. KILMER, New Windsor, assignor to the Kilmer Manufacturing Company, Newburg, N. Y. Filed Mar. 5, 1889. Serial No. 301,999. (No model.)

Claim.—The wire fence-strand consisting of the three wires A, B, and C, the wires A and B being twisted together and the latter running horizontally and the former obliquely, the wire A being twisted to the wire C and then running horizontally, the wire C running obliquely to the wire B, to which it is twisted, the wire B running from this twist obliquely to the wire A, and the wire C running horizontally, the said wires thus alternately running horizontally and obliquely throughout the entire strand, as set forth.



406,222. **INDICATOR OF MOTION AND SPEED OF STEAM AND LIKE MOTORS.** EDOUARD LARMENT, Marseilles, France, assignor to J. Gordon Alison & Co., Birkenhead, England. Filed Aug. 20, 1888. Serial No. 283,703. (No model.) Patented in France July 26, 1888, No. 177,507.

Claim.—1. In an indicator for engines, the combination, with the engine, of a pump connected therewith and actuated thereby, an indicator connected with the pump by means of a pipe, a valve located in the pipe, and a connection between the valve and the reversing-lever of the engine.

2. In combination with an engine, a pump operated thereby, a pipe F, connected with the pump and provided with an inlet-valve L and outlet-valve K, an indicator, a diaphragm connected with the indicator and placed within the pipe F, and a connection between the valves L K and the reversing-lever of the engine, whereby one valve is free to rise and fall with difference in pressure when the engines are going ahead and the other only when they are going astern.

3. In combination with an engine, a pump operated synchronously thereby, a pipe connected with the pump, an indicator, a valve or cock in pipe F, operated by the reversing-lever of the engine, all substantially as shown, and a diaphragm placed in the pipe F and serving to actuate the pointer of the indicator by variations in the pressure within the pipe.

406,222.

4. In an indicator, the combination, with a case or shell, of a pipe communicating therewith, a pointer pivoted in the casing, a diaphragm connected with the pointer and placed within the pipe, or an extension thereof, and means for varying the pressure beneath the diaphragm.

5. In an indicator, the combination, with a case or shell, of a pipe communicating therewith, a pointer pivoted in the casing, a diaphragm placed within the pipe and connected with the pointer, a semaphore operated by the pointer, and means for varying the pressure upon the diaphragm.

6. In combination with an engine, a pump actuated synchronously by the engine, an indicator, an expansible and contractible device, connected with and actuating the indicator, and a pipe adapted to convey the pulsations of air or other fluid caused by the pump to the expansible and contractible device.

7. In an indicator for engines, the combination, with an engine and an indicating mechanism, of a cylinder C, pipes F' F², communicating with opposite ends of the cylinder, a piston C', actuated by the engine and provided with a valve C², opening in one way only, and a four-way valve B, with which the pipes F' F² communicate, located between the indicating mechanism and the cylinder.

8. In combination with cylinder C and piston C', pipes F' F², communicating with the cylinder, an indicator, a four-way valve, and a pipe F, connecting the valve with the indicating mechanism, whereby the pulsations conveyed by said pipe shall operate the indicator.

9. In an indicator for engines, the combination, with a pump operated synchronously by the engine, of an indicator, a pipe connecting the indicator and pump, and a four-way valve B, located in the pipe between the indicator and pump.

10. In an audible indicator for engines, the combination, with the engine, of a pump operated synchronously thereby and a whistle connected with the pump, all substantially as shown.

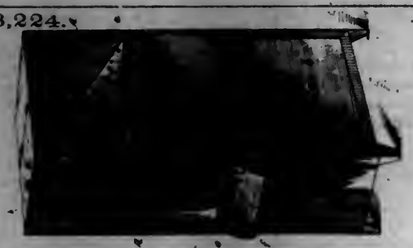
11. In an audible indicator for engines, the combination, with the engine, of a pump operated synchronously thereby, a whistle connected with and operated by the pump, and a stopping device H'.

12. In combination with a casing provided with a dial having the neutral point at the top, a pointer pivoted in the casing and adapted to maintain, normally, an upright position, a diaphragm G, exposed to pulsations of a fluid and connected with the pointer, whereby the pulsations will cause the pointer to oscillate to one or the other side of the neutral line, according as the pulsations are above or below a predetermined degree.

13. In an indicator, the combination of an air-pump, an indicator provided with a pointer, a diaphragm connected with and adapted to actuate the pointer, a pipe connecting the pump with the chamber in which the diaphragm is placed, whereby when the pressure of the air is above atmospheric pressure it will move the pointer in one direction, but when below atmospheric pressure it will move it in the reverse direction.

406,223. **GALVANIC BATTERY.** JOHN R. LEE, Conshohocken, Pa., assignor to the J. Ellwood Lee Company, same place. Filed Mar. 14, 1889. Serial No. 303,201. (No model.)

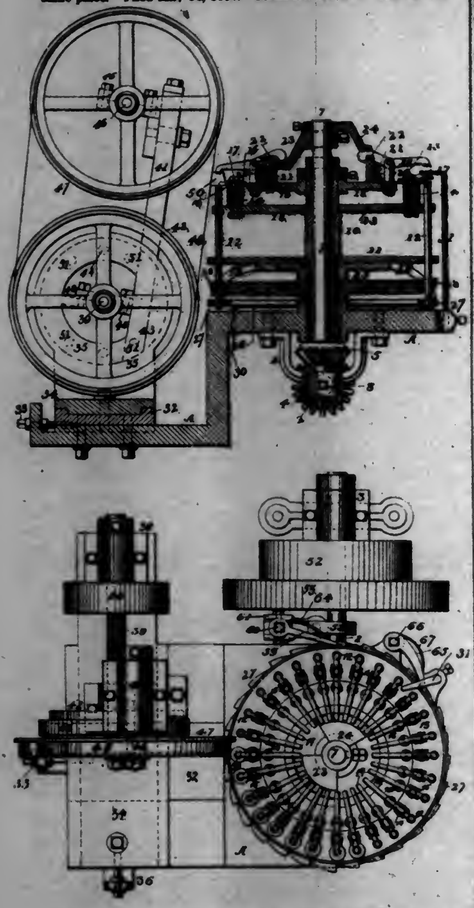
Claim.—1. The combination of the battery-cell having a cup electrode with a contact-plate having a grooved stem passing through the body of the cell and into the cup, and the metallic body mechanically securing the said stem and electrically connecting it to the cup, all substantially as described.



2. The combination of the battery-cell having a cup electrode with an outside contact-plate having a grooved stem passing through the body of the cell and into the cup, the metallic body mechanically securing the said stem and electrically connecting it to the cup, and a protecting layer of shellac or similar material over said metallic body, substantially as described.

3. The combination of the body of the cell and the screw-cap having a contact-plate on the outside and a screw-stem passing through it with a rod electrode and a rubber disk held between the end of the rod and the cap, and also serving as a gasket for the rim of the cell, all substantially as described.

406,224. **ASH-SIFTER.** JOSEPH W. LOVE, Baltimore, Md., assignor of one-half to August Beck, same place. Filed Sept. 4, 1888. Serial No. 284,582. (No model.)



Claim.—In the improvement hereinbefore specified, the combination, with the upper and lower screens inclined in opposite direc-

406,224.

tions, of the interposed angular hood B, which extends to and supports the upper screen and forms the top or cover, as well as sides, of the lower screen, all as shown and described.

406,225. CORK-MACHINE. FRANK METZ, New Brighton, Pa., assignor, by direct and mesne assignments, of one-half to John Carbon, same place. Filed May 31, 1887. Serial No. 239,754. (No model.)

Claim.—1. The combination of an endless-band knife, a horizontal rotating table in proximity thereto, and a series of vertical rotating spindles carried upon the table and adapted to support the corks upon the spindles.

2. The combination of a horizontal intermittently-rotating table and a series of vertical intermittently-rotating spindles carried by the table and adapted to support the corks upon the spindles.

3. In a cork-machine, a horizontal rotating table, a vertical rotating spindle mounted thereon and adapted to support a cork, and combined therewith, and a clamp disposed above said spindle.

4. In a cork-machine, a rotating table, a rotating spindle carried thereon, a clamp-jaw arranged above said spindle and moving with the table, and a stationary projection or cam arranged within the path of the clamp-jaw and adapted to throw the clamp into engagement during a portion of the rotation of the table, all in combination, as set forth.

5. The combination of a rotating table, a rotating spindle carried thereon, a clamp-jaw upon the table arranged above the spindle, and a stationary projection or cam adapted to throw the clamp into and a stationary projection for throwing the clamp out of engagement, both of said projections being arranged to lie in the path of the clamp-jaw.

6. The combination, in a cork-machine, of a rotating table, a rotating spindle thereon, and an adjustable guide arranged at the upper end of the spindle in proximity thereto and adapted to be set to and from the spindle.

7. A rotating table provided with a rotating spindle, in combination with a pivoted clamping-jaw arranged in proximity to the spindle, a main frame carrying the table and spindle, and a vertically-adjustable frame, in which the lamp is pivoted, mounted upon the rotating table.

8. The combination of a rotating table provided with a series of rotating spindles, and a stationary projecting arm adapted to sweep the path above the spindles as the latter revolve.

9. In a cork-machine, a horizontal rotating table, in combination with a vertical spindle carried thereby having both a rotary and vertical movement in the line of its length and adapted to support a cork.

10. In a cork machine, a rotating table, a vertical rotating spindle mounted thereon and combined therewith, and a stationary projection or ring below the spindle and extending throughout a portion of the peripheral path of the spindle and adapted to contact and raise said spindle out of engagement with the driving mechanism.

11. In a cork-machine, the combination of a stationary standard, a rotating table having a central sleeve and mounted upon the standard, a drive-wheel mounted also upon the standard, and a series of rotating spindles mounted upon the table and having pinions adapted to engage the drive-wheel.

12. The combination, with a horizontal driving-shaft having drive-pulleys and a bevel-pinion, of a standard, a sleeve mounted thereon having a bevel-gear, a drive-wheel keyed to the sleeve, a rotating table, and rotating spindles carried thereby having pinions engaging the drive wheel.

13. The combination of two band-wheels with a standard made in two parts, a flanged disk upon each part, a series of holes passing through said disks, and a bolt or bolts adapted to pass through said holes, for the purpose of bolting the standards adjustably.

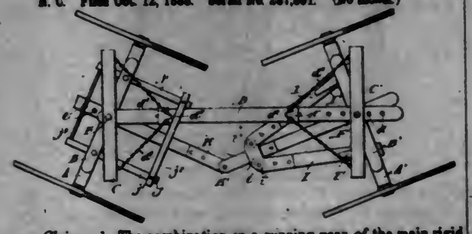
14. The combination of a table, a bed or frame, a seat-block thereon adjustable to and from the table, and a standard located upon the seat-block adjustable at right angles thereto and carrying the endless-band knife.

15. A circular table having a ratchet thereon, a drive-shaft for rotating the table provided with a cam, and intermediate mechanism for engaging the ratchet and intermittently rotating the table, a drive-wheel, and a series of intermittently-rotating spindles having pinions located upon the table and adapted to be driven by the drive-wheel.

16. The combination of an intermittently-rotating table, a series of cork-supporting spindles carried thereby provided with pinions, a drive-wheel adapted to engage the pinions, and a cam arranged in the path of the spindles upon the table and adapted to throw the pinions out of engagement.

17. The combination of a rotary table, rotating spindles carried thereby, a rotating clamp-support, a series of pivoted clamping-jaws arranged over the axial line of the spindles, a segmental stationary cam or projection adapted to throw the jaws into and a segmental stationary cam or projection adapted to throw the jaws out of engagement.

18. The combination of a rotary table, a ratchet-wheel carried thereby, a pawl, a cam for reciprocating the pawl, a drive-shaft for operating the cam, a series of spindles carried by the table, a drive-wheel adapted to engage the spindles, and a cam device adapted to disengage the spindles.



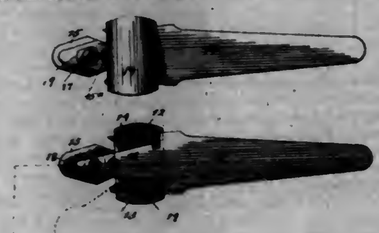
19. The combination of a standard, a table having a sleeve and mounted on the standard rotatably, adjunctive mechanism for rotating the sleeve intermittently, and a clamp-support mounted upon said sleeve and adjustable vertically thereon.

20. The combination of a rotary table, a ratchet device for intermittently rotating said table, a cam device for actuating the ratchet, a driving-shaft for operating the cam, a series of spindles carried upon the table, and a cam device for intermittently rotating the spindles.

21. The combination of a driving-shaft, a cam upon said shaft, a ratchet device actuated by the cam, a table rotated intermittently by the ratchet device, a series of spindles carried by the table, pinions upon the spindles, and a drive-wheel adapted to engage the spindles, said wheel being driven by said driving-shaft.

22. The combination of a driving-shaft, a rotary table, a cam and ratchet device for operating the table, a series of spindles upon the table, pinions upon the spindles, a drive-wheel engaging the spindles, and a stationary cam for disengaging the pinions.

406,226. RUNNING-GEAR. URIAH R. MILLER, Kellig's Mills, N. C. Filed Oct. 12, 1888. Serial No. 287,891. (No model.)



Claim.—1. The combination, in a running-gear, of the main rigid reach D, having its one end adjustable, the auxiliary reach E, hinged centrally to flex in a lateral direction and adjustable at the end opposite the adjustable end of the reach D, collars d', formed with hooks d^3 and secured to reach D, one of the collars being adjustable thereon, and the chains d^4, extending from the hooks d^3 to the body-bolsters, substantially as described.

2. The combination, in a running-gear, and with the axles and bolsters thereof, of the main reach D, pivotally secured at each end and longitudinally adjustable at one end, the frame J, secured to the front gear and between the spaced cross-bars j^3 of which the reach D lies, the auxiliary reach E, hinged at its center to flex laterally and made adjustable at one end, the bounds I, spaced at their ends, the plates i, uniting said spaced ends, and the friction-rollers i', substantially as described.

3. The combination, in a running-gear, of a main rigid reach D, adjustable longitudinally at its rear end, the auxiliary reach E, hinged at its center to flex laterally and adjustable longitudinally at its front end and having a free endwise movement at its opposite end, the keepers G G', secured to the under side of the axles, and the friction-rollers H, between which the free end of reach E is guided, substantially as described.

406,227. SAW-SWAGE. JASON W. MIXTER, Plymouth, Mass. Filed Mar. 20, 1889. Serial No. 303,961. (No model.)

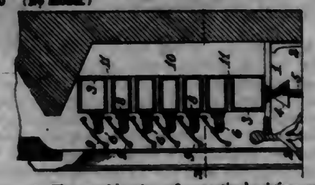
Claim.—1. The combination, with a saw-swage provided with a triangular tongue and a die secured to the base of the tongue at top and bottom, of guides provided with a longitudinal recess upon the inner face capable of receiving the sides of the tongue, and means, substantially as shown and described, for securing the said guides to the said tongue, as and for the purpose specified.

2. The combination, with a saw-swage provided with a tongue projected from one end, a die held in contact with the top and bottom, respectively, of said tongue at the base, and a band clamping said dies to said tongue, of a key consisting of a half-round pin capable of passing through the tongue in contact with the band, substantially as and for the purpose specified.

3. The combination, with a saw-swage provided with a triangular tongue, a die located at the top and bottom of the tongue at the base, a band binding said dies to said tongue, and a key consisting of a half-round pin capable of passing through the tongue in contact with the outer face of the band, of a guide detachably secured to each side of the tongue in advance of the dies, and means, substantially as shown and described, for adjusting the said guides upon the said tongue, as and for the purpose specified.

406,228. SAW-GUMMER. JASON W. MIXTER, Plymouth, Mass. Filed Mar. 20, 1889. Serial No. 303,962. (No model.)

Claim.—1. The combination, with a saw-gummer, of a gage bar or link adjustably attached thereto, and an adjustable lock link or bar capable of contact with the said gage-link, substantially as and for the purpose specified.

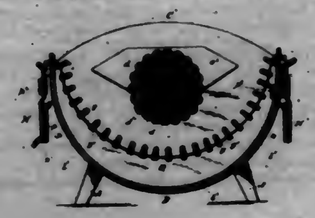


406,228.

2. The combination, with a saw-gummer, of a gage link or bar provided with a lip extending at a right angle from one end, essentially L-shaped in cross-section, and an adjustable lock link or bar adapted for contact with one side of the gage-link, substantially as and for the purpose specified.

3. The combination, with a saw-gummer provided with an ordinary gage-screw, of a gage link or bar adjustably attached thereto, provided with a lip essentially triangular in cross-section and projected from one end, whereby an angular recess is formed, and an adjustable lock link or bar located at a right angle to the gage-link and capable of contact therewith, substantially as and for the purpose specified.

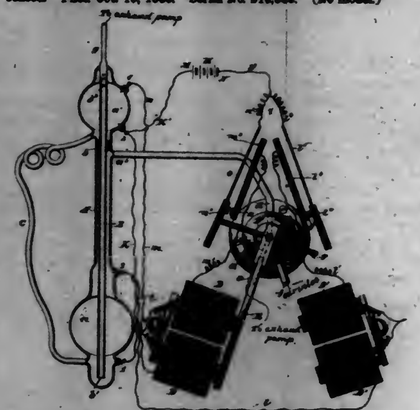
406,229. GAS-BURNER FOR STOVES OR FIRE-PLACES. TERRENCE MCSWEENEY, Allegheny, Pa. Filed Feb. 11, 1889. Serial No. 299,480. (No model.)



Claim.—1. The combination of a vertical mixing and heating chamber, a mixer communicating with said chamber at its lower end, a series of perforated burner-pipes located adjacent to the front of the chamber and communicating therewith, and a series of retarding and radiating plates supported one above another adjacent to the burner-pipes, substantially as set forth.

2. The combination of a vertical mixing and heating chamber, a mixer communicating with said chamber at its lower end, and a series of burner-pipes provided with burner-openings and located adjacent to the front of the chamber, said pipes communicating with the chamber through openings which increase gradually in diameter from the highest to the lowest of the series, substantially as set forth.

3. The combination of a vertical mixing and heating chamber, a mixer communicating with said chamber at its lower end, a series of perforated burner-pipes located adjacent to the front of the chamber and communicating therewith, an inclosed air-heating passage open at bottom and adjoining the rear of the chamber, and a series of air-supply passages leading through the chamber from said air-heating passage to points adjacent to the burner-pipes, substantially as set forth.



4. The combination of a vertical mixing and heating chamber, a mixer communicating with said chamber at its lower end, a series of perforated burner-pipes located adjacent to the front of the chamber and communicating therewith, and a series of perforated retarding and radiating plates supported one above the other adjacent to the burner-pipes and inclined downwardly and outwardly from the front of the chamber, substantially as set forth.

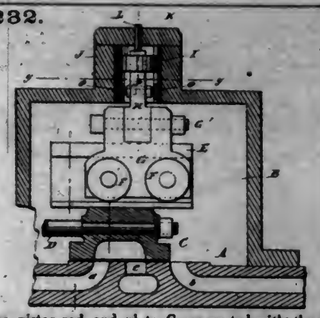
406,230. WASHING-MACHINE. HAIM NETHELL, Stromsburg, Nebr. Filed May 5, 1888. Serial No. 272,884. (No model.)

Claim.—In a washing-machine of the kind herein shown and described, the combination, with the outer casing thereof, of the elastic removable washing-apron composed of a series of slats secured together at their lower edges by means of spring-connections, the outer ends of said washing-apron having secured thereto the retaining-boards H and H', for holding the same within an adjusted position in said outer casing, the side blocks c^3 c^3, cross-strip p^3, and the projecting lip p', formed upon the end board H, as and for the purpose herein shown and described.

406,231. DEVICE FOR AUTOMATICALLY MANIPULATING THE VALVES OF HIGH-VACUUM PUMPS. EDMUND B. NICOLAUS, Cleveland, Ohio; Paul Schneider administrator of said Edmund B. Nicolaus, deceased. Filed Oct. 19, 1886. Serial No. 216,669. (No model.)

Claim.—1. The combination, with the mercury reservoirs of a high-vacuum pump, a valve and tubes for admitting variable pressure upon the mercury within the reservoirs, electro-magnets for actuating the valve, and electric circuits having terminals located within the mercury-reservoirs, so that the circuits will be opened and closed by the mercury in the pump, of circuit-breakers located outside of the pump and adapted to automatically open and close the circuits immediately prior to their being opened or closed by the mercury of the pump, substantially as set forth.

2. The combination, with a high-vacuum pump and electro-magnets for actuating the valve for controlling the pump-connections, of contacts arranged and adapted to be closed by the mercury in the pump, and circuit-breakers outside of the mercury-reservoirs for opening the circuits before the mercury contacts are broken, substantially as set forth.



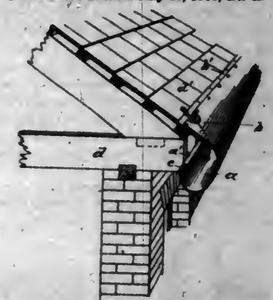
3. The combination, with a high-vacuum pump and electro-magnets for actuating the valve for controlling the pump-connections with the open air and exhaust-pump, of circuit-breakers for automatically opening and closing the circuits connected with the mercury-reservoirs at points outside of said reservoirs, substantially as set forth.

4. The combination, with the mercury-reservoir of a high-vacuum pump, contacts located within the reservoir and adapted to be closed by the mercury therein, and an electric circuit connected with the contacts and having an electro-magnet included therein, of a circuit-breaker adapted to break the circuit at a point outside of the mercury-reservoir immediately after the circuit has been closed within the reservoir, substantially as set forth.

5. In a high-vacuum pump, the combination, with the mercury-reservoirs, a valve for controlling the pump-connections with the open air and exhaust-pump, and electro-magnets for automatically actuating the valve, of a circuit-breaker for alternately opening and closing the circuits connected with the mercury-reservoirs at points outside of the pump, substantially as set forth.

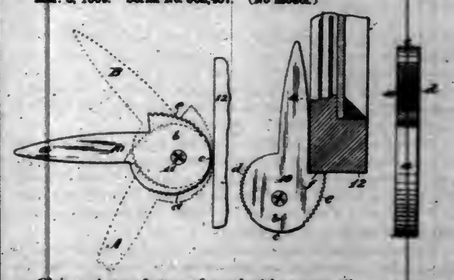
6. The combination, with the mercury-reservoirs, a valve and tubes connecting therewith, and electro-magnets and circuits, the latter connecting with the mercury-reservoirs and adapted to be opened and closed by the mercury in the pump, of circuit-breakers constructed to be operated by the electro-magnets, substantially as set forth.

406,232. BALANCED SLIDE-VALVE. FRANK D. PATTEN, Montrose, Iowa. Filed July 3, 1883. Serial No. 272,926. (No model.)



Claim.—1. The combination, with the steam-chest having a cylinder at the top, the slide-valve having the angular guideways E, the piston-rod and piston sliding in said cylinder, of the plate G, which is pivotally connected with said rod, and rollers journaled on the plate, as shown and described, to operate as specified.

2. The combination, with the steam-chest having a cylinder at the top, the piston-rod and plate G, connected with the latter and held against endwise movement, and the slide-valve having guideways E, of the rollers F F, which are mounted and rotate on journals fixed in said plate, as shown and described, for the purpose specified.

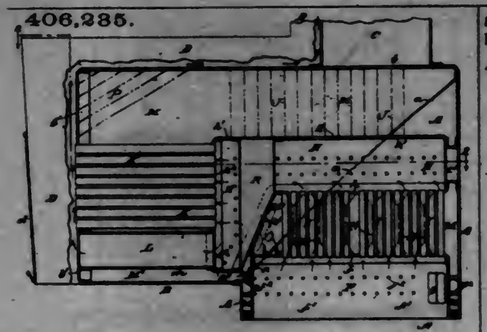


3. The combination, with a steam-chest and a cylinder formed on the same, of a piston held to slide in the said cylinder, a piston-rod carrying the said piston, a plate pivotally connected with the said piston-rod, rollers held on the said plate, a slide-valve provided with guideways traveling on the said rollers, and a cross-head held on the said piston-rod and fitting into the said cylinder, substantially as shown and described.

406,233. EAVES-GUTTER FOR ROOFS. JOHN PHELPS, Dulwich, County of Surrey, England. Filed Jan. 22, 1889. Serial No. 297,312. (No model.) Patented in India July 16, 1888, No. 12.

Claim.—A combined eaves-gutter and cover therefor, constructed of a sheet of metal bent to form both the gutter proper *a* and the sloping cover *b*, the gutter portion *a* being secured to the eaves along the edge *a'* and the cover-portion *b* overlapping the roof and being secured thereon at its edge *b'* in a plane parallel with the surface of the roof, but at a sufficient distance above the roof to permit of drainage beneath the part *b* into the gutter *a*, substantially as specified.

406,234. SASH-HOLDER. ELIAS C. PRUITT, Twiggs, S. C. Filed Mar. 3, 1889. Serial No. 302,407. (No model.)



Claim.—A sash-fastener formed with an extending arm, a shoulder *f*, and eccentric bearing-faces *d e*, substantially as described.

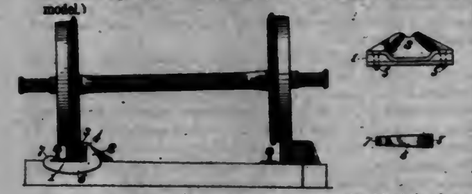
406,235. STEAM-BOILER. ROBERT S. ROOT, Jersey City, N. J. Filed Mar. 30, 1889. Serial No. 305,362. (No model.)

Claim.—1. A boiler made in two cylindrical or rounded sections connected by an elbow-joint to produce a self-bracing shell, and provided on the upper horizontal section with a steam-dome, substantially as herein set forth.

2. A boiler made in two cylindrical or rounded sections connected by an elbow-joint to produce a self-bracing shell, and an uptake or back connection extending at the rear and top of the shell, substantially as herein set forth.

406,235.

3. A boiler made in two cylindrical or rounded sections connected by an elbow-joint to produce a self-bracing shell, the fire-box being arranged at the bottom of one rounded section and the fire tubes or flues and the combustion-chamber arranged in the two sections above and in rear of the fire-box, substantially as herein set forth.



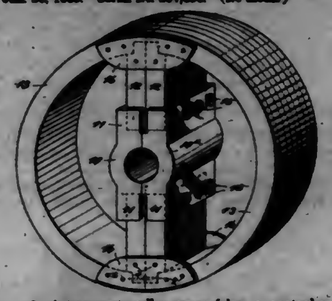
4. A boiler made in two cylindrical or rounded sections connected by an elbow-joint to produce a self-bracing shell, the fire-box being arranged at the lower end of one rounded section and the fire tubes or flues and combustion-chamber arranged in the two sections above and in rear of the fire-box, and with a steam-dome on the shell, substantially as herein set forth.

5. The combination, in a boiler, of two cylindrical or rounded sections A B, connected in elbow form, a fire-box F at the bottom of section A, a combustion-chamber H above the fire-box, tubes connecting the fire-box and combustion-chamber, and fire-tubes communicating with the combustion-chamber and with the uptake or back connection of the boiler, substantially as herein set forth.

6. The combination, in a boiler, of a shell, a fire-box therein, a combustion-chamber above the fire-box, tubes connecting the fire-box and combustion-chamber, fire-tubes connecting the combustion-chamber and the uptake or back connection of the boiler, and a water-circulation and man-hole tube crossing the combustion-chamber and communicating with the upper and lower parts of the water-space of the boiler, substantially as herein set forth.

7. The combination, in a boiler, of a shell made in two cylindrical or rounded sections connected in elbow form, a fire-box at the bottom of the front section, a combustion-chamber above the fire-box, tubes connecting the fire-box and combustion-chamber, fire-tubes connecting the combustion-chamber and the uptake or back connection of the boiler, and a water-circulation and man-hole tube crossing the combustion-chamber and communicating with the upper and lower parts of the water-space of the boiler, substantially as herein set forth.

406,236. WRECKING-FROG. CHARLES P. ROYCE and GERRARD R. GIBB, Allegheny, Pa. Filed Feb. 1, 1889. Serial No. 298,347. (No model.)



Claim.—1. In a wrecking-frog, a tapering guide-block having a central groove of a depth greater than the flange of a car-wheel and gradually increasing in width toward the thin end of the frog, and provided with treads along each edge, substantially as set forth.

2. In a wrecking-frog, the combination of a tapering guide-block, and a clamp adapted to pass under the rail and guide and provided at one end with a jaw constructed to engage the flange of the rail and at its opposite end with a jaw constructed to have a firm bearing upon the side and top of the block, the portion of the jaw bearing upon the side of the block having reversely-beveled edges, substantially as set forth.

3. In a wrecking-frog, the combination of a guiding-block and a lifting-block, said blocks being made for a part of their length of a height sufficient to support the wheel at or above the level of the rails, the remaining portions being inclined, the guiding-block having a central groove of a depth greater than the flange of a car-wheel and gradually increasing in width toward the thin end of the frog, and provided with treads along each edge, substantially as set forth.

406,237. SPLIT PULLEY. EDWARD P. SHERBURNE, Racine, Wis. Filed Jan. 26, 1889. Serial No. 297,893. (No model.)

Claim.—1. A two-part pulley comprising a central part or hub formed in two sections, arms supported by said sections face to face, rim-sections secured at their ends to the ends of said arms, and plates connected to the abutting ends of the rim-sections and to the arms to join the two pulley-sections, substantially as set forth.

2. A two-part pulley comprising a central part or hub formed in two sections having their adjacent faces provided with half-bearings between their ends and their ends provided with sockets open on their inner sides, the arms resting at their ends in said sockets, the rim-sections secured at their ends to the ends of the arms, bolts connecting the two pulley-sections at the inner ends of the arms, and plates connecting the two pulley-sections at the outer ends of the arms, substantially as set forth.

3. A two-part pulley consisting in the central part or hub in two sections 10 10^a, each having a half-bearing on its inner face and sockets 11 at its ends, the arms 12 resting in said sockets face to face, the semicircular rim-sections 13, secured at their ends to the outer ends of the said arms, and formed of strips secured together side by side, the plates 16, securing the abutting ends of the rim-sections and the outer ends of the arms 12 together, and the bolts 15, passed through the said sockets and inner ends of the said arms, substantially as set forth.

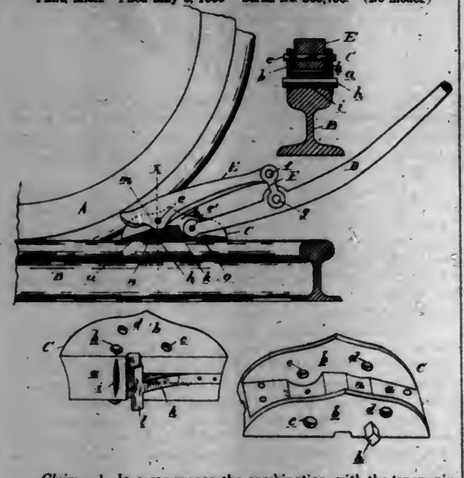
406,238. JUG-COVER. SAMUEL J. SCOTT, Cincinnati, Ohio. Filed Sept. 24, 1888. Serial No. 286,143. (No model.)

Claim.—1. In a jug-cover, the combination of the cover C, the leaf D, hinged to the cover, said leaf being notched at the rear, having the bearing *d* for the front of the jug-handle, and the downwardly-projecting fingers *d'*, formed integral with the leaf D and adapted to pass down outside of the jug-body upon each side of the handle, substantially as set forth.

2. The combination, substantially as set forth, of the vessel A, having the upwardly-projecting handle, part *b*, and bead *a*, the cover C, and leaf D, hinged to the cover, the said part D being cut away at the rear to pass upon each side of the handle, and having the bearing part *d* and fingers *d'*, whereby the leaf D is clamped upon the jug.

3. The herein-described jug-cover, comprising the two parts C and D, hinged together as shown, the part D being recessed at the back to bear against the jug-handle, and having fingers *d'* to press the outside of the vessel upon opposite sides of the handle.

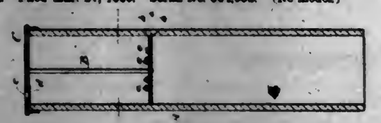
406,239. ATTACHMENT FOR DRESSES. LEWIS SEARSON, Jackson, Mich. Filed Mar. 15, 1888. Serial No. 267,267. (No model.)



Claim.—The improved dress attachment described, composed of two like parts, each consisting of a steel, the non-elastic closely-woven strips arranged at right angles to said steel and secured thereto by stitching, and an outer fabric inclosing said steels and strips and co-

406,239.

cured around said steels by stitching, and the outer ends of the strips free to be attached to a dress, substantially as shown and described.

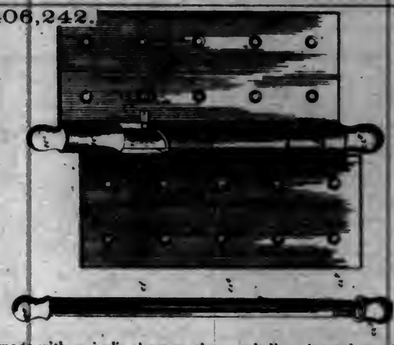


406,240. CAR-MOVER. JOHN SKINNER and CHARLES B. WALLACE, Flint, Mich. Filed May 6, 1880. Serial No. 309,738. (No model.)

Claim.—1. In a car-mover, the combination, with the levers pivotally connected to a shoe having the concave bottom, of a spring secured in the under side of the shoe and adapted to raise one end thereof, and of the sharp-edged pin projecting with its edge through the shoe, substantially as described.

2. In a car-mover, the combination, with levers pivotally connected to a shoe having a concave bottom, of the sharp-edged pin projecting with its middle nearly through said shoe, the T-shaped spring normally extending below said shoe, a recess formed in the upper portion of the shoe for the reception of the corresponding portions of the levers and of the flanges *b*, substantially as described.

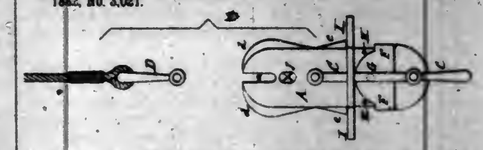
406,241. GAS-LEAK DETECTOR. JOHN F. STARK, New Haven, Pa. Filed Mar. 27, 1889. Serial No. 304,932. (No model.)



Claim.—1. The within-described device for detecting, by the aid or exposure of phosphorus, the presence or escape of gas in a room or elsewhere, consisting of a transparent tube having an opening below but mainly closed above, and of a phosphorus-table within the tube, composed of a series of gauze disks adapted to form a close fit within the tube, substantially as specified.

2. The within-described gas-leak detector operating by the aid or use of phosphorus, as specified, the same consisting of the transparent tube A, open below, a removable cap C, having a gauze-covered opening in it and adapted to close the upper end of said tube, a wire or pendant attached to said cap and arranged to project down within the tube, and a close-fitting phosphorus-carrying table within the tube, composed of a series of wire-gauze disks *b*, one above the other and attached to said wire or pendant, essentially as herein set forth.

406,242. HINGE. SIDNEY L. STILES, Watseka, Ill. Filed Feb. 15, 1889. Serial No. 299,962. (No model.)



Claim.—The automatically-closing hinge herein described, consisting of the two wings or leaves having tubular sleeves, one of which

406,242.

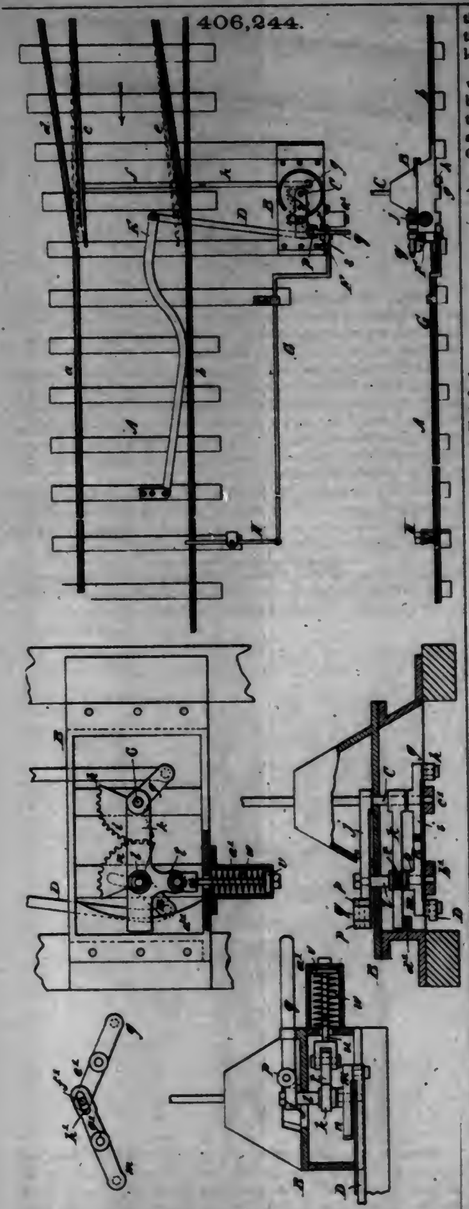
is made with an inclined upper edge, a spindle or journal attached to the other wing or leaf and bearing a friction-roller resting upon the incline, and a detachable pintle or hinge-pin having a longitudinal slot in the same receiving the end of the journal of the friction-roller, substantially as and for the purpose described.

406,243. DETACHING-HOOK FOR COLLIERY-HOISTS. JOHN A STRALEY, Brooklyn, N. Y., ancillary executor of John King, deceased, assignor to Stephen Humble, Westminster, England. Filed Feb. 4, 1889. Serial No. 298,596. (No model.) Patented in England June 27, 1882, No. 3,021.

Claim.—1. A detaching-hook for the cages of colliery-hoists, consisting of outer plates having central recesses at their upper ends and straight slots below said recesses in the upper parts of the plates, an intermediate or distance plate between the outer plates at the lower end of the same, a cage-suspending tackle applied to the outer and distance plate, inner shifting plates pivoted to the outer plates and provided with hook-shaped upper ends, reversely-inclined slots between said ends and the pivot of the shifting plates, and stop-shoulders at the lower ends, and means, substantially as described, for causing the outward shifting of the inner plates and the release of the hauling-shackle when overwinding takes place, substantially as set forth.

2. A detaching hook for the cages of colliery-hoists, consisting of outer plates A, having slots *g* and J, and recesses at the upper ends, an intermediate or distance plate B, a cage-suspending shackle C at the lower ends of the plates A and distance-plate B, inner shifting plates E, pivoted to the plates A and provided with curved slots *g'*, reversely-inclined slots K, stop-shoulders *e*, and hook-shaped upper ends *d*, and slide-plates F, for causing the shifting of the inner plates and the releasing of the hauling-shackle when overwinding takes place, substantially as set forth.

3. A detaching-hook for the cages of colliery-hoists, consisting of outer plates A, having straight slots *g* and J and recesses *a*, an intermediate or distance plate B, a cage-suspending shackle C, and inner shifting plates E, pivoted to the plates A and provided with curved slots *g'*, reversely-inclined slots K, and hook-shaped upper ends *d*, the slots J and K of the plates A and E serving for inserting the pin of the hauling-shackle for lowering the shackle below the stop-plate after overwinding has taken place, substantially as set forth.



406,244. RAILWAY-SWITCH. JAMES B. SUFFERN, Hilburn, N. Y. Filed Nov. 1, 1886. Serial No. 220,714. (No model.)

Claim.—1. The combination, with the switch-bar and the vertical crank-shaft for operating it, of horizontal arms pivoted at their inner ends, one above the other, to said crank-shaft, a vertical shaft journaled in said arms and geared to the vertical crank-shaft, a track-lever to be operated by a passing train and connected with said vertical shaft, and means for throwing the said pivoted arms toward the track to move the lever away from the rail, substantially as set forth.

2. In an automatic switch, the combination, with the switch-rails *c e*, the stand B, provided with the crank-shaft C, and the connections between the switch-rails and the crank-shaft, of the track-lever E, the connecting-rod D, the cranks *m g*, and connections intermediate between the cranks *m g*, substantially as specified.

3. In an automatic switch, the combination of the switch-rails

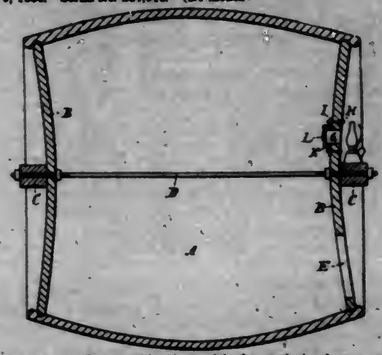
406,244.

c e, the crank *g*, provided with the toothed sector *i*, the crank *m*, provided with the toothed sector *n*, the track-lever E, and the connecting-rod D, substantially as specified.

4. In an automatic switch, the combination of the shaft C, crank *g* and toothed sector *i*, carried by the said shaft, the shaft *l*, crank *m*, and sector *n*, mounted on the said shaft, the arms *j k*, and the lever *q*, substantially as specified.

5. In an automatic switch, the combination of the base provided with the notches *r s*, the shaft C, crank *g* and toothed sector *i*, carried by the said shaft, the shaft *l*, the crank *m*, and sector *n*, mounted on the said shaft, the arms *j k*, and the jointed lever *q*, adapted to drop into the notches *r s*, substantially as specified.

6. In an automatic switch, the combination of the base provided with the notches *r s*, the shaft C, crank *g* and toothed sector *i*, carried by the said shaft, the shaft *l*, the crank *m*, and sector *n*, mounted on the said shaft, the arms *j k*, the jointed lever *q*, adapted to drop into the notches *r s*, the right-angled lever F, the rod G, and the track-lever H, substantially as specified.

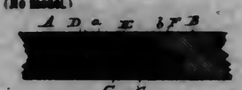


7. In an automatic switch, the combination of the base provided with the notches *r s*, the shaft C, crank *g* and toothed sector *i*, carried by the said shaft, the shaft *l*, the crank *m*, and sector *n*, mounted on the said shaft, the arms *j k*, the rod *u*, spring *w*, the jointed lever *q*, adapted to drop into the notches *r s*, the right-angled lever F, the rod G, and the track-lever H, substantially as specified.

406,245. NUT-LOCK. ANDREW D. VAN BIBBER, Zeln, W. Va. Filed Dec. 6, 1888. Serial No. 292,790. (Model.)

Claim.—The combination, with the bolt and the nut, of the washer having a flange on its edge, the sliding locking-plate mounted on the washer and having a shoulder engaging the flange of the washer, and the spring pivoted on the locking-plate and adapted to be turned at right angles to bear against the end of the flange of the washer, as set forth.

406,246. BEER-CASK. JOHN WAGNER, Detroit, Mich. Filed Oct. 9, 1888. Serial No. 287,616. (No model.)



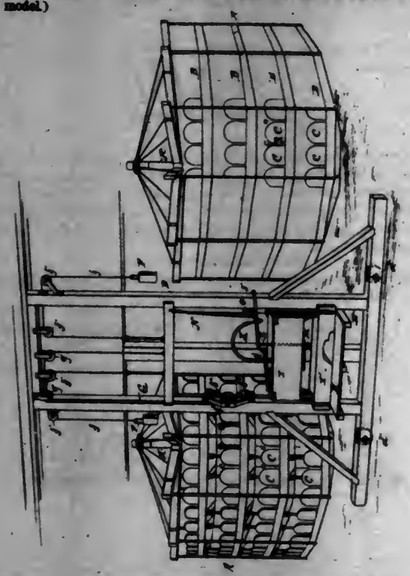
Claim.—1. The combination, with the cask having an aperture in its end and a brace across said end beneath said aperture, of a glass over said aperture, and a lamp supported by said brace, substantially as and for the purpose specified.

2. The combination, with the head having aperture G, of the flanged ring I, secured to the head around said aperture and provided with screw-threaded flange J, the lens, and the threaded collar K, for holding said lens against the flange, substantially as shown and described.

3. The combination, with the aperture G in the head of the cask, of the flanged ring I, provided with the screw-threaded flange J, the lens, the threaded ring K, the cap M, provided with the shoulder R, the gasket N, the bolt O, cross-brace P, and screw-nut Q, the parts being arranged to operate substantially as described.

406,247. HINGE. GEORGE B. WEBB, New York, N. Y., assignor to Wyckoff, Seamans & Benedict, same place. Filed Apr. 6, 1889. Serial No. 306,283. (No model.)

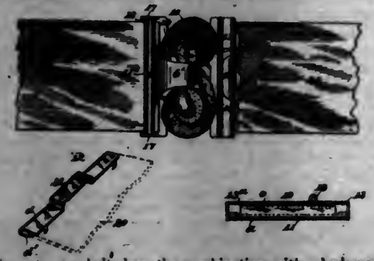
Claim.—1. In a hinge, the combination, with the leaves D and F, of the intermediate leaf E, pivotally connected at its ends to the leaves D and F, and comprising the arms *d* and *e*, set at an angle to each other.



2. In combination with the parts A and B, the latter provided with a socket, as C, a hinge comprising the three leaves D, E, and F, the leaves D and F being secured, respectively, to the parts A and B, and a spring seated in the socket and bearing against the under side of the leaf E.

3. In combination with the parts A and B, the latter having a socket C, a hinge comprising three leaves D E F, the leaves D F secured, respectively, to A and B, a spring beneath leaf E, and an arm H, carried by leaf D, to engage with the top wall of the socket.

4. In combination with a fixed part B and a movable part A, a hinge comprising three leaves, one of the leaves being secured to part A and another to part B, and a spring bearing against the under side of the connecting-leaf and tending to throw its outer end upward above the top of part B.



5. In combination with parts A and B, the bent leaf E, secured to part B and having its outer end free to rise above the top of the latter, and a leaf D, secured to part A and pivotally secured to the outer end of leaf E.

406,248. POULTRY-FATTENING MACHINE. WILLIAM C. WILLIAMS, Ossan, N. Y. Filed Dec. 12, 1888. Serial No. 293,390. (No model.)

Claim.—A poultry-feeding apparatus consisting, essentially, of a horizontally-sliding frame, a food-receptacle arranged in said frame, means for elevating said food-receptacle, and a series of pivotal coops, as and for the purpose described.

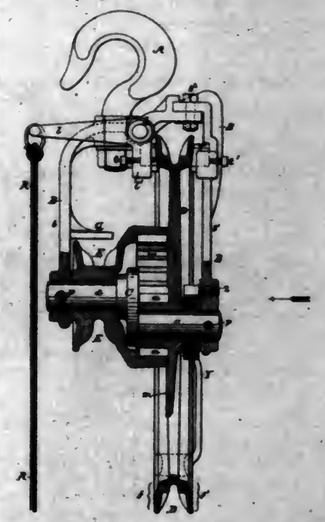
406,249. BELT-CLASP. GEORGE B. ZELTMACHER, Brooklyn, N. Y. Filed Apr. 3, 1889. Serial No. 305,834. (No model.)

Claim.—1. In a belt-clasp, the combination, with a body portion provided with a longitudinal groove in its under face at each side and a hook integral with one side edge, of a toothed lock-lever pivoted upon the under face beneath one of the grooves, and a keeper-bar consisting of a metal strap having its under face indented to receive the hook of the body, substantially as shown and described.

2. In a belt-clasp, the combination, with a body portion provided with longitudinal grooves in the under face at each side, a hook integral with one side edge, and ears projected downward from the ends of the grooves at the opposite side edge, of a toothed lock-lever pivoted in said ears, provided with a handle, and a keeper-bar consisting of a strip of metal bent upon itself, forming upper and lower parallel members, the upper member being provided with a raised portion upon the upper side, whereby a keeper is produced to receive the body-hook, substantially as shown and described.

406,250. NECK-YOKE CENTER. JOHN W. ALBAUGH, Burlington, Iowa. Filed Nov. 14, 1888. Serial No. 290,826. (No model.)

406,250.

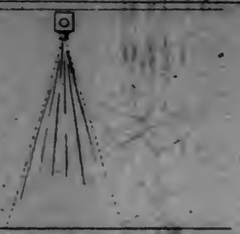


Claim.—1. The combination, with a neck-yoke, of two eyebolts secured thereto, a ring horizontally pivoted in the eyes of said bolts, and a pole-ring vertically pivoted at diametrically-opposite points in said outer ring, substantially as described.

2. The combination, with a neck-yoke, of two eyebolts secured thereto, a ring having two shouldered projections formed thereon and pivoted in the said eyebolts, two projections F F, formed on the front face of said ring, said projections being concaved on their rear faces, and a pole-ring pivoted in the outer ring and having bosses thereon which bear against the concaved faces of the said projections F F, substantially as described.

3. The combination, with a neck-yoke, of two eyebolts secured thereto, a ring pivoted in said eyebolts, and a pole-ring vertically pivoted in said outer ring, said pole-ring having enlargements bearing against projections on the outer ring, substantially as described.

406,251. HOIST. VICTOR ANGERER, Philadelphia, Pa., assignor to the William Wharton, Jr., & Company, Incorporated, same place. Filed Feb. 21, 1887. Serial No. 228,339. (No model.)

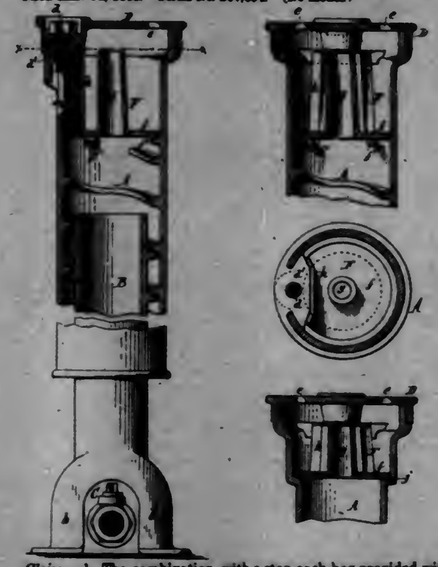


Claim.—1. The combination, in a hoist, of the chain-drum and its operating-wheel, a frame therefor, and a brake-block carried by said frame upon one side of the operating-wheel, with a brake-block upon the opposite side of the rim of said wheel carried by a lever hung to the frame, the operation of said lever causing the lateral movement of the wheel against the brake-block carried by the frame, substantially as specified.

2. The combination, in a hoist, of the fixed frame made in two parts, and a crank-spindle secured to the frame and having two arms both in the same vertical plane, one arm carrying the chain-drum and its gear-wheel, and the other arm carrying the drive-chain wheel and its pinion, with a brake-lever hung to said frame and carrying upon one of its arms a brake-block adapted to act against the rim of the drive-chain wheel, substantially as specified.

406,252. METHOD OF PRODUCING DRAMATIC PERFORMANCES. C. LAWRENCE BARRY and GEORGE B. UPHAM, Boston, Mass. Filed Sept. 25, 1886. Serial No. 214,343. (No model.)

406,252.

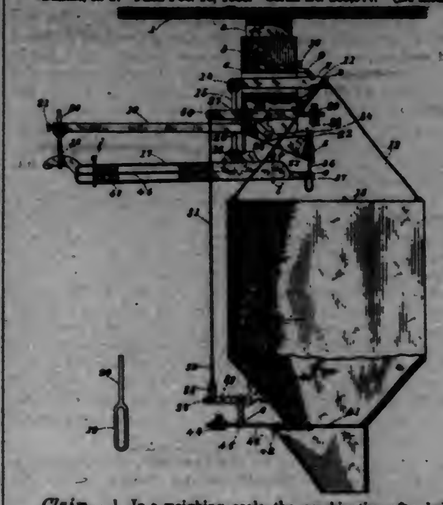


Claim.—1. The improvement in the art of producing dramatic compositions which consists in representing part of the drama by means of actors and part by pictorial representations during the intervals between the acts, narrative of the incidents of the drama conceived to happen during such intervals, substantially as described.

2. The improvement in the art of producing dramatic compositions which consists in representing part of the drama by means of actors and part by photographic representations of the said actors during the intervals between the acts, narrative of the incidents of the drama conceived to happen during such intervals, substantially as described.

3. The improvement in the art of producing dramatic compositions which consists in representing part of the drama by means of actors and part by photographic representations during the intervals between the acts in their serial order taken of the said actors while acting the incidents conceived to happen during the said intervals, substantially as described.

4. The improvement in the art of producing dramatic compositions which consists in representing part of the drama by means of actors and part by stereopticon views during the intervals between the acts of photographs in their serial order, taken of the said actors while acting the incidents conceived to happen during the said intervals, substantially as described.



406,253. STOP-COCK BOX. CHARLES F. BURNHAM, Buffalo, N. Y. Filed Mar. 20, 1888. Serial No. 267,954. (No model.)

Claim.—1. The combination, with a stop-cock box provided with a removable cover having gas-escape openings *e*, of a removable dirt-trap F, arranged within the box and composed of a bottom plate or diaphragm *f*, fitting the inside of the box, and an upwardly-projecting tube *g*, having its lower end opening into the box below the plate *f* and its upper end terminating below the removable cover, whereby any gas contained in the box below the trap F is permitted to escape through the tube *g* and openings *e*, substantially as set forth.

2. The combination, with the stop-cock box provided on its inner side with a lug *d'*, of the cover D, provided with gas-escape openings *e* and attached to the stop-cock box by a screw-bolt arranged in said lug, the removable diaphragm F, supported within the box and provided with an upright plate A, bearing against the lug *d'*, and an upright gas-escape tube *g*, substantially as set forth.

406,254. AUTOMATIC GRAIN-SCALE. WALTER A. BRADLEY, Buffalo, N. Y. Filed Feb. 10, 1888. Serial No. 263,577. (No model.)

Claim.—1. In a weighing-scale, the combination of a hollow scale-beam pivoted near one end and inclosing a rolling weight for carrying the weight of the beam in the direction of its incline, with a supporting loop-bar 15, pivoted thereto and having its opposite end pivoted to a beam 7, pivoted by a pivot 8 to a support 9, and carrying a hopper at its opposite end, substantially as described.

2. In a weighing-scale, the combination therewith of a hollow scale-beam pivoted near one end, a longitudinal partition within said beam dividing it into apartments, and a series of rolling weights within said apartments, substantially as and for the purposes described.

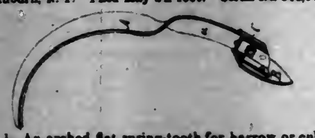
3. In a weighing-scale, the combination of the pivoted beam 7, connected by a connecting-link to the weighing-beam 17, a hopper connected to the beam 7, a pivoted arm 27, connected by a connecting-rod to an angular arm pivoted to the lower portion of the hopper and having a lower portion *e* for engaging with a pin on the arm 43 of the valve 41, two arms pivoted to opposite sides of the grain-spout, carrying a cut-off 22, and a pivoted link 36, connected by a loop and pin *e* on the weighing-beam 17, the arm 23 having an extension 26, adapted to engage with the arm 27, whereby when the hopper is nearly filled with grain the weighing-beam begins to rise and allows the cut-off to be partly closed, and when the weight in the hopper is just sufficient to raise the front end of the beam so as to incline from the front downward the rolling weight will immediately change its position from the front to the rear of the beam and cause the flow of grain to be shut off from the bin and open the valve to permit the grain to flow from the hopper, substantially as described.

406,255. PICTURE-HANGER. WARREN M. BRINKERHOFF, Auburn, N. Y. Filed Nov. 19, 1887. Serial No. 255,694. (No model.)

Claim.—1. A picture-hanger consisting of a main body provided with means for engaging a support for the same, a cord-support, a locking projection or projections below the cord-support, and a construction between the highest cord-engaging point and the locking devices for outwardly deflecting the cord, said cord-engaging parts extending forward of the plane of the wall-engaging portion of the hanger, whereby the cord can be attached to and removed from the hanger without detaching it from the picture-frame, substantially as described.

2. A picture-hanger consisting of a main body provided with means for engaging a support for the same tending to hold it from lateral vibration on said support, a rigid cord-support, a locking projection or projections below the cord-support for holding the cord in an inwardly-deflected position, and cord-engaging portions between the highest cord-engaging point and the locking devices for holding the cord in an outwardly-deflected position, said cord-engaging parts extending forward of the plane of the wall-engaging portion of the hanger and open for access forward of said plane, whereby the picture-

cord may engage with and be disengaged from said parts without detaching the cord from the picture or its frame, substantially as described.



3. A picture-hanger consisting of a main body provided with means for engaging a support for the same, a forwardly-projecting rigid cord-support which extends outward on each side below its highest cord-engaging point, said outwardly-extending portions being rigidly connected and held from lateral deflection, and a forwardly-extending projection or projections for removably engaging both of the depending portions of the cord and holding them in an inwardly-deflected position, said outwardly-extending portions being open for engagement with the cord without passing through the hanger, substantially as described.

4. A picture-hanger consisting of a knob provided with attaching means and having its base provided with two cord-engaging projections at one side of the same, integral therewith, the distance between said projections being less than the diameter of the cord-engaging portion of the knob, substantially as described.

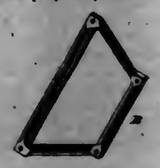
5. A picture-hanger consisting of a knob provided with means for engaging a support for the same, and a base-plate secured in fixed relation thereto, provided with a projection or projections for holding the cord in an inwardly-deflected position, substantially as described.

6. A picture-hanger consisting of a knob provided with a rearwardly-extending wall-engaging support for the same, connected by a non-pivotal engagement, and a cord-engaging projection or projections below the neck of the knob for holding the cord in an inwardly-deflected position, substantially as described.

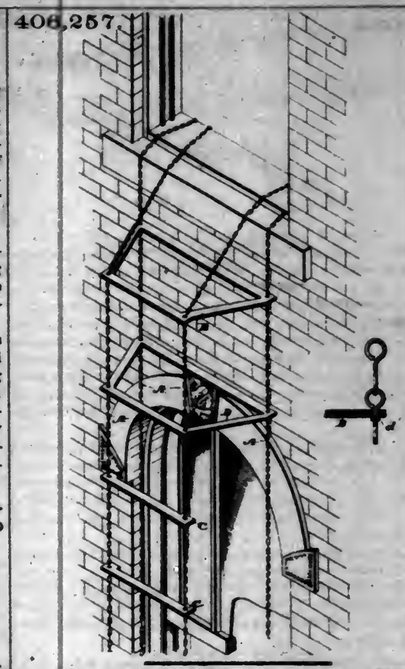
406,256. SPRING-TOOTH FOR HARROWS. WARREN M. BRINKERHOFF, Auburn, N. Y. Filed May 24, 1889. Serial No. 311,949. (No model.)

Claim.—1. An arched flat spring-tooth for harrow or cultivator, having a broad surface presented to the line of draft throughout the main portion of its length, and having at its lower extremity a broad earth-engaging part, and a narrower portion between the said earth-engaging part and the main body of the tooth, substantially as described.

2. An arched flat spring-tooth for harrow or cultivator, having a broad surface presented to the line of draft throughout the main portion of its length, and having at its lower extremity a broad earth-engaging part, and a portion between the said earth-engaging part and the main body turned edgewise to the line of draft, substantially as described.

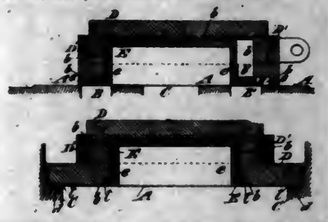


3. A flat spring-tooth for harrow or cultivator, having a broad surface presented to the line of draft throughout the main portion of its length and terminating at its lower extremity in a portion turned edgewise to the line of draft and provided with an attached point, substantially as described.



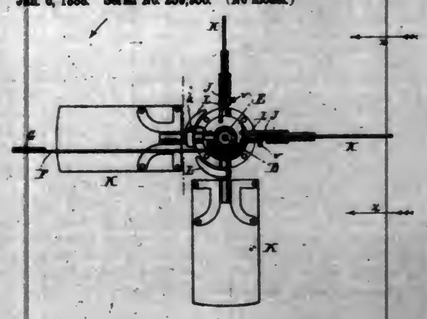
4. A spring-tooth for harrows or cultivators, consisting of a spring shank turned near its lower end at right angles to itself, so as to present its edge to the front, and a shoe having a web or flange projecting back at right angles to its face parallel with and adapted to be fastened to the twisted end of said spring-shank, substantially as described.

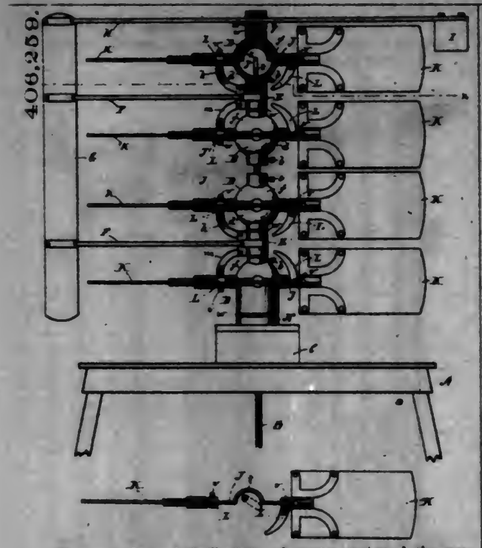
5. The combination, with a spring harrow or cultivator tooth turned at right angles to itself and edgewise to the line of draft at or near its lower end, of a shoe engaged therewith by a transverse bolt passing through said edgewise portion back of said shoe, substantially as described.



406,257. FIRE-ESCAPE. CORA A. BUTLER, Canton, Ohio. Filed Nov. 26, 1888. Serial No. 291,919. (No model.)

Claim.—In a fire-escape, the combination of the suspending-chains A, the braces B, attached to the suspending-chains and adapted to abut against the wall of a building between the windows, the bars C, attached to the outer suspending-chains and adjusted to come opposite the windows below the one from which the escape is suspended, and means for attaching the suspending-chains to the wall of a building, substantially as and for the purpose specified.





406,258. SLIDE-VALVE. BENJAMIN CARLEY, Paterson, N. J. Filed Oct. 15, 1888. Serial No. 288,113. (No model.)

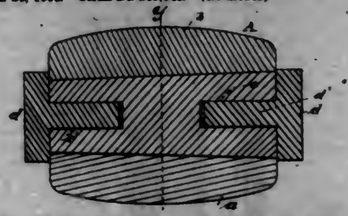
Claim.—The combination, with the slide-valve seat of an engine having two induction-ports and an interposed eduction-port, of valves arranged one within the other and both working on said seat with a lost motion between them, the outer valve for controlling the entrance of the motive agent to the said induction-ports and the inner one being coved for controlling the exhaust through said induction-ports to said eduction-port, the inner valve and the cavity in the outer valve wherein the inner one works being of less dimension in a direction transverse to the direction of the movement of the valve than the dimension of the eduction-port in the same direction, whereby portions of the face of the outer valve are always exposed to the eduction-port, substantially as and for the purpose herein set forth.

406,259. WINDMILL. AMOS H. CARPENTER, Waterford, Vt. Filed Jan. 6, 1888. Serial No. 259,950. (No model.)

Claim.—1. In a windmill of the character described, the combination of the following instrumentalities, to wit: a main shaft, a support or bearing for said shaft, a hollow hub secured to said shaft, two float-shafts journaled at right angles to each other in said hub, two floats rigidly secured to each of said float-shafts and arranged at right angles to each other, a tappet-arm for each of said floats, said arms being secured to the float-shafts, a cam or cam-bar arranged in the pathway of said tappet-arms and fitted to revolve around said main shaft, and a tail-piece or steerer connecting with the cam-bar and adapted to present it to the tappet-arms in such a manner as to feather the floats properly in accordance with the direction of the wind, said float-shafts being curved in opposite directions at or near their centers and the curved portions disposed within said hub to serve as stops for said shafts, substantially as set forth.

2. In a windmill of the character described, the combination of the following instrumentalities, to wit: a main shaft, a bearing or support for said shaft, two hollow hubs secured to said shaft, two float-shafts journaled at right angles to each other in each of said hubs, two floats rigidly secured to each of said float-shafts and arranged at right angles to each other, a tappet-arm for each of said floats, said arms being secured to the float-shafts, a collet loosely disposed on said main shaft between said hubs, an upwardly and also a downwardly projecting cam-bar secured to said collet, and a tail-piece or steerer connected with said collet and adapted to present said cam-bars to the tappet-arms in such a manner as to feather the floats properly in accordance with the direction of the wind, said float-shafts being secured in opposite directions at or near their centers and the curved portions respectively disposed within said hubs to serve as stops for said shafts, substantially as specified.

3. In a windmill of the character described, the hub D, consisting of the dish-shaped disks *d f*, connected by the bolts *h* and having the bearings *i*, said hub being provided with a hole for the reception of the main shaft B, substantially as specified.

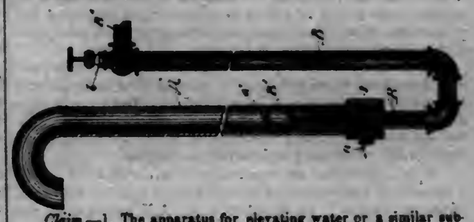


4. In a windmill of the character described, the hollow hub D, composed of the connected disks *d f*, having the bearings *i*, in combination with the shaft B, a collet fitted to revolve on said shaft, and the balls *w*, disposed between said hub and collet, substantially as specified.

5. In a windmill of the character described, the rod H, centrally pivoted or journaled above the hub D, in combination with a movable cam-bar, as *k*, said rod being connected at one end with the tail-piece G and provided at the other with the counterbalancing-weight I, substantially as specified.

6. In a windmill of the character described, the main shaft B, a bearing or support for said shaft, a hollow hub secured to said shaft, two float-shafts journaled at right angles to each other in said hub, two floats rigidly secured to each of said float-shafts and arranged at right angles to each other, a tappet-arm for each of said floats, said arms being secured to the float-shafts, means, substantially as described, for adjusting the tappet-arms on the float-shafts, stops for preventing the float-shafts from being revolved too far in either direction, a cam or cam-bar arranged in the pathway of said tappet-arms and adapted to be revolved by the wind around said main shaft, and a tail-piece or steerer connecting with said cam-bar and adapted to present it to the tappet-arms in such a manner as to feather the floats properly in accordance with the direction of the wind, substantially as set forth.

7. In a windmill of the character described, the rod F, centrally pivoted over the hub D and provided with a cam or cam-bar *k*, tail-piece G, and counter-balance I, in combination with the main shaft B and float-shafts J, said float-shafts being journaled in said hub and provided with the tappet-arms L, substantially as set forth.



406,260. MUFF-BLOCK. GEORGE F. CARTER, Orange, N. J. Filed Sept. 20, 1888. Serial No. 285,642. (No model.)

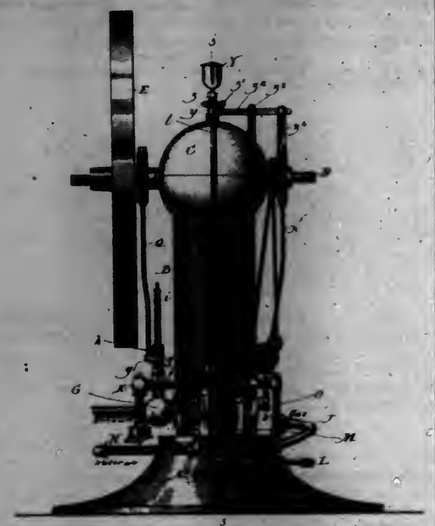
Claim.—1. A muff-block made substantially as herein described, consisting of a series of cylindrical sections and a smaller adjusting-section *b*, the inner sides of said sections forming a central tapering cylindrical opening through the block, and a tapering cylinder adapted to fit said central opening to bind a muff-skin tightly and uniformly on said block throughout its length, as set forth.

2. A muff-block made substantially as herein described, consisting of a series of cylindrical sections, and a smaller adjusting-section *b*, the inner sides of said sections forming a central tapering cylindrical opening through the block, a tapering cylinder adapted to fit said central opening to bind a muff-skin tightly and uniformly on said block, and adjustable wrist-blocks with tenons to enter sockets in the ends of said tapering cylinder, as set forth.

406,261. GAS-PRESSURE PUMP. WILLIAM H. CASTOR and SAMUEL B. CASTOR, Wayne, County of Hamilton, Ind. Filed June 23, 1888. Serial No. 277,997. (No model.)

Claim.—1. The apparatus for elevating water or a similar substance, consisting of a pipe inserted in a supply of water and another pipe arranged within said first pipe for supplying gas under pressure, its top end being arranged beneath the surface of the water or other substance, and the tubular set-screw *a*, inserted through said first-mentioned pipe against said last-mentioned pipe, whereby it is secured in position and water-inlets provided, substantially as set forth.

2. The combination, in an apparatus for elevating water, of the pipe A, the lower end of which is inserted in the water-supply, the natural-gas pipe B, inserted in the lower end of said pipe A, and the valve B^2 in the upper end of said pipe B, consisting of a disk of a size to close the end of said pipe mounted on a stem which extends down into said pipe, and the stop *a'*, arranged above said valve in the pipe A, all substantially as described, and for the purpose specified.



3. The combination of a pipe or stock A, extending beneath the surface of the water or other substance to be elevated, the gas-pipe B, provided with a valve *b*, and extending up into the lower end of the stock or pipe A, and the valve B^2, arranged in the top of said pipe B, subject to gas-pressure on the lower side and water-pressure on the upper side, suitable openings being provided at the lower end of the stock or pipe A for the inflow of the substance to be elevated, substantially as set forth.

406,262. BARREL-HOOP. GEORGE T. CHESTER, Lockport, N. Y. Filed Jan. 10, 1889. Serial No. 296,961. (No model.)

Claim.—A wooden barrel-hoop provided with a longitudinal indentation impressed into the wood, substantially as set forth.

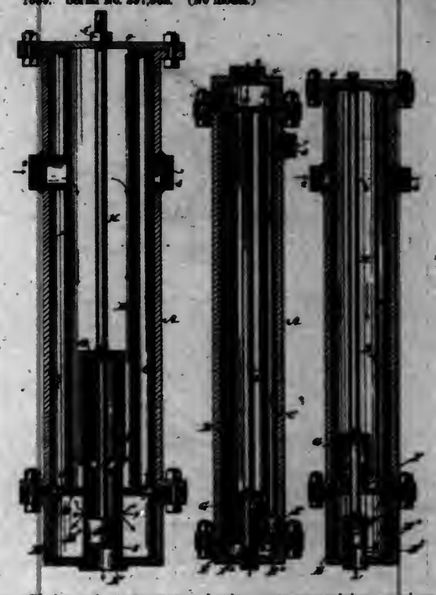
406,263. GAS-ENGINE. LEWIS T. CORNELL, Chicago, Ill., assignor to the Cornell Engine Company, same place. Filed Oct. 13, 1888. Serial No. 288,027. (No model.)

Claim.—1. In a gas-engine, the combination of the base A, having a central circular recess *a* and a concentric annular recess *a'*, the cylinder B, having a working-chamber V corresponding to and extended into the recess *a*, and a water-space X, corresponding to the annular recess *a'*, and an induction-valve having a valve-chest provided with a water-space *x*, that communicates with the water-space of the cylinder, substantially as described.

2. In a gas-engine, the cylinder B, cast or formed in a single piece, having a central working-chamber V, provided at its lower end with a pocket W, a water-space X, surrounding the working-chamber, a compressing-chamber U of large diameter above the working-chamber and water-space, and a hemispherical upper end provided with bearings for a crank-shaft, substantially as described.

3. In a gas-engine, the combination, with a cylinder B, having a compressing-chamber U, provided with a port *u*, and a working or explosion chamber V, provided with a port *v*, of a valve-chest containing a rotary valve having recess *p* and peripheral ignition-slot *e*, and an igniting device, substantially as described.

4. In a gas-engine, a cylinder having ports *u* and *v*, in combination with a valve-chest containing a rotary valve having a recess *p*, an ignition-slot *e*, and grooves *d*, communicating with said slot, and a discharge-passage *g* from the valve to the open air, substantially as and for the purpose specified.



5. In a gas-engine, the combination of a solid induction-valve having an ignition-groove on its periphery, a valve-chest having groove *g'*, a pipe *m*, attached to the valve-chest and communicating with the ignition-groove of the valve, and a burner for heating said pipe, substantially as described.

6. In a gas-engine, the combination of the induction-valve chest, a pipe *m*, bent to form a loop and screwed into the valve-chest at one end and open at the other, a burner for heating said pipe, and a valve having an ignition-groove on its periphery, substantially as described.

7. In a vertical gas-engine, the combination, with the eduction-valve having a vertical stem *g*, provided with adjustable button *j*, of the bracket A, the spring *i* on the valve-stem, and the rod Q, depending from an eccentric on the engine crank-shaft and having its lower end connected with the valve-stem above the button *j*, substantially as described.

8. In a vertical gas-engine, the combination, with the cylinder B, having the compression-chamber U, provided with port *u*, the explosion-chamber V, provided with port *v*, the piston T, located in said chambers, and the induction-valve chest F, having inlet-port *f* and a rotary induction-valve P, provided with recess *p* and peripheral ignition-slot *e*, of the pipes *l* and *l'*, located on the outside and inside of the cylinder, respectively, and one leading to the induction-valve chest and the other to the piston from an oil-cup located above the cylinder, substantially as described.

406,264. STEAM-TRAP. CHARLES CORNWELL, Philadelphia, Pa., assignor of one-half to Henry C. Dunlap, same place. Filed Jan. 24, 1889. Serial No. 297,382. (No model.)

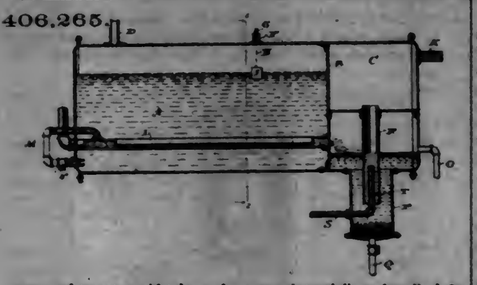
Claim.—1. A steam-trap having a water-receiving vessel and bottom and side chambers separated therefrom, a cylinder with ports, and a valve, said ports forming communication between said vessel and the bottom chamber, substantially as described.

2. A steam-trap having a water-receiving vessel, a discharge-chamber, a valve between said chamber and vessel, and a rod of expansible nature connected with said valve, substantially as described.

3. A steam-trap having separate receiving and discharging water-chambers, a valve between the same, a rod of expansible nature controlling said valve, and also simultaneously controlling a second valve regulating a discharge-port at the base of the discharge-chamber, substantially as described.

4. A steam-trap having a discharge-chamber provided with two outlet or eduction openings, one at the base of the chamber and the other at or near the top thereof, a primary receiving-chamber located within said discharge-chamber and communicating therewith by a valve between them, and automatic valve mechanism controlling said lower eduction opening of the discharge-chamber, substantially as described.

5. A steam-trap having a valve therein, a cylinder with ports, a chamber containing said valve, and a diaphragm between said chamber and the primary receiving-chamber, whereby the water of condensation enters the cylinder through one port, escapes through the other port into said chamber, and is permitted to discharge at the bottom of the trap or above the same, according to the different conditions of temperature of the water, substantially as described.

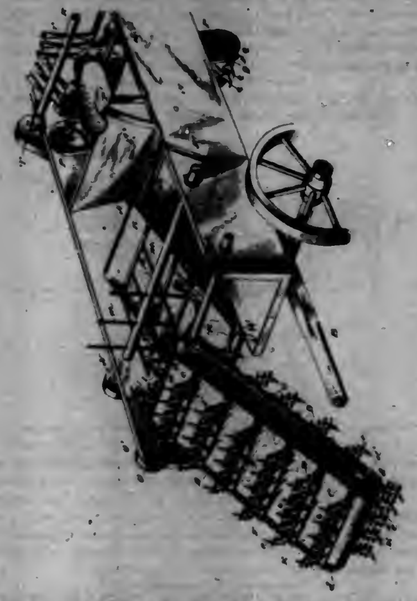


6. A steam-trap having separate receiving and discharging chambers, the former inclosed within the latter, eduction-openings at the base of both of said chambers, tubular sliding valves covering said openings, respectively, and a rod of expansible nature simultaneously controlling both of said valves, covering and uncovering the eduction-ports thereof, substantially as described.

406,265. WATER HEATER AND CONDENSER. JAMES R. CRAWLEY, Whitewater, Wis. Filed Jan. 29, 1889. Serial No. 297,867. (No model.)

Claim.—1. A shell divided into a water-tank and condensing-chamber, a tube arranged within the condensing-chamber, a steam-pipe extended through the water-tank to enter said condensing-chamber, a pipe connecting said water-tank and steam-pipe, a boiler feed-pipe connected to the condensing-chamber, and a head on the latter pipe extended up into said tube, substantially as set forth.

2. A shell provided with a water-inlet, an exhaust-steam outlet and a partition dividing it into a water-tank and condensing-chamber, a tube arranged within the condensing-chamber, a steam-pipe extended through the water-tank to enter said condensing-chamber, a pipe connecting said water-tank and steam-pipe, a boiler feed-pipe



406,265.

arranged to enter said tube, and means, substantially as described, for indicating the depth of water in said tank, as set forth.

3. A shell divided into a water-tank and condensing-chamber, a tube arranged within the condensing-chamber, a steam-pipe extended through the water-tank to enter said condensing-chamber, a pipe connecting said water-tank and steam-pipe, and a boiler feed-pipe arranged to enter the tube, substantially as set forth.

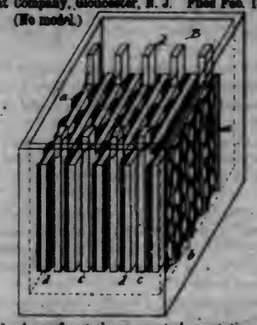
406,266. COTTON-HARVESTER. JAMES P. CUNNINGHAM, Sr., Anson, Tex. Filed Oct. 30, 1886. Serial No. 217,599. (No model.)

Claim.—1. In a cotton-harvester, the combination, with a cotton-receptacle, of a picker at the front end, consisting of two endless chains connected by a series of finger-supports, each support having a series of curved pointed fingers provided with brushes projecting laterally into the space between the fingers, said chains being supported upon a forwardly-projecting frame and actuated from the main wheels of the machine, substantially as described.

2. In a cotton-harvester, the combination, with a cotton-receptacle, of a picker at the front end, consisting of two endless chains connected by a series of finger-supports, each support having a series of curved pointed fingers provided with brushes projecting laterally into the space between the fingers, an endless apron closing the space between the chains, said chains and apron being supported upon a forwardly-projecting frame and actuated from the main wheels of the machine, substantially as described.

3. In a cotton-harvester, the combination, with a cotton-receptacle, of a picker at the front end, consisting of two endless sprocket-chains connected by a series of finger-supports, each support having a series of curved pointed fingers provided with brushes projecting laterally into the space between the fingers, an endless apron closing the space between the chains, a projecting frame pivoted at its rear end and provided at its front and rear ends with shafts, having each two sprocket-wheels for the chains, and a drum for the apron intermediate of said sprocket-wheels, substantially as described.

4. In a cotton-harvester, the combination, with a picker consisting of endless chains provided with a series of transverse finger-bars having a series of curved fingers, provided on the sides with brushes of yielding material projecting into the spaces between the fingers, of a frame pivoted at its rear end to a shaft journaled in the sides of the main body of the machine, said frame having drums for the apron and wheels at its ends for the chains, an auxiliary endless apron extending from beneath the discharging end of the picker-frame to a receptacle for the cotton, and suitable intermediate bands or gearing connecting the operating-shafts with the drive-wheels.



5. The combination, with the picking device described, consisting of a series of transverse finger-bars secured to endless chains supported upon a frame projecting from the body of the harvester, each of said bars being provided with a series of curved fingers having in their sides rows of brushes extending toward each other, of an auxiliary endless apron extending from beneath the discharging end of the picking device to a receptacle for the cotton, and a shaft in the rear of the picking device and above the forward end of the auxiliary endless apron, said shaft being provided with a series of arms which pass through the brushes between the fingers of the picking mechanism, as and for the purpose described.

6. In a cotton-harvester, the combination, with a main frame and a projecting frame at or near the front of the main frame, carrying a picking device for gathering cotton from the stalks, of the auxiliary frames having their upper ends loosely pivoted upon a shaft at the rear end of the machine and the lower ends dragging on the ground, and having endless belts revolving over drums at the ends of the said frames, provided with hooks or claws which pass near the ground and gather all fallen cotton therefrom, whereby cotton is gathered both from the stalks and the ground at the same time, substantially as described.

7. In a cotton-harvester, the combination, with one or more frames having their upper ends loosely pivoted upon a shaft journaled in the sides of the body near its rear end and their free ends extending rearward and trailing upon the ground, each frame provided at both ends with pulleys or drums carrying an endless belt having on its face claws or hooks which pass over the ground beneath the lower drum and gather therefrom all fallen cotton, of the revolving shaft adjacent to the upper ends of said frames having brushes for disengaging the cotton, and the receptacle beneath said shaft, substantially as and for the purpose described.

8. A cotton-harvester having a picker at the front for gathering cotton from the stalks and a picker at the rear of the harvester for gathering cotton from the ground, substantially as and for the purpose described.

406,267. INSULATING-PLATE FOR SECONDARY BATTERIES. STANLEY C. G. CURRIE, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester, N. J. Filed Feb. 16, 1889. Serial No. 300,236. (No model.)

Claim.—1. A perforated corrugated insulating plate or diaphragm permitting of the free passage of the current as well as the free circulation of the liquid and gases in or through the perforations and around or along the grooves or recesses of the corrugations thereof, substantially as and for the purposes set forth.

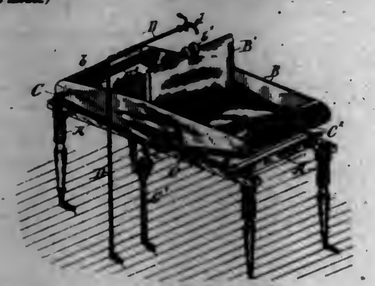
2. A perforated corrugated insulating plate or diaphragm having the lines of corrugation lying in a vertical plane, substantially as described.

3. A perforated insulating plate or diaphragm formed with corrugations, substantially in the manner and for the purposes described.

406,268. CUT-OUT. STANLEY C. G. CURRIE, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester, N. J. Filed Apr. 19, 1889. Serial No. 307,755. (No model.)

Claim.—1. An electric cut-out device consisting of two pieces of metal interposed in a circuit and engaging with and held by an insulated yoke and said pieces of metal embedded in an insulating substance susceptible of being melted and immersed in a conducting ma-

406,268.



terial in a vessel, and a band circumscribing said vessel, substantially as and for the purposes set forth.

2. An electric cut-out device consisting of two wires or pieces of metal interposed in an electric circuit and supported in or by a block composed of an insulating material, and said wires or pieces of metal in engagement with an insulated yoke and embedded in an insulating substance capable of being fused at a low temperature and immersed in a conducting-fluid in a vessel surrounded by a band, substantially as and for the purposes set forth.

3. A cut-out device consisting of two pieces of metal interposed in an electric circuit in engagement with a yoke, and said pieces of metal embedded in an insulating substance capable of being melted at a lower temperature than will melt said pieces of metal, and portions thereof immersed in a conducting-fluid in a vessel, and means to prevent said vessel from falling and to allow of the device being readjusted after the circuit is broken, substantially as described.

4. The combination, with two pieces of metal interposed in a circuit and a supporting insulated yoke, of an insulating substance and a fluid contained within a vessel, and a supporting-yoke, substantially as and for the purposes set forth.

406,269. PHOTOGRAPHIC WASHING APPARATUS. JAMES W. DALRYMPLE, Solsberry, Ind. Filed Sept. 3, 1888. Serial No. 284,404. (No model.)

Claim.—1. A rocking washer or pan provided with waste-pipes attached to itself and extending from the ends to near the center, where they are united into a down-spout, substantially as shown and described.

2. The combination, in a washing-machine, with a double pan, of waste-pipes connected to its ends and perforated pipes running across inside said ends and connected with said waste-pipes, substantially as set forth.

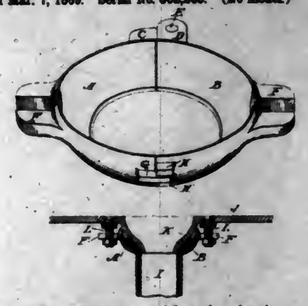
3. In a washing-machine, in combination with the waste-pipes thereof, perforated pipes connected to said waste-pipes and revolubly mounted, whereby the perforations may be given different elevations and the depth of water to be maintained in the pans thus regulated, substantially as set forth.

4. In a washing-machine, a double rocking pan having rounded ends which extend a short distance in from the extreme ends of the pan, substantially as described, and for the purposes specified.

5. The combination, in a washing-machine, with a double rocking pan having a central partition extending above its upper edge, of a saddle-like piece *b'* for receiving the discharge of water, and the water-pipe having its discharging end vertically above the pivot-point of said pan and over said saddle-like piece, substantially as set forth.

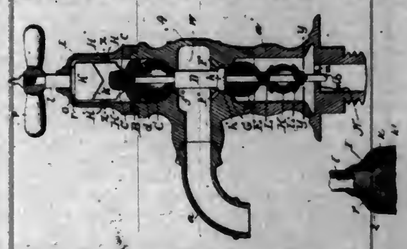
406,270. PROCESS OF MAKING DRY FLOUR-PASTE. JOHN H. DAY, Albany, N.Y. Filed Dec. 10, 1888. Serial No. 293,196. (Specimens.)

Claim.—The process of manufacturing flour-paste into a dry form by feeding liquid paste through a suitable slot into a cylindrical receptacle at or near the top thereof, and forcing hot air into contact with the paste as it is fed into the receptacle, rapidly eliminating the water therefrom by evaporation, the paste dropping on the bottom of said receptacle in a dry form, substantially as described.



406,271. THEATRICAL APPLIANCE. EDWARD W. [illegible], Boston, Mass., assignor to himself, William Wesley Coe, and Frank Gilman Reynolds, same place. Filed Apr. 2, 1888. Serial No. 269,504. (No model.)

Claim.—1. As an improvement in theater appliances, the combination of side screens with a vertical frame inclosing a picture-frame, removable screens having a costume painted thereon, and a screen suspended above and in rear of the removable screen to form a continuation of the background of the picture painted thereon, substantially as set forth.



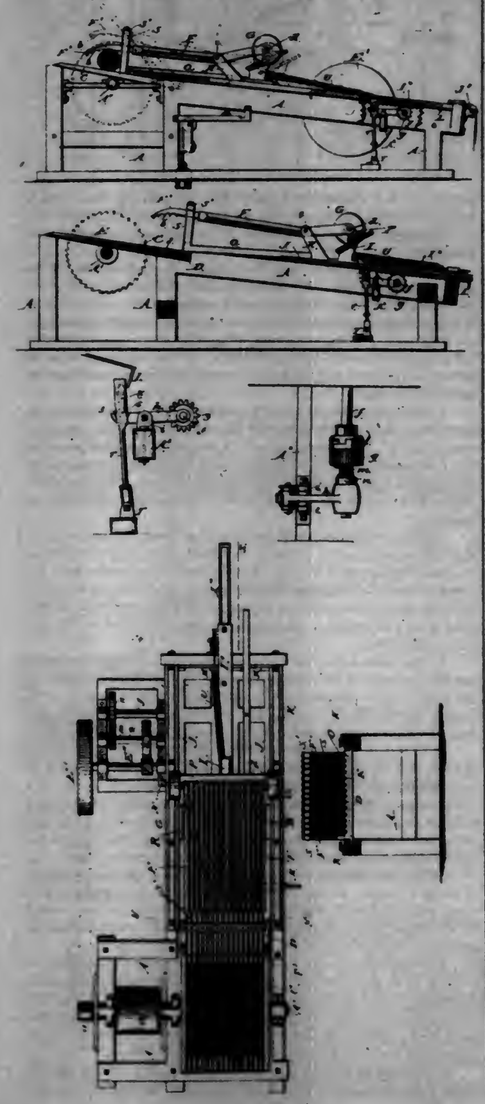
2. As an improvement in theater appliances, the combination of side screens with a vertical frame inclosing a picture-frame, removable screens having a costume painted thereon, and provided with sleeves of cloth that admit the arms of a person standing behind the screen, and a screen suspended above and in rear of the removable screen to form a continuation of the background of the picture painted thereon, substantially as shown and described.

406,272. SINK-COUPLING. LOUIS J. BUVRARD, Montclair, N. J. Filed Mar. 7, 1889. Serial No. 302,263. (No model.)

Claim.—The combination, with each other in an annular coupling for sinks, of the two semicircular divisions A and B, dished or concaved on one face only, and having slotted offsets projecting outwardly midway the curved rim of each, and ears or lugs projecting at each end of the straight edge of the one division to pass between embracing ears or lugs formed opposite thereto at the ends of the straight edge of the opposite division, and thereby form interlocking joints, which insure the proper registry of the divisions, substantially in the manner and for the purpose herein set forth.

406,273. SELF-CLOSING FAUCET. PIERCE E. EVERETT, Kansas City, Mo. Filed Feb. 2, 1889. Serial No. 298,466. (No model.)

Claim.—1. In a faucet, the combination, with a body, of a valve-stem carried within said body, a valve secured upon the stem, and an air-cushion also secured upon the stem and adapted to prevent the hammering of the valve, substantially as shown and described.



2. In a faucet, the combination, with the body constructed as shown, of a valve-stem carried within said body, the valve E, secured upon its stem, the hollow rubber ball K, carried beneath the valve, the hollow elastic ball secured upon the upper portion of the valve-stem, the nut B, cams *k k'*, and handle *p*, all arranged and adapted to operate substantially as shown and described.

3. The combination, with a cap provided with an oiling-aperture *r*, of the upper cam *k*, the rod *l*, handle *p*, and the lower cam *k'*, having the vertical oil-retaining ledge or rim 2, substantially as shown and described.

4. In a faucet, the combination, with a body A, provided with the usual cap, stand, and discharge-pipe and water-chamber, of the valve-seat G, having the enlarged recess *h'*, the passages F, communicating with the water-chamber and the recess *h'*, the valve-stem D, and valve E, all arranged and adapted to operate substantially as shown and described.

5. In a faucet, the combination, with a body constructed substantially as shown, of a valve-stem D, formed with an enlarged portion A, adapted to enter the enlarged recess *h'*, the ball-valve E, hollow rubber air-cushion K, carried below the valve-seat, the hollow expansible ball C, carried upon the upper portion of the valve-stem, the nut B, cams *k k'*, and handle *p*, all connected substantially as shown and described.

406,274. SAWING-MACHINE. JAMES FERSON, Alpena, Mich. Filed Feb. 13, 1889. Serial No. 299,703. (No model.)

Claim.—1. The combination, with the main frame, the arbor mounted therein, and the saws upon the arbor, of the carriage moving in guides upon the main frame, the movable dog-block, the levers carried by the carriage and operated by the dog-block, and the dog on the levers, substantially as herein described.

2. The main frame, the arbor, and the saws thereon, in combination with the fixed table D, the table C, hinged to the fixed table, the reciprocating carriage, and the arms O, carried thereby, said tables C and D having their upper surfaces grooved for the reception of the arms, substantially as herein described.

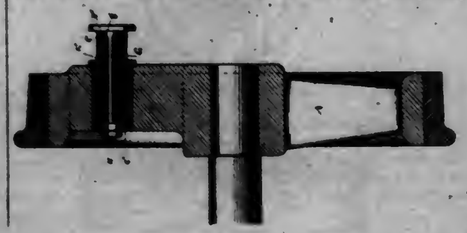
3. The main frame, the arbor, and the saws thereon, in combination with the fixed grooved table D and the hinged grooved table C, the reciprocating carriage, the arms O, carried thereby and moving in the grooved table, and provided with the upwardly-extending slotted portions S, and the levers carried by the carriage and provided with dogs F', which are guided in the slotted portions S of the arms O, substantially as herein described.

4. The main frame, the arbor, the saws thereon, and the reciprocating carriage, in combination with the hinged and fixed tables C and D, having grooves extending between the saws, the arms O, carried by the carriage, having upwardly-extending forward portions S, provided with slots, and the levers mounted on the carriage and provided with dogs F', operating in the slotted portions S, substantially as described.

5. The main frame, the arbor, the saws thereon, and the tables having grooved surfaces, in combination with the carriage having the upwardly-extending arms R, and the arms O, having slotted portions S, the levers mounted in the arms R and having their front portions provided with dogs F', working in the slotted portions S, and a movable dog-block operating against the short arms of the levers, substantially as herein described.

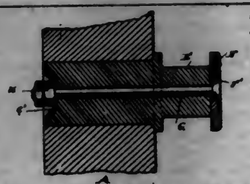
6. The main frame, the arbor, the saws thereon, and the carriage J, in combination with the table, the dog-block, the operating rack and pinion, the pivoted levers carrying the dogs and the frame P, said frame being engaged by the movements of the dog-block to operate the levers, substantially as herein described.

7. The main frame, the tables, the arbor, the saws, the reciprocating carriage, and the levers pivoted thereon and having their rear ends mounted on a rod, the dogs on the levers, and the frame P, in combination with dog-block, the bar I', the operating rack and pinion, the counter-weight for returning the carriage, and the spring for returning the dog-block, substantially as described.



8. The main frame, the tables, the arbor, the saws, the carriage, the dog-block, and the operating rack and pinion, in combination with the levers having the dogs F', a rod passing through the rear ends of said levers, weights upon said rod, and the frame P, engaged by the dog-block on its forward movement to lower the forward ends of the levers, said levers being elevated on the return of the dog-block by the weights on the rod, substantially as herein described.

9. The main frame, the table, the arbor, the saws thereon, the carriage, the levers having the dogs F' and dog-block, and the operating rack and pinion, in combination with a mechanism for tripping the pinion at the end of the forward stroke, said mechanism comprising a projection carried by the carriage, a pivoted arm carrying the pinion, and a rocking lever having a trip engaged by the projection, substantially as described.



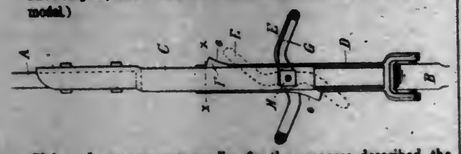
10. The main frame, the arbor, the saws, the carriage, the levers having the dogs F', the operating dog-block, and the rack and pinion, in combination with the power mechanism, the shaft *f*, on which the pinion is mounted, the clutch and return spring on said shaft, the arm *k*, the rocking arm *k*, having a trip T, and the rocking arm mounted on the base of the main frame and connected with the rocking arm *k*, substantially as described.

406,275. CRANK-PIN. HENRY D. GORDON, Wilmington, Del. Filed Dec. 9, 1887. Serial No. 257,281. (No model.)

Claim.—1. The combination, with a connecting-pin bored out longitudinally, of a device for retaining a rod or bar upon the outer end of said pin, said device consisting of a disk fitting against said outer end, a bolt-shank connected integrally with said disk and passing

406,275.

through the bored pin, and means for securing the bolt-shank at the inner end of said pin.



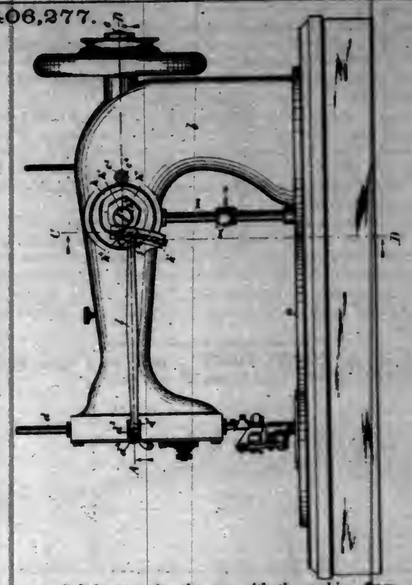
2. The combination, with a crank, of a connecting-pin bored out longitudinally, a device for retaining a rod or bar upon the outer end of said connecting-pin, said device consisting of a disk fitting against said outer end, a bolt-shank connected with said disk and passing through the bored pin, and means for securing the bolt-shank at the inner end of the pin.

3. The combination, with a crank, of a connecting-pin bored out longitudinally and countersunk at its inner end, a device for retaining a rod or bar upon the outer end of said pin, said device consisting of a disk fitting against said outer end, a bolt-shank connected with said disk and passing through the bored pin, and means, located within the countersunk portion of the pin, for securing the bolt-shank.

4. The combination, with a connecting-pin bored out longitudinally and having the hole thus made flared at its outer end, of a device for retaining a rod or bar upon the outer end of the pin, said device consisting of a disk fitting against said outer end, a bolt-shank connected integrally with said disk, said bolt-shank passing through the bored pin and having a fillet adapted to fit the flared end of the pin, and means for securing the bolt-shank at the inner end of the pin.

5. The combination, with a connecting-pin countersunk at its inner end and having a longitudinal aperture flaring at its outer end, of a device for retaining a rod or bar upon the outer end of said pin, said device consisting of a disk fitting against said outer end, a bolt-shank connected integrally with said disk, said bolt-shank passing through the bored pin and having a fillet adapted to fit the flared end of the pin, and means, located within the countersunk portion of the pin, for securing the bolt-shank.

406,276. PUMP-ROD COUPLING. CLARENCE J. HAMILTON, Plymouth, Mich., assignor of one-half to Cyrus A. Pinckney, same place. Filed May 22, 1888. Renewed June 7, 1889. Serial No. 313,449. (No model.)



Claim.—In a pump-rod coupling for the purposes described, the two parts of the coupling slidingly engaged with each other upon opposite sides, a double bail pivotally secured to one, and two stops formed upon the other and adapted to engage with the two ends of the bail, substantially as and for the purposes described.

406,277. SEWING-MACHINE. THOMAS P. HART and GEORGE S. HILL, Lynn, Mass.; said Hill assignor to said Hart. Filed May 29, 1888. Serial No. 275,475. (No model.)

Claim.—1. The combination, with the rocking frame *d'*, needle-bar *d*, shaft *c*, and spur-gear *h*, driven by the shaft and having a polygonal cam-groove *h''*, of the swinging arm *k*, engaging the cam-

406,277.

groove, a link *l*, connecting the arm with the rocking frame, and a lengthwise-sliding pin *k'*, carrying the swinging arm for moving said arm laterally from engagement with the cam-groove, substantially as described.

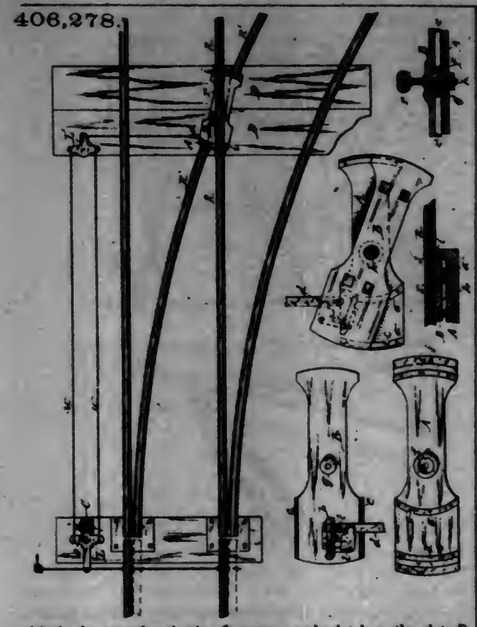
2. The combination, with the rocking frame *d'*, needle-bar *d*, shaft *c*, and spur-gear *h*, driven by the shaft and having a polygonal cam-groove *h''*, of the swinging arm *k*, engaging the cam-groove, a link *l*, connecting the arm with the rocking frame, a lengthwise-sliding pin *k'*, carrying the arm for moving it laterally from engagement with the cam-groove, and a spring *k''* on the pin for restoring it to its normal position and engaging the arm with the cam-groove, substantially as described.

3. The combination, with the rocking frame *d'*, needle-bar *d*, shaft *c*, and spur-gear *h*, driven by the shaft and having a polygonal cam-groove *h''*, of the swinging arm *k*, engaging the cam-groove, a link *l*, connecting the arm with the rocking frame, a lengthwise-sliding spring-pressed pin *k*, carrying the arm, and the shaft *m*, having a projection *m''* to act on the pin and move it lengthwise, substantially as described.

4. The combination, with the rocking frame *d'*, needle-bar *d*, shaft *c*, and spur-gear *h*, driven by the shaft and having a projection *h''*, and a cam-groove *h''*, of a swinging arm *k*, connected with the rocking frame and engaging the cam-groove, a spring-pressed pin *k'*, carrying the arm, the shaft *m*, having the projection *m''* and notched lever M, and the spring-pressed pin *n*, having locking-pin *n''*, substantially as described.

5. The combination of the shipper-shaft *m*, the lever *p*, secured thereto and having the regulating-screws *p''*, the lever *q*, pivoted to the lever on the shipper-shaft, the adjustable bar *r*, pivoted to the lever *q*, the feed-dog *g*, and the feed-lever *f*, having a slotted connection with the feed-dog, substantially as described.

406,278. RAILROAD-FROG. OMAR S. HAWLEY, Truxton, N. Y. Filed Oct. 18, 1888. Serial No. 288,488. (No model.)



Claim.—1. The combination, with the stationary bed-plate and rail-carrying plate pivoted to said bed-plate, of catches on one of said plates and a latch on the other of said plates adapted to engage the aforesaid catches, substantially as and for the purpose set forth.

2. The combination, with the bed-plate A and rail-carrying plate B, pivoted thereto, of the segmental ribs *a a* on the bed-plate, provided with notches *c c*, the bolt *b* on the plate B, the lever *l*, pivoted to the latter plate and engaging the bolt, and the rod *d*, connected to said lever, substantially as described and shown.

3. In combination with the bed-plate A, provided with the notched ribs *a a*, and the rail-carrying plate B, pivoted to the said bed-plate, the sliding bolt *b* on the plate D, the bell-crank lever *l*, having one arm engaging the bolt with a play between the points of engagement, the spring *s*, connecting said lever with the bolt, and the rod *d*, engaging the lever *l*, substantially as described and shown.

4. In combination with the bed-plate A, provided with the notched ribs *a a*, the rail-carrying plate B, pivoted to said bed-plate and formed

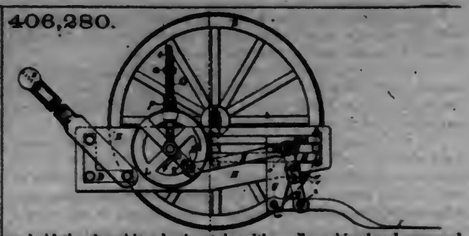
406,278.

with the downward-projecting flanges *c c*, and a latch on the plate B, adapted to engage the notches of the ribs *a a*, substantially as described and shown.

5. The combination of the bed-plate A, formed with the rail-seats *i*, having abutments *j*, and the plate B, pivoted to said bed-plate and carrying the rail *r*, substantially as described and shown.

6. The improved railway-frog composed of the bed-plate A, formed with the socket *f*, notched ribs *a a*, and rail-seats *i j*, the plate B, formed with the hub *g*, pivoted in the aforesaid socket, and with downward-projecting flanges *c c*, the coupling-bolt *h*, passing through the center of the aforesaid hub and socket, the bolt *b* and lever *l* on the plate B, and the rod *d*, engaging the said lever, substantially as described and shown.

406,279. ATTACHMENT FOR SHOE-BRUSHES. HERMAN HEINE, Milwaukee, Wis. Filed Feb. 19, 1889. Serial No. 300,476. (No model.)



Claim.—1. An attachment for shoe-brushes having a convex roughened rubbing-surface and a scraping-blade projecting at an obtuse angle thereto, substantially as set forth.

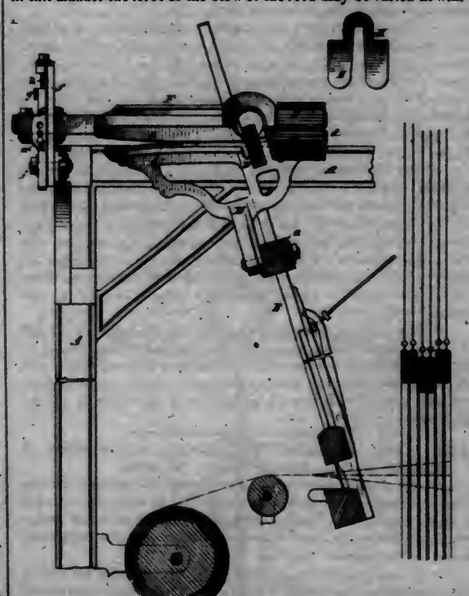
2. An attachment for shoe-brushes having a concave inner surface, a convex outer roughened rubbing-surface, a scraping-blade projecting therefrom, and means for attachment to the handle of a shoe-brush, substantially as set forth.

406,280. WEED-CUTTER. EDWARD A. HERMANN, Indianapolis, Ind. Filed Mar. 23, 1889. Serial No. 304,508. (No model.)

Claim.—1. In a weed-cutter, the following elements, namely: an axle and a pair of carrying-wheels mounted thereon, a main frame suspended from said axle, a guiding-handle secured to the frame, a crank-plate arranged to rotate on the main frame, a cross-head arranged to slide in suitable guides on the main frame, a connecting-rod connecting said crank-plate and cross-head, a bracket secured to the cross-head and depending therefrom, a shovel pivoted to said bracket, and a link pivoted to the cross-head and to the shovel so as

406,280.

to hold the shovel in a horizontal position, all combined and arranged to co-operate substantially as and for the purpose specified.



2. The combination, with the crank-plate, the sliding cross-head, the bracket depending from said cross-head, and the shovel pivoted to the bracket, of the connecting-rod having an extension which forms a bell-crank lever therewith, and the link connecting said extension with the shovel, all arranged to co-operate substantially as specified, whereby a horizontally-reciprocating and vertically-oscillating movement is imparted to the shovel, as set forth.

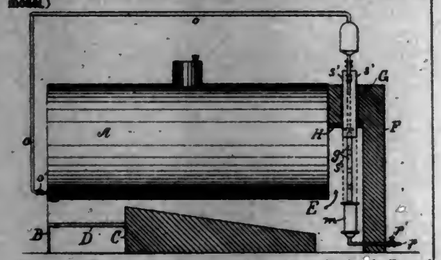
3. The combination, with the crank-plate L, sliding cross-head J, having pin T, bracket U and V, shovel I, and connecting-rod N, of the link W, having pin *n*, arranged to temporarily secure said link and connecting-rod together, and link Z, pivoted to the shovel and to link W, all substantially as and for the purpose set forth.

4. The combination, with the crank-plate L, sliding cross-head J, having pin T, bracket U V, shovel I, and connecting-rod N, of the links W and Z, said links being pivoted together at one end and having their opposite ends pivoted, respectively, to pin T and to the shovel, and means, substantially as shown and described, for securing the overlapping ends of the links rigidly together, for the purpose set forth.

406,281. LOOM. EDUARD HERRIG, West Hoboken, assignor to R. and H. Simon, Union, N. J. Filed Sept. 3, 1888. Serial No. 284,262. (No model.)

Brief.—By varying the height of the pivot of the weighted lever and by shifting the removable weight at its end the force of its contact with the bracket on the gravitating batten may be altered, and in this manner the force of the blow of the reed may be varied at will.

Claim.—1. The combination, with a batten, of the bracket E, carried by said batten, and of the lever F, for engaging said bracket, substantially as described.



2. In a loom, the batten B, carrying the bracket E, said bracket having the edges *b d*, combined with the lever F, that rests upon said bracket, the outer part *c* of said lever being adapted to contact with the edge *b* of the bracket and the inner part of said lever being adapted to contact with the edge *d* of the bracket, substantially as described.

3. In a loom, the batten B, and the bracket E carried thereby, combined with the lever F, that engages said bracket, and the weight H, carried by said lever, substantially as described.

4. In a loom, the combination, with the frame A, carrying the support *f* and the lever F, of the frame G, to which the lever F is connected, the batten B and bracket E, carried by said batten and engaging said lever, substantially as described.

5. In a loom, the frame A, having support *f*, said support carrying the screw *h* and the bolt *j*, and the frame G, engaged by said screw and bolt, combined with the lever F, pivoted in said frame G, and with the batten B and bracket E, carried by said batten, upon which bracket the lever F rests, and with the weight H, all arranged and operated substantially as herein shown and described.

406,282. **FEED-WATER HEATER AND PURIFIER.** EMIL HOLTHAUER, Brooklyn, N. Y. Filed Mar. 23, 1889. Serial No. 304,566. (No model.)

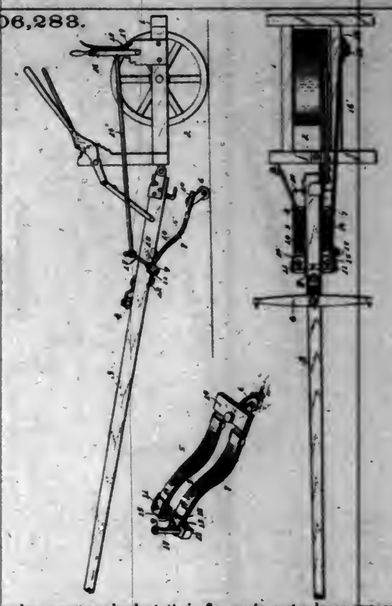
Claim.—1. The combination, with the uptake of a flue-boiler, of the coil of pipes arranged vertically above one another and having suitable inlet and outlet pipes, and a shield movable vertically over the coil through an aperture in the boiler-casing, as and for the purpose set forth.

2. The combination, with the uptake of a flue-boiler, of the coil of pipes arranged vertically above one another, the vertical pipes *i* and *m'*, connected with the ends of the coil, the horizontal pipe *j* above the top of the boiler, the cocks *l*, *n*, and *l'*, inserted in the several pipes, and a shield movable vertically over the coil and the pipes *i* and *m'*, as and for the purpose set forth.

3. The combination, with the uptake of a flue-boiler, of the coil of pipes arranged vertically above one another, the vertical pipes *i* and *m'*, connected with the ends of the coil, the horizontal pipe *j* above the top of the boiler, the mud-drum *m* at the junction of the coil and the pipe *m'*, the filter *k*, connected with the pipe *j* and by pipe *o* with the boiler, the cocks *l*, *n*, and *l'*, connected with the several pipes, and the shield movable vertically over the coil and the pipes *i* and *m'*, as and for the purpose set forth.

4. The combination, with the uptake of a flue-boiler, of the coil of pipes arranged vertically above one another, the vertical pipes *i* and *m'*, connected with the ends of the coil, the horizontal pipe *j* above the top of the boiler, the mud-drum *m* at the junction of the coil, and the pipe *m'*, the filter *k*, connected with the pipe *j*, and by pipe *o* with the boiler, the cocks *l*, *n*, and *l'*, connected with the several pipes, the shield movable vertically over the coil, as set forth, and suitable cords, pulleys, and weight to counterbalance the same, as and for the purpose set forth.

5. The combination, with the uptake of a flue-boiler, of the coil of pipes arranged vertically above one another and having suitable inlet and outlet pipes, and the shield consisting in the jackets *s s'*, connected together with the intermediate space *t*, and adapted to move vertically over the coil through an aperture in the casing, as and for the purpose set forth.



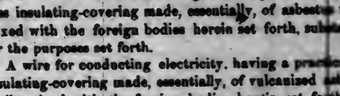
406,283. **TONGUE-SUPPORT.** MARTIN L. HORNER, Astoria, Ill. Filed Mar. 21, 1889. Serial No. 304,161. (No model.)

Claim.—1. A tongue-support consisting of a spring-metal bar forming a hanger and adapted to be connected at one end to a tongue in such a manner as to incline downwardly therefrom, and a caster-wheel swiveled to the lower unconfined end of said bar, substantially as and for the purpose described.

2. A tongue-support consisting of a depending hanger formed by two connected springs, which are secured at their upper extremities to the tongue and provided with a caster-wheel at their lower unconfined ends, substantially as and for the purpose described.

3. The combination, with a pivoted tongue, of an adjustable hanger pivoted to the tongue and carrying a caster-wheel, and a lever supported on the frame of the machine or vehicle and connected to said hanger to adjust the latter vertically, substantially as and for the purpose described.

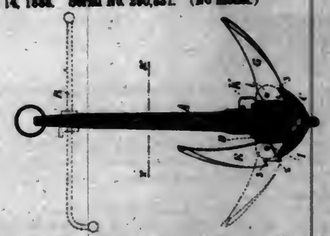
4. The combination, with a tongue, of a rock-shaft journaled thereon, the depending springs rigidly secured to said rock-shaft and



carrying a caster-wheel at their free ends, and a lever connected to said rock-shaft, substantially as and for the purpose described.

5. A tongue-support consisting of the longitudinally-curved springs secured at one end to a common support and carrying a caster-wheel at their unconfined ends, and the auxiliary springs connected to said main springs, substantially as and for the purpose described.

6. In a tongue-support, the combination, with a pivoted tongue, of a rock-shaft having the longitudinally-curved springs secured thereto, a caster-wheel journaled in a bar connecting the unconfined ends of said springs, an arm fixed to the rock-shaft, and a lever connected by an intermediate rod with said arm, as and for the purpose described.

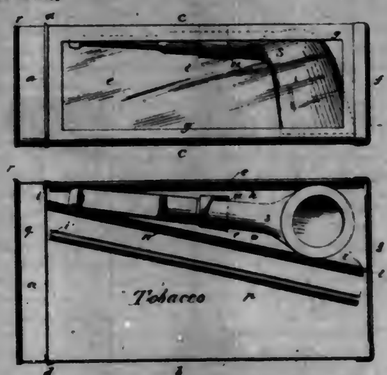


406,284. **INSULATED ELECTRIC WIRE.** HENRY W. JOHNS, Jr., New York, N. Y. Filed Jan. 3, 1889. Serial No. 295,753. (No model.)

Claim.—1. A wire for conducting electricity, having a practically seamless insulating-covering made, essentially, of asbestos mechanically mixed with the foreign bodies herein set forth, substantially as and for the purposes set forth.

2. A wire for conducting electricity, having a practically seamless insulating-covering made, essentially, of vulcanized asbestos mechanically mixed with the foreign bodies herein set forth, substantially as and for the purposes set forth.

406,285. **ANCHOR.** JAMES O. JOHNS, Hammondsport, N. Y. Filed Nov. 14, 1888. Serial No. 290,831. (No model.)

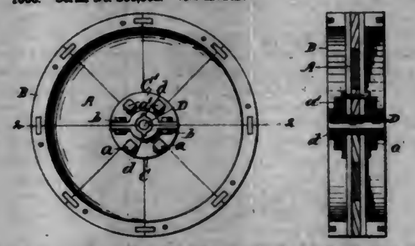


Claim.—1. The anchor-shank A, having a hollow conical head C, in combination with the collar D, and the flukes hinged to the collar and resting, when opened, against the edge of the hollow conical head, substantially as set forth.

2. The anchor-shank A, having a hollow conical head C, in combination with the movable collar D, surrounding and sliding on the shank, the flukes hinged to the collar and each fluke provided with shoulders 2 and 3 to rest against the edge of the conical head when the flukes are extended or folded, substantially as set forth.

3. The combination, with the anchor-shank A and hollow conical head C, of the movable collar D, flukes hinged to the collar and provided with the shoulders that rest against the edges of the conical head, and a key K, passing through the mortise in the shank A, substantially as set forth.

406,286. **COMBINED TOBACCO AND PIPE BOX.** FREDERICK R. KALDENBERG, New York, N. Y. Filed Sept. 14, 1888. Serial No. 285,069. (No model.)



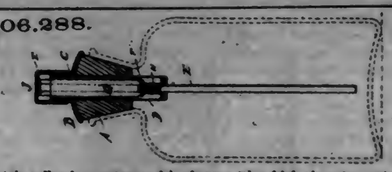
Claim.—1. A combined tobacco and pipe box consisting of a rectangular body having an open end fitted with a removable cover, and an open top having a sliding top piece of glass, and having grooves extending obliquely from end to end and a sliding partition of glass separating it into two compartments, as and for the purpose set forth.

2. A combined tobacco and pipe box consisting of a box having an open end with a removable cover, and an open top with a sliding top piece of glass, and a sliding division-piece of glass separating the interior into two compartments, the upper one being adapted to hold a pipe, and the interior of both compartments being visible from the outside of the box, substantially as shown and described.

3. A combined tobacco and pipe box consisting of a rectangular body having an open end fitted with a removable cover, and open top with a sliding top piece of glass, and having oblique grooves with a sliding partition of glass separating it into two compartments, the upper one having a ring-support for the pipe, substantially as shown and described.

4. The combination, with the box *a*, having open end and cover *f*, sliding top piece *c*, and sliding partition *l*, of the match-compartment *q*, as set forth.

406,287. **SPLIT BAND-PULLEY.** ADOLPHUS KESSLER, Warsaw, Ind., assignor of one-half to Wilbur F. Maish, same place. Filed Oct. 27, 1888. Serial No. 289,302. (No model.)



Claim.—In a split pulley, the combination, with the two separable halves thereof, of the flanged hub parts correspondingly divided and provided with grooves, as described, the two-part bushing having a feather formed on each part which engage with the grooves in said flanges, and the bolts for clamping the different parts together, substantially as set forth.

406,288. **ATOMIZER.** PAUL KÖTHNER, Berlin, Germany. Filed Apr. 26, 1888. Serial No. 308,794. (No model.) Patented in France Mar. 2, 1888, No. 184,625.

Claim.—1. In an atomizer, the combination, with a suction-tube, of an air-forcing tube hinged on a sliding collar of the suction-tube, substantially as set forth.

2. In an atomizer, the combination, with a stopper, of a metal tube passing through the same, a smaller suction-tube secured in said metal tube, an air-forcing tube, a sliding collar on said suction-tube,

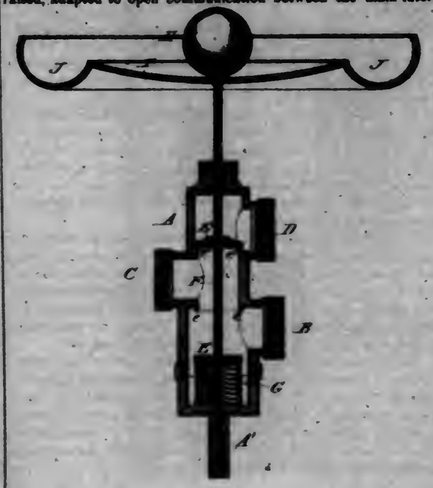
406,288.

which collar is provided with pivots with which the air-suction tube is connected, substantially as set forth.

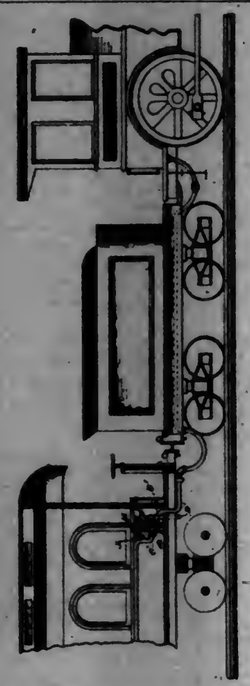
3. In an atomizer, the combination, with a stopper, of a tube passing through the same, a smaller suction-tube passing through said tube in the stopper, an air-forcing tube hinged on the sliding collar of the suction-tube, and a top plate on the stopper, which top plate is provided with an externally-screw-threaded neck, substantially as set forth.

4. In an atomizer, the combination, with a stopper, of a tube passing through the same, a smaller suction-tube passing through the bottom of the tube in the stopper, a sliding collar in said suction-tube, an air-forcing pipe hinged to said sliding collar, and a spiral spring surrounding the suction-tube with the metal tube in the metal tube in the stopper, substantially as set forth.

406,289. **FLAG-STONE AND CEMENT PAVEMENT.** CHARLES KUHL, Cincinnati, Ohio. Filed Feb. 16, 1889. Serial No. 300,101. (No model.)



Claim.—1. The combination, in a pavement, of the stones roughened upon the upper surface, the binding-coat B, placed on the same, the coarse concrete C, and the finishing coat D, the whole arranged and the block divided, substantially as specified.



2. The method herein described of repairing stone pavements, which consists of the following steps: first, cutting down and roughening the uneven surfaces of the stones; second, coating the upper surface with a binding-coat of cement and sand; third, placing on the same a concrete coating composed of coarse stone, sand, and Portland cement; fourth, placing upon the coarse concrete a finishing coat of fine sand and Portland cement, substantially as specified.

406,290. **SAFETY-VALVE FOR CAR-HEATERS.** CHARLES F. MURDOCK, Detroit, Mich. Filed Oct. 26, 1888. Serial No. 289,260. (No model.)

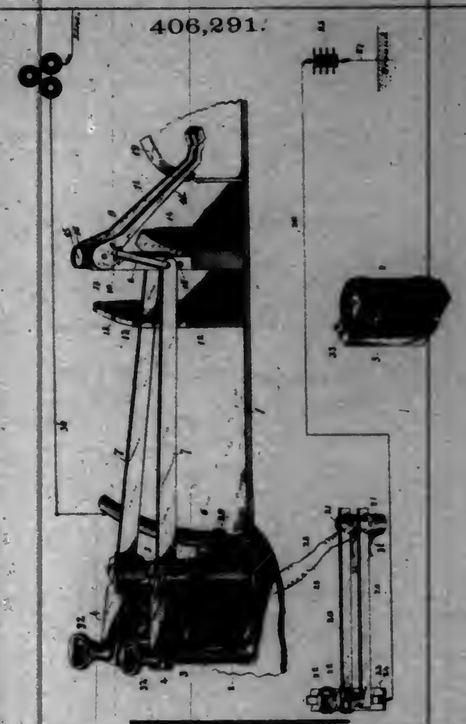
Claim.—1. In a valve for car-heaters, the main casing having an upper escape outlet-opening, a lower supply inlet-opening, and an intermediate main outlet-opening, with pipes leading to and from said openings, in combination with upper and lower valves secured to a valve-rod extending beyond the top of the main casing, said rod having a spring coiled about its lower extremity, the upper valve, when raised, adapted to open communication between the main interme-

406,290.

diate outlet-opening and escape-outlet and the lower valve, when lowered, adapted to open communication between the supply-inlet and main outlet, a disk connected to the upper extremity of the valve-rod, a ball or weight supported by said disk and normally in alignment with said valve-rod, and a circular track or way secured to the car-body.

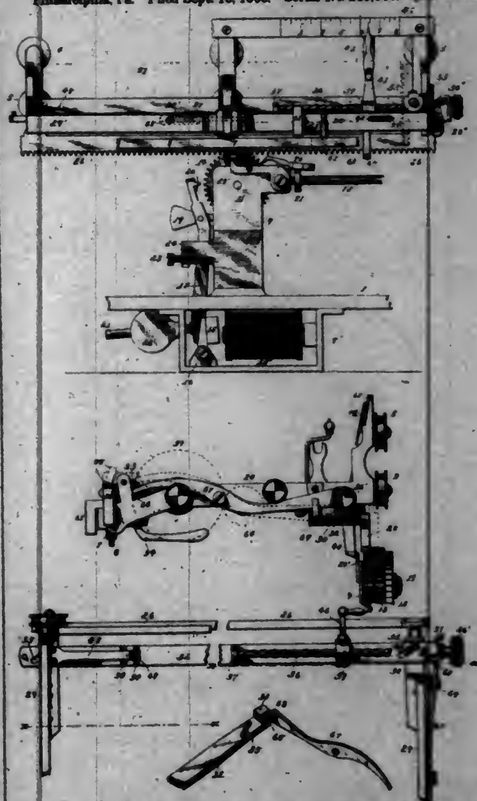
2. The main casing having a lower inlet-opening and a conducting-pipe coupled thereto, an upper escape outlet-opening having an exhaust-pipe connected thereto, an intermediate main outlet-opening situate on the opposite side of the main casing relatively to the said upper and lower openings and having a radiating conducting-pipe coupled thereto, in combination with upper and lower valves secured to a valve-rod which extends beyond the top of the main casing and has its upper end secured to a disk and its lower extremity surrounded by a spring, a ball or weight supported by the said disk, and a curved track or way secured to the car-body.

406,291. ELECTRICAL TYPE-WRITING MACHINE. JAMES F. MCLAUGHLIN, Philadelphia, Pa. Filed Nov. 26, 1887. Serial No. 256,102. (No model.)



Claim.—1. In a type-writer, the combination of a type-lever having a curved slot near one end and a type at the other end, with a key-lever having a link pivoted to one end, said link carrying a pin at the other end loosely engaging the slot in the type-lever, substantially as described.

2. In a type-writer, the combination of a type-lever having a curved slot near one end and a type at the other end, with a link carrying a pin which normally engages the slot at a distance from the rear end of the latter, and a key-lever operatively connected with the link, whereby the type-lever receives the momentary impact of the pin after the latter has acquired speed under the action of the key-lever, substantially as described.

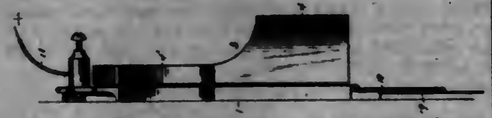


3. In an electrical type-writer, the combination of a pivoted type-lever having an expanded head with a curved slot in the same, and a key-lever for actuating the type-lever, with a link pivoted at one end to the key-lever, and a pin at the other end engaging the said slot, whereby the type-lever, after receiving the momentary impact of the pin, will move independently of the latter to produce the impression and to return to its normal position, substantially as described.

4. In an electrical type-writer, the combination of a pivoted type-lever having a curved slot near its pivot, and a similar key-lever for actuating the former, with a link pivoted to the key-lever, and carrying a pin engaging the said slot, and stops for the levers, whereby in the normal position of the latter the pin will be in the middle of the slot, so that the movement of the key-lever precedes that of the type-lever, substantially as described.

406,291.

406,292. TYPE-WRITING MACHINE. JAMES F. MCLAUGHLIN, Philadelphia, Pa. Filed Sept. 10, 1888. Serial No. 285,086. (No model.)



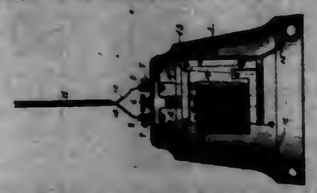
Claim.—1. In a type-writer having automatic letter and line spacing mechanisms, the combination, with such mechanisms and a spring-barrel for storing power during and by the letter-spacing operation, and for reversing the carriage automatically when the end of a line of writing is reached, of a shifting rack-bar upon the carriage, which in one position actuates the spring-barrel and in the other position is actuated by the same, mechanism for shifting the rack-bar automatically in one direction by the letter-spacing movement of the carriage, and mechanical connection with the line-spacing mechanism for shifting the rack-bar automatically in the other direction, substantially as described.

2. In a type-writer having automatic letter and line spacing mechanisms, the combination of a spring-barrel for storing power during the letter-spacing operation and a shifting rack-bar upon the carriage actuating the spring-barrel in one position and actuated by the same in another position, with a sliding bar for shifting the rack-bar, positively actuated in one direction by the letter-spacing movement of the carriage and in the other direction by the line-spacing mechanism, substantially as described.

3. In a type-writer having automatic letter and line spacing mechanisms, the combination of a spring-barrel for storing power during the letter-spacing operation and a rack-bar upon the carriage in gear with the spring-barrel, with a gear-wheel normally engaging the rack-bar for advancing the carriage step by step, a sliding bar for shifting the rack-bar out of and into engagement with the gear-wheel, a fixed stop in the path of the sliding bar for actuating the latter positively in one direction, and a lever operated by the line-spacing mechanism for actuating the sliding bar positively in the other direction, substantially as described.

4. In a type-writer, the combination of an automatic step-by-step carriage-feed or letter-spacing mechanism and an automatic line-spacing mechanism with a spring-barrel actuated by a rack-bar mounted upon the carriage for storing power during the letter-spacing operation, a sliding bar for shifting the rack-bar in and out of engagement with the letter-spacing mechanism, a fixed stop in the path of the sliding bar for actuating the latter to disengage the rack-bar, a lever operated by the line-spacing mechanism for actuating the sliding bar to engage the rack-bar, and a spring for holding the sliding bar in either of its shifted positions, substantially as described.

406,293. COMBINED ELECTRIC BELL AND ANNUNCIATOR. JAMES F. MCLAUGHLIN, Philadelphia, Pa. Filed Feb. 8, 1889. Serial No. 299,111. (No model.)



Claim.—1. The combination, with an electro-magnet, of an angle-armature provided at its free end with a lug, a knuckle-lever with one end in operative relation to the lug, and an indicator-plate provided with a lug in direct operative relation to the other end of the lever, substantially as described.

2. A combined electric bell and annunciator consisting of a frame, an electro-magnet and bell-armature supported by said frame, a knuckle-lever with one end in operative relation to the armature and the other end extending through a passage or recess in the frame, and an indicator-plate hinged to the frame so as to be exposed to view in one position and hidden from view in another position, and provided with a lug or projection engaged and locked by the lever when the plate is hidden from view, substantially as described.

3. A combined electric bell an annunciator comprising a frame, an electro-magnet, a bell-armature and a knuckle-lever in operative relation to the armature and extending through a passage in the frame, a bell inclosing and concealing said mechanism, and a gravity-annunciator normally engaged and held in position where it is hidden from view by said knuckle-lever, substantially as described.

406,294. ELECTRIC TREMBLER-BELL. JAMES F. MCLAUGHLIN, Philadelphia, Pa. Filed Mar. 29, 1889. Serial No. 305,213. (No model.)

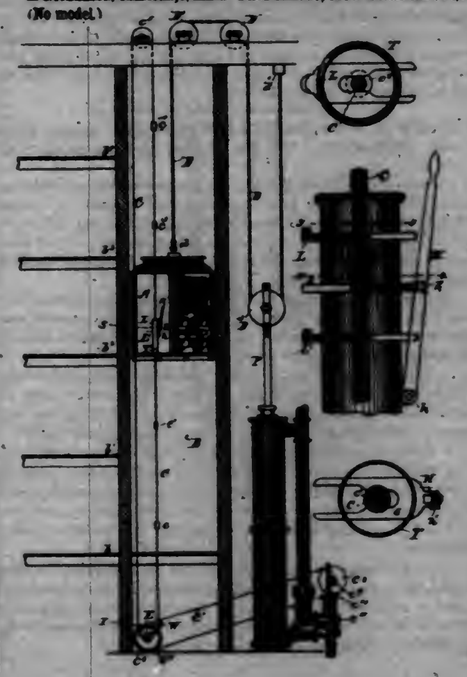
Claim.—1. An electric trembler-bell consisting, essentially, of a bell, a vibratory polarized armature having like poles in operative relation to each polar terminal of the neutral electro-magnet, and a bell hammer or hammers carried by the armature, substantially as described.

2. In an electric trembler-bell, the combination of a bell, an electro-magnet, a bell-crank polarized armature having like poles in operative relation to each polar terminal of the electro-magnet, and a bell hammer or hammers carried by the armature, substantially as described.

3. In an electric trembler-bell, the combination of a bell and electro-magnet supported within the same, having one of its poles extended and turned up parallel with the coil of the electro-magnet, with a polarized bell-crank armature having like poles at its free ends, with one of them extending horizontally in operative relation to the upper free end of the core of the electro-magnet, and the other arm extended vertically with its free end in operative relation to the extended upturned pole of the electro-magnet, and a bell hammer or hammers carried by the armature, substantially as described.

4. An electric trembler-bell consisting, essentially, of a bell, a neutral electro-magnet, a polarized armature having a consequent pole in the middle, and its free poles in operative relation to the polar terminals of the electro-magnet, and a bell hammer or hammers carried by the armature, substantially as described.

406,295. CLIP-MOLD. JOSEPH MCLEAN, Rockville, Conn. Filed Mar. 23, 1888. Serial No. 304,469. (No model.)

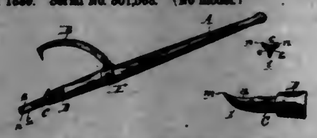


Claim.—1. In combination, in a mold, the sectional shell-pieces and the sliding cores borne in the respective shell-sections, the meeting faces of the shell-sections and cores being hollowed to form a chamber, all substantially as described.

2. In a mold, in combination with the sectional shells *f f'*, the sliding cores *g g'* and the clamp-screws *h h'*, for holding the cores against sliding movement in the shells, all substantially as described.

3. In combination with the shells *f f'*, the sliding cores *g g'*, borne in the respective shell-sections, the core *g*, having the channels *i i'*, forming a connection between the several parts of the mold-chamber when the core is in the several positions of its adjustment, all substantially as described.

4. In a mold, in combination with the sectional shells *f f'*, having the meeting faces crosswise of the shells, the sliding cores *g* and *g'* and the clamping devices *h h'*, for holding the cores against sliding movement within the respective shells, one of the cores bearing a graduated scale, all substantially as described.



406,296. CONTROLLING DEVICE FOR ELEVATORS. WILLIAM R. HICKMOTT, Cambridge, Mass. Filed Mar. 26, 1888. Serial No. 304,009. (No model.)

Claim.—1. In an elevator, the combination of an elevator-carriage, a hand-rope, a hand-rope-engaging device controlled by the operator, a controlling-valve, a mechanism for transmitting the motion of the hand-rope to the said controlling-valve, and a swinging weight adapted to be raised by the motion of the elevator-carriage to a position from which in dropping it will open said controlling-valve, substantially as and for the purpose set forth.

2. In an elevator, the combination of the engaging-slide S, rope C, having buttons c' c^2, and a segment-guide E, with swinging weight W, hand-rope wheels c^3 c^4, rope C, valve-setting device, and controlling-valve, substantially as and for the purpose set forth.

406,297. CANT-HOOK. CHRISTIAN HYGAARD, Oshkosh, Wis. Filed Feb. 28, 1889. Serial No. 301,563. (No model.)

Claim.—1. In a cant-hook, the combination, with the handle A, of a pike inserted in the end thereof, having an upper broad face depressed spoon-like and curved upwardly, the sides of the pike grooved longitudinally to form a lower circular sharp edge bearing from the point backward when used as a pry, the hook thereof being at right angles to the line of movement, substantially as shown, for the purposes specified.

2. A pike bent upwardly to form a pry and tapered from below to a broad sharp edge at the end, the upper surface being depressed spoon-like, and with longitudinal grooves on each side to form a sharp engaging lower edge at right angles with the end, substantially as shown, for the purposes specified.

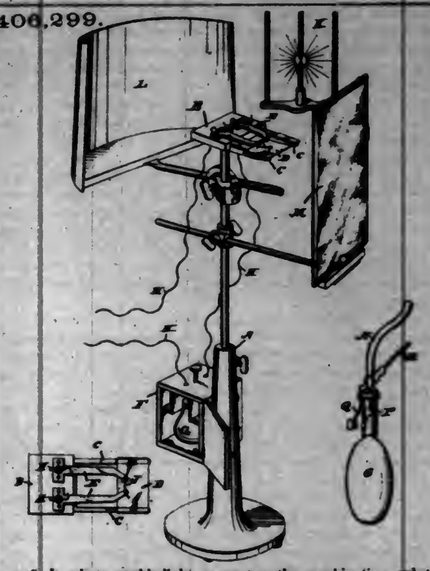
3. A cant-hook provided with a pike having a recess or depression on one side, the edges of the recess being sharp to prevent side slipping of the pike when used as a pry, and having a wedge-shaped bearing-edge opposite the recessed side.

406,298. RUNNING-GEAR FOR VEHICLES. HOMER R. OLMSTEAD, Decatur, Mich. Filed Feb. 6, 1889. Serial No. 298,889. (No model.)

Claim.—In a running-gear for vehicles, the front axle and sand-bar provided with chafing-plates, the thimbles having raised bearings for supporting the sand-bar above the axle, the reach passing through the space between the sand-bar and axle, and the hound-plates connecting the sand-bar and axle with the reach, all arranged substantially as and for the purpose described.

406,299. PHOTOGRAPHIC-LIGHT APPARATUS. LUCIEN C. OVERPECK, Hamilton, Ohio. Filed Feb. 13, 1888. Serial No. 264,435. (No model.)

Claim.—1. In photographic-light apparatus, the combination, substantially as set forth, of a supporting-shelf adapted to receive flash-light material, a pair of conducting-fingers disposed thereat, a fine conducting-wire connecting these fingers, a generator of electricity, a circuit-closing key, and electrical conductors connecting said fingers and generator and key.

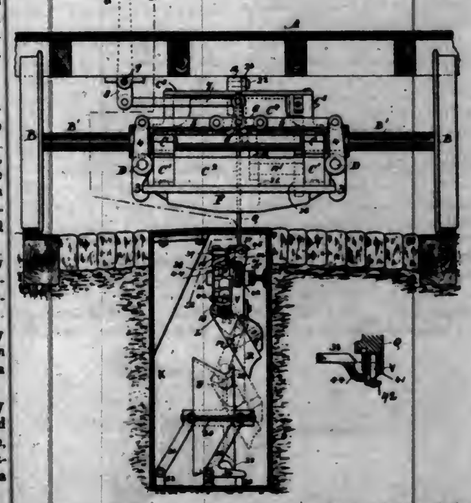


2. In photographic-light apparatus, the combination, substantially as set forth, of a pair of shelf-supports, a shelf of transparent material resting removably thereon adapted to receive a charge of flash-light material, and means for igniting said material.

3. In photographic-light apparatus, the combination, substantially as set forth, of a continuous actinic light, as an electric-arc lamp, an exposed shelf disposed contiguous thereto and adapted to receive a charge of flash-light material, and means for igniting said charge.

4. In photographic-light apparatus, the combination, substantially as set forth, of a standard, a crown-piece, shelf-supports attached thereto, conducting-fingers E, rigidly attached to the crown-piece, wire J, connecting with the fingers, and an electric battery, said battery and fingers being adapted for connection into a circuit with a circuit-closer.

5. In photographic-light apparatus, the combination of a tube adapted for connection with the pneumatic-shutter mechanism of a camera, a hand-bulb at the free end thereof for producing a compression of the air, an electric-circuit-closing key secured at said bulb and electrical conductors connecting with said key.



406,299.

6. In photographic-light apparatus, the combination, substantially as set forth, of a continuous artificial actinic light, as an electric-arc lamp, an exposed support for flash-light material disposed contiguous thereto, and an adjustable screen common to both said lights.

7. In photographic-light apparatus, the combination, substantially as set forth, of adjustable standard A, an adjustable reflector and a screen supported thereby, shelf-supports attached to the standard, fingers E at said shelf, wire J, connected with the fingers, battery G, and conductors H.

406,300. CABLE-GRIP. JOHN H. PRENDERGAST, Brooklyn, and ANDREW BETTES, Jr., and CORNELIUS TIERS, New York, assignors to the Rapid Transit Cable Company, New York, N. Y. Filed Nov. 30, 1888. Serial No. 292,260. (No model.)

Claim.—1. The combination, with the gripping device, of the stationary standard H and connections to the car-axle, the moving slides Q, for raising and lowering the gripping device, the toggle-cranks 16 and 23, pinion 26, rack-bar T, and mechanism for giving endwise motion to such rack-bar, substantially as set forth.

2. The combination, with the endless belt P and the grip-blocks 10, of the grip-shoe S and pick-up wheels R, and the device for supporting and moving the respective parts, the pick-up wheels R being located in such a manner as to support the cable out of contact with the grip-shoe, so that such cable may travel without friction upon the shoe and be brought into contact with the grip-blocks to give motion to the endless band before the gripping action is applied to the cable, substantially as specified.

3. The combination, with the endless belt and grip-blocks, of the grip-shoe having hooks 15, near the ends of the shoe, to aid in guiding the cable into place, the end portions of the shoe and the hooks being rounded to prevent injury to the cable, substantially as set forth.

4. The combination, with the grip-shoe and hooks 15, of the pick-up wheels R and the frame or bar for supporting and moving the same, such grip-wheels R having conical concave edges, and the wheels being placed at an inclination to press the cable laterally as the wheels and cable are moved downwardly for picking up such cable, substantially as set forth.

5. The combination, with the gripping and pick-up mechanism, of the conical wheels U, having flanges 28, the frame 30, and the diagonal links 31 32, for allowing the wheels U to be moved laterally by the pick up mechanism, substantially as specified.

6. The combination, with the grip-shoe and pick-up wheels and the frame for supporting and moving the parts, of the swinging chocks V, with the projections 46, the levers 38, with the projections 45, for moving the chocks, the spring-bolts 41, and the stationary arms 38 and 40, for causing the levers and chocks to be moved in throwing the cable out of the shoe and in restoring the parts to the normal position, substantially as specified.

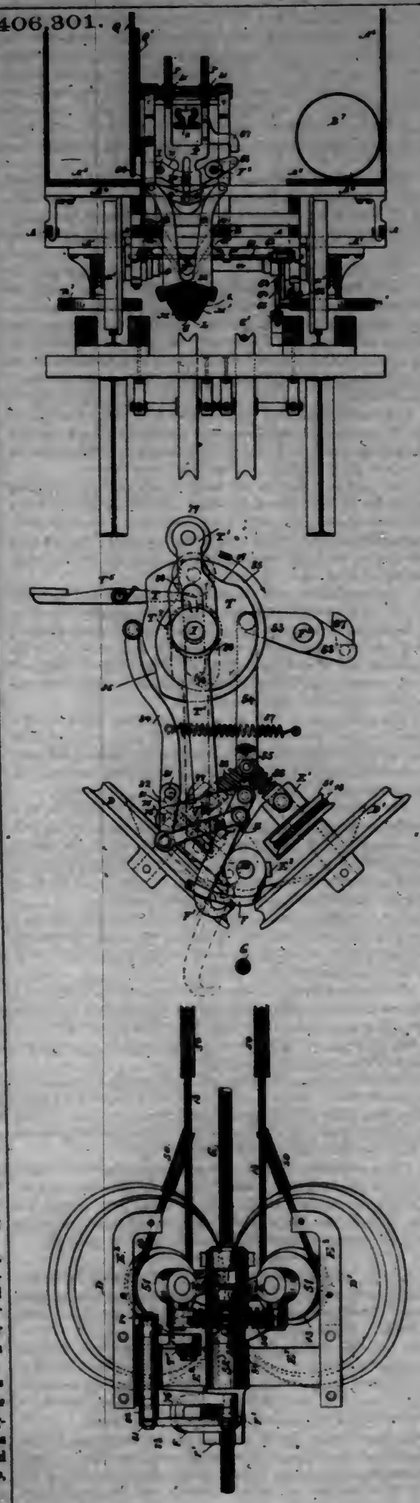
7. The combination, with the pick-up and gripping mechanism, of the plate F, to which the parts of the grip are connected, the hooks 3, for supporting such plate, and mechanism for moving the hooks to disconnect the gripping mechanism from the car and allow the same to drop, substantially as set forth.

8. The combination, with the plate F, of the hanging standard H, connected therewith, the endless belt and grip-blocks, and the wheels O O', supported by such hanging standard, the grip-shoe, the vertical slides Q, and the mechanism for moving the same to apply or release the grip, substantially as set forth.

9. The plate F and movable mechanism for supporting the same from the car, and the hanging standard H, connected with such plate, in combination with the gear-wheel 26 and shaft 17, having a journal box or bearing upon the plate F, the crank-arm 16 at the end of the shaft 17, the crank-arm 23, forming with the arm 16 a toggle, the vertical slides Q, and the grip-shoe connected with the same and receiving their motion from the toggle, and the rack-bar T, for moving the gear 26, substantially as set forth.

10. The combination, with the plate F and the grip mechanism therewith connected, of the hooks 3, for supporting such plate, the shafts D and bearings for sustaining the hooks, the lever-arms 4, links 5, three-part lever G and hand-lever G', and link 7, for actuating the hooks in connecting or disconnecting the plate F, substantially as set forth.

406,301. CABLE-RAILWAY GRIP. JOHN H. PRENDERGAST, Brooklyn, and ANDREW BETTES, Jr., New York, assignors to the Rapid Transit Cable Company, New York, N. Y. Filed Mar. 19, 1888. Serial No. 268,262. (No model.)



Claim.—1. The combination, with the car-wheels and main platform, of a transversely-moving frame and the cable-gripping mechanism supported by such transversely-moving frame, so as to adapt the gripping mechanism to the position of the cable upon which the same acts, substantially as set forth.

2. The combination, with the car-wheels and platform, of a transverse movable platform or frame supported by the main platform, cable-gripping mechanism supported upon and moving with such transverse platform, bolts for holding the platform in the position to which it may be moved, air-cylinders, pistons, and piston-rods for giving motion to the platform, substantially as set forth.

3. The combination, with the belt-wheels and an endless belt having gripping-blocks, of gripping-jaws for acting upon the gripping-blocks, the cable-wheels D D', placed at an inclination and grooved for the reception of the cable, the swinging bearings pivoted together and receiving the axes of the cable-wheels, and toggle mechanism for swinging the bearings and moving the cable-wheels toward or from each other, substantially as set forth.

4. The combination, with the endless belt having gripping-blocks and the gripping-jaws for acting upon the same, of the cable-wheels D D', placed at an inclination and grooved to receive the cable, swinging bearings for the axes of the cable-wheels, pulleys upon the axes of the cable-wheels, and belts extending therefrom, and pulleys and belt-wheels for giving motion to the endless belt and gripping-blocks, substantially as set forth.

406,301.

5. The combination, with the transverse moving frame B B', of the frame-arms E², extending from the ends of the frame B B', the cross-frame E², the swinging bearings E E', pivoted upon the frame E², the cable-wheels D D', set at an inclination and grooved for the reception of the cable, the axis of the cable-wheels being supported in the swinging bearings, the toggle-links pivoted together and to the swinging bearings, the shaft F², arms 53, and links 54, for acting upon the toggle-links and moving the swinging bearings, substantially as set forth.

6. The combination, with the swinging bearings E E', cable-wheels D D', and their axes within the swinging bearings, of toggle-links formed of two parts, one sliding within the other, and expansible springs for giving pressure of the cable-wheels upon the cable, substantially as set forth.

7. The combination, with the endless belt and gripping-blocks and the belt-wheels, of the gripping-jaws, the levers and toggles for acting upon the same, the rack-bar, pinions and hand-wheel for opening and closing the gripping-jaws, the ratchet-wheel and pawl for holding the parts in position, the roller 64, incline 65, the link for holding the roller, and the connection therefrom to the pawl for liberating the same automatically and releasing the grip-jaws, substantially as set forth.

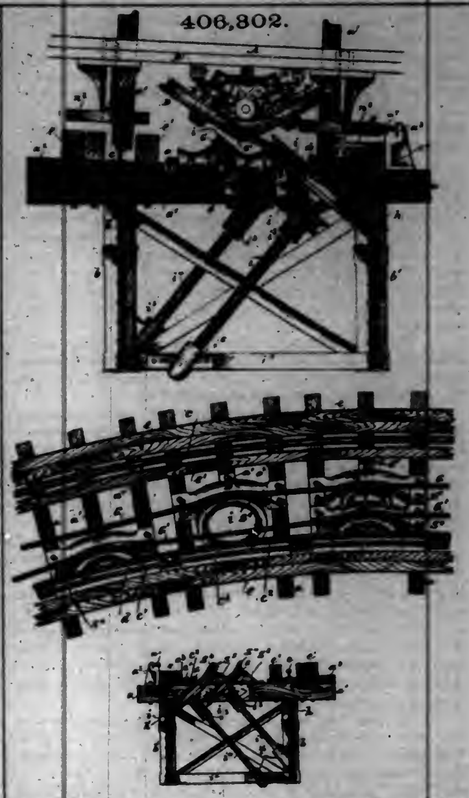
8. The combination, with the lifting-hook F, of the arm 76, vertical bar T, and cam 80, for raising and lowering the hook, and the link 83, and the arm 84 and cam 85, for swinging the lifting-hook beneath or away from the cable, substantially as set forth.

9. The combination, with the cable-wheels D D' and swinging bearing for the same, of the toggle-links and mechanism for acting upon the same to swing the cable-wheels toward or from each other, the hanging lifting-hook, and arm and links for raising and lowering the hook and for swinging the same beneath or away from the cable, substantially as set forth.

10. The combination, with the gripping mechanism and the cable-wheels D D', of the toggle-links, the swinging bearings for the cable-wheels, the shaft F², extending along the car, and the crank-arms 53, for giving motion to the toggle mechanism at both ends of the car simultaneously, the shaft I, cam-wheels T, lifting-hooks F, links and crank-arms whereby the lifting-hook is actuated in unison with the cable-wheels, substantially as set forth.

11. The combination, with the wheels and main platform, of a transversely-moving platform supported by the main platform, bolts for holding said transversely-moving platform in position, and gripping mechanism supported by such transversely-moving platform, substantially as specified.

12. The combination, with the wheels and main platform, of a transversely-moving platform, gripping mechanism supported by such platform, a movable link for connecting the motor-car to the cars to be drawn, there being holes in the end sill of the main platform in a line extending to the center of the transversely-moving platform, or nearly so, substantially as and for the purposes specified.



13. The combination, with the wheels and main platform on a motor-car, of the transversely-moving frame, and a grip mechanism and a pick-up device connected to and supported by the transversely-moving frame, substantially as set forth.

14. The combination, with the wheels and main platform in a motor-car, of the transversely-moving frame, the grip mechanism connected to and supported by the said frame, and mechanism for holding the said frame in the position to which it may be moved upon the main platform, substantially as set forth.

15. The combination, with the endless belt having gripping-jaws, and pendent shields or chocks S, of cable-wheels to support the cable after it has been lifted and for causing the cable to come into contact with the pendent shields or chocks and give motion to the belt while the car is at rest, substantially as specified.

16. The combination, with the cable-gripping mechanism, of cable-wheels D D', in pairs and at an inclination, and swinging bearings for such cable-wheels, and a pivot for such swinging bearings which is above the cable, so that the weight of the parts will cause the wheels to press at opposite sides on the cable, substantially as specified.

406,802.

406,802. CABLE-RAILWAY STRUCTURE. JOHN H. PENDLETON, Brooklyn, and ANDREW BRYSON, Jr., New York, assignors to the Rapid Transit Cable Company, New York, N. Y. Filed Apr. 11, 1889. Serial No. 306,837. (No model.)

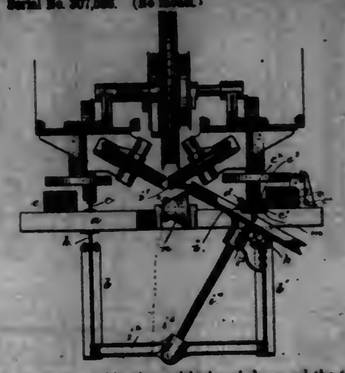
Claim.—1. The combination, with the elevated-railway structure and the inclined pulleys *i*, of cross-ties *c*, short ties *c'*, adjacent to where the inclined pulleys *i* are introduced, the outer guard-rails *c*, and inner guard-rails *c'*, to which the cross-ties and short ties are bolted for holding the short ties in position, substantially as set forth.

2. The combination, in an elevated-railway structure having straight and curved tracks, of two cables occupying different positions between the rails, and the inclined guide-pulleys upon the curved portion of the track for the respective cables, and the short ties *c'*, bolted to the guard-rails and adjacent to the guide-pulleys, substantially as set forth.

3. The combination, in an elevated-railway structure, with two cables occupying different positions between the track-rails, of supporting-pulleys for the two cables, such supporting-pulleys being in line, or nearly so, with the short ties *c'*, such short ties being supported by and bolted to the guard-rails, substantially as set forth.

4. The combination, with the railway structure and two cables between the rails of such structure, of two sets of guide wheels or pulleys, one set for each cable, the guide-wheels at the curved portions of the track that receive the cable nearest the convex side of the track being at an inclination to pass down below the guide-wheels that support the cable at the concave side of the track, substantially as set forth.

5. The combination, with the railway structure and two cables between the rails, of two sets of guide wheels or pulleys in pairs, both guide-wheels being upon inclined axes and one guide-wheel of each pair of guide-wheels passing partially beneath the other guide-wheel of the pair, substantially as set forth.



6. The combination, with the railway structure and the cable, of an inclined guide-wheel for the cable and an inclined shield in the form of an arch extending over the upper edge of the inclined guide wheel or pulley and secured at its ends to the railway structure, substantially as set forth.

7. The combination, with the railway structure and the cable, of inclined guide-wheels and stationary inclined lifters formed as segments of cylinders, and supports at the ends of said lifters connected with the railway structure, substantially as set forth.

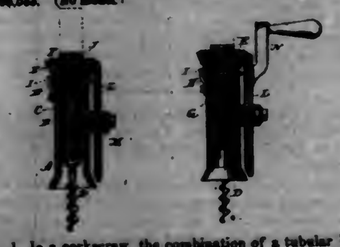
8. The combination, in a railway structure, with the track-rails and guard-rails, of a standing rail at the concave side of the track, supports for sustaining such rail upon the cross-ties, and a horizontal wheel connected to the car and rolling against said rail to sustain the car against the lateral strain of the cable as such car is traveling around the curve, substantially as specified.

9. The combination, with the railway structure having cross-ties *c*, track-rails *c c'*, and guard-rails *c c'*, of the standing rail *n*⁴ at the concave side of the track, and the brackets *a*⁵, for supporting such rails *n*⁴, and bolts for connecting the brackets to the cross-ties and the guard-rail, substantially as set forth.

406,803. CABLE RAILWAY. JOHN H. PENDLETON, Brooklyn, and ANDREW BRYSON, Jr., New York, assignors to the Rapid Transit Cable Company, New York, N. Y. Filed July 21, 1888. Renewed Apr. 16, 1889. Serial No. 307,808. (No model.)

Claim.—1. The combination, with the girders and the ties and track supported by them upon the straight portion of the road, of beams or their equivalents upon said girders at the curved portion of the road, the ties and track upon said beams, and the inclined guide-pulleys placed at intervals around the curve and passing between the inner rail and girder, substantially as specified.

2. The combination, with the girders and the ties and track supported by the same, of beams or their equivalents for elevating the track at the curved portion of the road above the level of the track at the straight portion of the road, and inclined guide-pulleys placed at intervals around the curve and passing between the inner rail and girder, substantially as specified.

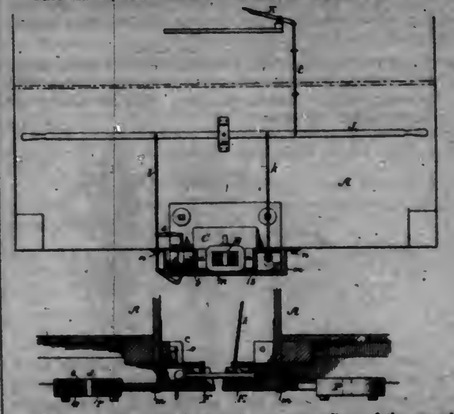


3. The combination, with the girders and the ties and track supported by them upon the straight portion of the road, the beams or their equivalents upon said girders at the curved portion of the road, and the ties and track upon said beams, of the inclined pulleys placed at intervals around the curve and passing between the inner rail and girder, and a supporting-bar beneath said inner rail at each place where a guide-pulley is located, as set forth.

4. The combination, with the girders and the ties and track supported by them upon the straight portion of the road, the beams or their equivalents upon said girders at the curved portion of the road, the ties and track upon said beams, and the inclined pulleys placed at intervals around the curve, of the bars or rails c^4 c^5, substantially as specified.

5. The combination, with the elevated-railway structure and the beams or their equivalents for supporting the ties and track at the curved portion of the road, of the grooved pulley *i* for the cable, the axis for said pulley, a cross-bar supported by the girders and having a bearing for the lower end of said axis, and a bearing for the upper part of said axis, as set forth.

6. The combination, with the elevated structure and the traveling cable, of the inclined guide-pulleys *i*, placed at intervals around the curve, of the pulleys *n n*, one at each side of the guide-pulleys *i*, each pulley *n* being upon a horizontal axis and having a face inclined upwardly toward the guide-pulley for directing the cable into said guide-pulley, as set forth.

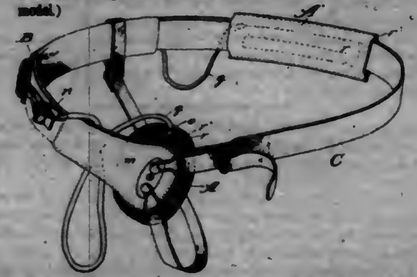


406,804. CORKSCREW. EDWARD T. POLLARD, Richmond, Va., and FRANK J. LUNDSTEN, Waterbury, Conn. Filed Dec. 14, 1888. Serial No. 293,563. (No model.)

Claim.—1. In a corkscrew, the combination of a tubular barrel constructed at its lower end to form a seat for the neck of a bottle, a mandrel arranged to work vertically in said barrel and provided at its lower end with a corkscrew, the said mandrel constructed with a right and left hand screw-thread, the said threads corresponding substantially to the screw-thread of the corkscrew, and the said spiral grooves of the threads on the mandrel crossing each other, a rocking shoe arranged upon a pivot within the barrel and adapted to engage either the said right or left hand thread on the mandrel, and means, substantially such as described, to impart rotation to said mandrel, and whereby under such rotation of the mandrel it will be caused to descend and then ascend without change in the direction of rotation.

2. The combination of the tubular barrel A, the mandrel C, arranged therein, said mandrel provided with a corkscrew at its lower end and constructed with a right and left hand screw-thread upon its surface, the spiral grooves of the said threads crossing each other, a rocking shoe P, supported upon a pivot upon the inside of the barrel, the said shoe corresponding to the said grooves on the mandrel and adapted to engage either as they are presented, a pinion E, arranged upon said barrel concentric with said mandrel, and through which the said mandrel works, the said pinion free for rotation, but held against movement in an axial direction, said pinion and mandrel, the one constructed with a spline and the other with a corresponding groove, and a gear, as L, arranged to work into said pinion and provided with a suitable lever, whereby rotative movement may be imparted to said gear, substantially as described.

406,805. CAR-COUPLING. WALTER A. POST, Newport News, Va. Filed Jan. 30, 1889. Serial No. 297,908. (No model.)

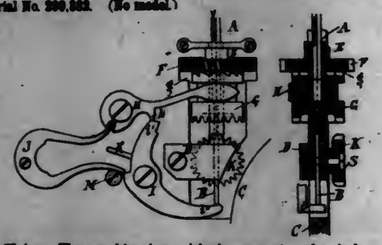


Claim.—1. The combination, in a car-coupling, of the opposite coupling-heads, an orifice in the top of one of said heads to receive the coupling-bar carried by the other head, with a vertically-hinged top piece covering said orifice and adapted to be raised by the entrance or withdrawal of the coupling-bar from the head, said top piece being connected to a system of levers operating the coupling-bars for the purpose of uncoupling the cars, substantially as specified.

2. The combination, in a car-coupling, of a casting carrying two coupling-heads, a laterally-extended pocket for receiving said casting, and to which it is pivoted by a vertical pin to permit of the lateral movement of the casting in the pocket, substantially as specified.

3. The combination, in a car-coupling, of a casting carrying two coupling-heads, a laterally-extended pocket for receiving said casting and to which it is pivoted by a vertical pin, and a spring interposed between the casting and the rear of the pivot-pin, substantially as described.

406,806. ELECTRODE FOR THERAPEUTIC BODY-WEAR. HARRY P. PRATT, Chicago, Ill. Filed Mar. 12, 1889. Serial No. 302,960. (No model.)



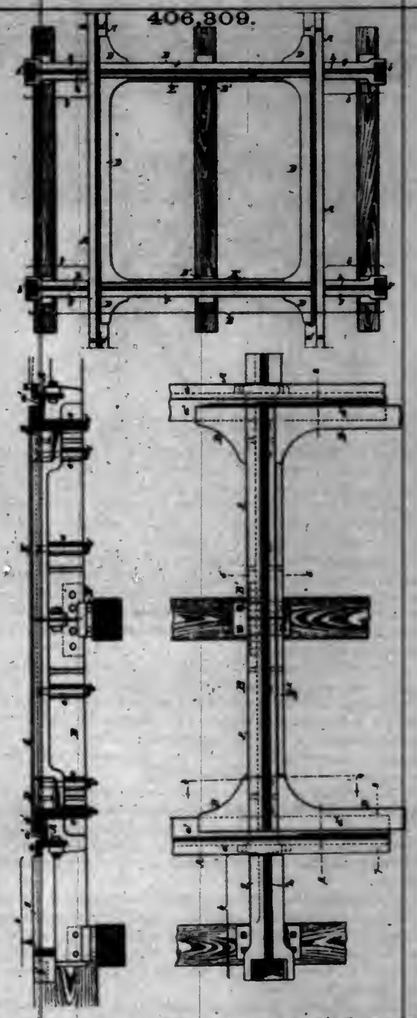
Claim.—1. An electrode for use with electro-therapeutic body appliances and formed with flexible absorbent material, having a flexible metallic conductor *p* secured to it, substantially as and for the purpose set forth.

2. In an electrode for use with electro-therapeutic body appliances, the combination of a layer *r*, of flexible absorbent material, a layer *r'*, of flexible material, secured to the layer *r*, an interposed flexible metallic conductor *p*, and a conductor *q*, attached at one end to the conductor *p* and provided at its opposite end with means for connecting it with an electric generator, substantially as and for the purpose set forth.

3. In combination, a truss C, an electric battery B upon the truss, and electrodes connected with the opposite poles of the battery, and each formed with flexible absorbent material having a flexible metallic conductor *p* secured to it and from which connection of the electrode with the battery is made, substantially as and for the purpose set forth.

4. In combination, a truss C, an electric battery B upon the truss, an electrode A' upon the girdle portion of the truss and comprising a layer *r*, of flexible absorbent material, a layer *r'*, of flexible material, the said layers being secured together, and a flexible metallic conductor *p*, interposed between the layers and from which connection of the electrode with the battery is made, and an electrode A, to be interposed and form a cushion between the pad of the truss and surface of the body, and comprising a layer *r*, of flexible absorbent material, a layer *r'*, of flexible material, the said layers being secured together, and a flexible conductor *p*, interposed between the layers and from which connection of the electrode with the battery is made, substantially as and for the purpose set forth.

406,307. HAND-SETTING MECHANISM FOR WATCHES. ERNEST J. ROUX, Geneva, Switzerland, assignor to the Ancienne Fabrique Vacheron and Constantin, (Limited,) same place. Filed Feb. 14, 1889. Serial No. 299,982. (No model.)



Claim.—The combination, with the stem A and tubular axis E, of the clutch G, sliding upon the tubular axis, the lever H, for moving the sliding clutch, the lever I, pin B, and the spring J, for acting upon the respective levers, substantially as set forth.

406,308. CHURN-DASHER. IRA A. SAHM, Kalvesta, Kans. Filed Jan. 19, 1889. Serial No. 296,833. (No model.)

Claim.—The combination of the dasher-staff formed or provided with a lower enlarged end square or rectangular in shape, the angles thereof being provided with recesses, the upper blades arranged at right angles to each other and having upper wedge-shaped surfaces with a gradual taper from each end inwardly, so as to form a contracted or decreased inner portion, the intermediate vertically-extending blades fitting in the recesses upon the under side of the upper blades and in the angles of the rectangular portion of the dasher-staff, and the lower blades provided with wedge-shaped upper surfaces with a gradual taper from each end inwardly and extending radially between the spaces and alternating with the upper set of blades, substantially as set forth.

406,309. STREET-RAILWAY CROSSING. EDWARD SAMUEL, Philadelphia, Pa., assignor to William Wharton, Jr., & Company, Incorporated, same place. Filed Sept. 21, 1888. Serial No. 285,979. (No model.)

406,309.

Claim.—1. The combination, in a railway-crossing, of the unbroken rails A of the track, girders supporting said rails, and crossing-rails with tie-plates extending from girder to girder and forming wagon-mounts, all substantially as described.

2. The combination, in a railway-crossing, of the rails A of one track, transverse girders having cross-rails between the rails A, and tie-plates situated at the inner sides of the rails A, and having lips which overlap said rails and are beveled to form a gradual rise, substantially as described.

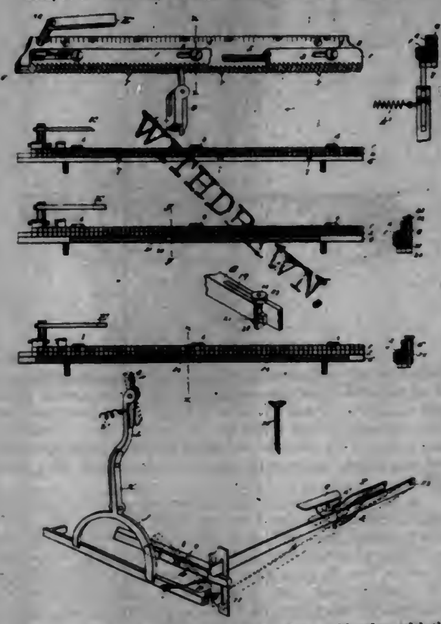
3. The combination of the continuous main rails, the supporting-girders, the intervening cross-rail sections having high treads, and the outer cross-rail sections having grooves with inclined bottoms for lifting the flanges of the wheels to the top of the main rails, all substantially as specified.

4. The combination, in a railway-crossing, of the continuous main girder-rails and cross-rails, with plates situated at the inner sides of said main rails and extending below the base of the rail and alongside of the paving, substantially as and for the purpose described.

5. The combination, in a railway-crossing, of the main rails, the supporting-girders, the intervening cross-rail sections with internal re-enforcing flanges B^2 on the said girders extending alongside the inner edge of the rail-sections, substantially as set forth.

406,310. DEVICE FOR HEATING SOLDERING-IRONS, LEAD-MELTING POTS, &c. JOHN H. SANGER, Brooklyn, assignor to Fred Ades & Co., New York, N. Y. Filed May 4, 1888. Serial No. 272,702. (No model.)

Claim.—1. The stove E, having openings at both ends that are larger than the gas-supply pipe, internal perforated plate *m*, side openings e^2 above said plate, and external cup *o*, having raised ledge *n*, that acts as a tool-rest, substantially as herein shown and described.



2. The combination of the plate A, having the internally-screw-threaded collar *d*, with the externally-screw-threaded pipe B fitting said collar, the reversible stove E, open at both ends, one end being adapted to rest on the plate A, the opening in the opposite end being larger than the pipe B, said stove having the internal perforated plate

406,310.

m and the opening e^2, whereby the stove may be used either as a solder or soldering-iron heater, substantially as described.

406,311. TYPE-WRITING MACHINE. JOHN H. SEDDLE, Jersey City, N. J., assignor to the American Writing Machine Company, New York, N. Y. Filed July 22, 1886. Serial No. 208,705. (No model.)

Claim.—1. In a type-writing machine, the combination, with the carriage, the driving mechanism, and the rocking frame carrying a dog or pawl, of a stop to limit the forward vibration of the rocking frame, and an arm or lever to remove said stop and permit a further forward vibration of the rocking frame and a releasement therefrom of the carriage, substantially as and for the purposes set forth.

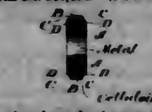
2. In a type-writing machine, the combination, with the driving mechanism, the carriage, the racks 1 and 2 thereon, and the rocking frame carrying the dog or pawl, of a stop to limit the forward vibration of the rocking frame, and an arm or lever for removing said stop and permitting a further forward vibration of the rocking frame and a disengagement of the dog or pawl from the racks 1 and 2, as and for the purpose set forth.

3. In a type-writing machine, the combination, with the driving mechanism, the carriage, the racks 1 and 2 thereon, and the rocking frame carrying the dog or pawl, of a pivoted stop for said rocking frame, and an arm or lever for vibrating said pivoted stop, as and for the purpose set forth.

4. In a type-writing machine, the combination of the driving mechanism, the carriage, the racks 1 and 2 thereon, the rocking frame carrying a dog or pawl, the keys or levers P P', arranged on opposite sides of the machine, the stop for said rocking frame, and the lever or arm for operating said stop connected to the key or lever P, the combination being such, as described, that the ordinary step-by-step spacing movements of the carriage are effected through the operations of the key or lever P', and the liberation of the carriage for rapid movements through the operations of the key or lever P, as set forth.

5. In a type-writing machine, the combination of the driving mechanism, the carriage, the racks 1, 2, and 6 thereon, the latter provided with a less number of teeth, and the rocking frame carrying the dog or pawl, of a stop for said rocking frame, and an arm or lever for operating said stop, whereby the dog or pawl may be disengaged from the teeth of the racks 1 and 2, for the purpose described, and engaged with the teeth or a tooth on the rack 6, as set forth.

6. In a type-writing machine, the combination of the driving mechanism, the rocking frame carrying the dog or pawl, the stop for said rocking frame, the arm or lever for operating said stop, the carriage, and the racks 1, 2, and 6 thereon, the latter provided with an adjustable tooth, as and for the purpose set forth.



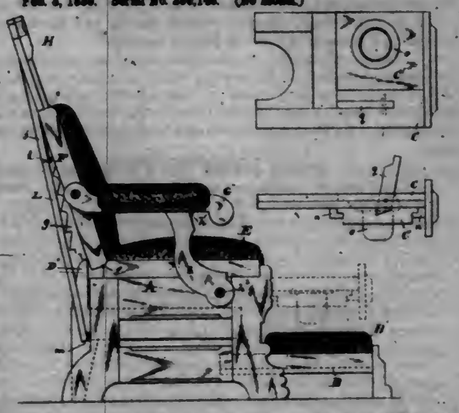
7. In a type-writing machine, the combination of the driving mechanism, the rocking frame carrying the dog or pawl, the stop for said rocking frame, the arm or lever for operating said stop, the carriage, and the racks 1, 2, and 6, the latter formed with an elongated slot and provided with an adjustable tooth, as and for the purpose set forth.

8. In a type-writing machine, the combination of the driving mechanism, the rocking frame carrying the dog or pawl, the carriage provided with the racks 1, 2, and 6, the latter having a less number of teeth, and means, substantially as described, for vibrating the rocking frame and throwing the dog farther forward to co-operate with the rack 6, as set forth.

9. In a type-writing machine, the combination, with the carriage, of an adjustable column-stop, a dog to engage the same, and a finger-piece or key to actuate said dog, substantially as and for the purpose set forth.

10. In a type-writing machine, the combination, with the dog and slotted rack, of a stop adjustably arranged on said rack, substantially as and for the purpose set forth.

406,312. REGISTERING-WHEEL. FRIEND W. SMITH, Bridgeport, Conn., assignor to the Beasley Supply Company, New York, N. Y. Filed Oct. 8, 1888. Serial No. 287,494. (No model.)

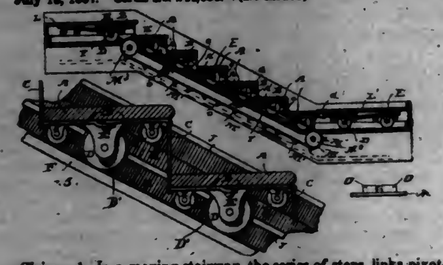


Claim.—1. A registering-wheel consisting of a metallic core and a celluloid facing, substantially as set forth.

2. A celluloid registering-wheel having a metallic bushing and a metallic side facing provided with notches, as set forth.

3. A registering-wheel having a facing of celluloid, a bushing or hub of metal, and a notched metallic plate extending at right angles from said bushing or hub against the side of said facing, substantially as set forth.

406,313. INVALID-CHAIR. WILLIAM SMITH, Baltimore, Md. Filed Feb. 3, 1889. Serial No. 298,146. (No model.)



Claim.—1. In an adjustable chair, the combination of the seat-frame A, a sliding cushion-supporting drawer C, provided with crosswise strips *n*, and a chamber-supporting drawer C', movable laterally on said crosswise strips, substantially as specified.

2. In an adjustable chair, the combination of the seat-frame A,

a sliding drawer C, provided with crosswise strips *n*, a chamber-supporting drawer C', movable laterally on said cross-strips, a chamber-cover *p*, hinged to said sliding drawer C, and a stud *q*, pivoted also to said sliding drawer, substantially as specified.

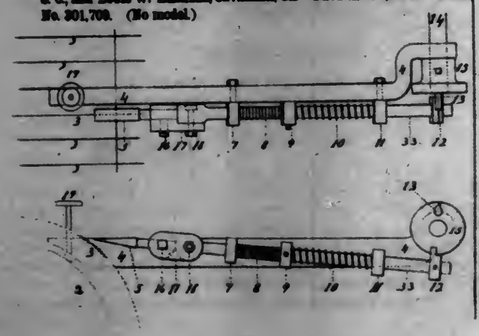
3. As an improved article of manufacture, an adjustable chair having its seat-frame A provided with drawers B and C, movable in and out at the front of the seat, and the laterally-moving drawer C', the slide D, interposed between the drawers B C and sliding to the rear of said seat, said slide being provided with a jack D', adapted to engage the rack-bar on the back of the chair when said back is lowered, said slide also provided with a leg D^2, which rests on the floor to support said back, substantially as specified.

406,314. STAIRWAY. LEANDER S. SOUDER, Norristown, Pa. Filed July 18, 1887. Serial No. 244,633. (No model.)

Claim.—1. In a moving stairway, the series of steps, links pivotally attached to the same, connecting-links hinged thereto, for the purpose set forth, and supporting-rollers, in combination with means for preventing the tilting of the said steps in rounding curves, consisting of rollers and guiding-rails, between which the said rails run.

2. The steps A, the projections A' thereupon, means for connecting the several steps, the endless belt M, and the projections M' thereupon, all arranged and combined for joint operation in the manner and for the purpose herein set forth.

3. In a moving stairway, the combination, with a series of steps united by links or rods pivotally attached thereto and to each other, and the supporting and guiding rails F, J, and K, of the wheels D and G, substantially as herein set forth.



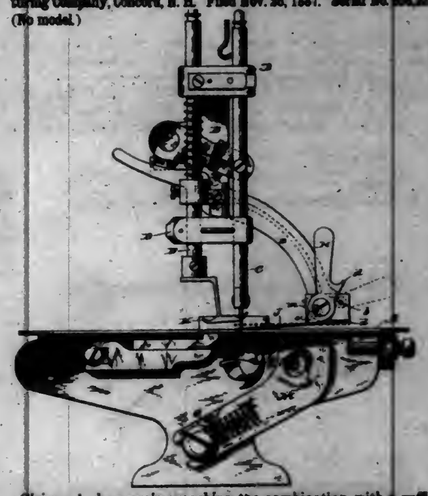
4. In a moving stairway, the series of steps and connecting hinged links or rods, in combination with the rails F J K, adapted to guide and support the steps during their ascent, a series of guides for the steps during their descent, and an endless propelling-belt, all substantially as and for the purpose set forth.

5. In a moving stairway, the series of steps united by links or rods pivotally attached thereto and to each other, in combination with a series of wheels guided upon and between a series of rails and adapted conjointly with said series of links to control the motion of the steps, a propelling-belt, and inclined or wedge-shaped blocks O, secured thereon, and adapted to operate in the manner and for the purpose herein set forth.

6. In a moving stairway, the steps thereof and suitable means for connecting the same, in combination with a propelling-belt and inclined or wedge-shaped blocks O secured thereto, and adapted to operate in the manner and for the purpose set forth.

7. In a moving stairway, the combination, with the series of steps, of a series of horizontal links or rods pivotally attached to the under side of the said steps, and a series of vertical links or rods serving to connect the series of steps by having their extremities secured to the extremities of the horizontal links or rods, substantially as herein set forth.

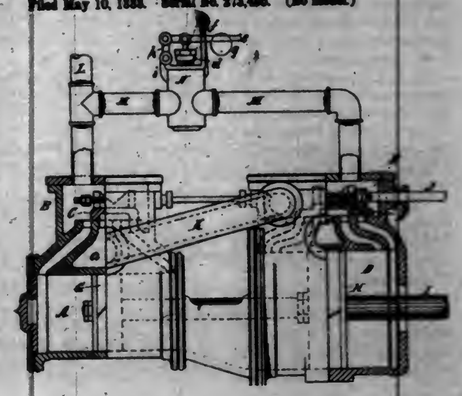
406,315. GIN-SAW GUMMER. ERWIN W. THURSTON, Columbia, S. C., and LOUIS W. HASKELL, Savannah, Ga. Filed Mar. 1, 1889. Serial No. 301,709. (No model.)



Claim.—1. The combination of a frame having temporary bearings in which the shaft of a gang or roll of saws revolves and an adjustable chisel which is caused to indent the root of each saw-tooth in succession, substantially as shown, for the purpose specified.

2. The combination of a frame having bearings in which the shaft of a gang or roll of saws revolves while being gummed and an adjustable chisel which is caused to indent the root of each saw-tooth by means of a set of springs and crank arm or cam, substantially as shown, for the purpose specified.

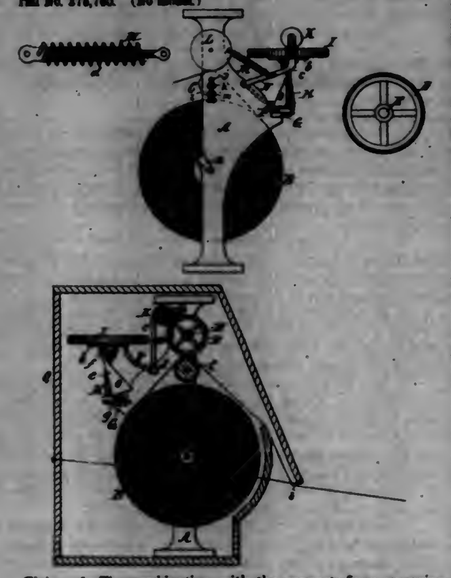
3. The combination of a frame having bearings in which a roll or gang of saws revolves while being gummed and an adjustable chisel which is caused to indent the root of each saw-tooth in succession, with adjustable pawl or pawls, which act upon a saw other than the one being gummed to revolve the whole roll or gang, substantially as set forth, for the purpose specified.



406,316. SEPARATOR-PLATE FOR SEWING-MACHINES. MILLAR G. TURNER, Westborough, Mass., assignor to the Turner Manufacturing Company, Concord, N. H. Filed Nov. 26, 1887. Serial No. 256,227. (No model.)

Claim.—1. In a sewing-machine, the combination, with a ruffler-feed below the work-plate and means for operating said ruffler-feed, of the supporting-arm E, secured to the frame of the machine above said work-plate, the separator-plate J, pivotally attached to said arm, and a lever also pivoted to said arm and having a part or projection, as *c*, to engage the said separator-plate forward of its pivotal point, and thus depress the forward end of said plate, substantially as set forth.

2. In a sewing-machine, the combination, with a ruffler-feed arranged below the work-plate and means for operating said ruffler-feed, of a supporting-arm E, secured to the machine-frame above the work-plate, a separator-plate J, pivoted at its rear end to the said arm E, and the lever H, also pivoted to said arm and having projections *c d* on opposite sides of its pivotal point to engage said separator-plate and depress or raise the forward end thereof, substantially as set forth.

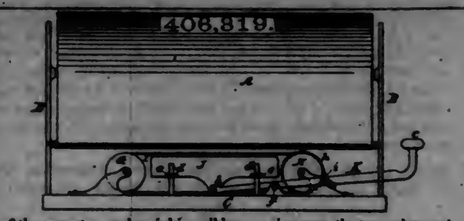


406,317. COMPOUND ENGINE. JOHN H. VAILE, Dayton, Ohio. Filed May 10, 1888. Serial No. 273,496. (No model.)

Claim.—1. In a compound steam-engine, the combination, with the high and low pressure cylinders, of a passage for the exhaust of the high-pressure cylinder leading to the steam-chest of the low-pressure cylinder, and a passage from the boiler for the simultaneous admission of exhaust and live steam to the steam-chest of the low-pressure cylinder, and a regulating-valve governing the admission of the live steam controlled by the pressure in the said steam-chest, substantially as described.

2. In a compound steam-engine, the combination, with the high and low pressure cylinders, of a pipe-connection between the exhaust of the high-pressure cylinder and the steam-chest of the low-pressure cylinder, and a live-steam pipe from the boiler to said steam-chest for the simultaneous admission of steam to said steam-chest, and a valve in the steam-pipe from the boiler opened by an adjustable weight and closed by the increase of pressure in the low-pressure steam-chest, substantially as described.

406,318. COMBINED WRAPPING-PAPER HOLDER AND PRINTER. EDWARD B. WESTON, Dayton, Ohio. Filed July 2, 1888. Serial No. 278,765. (No model.)

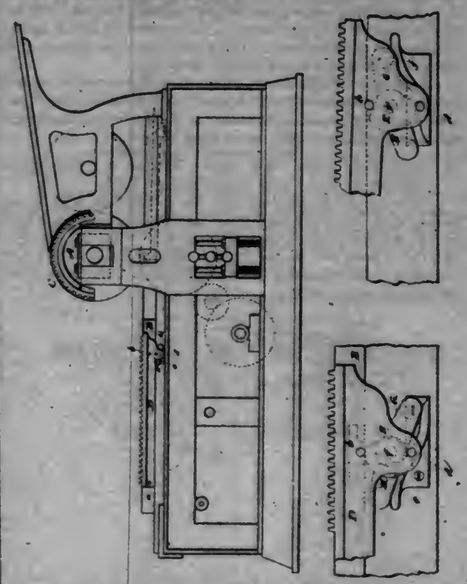


Claim.—1. The combination, with the supports for a wrapping-paper roll and a bed-roller and printing-roller in frictional contact and between which the paper from the first-mentioned roll is passed, of an inking-plate and an inking-roller, with connecting mechanism between said printing-roller and inking-roller, whereby the drawing forward of the paper actuates the bed, printing, and inking rollers to cause the printing of the paper, substantially as described.

2. The combination, with the supports for a wrapping-paper roll and a bed-roller and printing-roller in frictional contact and between which the paper from the first-mentioned roll is passed, of a pivoted inking-plate with connecting mechanism between said plate and printing-roller, and an inking-roller with connecting mechanism between said inking-roller and printing-roller, whereby the drawing forward of the paper actuates the inking-plate and the bed, printing, and inking rollers to cause the paper to be printed, substantially as described.

3. The combination and arrangement of the supports A, bed-roller C, printing-roller D, carrying a type-plate F, said rollers C and D being in frictional contact and having the paper from the roll B passed between them, the shaft J, connected to the roller D by a yielding pitman M, and provided with the arms *c*, carrying the inking-roller K, and the inking-plate I, provided with the ratchet *b*, and actuated by the arm O, carrying the dog *f*, the spring *g*, and the wiper-arm P, substantially in the manner and for the purpose specified.

406,319. PRINTING DEVICE FOR WRAPPING-PAPER ROLLS. EDWARD B. WESTON, Dayton, Ohio. Filed July 2, 1888. Serial No. 278,769. (No model.)



Claim.—1. The combination, with a suitable frame-work and a paper-roll journaled therein, of a cushion-plate beneath which the paper from the roll passes, a vertically-reciprocating type-plate beneath the cushion-plate, a lever pivoted at one end to the type-plate and fulcrumed in the frame-work, the other end of said lever extending outside the frame-work, in position to be operated by the hand of the operator, and an inking-ribbon passing over the type-plate, substantially as described.

2. The combination, with a suitable frame-work and a paper-roll journaled therein, of a cushion-plate beneath which the paper from the roll passes, guide-rods secured in the base of the frame-work, a vertically-reciprocating type-plate having perforated lugs through which the said guide-rods pass, a lever pivoted at one end to the type-plate and fulcrumed in the frame-work, the other end of said lever extending outside the frame-work, in position to be operated by the hand of the operator, a spool at each end of the type-plate, mechanism for turning the spools, and an inking-ribbon carried by said spools passing over the type-plate, substantially as described.

3. The combination, with the paper-roll A, of the cushion-plate E, inking-ribbon I, spools G H, upon which said ribbon is carried, a type-plate J, and a forked pivoted lever K, carrying said type-plate and provided with a dog *i*, engaging with a ratchet *h* upon the spool H, substantially in the manner and for the purpose specified.

406,320. RECIPROCATING MECHANISM FOR CYLINDER PRINTING-MACHINES. STEPHEN WHITLOCK, Birmingham, Conn., assignor to the Whitlock Machine Company, same place. Filed Apr. 16, 1888. Serial No. 270,840. (No model.)

Claim.—1. The combination of an impression-cylinder and reciprocating bed of a printing-press, a toothed segment on the end of the cylinder, with a rack on the side of the bed, toothed corresponding to said segment, the said rack hinged by its rear end to the bed, and so as to receive a vibratory movement in a vertical plane, mechanism, substantially such as described, between the free end of the said rack and the said bed, whereby the up-and-down movement is imparted to said rack, and a point stationary on the frame at each extreme movement of the bed, corresponding to the said mechanism, and with which said mechanism will engage as the bed approaches its two extreme movements, substantially as described, and whereby under such engagement at the termination of the advance movement the said free end of the rack will be dropped and at the extreme retreating movement the free end of the rack will be raised.

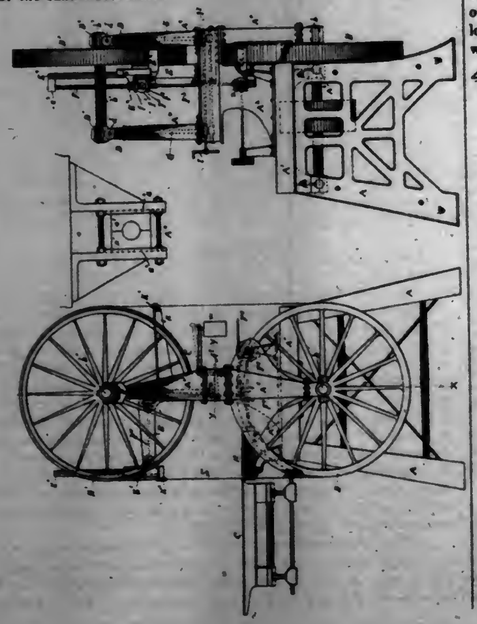
2. The combination of the impression-cylinder and reciprocating bed of a printing-press, a toothed segment on the end of the cylinder, with a rack on the side of the bed, toothed corresponding to said segment, the said rack hinged by its rear end to the bed, and so as

to receive a vibratory movement in a vertical plane, an oscillating cam E, hung in the bed near the forward or free end of said rack, with a bearing on said rack adapted to work upon said cam, the said cam provided with arms H G, extending, respectively, forward and rearward, and stationary cams *e f* on the frame of the machine, with which said arms *g h* are adapted, respectively, to engage as the bed approaches its extreme forward or rear movement, substantially as and for the purpose described.

406,321. **BEVERAGE-SHAKER.** JOHN A. WIEDERSHEIM, Philadelphia, Pa. Filed Oct. 27, 1888. Serial No. 289,253. (No model.)

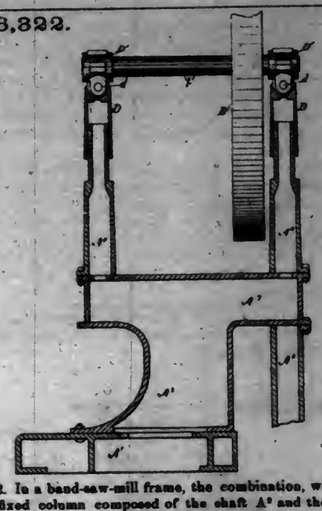
Claim.—1. A beverage-shaker having a vessel-holder, an oscillating yoke carrying said holder, an eccentric encircled by said yoke, and means for rotating said eccentric, said parts being combined substantially as described, whereby vertical and horizontal motions are imparted to the holder.

2. A beverage-shaker consisting of an oscillating yoke, an eccentric encircling said yoke, means for rotating said eccentric, a vessel-holder secured to the yoke, a closing-cap for the vessel, and a clamp for the cap, said parts being combined substantially as described.



3. In a beverage-shaker, an eccentric and means for rotating the same, in combination with a yoke which is engaged by said eccentric and carries a vessel-holder, and is provided with a guiding-neck, substantially as described.

4. A beverage-shaker consisting of a frame, a rotary shaft having an eccentric mounted thereon, a yoke carrying a holder and embracing said eccentric, and a guiding-neck secured to said yoke, said parts being combined substantially as described.



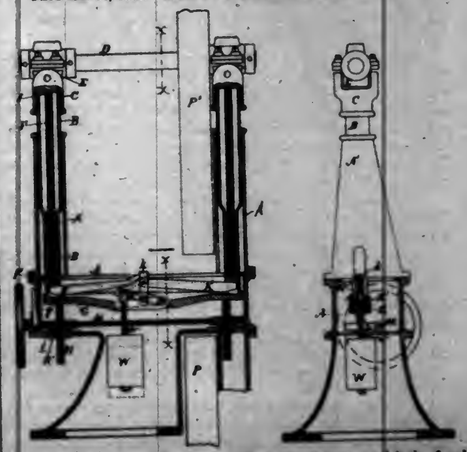
5. A beverage-shaker consisting of a frame, a rotary shaft with an eccentric mounted thereon, a yoke carrying a holder and having a neck with a slot, and a pin secured to the frame and entering said slot, substantially as and for the purpose set forth.

406,322. **BAND-SAW MILL.** WILLIAM M. WILKIN, Erie, Pa. Filed Dec. 17, 1888. Serial No. 293,965. (No model.)

Claim.—1. In a band-saw mill, the combination, with the supporting frame-work and husk or bed and the upper and lower band-wheels and shafts, of a T-shaped column A^3 A^2, which is mounted on said bed or husk and has one of its arms extended out between the two band-wheels in position to sustain the supports of the outer ends of the band-wheel shafts.

406,322.

2. In a band-saw-mill frame, the combination, with the base A', of a fixed column composed of the shaft A^2 and the cross-arm A^3, seated on said base, the outer hanger of the lower band-wheel depending from the lower side of the outer end of said cross-arm, and the posts which support the upper band-wheel mounted at the ends of said cross-arm.



3. In a band-saw-mill frame, a column formed of the shaft A^2 and cross-arm A^3, cast in one piece, in combination with the posts A^4, mounted at each end of said cross-arm, and the hanger A^5, suspended from the lower side of the outer end of said cross-arm.

4. In a band-saw-mill frame, the combination, with the T-shaped column A^2 A^3, of the posts A^4 A^4, mounted on the ends of the cross-arm A^3, and the guide post and arm E, mounted also on the cross-arm of said column between said posts A^4 A^4.

5. In a band-saw-mill frame, the combination of a base-support A, a base A', a T-shaped column A^2 A^3, mounted on said base, an outer hanger A^5, depending from the cross-arm of said column, a shaft *b*, supported at its outer end by the said hanger A^5 and at its inner end by a hanger depending from said base A', and held against lateral vibration by a hanger A^6, having ways a^5, for vertically moving boxes *a'*, said hanger A^6 being between the outer hanger A^5 and the driving-pulley on said shaft and attached to said base.

6. In a band-saw mill, the combination of a fixed cross-arm extending out between the upper and lower band-wheels, a hanger A^5 on the outer end of said cross-arm, for supporting the outer end of the lower band-wheel shaft, and extensible supports for the upper band-wheel shaft mounted on the ends of said cross-arm.

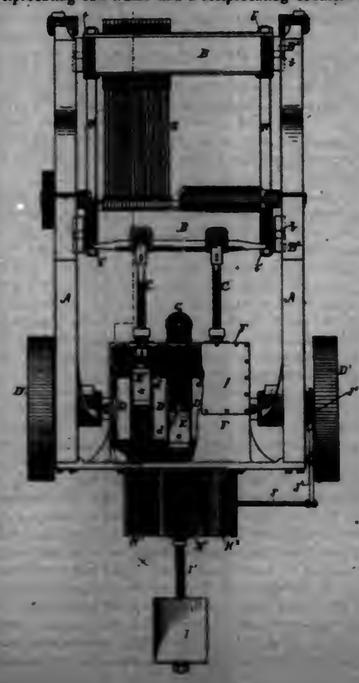
406,323. **BAND-SAW MILL.** WILLIAM M. WILKIN, Erie, Pa. Filed Jan. 31, 1889. Serial No. 298,271. (No model.)

Claim.—1. In a band-saw mill, the combination, with the fixed frame-work A A' A', and the vertically-adjustable yoke G, contained within the frame-work A, of automatically extensible supports for

the upper band-wheel shaft contained with the frame-work A' A' and supported by said yoke.

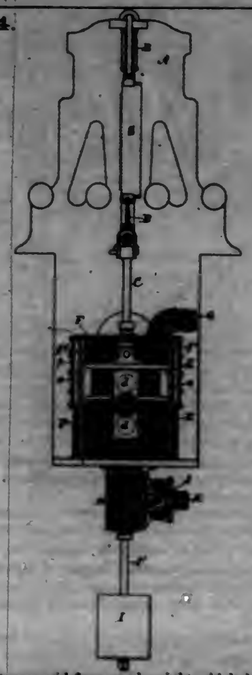
2. In a band-saw mill, the combination, with the fixed frame-work A A', of the yoke or bar G, posts B, seated on said yoke, sliding caps C on said posts, boxes E on said caps, and screws H, for vertically moving said yoke or bar.

3. In a band-saw mill, the combination, with the fixed frame-work A A', of the yoke G, posts B, seated on said yoke, sliding caps C on said posts, boxes E on said caps, bars F within said posts B and supporting said caps, levers K, fulcrumed on said yoke and supporting said bars F, weight-lever K', fulcrumed on said yoke and connected with said levers K, and screws H, for vertically moving said yoke.



4. In a band-saw mill, the combination, with the hollow horizontal frame-piece A and the hollow vertical frame-pieces A', of the yoke G, contained within the frame-piece A, the posts B, contained within the vertical frame-pieces A' and resting on said yoke, a lifting apparatus supported by said frame-piece A, which vertically moves said yoke G and posts B, scale-gearing supported on said yoke, vertical bars F within said posts B, which are moved by said scale-gearing, sliding caps C on said posts B, which rest on said bars F, and boxes E, for the upper band-wheel shaft, supported by said caps.

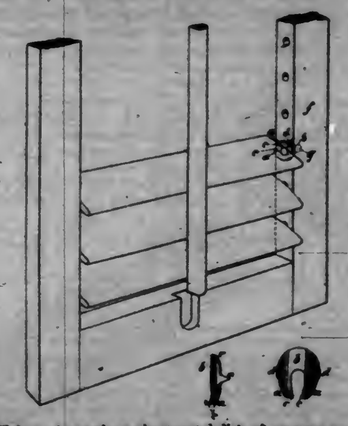
406,324. **GANG-SAW MILL.** WILLIAM M. WILKIN, Erie, Pa. Filed Feb. 1, 1888. Serial No. 298,307. (No model.)



Claim.—1. In a gang-saw mill, the combination, substantially as described, of a reciprocating saw-frame, a reciprocating counter-balance, an intermediate crank-shaft having three cranks, the middle one of which stands opposite the others, three steam-engine cylinders, each of which is in line with one of the cranks of the crank-shaft, and the middle one of which moves opposite from the others, and connections, substantially as set forth, for actuating said reciprocating parts oppositely and rotating said crank-shaft from said steam-engine cylinders.

2. In a gang-saw mill, the combination, substantially as set forth, of a reciprocating saw-frame, a reciprocating counter-weight, an intermediate crank-shaft having three cranks, the middle one of which stands opposite the others, three steam-engine cylinders arranged so that their pistons will move vertically and placed each in line with one of the cranks of the crank-shaft, the middle one of which has its piston moving in opposition to the others, connecting-gearing, substantially as described, connecting the middle engine with the said counter-weight and the outer engines with the saw-frame, and yokes in each of said connections which engage the contiguous crank of the said crank-shaft.

3. In a gang-saw mill, the combination, substantially as set forth, of a reciprocating saw-frame and a reciprocating counter-weight, a

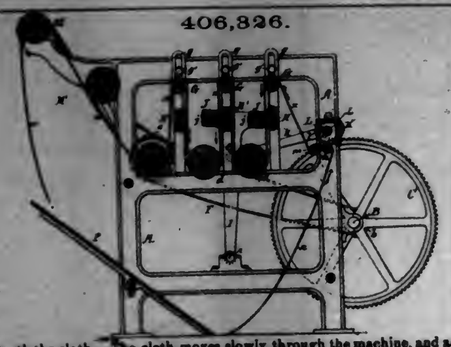


406,324.

crank-shaft between said frame and weight which has three cranks the middle one of which is opposite the others, connections, substantially as described, connecting the said outer cranks with the saw-frame and the inner crank with the counter-weight, and a direct-acting vertical steam-cylinder and piston acting upon one or more of said cranks.

4. In a gang-saw mill, the combination, with a reciprocating saw-frame, a reciprocating counter-weight, an intermediate crank-shaft, and a direct-acting steam-engine operating said parts, of an inclosing-box which forms a protecting and a lubricating chamber for the crank-bearings, substantially as shown.

406,325. **BLIND-STOP.** FREDERICK WHARF, New York, N. Y. Filed Feb. 6, 1889. Serial No. 298,908. (No model.)



Claim.—A struck-up sheet-metal disk of concavo-convex shape *c*, having an opening *b*, with the ends or points *a a* approaching each other, for the purpose of retaining the disk on the trunnion of the slat, substantially as described.

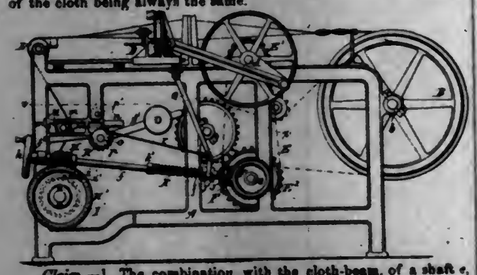
406,326. **GIGGING-MACHINE.** CHRISTIAN WORLITZ, Philadelphia, Pa., assignor of one-half to Howard W. Harley and Joseph Brunner, same place. Filed Mar. 10, 1888. Serial No. 266,954. (No model.)

Brief.—The cloth itself engages the gigging-teeth, and not the

406,326.

teeth the cloth. The cloth moves slowly through the machine, and as the teeth strike the cloth the cloth continues its movement and engages the teeth, and as the latter pass away from the cloth they drag with them a portion of the fabric and form a nap thereon.

Claim.—1. The combination, in a gigging-machine, of a reciprocating frame carrying one or more gigging-bars with teeth upon their opposite sides, opposite padded backing-bars, and means for reciprocating said gigging-bars between the backing-bars, with feeding devices for carrying the cloth to be gigged through the machine, substantially as specified.

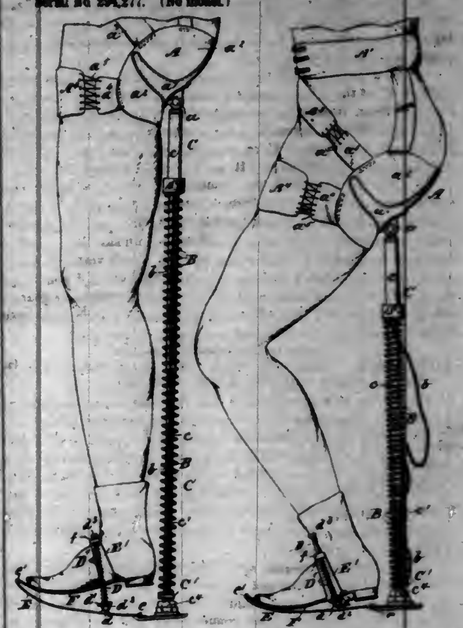


2. The combination, in a gigging-machine, of one or more stationary backing-bars, the reciprocating frame carrying one or more transverse bars of round or rectangular cross-section, said bars being provided with reserve gigging-teeth capable of adjustment to working position, means for reciprocating said frame, and feeding devices for carrying the cloth to be gigged through the machine, substantially as specified.

3. The combination, in a gigging-machine, of the stationary bars H H', guiding-rollers G and D, and the feed-roller E with a reciprocating gigging-frame having cross-bars J and teeth on the sides of the cross-bars opposite the stationary bars H H', with means for reciprocating the gigging-bar, all substantially as set forth.

4. The combination, in a gigging-machine, of the gigging-frame composed of bars H H' and the reciprocating gigging-frame, the guiding-rollers, and feed-rollers with a brush N, situated in the rear of the gigging-frame, and means to reciprocate said gigging-frame, substantially as and for the purpose set forth.

406,327. TAKE-UP MECHANISM FOR LOOMS. FREDERICK K. WRIGHT, Rochester, N. Y., assignor to the Steam Gauge and Lantern Company, same place. Filed July 26, 1887. Serial No. 245,182. (No model.)



Brief.—As the amount of slack in the cloth varies, its tension, acting in opposition to the weighted lever, effects variations in the position of the tension-roller, which, through the connected devices, throws into and out of operation the actuating mechanism for the cloth-beam, which is in this manner intermittingly rotated, the tension of the cloth being always the same.

Claim.—1. The combination, with the cloth-beam, of a shaft *e*, from which the cloth-beam is rotated, a connecting-shaft *f*, geared with the cloth-beam, a clutch J J', applied to the shaft *f* and geared with the shaft *e*, a tension-roller M, movable bearings *m*, in which the tension-roller is journaled, means for moving the movable bearings, and a shaft *o*, geared with the bearings and connected with the clutch, substantially as set forth.

2. The combination, with the cloth-beam, of a shaft *e*, provided with gear-wheel F, a connecting-shaft *f*, geared with the cloth-beam, and provided with a gear-wheel F' and clutch J J', a tension-roller M, provided with movable bearings *m*, having rack-bars *n*, a shaft *o*, provided with gear-wheels *p*, weighted arm S, and pulley R, a clutch-lever Q, and a band *r*, connecting said lever with the pulley R, substantially as set forth.

406,328. APPARATUS TO FACILITATE WALKING AND RUNNING. NICHOLAS YAGN, St. Petersburg, Russia. Filed Dec. 21, 1888. Serial No. 294,277. (No model.)

Claim.—1. In an apparatus of the class described, a spring-support for the body and pivotal connections for connecting the opposite extremes of the support to the corresponding extremes of the legs, substantially as and for the purposes specified.

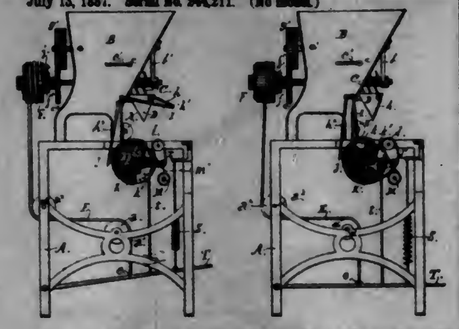
2. In an apparatus of the class described, a spring-support for each leg, comprising a telescopic standard, a power-spring having its extremes connected with the extreme sections of the standard, a seat or bearing for connecting the standard to the upper extreme of the leg, and a pivotal connection between the lower extreme of said standard and the foot, substantially as and for the purposes specified.

3. In an apparatus of the class described, a spring-support for each leg, comprising a telescopic standard, a seat or bearing for connecting the standard to the upper extreme of the leg, a pivotal connection between the lower extreme of the standard and the foot, a power-spring, a fixed abutment on the lower section of said standard for one end of the spring, a movable abutment for the opposite end of the spring on the upper section of the standard, and a lock for locking said abutment against motion, substantially as and for the purpose specified.

4. In an apparatus of the class described, a spring-support for each leg, comprising a telescopic standard, a seat or bearing for connecting the standard to the upper extreme of the leg, a pivotal connection between the lower extreme of the standard and the foot, a power-spring, a fixed abutment on the lower section of said standard for one end of the spring, a movable abutment for the opposite end of the spring on the upper section of the standard, a lock for locking said abutment against motion, and a connection between the movable abutments of the two standards operating to automatically lock and unlock the abutments in the act of walking, running, or jumping, substantially as described.

5. In an apparatus of the class described, the combination, with a spring-support for each leg, of a seat at one end thereof for attachment to the upper extreme of the leg, and a shoe at the opposite end of said support for attachment to the foot, substantially as described.

6. In an apparatus of the class described, the combination, with a spring-support for each leg, of a seat hinged at one end thereof for attachment to the upper extreme of the leg, and a shoe pivotally connected with the other end of said support and adapted to be attached to the foot, substantially as and for the purposes specified.



7. In an apparatus of the class described, the combination, with a spring-support for each leg, of a seat hinged at one end thereof for attachment to the upper end of the leg, a shoe articulated at the instep, and a universal joint between the heel of the shoe and the lower end of the support, substantially as and for the purposes specified.

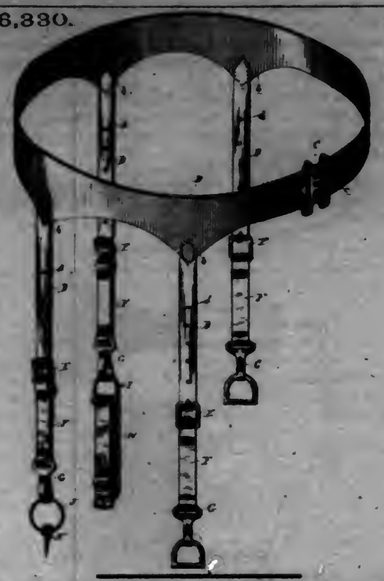
8. In an apparatus of the class described, the combination, with a spring-support for each leg, a hinge-connection for attaching the upper end of said support to the upper extreme of the leg, a shoe pivotally connected with the lower end of the support, and an elastic foot-rest connected with the shoe, substantially as and for the purposes specified.

9. In an apparatus of the class described, the combination, with a spring-support for each leg, a connection for attaching the upper end thereof to the upper extreme of the leg, and a shoe articulated at the instep and pivotally connected with the support, of an elastic foot-rest consisting of a plate or sole articulated to the shoe at the toe, a stirrup connected with the foot-rest at the instep, and spring-bearings for said stirrup pivotally connected with the shoe, substantially as and for the purposes specified.

10. In an apparatus of the class described, the combination, with a spring-support for each leg, a connection for attaching the upper end thereof to the upper extreme of the leg, and a shoe articulated at the instep and pivotally connected with the support, of an elastic foot-rest consisting of a plate or sole articulated to the shoe at the toe, a stirrup connected with the foot-rest at the instep, and spring-bearings composed of a rod hinged to the shoe on opposite sides thereof, and springs mounted on said rods and supporting the stirrup, substantially as and for the purposes specified.

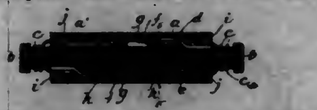
406,329. CIGAR-BUNCHING MACHINE. JOHN H. ABRAHAM, Lancaster, Pa., assignor to the Conestoga Cigar Company, same place. Filed July 13, 1887. Serial No. 244,211. (No model.)

Claim.—1. In a cigar-bunching machine, the combination, with the rotating cylinder having a recess formed in its side, a spring-actuated roller, cords extending therefrom, and the apron to which the cords are attached, whereby the slack of the apron is drawn down into the recess to form a pocket, substantially as set forth.



2. The combination, in a cigar-bunching machine, of the apron, the cylinder or surface upon which the apron is placed, and which is provided with a recess, a spring-actuated roller, and guiding-rollers for the belt and cords, which are attached to opposite edges of the apron, so as to draw its slack down into the recess to form a pocket, substantially as shown.

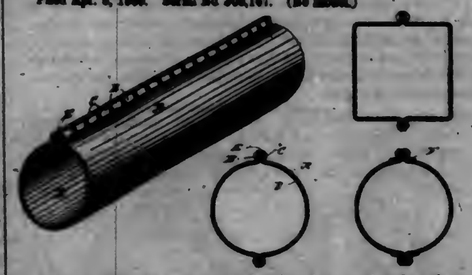
3. In a cigar-bunching machine, the combination of the hopper and the chute having a wicket with the rotating cylinder having a recess formed in its side, the apron, and a spring-actuated roller, cords extending from the roller and connected to opposite edges of the apron, whereby the slack of the apron is drawn down into the recess to form a pocket, substantially as described.



4. In a cigar-bunching machine, the combination, with the surface on which the bunch is rolled, said surface having a recess formed therein, of the apron and the cords fastened to said apron, and having a spring attachment whereby the apron is drawn down into the recess to form a pocket.

5. In a cigar-bunching machine, the combination, with the surface upon which the bunch is rolled, and which is provided with a recess which extends across its surface, of the apron and a spring attachment whereby the apron is drawn down into the recess to form a pocket, substantially as shown.

406,330.



406,331. ELECTRIC COUPLING AND CIRCUIT-CLOSER. WILLIAM H. BAKER, Chicago, Ill. Filed Mar. 22, 1888. Serial No. 304,066. (No model.)

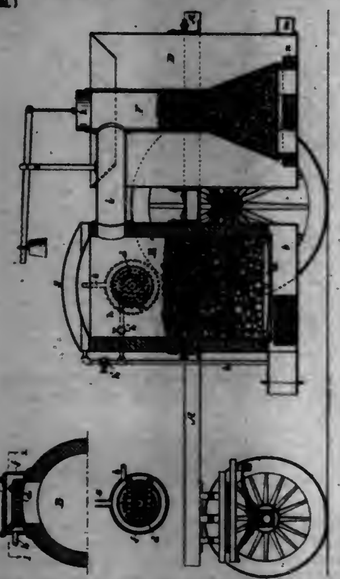
Claim.—1. An electrical coupling and circuit-closer for electric wires of cars, consisting of two similar shells *a a'*, each comprising the core *b*, having the conducting-pin *h* passing transversely through it, the projecting bar *c*, secured to one side of the core and having a notch *f*, and the spring-bar *d*, secured to the opposite side of the core and having a projection *g*, for engaging a notched bar, said spring-bar serving to lock the coupling-sections together and also to rest upon and make the electrical connection with the pin when the sections are separated, substantially as described.

2. An electric coupling and circuit-closer for electric wires of cars, consisting of two similar shells *a a'*, adapted to abut at their adjacent ends and each comprising a central core *b*, having its opposite sides longitudinally cut away or grooved and terminating flush with the inner end of its shell, an oblique conductor-pin *h*, passing transversely through the core, the bar *c*, secured in one cut-away or grooved side projecting beyond the core and provided with a notch *f*, and the spring-bar *d*, secured in the cut-away or grooved part of the core directly opposite the notched bar, serving to rest on the conductor-pin to close the circuit, and having the projection *g* to engage a notched bar, substantially as described.

406,332. PIPE OR TUBE. JAMES C. BAYLIS, New York, N. Y. Filed Apr. 6, 1888. Serial No. 269,167. (No model.)

Claim.—1. A pipe composed of a sheet-iron section shaped into cylindrical form with outwardly-projecting flanges along its opposite longitudinal edges, and a sheet-lead section similarly shaped and arranged within the sheet-iron section, with its flanges brought together face to face and secured to and between the flanges of the iron section.

406,330. CHILD'S CARRIAGE ATTACHMENT. PAULINE AMSTIL, Brooklyn, N. Y. Filed Mar. 21, 1888. Serial No. 268,182. (No model.)



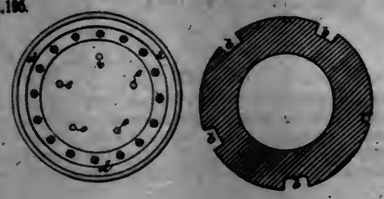
Claim.—1. An attachment for children's carriages, consisting of the belt B, having points *b*, a buckle C, and the front and rear straps connected to the points *b* and each having a snap-hook at its free end, substantially as described.

2. The combination, with a child's carriage provided with rings permanently attached thereto, of the belt B, having straps D attached to its front and rear, adjusting-buckles E, short straps attached to said buckles, and snap-hooks G, whereby the child may be secured, whether sitting or reclining, all substantially as shown and described.

2. A pipe composed of two or more sheet-iron sections, each shaped into the partial form of the pipe, with outwardly-projecting flanges at their longitudinal edges and provided with a sheet-lead lining, the sections being arranged in pipe form and their flanges secured together.

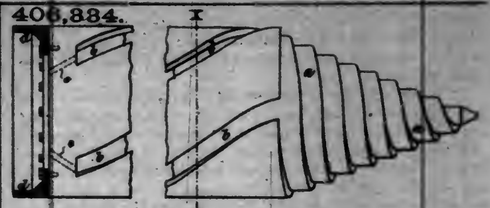
3. A pipe composed of sections of sheet-iron shaped longitudinally into pipe form and secured together along their longitudinal edges, and having a sheet-lead lining which is secured to the iron sections at their seams.

406,333. APPARATUS FOR MELTING SNOW AND ICE. WILLIAM BURGESS, Philadelphia, Pa. Filed Jan. 3, 1889. Serial No. 295,906. (No model.)



Claim.—1. The combination, in a snow-melting device, of the wheeled frame, the furnace or gas-generator, and snow-receiving tank carried by said wheeled frame, and a secondary furnace located within said tank and communicating with the main furnace or gas-generator, said secondary furnace extending down into the lower portion of the snow-receiving tank and having an opening through which fuel can be introduced, substantially as specified.

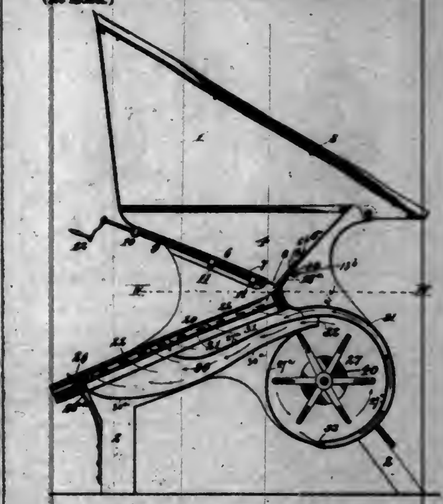
2. The combination of the wheeled frame and the gas-generator and snow-receiving tank mounted thereon, with a gas-distributer located within the tank and communicating with the gas-generator, said distributer having an upright conical and perforated lower portion, whereby the snow is supported and the gas directed upwardly and outwardly through the same, substantially as specified.



3. The combination of the wheeled frame, the snow-receiving tank, the furnace having a gas-distributing pipe in said tank, the closing door for the feed-opening of the furnace, the casing inclosing said door and forming an air-chamber, and means for supplying air to said chamber, substantially as specified.

4. The combination of the wheeled frame, the snow-receiving tank, the furnace having a gas-distributing pipe in said tank, the fire-door, the air-chamber surrounding the same, the chambered cap or cover, the closed ash-pit, and a communication between said ash-pit and the chambers around the fire-door and within the cap or cover, substantially as specified.

406,334. PROJECTILE. RICHARD CAIL, Newcastle-upon-Tyne, County of Northumberland, England. Filed Jan. 30, 1888. Serial No. 262,663. (No model.) Patented in England Dec. 16, 1886, No. 16,542; in France Feb. 21, 1887, No. 181,682, and in Germany Mar. 2, 1887, No. 41,195.



406,334.

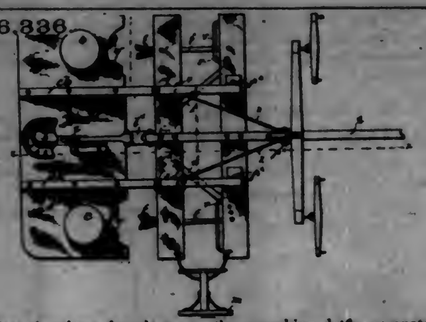
Claim.—1. A projectile having a spiral groove with an annular cutting or boring edge extending circumferentially around the nose, substantially as hereinbefore set forth.

2. A projectile provided with an annular recessed gas-check at its rear, and having upon or near its surface helical grooves or tubes registering with the recess in the annular gas-check, the ends of said helical grooves or tubes being open, so as to allow the powder-gases to pass through them to rotate the projectile, substantially as hereinbefore set forth.

406,335. DRY-ORE CONCENTRATOR. GUSTAVE T. GRANQUIST, St. Louis, Mo., assignor to the Sonora Mining and Dry Concentrator Company, East St. Louis, Ill. Filed Dec. 4, 1888. Serial No. 292,670. (No model.)

Claim.—1. In an ore-concentrator, the combination, with an inclined ore-bed, of upper flue 31, beneath the upper portion of the ore-bed, a lower flue 30, beneath the lower portion of the ore-bed and beneath the upper flue and of larger size than the latter, and a fan producing air-currents through the flues, substantially as described.

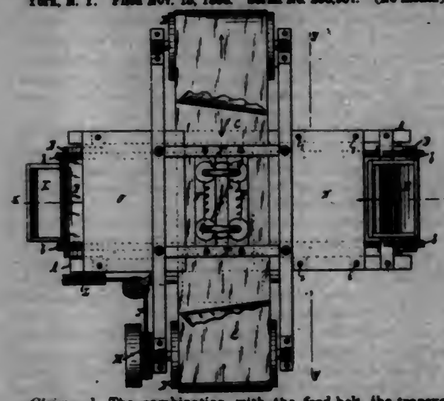
2. In an ore-concentrator, the combination, with an inclined ore-bed, of the fan, the lower flue 30, having an opening 32 into the fan-chamber and a base-plate 30ª curved downwardly from the top of the fan-chamber to the lower end of the ore-bed, the upper flue 31, having an opening 33 into the fan-chamber, and an outer plate 31ª, curved upwardly from the base of the fan-chamber, around and over the latter to the upper end of the ore-bed, and the intermediate plate 27ª, extending from the middle portion of the ore-bed to and around the fan and forming the fan-chamber, substantially as described.



3. In an ore-concentrator, the combination of an ore-bed resting on an inclined support and having pins 26, and springs 26ª, adapted to engage said pins and hold the bed on its support, substantially as and for the purpose set forth.

406,336. PLANT-SETTING MACHINE. NOAH M. CREW, Southport, Ind. Filed Feb. 16, 1889. Serial No. 300,376. (No model.)

Claim.—1. A plant-setting machine comprising a working-platform mounted upon brackets carrying a pair of covering-wheels on each side, a forward section beneath which are secured furrow-marking plows on each side hinged to cross-bars connected with the rear platform and also to a link pivoted to a lever carried upon the rear platform, each platform cut out on either side above the covering-wheels, with means for raising and lowering the front part of the machine from the rear part thereof, substantially as shown and described.



2. A plant-setting machine whose frame-work is composed of two

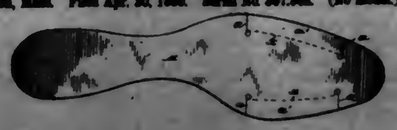
406,336.

sections hinged together, the rear section, a working-platform mounted on pairs of covering-wheels and providing seats for the workmen, a ratchet-lever mechanism secured thereto and connected to the forward section, furrow-plows secured beneath the latter, a box for holding the plants thereon, and a guide-marker for centering the next series of rows connected to one side thereof, all combined substantially as shown and described.

406,337. MAGNETIC SEPARATOR. GORDON COMBLING, Glens Falls, assignor to the Combling Ore Dephosphorizing Company, New York, N. Y. Filed Nov. 15, 1888. Serial No. 290,907. (No model.)

Claim.—1. The combination, with the feed-belt, the transverse belt, and the magnet or magnets contained in said transverse belt, of a cover extending over the feeding-section of the feed-belt, substantially as described.

2. The combination, with the feed-belt, the transverse belt, and the magnet or magnets contained in said transverse belt, of a cover extending over the feeding-section of the feed-belt and beneath the edge of the transverse belt, substantially as described.



3. The combination, with the feed-belt, the transverse belt, and the magnet or magnets contained in said transverse belt, of two covers, one extending over the feeding-section and the other over the discharge-section of the feed-belt, substantially as described.

4. The combination, with the feed-belt, the transverse belt, and the magnet or magnets contained in said transverse belt, of two covers, one extending over the feeding-section of the feed-belt and beneath the edge of the transverse belt and the other extending over the discharge-section of the feed-belt and over the edge of the transverse belt, substantially as described.

5. The combination, with the feed-belt, the transverse belt, and the magnet or magnets contained in said transverse belt, of a cover provided on its under surface with flanges and extending over the feeding-section of the feed-belt, substantially as described.

6. The combination, with the feed-belt having raised rims at its edges, and with the transverse belt and the magnet or magnets contained in the transverse belt, of a cover provided with flanges n n and extending over the feeding-section of the feed-apron, substantially as described.

406,338. LASTING BOOTS AND SHOES. WILLIAM C. CRESS, Boston, Mass. Filed Apr. 30, 1888. Serial No. 307,962. (No model.)

406,338.

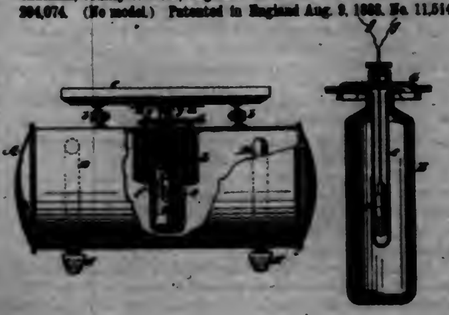
Claim.—1. The described improvement in the manufacture of boots and shoes, consisting in slitting the inner sole at the points *a* to form side flaps *a'* along the ball portion, placing the sole thus prepared flat upon the last, lasting the upper to the inner sole, as described, so that the flaps *a'*, although unturned and extended upon the last and overlapped by the upper, shall not be attached thereto, then laying the outer sole, next removing the shoe from the last and sewing the outer sole to the shoe, first lifting and turning back the flaps *a'* from the upper, so that the stitches at these points shall pass through the upper and outer sole only, and then turning down the flaps again into place, all substantially as hereinbefore set forth.

2. In the manufacture of boots and shoes, the method of securing the shank and forward portion of the upper to the slitted inner sole, which consists in attaching the shank and toe portions of the upper to the inner sole by lasting-tacks and lasting the intermediate portion of the upper to the portion of the inner sole included between the slits by cords or strings, substantially as and for the purposes hereinbefore set forth.

3. In the manufacture of boots and shoes, the method of holding the upper to the ball portion of the slitted inner sole, consisting in permanently securing the upper to the said portion of the inner sole along lines back of the flaps of the inner sole and back of the lines upon which the outer sole is afterward sewed to the upper, and then laying the outer sole and sewing it throughout the ball portion of the shoe to the upper only, the flaps of the slotted inner sole being turned back during this operation, substantially as set forth.

406,339. COMBUSTIBLE SUBSTANCE. MOSES H. DAY, Brookline, Mass. Filed Mar. 12, 1888. Serial No. 267,095. (No specimens.)

Claim.—A combustible substance consisting of a base of ordinary merchantable fuel impregnated with a chemical salt in a crystalline or anhydrous state, which, when acted upon by fire, in the destruction of the base by fire, will give a distinctive color to the flame produced, substantially as set forth.



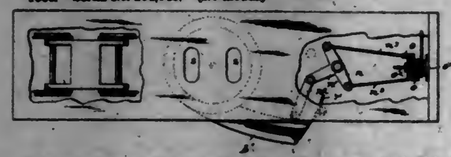
406,340. PINCUSHION. WILLIAM O. DAY, Seneca Falls, N. Y. Filed Oct. 10, 1887. Renewed May 16, 1889. Serial No. 311,006. (No model.)

Claim.—1. In a pincushion, the combination of a cup having a base 2 and a body 1, the filling 4, a cover 6 to the body, and the band 7, having the flange 8, substantially as described.

2. In a pincushion, the combination of a cup having a base 2, formed with a rabbet 3, and a cylinder 1, seated on the base, the filling 4, a cover 6, and the band 7, having the flange 8, substantially as described.

406,341. ELECTRICAL FIRE-EXTINGUISHER. THOMAS R. DOUSE, Chatham, County of Kent, England. Filed Dec. 19, 1888. Serial No. 294,074. (No model.) Patented in England Aug. 9, 1888, No. 11,514.

Claim.—In an electrical fire-extinguisher, the combination of an alkali-containing vessel A, having tubes D projecting therefrom and provided on their exposed ends with spray-nozzles E, a screw-cap G, inserted in the upper part of said vessel and provided with a clip *d*, an acid-containing bottle suspended from the clip *d* within said vessel, a tube *c*, extending into and sealing the bottle, a detonator *f*, placed in said tube, and an electric circuit including the detonator, substantially as described.



406,842. GAME-BOARD. JAMES H. DUMONT, Kingston, N. Y. Filed Mar. 7, 1889. Serial No. 302,265. (No model.)

Claim.—1. The combination, in a game-board, of the sections A and B, hinged to each other, one of said sections being adapted to be maintained in a vertical position when the other section is inclined, brackets *c c* and *d*, secured to the vertical board, and an inclined screen *e*, secured above the central bracket and beneath an opening in the board, substantially as shown.

2. The combination, in a game-board, of the sections A and B, suitably connected to each other, so that one section may be maintained in a vertical position while the other is inclined, the vertical section being provided with brackets *c c* and *d*, a screen *e*, and an opening above said screen, the section A having its surface divided into sections, the section near the vertical board having an opening *a*, the sections, openings, and brackets being provided with numbers or marks indicative of value, substantially as shown, and for the purpose set forth.

406,843. APPARATUS FOR TRANSFERRING PACKAGES TO MOVING CARS. WILLIAM H. ELLIOT, Brooklyn, N. Y. Filed Nov. 26, 1888. Serial No. 291,943. (No model.)

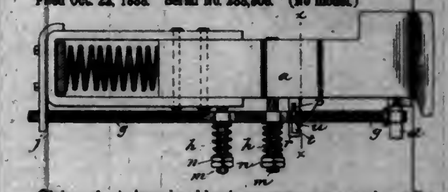
Claim.—1. A train-receiver consisting of a car provided with a receiving-chamber below the floor of the same and an entrance-spout leading to said chamber, substantially as described.

2. A train-receiver consisting of the combination, with a suitable car or truck, of a circular chamber or receptacle below the floor of the car and a mouth or entrance-spout leading to said chamber, substantially as described.

3. A train-receiver consisting of the combination, with a suitable car, of a chamber below the floor of the car and a movable entrance-spout, substantially as described.

4. A train-receiver consisting of the combination, with a suitable car, of a chamber below the floor of the car, a movable entrance-spout, and a stationary cover for capping said spout, substantially as described.

5. In a car for receiving packages while in motion, the combination of a chamber below the floor of the car, a floor provided with an opening leading from said chamber, and an entrance-spout leading to said chamber, substantially as described.



6. In a car for receiving packages while in motion, the combination of an entrance-spout leading to a chamber, a chamber below the floor of the car, a floor having an opening leading from the chamber to the interior of the car, and a trap-door for closing the opening, substantially as described.

7. In a car for receiving packages while in motion, and having a truss, substantially as described, a chamber below the floor of the car, and an entrance-spout leading through the truss to the chamber, substantially as described.

8. In a car for receiving packages while in motion, and having a truss, substantially as described, a chamber provided with a spherical bottom and arranged below the floor of the car, and an entrance-spout leading through the truss to said chamber, substantially as described.

9. The combination of a package-receiver, a vibratory entrance-spout, and means for operating said spout, consisting of a crank-lever, a link for connecting the lever and the spout, a drum or windlass, and rope or cord for connecting the drum and lever, substantially as described.

406,844. CAR-COUPLING. EBENEZER FERRIS, Manchester, N. H. Filed Oct. 22, 1888. Serial No. 288,806. (No model.)

Claim.—1. A draw-head having a spring-supported coupling-pin adapted to move vertically into the link-receiving chamber from below, and provided with shoulders *f f*, whereby it is adapted to support the link, as set forth.

2. The combination of a draw-bar, a coupling-pin adapted to move vertically into the link-receiving chamber thereof from below, the rod *g*, engaged at its forward end with said pin and fulcrumed at its rear end, an operating-lever extending across said rod and adapted to depress the same, and one or more independent springs supported by the draw-bar, and arranged to support said rod and pin and to hold the rod in contact with the operating-lever, as set forth.

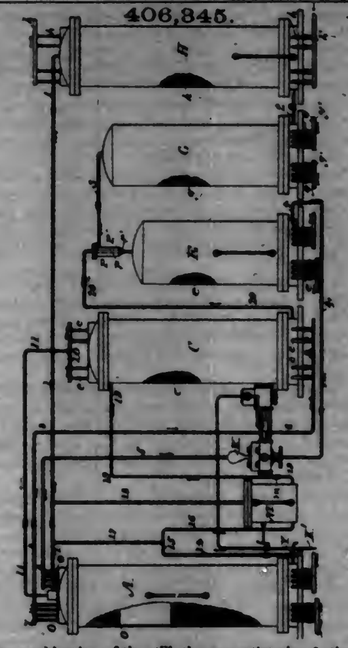
3. The combination of a draw-bar, a coupling-pin adapted to move vertically into the draw-bar from below, a spring-supported rod *g*, supporting said pin, a transverse lever *p*, extending across said rod to both sides of the car, and two fulcrums for said lever at opposite sides of the draw-bar, as set forth.

4. The combination of a draw-bar, a coupling-pin adapted to move vertically into the draw-bar from below, a spring-supported rod *g*, supporting said pin, a transverse lever *p*, extending across said rod to both sides of the car, two fulcrums for said rod, and stops or shoulders *u u* below said fulcrums, whereby the lever may be locked or held with either end depressed, as set forth.

5. The combination of the draw-bar, the coupling-pin, the rod *g*, supporting said pin and fulcrumed at its rear end, the bolts *m*, engaged with the draw-bar and projecting downwardly therefrom, the springs *h*, supported by said bolts and supporting the rod *g*, and the operating-lever *p*, whereby said rod with the coupling-pin may be depressed, as set forth.

406,845. REFRIGERATIVE APPARATUS. PHILANDER R. GRAY and PHILANDER R. GRAY, Jr., Elizabeth, N. J. Filed May 10, 1888. Serial No. 273,490. (No model.)

Claim.—1. The combination, with the circulating-pipes and essential apparatus of an evaporation and absorption refrigerative system, of a still having a removable shell, a fixed base, multiple steam-coils arranged within the still and supported by the base, and pipe-connections extending laterally through the fixed base by which the pipe-coils are connected with the steam supply and discharge pipes, substantially as set forth.



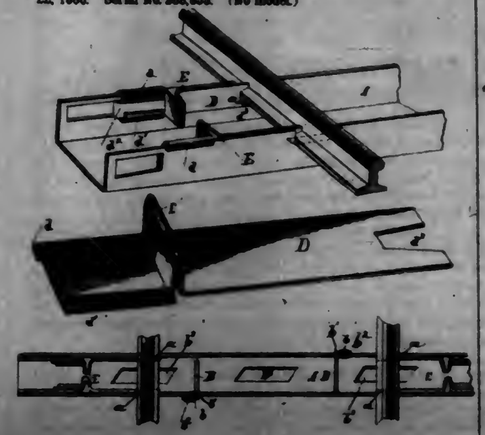
2. The combination of the still having a removable shell, a fixed base, independent multiple steam-coils arranged within the still upon the base, pipe-connections which connect each coil with steam supply and discharge pipes and extend laterally through enlarged openings in the base, packing-rings a^2, arranged in said openings and embracing the pipes, and a gland or follower, substantially as set forth.

3. The combination of the fixed base of the still, the steam-coils, the removable shell, the removable cover, and the aqueous-vapor-condensing coils carried by the cover and removable therewith, substantially as set forth.

4. The combination of the still, its cover, the concentrically coiled aqueous-vapor-condenser coils arranged in the top of the still, through which the cold strong ammonia passes, the pipe 8, leading the strong ammonia from said coils to the exchanger, and the pipes 11 and 12, returning the strong ammonia from the exchanger into the still, the latter extending down into the still through the center of said coils, substantially as set forth.

5. The combination of the fixed still-base, the independently-removable multiple steam-coils arranged upon the base, the removable shell, the removable cover, and the independently-removable multiple aqueous-vapor-condenser coils carried by the cover and all removable therewith, substantially as set forth.

406,845.



6. The combination of the still, the gas-outlet pipe 1, the weak-ammonia-discharge pipes 14, 15, and 16, the regulator M, and the pressure-equalizing pipes 17 and 18, extending, respectively, from the gas-outlet pipe 1 to the pipe 15 and from the gas-outlet pipe to the regulator, substantially as and for the purpose set forth.

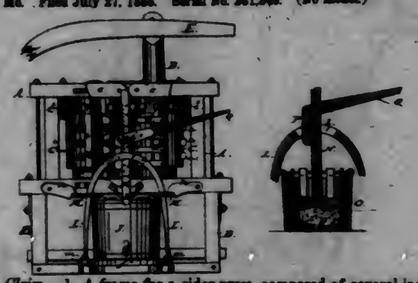
7. In an absorption refrigerative system, the combination of the still and circulating pipe system, the regulator through which the weak ammonia passes on its way from the still, the float therein, a pressure-equalizing pipe-connection connecting the interior of the regulator with the top of the still, the pump for supplying strong ammonia to the still, its steam-supply pipe and valve, and connections between the float and valve, whereby the speed of the pump is regulated by the level of the weak ammonia in the regulator.

8. The combination, in the regulator, of the hollow float, the pipe-guide N, and the pipe 18, in which it works, connected with the gas-outlet pipe leading from the still, substantially as set forth.

9. The combination of multiple pipe-coils, a base having a fixed bottom upon which the pipe-coils rest, and lateral openings through which the ends or inlet and outlet connections of each coil pass, inlet and outlet manifolds with which the ends of the coils are connected outside of the still, and the detachable removable shell enveloping the coils and supported upon the base.

406,846. RAILROAD-TIE. LEVI HAAS, Chester, Pa. Filed Oct. 22, 1888. Serial No. 288,633. (No model.)

Claim.—1. As an improvement in metallic railroad-ties, the tie having bracing or strengthening arms formed with one side and removably connected to the opposite side, substantially as described.



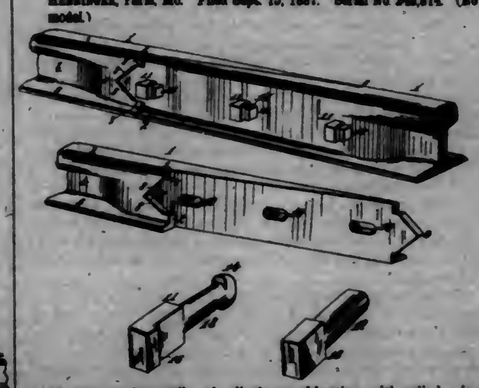
2. As an improvement in metallic railroad-ties, the tie having the arms struck from opposite sides thereof, and the lips for securing the ends of said arms, substantially as described.

3. The tie having the plates D secured thereto for clamping a rail, substantially as described.

4. As an improvement in railroad-ties, the plate D, having a groove or recess in its end, and the spring for holding the same against the rail, substantially as described.

5. The tie having short arms struck therefrom, in combination with the adjustable plate having lips for securing the same in place, and provided with a U-shaped spring or bend and recessed ends, substantially as described.

406,847. CIDER MILL AND PRESS. JOSEPH G. HARRIS, Sedalia, Mo. Filed July 27, 1888. Serial No. 281,249. (No model.)



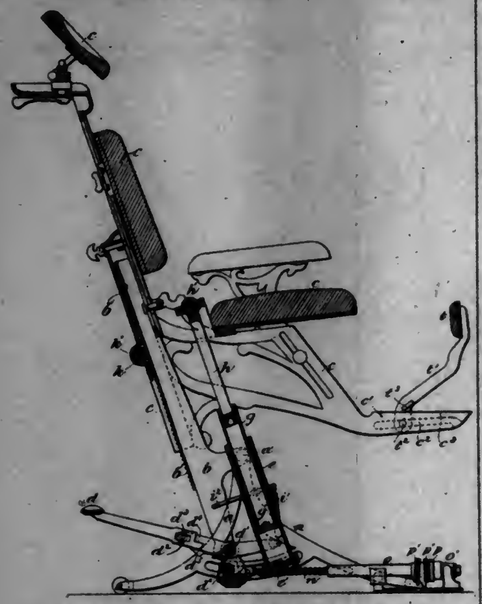
Claim.—1. A frame for a cider-press, composed of several independent sections formed of slats and cleats to hold them together and provided with a hook *k'*, in combination with a tub which, when the several sections are in place, holds them together, as and for the purpose set forth.

2. The combination, with the press-bail hooked to the base of the press, provided with a slot in its crown, and a post *p*, secured in said slot, of the press-lever pivoted to said post *p*, the upright perforated bar provided with a pin for a fulcrum, the platen for the pomace, and the base of the press provided with staples for the bail, as and for the purpose specified.

3. The combination, with the mill-frame, the bail for the press, and bar N, of catches M and *n* and the base for the tub provided with staples, as and for the purpose set forth.

4. The combination, with the mill having vertically-arranged cylinders geared together with meshing gear-wheels and provided with feed-teeth on the one and indentations on the other, the lever-sweep fixed upon the shaft of one of said cylinders, the feeding-gate, and scrapers, substantially as described, of the press consisting of a frame formed as described and fitting in a half-barrel, as described, the upright perforated bar N, provided with fulcrum-pins, the press-lever provided with notches and pivoted in post *p*, the bail L, provided with hooks on its ends and a slot in its crown, the platen O, and the base for the half-barrel provided with staples to receive the hooks of the bail, all arranged substantially as and for the purpose set forth.

406,848. RAILROAD-RAIL COUPLING AND BOLT. DAVID P. HENNINGER, Paris, Mo. Filed Sept. 15, 1887. Serial No. 249,814. (No model.)



Claim.—1. In a railroad-rail, the combination, with rails having beveled and interlocking ends and provided with horizontally-elon-

gated bolt-holes 10, of the double-headed bolts 11, having cylindrical shanks 13 and shoulders 15, and the locking-pins 12, having square heads to engage the shoulders on the bolts, substantially as described.

2. In a railroad-rail joint, the combination, with the rails having beveled ends, as shown, provided with shoulders 2, recesses 6, and corresponding projections 9, said beveled rails being provided with horizontally-elongated bolt-holes 10, of the double-headed bolts 11, having cylindrical shanks 13 and shoulders 15, and the locking-pins 12, having square heads 16 to engage the shoulders on the bolts, substantially as described.

406,349. DENTAL CHAIR. DUNCAN D. HEPBURN, London, and EDWARD GARDNER, Cornbrook, Manchester, England. Filed Nov. 26, 1888. Serial No. 291,850. (No model.)

Claim.—1. The combination, substantially as hereinbefore set forth, of a chair-support, a lifting-treadle, a series of hydraulic rams all mounted on the lifting-treadle, and a chair-body mounted on one of the rams.

2. The combination, substantially as hereinbefore set forth, of a chair-support, a lifting-treadle, its pivot on the chair-support, a series of interposed hydraulic rams mounted on the treadle-lever, and a chair-body mounted on one of the rams, which are successively operated to lift the chair-body by a step-by-step movement.

3. The combination, substantially as hereinbefore set forth, of a chair-body, a series of hydraulic rams supporting it, and a lifting-treadle on which the rams are mounted and which lifts the chair-body by reciprocating one of the rams relatively to the others.

4. The combination, substantially as hereinbefore set forth, of a chair-body, a hydraulic elevating apparatus supporting it, a store-vessel connected with the elevating apparatus, and a lifting-treadle supporting both the elevating apparatus and store-vessel.

5. The combination, substantially as hereinbefore set forth, of a chair-body, hydraulic elevating-rams, on one of which it is mounted, a store-vessel connected with the rams, a self-closing inlet-valve and an outlet-valve between the store-vessel and rams, and a lifting-treadle on which the chair-body, rams, and store-vessel are mounted.

6. The combination, substantially as hereinbefore set forth, of a chair-body, hydraulic rams supporting it, a store-vessel connected therewith, an escape-valve between the rams and store-vessel, a lever on the valve-stem, a lifting-treadle supporting and actuating the rams, and a spring connecting the valve-lever and treadle normally to hold the valve closed.

7. The combination, substantially as hereinbefore set forth, of a chair-support, a chair-body, a series of telescopic rams, on one of which it is mounted, a store-vessel surrounding the rams, separate inlet and outlet valves for the outer cylinder, a combined self-acting inlet and outlet valve for the inner cylinder, and a lifting-treadle pivoted on the chair-support, on which treadle the chair-body, rams, and store-vessel are mounted.

8. The combination, substantially as hereinbefore set forth, of a chair-support, a chair-body, a solid ram or plunger on which it is mounted, a hollow ram inclosing the plunger, an outwardly-closing self-acting inlet-valve in the hollow ram, a reciprocating cylinder inclosing this ram, a store-vessel, an outwardly-closing self-acting inlet-valve, a separate outlet-valve the opening of which causes the descent of the inclosed hollow ram, the opening of its valve, and the descent in turn of the plunger and chair-body, and a lifting-treadle and its pivots on the supporting-frame, on which lifting-treadle the rams, store-vessel, and chair-body are mounted.

9. The combination, substantially as hereinbefore set forth, of a chair support or frame, a chair-body movable vertically thereon, an automatic locking device on the frame adapted to hold the chair-body at any desired elevation, hydraulic apparatus supporting the chair-body, and a lifting-treadle which lifts both the hydraulic apparatus and chair-body.

10. The combination, substantially as hereinbefore set forth, of a chair support or frame, a chair-body movable vertically thereon, an automatic locking device adapted to hold the chair-body at any desired elevation, a lifting-treadle, and telescopic hydraulic rams supporting and lifting the chair-body and supported and actuated by the lifting-treadle.

11. The combination, substantially as hereinbefore set forth, of a chair-support, a chair-body movable vertically thereon, an automatic locking device on the chair-support adapted to hold the seat at any desired elevation, a plunger supporting the seat, a reciprocating hydraulic cylinder actuating the plunger, and a lifting-treadle supporting and actuating the cylinder.

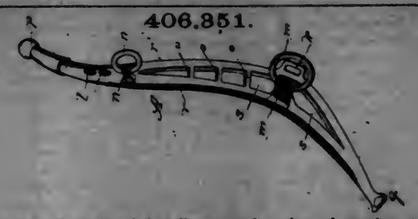
12. The combination, substantially as hereinbefore set forth, of a chair-support, a chair-body movable vertically thereon, an automatic locking device on the chair-support adapted to hold the seat at any desired elevation, a plunger supporting the seat, a hollow ram inclosing the plunger, a reciprocating hydraulic cylinder inclosing and actuating the ram and plunger with a step-by-step movement, and a lifting-treadle supporting and actuating the hydraulic cylinder.

13. The combination, substantially as hereinbefore set forth, of a base frame or standards, a chair support or frame pivoted thereon, mechanism for adjusting the angle of inclination of the chair-support, a chair-body movable vertically on the frame, a lifting-treadle pivoted on the chair-support, and telescopic hydraulic apparatus supporting and actuating the chair-body and supported and actuated by the lifting-treadle simultaneously to adjust all these parts as the inclination of the chair is varied.

14. The combination, substantially as hereinbefore set forth, of the base-frame, its standards, a chair-support, its intermediate transverse pivots on the standards, a longitudinal male screw pivoted to the chair-support, an inclosing female screw journaled in the base-frame, and its ratchet-gear and actuating-pawl to adjust and hold the chair-support at any desired inclination.

15. The combination, substantially as hereinbefore set forth, of a base-frame, a chair-support pivoted therein, a compound or telescopic adjusting-screw pivoted at one end to the chair, longitudinal male screw pivoted on the chair-support and inclosing female screw journaled in the base-frame, a ratchet-gear on the screw, a double-acting transverse pawl-lever journaled on the screw, and double-acting lifting-springs, so that the lever may be reversed and worked from either side of the chair to vary the inclination of the chair-support.

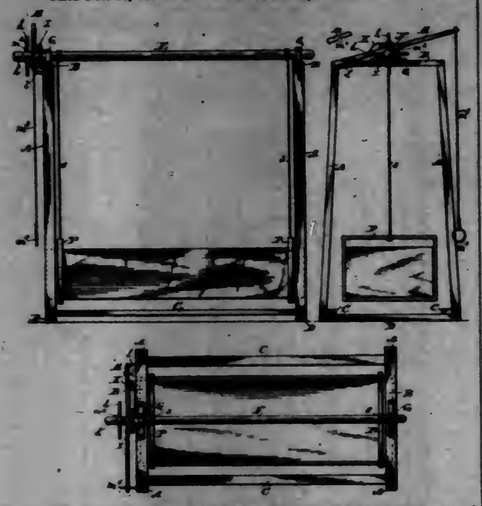
406,350. MOLD OR OUTSIDE RING FOR POTTERY. SAMUEL P. JACKSON, East Liverpool, Ohio, assignor to Homer Laughlin, same place. Filed Mar. 7, 1889. Serial No. 302,290. (No model.)



Claim.—1. In combination with a lathe head or table, a socket-bed attached thereto and provided with raised walls, a removable ring adapted to encircle the socket-bed and form a continuation thereof, and a mold constructed to have a bearing in and on the socket-bed and upon the removable ring, substantially as shown, and for the purpose set forth.

2. In combination with a head or rotary disk A, having a socket-bed attached thereto, a removable ring C, having interior wall adapted to fit over the exterior wall of the socket-bed, said ring being cut away at opposite points to be of less diameter than the mold, and a mold D, having the base shaped to fit within the inner walls of the socket-bed and also bear upon the upper faces of said socket-bed and ring, substantially as shown, and for the purpose set forth.

406,351. HAME. WILLIAM V. KAY, Chicago, Ill. Filed Sept. 4, 1888. Serial No. 284,837. (No model.)

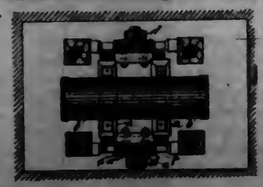


Claim.—A skeleton hame comprising the section r, a brace r', extending along the outer side of the said section from between one

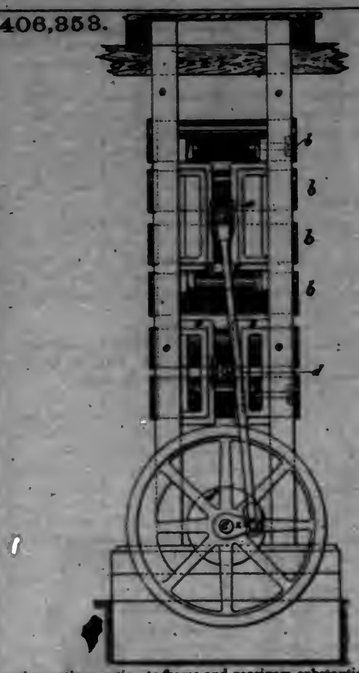
406,351.

extremity thereof and the adjacent stud or place of attachment for the tug or trace to near the opposite extremity and affording a space *s*, and strengthening-rib *o*, connecting the section r and brace r' across the space *s*, substantially as described.

406,352. WAGON-BODY LIFTER. ROBERT L. KEITH, Brazil, Ind. Filed Feb. 20, 1889. Serial No. 300,569. (No model.)



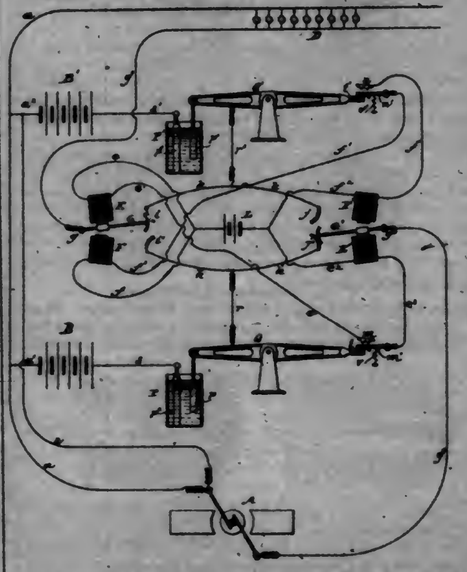
Claim.—A wagon-body lifter consisting of the frame composed of the uprights and cross-piece A B, side and end pieces C D, in combination with a single windlass F on the top of the frame, the handles, brackets G, secured to the cross-piece B, and in which the said windlass is journaled, the ratchet I, secured to the said windlass F, and pawl K, pivoted to the top cross-piece B, the hanging frames P P, composed of upright and cross pieces and adapted to extend under the wagon-body and up its sides, cords supporting said frames from the windlass, and the brake M, pivoted to a bracket on cross-piece B and provided with a groove *m'*, to close upon the said windlass F, and with a cord and handle with which to operate it, substantially as described.



406,353. APPARATUS FOR PRODUCING SHOT. FRANZ A. KÖHLER, Smichow, near Prague, Austria-Hungary, assignor of one-half to Ludwig Keyling, Berlin, Germany. Filed Nov. 17, 1888. Serial No. 291,157. (No model.)

Claim.—1. In an apparatus for manufacturing shot, the combination of the standards or supports *o*, having ways P, the frame *a*, having sliding blocks *a'* fitting in said ways, the receivers carried by said frames *a*, the crank-shaft, and the connecting pitmen for transmitting motion between the shaft and sliding blocks, all substantially as explained.

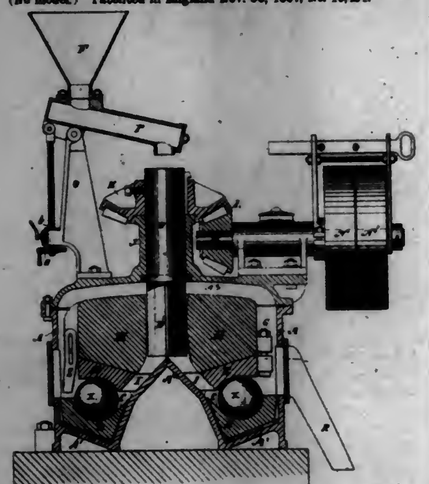
2. In an apparatus for manufacturing shot, the combination of suitable supports *o*, a frame *a*, sliding on said supports and carrying cylindrical receivers, having sliding doors *m* in their ends for the removal of the shot, with suitable driving mechanism for imparting a



406,353.

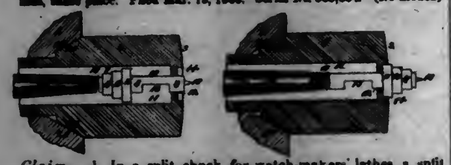
reciprocating motion to frame and receivers, substantially in the manner and for the purpose set forth.

406,354. SYSTEM FOR CHARGING AND DISCHARGING STORAGE-BATTERIES. WILLIAM P. KOSTERSKY, Brooklyn, N. Y., assignor to the Kostersky Electric Company. Filed Aug. 25, 1888. Serial No. 283,709. (No model.)



Claim.—1. The combination of a charging-circuit, two storage-batteries, a working-circuit, two electro-depositing cells, each respectively forming a part of both the charging and discharging circuits of one of the storage-batteries, and each of such depositing-cells having one of its plates suspended from the arm of a balance-beam so as to move up or down under the operation of the current through the cell, and a double alternating switch operated alternately by the movement of the balance-arms by which the storage-batteries, automatically and

alternately with each other, are connected in circuit alternately with the working-line and with the charging-source, the one to charge while the other is discharging, substantially as and for the purpose described.

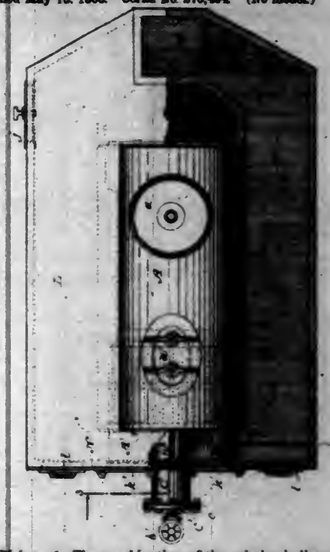


2. The combination of a charging-circuit, two storage-batteries, a working-circuit, two electro-depositing cells, each respectively forming a part of both the charging and discharging circuits of one of the storage-batteries and each of such depositing-cells having one of its plates suspended from the arm of a balance-beam so as to move up and down under the operation of the current through the cell, two local circuits with electro-magnets in them, which circuits when closed operate switch-connections in the battery-circuits to alternately and alternately with each other change them from connection with the working-circuit to connection with the charging-source, and circuit closers and breakers in the local circuits automatically operated by the balance-arms of the respective depositing-cells, substantially as and for the purpose described.

406,355. GRINDING-MILL. ANDREW LAMBERTON, Coatbridge, County of Lanark, Scotland. Filed July 23, 1888. Serial No. 280,783. (No model.) Patented in England Nov. 30, 1887, No. 16,451.

Claim.—In a grinding-mill, the combination of a casing A, having a bottom A', inclined toward the circumference of the casing, a cone A^3, extending upward from the inner side of the bottom, and a top A^3, the bed B, having concave circular path C, the balls X, working in the path, the loose driver H, having face-plate E, resting on the balls, and formed with a central eye and an annular passage I around the cone, the sleeve J, surmounting the top of the casing, the hollow shaft D, turning in the sleeve, having an angular lower end D', fitting loosely in the eye of the driver, to enable the latter to wabble around with it, and driving mechanism connected with the hollow shaft, substantially as described.

406,356. SPLIT CHUCK FOR WATCH-MAKERS' LATHES. FREDERICK LAUTERMILCH, Kirkwood, Mo., assignor of one-half to Edward Wilmes, same place. Filed Mar. 19, 1889. Serial No. 303,834. (No model.)

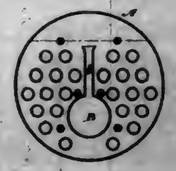


Claim.—1. In a split chuck for watch-makers' lathes, a split chuck whose head is provided with a lateral opening into the tubular center of the chuck for the insertion of watch-cylinder spindles, and the step cone-pulleys mounted thereon, and other objects to be trued by the lathe when presented to the grip of the chuck, substantially as described, and for the purpose set forth.

2. In a split chuck for watch-makers' lathes, the combination of the split chuck provided with longitudinal slots between its jaws and having jaws closing toward its center grip, the head of said chuck being provided with a lateral opening into its tubular center for the insertion of watch-cylinders and other articles to be chucked, and the spy-holes 38 for the inspection of the object to be treated, substantially as described, and for the purpose set forth.

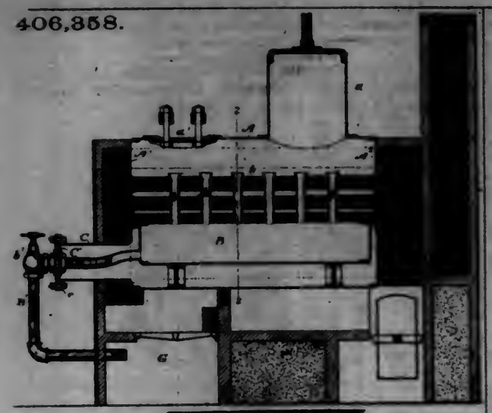
3. In a split chuck for watch-makers' lathes, the combination of the chuck-head and the stem that carries said head, the bevel-shoulder at the connection of the head to said stem, the said head and stem being provided with a tubular center and slotted longitudinal openings 5, that separate the jaws, the said head being also provided with an insertion-hole 37 from its periphery to its tubular center for the presentation and adjustment of the object to be operated on, which thus provides an approach to the jaws of the chuck from the inside, the spy-holes 37 in said head, the countersunk jaw-grip 14 in the face of the head, the extension-stem 23, with its enlarged end 24, the shoulder 25 of which works against the rear end of the tubular running spindle 2, the tube of which spindle is provided with a flaring mouth 28, with which the bevel-shoulder 20 of the split head engages when closing its grip, the junction-screws that connect the stems 23 and 19, the hand-wheel by which said stems and their junction-screws are operated to close and also to release the jaw of the chuck, and the back center-core rod 30, substantially as described, and for the purpose set forth.

406,357. BOILER-SETTING. FREDERICK LINDRUM, Chicago, Ill. Filed May 10, 1888. Serial No. 273,464. (No model.)



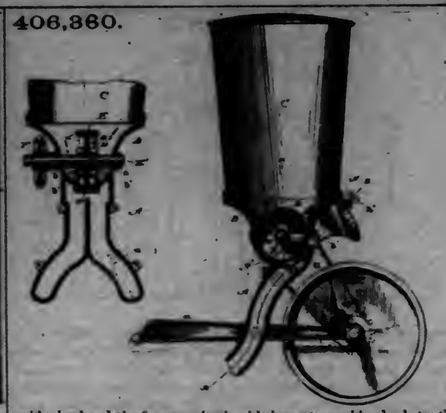
Claim.—1. The combination of the tubular boiler with the front chambers formed by the arched and vertical ribs, the back chamber, the side flues connecting the front chambers with the chimney, and the fire-box and combustion-chamber, substantially as herein set forth.

2. The combination, substantially as hereinbefore set forth, of a boiler with a boiler-front having a vertical rib and a rib joining the vertical rib at its bottom and extending inwardly under the boiler, whereby two front chambers are formed.

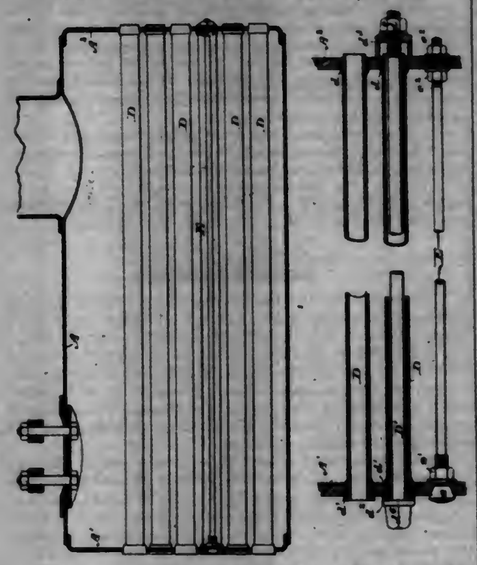


3. The combination, substantially as hereinbefore set forth, of a boiler and a boiler-front having a rib spanning the front of the fire-box, and a vertical rib extending upward from the rib spanning the front of the fire-box.

406,358. BOILER-CLEANER. FREDERICK LINDRUM, Chicago, Ill. Filed July 27, 1888. Serial No. 281,215. (No model.)



Claim.—The combination of the boiler, the tubular projection from its front head extending through the front wall of the setting, the collecting-vessel and its skimming-tubes within the boiler, and the blow-off pipe provided with a valve outside of the tubular projection leading from the collector through the tubular projection, whereby the collector and its connections are protected from the direct action of the heat, substantially as and for the purpose hereinbefore set forth.



406,358.

406,360.

406,359. TUBE FOR STEAM-BOILERS. FREDERICK LINDRUM, Chicago, Ill. Filed July 27, 1888. Serial No. 281,216. (No model.)

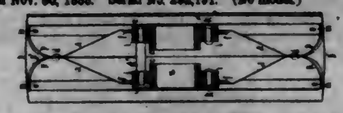
Claim.—1. The combination of boiler-tubes having conical collars at each end with boiler-heads having tapered apertures to receive the conical collars, and stay-bolts between the tubes connecting the boiler-heads, substantially as and for the purpose hereinbefore set forth.

2. The combination of the tube-sheets with the stay-bolts, consisting of tapered head at one end, a threaded portion beneath said head provided with a nut, and a threaded outer end provided with two nuts, one for the outside and one for the inside of the tube-sheet, whereby the tube-sheets are held rigid.

3. The combination of the stay-bolt with its conical head and screw-threaded shank, and the clamping-nut and washer upon this shank, the long body of the bolt smaller in diameter than the shank, screw-threaded at its end and provided with clamping-nuts and washers, with the boiler-heads A' A^3, one of which has a tapering aperture to receive the conical bolt-head and the other a plain aperture for the end of the bolt, all assembled and operating substantially as shown, and in the manner hereinbefore set forth.

406,360. SEEDING ATTACHMENT FOR PLOWS. WILLIAM D. LINDSLEY, Huntsville, Knox. Filed Mar. 11, 1889. Serial No. 302,763. (No model.)

Claim.—1. In a seeding attachment for plows, the upright tubular conductor forked at the lower end and having the rigid front and rear arms, the furrow-wheel mounted on the rear arm, a clamp pivoted to the front arm, the hopper, the feed-wheel having duplicate channels in opposite faces, and suitable connecting-gearing between said wheel and the furrow-wheel, said elements combined substantially as and for the purpose described.



2. In a seeding attachment for plows, the vertical feed-wheel having duplicate channels in opposite faces and its supporting-shaft, in combination with the seed-cup formed, as described, to permit the passage of the seed to the sides of the wheel at the rear but contracted at the front and provided with delivery-openings in both sides, the forked tubular conductor having a central partition and bolted to the seed-cup, a supporting-wheel, and an arm for connection with the plow.

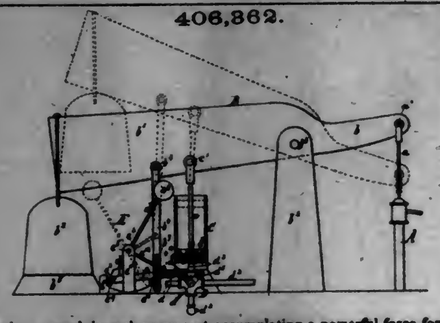
3. The vertical feed-wheel having duplicate channels in its faces, in combination with the seed-cup having the laterally-expanded front portion, the contracted rear portion fitting the sides of the wheel, the studs b^3 and g', the outlet-openings between said studs, the regulating-gates located between said openings and the studs g', the forked lever attached to the plates, and the bridge overlying the wheel.

4. In combination with a seed-distributing mechanism substantially such as described, the supporting-clamp pivoted thereto, said clamp comprising a plate with clamping devices thereon, an underlying plate pivoted thereto and provided with slotted ears, and a top plate having vertical screws and horizontal trunnions extended through the slots of the bottom plate.

5. In a clamp for connecting a seeding attachment to the cross-brace of a mold-board plow, the plate provided with studs and a fastening-screw for connecting it with the brace, in combination with the underlying plate pivoted thereto and provided with upright slotted ears, and the top plate provided with vertical screws, and with trunnions extending through the slotted ears.

406,361. PULLEY. HEINRICH E. LUDWIG, Berne, Switzerland. Filed Nov. 30, 1888. Serial No. 292,191. (No model.)

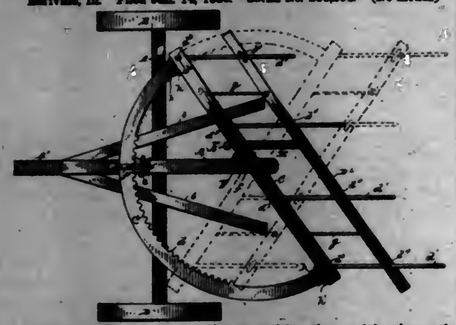
Claim.—1. The combination of the hub or nave, the sheet-metal disks *a*, secured to each other on a circle *d* and having each the outwardly-bent portion *p*, with flange-*m* and offset *m'*, rim *b*, rings *o*, and means for fastening together the rim, the disks, and the rings, substantially as specified.



2. The combination of the divided hub or nave *c*, having flanges *i*, with projecting rim *i'*, divided disks *a*, having one or more corrugations *f*, divided rings *e* and *e'*, corrugated on the side facing the disks, screw *q*, and means for securing together the disks, the rings, and the flanges *i*, substantially as described.

3. The combination of the divided hub or nave *c*, having flanges *i*, with recess *r*, divided disks *a*, having one or more corrugations *f*, divided rings *e* and *e'*, corrugated on the side facing the disks and the rings *e'* being each provided with a projection *t*, and means for securing together the disks, the rings, and the flanges, substantially as set forth.

406,362. METHOD OF OPERATING OIL-WELLS. MURDOCK LITTLE, Duke Centre, Pa. Filed Jan. 9, 1888. Serial No. 260,164. (No model.)



Claim.—The within-described method of operating slowly-flowing oil-wells equipped with lifting-pumps, as described, consisting, first, in automatically lowering the pump-piston very slowly relative to its upward movement, thereby allowing time for a full supply of oil to flow into the well by the time the piston has completed its down-

406,362.

stroke; second, in such movement accumulating a powerful force for raising the piston, and, third, automatically withdrawing the lowering force and allowing the said accumulated raising force to automatically come into action and suddenly, powerfully, and automatically raise the piston and the oil carried by the same, substantially as described.

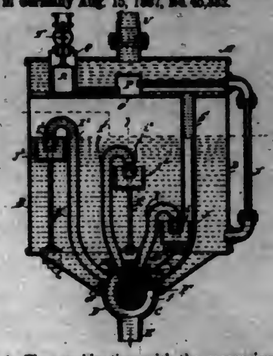
406,363. HAY-RAKE. WILLIAM R. MANN and GEORGE KEITH, Rutville, Ill. Filed Jan. 14, 1889. Serial No. 296,291. (No model.)

Claim.—The horse hay-rake comprising the semicircular rack, the rake-head to which said rack is pivoted at its ends, the tongue or draft-pole extension upon which at its rear end said rake-head is pivoted by means of a pivoted ear-plate and staples, the tooth-bar having pivoted connection with said rake-head, the rake-teeth having pivotal connection with the rake-head, and the handled shaft carrying a pinion engaging said rack, substantially as set forth.

406,364. ANTI-MAGNETIC WATCH. CHARLES T. MASON, Sumter, S. C., assignor, by direct and mesne assignments, to the American Waltham Watch Company, of Massachusetts. Filed June 26, 1888. Serial No. 278,256. (No model.)

Claim.—1. The combination, with a watch-balance, of a ring of magnetic metal encircling or surrounding the said watch-balance, substantially as described.

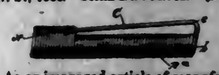
2. The combination, with the balance-wheel of a watch, of a soft-iron ring surrounding the balance-wheel, substantially as specified.



3. The combination, with a balance-wheel of a watch, of a ring of soft iron surrounding the balance-wheel and provided with an inwardly-projecting flange on its lower part, substantially as herein shown and described.

406,365. PROCESS OF GALVANIZING METALS. THOMAS MIDGLEY and WALTER B. NYE, Beaver Falls, Pa. Filed Sept. 2, 1886. Serial No. 212,504. (Specimens.)

Claim.—The above-described process of galvanizing metal, which consists in passing the metal into and through a large body of lead, and through and out of a smaller body of zinc floating upon the lead, as herein described, and for the purposes set forth.



406,366. MEASURING-VESSEL FOR LIQUIDS. JOHN P. MÜLLER, Brooklyn N. Y. Filed Apr. 23, 1888. Serial No. 308,240. (No model.) Patented in Germany Aug. 15, 1887, No. 45,332.

Claim.—1. The combination, with the measuring-vessel B, having a shell D, provided with a series of openings leading to the vessel, of an outflow E, a supply-pipe S, made to communicate with one of said openings, a series of siphons of varying heights made to communicate with said openings, adjustable cups into which said siphons dip, and a plug F, provided with a depression for opening and closing said openings, substantially as described.

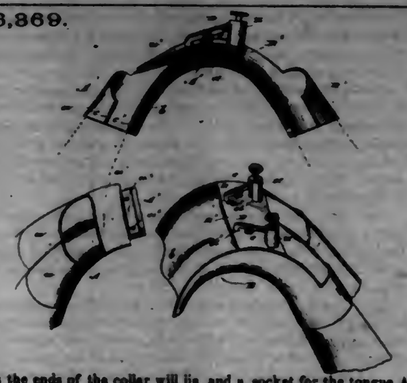
2. The combination, with a vessel having a siphon, of a cup into which said siphon dips, a jointed arm holding the cup, and an adjusting-rod K for said arm, substantially as described.

406,367. SAFETY-PIN. EDWARD MCCONNELL, Cape Elizabeth, Me. Filed Nov. 27, 1888. Serial No. 291,962. (No model.)

Claim.—1. As an improved article of manufacture, a safety-pin constructed of a single piece of wire, this wire being formed into a large guard-coil A, and a longer flexible body-coil B, this body-coil being of less diameter than the said guard-coil and having its inner end abutting the inner end of the same, whereby the coils are mutually braced, and a crescent-shaped opening *a* is formed for the reception of the point of the securing-pin, and a pin C, formed of a continuation of the outer end of the body-coil, and bent so as to enter the said opening *a*, substantially as described.

2. As an improved article of manufacture, a safety-pin constructed of a single piece of wire, this wire being formed into a spring guard-coil at one end, a long spring body-coil of less diameter than the guard-coil, and setting up close against the inner end of the latter, thereby bracing the two coils and forming a crescent-shaped opening for the reception of the securing-pin, and the pins, substantially as described.

406,368. SHUTTLE FOR SEWING-MACHINES. J. FREEMAN MCKENNEY, Baltimore, Md. Filed July 9, 1887. Serial No. 243,994. (No model.)



Claim.—1. A sewing-machine shuttle having a cylindrically-bored barrel provided with a flattened face curved in the direction of the length of the shuttle, and a flattened bottom surface at an acute angle with the flattened face, as set forth.

2. The combination, with the shuttle-race having a flat curved side engaging the face of the shuttle, and a carrier having a flat surface engaging the bottom of the shuttle, as set forth, of a shuttle provided with a flattened face curved in the direction of its length, and a flattened bottom surface at an acute angle with said flattened face, as and for the purposes described.

406,369. HORSE-COLLAR FASTENER. ALEXANDER P. PORTER, Marengo, Ohio. Filed Apr. 11, 1888. Serial No. 306,755. (No model.)

Claim.—In a horse-collar fastening, the section A, provided with sockets *a a*, having perforations *c* and *c'*, a raised cross-bar located above said sockets, and a tongue with perforations, in combination with a section B, having similarly-constructed sockets, the cross-bar raised above the base-plate of said section to provide a recess within

406,369.

which the ends of the collar will lie, and a socket for the tongue A', said cross-bar carrying pivoted spring-actuated catches, said catches having their ends which pass through the perforations in the cross-bar beveled, said section B having a curved portion *b*, the parts being organized substantially as shown, and for the purpose set forth.

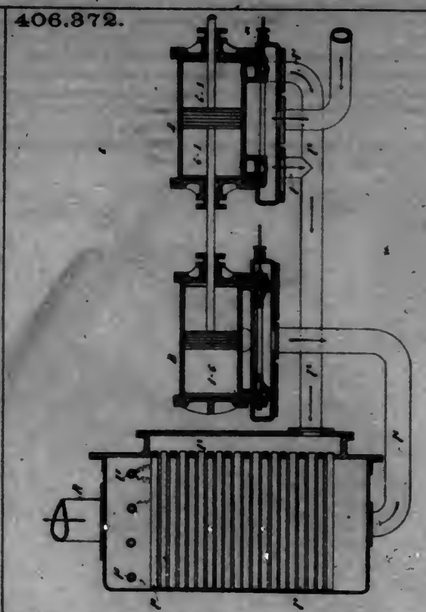
406,370. HAME STAPLE AND CLIP. JOHN I. REAN, Greeley Center, Nebr. Filed Apr. 4, 1888. Serial No. 306,082. (No model.)

Claim.—1. The combination, in an attachment for hames, of a clip or staple the ends of which are adapted to be attached to the hames, the rear edge of the cross-bar thereof being provided with a recess *b'*, the trace-plate having the rounded end *c* adapted to lie within said recess, and a strap encircling the cross-bar of the staple, and means for pivotally connecting the trace-plate to said strap, substantially as shown, and for the purpose set forth.

2. The combination, in an attachment for hames, of a staple, the rear edge of the cross-bar thereof being provided with a recess *b'*, a connecting-strap or open-ended loop adapted to encircle the bar *b* and provided with circular recesses *c c* and a connecting-screw, a trace-plate having a circular plate *c*, raised portions *d*, and semicircular flange *d'*, formed on one end thereof, while the trace is adapted to be attached to the other end, substantially as shown, and for the purpose set forth.

406,371. MEANS FOR SECURING STEREOTYPE-PLATES WHICH ARE CAST SEPARATELY FROM THEIR BEDS. EDWARD D. ROGERS, Church End, Finchley, County of Middlesex, England, assignor to Paul Wilcox, New York, N. Y. Filed Sept. 17, 1887. Serial No. 250,007. (No model.) Patented in England June 4, 1869, No. 2,575.

Claim.—1. A stereotype-plate provided with straight vertical flanges along its edges and at right angles thereto, in combination with a bed provided with correspondingly-shaped recesses to receive said flanges, and means for holding said plate in position, substantially as described.



2. A type-plate having along its edges and at right angles thereto and integral therewith rigid non-flexible vertical side flanges *b*, in combination with a block provided with vertical sides against which said flanges may rest, and whereby the said flanges are adapted to fit loosely over the said vertical sides and permit the ready removal of the plate by lifting it vertically from the block, substantially as set forth.

406,372. UTILIZING EXHAUST-STEAM. WILHELM SCHMIDT, Halberstadt, Prussia, Germany. Filed Dec. 11, 1886. Serial No. 220,396. (No model.) Patented in England Sept. 6, 1886, No. 12,066.

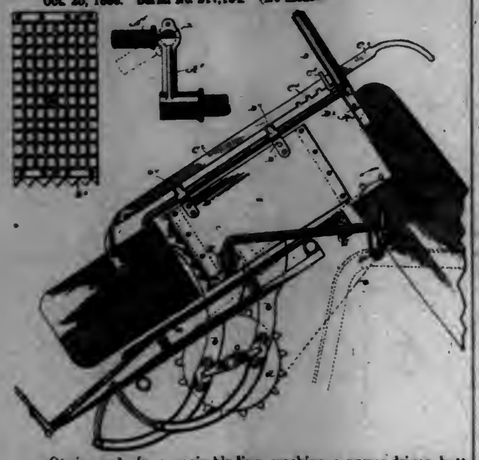
Claim.—1. A method of utilizing the latent heat of exhaust-steam, which consists in first using live steam to compress air and using the exhaust-steam from this air-compressing engine for warming and evaporating water the steam of which is mixed with the compressed air, substantially as and for the purpose as described.

2. A method of utilizing the latent heat of exhaust-steam, which consists in first using live steam to compress air, and using the exhaust-steam from this engine for warming and evaporating water the steam of which is mixed with the compressed air, and heating this compressed air before or during its passage through the evaporating

406,372.

apparatus for the purpose of increasing its absorbing powers, substantially as described.

406,373. RUNNING-GEAR FOR VEHICLES. LARANCE W. SIBBIS and JAMES H. WALKER, Holden, Mo. Filed Mar. 23, 1889. Serial No. 304,472. (No model.)



Claim.—1. The combination, with the front axle and bolster, of the pivoted tongue, the rigid non-yielding bearing *h* on the rear end of said tongue, the swinging bail pivotally attached to the tongue forward of its pivotal point, and the spring-bar attached at one end to the bolster and at the other to said bail and bearing on said bearing, substantially as shown and described.

2. The combination, with the front axle, the tongue pivoted as shown, and the reach pivoted as described, of the spring bearing on the

tongue, and the wire L, bearing on the reach, substantially as described.

3. The combination, with the hounds and the pivoted reach, of the roller journaled on the reach and adapted to travel on the hounds, and the spring-wire L, adapted to bear on the reach between its pivot and the said roller, substantially as shown and described.

406,374. GRAIN-BINDER. JOHN F. STEWARD, Chicago, Ill. Filed Oct. 25, 1886. Serial No. 217,154. (No model.)

Claim.—1. In a grain-binding machine, a power-driven butt-board the active face of which is pitted or reticulated, substantially as shown, to receive and retain the ends of the straws.

2. In a grain-binding machine, a butt-board provided with a facing of rubber or like yielding elastic material to act upon the ends of the grain-straws.

3. In a grain-binding machine, a rod or guide extending along the edge of the grain table or chute, in combination with a butt-board mounted at its ends upon and wholly sustained by said rod and movable in the direction of its length thereon.

4. In combination with a practically-straight rod or guide, a butt-board mounted thereon at both ends, a crank, and a pitman connecting the crank and board, whereby the board may be reciprocated endwise in a line parallel with its face.

5. In a grain-binding machine, the combination, substantially as described and shown, of a sustaining rod or guide and a butt-board mounted longitudinally on said rod and free to reciprocate endwise and also to vibrate transversely thereon.

6. In combination with the table or chute over which the grain is delivered laterally, the pivoted horizontally-adjustable guide, and the butt-board mounted at one edge on said guide to slide lengthwise thereof and also to vibrate laterally thereon, and mechanism, substantially such as shown and described, for imparting said motions thereto.

7. In a grain-binding machine, a sustaining rod or guide, a butt-board connected at its edge to said rod to slide longitudinally and vibrate laterally thereon, a driving-crank having its wrist oblique to its axis of rotation, and a pitman attached to the crank and to the board, substantially as described, whereby the board is caused to swing toward the grain when moving endwise in a forward direction and caused to swing away from the grain during its end motion in the opposite direction.

8. In combination with the butt-board and the guide whereon it is movable longitudinally and laterally, its operating-pitman, and the driving-crank having the wrist adjustable, as described, so that it may be placed at a greater or less angle to the axis of rotation, whereby the lateral vibration of the board may be increased or diminished.

9. The combination of the butt board or plate D and its guide, the butt-retaining plate C at its end, the driving-crank A^3, the pitman G, attached at one end to said crank, and the bearing E, connecting the pitman with the butt-board.

10. The combination of the guide-rod B^3, the butt plate or board D, sliding and vibrating thereon, the butt-retaining plate C, the crank A^3, and the connecting-pitman G, substantially as described, all adjustable by means of a rod or lever under the control of the driver, as described, whereby they are made to operate and regulate the direction of movement of the grain.

11. In combination with a grain harvesting and binding machine, a round guide-rod B^3, extending along the edge of the binder-table, the butt-board D, its ears or plates D', and the anti-friction rollers D^4, journaled to said ears and mounted on top of the guide-rod, as shown, the board being free to move longitudinally and to vibrate laterally at its lower edge, as described.

12. In a grain-binding machine, and in combination with the grain table or chute, an arm B^3, overhanging said table and pivoted to swing horizontally in combination with a locking device to hold said arm in different positions, a butt-board suspended from and guided at both ends by said rod to move longitudinally and vibrate laterally thereon, a crank lying outside of the plane of said board, and a pitman extending from the crank to the board.

13. In a grain-binding machine, a guide B^3, adjustable horizontally to change its angle to the edge of the grain-table, the butt-board arranged to reciprocate longitudinally and vibrate laterally on said guide, the butt-retaining plate C, hinged to the guide-rod, and the adjusting-bar C^3, rigidly attached to said plate.

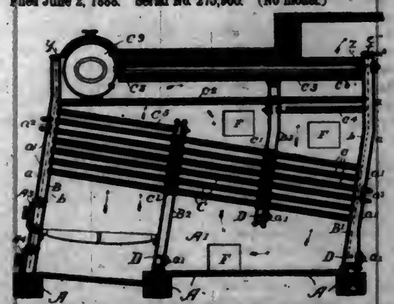
14. In a grain-binding machine, a guide B^3, adjustable horizontally to change its angle to the edge of the grain-table, the butt-board arranged to reciprocate longitudinally and vibrate laterally on said guide, and the butt-retaining plate C, hinged to the guide.

15. In a grain-binder, a butt-board having teeth D^2, projected toward the grain-space to engage the butts of the grain, in combination with a fixed guide B^3, whereon the board may reciprocate in a line parallel with its face and also swing in a line at right angles to its face to and from the grain, and suitable mechanism for imparting said movements to the board.

16. In a grain-binding machine, the circulatory packers *b b* and their actuating-crank, as usual, the reciprocating butt-board provided with teeth to engage the butts of the grain, the crank and pitman for operating the board, and intermediate mechanism, substantially as shown, connecting the two cranks and timed to compel the advance of the board and packers in unison, whereby the grain is subjected to the action of the packer and the butt-board simultaneously.

17. In a grain binding and harvesting machine, a longitudinally-reciprocating butt-board having a vertical row or series of teeth at its end to engage the butts of the grain, and a circulating packer to act against the middle of the grain, in combination with operating mechanism, substantially as described, adjusted to cause the simultaneous advance of the butt-board and the packer.

18. In a grain-binding machine, a butt-board and a packer combined with operating mechanism whereby they are advanced simultaneously against the grain.



19. In combination with a grain-binding machine, a longitudinally-reciprocating butt-board the lower or forward end of which is provided with a vertical row or series of teeth D^2, whereby the end of the board is adapted to engage the end of the straws and prevent them from rising at the butts as they are forced laterally.

406,375. FOUNTAIN-PEN. CHRISTOPHER STOCKMANN, Brooklyn, N. Y. Filed Dec. 13, 1888. Serial No. 293,463. (No model.)

Claim.—The combination, with the ink-reservoir A, of the pen-plug having a pen-receiving socket, and the feed-plug made to fit the interior of the pen-plug and having two channels *d d*, separated from each other by an intervening ridge, and a feed-tongue having two openings *e e*, one for each channel, substantially as described.

406,376. WATER-TUBE BOILER. JOHN TAYLOR, Troy, N. Y. Filed June 2, 1888. Serial No. 275,900. (No model.)

Claim.—1. A water-tube steam-boiler consisting of a group of inclined water-tubes, a single water-chamber at each end of the group, into which the individual tubes all open, formed from sheets of wrought metal united at their edges and centrally cross-stayed, a row of horizontal water tubes connecting the upper parts of the water-chambers with each other, a steam-drum and connections leading thereto from the upper part of one of the water-chambers, water-supply pipes leading into the lower part of one of the water-chambers, fire-grate, and grate and boiler supporting inclosure, and a flame-deflector extending transversely of the group of water-tubes, consisting of sheets of wrought metal united at their edges to form a single water-chamber having a lower supply and upper discharge pipe and centrally cross-stayed and provided with tube-receiving thimbles passing transversely through the chamber, substantially as described.

2. In a water-tube boiler, the combination, with inclined water-tubes supported at their ends by front and rear legs, of a flame-deflector consisting of metal plates secured together to form a water-chamber by tube-receiving thimbles passing through the chamber, inlet water-connections leading to the water-chamber of the deflector, and outlet-connections leading to the steam-pipe, substantially as described.

3. In a water-tube boiler having a front and rear water-chamber leg and a superheated steam-drum, a steam-tube having solid welded heads, and expanded nipple-connections by which one end of the tube is connected with one of the leg-chambers and the other end with the steam-drum, substantially as described.

4. The combination of the front and rear water-legs, the water-tubes connecting the same, and the hollow water-containing flame-deflector between said legs, with the steam-drum located between the front leg and deflector, above the grate, and communicating only with the rear water-leg, substantially as and for the purpose set forth.

5. The combination of the front and rear water-legs, the intermediate hollow water-holding flame-deflector, and the grate supported on said deflector and front leg, with the inclined water-tubes connecting the front and rear legs and passing through the deflector, but not communicating therewith, substantially as specified.

6. The combination of the front and rear water-legs and the intermediate water-chamber flame-deflectors, with the water-tubes connecting said legs and passing through the upper portion of one deflector and through the lower portion of the opposite deflector, but not communicating with either, substantially as and for the purpose described.

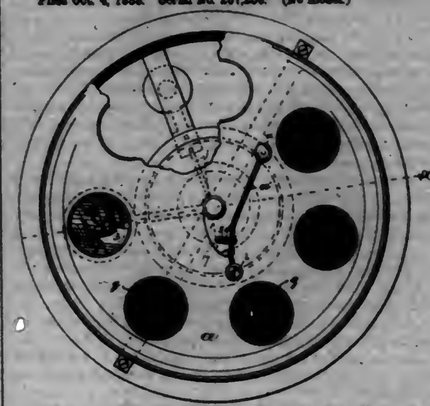
7. The combination of the stationary front water-leg and the rear water-leg having an enlarged mud-chamber at bottom and mounted on a movable support, with the water-tubes connecting said legs, the flame-deflector, the steam-drum located between the front leg and deflector, and the connections between said drum and rear water-leg, substantially as specified.

8. In a boiler, a water-circulating tube located above the grate and in the water-space of the boiler and formed to be of less strength than the other parts of the boiler, whereby it will break when subjected to undue steam-pressure without danger or injury to other portions of the boiler, substantially as and for the purpose set forth.

9. The combination of the front and rear water-legs and the intermediate hollow water-holding deflectors provided with horizontal hand-holes at their upper ends, with the tubes connecting the said deflectors respectively with the front and rear legs at points opposite said hand-holes, and the water-tubes connecting the front and rear legs and passing through the deflectors, substantially as and for the purpose set forth.

10. The combination of the front and rear water-legs, the intermediate water-holding deflectors, the water-tubes connecting said legs and passing through said deflectors, but not communicating therewith, with the steam-tubes leading from the deflectors and front leg to the top portion of the rear leg, and the steam drum and pipe located above the deflectors and tubes and communicating with the top of the rear water-leg also, all substantially as set forth.

11. The combination, in a tubular boiler, of the water-legs and steam-drum, with a fragile water-tube located above the grate and connecting the water-legs of the boiler and constructed to be of less tensile strength than the remaining tubes, for the purpose and substantially as set forth.



12. The combination of the front and rear water-legs and the intermediate water-containing deflectors with the water-tubes connecting the legs, but not communicating with the deflectors, the tubes connecting said deflectors respectively with the front and rear legs, and the steam-drum communicating solely with the rear leg, substantially as specified.

13. A hollow water-leg for tubular boilers, having its inner plate perforated in staggered order for the reception of the ends of the water-tubes and its outer plate provided with oblique hand-holes, substantially as and for the purpose specified.

14. The combination of the front water-leg, the rear water-leg having an enlarged mud-chamber at bottom and resting on a movable support, the water-chamber deflectors between said legs, the water-tubes passing through and not communicating with said deflectors and connecting the front and rear legs, the water-supply pipes to said legs and deflectors, the steam-drum located between the front legs and deflector above the grate, the steam-tube connecting said drum with the rear leg, and the steam-connections between said legs and deflectors, all substantially as set forth.

15. A water-leg for tubular boilers, composed of wrought-metal plates riveted together to form water-tight chambers, the inner plate having openings in it for the reception of the water-tube ends made in staggered order, and the outer plate having oblique hand-holes opposite a pair of openings in the inner plate, in combination with the obliquely-arranged hand-plates closing said holes, all substantially as specified.

406,377. ANNUNCIATOR. ALBION A. VANDERPOEL, Newark, N. J. Filed Oct. 4, 1888. Serial No. 287,236. (No model.)

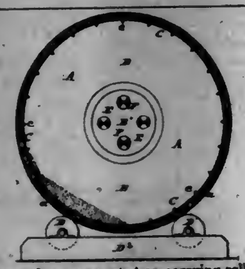
Claim.—1. In an annunciator, the combination of a center shaft carrying an indicating-hand or indicator, a cam having opposite inclines, and a series of arms adapted to engage said cam and revolve or turn the said shaft and arm thereon, a slotted guide or holder *r*, and suitable means, as described, for operating said arms, substantially as and for the purposes set forth.

2. In an annunciator, the combination of a shaft carrying an indicator, and a cam having opposite inclines *n* terminating in a point, and a series of arms adapted to be operated by the person making the call, substantially as and for the purposes set forth.

3. In an annunciator, the combination, with a case or face-plate *a*, having a series of openings providing indicating-characters, a shaft carrying an indicator and adapted to bring said indicator into coincidence with said openings, a cam revolving with said shaft, and a series of arms corresponding in number with said openings and adapted to engage said cam and cause the cam to turn the shaft and indicator thereon into coincidence with the corresponding opening, substantially as and for the purposes set forth.

4. In combination with the indicator or hand *o*, a cam revolving with said hand and provided with inclines *n*, a point *p*, and a recess *m*, a series of armature-arms engaging said cam, a bell-wheel, and means, substantially as described, for transmitting the motion of the said arms to said wheel, a bell and hammer, and means, substantially as described, for transmitting the motion of said wheel to the said hammer, a battery, conducting-wires, and magnets, substantially as set forth.

5. In combination, in an annunciator, with a series of magnets and armatures, a central shaft carrying a cam having inclines *n* and a recess *m*, a bell, and a circuit breaker or closer operated by said armatures to secure a succession of strokes on the bell, a battery and conducting-wires, all said parts being arranged and combined substantially as and for the purposes set forth.



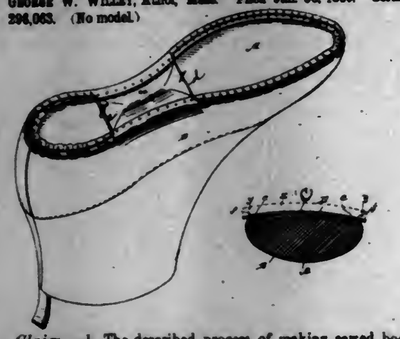
6. In an annunciator, the combination of a case *a*, having a bell and hammer thereon and apertures therein, with transparent panes with characters thereon in said apertures, a central shaft *k*, cam-lever *l*, a series of armature-levers *h* engaging said cam, a series of magnets *g*, shaft 10, springs 18, levers 6, wheel 3, contact-point 13 14, and pintle 4, all said parts being arranged and adapted to operate substantially as and for the purposes set forth.

406,378. APPARATUS FOR COMMINUTING AND CORRODING LEAD. EDWARD A. WESTON and LOUIS O. GIBB, Chicago, Ill. Filed Apr. 2, 1888. Serial No. 269,360. (No model.)

Claim.—1. An apparatus for corroding and comminuting lead in the Versepuy mode of manufacturing white lead, the same consisting of a shaftless cylinder or drum supported on carrying-rollers and provided with axial openings or man-holes, essentially as set forth.

2. An apparatus for corroding and comminuting lead in the Versepuy mode of manufacturing white lead, comprising, in combination,

406,878.



a shaftless cylinder or drum supported on carrying-rollers, a lining C for the same provided with longitudinal ribs, an axially-arranged gas-introducing tube extending to or near the middle of the cylinder, and axially-arranged removable man-heads E, closing central man-holes in the cylinder-heads and adapted to permit of the inspection, &c., of the material during the rotation of the cylinder, essentially as described, and for the purpose set forth.

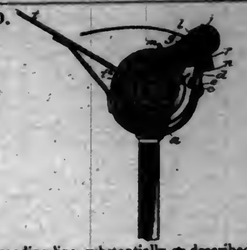
3. An apparatus for corroding and comminuting lead in the Versepuy mode of manufacturing white lead, comprising, in combination, a shaftless cylinder or drum supported on carrying-rollers, a lining C for the same provided with longitudinal ribs *c*, an axially-arranged gas-introducing tube extending to or near the middle of the cylinder, and removable man-heads closing central man-holes in both the heads of the cylinder and provided with a series of adjustable openings, essentially as described, and for the purpose set forth.

4. An apparatus for comminuting and corroding lead, consisting of a shaftless cylinder or drum supported on carrying-rollers and provided with band-tracks *a a*, having lapped tongues *a' a'*, laterally-arranged lugs a^3 a^3, and tightening bolts a^4 a^4, as described, and for the purpose set forth.

406,879. MANUFACTURE OF SEWED BOOTS AND SHOES. GEORGE W. WILLEY, Athol, Mass. Filed Jan. 30, 1886. Serial No. 226,063. (No model.)

Claim.—1. The described process of making sewed boots or shoes, consisting in first lasting the upper directly to the last, then attaching the stay-welt to the upper and sewing the two together, then inserting the inner sole and securing it in place, and securing or sewing the outer sole to the stay-welt only, substantially as and for the purposes hereinbefore set forth.

2. The method of making welted boots and shoes, which consists in first lasting the upper directly to the last, then applying and securing the stay-welt to the upper while on the last, and subsequently removing the upper and stay-welt from the last and securing the outer sole to the stay-welt, substantially as and for the purposes hereinbefore set forth.



3. The described method of lasting the upper, consisting in lasting the shank of the upper by means of lasting-tacks to a shank-filling formed and applied to the last, substantially as described, and lasting the remaining portions of the upper to the last (without the inner sole) by means of draw cords or strings, substantially as and for the purposes hereinbefore set forth.

4. In the operation of lasting the upper to the last without an inner sole, the method of lasting the shank of the upper, which consists in first applying to the last a shank-filling of the character described, and then lasting the shank of the upper to said shank-filling by means of lasting-tacks, substantially as hereinbefore set forth.

406,880. COPY-HOLDER. FREDERICK G. WIENER, Leavenworth, Kans. Filed Mar. 28, 1888. Serial No. 268,172. (No model.)

Claim.—1. A cylindrical shell copy-holder open at its rear side and top, its front edge terminating in a reading-line for the copy and having pressure drawing-rolls mounted in bearings in its ends above

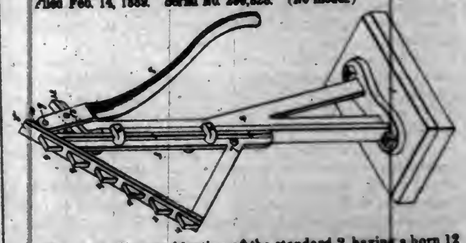
406,880.

the said front reading-line, substantially as described, for the purpose specified.

2. A cylindrical shell copy-holder open at its rear side and top, its front edge terminating in a reading-line for the copy, having an inner front supporting-back for the latter arranged to lap the said case front edge and form the opening through which the copy is drawn, and having pressure drawing-rolls mounted in bearings in its ends above the said supporting front plate, substantially as described.

3. A cylindrical shell copy-holder open at its rear side and top, its front edge terminating in a reading-line for the copy and having at its rear edge rearwardly-extending copy-sustaining arms, in combination with pressure drawing-rolls mounted in bearings in the ends of the said shell, substantially as described.

4. In a copy-holder, the combination, with a cylindrical shell open at its rear side and top and terminating at its front edge in a reading-line, of a pair of pressure drawing-rolls mounted in the ends of the shell, the upper one whereof is mounted in arms pivoted to the ends of the shell and adapted to be turned back to carry the top roll away from the under roll, substantially as described, for the purpose specified.

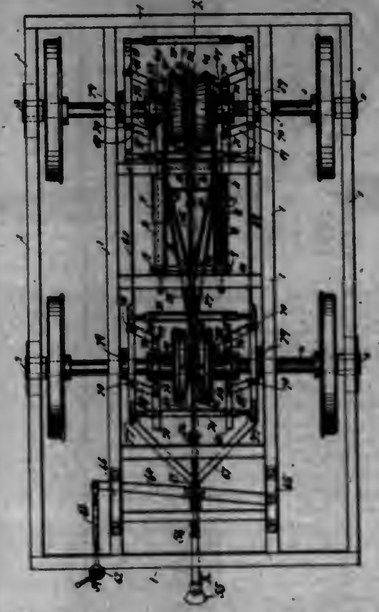


5. The combination, in a copy-holder, of a cylindrical shell open at its rear side and at its top, its front edge terminating in a reading-line and having a back supporting-plate for the copy, with a pair of pressure drawing-rolls mounted in the ends of said shell above said reading-line, and spring-fingers extending from said front edge in contact with the copy and bearing upon the lower of the pressure drawing-rolls, substantially as described, for the purpose specified.

6. The combination, in a copy-holder, of a cylindrical shell containing the copy, terminating at its front edge in a reading-line and having an interior back support for such copy, with pressure drawing-rolls mounted in said shell above said front edge and a cover-plate pivoted to the ends of the shell and adapted to be set in the arc of a circle in relation to said reading-line, substantially as described.

7. The combination, in a copy-holder, of a cylindrical shell terminating at its front edge in a reading-line, with pressure drawing-rolls mounted in the ends of said shell above the said front edge, and arms having suitable clamps, whereby the device is attached to the carriage of the type-writer, substantially as described.

8. As a copy-holder attachment for type-writers, the cylindrical shell open at the rear side to contain the copy in a loose coil, having a front reading-guide edge, pressure drawing-rolls mounted in said shell above said edge, an interior supporting-back for the copy, and laterally-adjustable arms provided with suitable attaching-clamps, substantially as described.



406,881. CARRIAGE-JACK. ARTHUR ZIMMERMAN, St. Louis, Mo. Filed Feb. 14, 1889. Serial No. 299,828. (No model.)

Claim.—1. The combination of the standard 2, having a horn 12 at its upper end formed with an inclined upper side, the lifting-frame 3, having an upward projection 3^p, provided with a lug 10, and the lever 8, formed with a slot 11, through which the horn projects, pivoted to the lug and provided with a fulcrum-pin 13, substantially as described.

2. The combination of the standard 2, having a horn 12 at its upper end formed with an inclined upper side, and hooked lugs 6, the lifting-frame 3, having flanges 5, upward projection 3^p, and lug 10, and the lever 8, having slot 11 pivoted to the lug and provided with a fulcrum-pin 13, substantially as described.

406,882. CAR BRAKE AND STARTER. ALFRED B. ARNOLD, Columbus, Ind., assignor of five-eighths to the Arnold Car Brake and Starter Company, same place. Filed July 16, 1888. Serial No. 280,114. (No model.)

Claim.—1. In a car-brake, the combination of a guide-rod secured to the car-frame, a cross-head adapted to slide longitudinally along said guide-rod, a spring arranged to force said cross-head along said guide-rod, a sprocket-wheel turning loosely on rear car-axle, a sprocket-spool turning loosely on forward car-axle, a chain connected thereto, and springs bearing against said cross-head, said chain engaging with sprocket wheel and spool, a clutch mounted on forward car-axle arranged to turn therewith, slide longitudinally thereon, and engage with said sprocket-spool, a clutch mounted on rear axle and adapted to turn thereon, and to engage with friction-disks firmly mounted and secured to axle, and mechanism for simultaneously operating said clutches, substantially as and for the purpose described.

2. In a car-brake, the combination of the horizontal parallel guide-rods secured to the car-frame, the cross-heads arranged to slide longitudinally thereon, the coiled accumulator-springs loosely encircling said guides and arranged to force said cross-head along them, a sprocket-wheel turning loosely on rear car-axle, sprocket-spool turning loosely on forward car-axle, a chain connected to and accumulator-springs bearing against said cross-head, said chain engaging with sprocket wheel and spool, a clutch mounted on forward car-axle arranged to turn therewith, slide longitudinally thereon, and to engage with the said sprocket-spool, a clutch mounted on rear axle and adapted to turn thereon and to engage with friction-disks, said disks firmly mounted on and secured to axle, and mechanism for simultaneously operating said clutches, substantially as and for the purpose set forth.

3. In a car-brake, the combination of two parallel guide-rods secured to car-frame, a cross-head adapted to slide longitudinally along said guide-rods, a coiled accumulator-spring loosely encircling said guide-rods and arranged to force said cross-head along them, a sprocket-spool turning loosely on car-axle, a chain connecting said sprocket to cross-head, clutches mounted on car-axle and arranged to turn therewith, slide longitudinally thereon, and to simultaneously engage with both ends of sprocket-spool, and mechanism for operating said clutches, substantially as and for the purpose described.

4. In a car-brake, the combination of a spring, a rod engaging with said spring, sliding longitudinally in bearings secured to car-frame and a fork secured thereto, a stop-lever fulcrumed on said fork, a spool turning loosely on car-axle and provided with annular flanges on which stop-lever arms rest, and a stop integral therewith, a clutch mounted on said axle and adapted to turn therewith, slide thereon, and to engage with said spool, and mechanism to operate said clutch, substantially as and for the purpose set forth.

5. In a car-brake, the combination of a guide-rod secured to car-frame, a cross-head adapted to slide along said guide-rods, a coiled accumulator-spring encircling said guide-rods and arranged to force said cross-head along them, a stop-lever, a rod connected to said stop-lever, and adapted to engage with accumulator cross-head at a point near the end of its stroke, a spool turning loosely on car-axle and provided with annular flanges on which stop-lever arms rest, and a stop integral therewith, a chain connected to and a spring bearing against said accumulator-spring cross-head, said chain connected to spool, a clutch mounted loosely on car-axle arranged to turn therewith, slide longitudinally thereon, and to engage with aforesaid sprocket-spool, and mechanism for operating said clutch, substantially as and for the purpose set forth.

6. In a car-brake, the combination of a guide-rod secured to car-frame, a cross-head adapted to slide along said guide-rod, a coiled accumulator-spring encircling said guide-rods and arranged to force said cross-head along them, a stop-lever, a rod connected to said stop-lever and adapted to engage with accumulators at a point near the ends of their stroke, an auxiliary spring, a rod engaging with said auxiliary spring sliding longitudinally in bearings secured to car-frame, and a fork secured thereto, in which stop-lever is fulcrumed, a spool turning loosely on car-axle and provided with annular flanges on which stop-lever arms rest, and a stop integral therewith, a chain connected to and a spring bearing against said accumulator-spring cross-head, said chain connected to spool, a clutch mounted loosely on car-axle arranged to turn therewith, slide longitudinally thereon, and to engage with aforesaid sprocket-spool, and mechanism for operating said clutch, substantially as and for the purpose set forth.

7. In a car brake and starter, the combination of a cross-head 9, provided with the integral-threaded boss 10, the casing 6, telescoping into casing 7 and threaded to receive boss 10, the casing 7, threaded and receiving washer 11, and the guide-rods receiving said washer and secured to car-frame, substantially as and for the purpose set forth.

8. In a car-starter, the combination of a guide-rod secured to the car-frame, a cross-head adapted to slide longitudinally along said guide-rod, a spring arranged to force said cross-head along said guide-rod, a gravity-clutch arranged to engage, when moving in one direction only, with a disk secured to car-axle, and means for connecting said gravity-clutch to said cross-head, substantially as and for the purpose described.

9. In a car-starter, the combination of the horizontal parallel guide-rods secured to the car-frame, the cross-head adapted to slide longitudinally thereon, the coiled accumulator-springs loosely encircling said guide-rods and arranged to force said cross-head along them, the clutch arranged to engage, when moving in one direction only, with the adjacent disks secured to car-axle and turning therewith, and means for connecting said clutch to said cross-head, substantially as and for the purpose described.

10. In a car-starter, the combination of a guide-rod secured to car-frame, a cross-head adapted to slide longitudinally along said guide-rods, a coiled accumulator-spring loosely encircling said guide-rod and arranged to force said cross-head along it, a gravity-clutch arranged to engage, when moving in one direction only, with its adjacent engaging-disks secured to car-axle and turning therewith, and means for connecting said gravity-clutch to said cross-head, substantially as and for the purpose set forth.

11. In a car-starter, the combination of a guide-rod secured to the car-frame, a cross-head adapted to slide along said guide-rod, a coiled accumulator-spring encircling said guide-rod and arranged to force said cross-head along it, an auxiliary spring encircling a guide-rod, said guide-rod arranged to slide in suitable bearings in frame, a connecting-rod secured to auxiliary guide-rod at one end and adapted to engage with accumulator-spring cross-head at a point near the end of its stroke, a clutch arranged to engage, when moving in one direction only, with its adjacent engaging-disks, said disks secured to and turning with car-axle, and means for connecting said clutch to said cross-head, substantially as and for the purpose described.

12. In a car brake and starter, the combination of the guide-rods 8, spring 5, cross-head 9, connecting-rod 15, chain 20, disks 45 and 46, secured to car-axle, sprocket 42, carrying pawls 43 and the stop-pins 44, substantially as and for the purpose set forth.

13. In a car brake and starter, the combination of the guide-rods 8, the springs 5, the cross-head 9, connecting-rod 15, chains 23, 28, and 29 and their connecting-rods 21, 27, 30, and 31, said rods 27, 30, and 31 provided at their rear ends with the distance-rods 25 and 26, for the purpose described and shown, the sprocket 42, carrying pawls 43 and the stop-pin 44, disks 45 and 46, of the character described and shown, secured to car-axle, clutches 47 and 48, axles 3 and 4, spool 35, clutches 37, and toggle-frames arranged to simultaneously operate said clutches 37, 47, and 48, substantially as and for the purpose set forth.

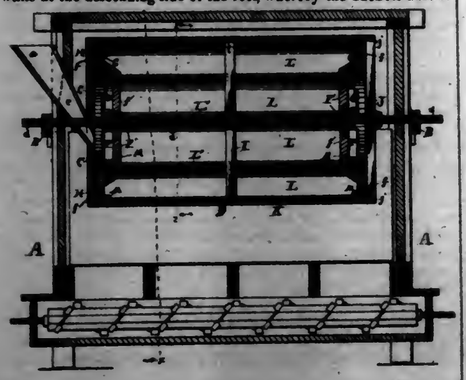
14. In a car brake and starter, the combination of the guide-rods 8, the springs 5, the cross-head 9, connecting-rod 21, stop-lever 53, connecting-rod 58, chains 20, 23, 28, and 29 and their connecting-rods 21, 27, 30, and 31, said rods 27, 30, and 31 provided at their

rear ends with the distance-rods 25 and 26 for the purpose described and shown, the sprocket 42, carrying the pawls 43 and stop-pin 44, disks 45 and 46, secured to car-axle, clutches 47 and 48, axles 3 and 4, spool 35, provided with flange 81 and stop 80, clutches 37, and toggle frame arranged to simultaneously operate said clutches 37, 47, and 48, substantially as and for the purpose set forth.

15. In a car brake and starter, the combination of the guide-rods 8, springs 5, cross-head 9, connecting-rod 21, draw-bar 55, auxiliary spring 56, fulcrum 54, secured to said draw-bar, stop-lever 53, and rod 58, jointed thereto in a manner to maintain arms of stop-lever in contact with spool-flange 81, and provided with a catch at its rear end, chains 20, 23, 28, and 29 and their connecting-rods 21, 27, 30, and 31, distance-rods 25 and 26, sprocket 42, carrying pawls 43 and stop-pin 44, disks 45 and 46, clutches 47 and 48, axles 3 and 4, spool 35, provided with flange 81 and stop 80, clutches 37, and toggle-frame arranged to simultaneously operate said clutches 37, 47, and 48, substantially as and for the purpose described.

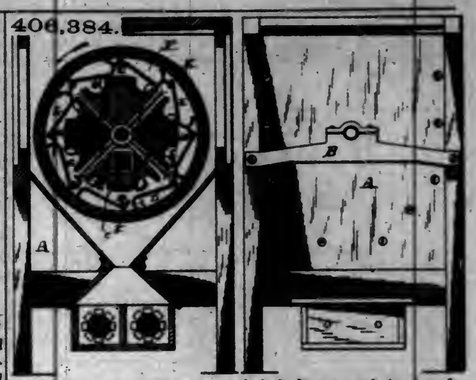
16. In a car brake and starter, the toggle-frames 68 and 69, of the form described and shown, adjustable cross-braces 74, 75, 76, and 77, connected to said toggle-frames, toggles 69, clutch-straps 71, having their top members prolonged, as described, clutches 37, 47, and 48, angle-brace 67, connecting said toggle-frame to intermediate lever 64, fulcrumed in fulcrum-brace 65 and guided at its outer end by the brace-guides 66, toggle-frame collars secured to and turning with car-axles, the adjustable connecting-rod 63, the brake-rod 59, carried by the standard 60, and having the eccentric 62, all in combination, substantially as and for the purpose described.

17. In a car brake and starter, the combination of the guide-rods 8, springs 5, cross-head 9, connecting-rod 21, draw-bar 55, auxiliary spring 56, fulcrum 54, secured to said draw-bar, stop-lever 53, and rod 58, jointed thereto for the purpose described, and provided with a catch at its rear end, chains 20, 23, 28, and 29 and their connecting-rods 21, 27, 30, and 31, distance-rods 25 and 26, sprockets 42, carrying pawls 43 and stop-pins 44, disks 45 and 46, axles 3 and 4, clutches 37, 47, and 48, toggle-frame 68 and 69, adjustable braces 74, 75, 76, and 77, toggles 69, clutch-strape of the character described and supported by their adjacent cross-braces, angle-brace 67, toggle-frame collars secured to and turning with car-axles, intermediate lever 64 and its fulcrum 65 and guide 66, adjustable brake-rod 63, and brake-rod 59, its standard 60, and eccentric 62, secured thereto, all combined substantially as and for the purpose set forth.



406,388. PROCESS FOR MAKING ALUMINIUM ALLOYS. WILLIAM A. BALDWIN, Chicago, Ill. Filed Aug. 21, 1888. Serial No. 283,364. (No specimens.)

Claim.—The process described of aluminizing a metal, consisting in fusing such metal and pouring the same on an unfused compound of clay or substances bearing alumina, sodium chloride, and charcoal or other carbonaceous substances placed in a vessel or pouring-ladle, substantially as specified.



406,384. BOLTING-REEL. CHARLES A. BARNARD, Moline, Ill., assignor to the Barnard & Leas Manufacturing Company, same place. Filed July 12, 1888. Serial No. 279,769. (No model.)

Claim.—1. A bolting-reel covered exteriorly with suitable material, in combination with internal elevator-buckets pivoted in end frames of the reel, said buckets being limited in their outward movements by striking and jarring the frame of the reel, and in their inward movements by studs on the end frame, substantially as specified.

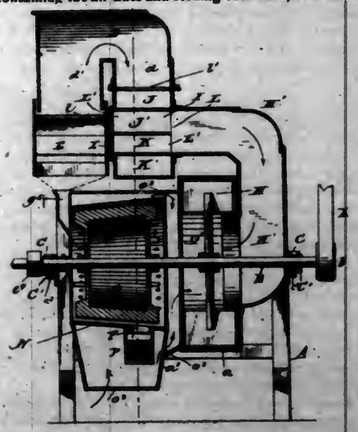
2. A bolting-reel having its outer surface covered with bolting-cloth, in combination with a series of swinging elevator-buckets therein moving automatically by gravity as the reel revolves and having blocks which strike the reel-frame when the buckets swing outwardly while at the descending side of the reel, whereby the buckets answer

406,384.

the double purpose of elevators and cloth-cleaners, and the stops for limiting the inward swing of the buckets, substantially as specified.

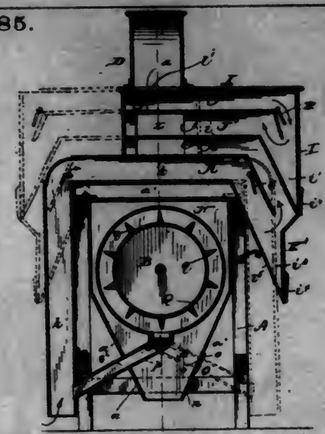
3. In a reel, the combination of the central shaft and the opposite spider-frames thereon, provided with inwardly-standing studs, with a series of elevator-buckets having an angular portion L' and an outwardly-curved portion *l*, and studs M M on the ends of said buckets journaled in the opposite spider-frames, substantially as set forth.

4. In a reel, the combination of the opposite spider-frames F F, having stop lugs on their inner faces, and the longitudinal swinging elevator-buckets L L mounted thereon, with the reel-head and the tail-spider of larger diameter than and supported on said spider-frames, and the bolting-cloth attached thereto, substantially as and for the purpose set forth.



5. The combination of the central shaft, the opposite spider-frames mounted thereon, having lugs on their inner faces, with the series of longitudinal swinging elevator-buckets mounted on said frames, the reel-head H, the spiders I and J, and the bolting-cloth, all substantially as described.

6. In a bolting-reel, the combination of the central shaft, the spider-frames mounted thereon at opposite ends of the reel and having inwardly-standing lugs, and a series of swinging longitudinal elevator-buckets mounted between said spiders and limited in their inward movement by said lugs, with the reel-head, tail-spider, and intermediate spider of larger diameter than said frames, and the bolting-cloth stretched thereon and inclosing said spider-frames and buckets, the buckets being provided with blocks which strike the rim of the central spider when at the descending side of the reel and jar the same, all substantially as set forth.



406,385. GRAIN-SCOURER. HERMAN A. BARNARD, Moline, Ill., assignor to the Barnard & Leas Manufacturing Company, same place. Filed Sept. 16, 1886. Serial No. 213,686. (No model.)

Claim.—1. The combination of the main frame, trunk D, the screening-casing, the fan and trunk H', with the detachable and reversible casing I, containing the air-flues and the trunk K', substantially as and for the purpose set forth.

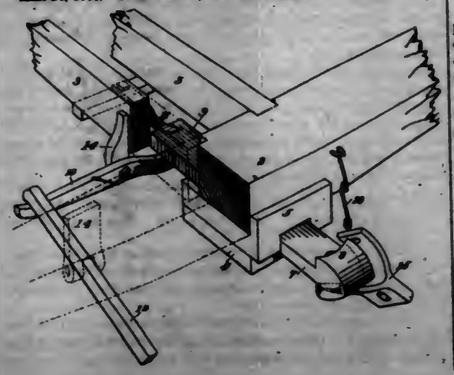
2. In a grain-separator and smut-machine, the combination of the main frame, the fan, the scouring-cylinder and its case, the reversible casing containing the air-flues and settling-chambers, with the reversi-

406,385.

ble vertical air-trunk connecting with said casing, all substantially as and for the purpose specified.

3. In a grain-separator and smut-machine, the combination, with the fan, the fan-casing, the main shaft, the casings, and beater mounted within said casings upon the main shaft, of a reversible casing containing the air-flues and settling-chambers connecting with the fan-casing, and a vertical air-trunk connected to said air-flue casing and to the beater-casing and reversible with the air-flue casing, all constructed and adapted to operate substantially as and for the purpose set forth.

4. The combination of the main frame, the scourer-casing, the reversible casing I, a vertical air-trunk K', opposite to and reversible with casing I, and a detachable spout P, with the fan adapted to rotate in either direction, substantially as specified.



5. In a grain-separator and smut-machine, the combination, with the main frame, its shaft, the fan and beater mounted on the same, and the perforated scouring-case surrounding the beater, of reversible air-flues, reversible separating-trunk, and the reversible delivering tube from the scouring-case, all substantially as described.

6. In a grain-separator and smut-machine, the combination, with the fan and beater mounted upon the main shaft within suitable casings, of the reversible air-flue casing and trunk, all constructed and operating substantially as and for the purpose set forth.

7. The combination, with the fan mounted on the main shaft and its casing, and the reversible air-flue casing I and trunk K', of the conical perforated scouring-casing adjustably connected with air-trunk K', and the conical beater Q, mounted on the main shaft within the scouring-casing, and provided with peripheral angular longitudinal flanges *q*, all substantially as and for the purpose specified.

8. In a grain-separator and smut-machine, provided with a fan and beater mounted on the main shaft within suitable casings, and an air-trunk D, a casing I, adjustable to either side of the machine, and provided with the air-flues K K' and J J', and settling-chambers f f', substantially as described, and the trunk K', with the casing I, all constructed and adapted to operate substantially as and for the purpose set forth.

406,386. CAR-COUPLING. JOHN BLEHER, McKeesport, Pa. Filed Mar. 26, 1888. Serial No. 304,904. (No model.)

Claim.—1. In a car-coupling, the combination of a coupling-bar and a box having an inclined cavity in which the bar is oscillatory, said cavity having faces *b* and *c*, situate on opposite sides of the bar and adapted to fit against the same, substantially as and for the purposes described.

2. In a car-coupling, the combination of a coupling-bar, a box in which the bar is set and is oscillatory, and oppositely-situate shoulders on the bar and within the box, by which motion of the bar in either direction is limited, substantially as and for the purposes described.

3. In a car-coupling, the combination of a coupling-bar, a box in which the bar is set and is oscillatory, and a spring 11, bearing on a portion of the bar projecting to the rear of the box, substantially as and for the purposes described.

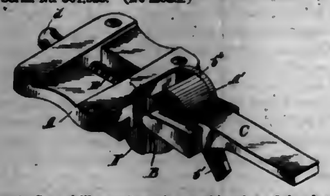
4. In a car-coupling, the combination of the end sill 2, the flanged metal box 5, secured to the under side of the sill, and a coupling-bar oscillatory within the box, substantially as and for the purposes described.

5. In a car-coupling, the combination of a coupling-bar having an arrow-shaped head and a removable link having a portion which fits over the head of the bar, and having an integral projecting shank perforated to receive a coupling-pin, substantially as and for the purposes described.

406,387. RAILWAY-GATE. JOHN BOWERS, Marion, Va., assignor of part to John W. Richardson, George W. Richardson, George W. Pratt, and J. L. Thornton, all of same place. Filed Apr. 19, 1888. Serial No. 307,711. (No model.)

Claim.—1. The combination, with the rail 1, having the laterally-projecting pins 42, of the spring-tread 34, having the central thickened portion 34^a, the offsetted portion 41^a, and the reduced intermediate spring portions 46, terminating in slots 47 and mounted on the pins, substantially as specified.

2. The combination, with the rail 1, having the projecting pins 42, terminating in heads, of the tread 34, having the intermediate spring portions 46, slotted ends 47, mounted on the pins, the intermediate outwardly-curved portion 41^a, and the coiled springs 44, interposed between the heads and the tread, substantially as specified.



3. The combination, with the gate-frame provided with a gate, and a latch adapted to operate upon a pin projecting from the gate, of a connecting-rod, as 32, a rock-arm connected with the rod and mounted upon a rock-shaft provided with an opposite slotted arm, and a spring-tread pivoted to the rail and connected with the rock-arm, substantially as specified.

4. The combination, with a signal-frame, of a gate pivoted therein, a three-armed lever pivoted in rear of the gate and having the front one of its arms connected therewith, oppositely-arranged spring-treads, each of which is connected to one of its remaining arms and adapted to operate the same to close the gate, and an in-

termediately-arranged spring-tread adapted to operate a rock-shaft for releasing the gate, substantially as specified.

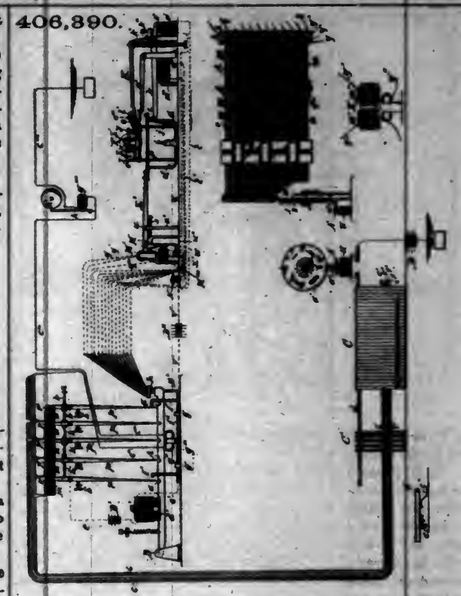
5. The combination, with the rail 1, provided with the opposite treads 34, rock-shafts 36, and rock-arms 39, of the gate-frame having the pivoted gate, the lever 12, mounted in rear of the gate and having arms 13 and 14, the rod 41, connecting the arm 13 and the rock-arm of one of the shafts 36, a rod 16, connecting the arm 14 to a pivoted arm 17, and the rod 46, connecting the lower end of the arm 17 to the opposite rock-arm 36, substantially as specified.

406,888. **THILL-COUPLING.** WILLIAM J. CARD, Olean, N. Y., assignor to R. L. Gage, same place, and William Mellinn. Filed Feb. 25, 1889. Serial No. 301,023. (No model.)

Claim.—1. In a thill-coupling, the combination of the slotted hollow head, the slotted sleeve movable inside said head, the lever actuating said sleeve, and a spring-actuated rod adapted to enter the slot in the sleeve to lock the sleeve, all substantially as described.

2. In a thill-coupling composed of a slotted and hollow head, a slotted sleeve fitting into said head for the slotted end of the thill to be dropped into, and a spring-actuated rod acting at once to lock the sleeve and upon the end of the thill, substantially as set forth.

3. In a thill-coupling, a spring-actuated rod D, combined with the slotted and flanged sleeve and the hollow and slotted head, substantially as described.



4. In a thill-coupling device, the combination of the following elements, viz: a slotted and hollowed head, a slotted sleeve fitting therein, a longitudinally-moving and spring-actuated rod adapted to act in conjunction with said slotted sleeve, and a side piece on the coupling which acts to receive backward pressure on the thill and prevent any strain on the spring.

406,889. **CANOPY-SUPPORT FOR CHILDREN'S CARRIAGES.** FLORENCE J. D. CHAPPELL, Baltimore, Md., assignor, by direct and mesne assignments, of forty-nine one-hundredths to Wilbur H. Riddle, same place. Filed Sept. 3, 1888. Serial No. 284,936. (No model.)

Claim.—The combination, with the carriage-body, of the two clamps B, constructed as described, consisting of the bars *i*, the central flat plates *f*, bearing against the inner flat faces *j* of the said bars and having concave grooves *n*, the bow ends fitting in said grooves, the eyes *e*, through which the ends of the bow pass, the pivot-bolt *d* and clamp-nut *o*, and the clamp H and set-screw, whereby the handle of the parasol or canopy is adjustably fastened to the bow, the whole being arranged so that the parasol can be adjusted in any desired position with respect to the body of the carriage, substantially as specified.

406,890. **ELECTRICAL TYPE-WRITER.** MARK W. DEWEY, Syracuse, N. Y., assignor of two-thirds to Emil Lamm and Charles H. Duell, both of same place. Filed Dec. 1, 1887. Renewed Nov. 24, 1888. Serial No. 291,808. (No model.)

Claim.—1. In combination with the feelers A A and the plates *p p*, provided with armatures *p' p'*, separate magnets for the respective plates and transmitting-keys electrically connected with the aforesaid magnets, as set forth.

2. In combination with circuit making and breaking keys at the transmitting-station, the feelers A A and the plates *p p* at the receiving-station, separate magnets *m m* for the respective plates, main-line wires *c c c*, connecting the keys with the magnets, circuit making and breaking points arranged to come in contact with the feelers by the movement of the latter, and printing-levers operated by magnets electrically connected with the aforesaid circuit making and breaking points, substantially as set forth.

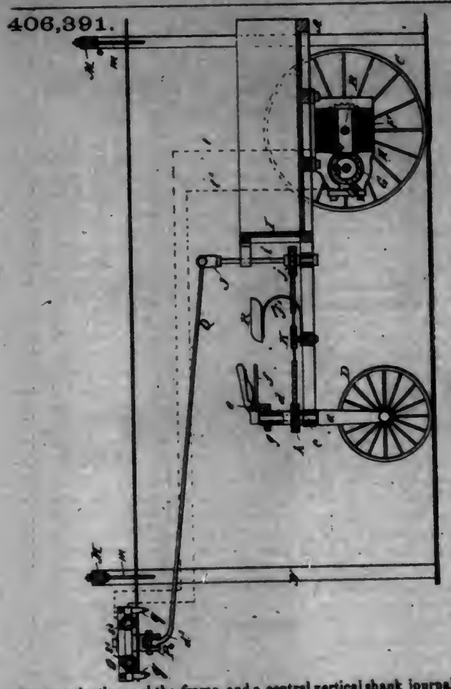
3. In combination with circuit making and breaking keys at the transmitting-station, the feelers A A and plates *p p* at the receiving-station, separate magnets *m m* for the respective plates, main-line wires *c c c*, connecting the keys with said magnets, circuit making and breaking points *k k*, arranged to come in contact with the feelers by the movement of the latter, a type-writer at the receiving-station, a platen-carriage on said type-writer, feed mechanism for moving said carriage, the lever *e'*, adapted to throw the feed mechanism in and out of gear, an armature on said lever, a magnet *m'''* for operating said lever, and wires connecting magnets *m'''* with one of the contact-points *k*, substantially as and for the purpose set forth.

4. In combination with the plates F, the pivoted carrier G, type-bars *j j j*, pivoted to and arranged in sets on said carrier, the series of levers *k k k*, arranged one for each set of type-bars, electro-magnets *m'' m'' m''* for operating said levers, the lever K' for turning the carrier, and electro-magnets M' M'' for operating the lever K', substantially as described and shown.

5. In combination with the frame E, carriage I, and plates F, the screw H, pivoted to the said frame, the ratchet-wheel *l'*, attached to said screw, lever *n*, and pawl *l''* for turning the screw, and an arm *o*, pivoted to the carriage and adapted to engage and release the screw, substantially as and for the purpose set forth.

6. In combination with the frame E, carriage I, and plates F, the screw H, pivoted to the said frame, the ratchet-wheel *l'*, secured to the screw, the pivoted lever *n*, provided with the armature *n'*, the pawl *l''*, connected to said lever and engaging the ratchet-wheel, the electro-magnet *m'''*, facing the said armature, and a circuit maker and breaker in the circuit with which said magnet is connected, as set forth.

7. In combination with the frame E, carriage I, and plates F, the screw H, pivoted to said frame, the ratchet-wheel *l'*, lever *n*, and pawl *l''* for turning the screw, the arm *o*, pivoted to the carriage and adapted to engage and release the screw, and the lever *o'*, adapted to throw the arm *o* out of engagement with the screw, substantially as described and shown.



8. In combination with the frame E, carriage I, and plates F, the screw H, pivoted to said frame, the ratchet-wheel *l'*, lever *n*, and pawl *l''* for turning the screw, the arm *o*, pivoted to the carriage and adapted to engage and release the screw, the lever *o'*, adapted to throw the arm *o* out of engagement with the screw, and the spring-lever K, connected with the carriage to retrograde the same when released from the screw, as set forth.

406,891. **SYSTEM OF ELECTRIC PROPULSION.** HARVEY D. DUBLE, Rockford, Dak. Filed Feb. 2, 1889. Serial No. 298,449. (No model.)

Claim.—1. In a system of electric propulsion for common roads, the trolley having opposite front and rear pairs of vertical rollers, and horizontal rollers insulated from each other and from the frame or body, substantially as set forth.

2. In a system of electric propulsion for common roads, the trolley consisting in a frame, opposite depending front and rear pairs of vertical rollers, opposite front and rear horizontal rollers insulated

406,891.

from each other and the frame, and a central vertical shank journaled in the frame and having a fork on its lower end, substantially as set forth.

3. In a system of electric propulsion for common roads, the trolley consisting in a frame having a central vertical chamber apertured in its bottom and having an apertured cap plate or cover, a shank extending through said apertures and having a fork at its lower end, a spring surrounding the shank within the chamber and connected at its end with the shank and cap plate, respectively, opposite front and rear pairs of vertical rollers depending from the frame, and opposite front and rear horizontal rollers insulated from each other and the frame, substantially as set forth.

4. The combination, with the overhead conductors and the trolley thereon, having a vertical shank journaled thereon, of a road-wagon having a motor connected with the trolley, a vertical shaft journaled on the wagon, and a rod pivoted or hinged at its ends to said shank and shaft, substantially as set forth.

5. In a system of electric propulsion for common roads, the wagon provided with drive-wheels and a steering-wheel having a vertical axis or shaft provided with a locking mechanism and a sprocket-wheel, a vertical shaft between the drive and steering wheels, a sprocket-wheel thereon, a chain connecting said sprocket-wheels, a rod pivotally connected to the upper end of said second vertical shaft, and an electric motor, the shaft of which is geared to the axis of the drive-wheels, substantially as set forth.

6. In a system of electric propulsion for common roads, the combination of a trolley provided with the conductors *l l'*, the vertical rollers *q*, and horizontal rollers *s s'*, the wagon provided with a body A, the axle B, drive-wheels C, caster-wheel D, motor H, and means for connecting the motor and the trolley, substantially as specified.

7. In a system of electric propulsion for common roads, the combination of the suspended conductors *l' l'*, the trolley provided with the frame *n* and chamber *u*, and having arms *o*, the studs *p*, and insulated studs *r r'*, the rollers *q*, journaled on the studs *p*, the rollers *s s'*, journaled on the studs *r r'*, and adapted to roll on the conductors, the fork P, furnished with the shank *w*, journaled in the frame *n*, and the spring *b'*, connecting the frame *n* and the shank *w*, substantially as specified.

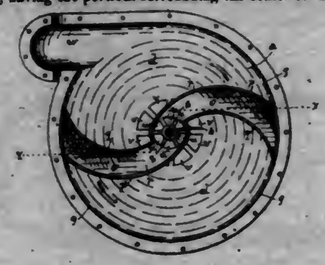
8. In a system of electric propulsion for common roads, the combination of the suspended conductors *l' l'*, the trolley provided with the frame *n* and chamber *u*, and having arms *o*, the studs *p*, and insulated studs *r r'*, the rollers *q*, journaled on the studs *p*, the rollers *s s'*, journaled on studs *r r'* and adapted to roll on the conductors, the fork P, furnished with the shank *w*, journaled in the frame *n*, the spring *b'*, connecting the frame *n* and the shank *w*, the knuckle *c'*, the rod Q, provided with the right-angled end *d'*, the shaft *i*, carrying the slotted fork J, the sprocket-wheel *j*, attached to the said shaft, the caster-wheel D, the shank *c*, the sprocket-wheel *h*, and the endless chain K, connecting the sprocket-wheels *h j*, substantially as specified.

9. In a system of electrical propulsion, the combination, with overhead electrical conductors, a trolley adapted to run thereon, a wagon provided with an electric motor, and connections between said motor and conductors, of a caster-wheel on the wagon, a sleeve on the shank of said caster-wheel carrying a sprocket-wheel, a vertical shaft journaled on the wagon provided with a sprocket-wheel, a belt connecting said sprocket-wheels, a steering-rod swiveled to the trolley and to the said vertical shaft, and a steering-lever on the shank of the caster-wheel, all arranged for operation as and for the purposes set forth.

406,892. **DRAWING-KNIFE.** JAMES R. FIELEY, Delphi, Ind., assignor of one-half to Willis J. Sinn and Michael McGlennon, both of same place. Filed Aug. 18, 1888. Serial No. 283,084. (No model.)

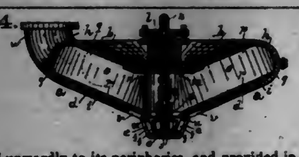
Claim.—The combination of the frame having parallel slotted rearward projections, an adjustable and removable blade provided with similar projections having square apertures, bolts having square shanks adapted to fit in the said apertures, and thumb-nuts for engaging the said bolts, substantially as described.

406,893. **SMOKE-PREVENTER FOR FURNACES.** SAMUEL S. FLEET, St. Louis, Mo., assignor of one-third to William F. Mills, same place. Filed Apr. 16, 1888. Serial No. 307,478. (No model.)



Claim.—1. In a steam-boiler or other furnace, the combination of an injector-jet having a perforated nozzle-cap, which incloses the jet and forms a mixing-chamber, an air-tube inclosing and extending beyond the jet and its cap, and an outer air-tube surrounding and extending beyond the injector-tube, substantially as shown, and for the purpose described.

2. In a steam-boiler or other furnace, the combination of an injector-jet having a perforated nozzle-cap, which incloses the jet and forms a mixing-chamber, an air-tube inclosing and extending beyond the jet and its cap, and a series of air-tubes placed one within the other around the injector-tube and extending, respectively, beyond the latter and each other, substantially as shown, and for the purpose described.



3. In a steam-boiler or other furnace, the combination of a series of injector-jets having perforated nozzle-caps and surrounding air-tubes, all constructed and arranged substantially as described, with a series of air-tubes communicating with each other and opening from the ash-pit through the fire-bridge into the furnace-chamber, substantially as shown, and for the purpose described.

406,894. **CENTRIFUGAL PUMP.** JOSEPH J. FORSTER, Bay City, Mich., assignor of one-half to Charles B. Curtis, same place. Filed Jan. 2, 1889. Serial No. 295,112. (No model.)

Claim.—1. In a centrifugal pump, the combination, with the casing having the upper and lower sections inclosing a horizontal circular chamber, having the portions surrounding the center of the said sec-

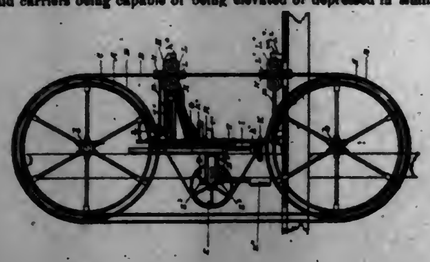
406,394.

tions inclined upwardly to its peripheries, and provided in the central part of its lower section, as described, with two series of induction-openings and an eduction-pipe leading from the periphery of the casing, of the rearwardly-curved upwardly-inclined arms within the chamber and each provided with a longitudinal opening of greater area at their outer ends than at their inner ends, and projecting outwardly from a central barrel having in its lower portion induction-openings, and mounted upon a shaft passing through the upper section of the casing, substantially as and for the purpose set forth.

2. In a centrifugal pump, the combination, with a casing inclosing a circular chamber and having upper and lower disks inclined from the center upward to their peripheries, and having the central portion *c* of the lower disk depressed and provided with side openings *f*, and the openings *v* in the lower disk *d*, around the depressed portion *c*, and having the eduction-pipe *w*, the shaft *k*, passed downwardly through the center of the chamber, the barrel *n*, provided with the upper hub *m* and lower hub *l*, mounted upon a shaft, and having the induction-openings *u*, of the upwardly-inclined rearwardly-curved hollow arms *o*, projecting laterally from the sides of the said barrel *n*, substantially as and for the purpose set forth.

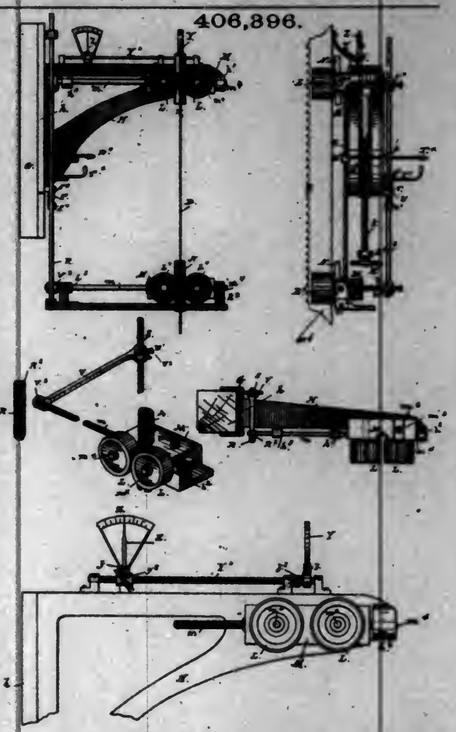
406,395. CHURN-DASHER. JAMES R. GIBBS, Jonesborough, Tenn. Filed Mar. 6, 1889. Serial No. 302,062. (No model.)

Claim.—1. As an improved article of manufacture, a metallic hub for churn-dashers, having radial arms provided with slots in the plane of the angle of the arms, and a crown-ratchet having a hollow spindle thereon, substantially as described.



2. In a churn-dasher, a metallic hub having radial arms provided with slots in the plane of the angle of the arms, and a crown-ratchet having a hollow spindle projecting therefrom, in combination with detachable blades secured in the slots of the arms of the hub, substantially as described.

3. In a churn-dasher, an upper section having a crown-ratchet on its lower surface, and a hollow spindle projecting from the face of said ratchet, in combination with a lower section having a crown-ratchet on its upper surface, and an inwardly-projecting hollow spindle adapted to receive the spindle of the upper section, in combination with a handle having the sections loosely mounted thereon, substantially as described.



406,396. BAND SAWING-MACHINE. ELIJAH S. GILMORE, San Francisco, Cal., assignor of two-thirds to Nathan W. Spaulding, same place. Filed June 16, 1887. Renewed Nov. 30, 1888. Serial No. 292,331. (No model.)

Claim.—1. In a band sawing-machine, the combination, with two sets of laterally-adjustable deflecting-rollers, of rods *m*, by which the rollers are adjusted, and the upright rods R and S, connected to rods *m*, in the manner and for the purpose set forth.

2. In a band sawing-machine, the combination of the two sets of deflecting-rollers and pivoted carriers on which the rollers are mounted, said carriers being capable of being elevated or depressed in similar

406,396.

vertical arcs, rods *m*, connected to the carriers, and upright rods R and S, connected to the rods *m*, in the manner set forth, whereby the vertical movement of the carriers is produced and the sets of rollers are set simultaneously and equally, as set forth.

3. In a band sawing-machine, the combination of deflecting-rollers, a sliding carrier on which they are mounted, rod *m*, connected to said carrier, and upright rod R, connected to rod *m*, in the manner and for the purpose set forth.

4. The combination of the pivoted and sliding roller-carrier M, rod *m*, connected thereto, arm V, secured upon rod *m* and having the groove V^2, and the upright rod R, having a spline R^2 working in groove V^2, and the upright rod S, to which one end of the arm V is connected, in the manner and for the purpose set forth.

5. The combination of the pivoted roller-carriers M, rods *m m*, connected thereto, arms V V, secured upon rods *m*, rods S, to which the arms V V are connected at their opposite ends, and the screw-threaded sleeve T and fixed nut U on rod S, as a means for moving said rod, as set forth.

6. The combination of the sliding roller-carrier M, rod *m*, connected thereto, having a groove V^2 in it or in a part fixed upon it, and the upright rod R, having a spline R^2, working in the groove, as set forth.

7. The combination, with the pivoted roller-carriers M, of the rods *m*, connected thereto, arms V, secured upon rods *m*, the rod S, the yielding collars U^x, by which the arms V are connected to the rod S, and the stop N, against which the back of the saw works, as set forth.

8. The combination, with an endless band-saw, of an indicator adapted to show the true vertical position of the saw and to indicate the degree of its departure therefrom, consisting, essentially, of a pointer, a scale or dial, and a finger bearing against the saw and connected with the pointer to operate the same by or from the movement of the saw, as set forth.

9. The combination, with the roller-carriers M, rods *m*, connected thereto, arms V, secured upon rods *m*, and rod S, to which the arms V are connected, of the clamp-screw and slotted plate P, through which the clamp-screw passes to the arms V, as and for the purpose set forth.

406,397. COUPLING FOR THE STEAM-PIPES OF RAILWAY CARS. ROBERT I. HAMPTON, Athens, Ga. Filed Mar. 21, 1888. Serial No. 304,196. (No model.)

406,397.

Claim.—1. In a coupling for the steam and other pipes upon railway-cars, the combination, with two similar pipe-sections, each having segmental lugs upon opposite sides, provided with alternate guides and guide-seats, of a locking-sleeve rotatively mounted upon one of said pipe-sections and capable of a limited longitudinal adjustment thereon, said sleeve having a cam-stop adapted to engage a stud or post upon the other pipe-section to hold the coupling in position for separation, substantially as described.

2. In a coupling of the type set forth, the combination, with two similar pipe-sections having locking-shoulders thereon, of a locking-sleeve having a slot with a recess therein, which receives a stud on one pipe-section, and provided with locking-shoulders engaging the similar shoulders on the respective pipe-sections, said slot having an inclined surface at one end, whereby the stud is thrown into the recess to hold the sleeve in coupling position, substantially as described.

3. In a coupling of the type described, the combination, with two similar pipe-sections, each having lugs provided with straight shoulders and separate cam-inclined shoulders, of a locking-sleeve having a straight slot provided with an incline at its end and having a recess opposite said incline, the other pipe-section being provided with a stud or post, and the edge of the sleeve adjacent to said post having a cam-stop which is engaged with the stud by the displacement of the sleeve caused by the action of the incline upon the stud lying in the recessed slot in the sleeve, substantially as described.

4. In a coupling of the type described, the combination, with two similar pipe-sections, each having opposite segmental lugs provided alternately with guide-pieces and seats therefor, of a locking-sleeve loosely mounted on one section and having straight and inclined shoulders engaging straight shoulders on one pipe-section and cam-shoulders on the other, one of said pipe-sections having a stud running in a slot in the sleeve, said slot having an inclined end and recess adjacent thereto, and the other having a similar stud engaging a cam-stop on the end of the sleeve as the pipe-sections come together, substantially as described.

5. In a coupling of the type described, the combination, with two similar pipe-sections, each having segmental lugs provided with guiding devices, and each having straight and cam surfaces or shoulders on the rear faces of each lug, of a locking-sleeve having a straight slot to receive a stud on one pipe-section and provided with a recess into which said stud may pass to hold the sleeve when set for coupling, the other pipe-section being provided with a stud to engage a cam-stop on the open end of the sleeve and throw the stud on the other pipe-section out of its recess and release the sleeve as the ends of said sections meet, substantially as described.

406,398. APPARATUS FOR GRAINING PRINTING-PLATES. JAMES G. HARRIS, Providence, R. I., assignor to Harris & Jones, same place. Filed Aug. 20, 1888. Serial No. 283,271. (No model.)

Claim.—1. A plate-holding bed provided with raised sides and holding a quantity of sand and a number of balls, with means for reciprocating the said bed to agitate the sand and balls upon the plate, substantially as described.

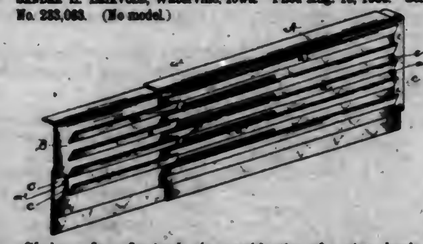
2. A plate-holding bed provided with raised sides and holding a quantity of sand, a number of balls, and a quantity of water, with means for reciprocating the said bed to agitate the sand, balls, and water upon the plate, substantially as described.

406,399. GRAIN DOOR FOR CARS. EDWARD A. HILL, Chicago, Ill. Filed Nov. 26, 1888. Serial No. 291,867. (No model.)

Claim.—1. The combination of a door, a pivot at each upper corner thereof, a guide-rod at each side of the doorway, and a ring encircling said guide-rod, and said pivot at their intersection, substantially as described.

2. The combination of a door, a pivot at each upper corner thereof, a guide-rod at each side of the doorway, its upper end receding from the doorway and having a ledge formed thereon, a ring encircling the guide-rod and pivot at their intersection, its upper edge lying on the side of the guide-rod toward the center of the door, substantially as described.

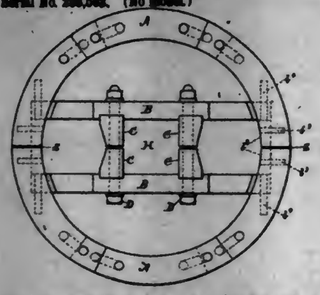
406,399.



406,400. CHAIR-ROCKER. CORNELIA M. JACOBY, St. Louis, Mo., assignor of two-thirds to Frank Tombridge and Julius J. Seitz, both of same place. Filed Feb. 7, 1888. Serial No. 298,950. (No model.)

Claim.—1. In a chair-rocker, the combination of rocker *a*, provided with a beveled groove *k*, box or casting *c'*, constructed substantially as described, and having a dovetail projection *j*, which is inserted within a corresponding groove or slot *k'*, formed along the rocker *a*, with a screw-bolt *g'*, working through one end of box *c'* and carrying a clamp *h*, substantially as shown, and for the purpose described.

2. In a chair-rocker, the combination of a rocker *a*, provided with a beveled groove *k*, a box or casting *c'*, having dovetail projection *j* inserted within groove *k'*, of rocker *a*, one end of said box *c'* having a rubber or other cushion *f'*, clamp *h*, provided with rubber cushion *i'*, and a screw-bolt *g'*, swiveled centrally to clamp *h'*, substantially as shown, and for the purpose described.

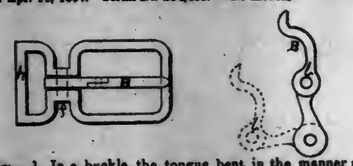


406,401. ADJUSTABLE FIRE-BACK. HOLVER O. JERLOW and SANDER H. LEHVOLD, Waterville, Iowa. Filed Aug. 13, 1888. Serial No. 283,083. (No model.)

Claim.—In a fire-back, the combination of a plate having a number of upward-extending parallel ribs and longitudinal open-ended slots between the ribs, a plate having similar ribs arranged out of line with the ribs of the first-named plate and adapted to slide be-

tween the same, adjustable plates fitting on the back of the ribbed plates, having a series of openings near their outer edges, projections on the ribbed plates engaging the said openings, and bolts extending through the adjustable and the ribbed plates to clamp the whole together, substantially as described.

406,402. WOODEN PULLEY. JOSEPH G. MOONY, Erie, Pa., assignor to the Taper Sleeve Pulley Works, same place. Filed Dec. 14, 1888. Serial No. 293,562. (No model.)



Claim.—1. The combination, in a split wooden pulley, of a central rim part composed of the rings *a'*, divided on the line S S and having the notches *b* cut therein, the spoke-bars B, seated in said notches, the pieces b^3, filling said notches, the finishing-rings *a a*, completing the rim and divided so as to bisect the pulley on the line S S, and the blocks C C on said spoke-bars.

2. The combination, in a wooden split pulley, of a central rim part formed of the rings *a'*, divided into segments and having the notches *b* cut at the ends of each segment, the spoke-bars B B, seated in said notches and secured by dowels b^2 b^4, the piece b^3 formed from the pieces *b'*, filling the notches *b*, the dowels b^2, holding said pieces b^3 and the bars B in place, and the finishing-rings *a*, completing said pulley-rim.

3. In a wooden split-pulley, the combination, with the rim A, spoke-bar B, and filling-piece b^3, of the dowels b^2 and b^4, entering said rim at right angles to each other.

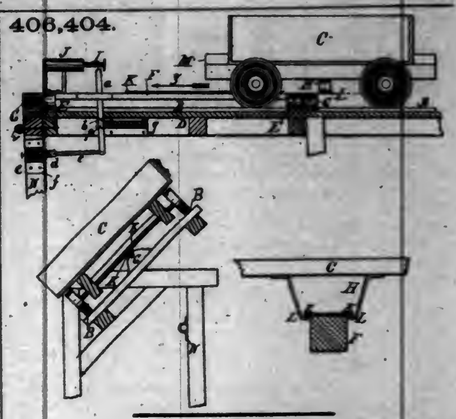
406,403. BUCKLE. GEORGE C. PAIGE, Boston, assignor to Joseph A. Hurd, Salem, A. B. Towne, Boston, and C. D. Moore, Chelsea, Mass. Filed Apr. 11, 1887. Serial No. 234,468. (No model.)

Claim.—1. In a buckle, the tongue bent in the manner shown and provided with a joint, substantially as and for the purpose shown.

2. The combination, in a buckle, of the jointed and bent tongue B and a frame provided with a recessed slot *c*, substantially as and for the purpose described.

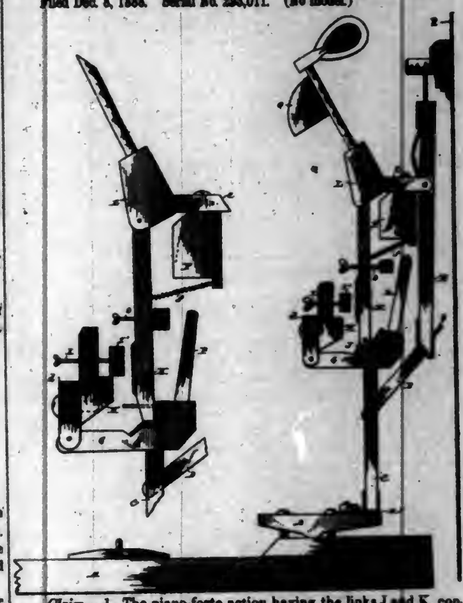
3. The combination, in a buckle, of the bent and jointed tongue B and the frame provided with the recessed slot *c*, hubs or bosses *c*, and loop E, the whole adapted to be used in connection with a metallic lug, and all substantially as described and shown.

4. The combination, in a buckle, of the independent bar or pivot *f* with the bent and jointed tongue and a frame provided with the recessed slot *c*, as and for the purpose substantially as described.



5. The combination, in a harness-buckle, of the independent bar or pivot *f* and the bent and jointed tongue B, substantially as and for the purpose described.

6. The combination, in a buckle, of the frame, the sides of which are drawn in, as described, the bar A, and the tongue B, substantially as and for the purpose shown.



406,404. DUMPING APPARATUS. GEORGE W. PAYSON, Crawford, Ill., assignor of one-half to Deisse & Shepard. Filed May 26, 1888. Serial No. 275,411. (No model.)

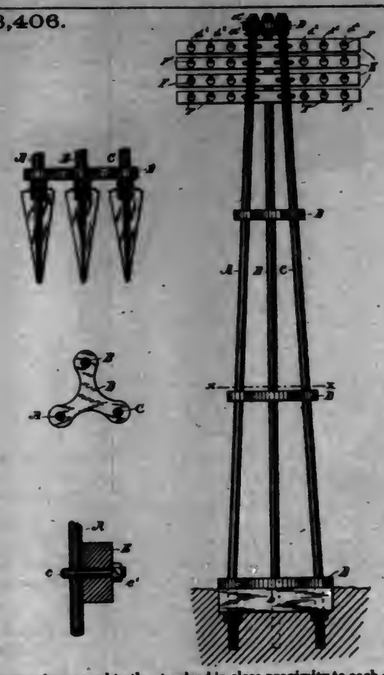
Claim.—A dumping apparatus comprising the bed D, pivotally supported in alignment with the main track A, and provided with the central rail F, having flanges K, a buffer I J, attached to said rail, a lever *a*, pivoted to said bed and having a connecting-rod *c* and *a*, pin *d*, a socketed plate *f*, connected with a fixed support to receive said pin, and a spring joined to the lever and the bed, all adapted for operation in connection with a truck carrying the clutch H L, substantially as described.

406,404.

406,405. PIANO-ACTION. SAMUEL R. PERRY, Wilkes-Barre, Pa. Filed Dec. 8, 1888. Serial No. 293,011. (No model.)

Claim.—1. The piano-forte action having the links J and K, connected to the hammer-butt, and arm G, pivoted to the pitman of the key, substantially as and for the purpose set forth.

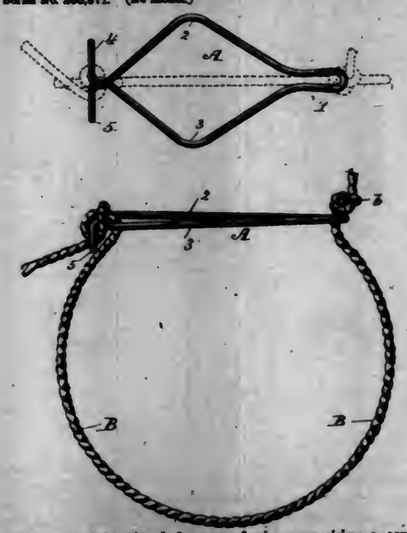
2. The piano-action having the arm G, pivoted upon the key-pitman, post P, applied to said arm, and the link J, connecting said arm to the link K, connecting with the hammer-butt L and acting upon the cushioned regulating-screw I, substantially as and for the purpose set forth.



3. The piano-forte action having the spring *f*, connected to the link K, substantially as set forth.

4. The piano-forte action having the links J and K, combined with the arm or lever G, the pitman C, and arm D, for the purpose specified.

406,406. TELEGRAPH-POLE. CHARLES M. RUSSELL, Bowling Green, Ky., assignor of one-third to Thomas B. Lyne, same place. Filed Oct. 3, 1888. Serial No. 287,544. (No model.)

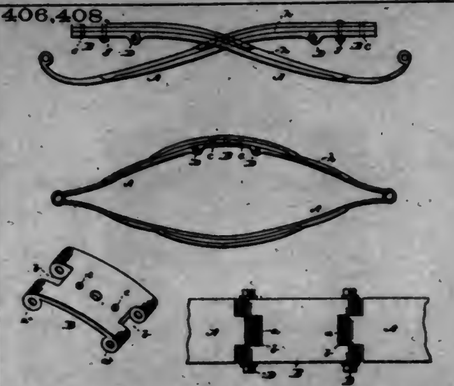


Claim.—In a telegraph-pole, the combination of the tubular standards A B C, arranged in the shape of a tripod, the cast-metal brackets or spiders having the vertical holes, through which the standards are extended, the cross-pieces E, having transverse horizontal holes therein to receive the insulators, the staples *c*, extending through the cross-pieces and around the standards, where they are secured by bolts, and the insulators seated in the holes in the cross-pieces, so as not to project above or below said cross-pieces, whereby the cross-

406,406.

pieces may be secured to the standard in close proximity to each other, substantially as described.

406,407. FODDER-BINDER. ENOS B. SMITH, Dayton, Ohio, assignor of one-half to James A. Weed, same place. Filed Oct. 22, 1888. Serial No. 288,871. (No model.)

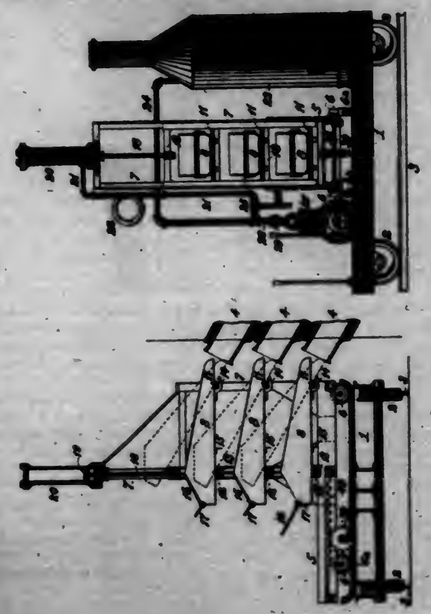


Claim.—A fodder-band fastener of wire, comprising a central band with nearly-parallel sides, them bent outwardly and inwardly with the ends interlocking and bent slightly downward at the point of junction, said ends standing at nearly a right angle to the longitudinal axis of said fastener, substantially as shown and described.

406,408. VEHICLE-SPRING. ALBERT WAGGONER, Columbus, Ohio, assignor of one-half to Orrin H. Allen, St. Louis, Mo. Filed Oct. 20, 1888. Serial No. 288,035. (No model.)

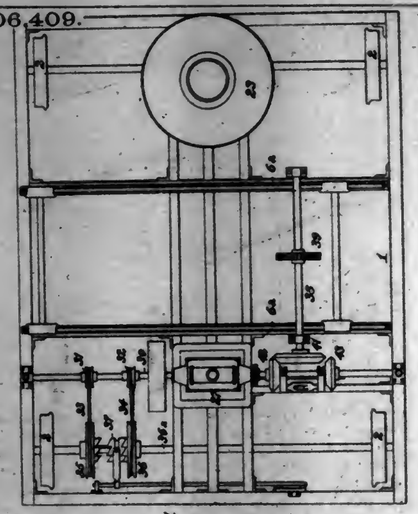
Claim.—In a vehicle-spring, the combination, with the upper and

406,408.



lower leaves A, the said upper leaf being made in sections and provided with perforated eyes or lugs *c*, of a connecting-link B, provided with recesses *b*, into which fit the eyes or lugs *a* of the spring, said recesses being located intermediate of the eyes *a'*, the latter being perforated, the vertical openings *c* in said link, and the bolts D, passing through the aligned perforations of the eyes or lugs *a* and *a'*, as described, for the purpose specified.

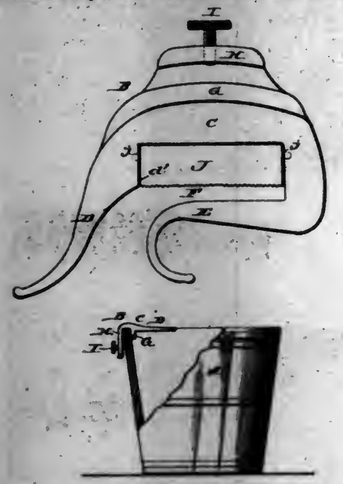
406,409. RETORT-CHARGING DEVICE. JAMES H. WALKER, Sewickley, assignor to the Pneumatic Gas and Electric Engineering Company, (Limited,) Pittsburg, Pa. Filed Feb. 16, 1889. Serial No. 300,165. (No model.)



Claim.—1. In a retort-charging machine, the combination of a carriage, a frame fixed thereon, a fluid-pressure cylinder secured to the frame and having a piston and rod connected to a frame fitted to move vertically on the fixed frame, and a series of tilting chutes, each supported adjacent to opposite ends upon the fixed and the movable frames, respectively, substantially as set forth.

2. In a retort-charging machine, the combination of a carriage, a frame fixed thereon, a fluid-pressure cylinder secured to the frame and having a piston and rod connected to a frame fitted to move vertically in the fixed frame, a series of tilting chutes, each supported adjacent to opposite ends upon the fixed and the movable frames, respectively, and stops fixed to the chutes in position to abut against their supports and regulate their degree of horizontal traverse thereon, substantially as set forth.

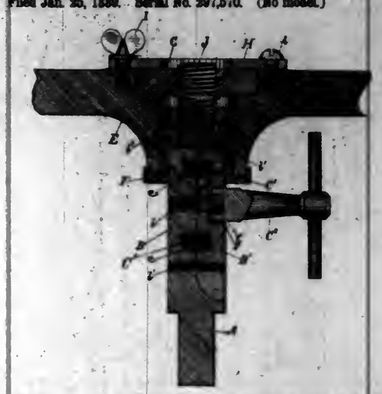
3. In a retort-charging machine, the combination of a carriage,



406,409.

a frame fixed thereto, a fluid-pressure cylinder secured to the frame and having a piston and rod connected to a frame fitted to move vertically on the fixed frame, a series of tilting chutes, each supported adjacent to opposite ends upon the fixed and the movable frames, respectively, and receiving-plates hinged to the chutes at their ends adjacent to the movable frames, substantially as set forth.

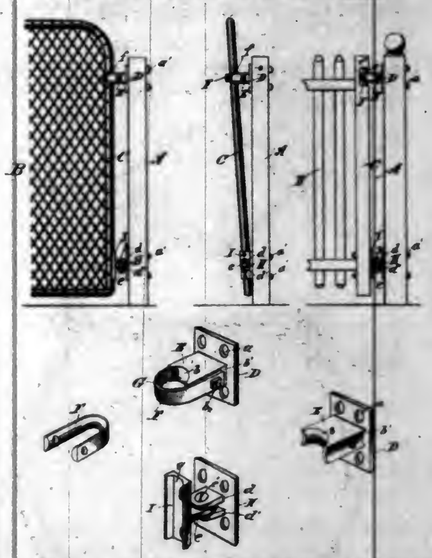
406,410. MOP-GRIP. JOHN H. WARE, Eureka, Cal. Filed Apr. 7, 1888. Renewed May 2, 1889. Serial No. 309,411. (No model.)



Claim.—1. A mop-grip arranged to be attached to a bucket, provided with a rectangular opening between two arms, and a plate pivoted in said opening in such manner that it will fall or bind against a mop-rag and prevent the latter from turning, substantially as specified.

2. A mop-grip arranged to be attached to a bucket, and comprising the body C, having the horn D and arm E, with their free ends curving away from each other, and having the rectangular space F and the oscillating plate J, provided with the outer roughened or toothed edge and journaled at *j j* in said space, substantially as specified.

3. In a mop-grip, the combination, with the body C, provided with the curved horn D, arm F, shoulder G, arm H, and set-screw I, and having the rectangular space or opening F, of the oscillating plate J, journaled at *j j* in said space, nearer its inner edge than its outer edge, and with its outer edge flush with the shoulder *d'* of the horn, substantially as specified.

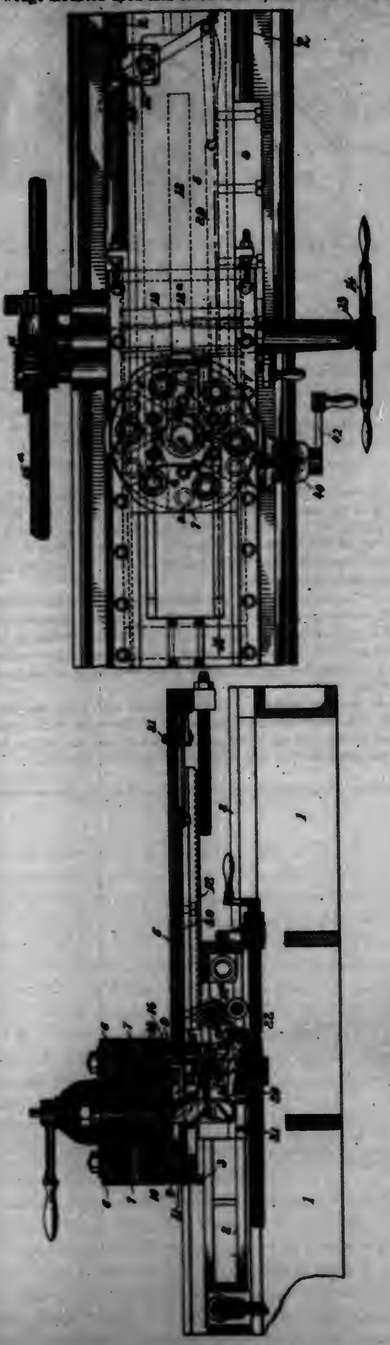


406,411. NIPPLE-HOLDER. JAMES C. WILLIAMS, Erie, Pa., assignor to the Jarecki Manufacturing Company, (Limited,) same place. Filed Jan. 25, 1889. Serial No. 297,570. (No model.)

Claim.—1. The combination, with the fixed jaw B, forming the body of the holder and having the shank A, the movable jaw B', the opening-springs working between said jaws, and the clamping-screw C, substantially as and for the purpose described.

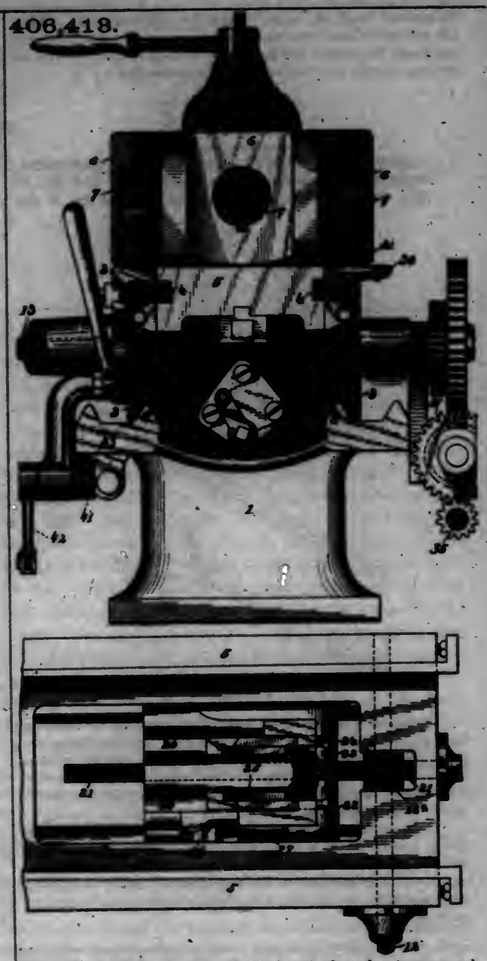
2. The combination, with the fixed jaw B, forming the body of the holder and having the shank A, of the movable jaw B', the opening-springs and dowel-pins working between said jaws, and the clamping-screw C, all constructed substantially as and for the purposes specified.

406,412. GATE-HINGE. HENRY EBERHARDT, Chicago, Ill., assignor to the Gilbert & Bennett Manufacturing Company, Georgetown, Conn. Filed Mar. 20, 1889. Serial No. 304,026. (No model.)



Claim.—1. A gate-hinge composed of the plate D, the projection E, formed with recess *b* and grooves *b'*, and the bent strap F, secured to the arm or projection E, forming the eye G, substantially as set forth.

2. A gate-hinge composed of a plate D, the projection E, formed with a curved recess *b* and concave grooves *b'*, and a bent strap F, having its inner surface convex and secured to the projection E, forming the eye G, substantially as shown and described, and for the purpose set forth.



3. The combination of an upper hinge having a plate D, projection E, formed with a curved recess *b*, concave grooves *b'*, a bent strap F, having its inner surface convex and secured to the projection E, forming the eye G, with a cylindrical bar or rod C, and a lower hinge attached to said bar, substantially as shown and described, and for the purpose set forth.

406,418. TURRET-LATHE. CHARLES I. LIGHT, Bridgeport, Conn., assignor to Edward P. Ballard, same place. Filed Feb. 16, 1888. Serial No. 263,183. (No model.)

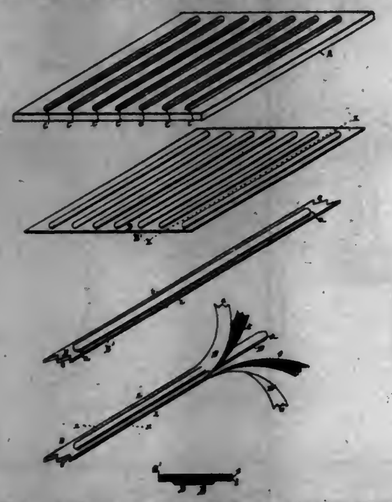
Claim.—1. The combination, in a machine of the character described, with the base, the carriage, means for moving the same, and the revolvable turret mounted thereon, of the locking-bolt engaging said turret, the movable block arranged beneath said carriage, a hinged wedge mounted upon said block in the path of said locking-

406,418.

bolt, and a pawl hinged upon said block and adapted to engage and turn the said turret, substantially as specified.

2. The combination, in a machine of the character described, with the base having ways formed thereon, of the carriage mounted on the ways and means for moving it thereon, the rotatable turret upon said carriage, studs projecting downward from the turret, a spring-actuated locking-bolt arranged in the carriage and adapted to engage recesses in the turret, the block beneath the carriage, and wedges arranged thereon in the path of the locking-bolt, and a spring-actuated pawl arranged in the plane of the studs on the turret and adapted to engage therewith, whereby the locking-bolt may be withdrawn and the turret turned, substantially as set forth.

3. The combination, with the bed, the carriage, the turret mounted and adapted to turn thereon, and the locking-bolt, of the block mounted in ways beneath the carriage, a screw for varying the position of said block lengthwise of the machine, the yoke hinged upon said block and provided with wedges located in the path of the locking-bolt, the spring-actuated pawl pivoted upon the block just forward of the yoke, and the studs upon the turret, wherewith the said pawl is adapted to engage in rotation, substantially as set forth.

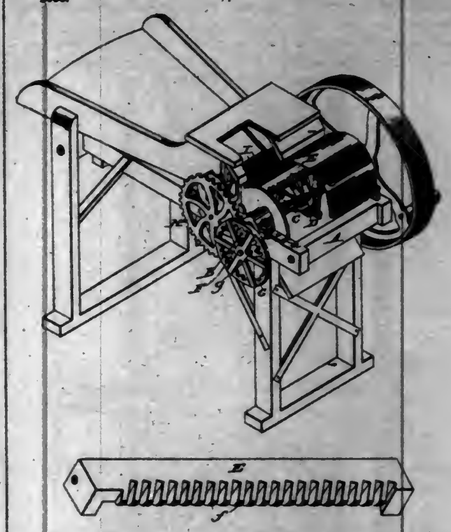


4. The combination, with the turret and the studs upon the lower surface thereof, of the pawl pivoted to a stationary part of the lathe and adapted to engage and turn the studs *serviam*, the sliding carriage supporting the turret and having a slot through which the pawl is raised into engagement with the studs, and a sliding plate and means for actuating the same, whereby the slot may be opened for the reception of the pawl or closed as against entrance of the same, substantially as specified.

5. In a machine of the character described, the combination, with the base and carriage, of the turret, its studs and the locking-bolt,

the movable block, the means thereon for withdrawing the locking-bolt, the pawl whereby the studs may be engaged, and the cover-plate and means for moving the same over or away from the slot in the carriage beneath the studs, substantially as specified.

REISSUES.



11,009. GARMENT-STAY. BRUCE C. BOWLING, Ypsilanti, Mich., assignor of one-half to Henry P. Glover, same place. Filed Sept. 26, 1888. Serial No. 286,573. Original No. 362,566, dated May 10, 1887.

Claim.—1. The stay herein described, comprising the stiffening-blade D, having sheets of rubber *t t* lying upon each side thereof and projecting over the edges and ends of said blade, with the covering fabrics B B', having a like projection and adhering thereto, whereby a stitching-edge is provided surrounding the stiffening-blade, as and for the purposes specified.

2. The stay herein described, comprising the stiffening-blade D, having a sheet of rubber *t* lying upon the side thereof and projecting over the edges and ends of said blade, with the covering fabrics B B', having a like projection and adhering thereto, whereby a stitching-edge is provided surrounding the stiffening-blade, as and for the purpose specified.

11,010. FODDER-CUTTER. LIBBY SWANGER, Canton, Ohio, administratrix of David Swanger, deceased; said David Swanger assignor of two-thirds to William Betz and Anton Hammerly, same place. Filed Apr. 4, 1888. Serial No. 269,697. Original No. 362,993, dated May 24, 1887.

Claim.—1. The combination, with the diagonally-toothed cutter-bar E, of the rotary shaft B, the arms C, connected in pairs by collars and adjustably secured to said shaft in different planes, thereby forming a spiral thereon, and the knives D, adjustably secured to the ends of said arms with their cutting-edges standing at an angle thereto, substantially as described.

2. The combination of the feed-rollers I, the toothed cutter-bar E, the rotary shaft B, having pinion F, the arms C, mounted on said shaft and provided with knives D, the adjustable bracket L, having slot M and stud K, the wheel G and pinion *g*, mounted on said stud, and the wheel H, attached to the lower feed-roller, substantially as described.

3. In a fodder-cutter, the combination, with the cutter-bar provided with diagonally-arranged teeth, of the main shaft, arms attached thereto and arranged spirally thereon, and knives attached to and set at an angle to said arms, substantially as described.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court—Western District of Pennsylvania.

PUTNAM *et al. v.* THE KEYSTONE BOTTLE STOPPER COMPANY *et al.*

Decided March 28, 1889.

1. DE QUILLFELDT—BOTTLE-STOPPERS—REISSUES.
Reissue Letters Patent No. 7,722, granted June 5, 1877, to Charles De Quillfeldt, for an improvement in bottle-stoppers, construed, and *Held* that the first claim, when read in connection with the specification and drawings of the original patent, contains the same elements found in the first claim of the original patent, combined and operated in the same way and producing the same results.

2. REISSUES—ENLARGEMENT.
While a comparison of the two patents evinces that the specification of the reissue is amplified, yet this amplification is in matters of an explanatory nature and embraces nothing of any importance which is not plainly disclosed in the original specification and accompanying drawings.

3. VOM HOFE—BOTTLE-STOPPERS.
Letters Patent No. 167,141, granted August 24, 1875, to William Vom Hofe, for an improvement in bottle-stoppers, not anticipated by a previous patent to said Vom Hofe, No. 163,533, dated May 18, 1875.

SUR motion for a preliminary injunction.

Mr. Arthur v. Briesen and *Mr. W. Bakewell* for the complainants.

Mr. Wm. H. Doolittle for the defendants.

ACHESON, *J.*:

The bill of complaint charges the defendants with the infringement of two Letters Patent for improvements in bottle-stoppers, one granted to Karl Hutter, assignee of Charles De Quillfeldt, being Reissue No. 7,722, dated June 5, 1877, of original patent to De Quillfeldt, No. 158,406, dated January 5, 1875, and the other granted to William Vom Hofe, being Patent No. 167,141, dated August 24, 1875. The title of the plaintiffs to these patents is not controverted.

The De Quillfeldt reissue, No. 7,722, has 9 claims; but infringement of the first claim only is here alleged. That claim is as follows:

1. The combination, substantially as before set forth, of the compound stopper, the yoke, the lever, and the supporting device on the bottle, by means of three pivotal connections, upon which the said members can be turned relatively to each other without disconnecting either one from the other.

In two suits in the second circuit, *Putnam* v. *Hollender* (6 Fed. Rep., 882) and *Putnam* v. *Vom Hofe*, (Id., 897,) the De Quillfeldt reissue, No. 7,722, was sustained by Judge Blatchford, who also there held that the first claim of said reissue was infringed by a bottle-stopper from which the bottle-stopper made and sold by the defendants does not differ in any substantial particular. The like conclusions were reached by Judge McKennan in the case of *Putnam* v. *Hammet and Sunderman*, a suit in this court on the De Quillfeldt reissue, wherein, after full argument, a preliminary injunction was allowed, and subsequently a final injunction was granted. Moreover, in this case against Hammer and Sunderman, in a proceeding for contempt for violating the injunction, Judge McKennan held that a bottle-stopper in every material respect identical with the stopper which the defendants manufacture infringed the first claim of the reissue now in suit. No such new proofs have been submitted in this case as would warrant a different conclusion, either upon the question of anticipation or the question of infringement, from that reached in the several cases referred to; and therefore, according to the prevailing rule in patent causes, in disposing of the present motion for a preliminary injunction those decisions should be accepted and followed. (*Mallory Mfg. Co.* v. *Hickok*, 20 Fed. Rep., 116.) It is, however, strenuously urged that such effect ought not to be here given to those adjudications, because they were made before the decision touching reissues in *Miller* v. *Brass Co.*, (104 U. S., 350,) and (as is supposed) without regard to the principles there enunciated; and the defendants insist that under the doctrine established by that decision the reissue in suit must be held to be void. But in *Putnam* v. *Hollender*, *supra*, Judge Blatchford said:

The answer sets up that the reissue covers more than was described in the specification of the original patent, and is not for the same invention. There is no evidence to this effect, and there does not appear to be any ground for the assertion. (6 Fed. Rep., 888.)

It appears, then, that the question of the enlargement of the scope of the patent was raised and considered in that case, and the determination of the court was that the reissue was for the same invention as the original patent. I might therefore well rest this case upon the opinion of Judge Blatchford and the presumption that the several decrees heretofore made sustaining the validity of the De Quillfeldt reissue were fully considered and right. I have, however, given this question an independent investigation, confining myself, of course, to the first claim of the reissue, which is the only one here involved. My conclusions I will state briefly.

While a comparison of the two patents evinces that the specification of the reissue is amplified, yet this amplification is in matters of an explanatory nature and embraces nothing of any importance which is not plainly disclosed in the original specification and accompanying drawings. Clearly the invention set forth in the reissue is the precise invention set forth in the

original patent, and the construction and mode of operation described are the same in both. Therefore it seems to me that the first claim of the reissue is no broader in scope than the first claim of the original patent, which was in these words:

1. The bottle-stopping device composed of a pivotal lever-frame applied to neck of bottle, with eccentrically-hinged yoke carrying the elastic stopper and cap-piece, arranged and operated substantially in the manner and for the purpose set forth.

Read, as it must be, in connection with the preceding specification and accompanying drawings, this claim contains the same elements which are contained in the first claim of the reissue, combined and operating in the same way and producing the same results. This conclusion is supported by *Reed* v. *Chase*, (25 Fed. Rep., 95.)

Second, touching the second branch of the plaintiffs' case—that which relates to the Vom Hofe patent, No. 167,141—little need be said. The stopper manufactured under that patent was held by Judge Blatchford, in the cases heretofore cited, to infringe the first claim of the De Quillfeldt reissue; but the titles to those two patents are now united in the plaintiffs, and the Vom Hofe patent, as an improvement upon the De Quillfeldt invention, may well be sustained as against the present defendants. (*Cantrell* v. *Wallick*, 117 U. S., 689.) That the defendants infringe this patent is, I think, entirely clear. Their bottle-stopper is substantially identical with the Vom Hofe stopper. Whatever differences between them may exist are merely formal, and, upon the question of infringement, altogether immaterial. The defense against this patent mainly relied on is based on a prior patent to Vom Hofe, No. 163,533, dated May 18, 1875, which the defendants insist is an anticipation of the patent in suit, No. 167,141. But I do not concur in that view. From the mere grant of the patent there arises a fair presumption that there is a substantial difference involving invention between the two patents, and that the later one is for a patentable improvement upon the earlier patent. The defendants, I think, have not succeeded in overcoming or weakening that presumption by anything submitted to me.

A preliminary injunction must be granted.

U. S. Circuit Court—District of New Jersey.

ZINSSER *et al. v.* KREMER.

Decided June 12, 1889.

1. MUSSGILLER AND SCHEDLER—TREATING BEER AND OTHER LIQUIDS.

Reissue Letters Patent No. 9,129, granted March 23, 1880, upon the application of Friedrich C. Mussgiller and R. W. Schedler, for an improvement in treating beer and other liquids, sustained.

2. INVENTION—PROCESS.

A change in the method of making an article of manufacture producing a different and beneficial result, although the difference consists only in improving or cheapening the article, and the change and its advantages not having been seen or made by others interested in seeing and making it, is sufficient evidence of invention to sustain a process patent.

Mr. Arthur v. Briesen for the complainants.
Mr. Joseph M. Deuel for the defendant.

BUTLER, *J.*:

The suit is for infringement of reissued Letters Patent No. 9,129, granted to the plaintiff March 23, 1880, for a new and useful improvement in treating beer and other liquids.

The claim is stated as follows:

The process of charging beer and other liquids of a similar nature with carbonic acid by dropping into and through the liquid lumps of bicarbonate of soda or of other alkali, thereby causing the acid discharged from the lumps to pass through the entire column of liquid, substantially as specified.

The specifications are as follows:

This invention consists in treating beer and other liquids of a similar nature with lumps of bicarbonate of soda or of other alkali, said lumps being compacted by means of a suitable cement, so that they are heavy enough to at once drop through the liquid to be treated upon the bottom of the vessel containing the liquid. The carbonic acid evolved from said lumps is thus compelled to permeate the entire column of liquid above it, and at the same time to give up the requisite quantity of alkaline matter. Together with the lumps of bicarbonates of alkali may be used lumps of tartaric or other suitable acid compacted in the same manner as the lumps of bicarbonate of alkali, so that the amount of carbonic acid evolved from the latter can be easily controlled.

It is a common practice with brewers and others to use bicarbonate of soda, either alone or together with tartaric acid, in the manufacture of beer, sparkling wines, and other effervescent liquids for the purpose of increasing the life of such liquids.

The mode of applying such article or articles—by brewers, for instance—is to apply about one ounce of the bicarbonate of soda to each quarter-barrel with a table-spoon, the bicarbonate being in the form of a powder. The powder, on being thrown into a barrel of beer, will at first float on the surface of the liquid, and immediately evolve carbonic acid, a large portion of which is lost, together with the beer which is thrown out by the action of the acid before the barrel can be closed by a bung. Besides this, the operation of filling barrels is carried on in a great hurry, and a large quantity of the bicarbonate of soda handled with a spoon is spilled over the barrel and wasted. Like defects occur in the use of tartaric acid in crystals when applied together with powdered bicarbonate of soda.

These disadvantages we have obviated by preparing the bicarbonate of soda or of other alkali and the acid in solid lumps of such weight that the lumps at once drop through the liquid upon the bottom of the vessel, and give off the carbonic acid to the entire column of liquid, and not only, as heretofore, to the upper stratum. These lumps we produce by mixing powdered bicarbonate of alkali with a suitable cement, such as a solution of dextrine, and then compressing the same in molds of suitable size and shape. Lumps of acid are made in like manner.

The advantage of using the bicarbonate of alkali, either alone or in connection with acid in this shape, is perceptible at once. The lumps being in compact form, when dropped into a barrel filled with beer, ale, or other liquid, will at once sink to the bottom, and the carbonic acid evolved from them is forced to stay in the liquid. The barrel can be easily closed by a bung without losing a particle of carbonic acid or of beer, and the said lumps can be introduced into the barrel without any waste. Besides this, the weight or size of our lumps is so gaged that each barrel will receive the exact quantity of bicarbonate of alkali and of acid required, and that the liquid in a number of barrels, after having been treated with the bicarbonate of alkali, with or without acid, will be of uniform quality.

The answer attacks the patent for want of inventive novelty, for defective specifications and claims, and because of prior use. It also denies infringement.

The inventive novelty claimed consists in passing compacted lumps of bicarbonate of soda or other alkali through beer and similar liquids in casks and depositing the same at the bottom, where it will slowly dissolve, and the carbonic acid evolved be distributed equally throughout the liquid.

The treatment of beer and other liquids with bicarbonate of soda was not new. It was in common use and had been for a long time. The method employed, however, was that of dropping powdered bicarbonate on top. This was attended with serious disadvantages. The liquid was not thoroughly permeated, and the powder floating on top instantly evolved acid in quantities so large as to cause overflow before the casks could be closed. The patentee sought for means to obviate these disadvantages. He saw that if the bicarbonate could be deposited at the bottom of the liquid and its dissolution retarded the entire contents of the cask would be equally treated, and the loss from overflow be avoided. He further saw that if the bicarbonate could be compressed into solid lumps it would pass to the bottom when dropped and the dissolution also be retarded. Experimenting with this method, he found the result beneficial and satisfactory.

Thereupon he applied for and obtained the patent. The novelty thus exhibited seems quite sufficient to sustain his claim. It is true that nothing more is done than charging the liquid with carbonic-acid gas, and this had been done before. But he does it in a different way and with different results, producing a better article more economically, avoiding all waste. The same objection was made to the Crane patent for an improvement in the manufacture of iron. It covered a hot blast with anthracite coal. A hot blast with bituminous coal was old, and a cold blast with anthracite was old. The patentee simply introduced into the existing process a hot blast with anthracite. The change was very slight, but the result was highly beneficial, and the patent, after a severe contest, was sustained. *Crane* v. *Price* (1 Web. Pat. Ca., 375) has withstood the test of criticism and time, and is as good authority to-day as when first published. Hall's patent for a new process of manufacturing lace is similar in character. It covered the use of gas-flame for singeing off the superfluous fibers of thread. Flames of other substances had been employed for a long time. By the use of gas-flame, however, the fibers were more effectually removed and the lace given a smoother and finer finish. This patent encountered the same objection, want of novelty; but was sustained in *Hall* v. *Jarvis*, (1 Web. Pat. Ca., 100,) which is still quoted with approval. The reports show many similar cases. Probably no one has considered this subject with greater care than Judge Curtis, who says, (Curtis on Pat., p. 7–8:)

We have seen that in order to make a new process or method of working or producing a new effect or result in matter the subject of a patent in England a somewhat liberal construction of the term "manufacture" became necessary, by which an improvement in the art or process of making or doing a thing was made constructively to be represented by the term which ordinarily would mean only the thing itself when made or done. It was doubtless to avoid the necessity for this kind of construction that the framers of our legislature selected a term which *proprio vigore* would embrace those inventions where the particular machinery or apparatus, or the particular substance employed, would not constitute the discovery so much as a newly-invented mode or process of applying them in respect to the order or position or relation in which they are used. The difficulty is obviated by our use of the term "art," which was intended to embrace those inventions where the particular apparatus or machinery used may not be of the essence of the discovery, but where that essence consists in using apparatus or materials in a new way, method, or relation, so as to constitute a new mode of obtaining an old result or of obtaining a new result.

And again at page 9 he sums up the cases as follows:

It will be seen that the comprehensive position laid down embraces the instances where the process itself exhibits advantages of the change from the old to the new, or where the article manufactured exhibits the advantages, or where they appear both in the process itself and the result of using it. Thus if the article made be either new or better, having different or superior properties, the advantages are presented by the thing itself. If the article as made by the new process is of as good quality and cheaper, and the advantage of cheapness is gained by the new process, the improvement appears in the process, although the article made by it may not be new—that is to say, may not possess other new properties than the cheapness.

The line dividing invention from non-invention is very dim, and cases lying near it often present great difficulty. In deciding them judges have occasionally used expressions which seem extravagant and calculated to mislead. Some of them would almost justify a doubt whether a majority of the patents issued are valid, and others whether any of them are invalid. The decisions, however, are generally harmonious. We think it may safely be said that wherever a change in the method of making an article of manufacture produces a different and beneficial result, although the difference consists only in improving or cheapening the article, and the change and its advantages had not been seen or made by others (than the patentee) interested in seeing and making it, there is sufficient evidence of invention to sustain a process patent.

There the effect of the change is to improve and also to cheapen. The respondent admits the advantages by adopting the change. Much reliance is placed by him on *Dryfus* v. *Searle*, (124 U. S., 60.) On first blush this reliance may seem justified. Closer examination, however, will show that it is not. The patent was "for an improved process of imparting age to wine" by introducing heat directly to the wine by means of metallic pipes passing through the casks, instead of the former method of applying heat to the outside of the casks by placing them in ovens. While the specifications assert that this change saves time and fuel and has other advantages, the case as reported does not show this. It does show, however, that precisely the same method of heating water and high wines (to evolve alcoholic vapor in the latter) had been employed prior to the patent. The court finds these facts, and says:

There was no patentable invention in heating wine or other liquid from the inside of casks by apparatus which had been previously used in the same manner.

With such finding of facts the case could not have been decided otherwise. It would be very unsafe to conclude, from what is said respecting the process, that the case would have been so decided without the facts referred to, and with proof of positive and material advantage from this method of applying heat.

We do not find anything to support the allegation of "defective specification and claim." Nor is the allegation of "prior use" sustained. There is some evidence that lumps of bicarbonate of soda were used at Brunges & Linnewerths' brewery before the complainant's invention; but it is met by as much, if not more, evidence to the contrary. With the burden of proof on the respondent, this would be fatal if nothing else stood in his way. In addition, however, is the important fact (proved by his own witnesses) that the use was strictly secret. Such a use is not important. (*Gaylor* v. *Wilder*, 10 How., 477; *Adams* v. *Edward*, 1 Fish., 1.)

Do the proofs show infringement? The respondent used lumps of bicarbonate of soda, as the complainant does, artificially compressed, so as to form a solid mass without employing cement. This we believe to be an infringement. The employment of cement in forming the complainant's lumps is not a part of the patented process and is not mentioned in the claim. It is referred to in the specification as an available aid in solidifying the bicarbonate. It has no other office. The lumps of bicarbonate alone are important in the process. It may be more convenient, require less time and less pressure, to use cement in forming them. The powder itself, however, if slightly moistened or sufficiently compressed, will fill the role of a cement, as Dr. Sloan states. What the complainant discovered and secured by his patent is the use of artificially-compressed lumps of bicarbonate of soda or other alkali in the manner and for the purpose described in his claim. What the respondent has done is an infringement upon the right thus secured.

A decree will therefore be entered sustaining the bill.

U. S. Circuit Court—Eastern District of New York.

UNDERWOOD *et al. v.* GERBER *et al.*

Decided February 13, 1889.

1. PATENTS UPON DIVIDED APPLICATIONS—VOID PROCESS.

Under Rule 41, Rules of Practice of the Patent Office, as interpreted by *ex parte Blythe* (30 O. G., 1321) and *ex parte Herr*, (41 O. G., 463,) two patents in which the description was substantially the same, No. 348,072 for a composition for transfer surfaces for producing copies of type-writing, and No. 348,073, for a process of reproducing surfaces for type-writing and manifolding, were obtained with a single claim on each, instead of one patent with two different claims, each embodying one of the above inventions. Suit for infringement was instituted upon Patent No. 348,073 alone. *Held* that the claim of this patent covering the mere taking of a coloring-substance already known and applying it to paper did not involve invention, and in view of the state of the art the patent is void.

2. SAME—SUITS FOR INFRINGEMENT.

The complainants insist that their position is precisely the same as if they held a single patent with two claims—one for the process or composition of matter producing the coloring-substance, the other for the combination of that substance with paper. This might be so if they could be considered as holding both patents; but in this suit they have carefully abstained from declaring upon the first patent or even in any way referring to it. By not declaring upon it as its present owner, they leave it to the defendant to be availed of as if it were the property of a stranger.

For the complainants: *Mr. James A. Hudson*, cited (to the point decided in opinion) *Railway Signal Mfg. Co.* v. *Broadway & Seventh Ave. R. R.*, (22 Fed. Rep., 655;) *McMillen* v. *Ross*, (1 Fed. Rep., 722.)

For the defendants: *Mr Arthur v. Briesen*, cited (to the same point) *Mahn* v. *Harwood*, (112 U. S., 354;) *Mosler Safe & Lock Co.* v. *Mosler*, (127 U. S., 354;) *Suffolk* v. *Hayden*, (3 Wall., 315;) *Morris* v. *Huntington*, (1 Paine, 348;) *Matthewson* v. *Fowler*, (25 Fed. Rep., 830.)

LACOMBE, *J.*:

This is a suit brought to restrain the defendants from infringing Letters Patent No. 348,073, granted to the complainants, John T. Underwood and F. W. Underwood, August 24, 1886, for an improved reproducing surface for type-writing and manifolding.

The circumstances of the case are peculiar and present what seems to be a novel question.

On March 22, 1886, the complainants filed their application, (known as Serial No. 196,200.) The patent issued thereon and now sued on sets forth that the invention relates to an improved reproducing surface adapted to be employed for obtaining copies of type-writing or other printed or written impressions by means of a type-writer or other printing device, or by the employment of a stylus or other writing means. That the transfer-surface is spread upon a sheet or vehicle, and when so applied is adapted to be employed in place of the articles of trade commonly known and designated as "carbon papers" or "semi-carbon papers." The specification then proceeds as follows:

* * * "Carbon paper" or "semi-carbon paper," * * * are employed by type-writers and others to produce copies of impressions either obtained by a machine or by a stylus or other writing means.

In carrying out our invention we employ in the manufacture of our improved transfer-surface dye-wood solutions or their active principles, which we filter and precipitate with alkalies and mineral salts, or with alkalies, acids, and mineral salts, or with acids or alkalies alone. After the solution has been filtered the precipitate is removed from the filtering device and dried. The precipitate is then mixed with lard-oil and wax or their equivalents, and the mixture is then ground together in a warm state.

The dye solutions we prefer to employ are obtained from logwood or hæmatoxylin, the active principle of logwood, Brazil wood, sapan wood, peach-wood, madder, or its active principle—alizarine.

The proportions we find to answer well in producing our improved surface are as follows: Take one pound of extract of logwood and dissolve the same in one gallon of water, then add to the solution one pound of soda and one pound of mineral salt, using one of the salts of iron or copper, preferably sulphate of copper. The mixture thus obtained is then placed in a filter. After the solution has been filtered the precipitate is removed from the device employed for filtering and then dried, after which the precipitate is ready for use. To every two pounds of precipitate thus obtained we add one pound of oil and one pound of wax, and then grind the mixture in a warm state in what is commonly known as a "paint" or other suitable grinding mill. The heated mixture thus obtained is then applied to tissue-paper or other suitable paper or fabric by means of a sponge or other suitable transferring device.

The paper or fabric to which our improved surface is to be applied is placed upon a heated table, by preference formed of iron, and heated by steam; but this may be varied.

In place of employing oil or wax, or both combined, we can employ any other suitable oleaginous matter or combination of oleaginous matter having equivalent or approximately-equivalent properties.

The invention having been thus described, the patentees claimed:

A sheet of material or fabric coated with a composition composed of a precipitate of dye-matter, obtained as described, in combination with oil, wax, or oleaginous matter, substantially as and for the purposes set forth.

On the same day (March 22, 1886, Serial No. 196,199) complainants also applied for a patent for a "composition for transfer-surfaces for producing copies of type-writing," and Letters Patent therefor (No. 348,072) were issued to complainants on the same day as those sued on, August 24, 1886.

The specification sets forth that the invention relates to the process of producing a transfer-surface adapted to be employed upon a sheet or vehicle to take the place of the articles of trade commonly known and designated as "carbon papers" or "semi-carbon papers." It then states that these papers are employed by type-writers or others to produce copies of impressions either obtained by a machine or by a stylus or other writing means, and proceeds to describe the invention in the identical words used in the other patent and quoted above.

Having thus described their invention, the patentees claimed:

The coloring composition herein described for the manufacture of a substitute for carbon paper, composed of a precipitate of dye-matter, in combination with oil, wax, or oleaginous matter, substantially as set forth.

This novel method of manifolding an invention was adopted, as complainants state, in order to comply with recent decisions of the Patent Office, interpreting Rule 41 of that Office, and holding that where a person has "invented something in an art, or, as it is ordinarily called, 'a process,' also a machine for carrying out the process, and also the manufacture or article which is produced in the operation or the process by the machine," he must take out three separate patents—one for the process, one for the machine, and one for the product. (*Ex parte Blythe*, 30 O. G., 1321; *ex parte Herr*, 41 O. G., 463.) Before those decisions the patent would have contained the common specification above quoted with two separate claims—one for the process and resulting composition, the other for its combination with the paper. The complainants insist that their position is precisely the same, whether their invention is covered by a single patent with a double claim or by two separate patents. Whether this is so under the circumstances of the particular case here presented must be now determined. The defendants insist that no invention is set forth in either patent and that they do not infringe.

For the purposes of the argument upon the preliminary objection, however, the converse of these propositions will be accepted.

The present application is to restrain the defendants from continuing to infringe; and for some unexplained and unaccountable reason the complainants sue only on a single patent, and that, too, the one whose numbers would indicate that it was in time of application and of issue subsequent to the other. Having taken their stand solely upon this patent, what is their position toward defendants who make the composition of matter described in both patents and combine paper with it as indicated in the one sued on?

When differentiated from each other, it is found that the only step in advance which the higher-numbered patent suggests is the spreading upon paper of the composition described in the lower-numbered patent. In view of the earlier patents and publications which have been put in evidence—in fact, considering only what is within the common knowledge of all who have for upward of a generation manifolded writing by the use of a paper coated or impregnated with some pigment—it is difficult to see how even the Patent Office could detect novelty or invention in merely taking a coloring substance already known and applying it to paper. If the patent for the composition of matter forming the coloring substance had been granted to John Doe the day before complainants applied for their patent covering the application of that substance to paper, the latter would be clearly void for want of novelty or invention. It follows that if the first-numbered patent were held by an assignee of the complainants, near or remote, he could not be held an infringer of the second patent. Complainants conceded, upon the argument, that an assignee could not be so held except for the combination of paper with the coloring substance for the purpose named, and such a combination is clearly old. The complainants insist that their position is precisely the same as if they held a single patent with 2 claims—one for the process or composition of matter producing the coloring substance, the other for the combination of that substance with paper. This might be so if they could be considered as holding both patents. But in this suit they have carefully abstained from declaring upon the first patent or even in any way referring to it. Its issuance is only known to the court through the defendants, who set it up in defense. The complainants base their claim to a monopoly solely upon the second patent. As that single patent, tried by the usual tests, may stand or fall, the case which they make out upon their complaint must also stand or fall. One who seeks to enforce the rights secured to him by a patent is an Ishmaelite—his hand against every one and every one's hand against him. His adversary may avail of every publication of the fruits of human invention—by Letters Patent, by printed books, by actual public use—as if they were his own. When offered in evidence, they may prove not conflicting, not anticipatory, or be found otherwise immaterial; but for what they are worth they are the common property of all who are called upon to justify their acts in the face of a complainant patentee. The holder of the patent sued upon in this case must submit it to comparison with the first patent, as if that first patent were outstanding. By not declaring upon it as its present owner he leaves it to the defendant to be availed of as if it were the property of a stranger. What, then, is his position? At the very time when his patent was issued the composition of matter which enters into his combination with paper was known, and the right to exclude all persons from making it was conferred upon the holder of another patent. Upon the holder of the patent sued upon was conferred the right to exclude all others from combining paper with this combination; but, in view of the state of the art, such a grant was void.

The cases cited by complainant (*Railway Signal Mfg. Co.* v. *Broadway & Seventh Ave. R. R.*, 22 Fed. Rep., 655, and *McMillen* v. *Ross*, 1 Fed. Rep., 723) do not apply. There it was held that the additional combination which the original inventor sought to secure by his later patent was in fact a real step in advance. It was held that the description of his invention in the earlier patent would not preclude him from securing his additional claim, because that additional claim covered a patentable invention. "Whether two patents," says the court in the case last cited, "cover the same invention must be determined by the tenor and scope of their claims, not by the description in the specifications." Here, as we have seen, the combination which the second patent sought to cover was not patentable. This suit, based upon it alone, must therefore fail. To the holder of the first patent, whoever he may be, alone belongs the right to exclude all others from making the new composition of matter, the only invention which (if the other issues in the case be decided against the defendant) was sufficiently novel to warrant the granting of Letters Patent.

Usual decree for defendant.

U. S. Circuit Court—Eastern District of Pennsylvania.

SHELDON AXLE COMPANY *v.* STANDARD AXLE WORKS.

Decided 1889.

1. USE OF PATENTED ARTICLES — ASSIGNMENTS — TERRITORIAL RIGHTS.

Where an assignment of territorial rights has been made, the subsequent purchase of the patented article from the inventor or a later assignee (with notice) will not entitle the purchaser to use said article within the territory of the first-mentioned assignee.

2. FORMER DECISION REVIEWED.

Adams v. *Burke* (23 O. G., 114) commented upon, and *Held* not to conflict.

Mr. John R. Bennett for the complainant.
Messrs. Flemming & McCarrell for the defendant.

BUTLER, *J.*:

The principal objections made to the plaintiff's title are met by the amendment to the record just filed. The transfer from the Philadelphia Axle Company is properly executed. The State statute relating to the execution of deeds by such companies has application to transfers of real estate.

The plaintiffs owned the interest acquired by the Philadelphia Axle Company. The patentees transferred to this company all their right and interest in the patent and any improvements and reissues which might thereafter be made or granted within the ter-

ritorial limits specified in the transfer. The company thus took the exclusive monopoly of the manufacture, use, and sale within these limits. The patentees thereafter could not interfere with the enjoyment of this monopoly, and, consequently, could not authorize any one else to do so. Subsequent assignees of interests and purchasers of machines (with notice) took subject to the company's rights. This seems entirely clear. It is urged, however, that *Adams* v. *Burks* (23 O. G., 114; 7 Wall., 453) decides otherwise, as respects the use of machines subsequently purchased; that such use may be enjoyed within this territory. It would be strange, indeed, if this were so. It is as clear as language can make it that the right to use, within the territory, is as distinctly conveyed as the right to manufacture and sell. It is not, of course, questioned that the latter right cannot be interfered with. On what ground, then, can such a distinction be supported? None has been suggested, and we can see none. It is urged, however, that this distinction is drawn in *Adams* v. *Burks*. We do not so understand that case. There the patentees assigned their right to manufacture, use, and sell within certain territorial limits, and subsequently transferred their remaining interest to another.

The patented article was a coffin-lid. The purchaser of a lid from the first assignee used it outside the prescribed limits. Of this use the second assignee complained. The question thus raised was one of construction. Its decision turned on the interpretation of the first assignment. If the use of lids sold under this instrument was intended to be confined to the territory named, the complaint was well founded; otherwise it was not. The court (laying stress on the character of the article—the fact that it is incapable of continuous use) held that the use was not intended to be so confined; that the right to sell (which is distinct from the right to manufacture and use) contemplated a use of the lids sold everywhere; consequently that the second assignee took subject to this right, and therefore had no just cause of complaint. The case stands on this interpretation of the contract. The court says:

> It would engraft a limitation not contemplated, * * * nor within the reason of the contract, to say that it (the lid) could only be used within the ten-mile circle—

to which the right of sale was confined. This construction seems to rest on the conclusion that as a sale by the patentees before assigning conferred a right to such unrestricted use, the assignment of their authority to sell conferred on purchasers under it the same unrestricted use. The court distinguished, as it had done before, between the right to manufacture and use and the right to sell, and held that the territorial limitation was not intended to restrict the use of lids sold. What is said in this case of the patentee's "receipt of compensation for the use outside the territory," of a sale "emancipating the patented article from the monopoly," &c., was applicable there; but it is inapplicable to the case before us. The defendants here did not pay for a use within the plaintiffs' territory, a use which they knew the patentees had previously sold and received compensation for. Their purchase could not emancipate the machine from a monopoly which their vendors did not own and could not interfere with. The distinction, which seems to be broad and plain, between this case and *Adams* v. *Burk* consists in the facts that the assignment here, under which the plaintiffs hold, is first in the order of time, conferring upon them the entire monopoly of the patent within their territory, and that the second assignment, under which the defendants hold, is subject to this; while in *Adams* v. *Burks* the plaintiff's assignment was subsequent to that under which the defendant purchased, by which latter assignment, as the court held, a right was tranferred to use the article so purchased everywhere. The situation of the parties in *Adams* v. *Burks* is here reversed; which makes all the difference in the world—rendering the decision in that case wholly inapplicable to this.

Other decisions of the Supreme Court, cited by the defendants, lend no support to their position. *Bloomer* v. *McQuewan* (14 How., 549) determines no more than that the lawful purchase of a patented machine covers a right to use it until worn out, notwithstanding the patent may have expired and been removed in the meantime. General observations made by the Court in disposing of such a case can have no influence in deciding the question before us. *Chaffee* v. *The Belting Company* (22 How., 217) and *Mitchell* v. *Howley* (16 Wall., 544) are equally inapplicable. The facts involved bear no relation to those before us. Nor are the cases cited from the circuit courts entitled to greater influence. We had occasion to consider them in *Hatch* v. *Adams*, (24 Fed. Rep., 450,) and nothing need be added to what is there said on the subject.

The foregoing is predicated on the supposition that the defendants and their predecessors, Ives and Miller, had knowledge of the previous assignment to the Philadelphia Axle Company. Had they such knowledge? Notice may be actual or constructive. The latter, which results from an authorized record, Ives and Miller had not. The duty of recording was neglected until after they had purchased. It is entirely clear, however, that they had actual notice. A review of the testimony respecting this is unnecessary. The fact is abundantly proved. Ives and Miller first purchased the patentee's entire remaining interest, some months after the transfer to the company, with knowledge that the latter had an interest, and later, on being informed by the company of the character and extent of this interest, they refused to pay the consideration, returned the property and entered into a contract for twenty machines, one of which was sold to the defendants, brought within the plaintiffs' territory, and used. It is unimportant that Mr. Miller says the patentees denied the company's statement respecting its interest. The latter was not required to do more than inform Ives and Miller of it. Ives and Miller, however, acted as if they believed it—declining to carry out their contract and returning the property. It is unnecessary in this case to invoke the rule that knowledge of facts sufficient to put a prudent man to inquiry is notice. Direct, explicit notice is proved. That the defendants also had notice, constructive as well as actual, is equally clear. The assignment was on record several years before their purchase, and the evidence abundantly shows that they had actual knowledge of the plaintiffs' rights. Their correspondence with Ives and Miller puts this beyond doubt. It shows not only that they were fully apprised of these rights, but that they directed their most earnest efforts to the discovery of means whereby the plaintiffs' enjoyment of them might be circumvented and defeated. They were slow to believe that a purchase outside this territory would confer a right on them to use the machine within, in view of the exclusive right vested in the plaintiffs, and they consequently demanded a guaranty from Ives and Miller. This being refused, however, they resolved to take the risk.

A decree must be entered for the plaintiffs.

Instructions to Examiners, Applicants, and Others.

(ORDER No. 560.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 2, 1889.

1. All marginal notes, interlineations, or other marks placed upon application-papers by examiners for convenience in conducting their work of examination will be removed when the application is passed to issue.
2. Official communications will not refer to memoranda or pencil notes made by examiners on application-papers.
3. Letters emanating from this Office must be couched in respectful and courteous language, and give full, clear, and explicit information to the applicant or correspondent on the subject under consideration, and must be absolutely free from personal controversy.
4. The Commissioner will strictly enforce the provisions of Rule 22 requiring applicants and attorneys to conduct their business with the Office with decorum and courtesy. No complaints against examiners will be permitted in papers intended to be filed in connection with applications.

C. E. MITCHELL,
Commissioner.

Examiners' Hours for Interviews.

(ORDER No. 561.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 2, 1889.

The examiners having agreed upon the hour from 11 to 12 o'clock A. M. and the hour from 1 to 2 o'clock P. M. for interviews concerning applications and other matters pending before the Office, such hours are hereby approved and established for such purposes. The respective examiners will, if they deem it expedient, designate additional hours or extend the foregoing hours, as they may find convenient.

C. E. MITCHELL,
Commissioner.

Oath of Inventor in Relation to Foreign Patents.

(ORDER No. 562.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 2, 1889.

In applications for patents for inventions which have not been patented abroad it will be deemed a sufficient compliance with Rule 46 of the Rules of Practice if the American inventor makes oath that the invention has not been patented to himself or to others with his knowledge or consent in any foreign country.

C. E. MITCHELL,
Commissioner.

Assignment of Applications for Examination.

(ORDER No. 563.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 2, 1889.

Whenever the question arises to which one of two or more divisions an application should be assigned for examination, the examiners in charge of such divisions will use their best efforts to effect a proper assignment before the case is submitted to the Assistant Commissioner for decision.

C. E. MITCHELL,
Commissioner.

Issue of July 9, 1889.

DESIGNS.

19,195.—FLUE-STOPPER OR COLLAR.—*Emanuel Ettenheimer*, New York, N. Y. Application filed May 13, 1889. Serial No. 310,643. Term of patent 7 years.

19,196.—GIMP.—*George W. Graham*, New York, N. Y. Application filed May 23, 1889. Serial No. 311,681. Term of patent 7 years.

19,197.—SURFACE ORNAMENTATION OF WATER-CLOSET BOWLS.—*Christian H. Hansen*, Trenton, N. J., assignor to *Henry Huber*, New York, N. Y. Application filed January 4, 1889. Serial No. 295,451. Term of patent 7 years.

19,198.—VAPOR-STOVE.—*Thomas Johnson*, St. Louis, Mo., assignor to *Johnson & Brandon*, same place. Application filed May 29, 1889. Serial No. 312,655. Term of patent 14 years.

19,199.—LOUNGE.—*Adolph Karpen*, Chicago, Ill. Application filed January 2, 1889. Serial No. 295,253. Term of patent 3½ years.

19,200.—SEWING-MACHINE COVER.—*Theodor Kundtz*, Cleveland, Ohio. Application filed May 28, 1889. Serial No. 312,462. Term of patent 7 years.

19,201.—DISH.—*Thomas Maddock*, New York, assignor to *Henry Maddock*, Brooklyn, N. Y. Application filed September 8, 1888. Serial No. 284,983. Term of patent 7 years.

19,202.—ORNAMENTATION OF SASH-LIFTS OR OTHER ARTICLES OF BUILDERS' HARDWARE.—*Floyd N. Perkins*, Cleveland, Ohio. Application filed May 13, 1889. Serial No. 310,646. Term of patent 3½ years.

19,203.—HANDLE FOR SPOONS, FORKS, &c.—*Frederick Schmidt*, North Attleborough, Mass., assignor to *F. M. Whitney & Co.*, same place. Application filed June 13, 1889. Serial No. 314,145. Term of patent 3½ years.

19,204.—SAD-IRON HANDLE.—*Henry W. Schneider*, Little Oley, assignor to *The Colebrookdale Iron Company*, Douglas, Pa. Application filed April 15, 1889. Serial No. 307,342. Term of patent 14 years.

19,205.—SPOON, &c.—*George P. Tilton*, Newburyport, Mass., assignor to *The Towle Manufacturing Company*, same place. Application filed June 5, 1889. Serial No. 313,203. Term of patent 7 years.

TRADE-MARKS.

[Certificates of registration of Trade-Marks numbered 8,191 and upward are registered under the act of March 3, 1881.]

16,787.—DISPLAY-FRAMES HAVING ADJUSTABLE JOINTS FOR EXHIBITING WEARING-APPAREL.—*William A. Aiken*, Norwich, Conn. Application filed April 13, 1889. Used since February 23, 1889.

"The figure of Mercury outlined by a black ground."

16,788.—PRESERVING-PAINT.—*Gebrüder Avenarius*, Gaualgesheim, Germany. Application filed April 19, 1889. Used since February 25, 1889.

"The words 'CARBOLINEUM AVENARIUS.'"

16,789.—PILLS OF ESSENCE OF TAR.—*A. Bertelli & Cie.*, Milan, Italy. Application filed June 11, 1889. Used since December, 1884.

"The word 'CATRAMINA.'"

16,790.—WHISKY.—*Betterton & Co.*, Knoxville, Tenn. Application filed May 15, 1889. Used since March 3, 1888.

"The words 'DAVEY CROCKETT.'"

16,791.—WHISKY.—*Elias Block & Sons*, Cincinnati, Ohio. Application filed May 8, 1889. Used since August 15, 1863.

"The word 'MERCANTILE,' in a curved line, under which, in a straight line, is the word 'CLUB.'"

16,792.—[Withdrawn.]

16,793.—BRONZE, COPPER, AND BABBITT INGOTS AND ARTICLES USEFUL AND ORNAMENTAL MADE THEREFROM.—*The Eastwood Wire Manufacturing Company*, Belleville, N. J. Application filed March 16, 1889. Used since July 28, 1888.

"The word 'PERFECTION.'"

16,794.—DENTAL INSTRUMENTS, MACHINERY, PREPARATIONS, AND FURNITURE.—*George W. Fels*, Cincinnati, Ohio. Application filed January 24, 1889. Used since September 1, 1883.

"The word 'FAVORITE' and the picture of an infant."

16,795.—GOLD PAINT MADE OF GOLD BRONZE.—*Gerstendörfer Bros.*, New York, N. Y. Application filed May 20, 1889. Used since May 1, 1889.

"The representation of a star inclosing the initial letter 'G' and the syllable 'BROS.' within said letter."

16,796.—GOLD PAINT MADE OF GOLD BRONZE.—*Gerstendörfer Bros.*, New York, N. Y. Application filed May 20, 1889. Used since May 1, 1889.

"The figure of a Japanese woman."

16,797.—ELECTRIC BATTERIES.—*George A. Harmount*, Chicago, Ill. Application filed June 10, 1889. Used since December 1, 1888.

"The word 'MONITOR.'"

16,798.—SALT.—*Thomas Higgin & Co.*, Liverpool, county of Lancaster, England. Application filed October 18, 1888. Used since September 1, 1873.

"The representation of a rhombus figure and a monogram or cipher composed of the initial letters 'T H & Co.'"

16,799.—FERMENTED CIDER OR CIDER CHARGED WITH CARBONIC-ACID GAS.—*William L. Horne*, Wallingford, Conn. Application filed June 7, 1889. Used since May 26, 1889.

"The word 'APPLEAGNE.'"

16,800.—LIQUID PREPARATION FOR USE AS AN INGREDIENT IN BEVERAGES AND BITTERS FOR INDIGESTION.—*William Robert Julian Gill Knight*, Barbadoes, West Indies. Application filed November 22, 1887. Used since June, 1885.

"The word 'DINNER.'"

16,801.—WHISKY.—*J. M. Mackenzie & Co.*, Wishaw, county of Lanark, Scotland. Application filed March 19, 1889. Used since January 1, 1839.

"The word 'CLYDESDALE.'"

16,802.—OLIVE-OIL.—*Carlo Maspero*, New York, N. Y. Application filed May 24, 1889. Used since May 1, 1889.

"Registrant's family coat of arms, composed of a heraldic shield having three panels, the top panel containing an eagle, the intermediate panel two comets, and the lower panel the heraldic representation of a lion, together with a breast-plate and helmet and the scrolls extending from the same."

16,803.—OIL FOR SEWING-MACHINES AND LIGHT MACHINERY.—*Nesbitt D. Stoops*, Philadelphia, Pa. Application filed May 23, 1889. Used since April 1, 1889.

"The representation of a whaling or sea-going vessel and portion of the body of a whale projecting above the surface of the sea, showing the act of removing the blubber."

16,804.—WHISKY.—*Patrick J. Sullivan*, Sault Ste. Marie, Mich. Application filed April 1, 1889. Used since December 31, 1888.

"The words 'BLACK THORN.'"

16,805.—ASPHALTUM PAVING-BLOCKS.—*The Trinidad Asphaltum Block Company*, Philadelphia, Pa. Application filed April 29, 1889. Used since April 1, 1889.

"The words 'TRINIDAD ASPHALTUM BLOCK CO.' displayed upon a picture of an asphaltum paving-block."

16,806.—DRUGGISTS' RUBBER GOODS, AS NIPPLES, SYRINGES, TEETHING-RINGS, WATER-BOTTLES, AIR-PILLOWS, AIR-CUSHIONS, &c.—*Tyer Rubber Company*, Andover and Boston, Mass. Application filed May 18, 1889. Used since May 1, 1883.

"The word 'TYRIAN.'"

16,807.—CHEMICAL FIRE-EXTINGUISHING APPARATUS.—*Worcester Fire Appliance Company*, Worcester, Mass. Application filed April 27, 1889. Used since April 15, 1889.

"The words 'WORCESTER CHEMICAL FIRE PAIL' in connection with the design of a pail or bucket and the hand of an unseen person breaking through the cover of the same."

LABELS.

5,958.—Title: "HOSPITAL REMEDIES."—*A. H. Dixon*, Toronto, Ontario, Canada. Application filed April 8, 1889.

5,959.—Title: "MRS. A. A. DRAPER'S CORN KILLER."—*A. A. Draper*, Blue Island, Ill. Application filed June 13, 1889.

5,960.—Title: "LANGLES" (FOR BISCUITS.)—*Justin J. Langlés*, New Orleans, La. Application filed March 28, 1889.

5,961.—Title: "THE ST. LOUIS JEANS PANTS."—*Harry N. Marx* and *Aaron Haas*, St. Louis, Mo. Application filed May 21, 1889.

5,962.—Title: "D. MAURER & SON'S INFALLIBLE RAT AND ROACH EXTERMINATOR."—*Conrad Daniel Maurer*, Philadelphia, Pa. Application filed May 11, 1889.

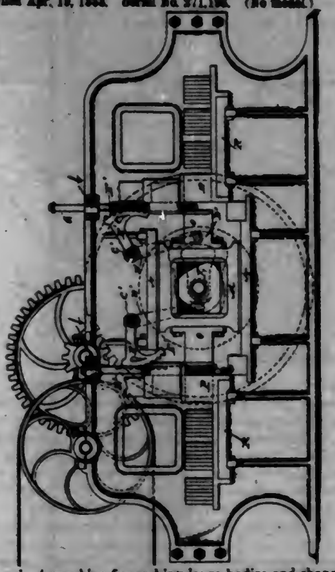
5,963.—Title: "DR. C. K. MERRIAM'S FEMALE HERBAL PASTILLETTES."—*Dr. C. K. Merriam*, Ludington, Mich. Application filed May 20, 1889.

5,964.—Title: "HAIR WASH."—*Charles Parker*, Stockton, Cal. Application filed March 6, 1889.

5,965.—Title: "VISCOL-DRESSING" (FOR LEATHER.)—*Adolph Sommer*, Berkeley, Cal. Application filed October 8, 1888. (Trade-Mark Registered.)

DISCLAIMER.

143,160.—*James M. Ellis*, Bridgeport, Conn. IMPROVEMENT IN COIL-SPRING GARTERS AND BELTS. Patent dated December 2, 1873. Disclaimer filed June 29, 1889, by the present assignees, *The Chapman and Armstrong Manufacturing Company*, Waterbury, Conn.



Enters its disclaimer—

"To so much of both clauses of claim in said Letters Patent as does or might make them include a structure not having the 'tip D' described and shown in the specification and drawings of said patent."

PATENTS

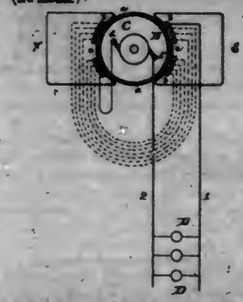
GRANTED JULY 9, 1889.

406,414. BRICK-MACHINE. JAMES C. ANDERSON, Highland Park Ill. Filed Apr. 19, 1888. Serial No. 271,198. (No model.)

Claim.—1. A machine for making large bodies and shapes from clay, in which the compression-plungers press a thin slab of clay onto a series of similar slabs or layers in an open-ended mold, and rolls or described equivalents for depositing a layer or film of slip or vitrifiable or cementing material between each slab, as set forth.

2. In a machine for making blocks of a series of thin clay slabs, an open-ended mold-chamber, a feed-charger working in front of the mold-chamber, and a plunger working into and through the charger to press the clay and compact it against the previously-formed blocks in the compression-chamber, as set forth.

3. In a machine for making blocks, colums, &c., of a series of thin clay slabs, an open-ended mold-chamber, a charger working in front of the mold-chamber, said charger being provided with rolls for depositing a slip between the layers or slabs, and a plunger working into and through the charger to press the clay therefrom and compact it against the previously-formed blocks in the compression-chamber, as set forth.

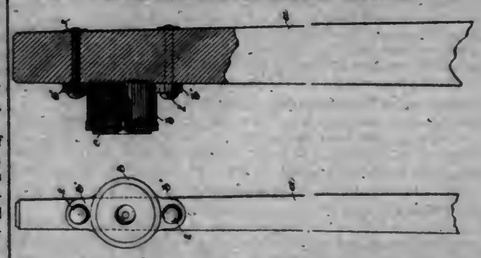


4. In a machine of the character described, the clay spouts or chambers located above the compression-chamber and communicating with the vertically-moving charger at the side thereof, the plate V for closing one side of the charger, and devices, substantially as described, for moving the charger up and down in front of the compression-chamber, as set forth.

5. The shafts G, having the crank-arms D, adapted to engage cam-grooves B, and with the arms E, having the toothed sectors F to engage the rack-bars G' of the chargers, whereby said chargers are moved up and down in front of the compression-chambers.

6. In a machine of the character described, the clay-charger T, in combination with the rolls I' and K' and the slip-trough L', whereby a film or layer of slip is deposited on the face of the newly-formed slab at each movement of the charger, as set forth.

7. The ratchet-wheel M' and disk P', mounted on the shaft of the slip-roll I', in combination with the pawls N' and R', whereby, when the ratchet-wheel and disk have made one revolution, the roll I' will be held from contact with the clay slab and the block separated at this point.

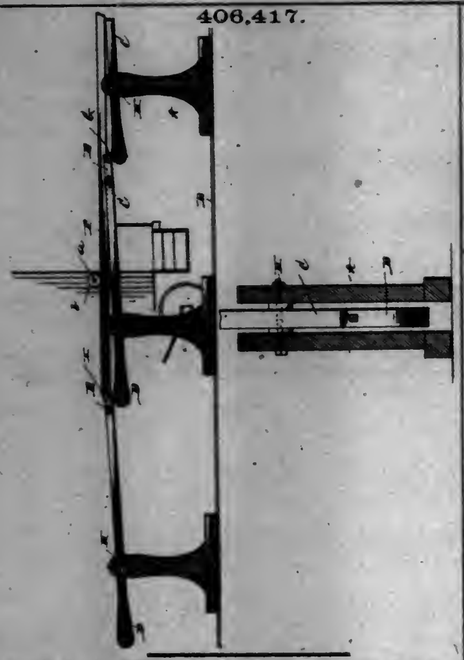


406,415. DYNAMO. WILLIAM R. ANDREWS, New York, N. Y., and THOMAS SPENCER, Westbrook, Conn. Filed Aug. 17, 1888. Serial No. 311,100. (No model.)

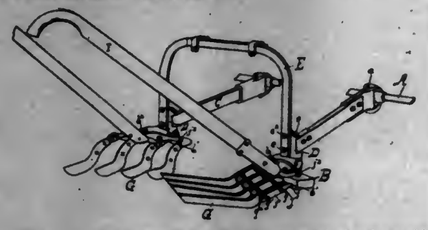
Claim.—1. In a dynamo-electric machine, the combination of the armature, the generating-coils thereon, the field-magnet, and the external stationary coils supported upon said field-magnet and wound so as to oppose the magnetizing effect on the armature-core of said generating-coils, substantially as set forth.

2. In a dynamo-electric machine, the combination of the armature, the generating-coils thereon, the field-magnet having grooves in its pole-pieces, and the coils wound in said grooves, so as to oppose the magnetizing effect on the armature-core of said generating-coils, substantially as set forth.

406,416. LOOM-PICKER. EVERETT H. ARCHIBALD, Lawrence, Mass. Filed Mar. 26, 1888. Serial No. 304,847. (No model.)



Claim.—The loom-picker herein described, it consisting of the metallic support *b*, formed with a circular socket within it and having external ears *b'*, and the circular piece *c*, placed in the circular socket in the support and having the central guiding hole or eye therethrough for the point or beak of the shuttle, all as and for the purposes set forth.



406,417. RAILROAD-GATE. JOHN T. BARLOW, Richmond, Va. Filed Feb. 2, 1889. Serial No. 298,426. (No model.)

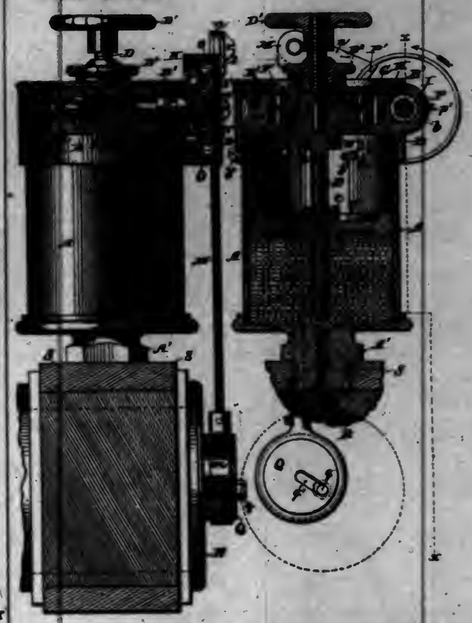
Claim.—The combination, with a series of standards erected along a railway-track at a crossing, of tumbling-bars connected pivotally to the upper ends of said posts or standards and having weights at their lower ends, and a connecting-bar connected pivotally to the upper end of each of said tumbling-bars, substantially as herein described, and for the purpose set forth.

406,417.

406,418. CULTIVATOR. DAVID W. RASH, Sandwich, Ill., assignor to the Sandwich Enterprise Company, same place. Filed Apr. 11, 1887. Serial No. 234,468. (No model.)

Claim.—1. In a cultivator, the combination of the heads provided with rounded sockets, arms having one end flattened and the other end rounded and adapted to fit in said sockets, and set-screws for retaining them therein, with blades adjustably secured to the flattened end of said arms, substantially as and for the purpose specified.

2. In a cultivator, the combination of the heads provided with rounded sockets, arms having one end flattened and the other end rounded and adapted to fit in said sockets, and set-screws for retaining them therein, with blades pivoted to the flattened end of said arm, and a slot, bolt, and nut for securing said blade in any desired position, substantially as and for the purpose specified.



3. In a cultivator, the combination of suitable heads, and standards secured thereto, with an arch having its ends pivotally connected with said standards, and means for rigidly securing the standards and arch together, substantially as and for the purpose specified.

4. In a cultivator, the combination of suitable heads, each having blades secured thereto, and an arch extending between said heads, with standards, and adjustable connections between said standards and both the arch and the heads, substantially as and for the purpose specified.

5. In a cultivator, the combination of suitable heads and standards secured thereto, an arch having its ends pivotally connected with said standards, and means for rigidly securing the standards and arch together, with the frame and beams pivotally connected to both the frame and the heads, as and for the purpose set forth.

6. In a cultivator, the combination of suitable heads, each having blades secured thereto, an arch extending between said heads, and standards adjustably connected to both the arch and the head, with the frame and beams pivotally connected to both the frame and the heads, substantially as and for the purposes hereinbefore set forth.

406,419. SPEED-REDUCING MECHANISM FOR LUBRICATORS. WILLIAM S. REYNAR, Ashland, Wis. Filed Apr. 30, 1888. Serial No. 272,223. (No model.)

Claim.—1. The combination of a rotary eccentric, an internal gear inserted therein, and differential gears working with said internal gear, substantially as and for the purposes set forth.

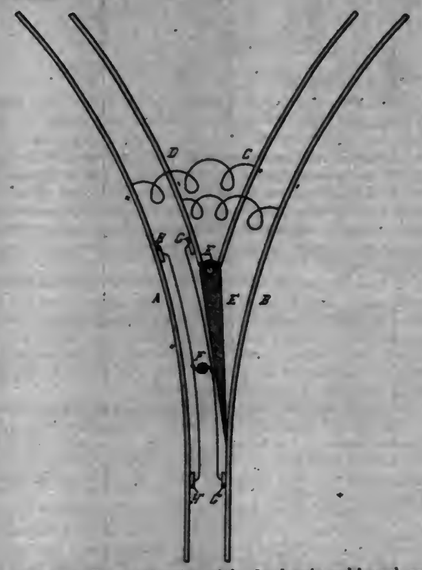
2. The combination of a rotary eccentric having a worm-gear formed on its periphery, an internal gear inserted therein, concentric differential gears working with said internal gear, and a worm working with said worm-gear and connected with a suitable source of power, substantially as and for the purposes set forth.

3. The combination of concentric differential gears, one being fixed and the other revoluble, a rotary eccentric, and an internal gear interposed between said eccentric and said differential gears and working therewith, substantially as and for the purposes set forth.

4. The combination, with a piston or follower having a rotary stem, of differential gears, one of which is fixed and the other revoluble, a clutch adapted to secure said revoluble gear to said stem, a rotary eccentric, and an internal gear inserted in said eccentric and engaging with both differential gears, substantially as and for the purposes set forth.

5. The combination, with a suitable receptacle and a piston or follower adapted to work therein, of a cover constituting a gear-case, an eccentric worm-gear revoluble in said gear-case, differential gears placed within said worm-gear concentric with its axis of rotation, an internal gear interposed between said worm-gear and said differential gears, and a revoluble stem connecting said piston with one of said gears, substantially as and for the purposes set forth.

6. The combination, with a suitable receptacle and a piston adapted to work therein, of differential gears, one fixed and the other revoluble, a screw-threaded stem working with a nut in said piston and extending throughout said gears and provided at its outer end with a head by means of which it may be turned, a friction-disk and a jam-nut placed on said stem on opposite sides of said revoluble gear, and a driving-gear working with both differential gears, substantially as and for the purposes set forth.



7. The combination of concentric differential gears, an eccentric annular worm-gear, an internally-toothed ring working within said worm-gear in engagement with said differential gears, a worm working with said worm-gear, and an oscillatory friction-clutch connected with said worm and with a suitable source of power, substantially as and for the purposes set forth.

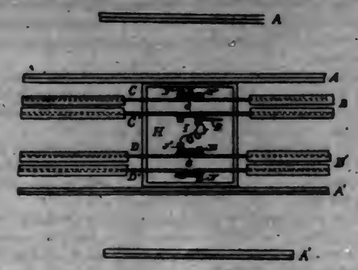
8. The combination, with a piston or follower and a stem connected therewith, of a friction-wheel provided with a laterally-projecting annular rim, speed-reducing mechanism connecting said friction-wheel with said stem and composed of a rotary eccentric worm-gear, a worm working therewith, an internal gear inserted in said eccentric, and differential gears concentric with the axis of rotation of said eccentric and working with said internal gear, an oscillatory head, and friction-shoes working with the rim of said friction-wheel and so connected with said oscillatory head as to be moved into engagement with said rim when said head moves in one direction and moved out of engagement therewith when the head moves in the reverse direction, substantially as and for the purposes set forth.

9. The combination of a piston provided with a stem, an internal friction-wheel connected with said stem by speed-reducing gearing composed of a worm, a rotary eccentric worm-gear, an internal gear inserted therein, and differential gears concentric with the axis of rotation of said eccentric worm-gear and both working with said internal gear, and oscillatory friction-clutch mechanism working with said friction-wheel, substantially as and for the purposes set forth.

10. The combination of a piston provided with a stem, an intermittingly-rotating shaft connected with said stem by speed-reducing gearing composed of a worm, a rotary eccentric worm-gear, an internal gear inserted therein, and differential gears concentric with the axis of rotation of said eccentric worm-gear and both working with said internal gear, oscillatory clutch mechanism connected with said shaft, and an eccentric adjustably attached to the actuating crank-pin and connected with said oscillatory clutch mechanism, substantially as and for the purposes set forth.

406,420. ELECTRIC-RAILWAY SWITCH. FRANCIS O. BLACKWELL, New York, N. Y. Filed Nov. 23, 1888. Serial No. 291,643. (No model.)

Claim.—1. The combination of the fixed main and branch conductors and a movable switch-point forming no part of the electric circuit, for directing the collector upon either branch, with a traveling vehicle, a propelling electric motor therefor, and a contact device in circuit with the motor, which bridges the switch-point, making contact with one fixed conductor before breaking contact with the other, substantially as described.



2. The combination of the fixed main and branch conductors and the movable switch-point with a traveling vehicle, a propelling electric motor therefor, and a contact device in circuit with the motor, bridging the switch-point and adapted to contact with the fixed conductors on either side of the switch-point, substantially as described.

3. The combination of the conductors A B and C D for main and branch tracks and the movable switch-point E, forming no part of the electric circuit, with a traveling electrically-propelled vehicle and a contact device which bridges the switch-point.

4. The combination, in an electric railway, of the fixed main and branch conductors and the intermediate movable switch-point out of circuit with the said fixed conductor, to form a mechanical guide for the traveling current-collector.

5. The combination, in an electric railway, of the two main conductors, which extend beyond the switch to form the outer conductors of said branch tracks, with the two inner conductors of said branch tracks and the movable switch-point E, out of circuit with the conductors, but extending from the main to the branch conductors, to form a mechanical guide for the traveling current-collector.

406,421. ELECTRIC-RAILWAY CIRCUIT. JOSIAH L. BLACKWELL, New York, N. Y. Filed Mar. 11, 1889. Serial No. 302,930. (No model.)

Claim.—1. The combination of a supply-conductor extending along the line of an electric railway with the supplementary flexible emergency-conductor I, normally forming no part of the line-circuit, but placed in engagement with the supply-conductor upon the interruption of the circuit therein for temporarily bridging the break in said supply-conductor.

2. The combination, in an electric railway, of two parallel tracks, bared supply-conductors of like polarity extending along said tracks, and a loop-circuit for bridging a fault upon the supply-conductor of one road, said loop-circuit consisting in part of the supply-conductor of the second road.

3. The combination, in an electric railway, of two supply-conductors of like polarity between the tracks of two parallel roads supplying current to the motors upon the said roads, respectively, and a flexible supplementary conductor connecting the two said conductors upon the occurrence of a fault on either one.

4. The combination, in an electric railway, of two parallel tracks, supply-conductors of like polarity extending along the said tracks, respectively, said conductors being each made up of independent sections normally in circuit with one another, switches at intervals for breaking the circuit of the supply-conductors, and a supplementary conductor connecting the supply-conductors of the two roads when the circuit of one is interrupted.

5. The combination, in an electric railway, with two sectional supply-conductors of like polarity extending along the line of two parallel roads and supplying current to the motors traveling upon the two roads, respectively, of switches normally coupling up in circuit the sections of each supply-conductor, and two supplementary conductors, substantially as described, whereby one section of supply-conductor may be cut out and the circuit completed around said section through the supplementary conductors and supply-conductor of the parallel road.

6. The combination of two slotted conduits between the tracks of a double-track road, supply-conductors of like polarity inclosed therein and supplying current to the motors upon the two roads, respectively, a common opening affording access to the conductors of both roads, and a supplementary conductor in said opening joining the supply-conductors of both roads upon the interruption of the circuit upon either one of them.

7. The combination, with two parallel tracks, of two conduits between the tracks, and sectional supply-conductors inclosed therein supplying current to the motors upon the two tracks, respectively, with switches normally uniting the adjacent sections of each supply-conductor, and a common opening permitting access to the conductors of both roads and their bridging-switches.

8. The combination, with the two tracks, of a double-track road, two conduits between the said tracks, and an inclosed supply-conductor in each conduit, with a common pit or opening permitting access from the street to the conductors of both roads.

9. The combination of the conduits with a common pit, inclosed sectional conductors of like polarity supplying current to the motors upon the tracks of a double-track road, and having adjacent sections terminating in said pit, the switches for connecting and disconnecting adjacent sections, and the supplementary conductor connecting the supply-conductors of the two roads upon the interruption of the circuit on either one of them.

10. The combination, with the sectional supply-conductors of like polarity of two parallel roads, of the switches for connecting and disconnecting adjacent sections of each supply-conductor, the exposed terminals adjacent to said switches, and the supplementary conductor adapted to engage said terminals, whereby the circuit of either conductor may be broken and connection made to the second conductor, substantially as described.

11. The combination, with the supply-conductors of like polarity of two parallel roads, of the supplementary flexible emergency-con-

ductor I, joining the supply-conductors upon the interruption of the circuit in either one.

12. The combination, with a sectional supply-conductor extending along the line of an electric railway, of a bridging-switch between adjacent sections pivotally connected with one and engaging the other of said sections.

13. The combination, with the sectional supply-conductor extending along the line of an electric railway, of the insulating-backing at the break between adjacent sections, and a bridging-switch behind said backing.

14. The combination, with a sectional supply-conductor extending along the line of an electric railway, of the studs projecting from adjacent sections, and a switch pivoted upon one of said studs and engaging the other.

15. The combination, with a sectional supply-conductor extending along the line of an electric railway, of an insulated mechanical connection between adjacent sections, and a switch for establishing an electrical connection at will.

16. The combination of a sectional supply-conductor extending along the line of an electric railway with a bridging-switch forming an electrical connection between adjacent sections, and a catch for said switch holding the same against accidental displacement.

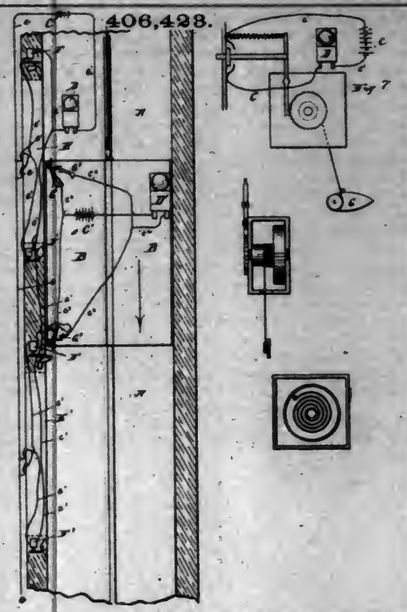
17. The combination of two line-conductors of like polarity supplying current to motors traveling upon an electric railway, and generators normally in circuit with the line-conductors, respectively, with a supplementary conductor for joining the said supply-conductors, and a switch for coupling up the generators in circuit with either line-conductor at will.

18. The combination of two line-conductors of like polarity supplying current to motors traveling upon two parallel roads, respectively, a generator normally in circuit with each conductor, and a switch for cutting out a portion of one of the line-conductors, with a supplementary conductor joining the line-conductors, and a switch at the supply-station for shifting the circuit of the generator from the cut-out section to the conductor of the other line, substantially as described.

19. The combination, with the supply-conductors of two roads, and an independent generator normally supplying current to the motors upon each road, of the supplementary conductors for joining the supply-conductors of like polarity upon the two roads, and the switches at the supply-station for shifting the circuit of the generators from one line to the other.

20. The combination, in an electric railway, of two parallel roads, and an independent generator normally supplying current to each road, with switches and circuit-connections for putting both generators in circuit with one of the roads, as set forth.

406,422. CULTIVATOR. WILLIAM H. BOSWELL, Brookville, Ind. Filed Aug. 21, 1888. Serial No. 283,314. (No model.)



Claim.—1. In a wheeled cultivator, the combination of an axle extended horizontally outward from the central arch and bent downward terminally, wheel-pintles engaging said vertical terminals to swing horizontally upon the same as pivots, draft-bars rigidly secured directly to and extending forward from the wheel-pintles, coupling-blocks F, and share-beams connected with the horizontal portions of said axle, whereby an unequal strain upon one of the draft-bars is compensated for by the pivotal connection of the said wheels and share-beams with the axle and the proper alignment of the cultivator preserved, substantially as described.

2. In a wheeled cultivator, the combination, with the axle and the share-beams, of the coupling blocks or caps F, each having a vertical pivot for connecting it with its share-beam, pivoted horizontally to the axle and having a central aperture, and a collar *b* in said aperture embracing the axle and held in any desired position by a set-screw, substantially as described.

3. In a wheeled cultivator, the combination, with the arched axle C and the pivoted share-beams E, of a bifurcated link *w*, adapted to be attached to the arched axle and elevate the share-beams out of working position, substantially as described.

406,423. SIGNALING APPARATUS FOR ELEVATORS. JOHN F. BOWER, Chicago, Ill. Filed Oct. 19, 1887. Serial No. 252,804. (No model.)

Claim.—1. The combination, with an elevator-car and its shaft, of a stationarily-located signal-trip device, as a trip-lever operated by the car when going down, a second stationarily-located signal trip device, as a trip-lever operated by the car when going up, an electric circuit embracing magnets for setting said trip devices, and buttons or switches *c d*, placed at the elevator stations or landings, substantially as set forth.

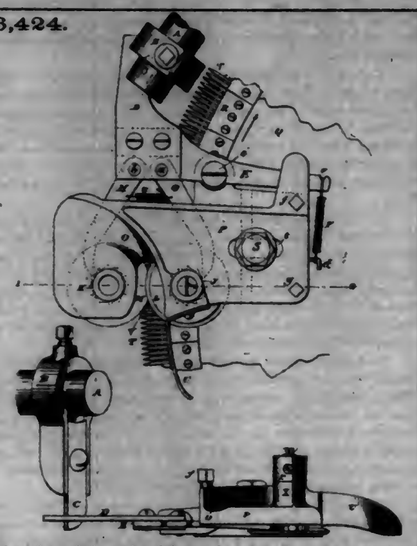
2. The combination, with the elevator-car, the shaft, and the trip devices, and an electric circuit in the shaft for operating said trip devices, of an electric circuit on the car for operating a signal thereon and controlled by contact with the trip devices in the motion of the car, and a sound-signal, as a bell, connected with said first-mentioned circuit and operated by the setting of the trip devices to give the general call-signal, substantially as set forth.

3. The combination, with an elevator-car and its shaft, of a trip-lever located and stationary in the shaft, an electric circuit or its equivalent located and stationary in the shaft, and a sound-signal, as a bell, located stationarily in the shaft and operated by the electric circuit, said circuit being controlled by the setting of the trip-lever, substantially as specified.

4. The combination of magnet F, its armature *f*, pawl f^2, trip G, swinging arm G′, lever G^2, arm G^2, gong D′, and electric circuit upon the elevator-car for operating said gong, substantially as specified.

5. The combination of the battery C, gong D, magnets F and F′, operating-armatures *f* and *h*, the trips G and H, the circuit from the battery C, with the battery C′, gong D′, and contact devices on the elevator-car, together with the circuit thereon, substantially as specified.

6. The combination, with an elevator-shaft and its car, of a signal-giving trip stationarily located in the shaft and operated by the car, a sounding call-signal, and electrical devices whereby the passenger may simultaneously set the trip and sound the call, the same consisting of the magnet and the circuit including said magnet, the push-button, the sound-signal and battery, or the equivalents of such electrical devices, substantially as set forth.



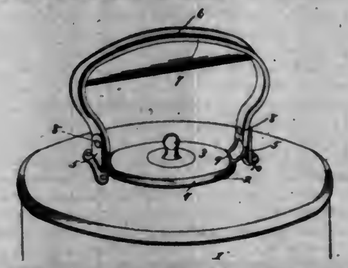
7. The combination, with an elevator-shaft and its car, of a signal-giving device, as a trip-lever, located at a stopping-station and operated by the car as it approaches such station, a sound-signal, as a bell, a button to be used by the passenger, and an electrical circuit embracing both the trip-signal and the sound-signal, whereby the passenger sets the lever of the first signal and sounds said bell at the same time, substantially as set forth.

406,424. TRIMMING ATTACHMENT FOR MACHINES FOR SEWING KNIT FABRICS. BYRON H. BROWN, Bennington, Vt. Filed Apr. 23, 1888. Serial No. 308,980. (No model.)

Claim.—1. The combination, in machines for trimming the seams of knit fabrics, of the finger C, connected with the oscillating needle-arm, the lever D E, pivoted as shown, and the retractile spring F, attached to the end thereof and fastened at the other end to the bed-plate for effecting the back-stroke of the lever D E, with the pawls H G, connected by the spring *k*, the ratchets K J, and the rotary cutters L M, when arranged to operate substantially in the manner described, and for the purposes set forth.

2. The combination, with the table of a looper-frame, of the cutter bed-plate P, having the rib *u*, set-screws *f* and *g*, elongated slot *t*, and screw-bolt S, as and for the purposes set forth.

406,424.

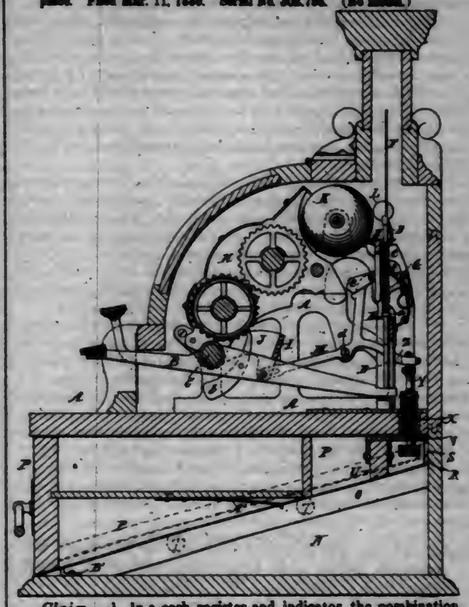


406,425. FEED-TROUGH. GEORGE D. BURTON, Boston, Mass. Filed May 22, 1888. Serial No. 274,746. (No model.)

Claim.—A feed-trough consisting of a curved body, heads having flanges curved to conform to the shape of the body, and binding-strips substantially semi-cylindrical in shape covering the edges of the body, the inner sides of the ends of said strips being bent to cover the flanges of the heads and secured to the body and flanges, as set forth.

406,426. HANDLE. GUSTAV A. BYON, Edgar, Nebr. Filed Sept. 18, 1888. Serial No. 285,732. (No model.)

Claim.—The vessel 1, having opening 2, and opposite perforated ears 5, in combination with the cover 3, mounted in the opening and having the overlapping annular flange 4, and the handle 6, pivoted, as at 8, to the ears, and having the stiffening-wires 7 projecting beyond the handle and terminating in loops 9, bent, as at 10, for taking over the flange of the cover, substantially as specified.



406,427. COMPOUND FOR THE SCRUBBING-SURFACES OF WASH-BOARDS. JAMES P. CLINTON, Xenia, Ohio. Filed May 14, 1888. Serial No. 310,981. (No model.)

Claim.—The herein-described compound, consisting of powdered fire-clay, Spanish white, litharge, powdered or granulated wood, gum-shellac, pitch, and a solvent oil, mixed and incorporated substantially in the manner and for the purpose set forth.

406,427.

406,428. CASH INDICATOR AND REGISTER. WILLIAM S. CRAIG, Dayton, Ohio, assignor to the National Cash Register Company, same place. Filed Mar. 11, 1889. Serial No. 302,796. (No model.)

Claim.—1. In a cash register and indicator, the combination, with the operating-keys and the case or cabinet provided with a drawer-compartment, of a drawer fitted therein and arranged when released to be automatically propelled therefrom by its own gravity, and means for releasably holding the drawer in its compartment actuated by the operating-keys to release the drawer, substantially as described.

2. In a cash register and indicator, the combination, with the operating-keys and the case or cabinet provided with a drawer-compartment, of a drawer fitted therein and arranged when released to be automatically propelled therefrom by its own gravity, a locking device for locking the drawer in its compartment and actuated by the operation of the keys to release the drawer, substantially as described.

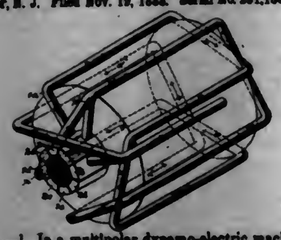
3. In a cash register and indicator, the combination, with the operating-keys and the case or cabinet provided with a drawer-compartment, of a drawer fitted therein, an incline upon which the drawer

travels in and out of its compartment, and means for releasably holding the drawer in its compartment and actuated by the operating-keys to release the drawer, substantially as and for the purpose described.

4. In a cash register and indicator, the combination, with the operating-keys and the case or cabinet provided with a drawer-compartment, of a drawer fitted therein, an incline upon which the drawer travels in and out of its compartment, and a locking device for locking the drawer in its compartment and actuated by the operation of the keys to release the drawer, substantially as and for the purpose described.

5. In a cash register and indicator, the combination, with the case or cabinet provided with a drawer-compartment, of a drawer fitted therein, an incline upon which the drawer travels in and out of its compartment, friction-rollers interposed between the drawer and incline, a locking device for locking the drawer in its compartment, and the operating-keys mediately connected with said locking device to actuate the same to release the drawer, substantially as and for the purpose described.

6. In a cash register and indicator, the combination, with the operating-keys and the case or cabinet provided with a drawer-compartment, of a drawer fitted therein, an incline upon which the drawer travels in and out of its compartment, means for releasably holding the drawer in its compartment and actuated by the operating-keys to release the drawer, and a stop for limiting the outward movement of the drawer, substantially as and for the purpose described.



7. In a cash register and indicator, the combination, with the operating-keys and the case or cabinet provided with a drawer-compartment, of a drawer fitted therein, an incline upon which the drawer travels in and out of its compartment, friction-rollers interposed between the drawer and incline, a locking device for locking the drawer in its compartment and actuated by the operation of the keys to release the drawer, and a stop for limiting the outward movement of the drawer, substantially as and for the purpose described.

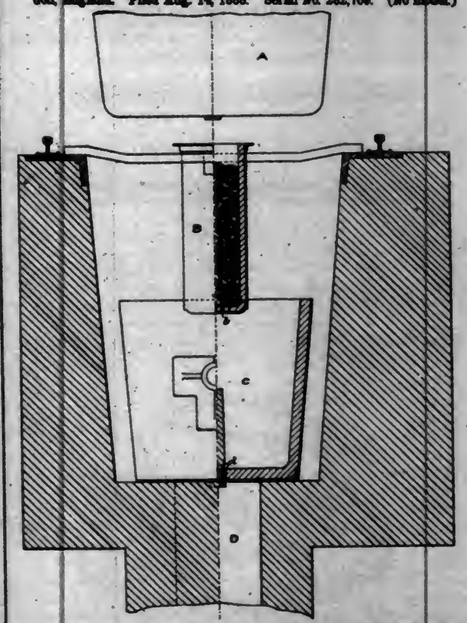
8. In a cash register and indicator, the combination, with a series of operating-keys, registering and indicating mechanisms actuated thereby to register and indicate the values of the keys operated, and a case or cabinet provided with a drawer-compartment, of a drawer fitted in said compartment and arranged when released to be automatically propelled therefrom by its own gravity, and a locking device for holding the drawer in its compartment and actuated upon the operation of a key to release the drawer, substantially as and for the purpose described.

9. In a cash register and indicator, the combination, with a series of operating-keys, registering and indicating mechanisms actuated thereby to register and indicate the values of the keys operated, and a case or cabinet provided with a drawer-compartment, of a drawer fitted in said compartment, an incline upon which the drawer travels in and out of its compartment, and a locking device for holding the drawer in its compartment and actuated by the operating-keys to release the drawer, substantially as and for the purpose described.

10. In a cash register and indicator, the combination, with a series of operating-keys, registering and indicating mechanisms actuated thereby to register and indicate the values of the keys operated, and a case or cabinet provided with a drawer-compartment, of a drawer fitted in said compartment and arranged when released to be automatically propelled therefrom by its own gravity, a bar common to all the operating-keys and actuated by the operation of any one of them, and a locking device for holding the drawer in its compartment and actuated by the movement of said bar, whereby when any key is operated its value is registered and indicated and the drawer is released and automatically propelled from its compartment, substantially as and for the purpose described.

406,429. DYNAMO-ARMATURE. STANLEY G. C. CURRIE, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester, N. J. Filed Nov. 19, 1888. Serial No. 291,186. (No model.)

Claim.—1. In a multipolar dynamo-electric machine, the combination of a commutator whose bars are insulated from each other with an armature in which the winding or circuit between two commutator-bars traverses or influences each pole thereof, is connected at each of its terminals with but a single point or bar in the commutator, and is unconnected at any intermediate point with any other commutator-bar.

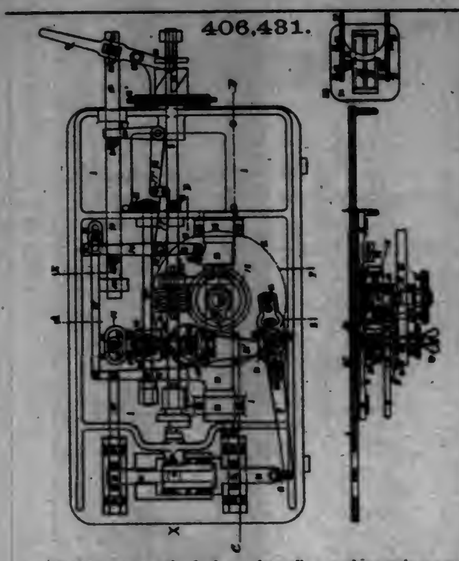


2. In a dynamo-electric machine, the combination of a commutator whose bars are insulated from each other with an armature in which the winding between any pair of adjoining commutator-bars traverses or influences equally each pole, is connected at each of its terminals with but a single point or bar in the commutator, and is unconnected directly with any other commutator-bar, in combination with three or more brushes, substantially as and for the purpose set forth.

3. In a dynamo-electric machine, the combination of the commutator whose bars are insulated from each other with an armature in which the winding extending from one commutator-bar to an adjoining commutator-bar constitutes a circuit that extends around the entire armature, traversing or influencing each pole thereof, is connected at each of its terminals with but a single point or bar in the commutator, and is unconnected at any intermediate point with any other commutator-bar, substantially as set forth.

4. An armature for dynamo-electric machines, in which the commutator-bars are insulated from each other and are apportioned or divided into groups, the windings of each group constitute one layer upon the armature, the winding between adjoining bars of any group traverses or influences equally each pole and is unconnected intermediately with any other bar, and the end of the windings of each group is connected to the first bar of the next group, in combination with brushes, substantially as and for the purpose set forth.

5. A multipolar armature for dynamo-electric machines, in which each winding traverses and influences each pole of the armature, is connected at its beginning with but a single commutator-bar and at its end with but a single commutator-bar adjoining that from which it started, and is unconnected between its terminals with any bar, each winding tending on the commutator-bar from which the next winding starts, substantially as set forth.



406,430. PROCESS OF RECARBONIZING STEEL. JOHN H. DARBY, Brymbo, County of Denbigh, assignor to Percy Carlyle Gilchrist, London, England. Filed Aug. 14, 1888. Serial No. 282,709. (No model.)

Claim.—The herein-described process of converting crude iron into ingot iron or steel, the same consisting in first purifying the crude metal, and then passing the same while still molten to and through a mass of carbonaceous material.

406,431. SEWING-MACHINE. PIERRE A. DARRAGH, Le Pré St. Gervais, France. Filed Oct. 14, 1887. Serial No. 252,341. (No model.) Patented in France Feb. 22, 1887, No. 181,742, and in England Aug. 22, 1887, No. 11,668.

Claim.—1. In a sewing-machine, the combination, with a stitch-forming mechanism, and a presser foot or plate, of the longitudinally-

movable slide carrying the feeders, a laterally-movable carriage, connections between the carriage and slide whereby the movements of the carriage are transmitted to the slide, a lever mounted on the carriage and connected with the slide to impart thereto its longitudinal reciprocations in regular succession to cause the stitches to be laid, a cam for imparting the successive movements to the lever, and a driver for the cam, substantially as set forth

2. In a sewing-machine, the combination, with the stitch-forming mechanism and the presser foot or plate, of the longitudinally-movable slide carrying the feeders, a laterally-movable carriage, connections between the carriage and slide whereby the movements of the carriage are transmitted to the slide, a lever which imparts longitudinal reciprocations to the slide in regular succession to cause the stitches to be laid, an adjustable fulcrum-support for the lever mounted upon and movable with the carriage, a cam for imparting movements to the lever also mounted upon the carriage, and a driver for the cam, substantially as set forth.

3. In a sewing-machine, the combination, with the stitch-forming mechanism and the presser foot or plate, of the slide carrying the feeders, the carriage 51, connections between the carriage and the slide, a slotted arm carried by the carriage, a slotted lever connected with the slide which imparts longitudinal reciprocations thereto in regular succession to cause the stitches to be laid, an adjustable fulcrum-support passing through the slots in the lever and the said arm, a clamp for holding the fulcrum-support after adjustment, and a cam for moving the lever, substantially as set forth.

4. In a sewing-machine, the combination, with the stitch-forming mechanism and the presser foot or plate, of the slide carrying the feeders, the carriage 51, with which the slide is connected, provided with a slotted arm having a rack 31, the slotted lever 17, connected with the slide, the sleeve 27, passing through the slots in the arm and lever and constituting an adjustable fulcrum for the lever, a pinion 30, mounted upon the stem and meshing with the said rack, an adjustable plate 25, secured to the lever through which the sleeve 27 passes, and a clamp for securing the sleeve after adjustment, substantially as set forth.

5. In a sewing-machine, the combination, with the stitch-forming mechanism and the presser plate or foot, of the slide carrying the feeders movable both laterally and longitudinally, a sliding carriage connected with the said slide to impart lateral motions thereto, a step-by-step driving device for moving the carriage, a lever mounted upon the sliding carriage and connected with the said slide to move it longitudinally, a cam for imparting irregular vibrations to the lever, and a driver for the cam, substantially as set forth.

6. In a sewing-machine, the combination, with the stitch-forming mechanism and the presser foot or plate, of the slide carrying the feeders, a sliding carriage, a main driving-shaft 3, the lever connected with the slide to move it longitudinally, a cam which drives the lever mounted upon the carriage, a worm spliced to and movable upon the said driving-shaft and connected to move with the carriage, and a worm-wheel connected with the said cam, substantially as described.

7. In a sewing-machine, the combination, with the stitch-forming mechanism, the presser plate or foot, and the slide carrying the feeders, free to be moved laterally, of the sliding carriage connected with the slide, the rack and pinion by which the carriage is moved, the ratchet-wheels 46 47, having teeth inclined in opposite directions, connected to move the said pinion, the vibrating lever 58, the pawls which respectively engage with the ratchet-wheels carried by and sliding upon the said lever, and a shifting device for sliding the said pawls, whereby they are independently brought into engagement with their respective ratchet-wheels, substantially as described.

8. In a sewing-machine, the combination, with the stitch-forming mechanism, the presser foot or plate, and the slide carrying the feeders, free to be moved laterally, of the sliding carriage connected with the slide, a rack and pinion for moving the carriage, the ratchet-wheels having teeth inclined in opposite directions connected to rotate the said pinion, pawls engaging, respectively, with the said ratchet-wheels and provided with the yokes 63, the said pawls being free to slide toward and from the ratchet-wheels, and the cams 64 65, engaging with the yokes for bringing the pawls into and out of engagement with the ratchet-wheels mounted upon a shaft provided with an operating-handle, substantially as described.

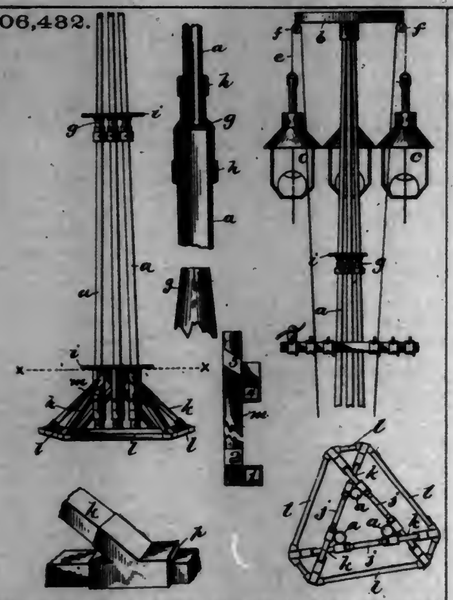
9. In a sewing-machine, the combination, with the stitch-forming mechanism, the presser foot or plate, and the slide carrying the feeders free to be moved laterally, of a sliding carriage connected with the slide, the rack and pinion by which the carriage is moved, the ratchet-wheels 46 47, having teeth inclined in opposite directions connected to rotate said pinion, the vibrating lever 58, a cam by which the lever is vibrated, the pawls 56 57, which engage with the said ratchet-wheels respectively, supported upon said lever, on which they are free to slide toward and from the ratchet-wheels, and each provided with a yoke 63, the springs which tend to move the pawls into engagement with the ratchet-wheels, and the cams engaging with the said yokes for regulating the position of the pawls in respect to their ratchet-wheels, substantially as set forth.

10. In a sewing-machine, the combination, with the main driving-shaft, the stitch-forming mechanism, the presser-foot, and the slide carrying the feeders, of a sliding carriage connected with the said slide, a feeding mechanism for the carriage by which it is moved in either direction, a clutch on the main driving-shaft, a clutch-shifter, and the independent connections between the sliding carriage and the clutch-shifter, whereby the latter is operated when the sliding carriage reaches the end of its movement whichever direction it be moved, substantially as set forth.

11. In a sewing-machine, the combination, with the main driving-shaft 3, the stitch-forming mechanism, the presser foot or plate, and the feeder-slide, of the sliding carriage connected with the feeder-slide, the clutch 72, the clutch-shifter having two contacts 80' 85, the lever 76, connected with the sliding carriage, and arranged to bear against the contact 85, and move the clutch-shifter when the carriage moves in one direction, and the train of levers 73, 77, 78, and 80, connected with the carriage and adapted to bear upon the contact 80', and move the shifter when the carriage moves in the opposite direction, substantially as set forth.

12. In a sewing-machine, the combination, with the main driving-shaft 3, the stitch-forming mechanism, the presser plate or foot, and the feeder-slide, of the sliding carriage connected with the feeder-slide, the clutch 72 on the main driving-shaft, the sliding bar 79, connected with the sliding carriage and provided with a slot 88', the clutch-shifting lever, and the block carrying the pivot-pin 88, which enters the slot 88', and connects the said sliding bar and the lever, adjustable in a slot in the lever, substantially as set forth.

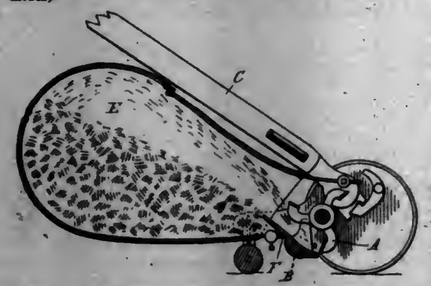
13. In a sewing-machine, the combination, with the stitch-forming mechanism, the presser-foot, the feeder-slide, and the sliding carriage connected therewith to move the same, of an indicator 86, extending above the bed-plate of the machine, a connecting-bar between the said indicator and the sliding carriage, whereby the two are caused to move together, and a handle for moving both the said indicator and the sliding carriage, whereby the parts may be brought to the proper position for starting, substantially as described.



406,432. LIGHT-TOWER. JOHN W. DAVY, Kingston, Ontario, Canada. Filed Sept. 7, 1888. Serial No. 284,786. (No model.)

Claim.—1. A base or anchor for a pole or tower, comprising main horizontal beams secured to the lower end of the pole or tower, cross-bars connecting the outer ends of the horizontal beams, and inclined braces secured to the beams and pole or tower, substantially as set forth.

2. The herein-described joint, comprising a sleeve or connecting-link provided with sockets at its opposite ends to snugly receive the parts to be joined, the ends of the link being split and tapered outwardly, and one or more rings to be driven on each end of the link and thereby contract the sockets and by friction clamp said parts in the same, whereby the use of screw-threads is avoided, substantially as described.



3. A tower comprising uprights formed in sections, connecting-links having tapered split ends surrounding sockets in which the up-

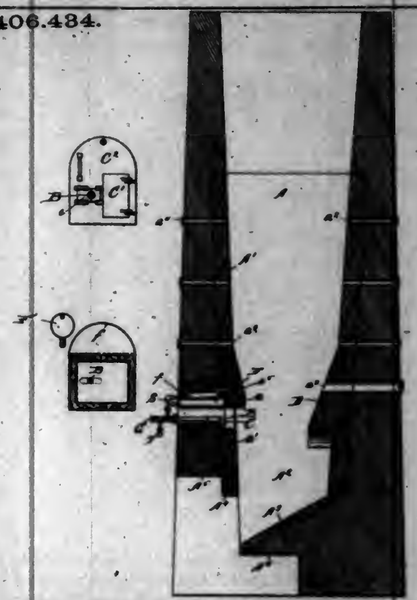
406,482.

right sections are located, one or more rings forced upon the tapered split ends, thereby contracting the sockets and by friction clamping the upright sections therein, the split ends being "upset" upon the rings, and cross-pieces securing each set of connecting-links together, substantially as set forth.

406,483. ATTACHMENT FOR LAWN-MOWERS. FRANK A. DE LAND, Memphis, Mich. Filed Mar. 6, 1889. Serial No. 302,057. (No model.)

Claim.—1. The combination, with a lawn-mower, of a grass-collecting receptacle secured in rear thereof, and a shield carried by and extending rearwardly from the knife-bar into said receptacle above the bottom thereof, substantially as described.

2. The combination of the grass-collecting receptacle E and the shield F, rigid with and extending from the rear edge of the stationary knife-bar B into the grass-receptacle and above the bottom of the same, substantially as described.



406,484. LIMEKILN. JOSEPH DRUECKER, Druecker, Wis., and JOHN DRUECKER, Chicago, Ill. Filed Dec. 10, 1888. Serial No. 293,141. (No model.)

Claim.—1. The combination of a limekiln having a single burner-recess in the walls thereof at one side of the cupola with a hydrocarbon-burner mounted in said recess, substantially as specified.

2. The combination of a limekiln having but one burner-recess in the walls thereof, and provided with an inclined face, arched projection D opposite said burner-recess, and a hydrocarbon-burner mounted in said burner-recess, substantially as specified.

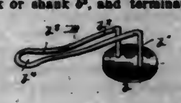
3. The combination of a limekiln having but one burner-recess in the walls thereof, and provided with an inclined faced projection D opposite said burner-recess and an oppositely inclined-faced projection E above said burner-recess and opposite said projection D, and a hydrocarbon-burner mounted in said burner-recess, substantially as specified.

406,484.

4. The combination, with a limekiln having a single burner-recess in the walls thereof at the extremity of the longer diameter of the cupola, of a hydrocarbon-burner mounted in said recess with its mouth or nozzle and about eighteen inches from the inner edge of the cupola-wall, substantially as specified.

5. The combination, with a limekiln having a burner-recess in the walls thereof, of a hydrocarbon-burner pivotally mounted to swing laterally in said burner-recess to adjust the direction of the blast, substantially as specified.

6. The combination, with a limekiln having a burner-recess in the walls thereof and a hydrocarbon-burner mounted in said recess, of a steam-boiler located at said recess, and steam-pipe connections directly from said boiler to the steam-pipe of said burner, whereby the burner is supplied with a blast of dry hot steam, substantially as specified.



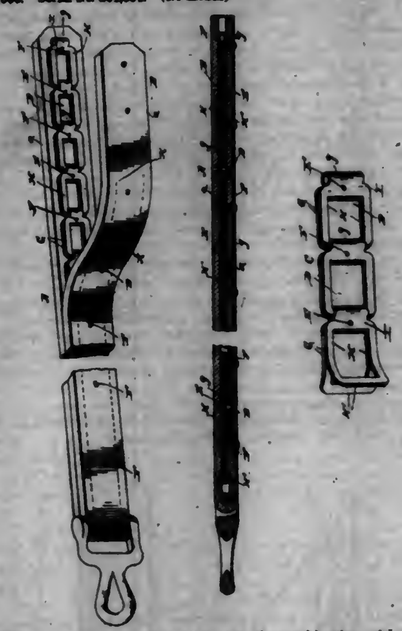
7. The combination, with a limekiln having a burner-recess in the walls thereof and a hydrocarbon-burner mounted in said recess, of a steam-boiler heated by said burner, and steam-pipe connections directly from said boiler to the steam-pipe of said burner, whereby the burner is supplied with a blast of dry hot steam, substantially as specified.

8. The combination, with a limekiln having a burner-recess in the walls thereof and a hydrocarbon-burner mounted in said recess, of a steam-boiler heated by said burner, and steam-pipe connections directly from said boiler to the steam-pipe of said burner, whereby the burner is supplied with a blast of dry hot steam, said boiler extending only partially through the walls of the kiln, and said kiln having a course of fire-brick between the end of the boiler and the cupola or fire-space of the kiln, substantially as specified.

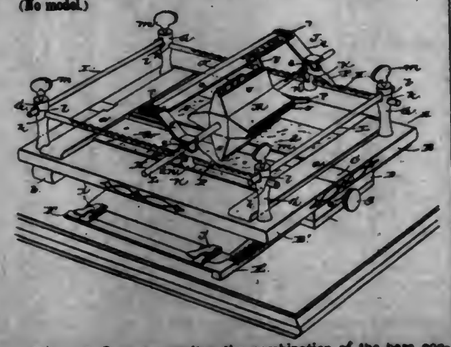
9. The combination, with a limekiln having a burner-recess in the walls thereof and a hydrocarbon-burner mounted in said recess, of a steam-boiler heated by said burner, and steam-connections directly from said boiler to the steam-pipe of said burner, whereby the burner is supplied with a blast of dry hot steam, said boiler being in the form of a rectangular shell and forming a portion of the side, top, and bottom walls of the burner-recess, and extending through the wall of the kiln to within about nine inches of the interior thereof, the inner end of the boiler abutting against the fire-brick lining of the cupola, substantially as specified.

406,485. CUFF-HOLDER. JAMES C. EMERSON, Waterbury Centre, Vt. Filed Mar. 2, 1889. Serial No. 302,059. (No model.)

Claim.—The herein-described cuff-holder, consisting of the button b and the upwardly-projecting opposite arms b' b^2, rearwardly bent to form a neck or shank b^3, and terminating in the loop b^4, in



406,485.



combination with a device secured to the sleeve for engaging the loop, substantially as specified.

406,486. TRACE. GEORGE W. FAIL, Bethany, Mo. Filed Nov. 20, 1888. Serial No. 291,331. (No model.)

Claim.—As an improvement in traces, the combination, with the pair of straps forming a trace connected by stitching along their edges, of a metallic chain interposed between said straps, said chain being composed of flat double-leaved links, each of which has a perforation in its solid portion, each alternate link being secured to one of the straps by a rivet passing through its perforation, and the perforations in the intermediate non-riveted links registering with perforations for the buckle-tongue in both straps, substantially as set forth.

406,487. TYPE-WRITING MACHINE. FRANK FELT and ISAAC W. ARCHIBALD, Everett, Mass. Filed Nov. 2, 1887. Serial No. 254,067. (No model.)

Claim.—1. In a type-writer, the combination of the base consisting of a stationary platen and the parallel longitudinal plates having their rear ends pivoted to the opposite sides of the platen at the rear end thereof and adapted to rest on opposite sides of the platen, and a type-carriage mounted on the said parallel plates, as set forth.

2. In a type-writer, the combination of the stationary platen, the parallel plates pivoted to the platen and adapted to rest on opposite sides of the same, the type-carriage frame mounted on said plates, a shaft mounted in the type-carriage frame and adapted to move transversely and vertically therein, and a rotatable type-head mounted on said shaft and having radial portions carrying type, as set forth.

3. The combination of the platen, a block secured to one end of the same having a recess in its under side, a rack-bar arranged in said recess, a bar secured to the rack-bar and provided with paper-securing clips, a shaft journaled in the block on the platen and carrying a pinion meshing with the rack-bar, and the parallel plates pivoted to the platen and adapted to rest on opposite sides of the same, as set forth.

4. The combination of the platen, the parallel plates pivoted thereto on opposite sides thereof, the notched bars mounted on said parallel plates, the blocks mounted on said notched bars, the shaft inserted through the blocks, the type-head on said shaft, the springs arranged within the blocks and bearing against the said shaft, and the dogs engaging the notched bars and having ears pivotally mounted on the said shaft, as set forth.

5. The combination of the platen, the plates pivoted thereto, the type-carriage mounted on said plates and having the blocks K, the inclined plates q, secured on said blocks, the spring-ears r on the upper ends of the said plates, the index-plate secured by said ears and having a series of notches at its front edge, the shafts mounted on the blocks K, the type-head mounted on said shaft, and the radial arms at the end of the type-head adapted to engage the notches in the index-plate, as set forth.

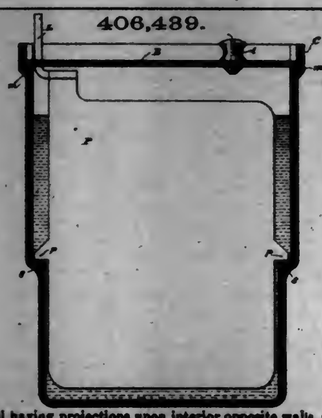
6. The combination, in a type-writing machine, of side bars, standards having intersecting openings for said bars, binding-screws for the same, and type-carriage and platen, substantially as described.

406,488. SLAT-FASTENER. ANDREW FRANK, Creighton, Mo. Filed Apr. 6, 1889. Serial No. 306,356. (No model.)

Claim.—1. The combination, with the rail of a bed-frame having sockets therein, and slats having vertical and longitudinal grooves in their ends and under sides, respectively, of metallic fasteners located in the grooves and formed with upwardly-extending end portions, one of which has its outer end bent down parallel with the main portion of the fastener and a pin on the fastener, substantially as described.

2. A slat-fastener consisting of a metallic strip having its ends bent up at right angles, one of which is also bent down parallel with the main portion, said ends being tapered to a point, and a pin extending out from the under side of the fastener, substantially as described.

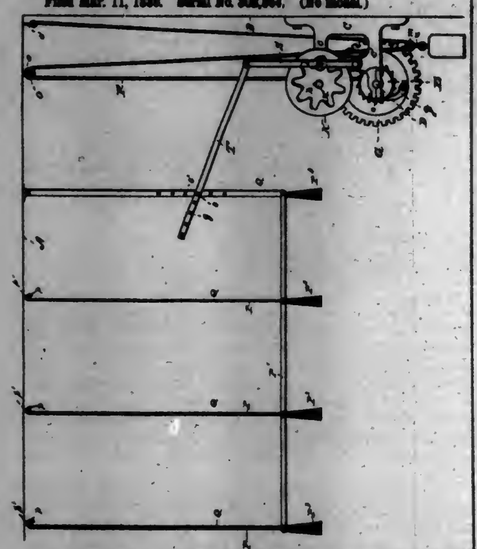
3. A slat-fastener consisting of a metallic strip having its end portions bent up at right angles, one of which has its end bent down parallel with the main portion and the other having an inclined outer face, and a pin formed on the under side of the fastener adjacent to its outer end, substantially as described.



406,489. SECONDARY BATTERY. WILLIAM W. GIBBON, Haverford College, Pa., assignor to the Electrical Accumulator Company, of New York. Filed Apr. 12, 1888. Serial No. 306,921. (No model.)

Claim.—1. In a secondary battery, a cell of insulating material having projections formed in or upon its interior opposite walls and near the central vertical distance, in combination with two elements, each composed of a series of interleaved parallel plates having projections upon opposite sides, near the central vertical distance, resting upon or supported by said projections from the interior of the cell, whereby one element may be removed without disturbing the other, substantially as described.

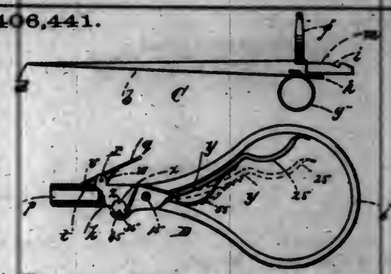
2. The combination, in an electric battery, of an inclosing-cell of insulating material, having shoulders or projections upon its opposite interior walls, near the upper edge thereof, a cover of insulating material resting upon said projections and having one or more rigid perforated handles, suitable elements or electrodes for said battery, and an electrolytic liquid, all arranged and operating substantially as and for the purpose described.



3. In an electric battery, the combination of a hard-rubber in-

406,439.

closing-coil having projections upon interior opposite walls, at or near the central vertical distance and at or near the upper edge thereof, elements resting upon the first-named projections and supported thereby, a hard-rubber cover resting upon said second projections, and one or more perforated rigid battens of hard rubber located in said cover, whereby the cover may be removed and replaced and the accumulating gases may escape, all arranged substantially as described.



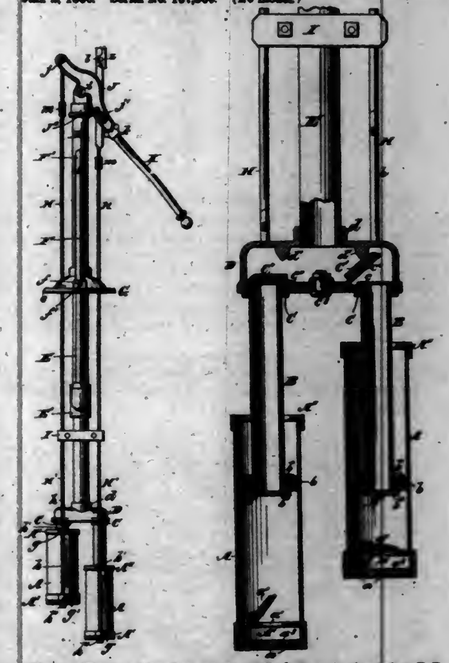
406,440. MECHANICAL MOTOR. EDGAR S. HARPER, Tyler, Tex. Filed Mar. 11, 1889. Serial No. 302,864. (No model.)

Claim.—The combination of the supporting-frame C, provided with the forwardly-projecting arms *c c'*, the shaft D, having its bearings in the arms *c'*, the drum E, loosely mounted on said shaft, and the gear-wheel G, rigidly mounted on said shaft intermediate said arms *c'*, said drum E being provided with a toothed flange *e*, a pawl *g*, pivoted to said gear-wheel and engaging the teeth of said flange, the shaft H, having its bearings in the arms *c*, carrying at one end the pinion I, which meshes with the gear-wheel G, and at its other end the wheel K upon the outside of one of the arms *c*, said wheel K being provided upon its outer face with the cam-shaped recess *k*, the rod S, pivoted to the frame and carrying intermediate its ends the anti-friction roller traveling in said recess, the connecting-rod T, adapted to be connected at one end to a fan-frame, its opposite end being pivoted to the upper end of the rod S, the rope F, attached at one end to the drum E, passing over a pulley attached to the ceiling and attached at its opposite end to the ceiling, and the weight M, carried by said rope, substantially as specified.

406,441. COMBINED CANDLE-HOLDER AND CAP-NIPPER. STEPHEN T. HARRINGTON, Butte City, Mont. Filed Jan. 25, 1889. Serial No. 297,541. (No model.)

406,441.

Claim.—1. A candle-holder comprising an elongated pointed body provided with a flexible holder proper and a supporting hook, the head of said body being notched to receive a spring-catch projecting into the holder-chamber of the cap-nippers, substantially as described.

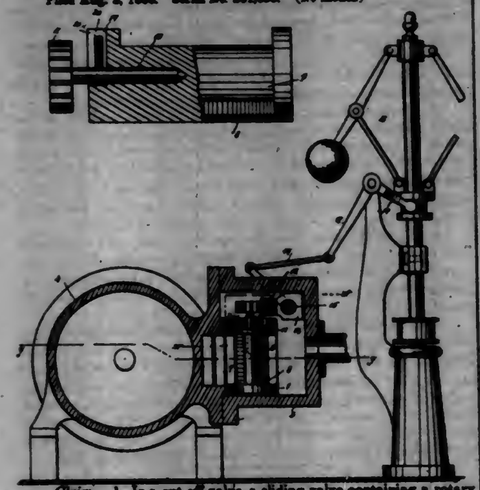


2. The improved nippers herein described, consisting of a body provided with a curved handle and a groove forming the fixed jaw thereof, a pivoted handle projecting within said curved handle and having a jaw registering with said fixed jaw, and inwardly-projecting brads on said jaws for indenting the cap, substantially as described.

3. Cap-nippers comprising a body having a curved groove forming the fixed jaw and a circular handle, a handle pivoted to said body and provided with a curved jaw registering with said fixed jaw, brads in said jaws for indenting the cap, and a spring for keeping said jaws distended, substantially as described.

4. The nippers D, comprising the body *k*, having the handle *l* and groove *x*, the handle *y*, pivoted to said body and provided with the jaw 35, the brads *z* and 45, and the spring 55, for distending said jaws, all being arranged to operate substantially as described.

5. The holder C, having the point *d*, holder proper *g*, and notch *i*, in combination with the nippers D, provided with the chamber *p*, for receiving said holder, and the spring-actuated rod *q*, for detachably securing it therein, substantially as described.



406,442. FORCE-PUMP. ROMULO K. HAYES, Kewanee, Ill. Filed Jan. 2, 1886. Serial No. 187,308. (No model.)

Claim.—The combination of the cylinders A A, the tubes B B, provided with pistons B' B' within said cylinders, the valve-controlled receiving-chamber D, the tube E, extending upwardly from said chamber, the beam J, fulcrumed in a support on the upper end of said tube, and the detachable rods H, one of which is extended above the beam for connection with a wind-wheel, whereby the pump may be made either double-acting or single-acting and the opposite sides

be operated either by the same power or one by hand and the other by wind-wheel, substantially as described.

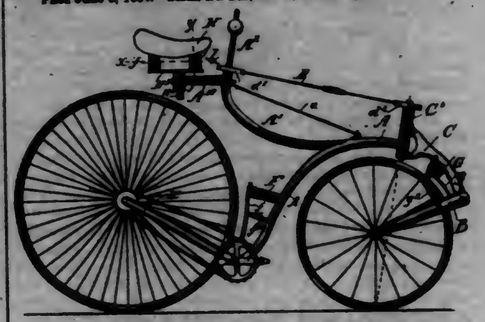
406,443. CUT-OFF VALVE. MICHAEL J. MURPHY, Brooklyn, N. Y. Filed Aug. 2, 1888. Serial No. 281,883. (No model.)

Claim.—1. In a cut-off valve, a sliding valve containing a rotary valve having a recess, and a pinion with a shaft loosely mounted in the rotary valve, a projection on the shaft located in the recess and movable therein, and a rack engaging the pinion, substantially as shown and described.

2. The combination, with a sliding valve containing a rotary valve having a recess, and a pinion with a shaft loosely mounted in the rotary valve, and a projection on the shaft located in the recess and movable therein, of a rack engaging the pinion, a rotary threaded shaft engaging a nut on the rack, and an engine-governor connected with and operating the rotary shaft, substantially as shown and described.

3. The combination, with a double slide-valve containing rotary valves having recesses, pinions with shafts loosely mounted in the rotary valves, and projections on the shafts located in the recesses and movable therein, of racks engaging the pinions, a right and left hand screw-threaded rotary shaft engaging threaded nuts on the racks, and an engine-governor connected with and operating the rotary shaft, substantially as shown and described.

4. The combination, with valve 8, having circumferential recess 9, and the quadrantal-shaped recess 19 in one end, of the pinion 11 with shaft 10 loosely mounted in valve 8, and having pin 20 located in recess 19, substantially as shown and described.



5. The combination, with double slide-valve 1, containing rotary valves 8, having circumferential recesses 9, and quadrantal-shaped recesses 19, pinions 11, with shafts 10 loosely mounted in valves 8, and lateral pins 20 located in recesses 19, of racks 12, engaging pinions 11, a rotary shaft 15, with right and left screw-threaded portions 14 engaging nuts 13 on racks 12, and engine-governor 18, connected by pivoted levers 17, and crank 16, with shaft 15, substantially as shown and described.

406,444. PAPER-FILE. ROBERT G. HEARNE, Kansas City, Mo. Filed May 20, 1889. Serial No. 275,294. (No model.)

Claim.—In a paper-file, the combination of a pair of covers perforated in one edge, a series of stubs of leaves doubled to form upper and lower thicknesses, said upper thickness being doubled again under itself to form a suitable binding portion and leave space for attaching papers or letters to said lower portion, perforations in said twice-doubled portion registering with the perforations in the covers, a pair of upright standards adapted to engage the perforations in said covers and said leaves and formed of one piece of metal bent in the form of a U, and mechanism, substantially as described, for forcing said covers together, all arranged and adapted to operate in the manner and for the purpose set forth.

406,445. VELOCIPEDE. THOMAS B. JEFFERY, Ravenswood, Ill. Filed June 6, 1887. Serial No. 240,266. (No model.)

Claim.—1. In a bicycle, in combination with the front steering-wheel, a steering-head having its axis in line with the wheel's contact with the ground and forward of the steering-wheel's axis, substantially as set forth.

2. In a bicycle, in combination with the front steering-wheel and the rear driving-wheel, the steering-head having its axis in a line forward of the steering-wheel's axis and leaning forward, substantially as set forth.

3. In a velocipede, in combination with the front steering-wheel and the rear driving-wheel, the backbone and the front bone pivoted together, the axis of the pivot being in a line which leans forward, the rider's seat secured to the backbone, and the tiller-rods connecting the handle-bar shaft to the steering-head on the front bone, substantially as set forth.

4. In a velocipede, in combination with the rear driving-wheel and the front steering-wheel, the backbone situated over the steering-wheel and extending between the steering and driving wheels and pivoted to the front bone in a steering-head axle, the steering-wheel, the front fork hinged to the front bone, and a spring reacting between said hinged parts to spread them, substantially as set forth.

5. In a bicycle, in combination with the rear driving-wheel and the front steering-wheel, the backbone and the front bone pivoted together in a steering-head whose axis is inclined forward and is in a line passing in front of the steering-wheel's axis, and a front fork in which the steering-wheel is journaled, hinged to the front bone forward of the steering-head, substantially as set forth.

6. In combination with the rear driving-wheel and the front steering-wheel, the backbone and the front bone pivoted together in a steering-head over the front wheel, the driving-wheel fork hinged to the backbone and the steering-wheel fork hinged to the front bone, and springs reacting between said hinged parts, respectively, to uphold the joints, substantially as set forth.

7. In combination with the rear driving-wheel and the front steering-wheel, the backbone and the front bone pivoted together in a steering-head, and the rear driving-wheel frame or fork hinged to the backbone, and the front-wheel frame or fork hinged to the front bone, and springs reacting between the hinged parts, respectively, and checks to limit the action of the springs, substantially as set forth.

8. In a velocipede, in combination with a front steering-wheel and the rear driving-wheel, the seat-support between the wheels hinged to the rear driving-wheel frame or fork, and a spring reacting between the seat-support and said rear driving-wheel frame to spread them apart, substantially as set forth.

9. A velocipede having a frame elastic at two joints, one elastic joint being forward of each wheel, substantially as set forth.

10. In a velocipede, a single front steering-wheel, the front-wheel frame comprising the steering-head and the bearings for the steering-wheel and jointed between said head and bearings, and a spring reacting between said jointed parts, and a rigid frame pivoted to said front-wheel frame at the steering-head, and the handle-bar secured to and turning said rigid frame, substantially as set forth.

11. In a velocipede, a single front steering-wheel, the front-wheel frame comprising the steering-head and the bearings for the steering-wheel and jointed between said head and bearings, a spring reacting between said jointed parts, a rigid frame pivoted to said front-wheel frame at the steering-head, and the seat and handle-bar both supported on said rigid frame.

12. In a velocipede, in combination, front and rear forks, front and rear bones, a spring reacting between the front fork and front bone, and a spring reacting between the rear fork and rear bone, substantially as set forth.

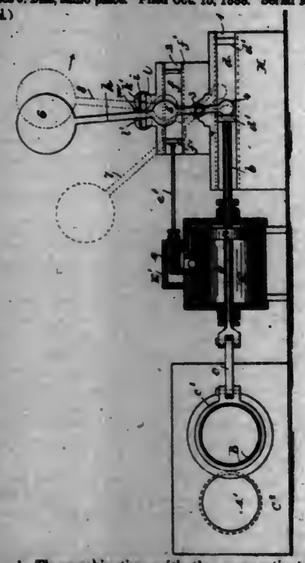
13. In a velocipede, in combination, front and rear wheels, front and rear forks, and front and rear bones, a spring reacting between

the front fork and front bone, and a spring reacting between the rear fork and rear bone, and a seat secured to one of the bones, substantially as set forth.

14. In a velocipede, in combination with the rear driving-wheel and the frame in which it is journaled, a forward frame which is joined to said driving-wheel frame by a horizontal pivot, and a spring which contacts with and reacts between said frames, and the rider's seat supported on said forward frame, substantially as set forth.

15. In a velocipede, in combination with the rear driving-wheel and the frame in which it is journaled, a forward frame joined to the rear driving-wheel frame by a horizontal pivot located lower than the axle of said driving-wheel, a spring reacting between said frames, and the rider's seat secured to the forward frame, substantially as set forth.

16. In combination with a rear driving-wheel and a front steering-wheel and the frame in which said rear driving-wheel is journaled, the backbone joined to said rear driving-wheel frame upon a horizontal pivot, and a spring which contacts with and reacts between said frame and backbone, the backbone extending from said pivot to a point above the steering-wheel, and the steering-wheel frame pivoted to said backbone in a steering-head, and the seat secured to the backbone, substantially as set forth.



17. In a velocipede, in combination with a rear driving-wheel and the front steering-wheel, and the frame in which said rear driving-wheel is journaled, a frame pivoted to the driving-wheel frame on a horizontal pivot, and a spring which contacts with and reacts between said frames, the latter frame extending from said pivot to the steering-head and having the bearings for the pedal-crank shaft, substantially as set forth.

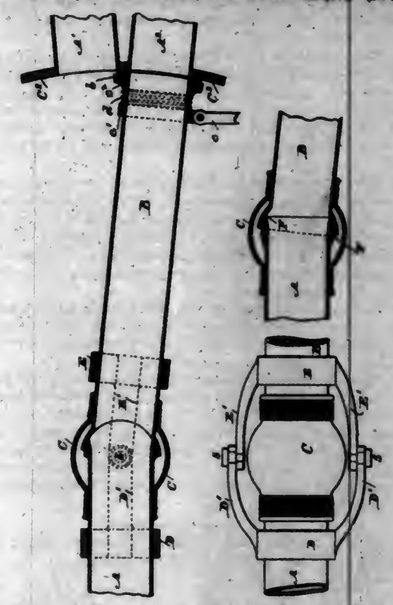
18. In a velocipede, in combination with the rear driving and the front steering wheel, and the frame in which said rear driving-wheel is journaled, a frame pivoted thereto on a horizontal pivot, and a spring which contacts with and reacts between said frames, the latter frame extending thence to the steering-head and supporting both the seat and the handle-bar, substantially as set forth.

19. In a velocipede, in combination with the rear driving-wheel and the front steering-wheel, and the frame in which said rear driving-wheel is journaled, a frame pivoted thereto on a horizontal pivot, and a spring which contacts with and reacts between said frames, the latter frame extending from said pivot to the steering-head and having the bearings for the pedal-crank shaft and affording support for both the handle-bar and the seat, substantially as set forth.

20. In combination, substantially as set forth, the rear driving-wheel and its frame, the pedal-crank shaft journaled in said frame, a forward frame pivoted to said driving-wheel frame near the pedal-crank-shaft axis, the rider's seat secured to the forward frame, and a spring which contacts with and reacts between said frames to resist the approach of the seat to the driving-wheel.

406,446. PNEUMATIC SWITCH FOR PNEUMATIC DISPATCH-TUBES. PATRICK KENNEDY, Jr., Brooklyn, N. Y., assignor to himself and Charles J. Dias, same place. Filed Oct. 15, 1888. Serial No. 288,110. (No model.)

Claim.—1. The combination, with the pneumatic tubes and a switch, of an air-cylinder and its piston-rod adapted to be operated by compressed air, and a weighted pivoted arm operated by the piston-rod and electrically controlled and adapted to shift the slide-valve of the air-cylinder, substantially as set forth.



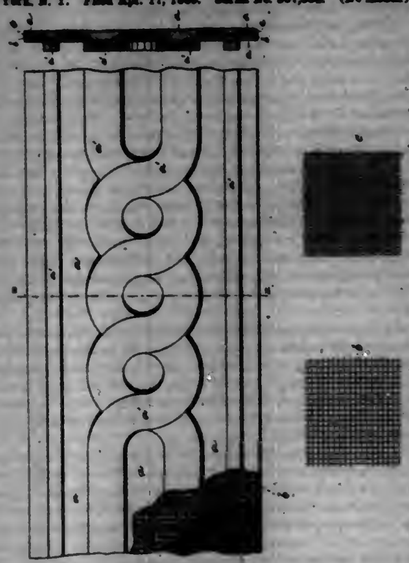
2. The combination, with pneumatic tubes and a switch, an air-cylinder, its chest, piston-rod, and slide-valve, of the frame having slideways, slide-blocks having right-angled projecting ends, and connected, respectively, to the piston-rod and rod of the slide-valve, and a weighted arm moving in a vertical plane and electrically controlled and operated by the piston-rod and adapted by its movement to shift the slide-valve, substantially as set forth.

3. The combination, with pneumatic tubes and a switch, of the piston and piston-rod connected to the switch and adapted to be operated by compressed air, the slide-blocks *d* and *f* and their projections *d'* and *f'* and slideways for the same, a vertical weighted pivoted arm *h*, having a circular end 4 and a circular portion 5, the electro-magnet *i*, the slide-block *l*, having a notched outer end adapted to engage the arm *h*, and a spring *m*, substantially as set forth.

4. The combination, with the pneumatic tubes and a switch, of an air-cylinder and its piston-rod adapted to be operated by compressed air, a slide-valve and rod, and a pivoted arm electrically controlled and adapted to shift the slide-valve and rod, substantially as specified.

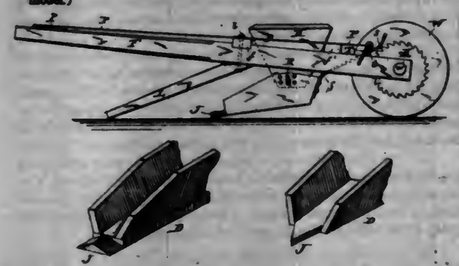
5. The combination, with pneumatic tubes, a switch, and a cylinder for compressed air, and mechanism connected with said cylinder for operating said switch, of an electro-magnet *i*, a slide-block *l*, having a notched end and acting as an armature moving in one direction, a spring for moving the slide-block in the reverse direction, and with mechanism, substantially as set forth, engaging the notched end of the slide-block, and adapted by its release from said slide-block to operate the slide-valve of the air-chest, substantially as set forth.

406,447. SWITCH FOR PNEUMATIC DISPATCH-TUBES. PATRICK KENNEDY, Jr., Brooklyn, N. Y., assignor to himself and Charles J. Dias, same place. Filed Oct. 20, 1888. Serial No. 288,276. (No model.)



Claim.—1. The combination, with the pneumatic tube A, of the pneumatic tubes A' A^2, the segment-piece C^2, connecting the ends of the tubes A' A^2, the pneumatic switch consisting of a length of tube B, pivotally connected to the tube A, and a ring and packing surrounding the end of the tube B and adapted to bear against the segment-piece C^2, for forming an air-tight joint, substantially as set forth.

2. The combination, with the pneumatic tubes A A' A^2, of the pneumatic switch consisting of a length of tube B, the collar D and arms D', connected to the tube A, the collar E and the arms E', connected to the switch-tube B, the pivots 5, connecting said arms, the rubber sleeve or gasket C, surrounding the junction of the main and switch tubes A B and forming an air-tight joint, the segment C^2, the collar c^2 and its packing, and a helical spring that holds the same against the segment to form an air-tight joint, substantially as set forth.



3. The combination, with the pneumatic tubes A A' A^2, of the pneumatic switch consisting of a length of tube B, the meeting ends of the tubes A and B being curved and the one adapted to set within the other, the rubber sleeve or gasket C, surrounding and connecting the tubes A and B and forming an air-tight joint, the segment C^2, the ring c^2 and its packing, and a helical spring adapted to press the ring and its packing against the segment to form an air-tight joint, substantially as set forth.

406,448. MOLDED FACING FOR WALLS. JOHN KLEE, New York, N. Y. Filed Apr. 17, 1888. Serial No. 307,532. (No model.)

Claim.—A plastic composition for walls having relief ornaments molded thereon and containing two sheets of textile fabric, the front sheet having wider meshes than the rear sheet and being pressed out to form forward projections that enter the reliefs of the plastic composition, substantially as specified.

406,449. DISTRIBUTER. HERMIAN O. KIRK, Greenville, S. C. Filed Mar. 18, 1886. Renewed Jan. 17, 1887. Serial No. 224,655. (No model.)

Claim.—1. In a fertilizer-distributer, the combination, with the hopper, of the dropper D and an extension J, shaped as described, and situated in substantially the same horizontal plane with the bottom of the dropper, as and for the purpose set forth.

2. The combination of the hopper, the dropper D, the arm and ground-wheel for actuating the same, and the extension J, projecting beyond the side walls of the dropper and tapering toward the rear end of the extension, as and for the purpose set forth.

3. The combination, with the hopper, of the dropper D, having an extension J, shaped as described, and constituting a rearwardly-extending integral part of the bottom of the dropper, as set forth.

406,450. MACHINE FOR CORKING BOTTLES AND WIRING THE CORKS THEREIN. HENRY LA CAMP, Syracuse, and GEO. WILE, Rochester, N. Y.; said La Camp assignor to said Wile. Filed Nov. 24, 1888. Serial No. 291,772. (No model.)

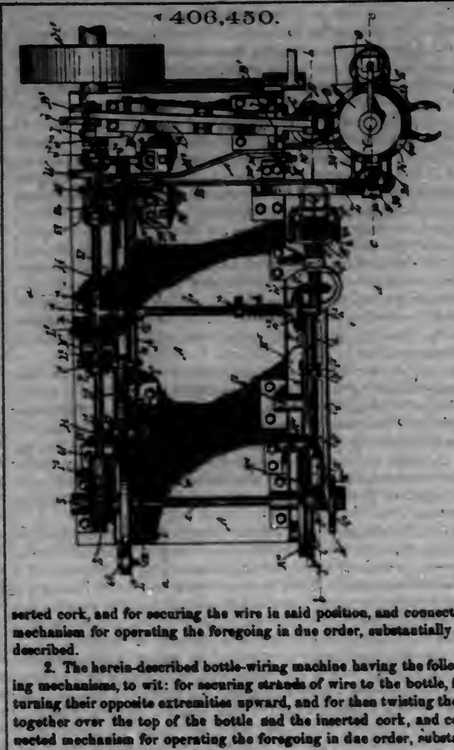
Claim.—1. The herein-described bottle-wiring machine having the following mechanisms, to wit: for securing strands of wire to the bottle, for turning the wire over the top of the bottle and the inserted cork, and for securing the wire in said position, and connected mechanism for operating the foregoing in due order, substantially as described.

2. The herein-described bottle-wiring machine having the following mechanisms, to wit: for securing strands of wire to the bottle, for turning their opposite extremities upward, and for then twisting them together over the top of the bottle and the inserted cork, and connected mechanism for operating the foregoing in due order, substantially as described.

3. The combination of the following mechanisms, to wit: for securing strands of wire to the bottle, for inserting a cork into the bottle, for turning the wire over the top of the bottle and the inserted cork, and for securing the wire in said position, and connected mechanism for operating the foregoing parts conjointly in due order, substantially as specified.

4. The herein-described bottle-wiring machine having the following mechanisms, to wit: for applying separate strands of wire to the bottle, for twisting together the extremities of the separate strands, for turning the twisted extremities over the top of the bottle and the inserted cork, and for then twisting together the twisted opposite extremities of the separate strands, and connected mechanism for operating the foregoing in due order, substantially as described.

5. The combination of a bottle-support with a cork-inserter, means for securing the wire to the bottle and over the cork, said means being arranged to operate conjointly with the cork-inserter, and connected mechanism for actuating the wire-securing means and cork-inserter in due order, substantially as and for the purpose set forth.



6. The combination of a cork-inserter for inserting the cork, mechanism for securing the wire to the bottle, and connected mechanism between the parts for actuating the cork-inserter to insert the cork into the bottle during the operation of the wire-securing mechanism in securing the wire to said bottle, substantially as and for the purpose set forth.

7. The combination of a bottle-support for holding the bottle, a cork-inserter having a movement toward and away from the supported bottle, wire-securing mechanism having a movement toward and away from said supported bottle, and connected mechanism for conjointly operating the cork-inserter and wire-securing mechanism substantially as and for the purpose set forth.

8. The combination of a bottle-support, a cork-inserter for inserting the cork, mechanism for actuating the cork-inserter toward and away from the supported bottle, mechanism for securing the wire to the bottle, with the extremities projecting therefrom, mechanism for actuating the wire-securing devices toward and away from the supported bottle, and connected mechanism for conjointly operating the cork-inserter and wire-securing mechanism, substantially as and for the purpose set forth.

9. The combination of a bottle-support, means for securing the wire to the bottle, a cork-inserter for inserting the cork, mechanism

406,450.

for passing the wire over the top of the bottle and the inserted cork, mechanism for securing the wire in said position, a feed or carrier for feeding the bottle from the cork-inserter and the mechanism for securing the wire to the bottle, the mechanism for securing the wire over the top of the cork, and connected mechanism for operating the parts in due order, substantially as and for the purpose described.

10. The combination of mechanism for securing the wire to the bottle, with its ends projecting therefrom, said mechanism being actuated to encircle the bottle, mechanism for passing the wire over the top of the bottle and the inserted cork, mechanism for securing the opposite extremities of the wire together, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose set forth.

11. The combination of wire-securing jaws or arms for securing the wire to the bottle, with the opposite extremities projecting therefrom, a cork-inserter for forcing the cork between said arms, mechanism for turning the wire over the top of the bottle and cork, mechanism for securing the wire in said position, and connected mechanism for operating said parts in due order, substantially as and for the purpose specified.

12. The combination of the compressor for compressing the cork, means for holding the compressor normally open to receive the cork, with the following mechanisms, to wit: for securing the wire to the bottle, with its extremities projecting therefrom, for inserting the cork into the bottle, for passing the extremities of the wire over the top of the bottle and the inserted cork, and for securing the extremities in said position, and connected mechanism between the several parts for operating them in due order, substantially as and for the purpose specified.

13. The combination of wire-securing mechanism for securing the wire to the bottle, with its extremities projecting therefrom, a reciprocating compressor timed with the wire-securing mechanism, and a cork-inserter, with the following mechanisms, to wit: for passing the wire over the top of the bottle and the inserted cork, for securing the wire in said position, and connected mechanism for operating the foregoing parts conjointly in due order, substantially as described.

14. The combination of reciprocating wire-securing mechanism for securing the wire to the bottle, with the extremities projecting therefrom, a reciprocating compressor timed with the reciprocating wire-securing mechanism, and a cork-inserter, with the following mechanisms, to wit: for passing the wire over the top of the bottle and the inserted cork and for securing the wire in said position, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose specified.

15. The combination of a compressor for compressing the cork, reciprocating jaws for securing the wire to the bottle, with the opposite extremities projecting therefrom, and a cork-inserter for inserting the cork, with the following mechanisms, to wit: for passing the wire over the top of the bottle and the inserted cork, for securing the wire in said position, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose set forth.

16. The combination of a wire-carrier having a movement toward and away from the bottle, oscillating jaws mounted on the wire-carrier for securing the wire around the bottle, with the opposite extremities projecting therefrom, mechanism for passing the wire over the top of the cork, mechanism for securing the wire in said position, and connected mechanism for operating the foregoing parts in due order, substantially as and for the purpose set forth.

17. The combination of yielding jaws encircling the bottle for securing the wire thereto, with its extremities projecting therefrom, mechanism for withdrawing the yielding jaws around the bottle, with the following mechanisms, to wit: for turning the extremities of the wire over the top of the bottle and cork, for securing the wire in said position, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose described.

18. In a wiring-machine, the combination of the following mechanisms, to wit: for securing the wire to the bottle, with the extremities of the wire projecting therefrom, for actuating said wire-securing device lengthwise of the bottle, for passing the wire over the top of the bottle, and for securing the wire in said position, and mechanism operatively connecting the foregoing parts, substantially as specified.

19. The combination of a bottle-support for the bottle, a cork-inserter having a movement toward and away from the supported bottle, wire-securing mechanism having a movement toward and away from the said supported bottle, and also having a movement lengthwise of the bottle, and connected mechanism for actuating the cork-inserter, and wire-securing mechanism to operate conjointly upon said bottle, substantially as and for the purpose set forth.

20. In a wiring-machine, the combination of a bottle-support for the bottle, mechanism for securing the wire to the bottle, with the extremities projecting therefrom, said mechanism having a movement toward and away from the bottle, and also a movement lengthwise of the same, mechanism for turning the projecting extremities over the top of the bottle and the inserted cork, mechanism for securing the wire in said position, and connected mechanism between the parts for operating the same in due order, substantially as and for the purpose specified.

21. In a wiring-machine, the combination of yielding reciprocating jaws or arms for securing the wire to the bottle, with the opposite extremities projecting therefrom, mechanism for actuating said jaws lengthwise of the bottle, mechanism for passing the wire over the top of the bottle and the inserted cork, mechanism for securing the wire in said position, and connected mechanism between the parts, substantially as and for the purpose specified.

22. The combination, in a wiring-machine having the following mechanisms, to wit: for applying the separate strands of wire to the bottle, with their extremities projecting therefrom, for twisting together these projecting extremities and for automatically withdrawing the wire-twisting mechanism, for turning the twisted projecting extremities over the top of the bottle and cork and for securing the wire in said position, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose set forth.

23. The herein-described wiring-machine having the following mechanisms, to wit: for securing separate strands of wire to the bottle, with their extremities projecting therefrom, for twisting together these projecting extremities, for automatically withdrawing the wire-twisting mechanism, for turning the twisted projecting extremities over the top of the bottle and cork, and for twisting together these twisted extremities in said position, and mechanism operatively connected to the foregoing parts, substantially as and for the purpose set forth.

24. In a wiring-machine, the combination of shuttle jaws or arms for applying the separate strands of wire to the bottle, means for rotating the shuttle jaws or arms to twist the said strands together, mechanism for turning the twisted extremities over the top of the bottle and the inserted cork, mechanism for securing the wire in said position, and connected mechanism between the parts, substantially as and for the purpose specified.

25. In a wiring-machine, the combination of a wire-carrier having a movement toward and away from the bottle for applying the wire to the bottle, with the extremities projecting therefrom, arms secured to the carrier encircling the bottle on the forward movement of the carrier and forced around the bottle by the retraction of the carrier, means for rotating the arms when withdrawn clear of the bottle, said rotating means adapted to cease operation when the rearward movement of the carrier is reached, with mechanism for turning the opposite extremities of the wire over the top of the bottle and cork, mechanism for securing the wire in said position, and connected mechanism between the parts, substantially as and for the purpose specified.

26. The combination of an adjustable bottle-support with the following mechanisms, to wit: for securing the wire to the bottle, with its extremities projecting therefrom, for passing the wire over the top of the bottle and the inserted cork, and for securing the wire in said position, and connected mechanism between the parts, substantially as and for the purpose set forth.

27. The combination, with the following mechanisms, to wit: for securing the wire to the bottle, with its extremities projecting therefrom, for passing the wire over the top of the bottle and the inserted cork, and for securing the wire in said position, of an adjustable bottle-support and means for retaining the bottle-support in its adjusted position, substantially as and for the purpose set forth.

28. The combination of an adjustable bottle-support with a cork-inserter having a movement toward and away from said support, wire-securing mechanism having a movement toward and away from said support, and connected mechanism for conjointly operating the foregoing parts, substantially as and for the purpose set forth.

29. In a wiring-machine, the combination, with means for securing the wire to the bottle, of a bottle-support, a feed or carrier for feeding the bottle to the support, mechanism for lowering the bottle-support before a new bottle is fed thereto, mechanism for raising the support to contact with the bottle, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose set forth.

30. The combination of an adjustable bottle-support and a feed or carrier for feeding the bottles to said support, of a cork-inserter having a movement toward and away from the bottle-support, wire-securing mechanism having a movement toward and away from the bottle, and connected mechanism between the parts for operating them conjointly in due order, substantially as and for the purpose set forth.

31. The combination, in a wiring-machine, of wire-securing mechanism for securing the wire to the bottle and over the top of the inserted cork with a bottle-support for holding the bottle, a rotary shank provided on the bottle-support, mechanism for turning said shank and raising or lowering the bottle-support, and connected mechanism between the parts, substantially as and for the purpose set forth.

32. The combination of a bottle-support for the bottles, a rotary shank provided on the bottle-support, and connected mechanism for automatically turning said shank and raising or lowering the bottle-support, substantially as and for the purpose set forth.

33. The combination of a compressor for compressing the cork, said compressor having a movement toward and away from the bottle, a cork-inserter, a bottle-support for the bottle, means for adjusting the bottle-support to suit different heights of bottles, means for retaining the support in its adjusted position, mechanism for securing the wire to the bottle, with its extremities projecting, mechanism for passing the wire over the top of the bottle and the inserted cork, mechanism for securing the wire in said position, and connected mechanism between the parts for operating them in due order, substantially as and for the purpose set forth.

34. The combination, in a wiring-machine, of mechanism for securing the separate strands of wire around the bottle, mechanism for twisting together the projecting extremities of said strands, with a cut-off for severing the wire secured to the bottle from the wire-twisting mechanism, mechanism for turning the opposite extremities of the wire over the top of the bottle and the inserted cork, mechanism for securing the wire in said position, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose set forth.

35. The combination, in a wiring-machine, of wire-securing means having a movement toward and away from the bottle, a cut-off for cutting off the wire at the end of the rearward movement of the wire-securing means, mechanism for turning the extremities of the wire over the top of the bottle and the inserted cork, mechanism for securing the wire in said position, and mechanism for operating the aforesaid parts in due order, substantially as and for the purpose set forth.

36. The combination, in a wiring-machine, of wire-securing mechanism having a movement toward and away from the bottle, means for turning the wire-securing mechanism and thus twisting the wires, a cut-off for cutting off the wire at a point substantially midway between the bottle and the wire-securing mechanism when in its retracted position, mechanism for turning the extremities of the wire over the top of the bottle, mechanism for securing the wire in said position, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose specified.

37. The combination of a rotary bottle-carrier, a cork-inserter, means for securing the wire to the bottle and over the cork, said means being arranged to operate conjointly with the cork-inserter, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose specified.

38. The combination of a bottle-support for the bottles, a cork-inserter having a movement toward and away from the support, wire-securing mechanism having a movement toward and away from the said support, a feed or carrier for feeding the bottles over said support, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose specified.

39. In a wiring-machine, the combination of wire-securing mechanism for securing the wire to the bottle, with the extremities projecting therefrom, mechanism for twisting the wire over the top of the bottle and cork, a bottle feed or carrier for feeding the bottles to the wire-securing mechanism and then to the device for twisting together the opposite extremities of the wire, and connected mechanism between the parts for operating them in due order, substantially as and for the purpose specified.

40. The combination of the cork-inserter, means for securing the wire around the bottle, with its extremities projecting therefrom, mechanism for turning the said extremities over the top of the bottle and cork, and mechanism for twisting said extremities together, with a bottle feed or carrier having bearings for the bottles arranged at intervals corresponding to the relative distance between the cork-inserter and the device for twisting together the extremities of the wire, and connected mechanism between the parts for operating them in due order, substantially as and for the purpose set forth.

41. The combination of a bottle feed or carrier having pivoted arms for grasping the bottle and the following mechanisms, to wit: for securing strands of wire to the bottle, with their extremities projecting therefrom, for passing the wire over the top of the bottle and the inserted cork, and for securing the wire in said position, and connected mechanism between the parts, substantially as and for the purpose set forth.

42. The combination of the cork-inserter and means for securing the wire to the bottle and over the top of the cork, said wire-securing means being arranged to operate conjointly with the cork-inserter, with a bottle feed or carrier having oscillating arms for grasping the bottle and feeding it to said mechanism, and mechanism for operatively connecting the aforesaid parts and actuating them in due order, substantially as and for the purpose specified.

43. In a wiring-machine, the combination of a bottle-support for the bottles, wire-securing mechanism for securing the wire to the bottle, with the extremities projecting therefrom, mechanism for turning the wire over the top of the bottle and the inserted cork, mechanism for securing the wire in said position, a carrier for feeding the bottles, means for discharging the bottles, and connected mechanism for operating the parts in due order, substantially as and for the purpose set forth.

44. The combination of a bottle-support for the bottles, a cork-inserter having a movement toward and away from said support, wire-securing mechanism having a movement toward and away from the said support, a feed or carrier feeding the bottles over the support, mechanism for discharging the bottles from the carrier, and connected mechanism between the foregoing for operating them in due order, substantially as and for the purpose set forth.

45. The combination of the cork-inserter, mechanism for securing the wire to the bottle and over the top of the cork, said mechanism being arranged to operate conjointly with the cork-inserter, with a bottle feed or carrier, arms provided on the carrier and held normally open to receive the bottles, and connected mechanism between the parts for operating them in due order, substantially as specified.

46. The combination, in a wiring-machine, of mechanism for securing the wire around the bottle, with its extremities projecting therefrom, a bottle feed or carrier for feeding the bottles, oscillating lifting-arms for elevating the opposite extremities of the wire secured to the bottle, mechanism for twisting together these extremities, and connected mechanism for operating the foregoing in due order, substantially as and for the purpose specified.

47. The combination, in a wiring-machine, of mechanism for securing the wire to the bottle, with the extremities projecting therefrom, a rotary bottle feed or carrier for feeding the bottles, mechanism for turning the extremities of the wire upward over the top of the bottle and the inserted cork, and connected mechanism between the parts, substantially as and for the purpose specified.

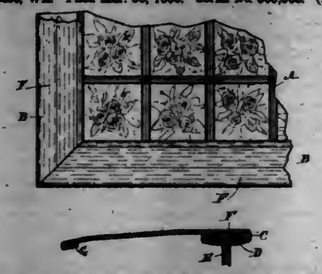
48. The combination of a stop or gage for forcing the bottles to the desired plane, of the following wire-securing mechanisms, to wit: for securing strands of wire to the bottle, for passing the wire over the top of the bottle and the cork, and for securing the wire in said position, and connected mechanisms between the parts, substantially as and for the purpose set forth.

49. The combination of a support for the bottles, a cork-inserter having a movement toward and away from the support, wire-securing mechanism having a movement toward and away from said support, a stop or gage for bringing the bottles into the required plane, and connected mechanism between the parts, substantially as and for the purpose set forth.

50. The combination of a support for the bottle, a cork-inserter having a movement toward and away from the support, wire-securing mechanism having a movement toward and away from said support, a feed or carrier for feeding the bottles over the said support, a stop or gage for forcing the bottles down to the desired position in said carrier, and mechanism for operatively connecting the aforesaid parts, substantially as described.

51. The combination, in a wiring-machine, of a support for the bottle, wire-securing mechanism for securing the wire to the bottle, said wire-securing mechanism being arranged to operate conjointly with the cork-inserter and over the top of the cork, with a bottle feed or carrier for feeding the bottles, oscillating arms mounted on the carrier, a stop or gage for contacting with the bottle, mechanism for impinging the oscillating jaws against the bottle, and connected mechanism for operating the foregoing parts in due order, substantially as and for the purpose set forth.

52. The combination of a cork-inserter for inserting the cork, a spool having two separate feeding-strands wound thereon, and mechanism for feeding out the wire, with the following mechanisms: for securing the wire to the bottle, with its extremities projecting therefrom, for passing the wire over the top of the bottle and the inserted cork, for securing the wire in said position, and connected mechanisms for operating the foregoing parts in due order, substantially as and for the purpose set forth.



53. The combination of mechanism for securing the wire around the bottle, with its extremities projecting therefrom, oscillating arms for acting on said extremities of the wire, mechanism for locking and rotating the oscillating arms, and connected mechanism for operating the said working parts, substantially as and for the purpose set forth.

54. The combination, in a wiring-machine, of mechanism for securing the wire around the bottle, with its extremities projecting therefrom, with means for elevating the projecting extremities of the wire, oscillating arms or nippers for twisting together these projecting extremities over the top of the cork, a bottle feed or carrier for feeding the bottles, mechanism for actuating the wire-twisting arms or nippers toward and away from the bottle feed or carrier, and connected mechanism between the parts for operating the same in due order, substantially as and for the purpose set forth.

55. The combination, in a wiring-machine, of mechanism for securing the wire to the bottle, with its extremities projecting therefrom,

means for elevating these projecting extremities of the wire, oscillating arms or nippers for twisting together the projecting extremities of the wire, mechanism for locking these arms or nippers upon the wire mechanism for unlocking these arms, and connected mechanism between the parts for operating them in due order, substantially as and for the purpose set forth.

406,451. CARPET BINDING AND FASTENER. DIEGO LANGE, La Crosse, Wis. Filed Mar. 30, 1889. Serial No. 305,382. (No model.)

Claim.—1. A metallic carpet-binding consisting of a strip B, having perforated folded parts C and D, provided with a series of retaining-tacks E, inserted through said folded parts C and D, the said parts C and D being turned and folded against the under side of the body F of the strip, whereby said tacks are retained in said perforations, substantially as and for the purpose specified.

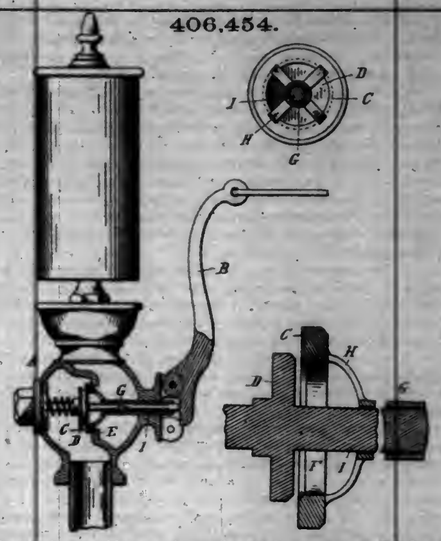
2. In a metallic carpet-binding, the strip B, provided at its exterior marginal edge with perforated folds C and D and at its inner marginal edge with the fold G, in combination with the series of retaining-tacks E, inserted through said folds C and D and turned beneath the body F of said strip, all substantially as and for the purpose specified.

406,452. METHOD OF MAKING CANNON. JOSEPH P. LAVIGNE, New Haven, Conn. Filed Aug. 13, 1888. Renewed June 7, 1889. Serial No. 313,459. (No model.)

Claim.—1. A method of making cannon, consisting in independently preparing a filling and a tube and securing them together, and then casting an envelope over such filling and tube, so as to hermetically seal the filling between the tube and envelope, substantially as set forth.

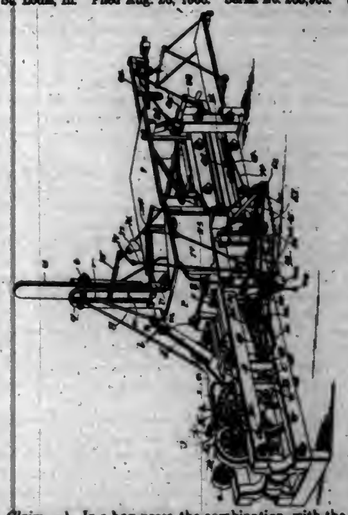
2. A method of making cannon, consisting in independently preparing a filling and a tube, then shrinking the former upon the latter, and then casting an envelope over them, so as to hermetically seal the filling from the air, substantially as set forth.

406,458. DEVICE FOR EVAPORATING LIQUIDS. JOHN U. LLOYD, Cincinnati, Ohio. Filed Dec. 11, 1888. Serial No. 293,273. (No model.)



Claim.—In an apparatus for evaporating or concentrating liquids or solutions, the funnel-shaped plate A, having the upper part thereof provided with supply-pipes B, perforated flange C, and openings K, and the lower portion thereof with outlet-pipe D, and means for heating said plate, in combination with the removable lid or cover E, having opening F for the passage of a current of air over the surface of the moving liquid, substantially as and for the purpose specified.

406,454. STEAM-WHISTLE. CHARLES D. LYNCH, Detroit, Mich. Filed Feb. 11, 1889. Serial No. 299,468. (No model.)



Claim.—In a steam-whistle, the combination, with the valve-seat E, of the hollow stem G, formed with spider-arms H, and valve-disk

406,454.

C, operating on said seat, and a smaller disk D, seated on the disk C and provided with a stem I, working through the stem G, said valve-stems projecting into different proximity to the operating-lever and operating substantially as described.

406,455. AUTOMATIC HAY-PRESS. FRANK X. MAURER, East St. Louis, Ill. Filed Aug. 28, 1888. Serial No. 283,962. (No model.)

Claim.—1. In a hay-press, the combination, with the main frame, of the plunger, the driving mechanism having the wheel E provided with wrist-pin F, and the toggle-levers acted upon by said wrist-pin and having their rear ends pivoted to the plunger and their front ends pivotally supported on opposite sides of the center of the wheel E, as set forth.

2. The combination, with the main frame, of the plunger, the toggle-levers having their outer ends pivoted to the plunger, the rammer, the angle-lever connected to the rammer, and the driving mechanism having the gear-wheel E, provided with the wrist-pin F, to act on the toggle-levers, and the lug G, to act on the angle-lever, as set forth.

3. The combination, with the main frame, of the rammer, the angle-lever connected to the rammer, the pin projecting from the angle-lever, the tube pivoted to the frame, the rod connected to the pin projecting from the angle-lever and extending into said tube, the spring in said tube acting on said rod, and mechanism for operating the angle-lever, as set forth.

4. In a hay-press, the combination of the rammer, the angle-lever, the plate pivoted to the angle-lever and having a notched edge

engaging a pin on the angle-lever, a link connecting said plate with the rammer, and mechanism for operating the angle-lever, as set forth.

5. The combination, with the main frame, of the plunger, the sliding carriage actuated by the plunger, the transversely-sliding plate operated by the carriage, connections between the sliding plate and the carriage, and mechanism for reciprocating the plunger, as set forth.

6. The combination, with the main frame and the guide-trough projecting laterally from the main frame, of the plunger, the sliding plate mounted on the guide-trough, intermediate devices between the plunger and the sliding plate, whereby the sliding plate will be moved along the guide-trough by the plunger, and suitable operating mechanism, as set forth.

7. The combination, with the main frame, of the plunger, the sliding carriage mounted on the main frame and actuated by the plunger, the guide-trough projecting from the main frame, the transversely-sliding plate thereon, connections between said plate and the carriage, and suitable operating mechanism, as set forth.

8. The combination, with the main frame having a vertical opening 16 in its side, of the plunger, the sliding carriage actuated thereby, the needle carried by the carriage and projected thereby across the said opening 16, the sliding plate adapted to be moved to and from said opening, connections between said plate and the carriage, and mechanism for reciprocating the plunger, as set forth.

9. The combination, with the main frame, of the plunger, the transversely-sliding plate, the sliding carriage actuated by the plunger and connected to said plate, the trip-hook on the main frame and adapted to be engaged by the carriage, devices for releasing said trip-hook, and mechanism for actuating the plunger, as set forth.

10. The combination, with the main frame, of the plunger, the carriage mounted on the main frame and having the hook 38, and the trigger 33, adapted to be alternately engaged by the plunger, the sliding plate connected to the carriage, and mechanism for operating the plunger, as set forth.

11. The combination, with the main frame, of the sliding plate, the carriage mounted on the main frame and having the pawl 24, and the trigger 33, and the hook 38, the pin 35, projecting from the plunger and adapted to engage the trigger 33 and the hook 38 alternately, mechanism for actuating the plunger, and devices for locking the carriage and releasing the same, as set forth.

12. The combination, with the main frame, of the plunger, the carriage actuated thereby and having the pawl 24, the lug 27, having a shoulder 26 engaged by said pawl, the trip-hook adapted to release said pawl from said lug, the rock-shaft 106, having the ratchet-wheel 105 adapted to actuate said trip-hook, and mechanism for rotating said shaft, as set forth.

13. The combination, with the main frame, of the trough 54, projecting from one side of the same, the sliding plate mounted on said trough, the plunger, the sliding carriage actuated thereby and connected with the sliding plate, mechanism for operating the plunger, the standard pivoted to the sliding plate, and the rod pivoted to the standard and adapted to engage said plate, as set forth.

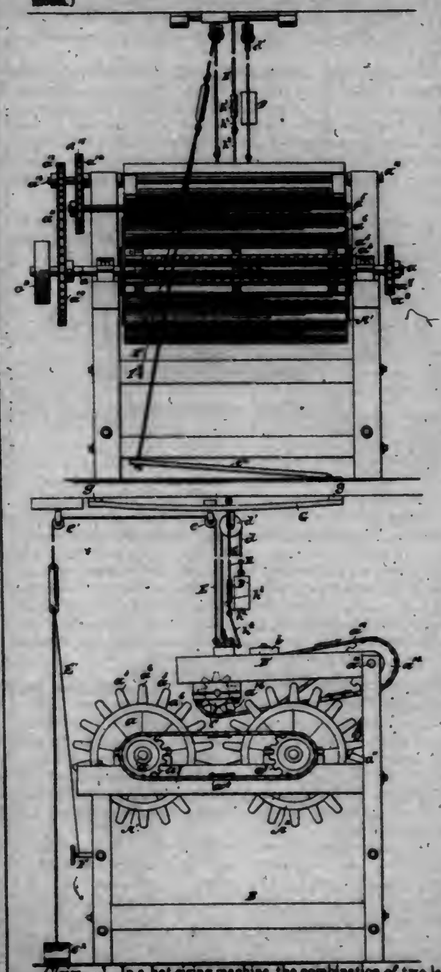
14. The combination, with the main frame, of the guide-trough projecting from the same, the sliding plate mounted on said trough, the arms 57, projecting inward from said plate, the lip 56 at the outer edge of said plate, the standard pivoted to the arms 57, the rod pivoted to said standard and engaging the lip 56, the plunger, the sliding carriage actuated by the plunger and connected with the sliding plate, and mechanism for operating the plunger, as set forth.

15. The combination, with the main frame, of the plunger, the trough projecting therefrom, the sliding plate 45, mounted thereon, the carriage mounted on the main frame and actuated by the plunger, the chains 40 and 51, and the rod 50, extending between the plate and the carriage, the rod 42, extending from the carriage, and the chain 43, secured to said rod and adjustably connected to the sliding plate, as set forth.

16. The combination, in a hay-press, of the main frame, the lever 71, pivoted on the side of the frame, the lever 66, mounted on the frame, a connecting-rod between the levers 66 and 71, a bell supported above the frame-work, and connections between said bell and the lever 71, as set forth.

17. The combination, with the main frame, of the standard erected thereon, the arm projecting from said standard, the angle-lever fulcrumed on said arm and carrying a bell, the lever 71, pivoted on the main frame, connections between the lever 71 and the angle-lever, the lever 66, fulcrumed on the main frame, and a rod connecting the said lever and the lever 71, as set forth.

18. The combination of the rammer *u*, the rammer-plate comprising the rigid section *x*, secured to the rammer, and the swinging section *y*, hinged to the rigid section, the spring secured to the rammer, and the swinging section of the rammer-plate, the tube, the rod playing in said tube and connected to the swinging section of the rammer-plate, and the spring in the tube controlling said rod, as set forth.



19. The combination, with the main frame, of the rearwardly-diverging boards 14 on the upper side of the same, the feed-table having the swinging leaves bearing against said diverging boards, the spring between the leaves, and mechanism for operating the feed-box, as set forth.

20. The improved feed-box having the leaves 11, the hooks 12 on the rear side of said leaves, and the spring 13 between said hooks, substantially as specified.

21. The combination, with the main frame having a vertical opening in one side, of the block 18, secured to the rear wall of said opening, the division-block having a plain front side and provided on its rear side with horizontal ribs 63 adapted to engage the upper and lower edges of the said block 18, and mechanism for pushing said division-block through the said opening 16, as set forth.

22. The combination, with the main frame having the opening 16, and the block 18, secured to the rear side of said opening, of the horizontal lever 66, mounted on the main frame and longitudinally adjustable thereon, said lever being adapted to sound an alarm, the division-block adapted to pass through the opening 16, and having the ribs 63 adapted to engage the block 18, and provided with the recess 64 in its lower corner adapted to operate the lever 66, and mechanism for pushing the division-block through the opening 16, as set forth.

406,456. HAT SIZING OR SHRINKING MACHINE. CHARLES H. MERRITT, Danbury, Conn. Filed Oct. 25, 1888. Serial No. 289,120. (No model.)

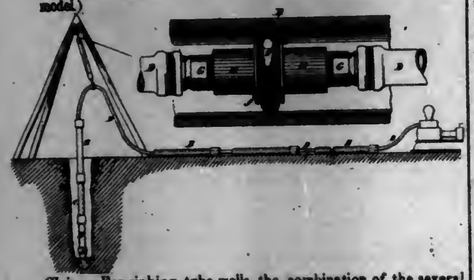
Claim.—1. In a hat-sizing machine, the combination of two large

wheels or drums provided with obliquely-slotted lags, substantially as specified.

2. In a hat-sizing machine, the combination of two large wheels or drums and a smaller wheel or drum having obliquely-slotted lags arranged intermediately thereof and above the adjacent portion of the same, substantially as specified.

3. In a hat-sizing machine, the combination of two large wheels or drums having lags provided with oblique slots and a smaller wheel or drum arranged above and intermediately of them and supported by a swinging frame, substantially as specified.

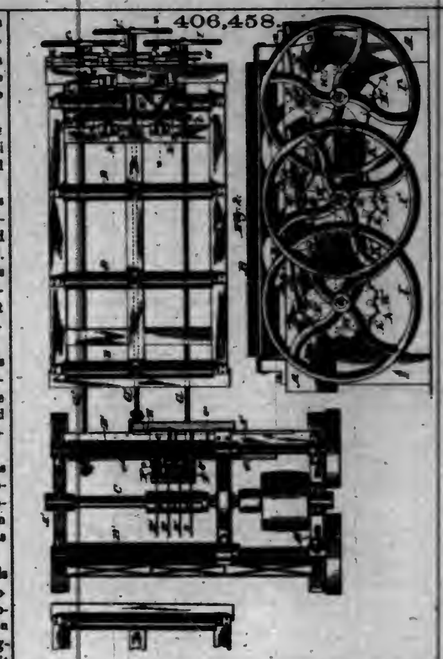
4. In a hat-sizing machine, the combination of two large wheels or drums and a smaller wheel or drum arranged above and intermediately of them, and having a vertically-movable support, all of said wheels or drums having obliquely-slotted lags, substantially as specified.



5. In a hat-sizing machine, the combination of two large wheels or drums, a smaller wheel or drum having a vertically-movable support, a sliding weight on said support, and a counterbalance-weight connected by a cord or chain to the vertically-movable support, substantially as specified.

6. In a hat-sizing machine, the combination of two large wheels or drums, a smaller wheel or drum having a vertically-movable support, a counterbalance-weight connected by a cord or chain to the vertically-movable support, a guide or pulley around which the cord or chain passes, and a spring sustaining the said guide or pulley, substantially as specified.

7. In a hat-sizing machine, the combination of two large wheels or drums, a smaller wheel or drum having a vertically-movable support, a treadle, a cord or chain connecting the vertically-movable support and treadle, a guide or pulley around which the cord or chain passes, and a spring sustaining said guide or pulley, substantially as specified.



8. In a hat-sizing machine, the combination of two large wheels or drums, a smaller wheel or drum having a vertically-movable support, a treadle, a cord or chain connecting the vertically-movable support and treadle, a guide or pulley around which the cord or chain passes, a spring sustaining said guide or pulley, a cleat, and an engaging device for the cord or chain serving to secure the latter when it is desired to permanently elevate the smaller wheel or drum, substantially as specified.

406,457. MEANS FOR SINKING TUBE-WELLS. FREDERICK W. MILLER, Brooklyn, N. Y. Filed Apr. 13, 1888. Serial No. 307,173. (No model.)

Claim.—For sinking tube-wells, the combination of the several detached sections of well-tube B B B with the hose-pipe D D, the said detached sections being strung along on the said hose-pipe before the sinking of the well is commenced, whereby the said sections for the entire well, one after another, can be joined together to complete the well without interrupting the flow of water for washing down the same from the commencement to the completion of the well, substantially in the manner and for the purpose set forth.

406,458. GANG-EDGER. ERNST J. MULLER, Milwaukee, Wis. Filed Nov. 17, 1888. Serial No. 291,144. (No model.)

Claim.—1. In a gang-edger, the combination, with two or more saws movable lengthwise of their arbor and shifting mechanism connected therewith, of two concentric revoluble dials, one having a scale and connected with the shifting mechanism of one saw, and the other having an index or opening adjacent to said scale and connected with the shifting mechanism of another saw, substantially as and for the purposes set forth.

2. In a gang-edger, the combination, with two or more saws movable upon their arbor lengthwise thereof, of a register composed of a circular revoluble scale, and a revoluble index concentric therewith, one connected with one movable saw and the other connected with another movable saw, substantially as and for the purposes set forth.

3. In a gang-edger, the combination of a fixed and two or more movable saws and shifting mechanism connected with said movable saws, a rotary scale connected with the shifting mechanism of the first movable saw, a fixed index adjacent to said scale, and a register composed of a rotary index concentric therewith, one connected with the shifting mechanism of the first movable saw and the other connected with the shifting mechanism of the second movable saw, substantially as and for the purposes set forth.

4. In a gang-edger, the combination, with a number of laterally-movable saws and shifting mechanism connected therewith, of two or more registers each composed of a circular rotary scale and a rotary index concentric therewith, one connected with the shifting mechanism of one saw and the other connected with the shifting mechanism of the next saw, substantially as and for the purposes set forth.

5. In a gang-edger, the combination of a number of laterally-movable saws each provided with shifting mechanism, registers each composed of a rotary scale and a rotary index, which are connected one with the shifting mechanism of one saw and by said mechanism with a part of the next register and the other connected with the shifting mechanism of another saw, substantially as and for the purposes set forth.

6. In a gang-edger, the combination, with three or more laterally-movable saws, of two or more registers each composed of a movable scale and a movable index, each intermediate saw being connected with one of the movable parts of each adjacent register, and the outer saws being connected with the remaining parts of said registers, substantially as and for the purposes set forth.

7. In a gang-edger, the combination, with one fixed and a number of laterally-movable saws and shifting mechanism connected with the movable saws, of a register connected with the first movable saw so as to indicate its distance from the fixed saw, and registers each composed of a movable scale and a movable index, the several scales and indexes being connected in series with the several movable saws, substantially as and for the purposes set forth.

8. In a gang-edger, the combination, with laterally-movable saws and shifting mechanism connected therewith, of a register composed of a circular rotary scale and a circular rotary index-plate provided with an opening through which a single division of said scale is disclosed, but otherwise covering the scale, said index and scale being separately connected with the movable saws, substantially as and for the purposes set forth.

9. In a gang-edger, the combination, with laterally-movable saws and shifting mechanism connected therewith, of a register composed of a circular rotary scale divided into a number of similar parts having like subdivisions, and of a rotary index-dial having a number of openings through which like divisions on the different parts of said scale are disclosed, said index and said scale being separately connected with said movable saws, substantially as and for the purposes set forth.

10. In a gang-edger, the combination, with a number of laterally-movable saws and shifting mechanism connected therewith, of a register composed of a circular beveled rotary scale and a rotary index-dial concentric therewith, provided with an opening through which a single division of said scale is visible, said scale and index being separately connected with said saws, substantially as and for the purposes set forth.

11. In a gang-edger, the combination, with a number of laterally-movable saws and saw-shifting shafts severally connected with said saws and extending to the front of the machine, where they are provided with means for turning the same, of registers mounted upon shafts midway between and parallel with said saw-shifting shafts and each composed of a rotary scale and a concentric rotary index, gears connecting said scale with the saw-setting shaft on one side of said register, and gears connecting the index with the shaft on the opposite side of said register, substantially as and for the purposes set forth.

12. In a gang-edger, the combination, with a number of laterally-movable saws and shifting-shafts individually connected with the several saws and each provided with a pinion, of registers mounted upon shafts between and parallel with said shifting-shafts, and each composed of a rotary scale and a rotary index, a pair of gears mounted on each register-shaft, one connected and revoluble with said scale and meshing with the pinion of the shifting-shaft on one side and the other connected with the pinion of the shifting-shaft on the other side of said register, substantially as and for the purposes set forth.

13. In a gang-edger, the combination, with a fixed and a number of laterally-movable saws, of shifting-shafts severally connected with said movable saws and each provided with a pinion, registers each composed of rotary dials, one provided with a circular scale and the other with an index-opening, and a pair of gears connected with said dials and meshing one with the pinion of the shifting-shaft on one side and the other with the pinion of the shifting-shaft on the other side of said register, a circular scale formed on the index-dial of the first register, and a fixed index indicating on said scale the distance of the first movable saw from the fixed saw, substantially as and for the purposes set forth.

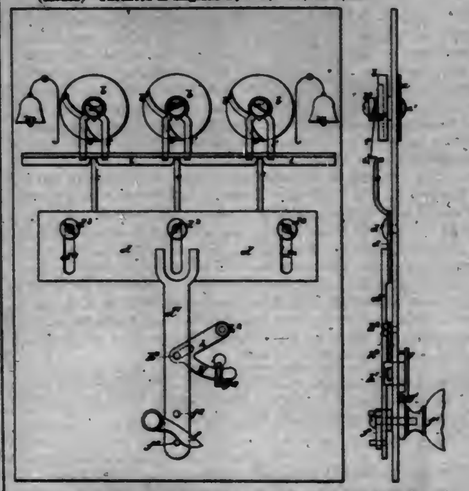
14. In a gang-edger, the combination, with a laterally-movable saw, of a rack connecting therewith, and a pinion meshing with said rack and composed of two sections, one fixed and the other loosely mounted upon the pinion-shaft, a polygonal collar having a number of transverse perforations and adjustably secured on said pinion-shaft by a pin passing through a perforation therein and one of the perforations in said collar, and a spring attached at one end to the loose section of said pinion and at the other end to said collar, substantially as and for the purposes set forth.

15. In a gang-edger, the combination, with a laterally-movable saw, of a rack in connection therewith, a pinion composed of a fixed and a loose section working with said rack, the teeth of one section being formed with working-faces on one side and cut away on the other side, and the teeth of the other section being similarly formed but reversed, and a spring connecting the loose section with the pinion-shaft, substantially as and for the purposes set forth.

16. In a gang-edger, the combination, with a laterally-movable saw, of shifting mechanism connected therewith and arranged to move the same lengthwise of its arbor, a locking device positively holding the saw in place when locked, and an operating device connected with said shifting mechanism and capable of a limited movement independently thereof, the initial movement of said operating device acting to unlock said locking device before it moves the saw-shifting mechanism, substantially as and for the purposes set forth.

17. In a gang-edger, the combination, with a laterally-movable saw, of shifting mechanism connected therewith and provided with a hand-wheel capable of a limited movement independently of the rest of said shifting mechanism, and a locking device connected therewith and arranged to be unlocked by the initial movement of said hand-wheel, substantially as and for the purposes set forth.

18. In a gang-edger, the combination of a laterally-movable saw, a rotary shifting-shaft connected therewith and provided with a hand-wheel capable of a limited movement upon said shaft, and a spring-latch acting normally to prevent the rotation of said shifting-shaft and adapted to be unlocked by the initial movement of said hand-wheel, substantially as and for the purposes set forth.



19. In a gang-edger, the combination of a laterally-movable saw, a rotary shifting-shaft connected therewith, a pair of disks, one notched and fixed upon said shaft, the other toothed and having a limited angular movement thereon, and a spring-latch adapted to engage with said notched disk and to be engaged and unlocked by the initial movement of said toothed disk, substantially as and for the purposes set forth.

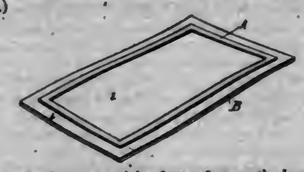
20. In a gang-edger, the combination, with a number of laterally-movable saws severally provided with shifting mechanism, of a number of registers connected with each other and composed each of a movable scale, and a movable index whereby the distance between the several saws is automatically indicated, substantially as and for the purposes set forth.

21. In a gang-edger, the combination, with a number of laterally-movable saws and rotary shifting-shafts connected with said saws, one to each saw, of a number of registers each composed of a circular rotary scale, and a rotary index geared with said shifting-shafts, and a single part of each register being geared with a single part of the next register, whereby the distance between the several movable saws is indicated upon said registers, substantially as and for the purposes set forth.

22. In a gang-edger, the combination, with a number of laterally-movable saws and shifting mechanism connected therewith, of a number of registers each composed of a scale and index and connected with each other and with said shifting mechanism so as to indicate the distance between the several saws, and automatic locking devices connected with said shifting mechanism and arranged to be unlocked by the initial movement of said shifting mechanism, substantially as and for the purposes set forth.

406,459. PERMUTATION-LOCK. STUART C. MUNRO, London, County of Middlesex, England. Filed Aug. 10, 1888. Serial No. 282,457. (Model.) Patented in England Apr. 27, 1887, No. 6,145.

Claim.—1. In apparatus such as described, the combination of a series of disks having letters or figures marked thereon with a second series of disks having curved cam-grooves formed on the faces thereof, substantially as specified.



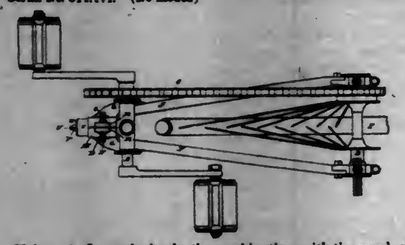
2. The combination, with a series of disks having cam-grooves on the faces thereof, of a series of pins bent or hooked at their ends, attached to a bar capable of being moved vertically upward and downward from the outside of the safe, substantially as specified.

3. The combination, with a series of grooved disks and a sliding bar and pins for operating the same, of a bar for securing the key-hole guard connected with and operated by said sliding bar, substantially as specified.

4. The combination, with a series of grooved disks, of a swinging or movable bar for covering the edges of the grooves, substantially as specified.

5. The combination, with a series of grooved disks, of a swinging or movable bar capable of being forced inward or outward by cams on the axes of the grooved disks, substantially as specified.

406,460. SUPPORT FOR PHOTOGRAPHIC FILMS. RALPH MCNEIL, New York, N. Y. Filed July 12, 1888. Serial No. 279,856. (No model.)



Claim.—1. As a new article of manufacture, the herein-described substitute for paper of plate-mounts for photographic films, and consisting of an open frame or mat with a photographic film permanently adherent at its margin to the said frame or mat.

2. As a new article of manufacture, an open frame or mat having a photographic film cemented to it around its margin.

3. As a new article of manufacture, an open frame or mat carrying a sensitized photographic film with a strengthening film or stratum adhering to the sensitized film.

406,461. VELOCIPEDE. ALBERT H. OVERMAN, Newton, assignor to the Overman Wheel Company, Boston, Mass. Filed May 17, 1889. Serial No. 311,171. (No model.)

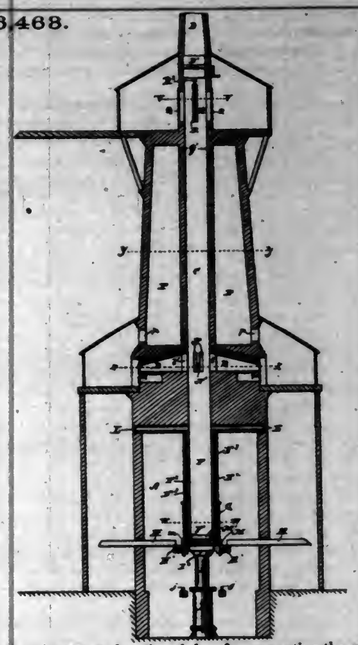
Claim.—1. In a velocipede, the combination, with the crank-shaft and a driving-chain, of a hanger in which the shaft is mounted, a slotted carrier rigidly connected with the frame of the vehicle and having the hanger movably mounted upon it, a sliding block extending transversely through the carrier and located in the slots thereof, a coupling-bolt extending through the hanger, block, and carrier, and an adjusting-bolt connected with the said block and operated for moving the hanger on the carrier to regulate the tension of the chain, substantially as set forth.

2. In a velocipede, the combination, with the crank-shaft and a driving-chain, of a crank-shaft hanger provided with a split sleeve furnished with a clamping-bolt, a carrier rigidly connected with the frame of the machine and having two elongated horizontal slots, a sliding block located in the said slots and having flat bearing-faces engaging with the side walls thereof, a coupling-bolt passing transversely through the hanger, the carrier, and the block, an adjusting-bolt connected with the sliding block and projecting out of the carrier, a nut located on the outer end of the bolt, and a perforated disk placed over the end of the carrier and forming a point of purchase for the nut, substantially as set forth.

406,462. BRAKE FOR VELOCIPEDES. ALBERT H. OVERMAN, Newton, assignor to the Overman Wheel Company, Boston, Mass. Filed May 17, 1889. Serial No. 311,172. (No model.)

Claim.—1. In a velocipede, the combination, with a brake composed of one or more levers, of a spring located at one end of such lever or levers, and a seat located at the other end thereof and forming a point of purchase for the spring for holding the lever or levers against rattling, substantially as set forth.

2. In a velocipede, the combination, with a brake-train consisting of connected series of brake parts, of a spring located at one end of the train and a seat located at the other end thereof and forming a point of purchase for the spring for holding the train under tension and against rattling, substantially as set forth.



3. In a velocipede, the combination, with a longitudinally-adjustable brake-train consisting of a connected series of brake parts, of a spring located at one end of the train and a seat located at the other end thereof and forming a point of purchase for the spring in holding the train under tension and against rattling, substantially as set forth.

4. In a rear-driving front-steering bicycle, the combination, with a brake-spoon placed for engagement with the driving-wheel, connecting-rods, a bell-crank lever, an adjusting-rod, and a hand-lever, the said parts being connected to form a brake-train, of a spring pressing against the spoon, and a shoulder formed upon the hand-lever and pressing against the handle-bar, which forms a point of purchase for the spring which holds the train under tension and against rattling, substantially as set forth.

406,463. BRICK-KILN. CLARK D. PAGE, Rochester, N. Y., assignor to Page's Patent Brick Kiln Company, same place. Filed May 15, 1888. Serial No. 273,967. (No model.)

Claim.—1. In a brick-kiln of the character described, the combination, with the cupola and the girders supporting the same, of the downwardly-extending portion, and the tie-rods extending through

406,463.

the same and connected to the girders for supporting the extension, substantially as described.

2. In a brick-kiln of the character described, the combination, with the cupola and girders, of the lower depending extension of the cupola, formed of brick, with the interposed and bottom plates, and the tie-rods uniting the plates and connected to the girders for supporting the depending extension, substantially as described.

3. In a brick-kiln of the kind described, the combination, with the furnace and cupola, of the lower extension formed of brick, the protecting corner-plates, and the hood arranged to slide over said extension, substantially as described.

4. In a brick-kiln of the kind described, the combination, with the furnace and cupola, of the lower extension constructed of brick, the corner-plates and bolts or rods connecting them, and the hood arranged to slide over said extension, substantially as described.

5. In a brick-kiln of the character described, the combination, with the feeding-aperture, of a hot-air passage opening into the kiln below or at one side of the feeding-aperture and a discharge-opening above or at the opposite side of the same, whereby warm air is caused to pass in front of the said feeding-aperture and prevent contact of cold air with the vapor from the bricks in the center of the kiln, substantially as described.

6. In a brick-kiln of the character described, the combination, with the feeding-aperture, of the cupola below the same, the hot-air chamber surrounding the cupola and heated thereby, air-passages communicating with said hot-air chambers and opening into the cupola below or to one side the feeding-apertures, and the discharge on the opposite side, substantially as described.

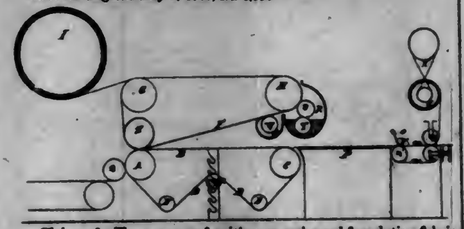
7. The combination, with the furnace, the cupola, the chamber formed at the side of the latter open to the air, the feeding-apertures of the kiln, and the drying-chamber located in proximity thereto, heated by the air from the chambers at the side of the cupola, substantially as described.

8. The combination, with the cupola having the protecting-covering, of the air chamber or chambers at the sides, substantially as described.

9. The combination, with the furnace, the cupola, the hot-air chamber at the sides of the latter open to the air, and the feeding-apertures for the kiln, of the drying-chambers located in proximity and heated by air from said hot-air chambers and the openings from the hot-air chambers into the cupola below the feeding-apertures, substantially as described.

10. In a vertical kiln, the combination of the furnaces having the broad inner ends opening into the shaft and the side passages extending to one side and discharging into the shaft at an angle to the direct passages, substantially as described.

11. In a vertical kiln, the combination, with the four furnaces having the broad inner ends discharging into the shaft and arranged

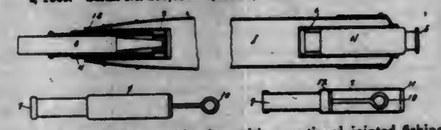


in pairs on each side thereof, of the side passages extending around from the outside of each furnace and entering the shaft in pairs at near the center of the sides, substantially as described.

12. In a brick-kiln, the combination of the feeding-apertures, the partition-plate, and the spacing or forming bar provided with the slot adapted to co-operate with the plate, substantially as described.

13. In a brick-kiln, the combination of the feeding-apertures, the central partition-plate, the horizontal notched bars, and the spacing or forming bar adapted to rest in the notches, substantially as described.

14. In a brick-kiln, the combination of the feeding-apertures, the horizontal notched bars, and the spacing-bar adapted to rest in the notches, substantially as described.



406,464. MANUFACTURE OF MATERIAL FOR COVERING WALLS OR OTHER SURFACES. THOMAS J. PALMER, Lancaster, England. Filed May 21, 1888. Serial No. 274,556. (No model.) Patented in England May 2, 1888, No. 6,554.

Claim.—1. The process of uniting an embossed foundation fabric or material and an ornamental facing, which process consists in spreading a layer of cement on one of said materials and passing both between rollers, together with a band of elastic or yielding material, substantially as described.

2. The process of uniting an embossed foundation fabric with an ornamental facing of metal, which process consists in spreading upon the metal sheets or strips a layer of cement, heating it and passing it, together with the foundation material and an elastic band, between rollers, whereby a yielding pressure is brought to bear on the two materials and the metal facing made to conform to the surface of the foundation fabric, substantially as described.

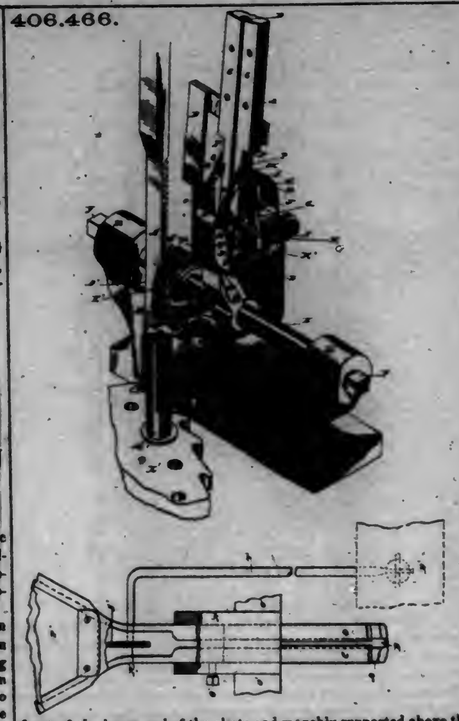
406,465. FISHING-ROD. JOHN PEPPER, Rome, N. Y. Filed Feb. 4, 1889. Serial No. 297,880. (Model.)

Claim.—1. The combination, with a sectional jointed fishing-rod, of a supplemental reducing-ferrule for shortening the rod by substituting the same for one of the intermediate sections of the pole, substantially as described.

2. The combination, with a sectional jointed fishing-rod, of a butt-section having a socket 2 and a socket 6, and a supplemental reducing-ferrule adapted to be placed in either socket, substantially as described, for the purposes stated.

3. The combination, with a sectional jointed fishing-rod, of a butt-section having sockets in each end thereof, a supplemental reducing-ferrule, for the purposes stated, adapted to be placed in either socket, and a cap adapted to be applied to either end of the butt-section over the socket, substantially as set forth.

4. The combination, in a sectional jointed fishing-rod, of a supplemental reducing-ferrule having a handle capable of retreating into the ferrule, substantially as described, for the purpose stated.



5. The combination, with a jointed fishing-rod of three or more sections, of a supplemental reducing-ferrule, substantially as described, and a line-eye having overlapping free ends, substantially as described.

406,466. MACHINE FOR CAPPING CARTRIDGES. WILLIAM R. PLACE, West Haven, Conn., assignor to the American Buckle and Cartridge Company, same place. Filed Feb. 25, 1889. Serial No. 301,136. (No model.)

Claim.—1. In a machine for capping cartridges, the combination, with a chute, of a gate for closing the lower end thereof, a cap-carrier for removing the caps one by one from the chute, and a guard located in front of the chute and operatively connected with the gate and adapted to retain the caps in the cap-carrier until they are firmly grasped thereby, substantially as set forth.

2. In a machine for capping cartridges, the combination, with a chute, of a gate for closing the lower end thereof, a cap-carrier for removing the caps one by one from the chute, a guard located in

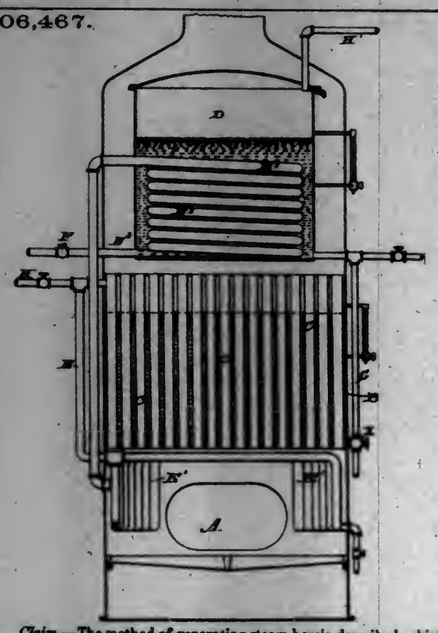
406,466.

front of the lower end of the chute and movably supported above the mouth thereof, and means for operating the guard to engage it with the upper end of the cap-carrier and hold it in engagement with the same until the fingers thereof have firmly grasped the cap, and then lift it above the said fingers to permit them to deliver the cap to the cartridge, substantially as set forth.

3. In a machine for capping cartridges, the combination, with a chute, of a gate for closing the lower end thereof, a cap-carrier for removing the caps one by one from the chute, a guard pivoted to the lower end of the chute, and means operatively connected with the gate for retiring it and for bringing it into action, substantially as set forth.

4. In a machine for capping cartridges, the combination, with a chute, of a gate for closing the lower end thereof, two pivotal upright arms for carrying the gate extending above the same, a cap-carrier for removing the caps one by one from the chute, and a guard located in front of the lower end of the chute and having two arms pivoted at their upper ends to the chute and provided with elongated slots, through which they are coupled by screws with the upper ends of the arms carrying the gate, substantially as set forth.

5. In a machine for capping cartridges, the combination, with a cap-carrier, of a rock-shaft on which it is mounted, a gear-wheel frictionally mounted on the shaft, and stops which limit the movement of the carrier in either direction, whereby the wheel is caused to slip, substantially as set forth.



6. In a machine for capping cartridges, the combination, with a hopper, of a thin narrow blade located in the neck thereof, a chute rigidly connected with the hopper, and means for moving such blade to agitate the caps and cause them to feed into the chute which is combined with the hopper, substantially as set forth.

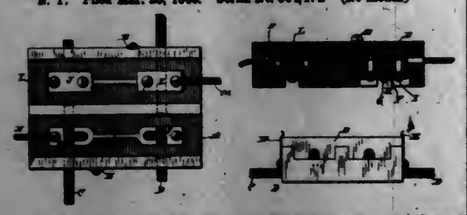
7. In a machine for capping cartridges, the combination, with a cap-carrier and means for rocking it back and forth, of two adjustable buffers, respectively located so as to be engaged by the carrier at the opposite ends of its stroke, substantially as set forth.

8. In a machine for capping cartridges, the combination, with a cap-carrier, of a rock-shaft to which it is secured, a gear-wheel frictionally mounted on the shaft and having a power-connection, whereby the shaft is operated to rock the carrier back and forth, and two adjustable buffers, respectively located so as to be engaged by the carrier at the opposite ends of its stroke, substantially as set forth.

406,467. METHOD OF GENERATING STEAM. AUGUST POSSENDORFF, CARL BEHNE, and FRITZ BEHNE, Rochester, N. Y. Filed Jan. 16, 1889. Serial No. 296,568. (No model.)

406,467.

Claim.—The method of generating steam herein described, which consists in first generating it in a water-receptacle heated by fire, conveying it thence to a superheater and superheating it, and conveying it thence into submerged pipes within another water-receptacle to generate steam there, the superheated steam being kept separate from the water in the second water-receptacle, substantially as set forth.

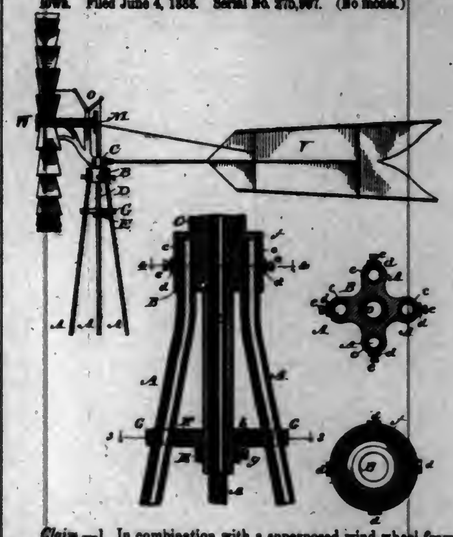


406,468. ELECTRICAL SWITCH. JOSEPH A. POWERS, Lansingburg, N. Y. Filed Mar. 23, 1889. Serial No. 304,473. (No model.)

Claim.—1. The combination, in an electric switch mechanism, with a loosely-mounted disk or carrier for the contacts limited in its movement, and prominences J thereon, of a lever pivoted on the arbor of the disk and a spring or yielding cam carried by the lever and having two prominences adapted to engage with those on the disk or carrier, as set forth.

2. In an electric switch, the combination, with an insulating contact-carrying disk loosely mounted on a vertical spindle, detents for limiting the range of movement thereof, and rollers mounted in opposite sides of the disk, of a lever pivoted to the spindle, and a circular spring carried thereby and bent to form a cam-track with two prominent points adapted to engage with the rollers, as set forth.

406,469. CONNECTION-BOX. JOSEPH A. POWERS, Lansingburg, N. Y. Filed Mar. 23, 1889. Serial No. 304,474. (No model.)

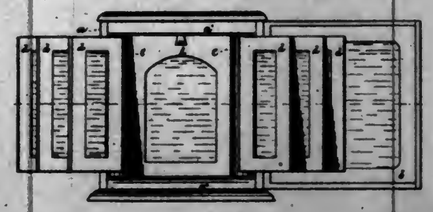


Claim.—1. The combination, with the base or block A, adapted to be placed over the wires of a circuit, of the connecting-plates F G for inclosing the wires and the safety-strip, and clamps J, secured by screws passing through the plates F G, as set forth.

2. The combination, with the base or block A, adapted to be placed over the wires of a circuit, of the connecting-plates F G for inclosing the wires, the clamps J, secured by screws to the plates F G, the terminal clamps L, and the safety-strips joining the said clamps J and L, as set forth.

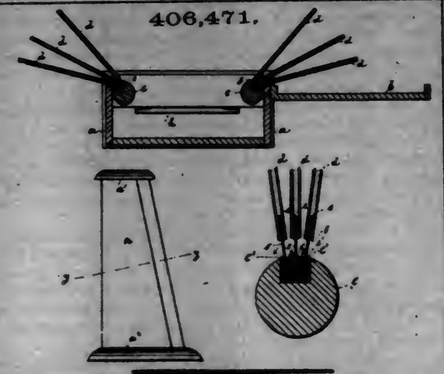
3. The combination, with the base or block A, containing grooves on its under side adapted to receive the wires of a circuit, and grooves on its upper side for containing the safety-strips, of the connecting-plates F G for inclosing the wires, the clamping-plates J, adapted to receive the ends of safety-strips and secured to the plates F G by screws, the terminal clamping-plates L, secured to the base, and the safety-strips connecting the said clamping-plates J and L, as set forth.

406,470. WINDMILL-TOWER. CHARLES B. PUTNAM, Marion, Iowa. Filed June 4, 1888. Serial No. 275,997. (No model.)



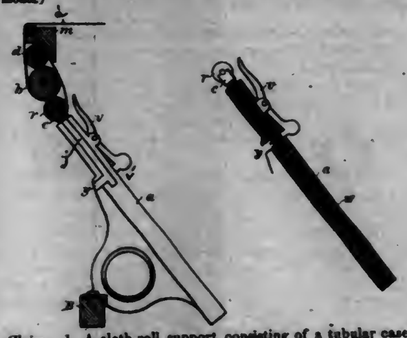
Claim.—1. In combination with a superposed wind-wheel frame turning in a horizontal plane and having a depending pivot, an annular turn-table casting having vertical cells open at bottom and corresponding drilled and tapped bosses provided with set-screws, and converging corner-posts having vertical upper extremities fastened in the respective cells by said set-screws, substantially as hereinbefore specified.

2. The combination, in a windmill-tower, of converging corner-posts having vertical upper extremities, an annular turn-table casting having vertical cells fitted to said post extremities, and set-screws fastening the latter in said cells, a superposed wheel-frame casting having a depending pivot, an annular casting having radial arms with concave outer ends fitted to the posts within a converging portion of the tower, and a collar fastened on said pivot below the casting last named, substantially as hereinbefore specified.



3. The combination of the corner-posts A, turn-table casting B, wheel-frame casting C, tubular pivot D, collar E, casting F, and band G, substantially as hereinbefore specified.

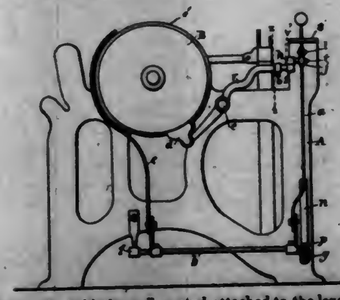
406,471. PICTURE-EXHIBITOR. JACOB REITS, New York, N. Y. Filed Jan. 14, 1889. Serial No. 296,230. (No model.)



Claim.—A case having journaled therein slotted posts and picture-holding leaves, united thereto by joints consisting of rigid pieces united by a flexible connection, the hub-pieces being held in the slotted posts, while side plates are united to the other pieces to form picture-receiving spaces, substantially as specified.

406,471.

406,472. CLOTH-ROLL SUPPORT FOR LOOMS. HORATIO A. REMINGTON, River Point, R. I. Filed Feb. 26, 1889. Serial No. 301,232. (No model.)



Claim.—1. A cloth-roll support consisting of a tubular case inclosing a spiral spring and having a slot and opening made in it, substantially as described, in combination with a bearing-block, to hold the journal of the cloth-roll, substantially as and for the purpose described.

2. The combination of the tubular case *a*, having a slot *j'* and opening *y*, substantially as described, with the spiral springs *w*, roll-bearing *c*, and the lever *v*, having the projection *v'*, substantially as and for the purpose set forth.

3. The combination of the top roll *d*, supports *c*, draft-roll *b*, and cloth-roll *r*, with the tubular cases *a*, having slots *j* and openings *y*, springs *w*, and levers *v*, substantially as specified, and for the purpose set forth.

406,473. BRAKING MECHANISM FOR LOOMS. HORATIO A. REMINGTON, River Point, R. I. Filed Feb. 26, 1889. Serial No. 301,233. (No model.)

Brief.—By means of the described devices the brake is removed from the brake-wheel immediately after it has been applied, and the loom is thus left free to be turned backward or forward by hand. Also, in starting the loom the brake is not removed from the brake-wheel until the driving-belt is far enough upon the fast pulley to give the loom sufficient speed to throw the shuttle clear across into the opposite box at the first pick.

Claim.—1. A friction roll or stud attached to the lever for operating the belt-shipper, in combination with a brake-lever having a cross-bar attached to it with its surface made with a double incline, and the shipping-lever, substantially as and for the purpose set forth.

2. The adjustable plate *j*, having a slot in it and carrying a stud with a friction-roll, substantially as described, and its adjusting-bolt *l*, in combination with a brake-lever carrying a cross-bar adjustably attached to it with its surface made with a double incline, stud *v'* and set-screw *o*, and shipping-lever *a*, substantially as and for the purpose set forth.

3. The combination of the plate *j*, bolt *l*, stud *t*, roll *h*, and lever *a* with the brake-lever *r*, shoe *d*, cross-bar *s*, having a double-inclined surface, stud *v'*, and set-screw *o*, substantially as described, and for the purpose specified.

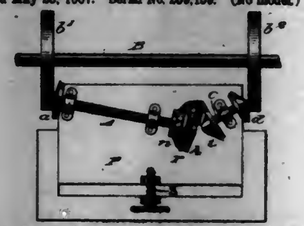
406,474. WINDOW-SHADE SUPPORTER. WALTER S. REYNOLDS, Clayton, Del. Filed Feb. 12, 1889. Serial No. 299,561. (No model.)

Claim.—1. In a window-shade supporter, the combination of the rack-bars secured to and projecting forward from the window-frame and provided at their front edges with inwardly-projecting notched flanges, the curtain-bar having its ends moving between the window-frame and the notched flanges and provided with longitudinal notches, and the supporting-rods journaled in the ends of the curtain-bar and provided with horizontal crank-arms playing in the notches in the ends of the curtain-bar and engaging the notches in the flanges of the rack-bars, as specified.

2. The combination of the rack-bars, the curtain-bar provided in its ends with the notches F, the openings G, leading downward from said notches, and the grooves K, leading upward from said notches, and the supporting-rods adapted to be inserted through the grooves K and journaled in the openings G, and provided with crank-arms playing through the notches F and engaging the rack-bars, as specified.

406,475. BED-SPRING. CHARLES E. RICE, Jonesburg, Mo. Filed Jan. 6, 1888. Serial No. 259,955. (No model.)

Claim.—1. The bed-spring formed from a single piece of wire and comprising the twin spiral coils, the Z-shaped connecting-wire between the upper ends thereof, said connecting-wire being bent to form the parallel longitudinal portions *e* on opposite sides of the top of the coils, the obliquely-arranged portion e^3, connecting the parts *e* and arranged to bridge the space between the twin springs, one of the side portions *e* projecting longitudinally beyond one of the coils and being then bent to form the oblique portion e', which merges in the top of the coil and diverges from the portion e^3, said portions *e*, e^3, and e' being arranged in the same horizontal plane above the tops of the coils, substantially as described.

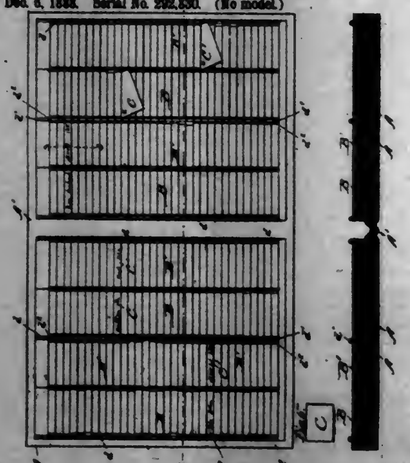


2. The twin springs comprising the coils, the Z-shaped connecting portion between their tops, and the acute-angled arm projecting longitudinally from the top of one of the coils and arranged in the same horizontal plane with the connecting portion, whereby, when the pairs of said springs are arranged in the same longitudinal line and in reverse relation to each other, the acute-angled arms will lap in the space between the proximate coils, with their oblique portions parallel, and bridge the said space, substantially as described.

406,476. BOOK-BINDING. HENRY J. RIES, Iowa City, Iowa. Filed Nov. 20, 1888. Serial No. 291,322. (No model.)

Claim.—The book A, held in the flexible back E, having free flaps at either end, in combination with the concentric flexible backs C D, having, respectively, the ends *c d*, and the covers B', slitted to form beveled walls b^2 b^2, wherein the ends *c* are secured, the ends *d* being fastened to the outer surface of the cover B'

406,477. FRICTIONAL GEARING. ALSON ROBINSON, Lewiston, Me. Filed May 23, 1887. Serial No. 239,159. (No model.)

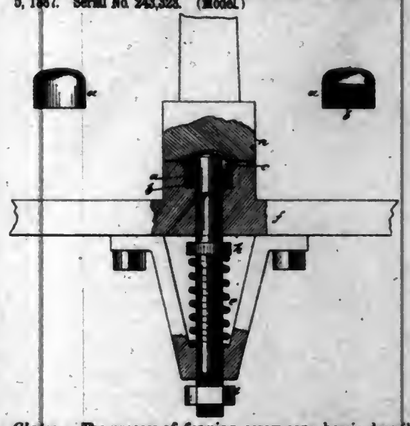


Claim.—1. In a train of mechanism for transmitting rotary motion, two frictional contrate-wheels mounted upon the same shaft, two conical friction-gears tangential to the planes of the contrate-wheels, and two conical friction-gears tangential to each other and to a plane parallel to the plane of the contrate-wheel, all combined with each other and with the shafts upon which they are mounted, substantially as set forth.

2. In a train of mechanism for transmitting rotary motion, the combination of two shafts mounted upon a movable bed-piece, conical friction-gears connecting these shafts and having their point of contact in a straight line parallel to the line of motion of the bed-piece, a third shaft at right angles to this line of motion, a pair of frictional contrate-wheels mounted upon this shaft, a conical friction-gear upon the first shaft in continual contact with one of the contrate-wheels, and a conical friction-gear upon the second shaft in continual contact with the other contrate-wheel, all as set forth.

3. The combination of a bed-piece, two shafts mounted thereon, a pair of conical friction-gears upon each shaft whose working-surfaces make equal and opposite angles with the shaft, a third shaft in the same plane, a pair of frictional contrate-wheels mounted thereon, and means for varying the distance between the third shaft and the bed-piece, all as set forth.

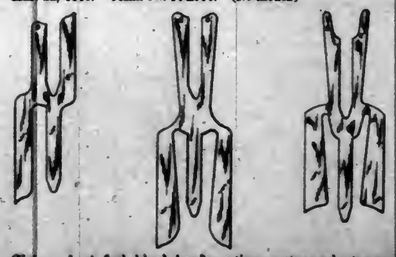
406,478. ACCOUNT-BOOK. JUNIUS ROGERS, Fremont, Nebr. Filed Dec. 6, 1888. Serial No. 292,830. (No model.)



Claim.—1. The account-book for showing daily balances, consisting of a base or back board A, provided with a series of pockets B, in a column one above another, furnished with separately-removable name slips or leaves C, and a second series of pockets B', in a column one above another, at the side of said column of pockets B, and furnished with separately-removable account slips or leaves C', substantially as specified.

2. The account-book for showing daily balances, consisting in a base or back board A, furnished with a series of pockets B, formed by a series of pocket-slips *b*, having flaps *b'* pasted or secured to said board A, one above another, said slips *b* being sewed or secured at the ends thereof flat upon said board A, and said pockets being furnished with separately-removable account slips or leaves, substantially as specified.

3. The account-book for showing daily balances, consisting in a base or back board A, furnished with a series of pockets B, formed by a series of pocket-slips *b*, having flaps *b'* secured to said board A, one above another, and flaps b^2 folded inwardly at the lower edge of said slips *b*, said slips *b* being secured at the ends thereof flat upon said board A, and said pockets being furnished with separately-removable account slips or leaves, substantially as specified.



4. The combination of board A with pocket-slips *b*, having flaps *b'* b^2, said flaps *b'* being secured to said board A, and said pocket-slips *b* being secured at their ends and also at their middle to said board, so as to form two columns of pockets B and B', and account slips or leaves C and C', fitting in said pockets, substantially as specified.

406,479. PROCESS OF FORMING SCREW-CAPS. GEORGE SCHRADER, New York, and JOSEPH SCHMITT, Brooklyn, N. Y. Filed July 5, 1887. Serial No. 243,323. (Model.)

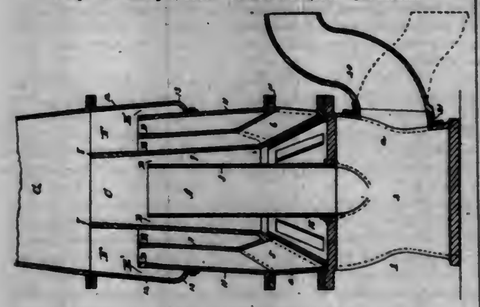
Claim.—The process of forming screw-caps herein described, which consists, first, in stamping a cylindrical cup-shape blank out of sheet metal; second, cutting a screw-thread therein, and, third, swaging between suitably-formed dies, so as to contract the lower or neck portion, while the upper or dome-shaped portion is crushed downward and expanded outward by the same operation sufficiently to just fill the dies and take the desired form, as shown, without the use of a filling to transmit the pressure to the interior walls of the blank, substantially as shown and described.

406,480. FORK-BLANK. FRANK SILLIMAN, Jr., Springfield, Mass., and WARREN H. COWDERY, Ashtabula, Ohio; said Silliman assignor to Samuel R. Harris, Ashtabula, Ohio. Filed Aug. 29, 1887. Renewed Mar. 22, 1889. Serial No. 304,339. (No model.)

Claim.—1. A fork-blank having a tine portion and a tang portion formed in substantially parallel lines, and having two other tine portions formed in substantially parallel lines with each other and projecting from the blank-head in an opposite direction from said first two portions, said two other tine portions being separated from each other throughout their entire length a distance substantially equal in width to the width of the tang portion, substantially as set forth.

2. A fork-blank having an outer tine portion and an inner tine portion formed parallel, and having an outer tine portion and a tang portion formed parallel but projecting in an opposite direction from the first two portions, substantially as set forth.

406,481. SHADE-ROLLER FIXTURE. HENRY W. SIMS, Bay City, Mich. Filed June 10, 1888. Serial No. 277,541. (No model.) Patented in Canada July 9, 1888. No. 34,532.



Claim.—1. In a shade-roller fixture, the shade-roller having an inclosed actuating-spring, a spindle *c*, passed into the end of the roller and connected to one end of the spring and provided with a flattened portion *d*, and a journal *f*, projecting beyond the roller, and a bracket *i*, having a slot supporting the journal and provided with an inwardly-projecting lug *n*, in combination with a wheel *j*, having a central opening fitted to and passed upon the part *d* between the end of the roller and the bracket and provided with spokes *k*, engaging with the said lug *n*, substantially as set forth.

2. In a shade-roller fixture, the combination, with a shade-roller having an inclosed actuating-spring and a rod *c*, passed into the end of the roller and secured to the spring and provided with a flattened portion *d*, and a journal *f*, extending from the roller, of a wheel *j*, having a central opening fitted to and passed upon the said portion *d*, and a lug *o*, projecting from the end of the roller and engaging with the spokes of the wheel, substantially as and for the purpose set forth.

3. In a shade-roller fixture, the combination, with the roller having an end piece *e* and an inclosed actuating-spring *b*, a spindle *c*, placed within the coils of and secured to one end of the spring and having a journal extending beyond the said end piece, of a retaining-piece *g*, having a loop *t* attached to the opposite end of the spring and provided with a lug *o*, passed through an opening in the said end piece *e*, and having a flange *r* between the end of the roller and the end piece *e*, substantially as and for the purpose set forth.

406,482. BLAST OR EXHAUST APPARATUS. JOHN Y. SMITH, Doylestown, Pa., assignor to the Smith Exhaust Pipe Company, of New Jersey. Filed May 9, 1888. Serial No. 273,266. (No model.)

Claim.—1. In an exhaust apparatus such as described, in combination with an annular ejector, the supplemental steam-nozzle located within the air-passage, substantially as described.

2. In combination with an ejector comprising a steam-nozzle surrounding an air inlet or passage, a supplemental steam-nozzle located in said air-passage adjacent the inner wall thereof, substantially as described.

3. In combination with the steam-nozzle, air-passage, and confining-chamber of the outer ejector, the supplemental steam-nozzle, substantially as described.

4. In an apparatus such as described, in combination with the annular steam-nozzle, inner air-passage, and confining-flue, the supplemental air-passage surrounding the steam-nozzle, substantially as described.

5. In an apparatus such as described, in combination with the steam-nozzle and inclosing air-passages, the supplemental steam-nozzle located in one of said air-passages, as and for the purpose set forth.

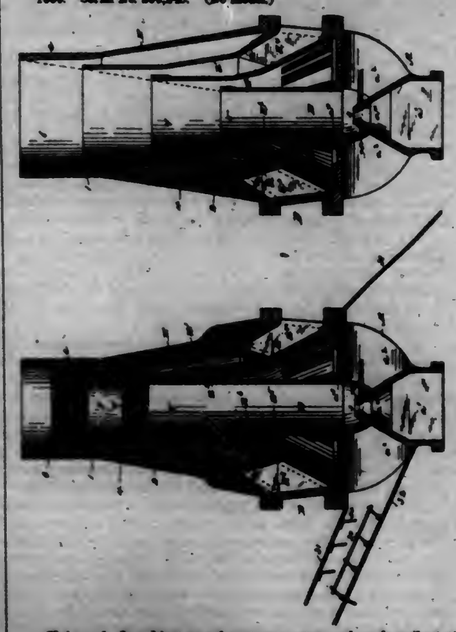
6. In combination with the steam-nozzle and air-passage of the outer ejector, the supplemental air-passage outside the steam-nozzle and the supplemental steam-nozzle adjacent the inner wall of the main air-passage, substantially as described.

7. In an apparatus such as described, containing inner and outer ejectors receiving steam through a common supply-chamber and each provided with a confining-flue in advance of their steam and air nozzles or openings, the combination, with the outer ejector, of the supplemental steam and air passages, as set forth.

8. In an apparatus such as described, and in combination with the flue or pipe forming the division between the inner and outer ejectors, the tube surrounding said pipe and attached thereto, and the ports formed near the base of said pipe, substantially as described.

9. In an apparatus such as described, the combination, with the base and hollow wall, of the removable air-tube secured to said wall, the cap or intermediate section 4, secured to the base and provided with two series of ports or passages and supporting-tubes 7 and 8, and the casing 11, detachably secured to the section 4, substantially as described.

10. In an apparatus such as described, containing a steam-chamber and two ejectors whose nozzles receive steam from said chamber, a damper arranged in proximity to but out of contact with the steam-ports leading to one of said nozzles, as and for the purpose set forth.



11. In combination with a double blast or exhaust apparatus such as described, located in the smoke-box and provided with inlet-openings at different levels, a conduit or flue extending from a remote point in the smoke-box and communicating with one of said air-inlets, as and for the purpose set forth.

12. In an exhaust or blast apparatus such as described, the combination, with the smoke-box and boiler-flues, of an ejector located in the smoke-box opposite the flues, and an independent flue or conduit adjustably applied to one of the air-inlets and extending laterally and opening into a remote portion of the smoke-box, substantially as described.

13. In combination with the air inlet or passage of an exhaust apparatus such as described, a supplemental pipe or conduit projected laterally from the blast apparatus and communicating with its air-inlet, said supplemental pipe being adjustably applied, so as to permit its outer or induction opening to be moved vertically within the smoke-box, substantially as described.

14. In an exhaust apparatus such as described, the combination, with a blast-pipe and air-passage co-operating therewith to form an ejector, of a supplemental tube or conduit communicating with said air-passage and having its induction end adjustable both laterally and vertically within the smoke-box, substantially as described.

406,488. TRIPLE-EXPANSION BLAST OR EXHAUST APPARATUS FOR LOCOMOTIVES. JOHN Y. SMITH, Doylestown, Pa., assignor to the Smith Exhaust Pipe Company, of New Jersey. Filed Feb. 9, 1888. Serial No. 263,945. (No model.)

Claim.—1. In a blast or exhaust apparatus such as described, the

combination, with an inner and an outer steam-nozzle, of an air-passage adjacent the outer nozzle, an air-passage centrally of the inner nozzle, and a jet pipe or nozzle discharging into the induction end of the central air-passage, substantially as described.

2. In a blast or exhaust apparatus such as described, the combination, with steam-nozzles 1 and 2, air-passages 4 and 5, and a steam-chamber common to the said nozzles and communicating through separate passages with the cylinders, of a steam-nozzle or jet-pipe 3 in open communication with both passages leading to the cylinders, as and for the purpose set forth.

3. In a blast or exhaust apparatus such as described, the combination, with the outer annular steam-nozzle, its confining-flue and air-passage, the inner annular steam-nozzle, its confining-flue and central air-passage, and the jet-pipe or steam-nozzle located at or near the induction end of the said central air-passage, of a chamber or passage communicating with the three steam-nozzles and the cylinders, substantially as described.

4. The combination, in a blast or exhaust apparatus such as described, comprising inner and outer ejectors having separate air-passages, of inlet-ports located at different levels, and a perforated screen inclosing or covering the upper series of air-inlets, substantially as described.

5. The combination, with the smoke-box flues and smoke-stack, of an exhaust or blast apparatus such as described provided with inner and outer steam-nozzles and separate air-passages opening into the smoke-box at different levels, a jet-pipe or steam-nozzle delivering into the induction end of the lower air-passage, and a screen inclosing the upper air-inlets and the inlet to the smoke-stack, as and for the purpose set forth.

6. In a blast or exhaust apparatus such as described, comprising inner and outer ejectors, the combination, with the walls or tubes forming the steam and air passages, of the removable tubular section forming the confining-chamber and outer wall of the outer steam-nozzle, and the eduction-orifice of the apparatus, substantially as described.

7. In a blast or exhaust apparatus such as described, the combination, with the central air-passage communicating through a transverse tubular bridge with the lower portion of the smoke-box, of a supplemental steam-nozzle discharging into the induction end of said central passage and connected with the boiler, substantially as and for the purpose set forth.

8. In combination with a blast or exhaust apparatus such as described, containing a central air-passage, an annular steam-nozzle surrounding said passage, and a central jet-pipe or steam-nozzle discharging into said air-passage, and passages connecting said annular and central nozzles with the exhaust-ports of the cylinders, a supplemental blast pipe or nozzle surrounding the central nozzle and discharging into the central air-passage, said supplemental blast-pipe being in communication with a constant steam-supply, as and for the purpose set forth.

9. In a blast or exhaust apparatus such as described, the combination, with the central air-passage and annular steam-nozzle surrounding said air-passage, of a confining-flue located in advance of the steam-nozzle and provided with parallel walls at its eduction end, substantially as and for the purpose set forth.

10. The combination, in a blast or exhaust apparatus such as described, and with an inner ejector consisting of a steam-nozzle, air-passage, and confining-flue, of an outer ejector, including air-passage, steam-nozzle, and confining-flue, the walls of said nozzle and flue being formed parallel, substantially as and for the purpose set forth.

11. In a blast or exhaust apparatus such as described, the combination, with the inner ejector whose confining-flue is provided at its eduction end with cylindrical walls, of an outer ejector provided with cylindrical steam and air nozzles located in advance of the confining-flue of the inner ejector, and a cylindrical confining-flue common to the two ejectors, as and for the purpose set forth.

12. In a blast apparatus such as described, the combination, with the hollow base-piece provided with a partition and a transverse tubular bridge-piece containing the induction-passages and a port or opening into the air-passage of the ejector, a hollow projection or tube located within said tubular bridge and provided with a steam-nozzle or escape-orifice discharging into the ejector, said hollow projection containing a division-wall separating it into two chambers, each of the latter communicating with one of the steam-passages in the base-piece and with the steam-nozzle, as and for the purpose set forth.

13. In a blast or exhaust apparatus such as described, the combination, with the hollow piece containing steam-passages and a tubular bridge, a tube forming an air-passage mounted upon and communicating with the interior of the tubular bridge, an intermediate section containing a steam-chamber surrounding the central air passage or tube and communicating with the steam-passages in the base-piece, and two series of reversely-inclined ports, the one for air and the other for steam, of two tubular walls separated from each other and the inner air-tube to form air and steam passages, and an outer tube arranged above the intermediate section and provided with a detachable eduction end, substantially as and for the purpose set forth.

14. The combination to form a blast or exhaust apparatus such as described, of the base A, formed or provided with steam-passages a, a tubular bridge a^3, and nozzle 3, a tube B, applied to an opening in bridge a^3 above and in line with nozzle 3, intermediate section D, containing a steam chamber or space, two series of ports or passages d^3 d^4, and tubes d' d^2, and an upper section E, the whole arranged for conjoint action, substantially as set forth.

15. The combination, in a blast or exhaust apparatus such as described, of a base formed or provided with two steam-passages a and a steam nozzle or orifice 3, communicating with both of said passages, a central air-passage 5 in line with nozzle 3 and provided with inlet-openings near the base of the apparatus, a steam-chamber surrounding passage 5 and communicating with passage a, two steam-passages communicating with said steam-chamber and terminating the one in nozzle 2 and the other in nozzle 1, an air-passage 4, with its eduction end between nozzles 1 and 2, a confining-flue 7 in advance of nozzle 2 and the discharge end of passage 5, and a confining-flue 6 in advance of nozzle 1 and the discharge end of flue 7, as and for the purpose set forth.

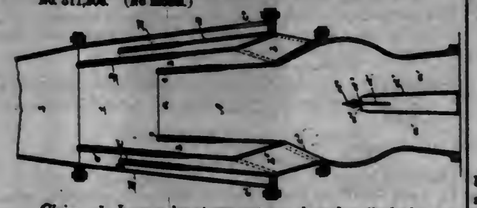
16. In a blast or exhaust apparatus such as described, containing steam-nozzles 1 and 2, an intermediate air-passage 4, and a steam-chamber from which steam is supplied to both said nozzles, the combination, with the walls forming the air-passage 4 and the steam-passage leading to nozzle 1, of a ring-section, such as D, containing two series of reversely-inclined ports or passages, the one leading from the steam-chamber to the steam-passage of nozzle 1 and the other from the exterior of the apparatus to the air-passage 4, substantially as and for the purpose set forth.

17. In an exhaust or blast apparatus such as described, the combination, with the outer casing E and removable section e, of the arms 43, provided with shoulders engaging a groove or shoulders on section e, and a clamp for confining said arms, substantially as described.

18. In a blast or exhaust apparatus for locomotives, the combination, with the boiler, its flues and smoke-box, and the ejector located within the smoke-box, of a perforated hood or deflecting-plate extending upward and forward from the bottom of the smoke-box and covering the rear induction-passage, substantially as described.

19. In a blast or exhaust apparatus for locomotives, the combination, with the boiler, its flues and smoke-box, and the ejector located within the smoke-box, of an inclined plate arranged in the front of the smoke-box and covering the front induction-passage of the ejector, and a chute or inclosed passage communicating with said induction-passage, and provided with an opening near the upper end of the inclined plate to receive the ashes, cinders, &c., substantially as and for the purpose specified.

20. In an exhaust or blast apparatus for locomotives, and in combination with the smoke-box and the ejector located therein and discharging into the smoke-stack, a perforated deflecting-plate covering the rear induction-passage, an inclined plate covering the front induction-passage, and a chute or conduit leading from the front induction-passage to and opening through the inclined plate, substantially as described.



21. In an exhaust or blast apparatus such as described, the combination of the ejector located within the smoke-box, a partition above the induction-passage of the ejector, and a chute or chamber communicating with the forward portion of the smoke-box and said induction-passage, and provided with deflecting-plates to retard the passage of cinders, &c., substantially as and for the purpose set forth.

22. In a blast or exhaust apparatus such as described, the combination of the ejector located within the smoke-box, a chamber or chute communicating with the induction-passage of the ejector, a deflecting-plate provided with an opening for the escape of cinders, &c., into said chamber or chute, and a series of hinged or pivoted deflecting-plates projected within the said chamber or chute and connected together, substantially as described.

23. In an exhaust or blast apparatus for locomotives, the combination, with the boiler, its flues, smoke-box, and smoke-stack, and an ejector provided with two or more sets of induction-passages at different levels, of a perforated guard surrounding the upper set of induction-passages, a perforated deflecting plate or guard covering the rear induction-aperture of the lower set of passages, an inclined plate covering the front induction-aperture of the lower passages, and a chute or chamber communicating with said front induction-opening, said inclined plate being provided with an opening or passage for the admission of cinders, &c., into the said chute or chamber, whence they are conducted to the induction-passage of the ejector, substantially as set forth.

24. In an exhaust or blast apparatus such as described, the combination, with the central air passage or flue and central jet-pipe, of an annular steam-nozzle surrounding the central air-passage, an uncontracted flue into which the said steam-nozzle and air-passage open, and an annular air-nozzle surrounding the eduction end of said uncontracted flue and delivering into a second uncontracted flue or passage whose eduction end is surrounded by an annular steam-nozzle, the latter delivering steam through a confining chamber or flue whose inner walls are straight, whereby choking or undue retardation of air or gas and steam within the ejector is prevented, substantially as described.

406,484. EXHAUST APPARATUS FOR LOCOMOTIVES. JOHN Y. SMITH, Doylestown, Pa., assignor to the Smith Exhaust Pipe Company, of New Jersey. Filed May 9, 1888. Renewed May 17, 1889. Serial No. 311,206. (No model.)

Claim.—1. In an exhaust apparatus such as described, the combination of the central blast-pipe A, an air-passage adjacent to said nozzle, and a confining flue or chamber in advance of and surrounding said nozzle and air-passage and into which they both discharge, as set forth.

2. In combination with the central steam-pipe, an inclosing wall or tube supported in proximity to but removed from the exterior of said steam-pipe and extending beyond the nozzle, with inlet ports or passages opening from the exterior of the apparatus to the space between the exterior wall and the steam-pipe, substantially as described.

3. In combination with the outer ejector, consisting of the annular steam and air pipes, the inner ejector comprising the annular air-pipe, central steam-nozzle, and confining-chamber, substantially as described.

4. In combination with the blast-pipe A, provided with nozzle a^3, and steam-ports, as described, a detachable connection consisting, essentially, of an outer ejector, the steam-passage leading to its nozzle registering with the steam-ports in blast-pipe A, and a central flue to receive the nozzle a^3 and form an air-passage and confining-flue, as and for the purpose set forth.

5. As an attachment for the ordinary blast-pipe A when provided with steam-ports in the sides, an annular ejector provided with steam and air passages and a confining-flue, combined with a central flue to receive the nozzle of the blast-pipe and form, in conjunction therewith, a central ejector with air-passage and confining-flue, substantially as described.

6. In combination with blast-pipe A, a tube or flue B, supported on said blast-pipe and provided with two series or sets of passages, the one extending from ports in pipe A to the exterior of tube B, and the other from the exterior of the apparatus to the interior of tube B, said tube B extending beyond the nozzle of pipe A to form a confining-chamber, as set forth.

7. In combination with blast-pipe A, perforated at a point below the nozzle, flue or pipe B, provided with passages leading from said perforations to the exterior of said flue, an inclosing-casing E, and a wall or flue D, interposed between said casing and flue B, with inlet-passages leading to the spaces between A and B and D and E, substantially as described.

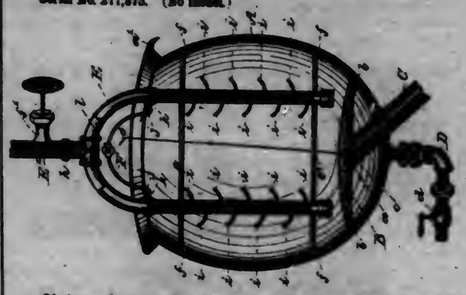
8. In combination with the outer ejector, having steam-nozzle and air-passage, the inner ejector provided with air-passage, a central steam-nozzle, and a confining-flue, and an auxiliary confining-flue into which both ejectors discharge, substantially as described.

9. In combination with a blast-pipe A, the hollow bridge open at the ends and top, and the division plate and bar having inclined faces, substantially as described.

10. In combination with the blast-pipe A and the flue B, forming, in conjunction therewith, an air-passage surrounding the nozzle, and a confining-chamber, the hollow bridge inserted in the base of the blast-pipe and provided with air-inlet openings, substantially as described.

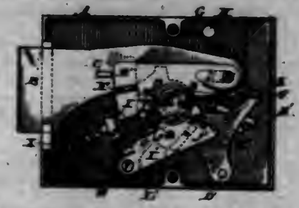
11. In combination with the blast-pipe A and the outer ejector applied thereto and receiving steam from said blast-pipe whose nozzle forms part of an inner ejector, the hollow bridge located within the blast-pipe A and provided with inlet-openings situated below the steam-ports leading to the outer ejector, substantially as described.

406,485. CARPET-BEATING MACHINE. CHARLES T. STORY, Boston, Mass. Filed Aug. 6, 1888. Serial No. 282,101. (No model.)



Claim.—1. The shaft B, with its frames E and plates G, in combination with the arched rods a and nuts b, all operating substantially as set forth.

406,485.



2. The shaft B, with its frames E, plates G, and rods a, in combination with the beaters H, all constructed to operate substantially as set forth.

406,486. STEEPING-TUB FOR STEEPING BARLEY OR OTHER GRAINS. FRITZ SUSSENBIL, Davenport, Iowa. Filed June 22, 1888. Serial No. 277,873. (No model.)

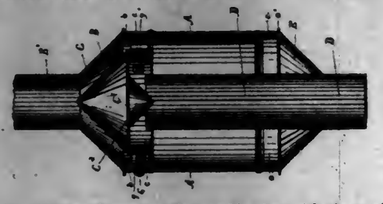
Claim.—In a steeping-tub, the combination of an inverted-U-shaped water-pipe within such tub, its lower ends closed, such pipe having attached to it short laterally-projecting and communicating water-pipes which are perforated, and the interior of such U-shaped water-pipe being also provided with a perforated air-pipe of less diameter and similarly shaped, each air-pipe arranged to be supplied with compressed air and each U-shaped water-pipe with water, for the purposes set forth, and substantially as described.

406,487. LOCK. WARREN H. TAYLOR, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, same place. Filed Feb. 18, 1889. Serial No. 300,806. (Model.)

Claim.—1. In a lock, a rotary key-hub provided with two key-holes and two keys, each adapted to act separately through its own hole on its own set of tumblers, substantially as described.

2. In a lock, the combination of a rotary key-hub provided with two key-holes and two keys, and a separate set of tumblers for each key, substantially as described.

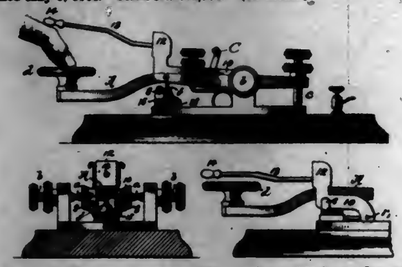
3. In a lock, the combination, with the bolt, of one set of tumblers which dogs the bolt, and another set of tumblers and a detent or holder which holds the first set, substantially as described.



4. In a lock, the combination, with the bolt and the main tumbler mechanism, of a movable dog or detent which holds the main tumbler mechanism, a lever for operating said detent, and an independent key for operating the said lever, substantially as described.

5. In a lock, the combination, with the bolt, of a set of main tumblers, a set of supplementary tumblers, and dogging mechanism between said main and supplementary tumblers, whereby the bolt is held until the supplementary tumblers are set by their proper key and

the dogging mechanism is moved by the rotation of said key, substantially as described.

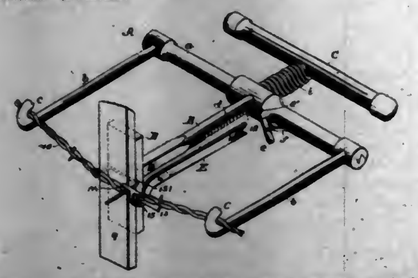


6. The combination, with the key-bub and keys, of the bolt and its tumblers and fence, a separate guard-tumbler, the pivoted fence-lever and fence thereon, and the bell-crank or detent, substantially as described.

406,488. SPARK-ARRESTER. WILLIAM J. UMBERY, Norwich, Ontario, Canada. Filed Nov. 28, 1888. Serial No. 292,116. (No model.) Patented in Canada Apr. 5, 1888, No. 26,819.

Claim.—In a spark-arrester, the combination, with the conical base E, having an outwardly-projecting flange *d* and a vertical flange *e* on its upper edge, the pipe D, secured rigidly in the base and extending above the same, the drum A, fitted on the flange *e*, the conical cap C in the upper part of the drum above the pipe, the bolts *g*, for supporting the cap, the diaphragm C', the conical projection C, secured to the diaphragm and extending into the pipe, and the cover B, having flange *b* and pipe B', substantially as described.

406,489. TELEGRAPH-KEY. HENRY A. WALDO, Reno, Nev. Filed May 5, 1888. Serial No. 272,998. (No model.)

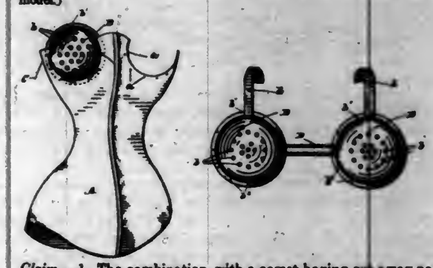


Claim.—1. The combination, with a telegraphic key, of a self-closer consisting of a pair of pivotally-mounted arms having a stem overlying the key-button and a pair of spring-fingers adapted to contact with the sides of the arms of the self-closer, substantially as described.

2. The combination, with a telegraphic key, of a self-closer consisting of a pair of pivotally-mounted spring-arms 10, having a stem overlying the key-button, and a fixed bifurcated contact consisting of a pair of spring-fingers 8, adapted to receive the arms 10 between them and bear against their sides, substantially as described.

3. The combination, with a telegraphic key, of a self-closer consisting of a pair of spring-arms 10, pivotally mounted at one end on the pivots of the key-lever and at the other end united in a head having a stem overlying the key-button, and a pair of spring-fingers adapted to contact with the sides of the arms of the self-closer, substantially as described.

406,490. DEVICE FOR ATTACHING PICKETS TO WIRE FENCES. REUBEN P. WILCOX, Kansas City, Mo. Filed Nov. 15, 1888. Serial No. 290,866. (No model.)



Claim.—1. The herein-described tying tool, comprising a body portion bent at 13 to form a short limb 15, adapting it to hook upon the strand-wires and having lateral projections 144 with notches upon their lower faces, substantially as set forth.

2. The combination, with a yoke having limbs that are provided with hooked ends and a sliding clamping-bar, of a ratchet-toothed rack formed on the sliding bar, a locking-dog, and a retracting-spring, substantially as set forth.

3. The combination, with a yoke comprising a perforated cross-bar and two parallel limbs having hooks on their free ends and a bar that is provided with ratchet-teeth and adapted to slide in the perforation of the cross-bar, of a pivoted locking-dog and a spiral retracting-spring, substantially as set forth.

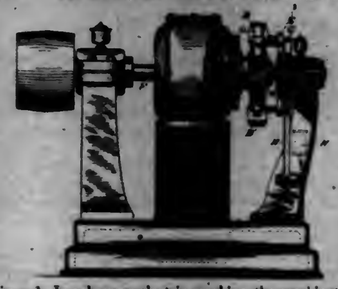
4. The combination, with a yoke having limbs with hooked ends, of a toothed sliding bar having a cross-handle and a clamping-block, a pivoted dog, a spring to actuate the dog, and a spring to retract the sliding bar, substantially as set forth.

406,491. COMBINED CORSET AND BREAST-PAD. MARY A. WILLIAMS, Kansas City, Mo. Filed Apr. 1, 1889. Serial No. 305,866. (No model.)

Claim.—1. The combination, with a corset having cut-away portions opposite the breasts of the wearer and provided with eyelet-holes in the marginal walls of the cut-away portions, of hollow hemispherical perforated pads formed with a laterally-projecting flange *b'*, having eyelet-holes registering with the eyelet-holes of the corset, tape or cord passed through each series of eyelet-holes for securing the pads to the corset, and shoulder-straps secured to said pads, substantially as set forth.

2. The combination, with a corset having the portions opposite the breasts of the wearer cut away and provided with a series of eyelet-holes, of pads having laterally-projecting flanges provided with eyelet-holes registering with the eyelet-holes of the corsets, the said flanges seated behind the margins of the cut-away portions of the corsets, and a tape or cord laced through the eyelet-holes of the corsets and flanges of the pads, substantially as set forth.

406,492. ARMATURE-WINDING FOR DYNAMOS. JAMES J. WOOD, Brooklyn, N. Y. Filed Oct. 12, 1888. Serial No. 287,917. (No model.)



Claim.—1. An armature-coil consisting of a single length of wire wound with its middle portion at the inner part and its terminal portions at the outer part, and with the outer convolutions of its opposite end portions wound on opposite sides of an insulating-sheet, whereby the tendency to short-circuit between the opposite end portions of the wire is overcome by the additional insulation afforded by said interposed sheet.

2. An armature wound with coils consisting each of a single length of wire with its middle portion wound against the core and its opposite end portions wound on opposite sides of a sheet of insulating material, whereby the tendency to short-circuit between the opposite end portions of the wire is overcome by the additional insulation afforded by said interposed sheet.

3. A Gramme armature wound with juxtaposed pairs of coils consisting of a single length of wire with its middle portion crossing between the two coils and an insulating-sheath separating the two coils.

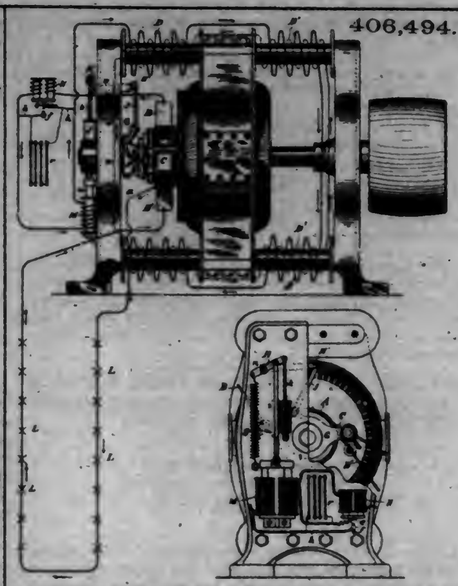
4. The combination, with an armature-coil consisting of a single length of wire wound with its middle portion at the inner part and its terminal portions at the outer part, and with the outer convolutions of its opposite end portions wound as separate half-coils in opposite halves of the space for the coil, of an insulating-sheet *f*, interposed between said half-coils, formed with a central opening to admit the core, and a notch *e'* to admit the middle convolution of wire.

406,498. SELF-REGULATING DYNAMO. JAMES J. WOOD, Brooklyn, N. Y. Filed Nov. 20, 1883. Serial No. 291,264. (No model.)

Claim.—1. In a dynamo-electric machine, the combination, with the field-magnet and armature, of main-current brushes connected to the line-circuit, the field-magnet coil in a shunt-circuit, terminal brushes for said shunt relatively adjustable around the commutator to positions of different relative potentials, whereby a variable continuous current is fed to the shunt field-coil, a regulating magnet or solenoid connected with the main circuit and responding to variations therein, and a mechanical connection between the movable member of said magnet and the movable shunt-terminal brush or brushes, whereby the movements of the former due to changes in the circuit are communicated proportionally to the latter and the current to the field-coil is thereby varied to alter the magnetization of the field in compensation for the variations in the external circuit.

2. In a dynamo-electric machine, the combination, with the field-magnet and armature, of main-current brushes connected to the line-circuit, the field-magnet coil in a shunt-circuit, terminal brushes for said shunt relatively adjustable around the commutator to positions of different relative potentials, whereby a variable continuous current is fed to the shunt field-coil, a regulating magnet or solenoid connected with the main circuit and responding to variations therein, a lever to which the movable member of said magnet is connected, formed with a sector, and a movable yoke carrying the movable shunt-terminal brush or brushes, and formed with a sector gearing with the sector of said lever, whereby the movements of said magnet are communicated proportionally to the shunt-terminal brush.

3. In a dynamo-electric machine, the combination, with the field-magnet and armature, of main-current brushes connected to the line-circuit, the field-magnet coil in a shunt-circuit, terminal brushes for said shunt relatively adjustable around the commutator to positions of different relative potentials, whereby a variable continuous current is fed to the shunt field-coil, a regulating magnet or solenoid responsive to variations of electrical condition in the main circuit, a mechanical connection between the movable member thereof and the movable shunt-terminal brush or brushes for communicating the movements of the former proportionally to the latter, the main circuit formed with a branch in which said magnet or solenoid is connected, and a comparatively sensitive relay-magnet in connection with the main circuit adapted to govern the flow of current through said branch, and arranged when excited by an increased current to disproportionately augment the current through said regulating-magnet, whereby the action of the latter is intensified.



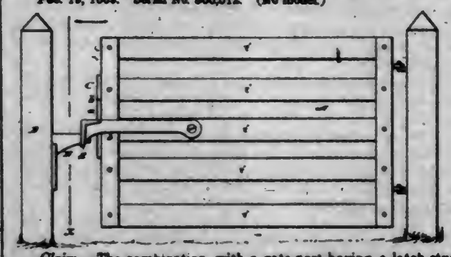
406,494. REGULATOR FOR DYNAMO-ELECTRIC MACHINES. JAMES J. WOOD, Brooklyn, N. Y. Filed Nov. 21, 1888. Serial No. 291,456. (No model.)

Claim.—1. A dynamo for generating constant currents, combined with a shunt field-magnet coil connected to receive normally a continuous current and wound inversely, so that the current in it acts to reduce the magnetization of the field-magnet, and with automatic means for varying the electro-motive force of the current in the shunt-coil inversely to and in proportion to variations of the resistance in the external circuit in order to maintain the current in said circuit uniform.

2. A dynamo for generating constant currents having its field-magnet wound with an exciting-coil in series and with an inversely-wound coil in a shunt of uniform resistance, and with automatic means for varying the electro-motive force of the current in the shunt-coil inversely to and in proportion to variations of resistance in the external circuit in order to maintain the current in said circuit uniform.

3. In a dynamo, the combination, with the commutator and main collecting-brushes, of the field-magnet wound with a series coil in the main circuit and with an inversely-connected shunt-coil terminating

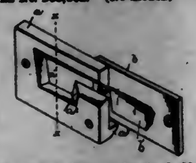
406,494.



in commutator-brushes relatively adjustable around the commutator to vary their relative potentials, and consequently to vary the inverse current in said shunt-coil, and an automatic regulator responsive to changes in the external circuit, connected to said brushes to effect such relative adjustment thereof in the direction to vary the current in said shunt-coil proportionally to and in compensation for the changes in the external circuit.

4. In a dynamo, the combination, with the commutator and main collecting-brushes, of the field-magnet wound with a series coil in the main circuit and with an inversely-connected shunt-coil joined at one terminal to one of the main collecting-brushes, an auxiliary brush to which its other terminal is connected, said brushes adjustable relatively around the commutator to vary their relative potentials, and consequently to vary the inverse current in said shunt-coil, and an automatic regulator responsive to changes in the external circuit, connected to said brushes to effect such relative adjustment thereof in the direction to vary the current in said shunt-coil proportionally to and in compensation for the changes in the external circuit.

5. In a dynamo, the combination, with the commutator and main collecting-brushes, of the field-magnet wound with a series coil in the main circuit and with an inversely-connected shunt-coil joined at one terminal to one of the main collecting-brushes, and an adjustable auxiliary brush to which its other terminal is connected, and an automatic regulator responsive to changes in the external circuit, connected to said auxiliary brush to adjust the same around the commutator toward or from said main brush, to vary the current in said shunt-coil proportionally to and in compensation for the changes in the external circuit.

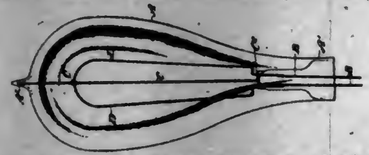


406,495. GATE-LATCH. JOHN J. WRIGHT, Bremen, Ind. Filed Feb. 19, 1889. Serial No. 300,512. (No model.)

Claim.—The combination, with a gate-post having a latch-stud, of the gate having the plates C, secured to the forward vertical rail thereof, and having the cut-out portion *a* and shoulders *b*, to form upper and lower stops, and the gravitating latch composed of the parallel arms pivoted at their inner ends to the opposite sides of the gate, and the integral latch-bars at their opposite ends having a central notch, as shown, and inclined on its lower edge in opposite directions

from said notch and terminating in handle portions, substantially as specified.

406,496. BOOK-CASE. ROBERT YAGER, Ann Arbor, Mich. Filed Aug. 27, 1888. Serial No. 283,882. (No model.)



Claim.—A portable or knockdown book-shelf consisting of the end uprights A, having irons *a*, provided with dovetailed recesses *a'*, and horizontal dovetailed slots a^2 leading thereto, in combination with shelves B, having the dovetailed tenon-irons *b'*, said shelves being adapted to rest upon the ledges or flanges a^3 on the irons *a*, substantially as described.

406,497. HAME-FASTENER. LEE ANDERSON, Paris, Tex., assignor of two-thirds to Thomas Broad and John Martin, same place. Filed Mar. 20, 1889. Serial No. 303,960. (No model.)

Claim.—In a hame-fastener, the combination, with the casting A, having the longitudinal rectangular opening *a*, the opening *a'* on the under side thereof, the depending cheeks *b*, provided with the curved edges *b'*, the hook *f'*, and the guard F at the forward end of said casting, of the rectangular bar B, toothed upon its under side, passing through the opening *a* and provided with the hook *f* at its rear end, and the stop B', the locking-dog C, pivoted upon the pivot b^3, between the cheeks *b*, and provided with the shoulders *c'*, having the curved edges c^2 abutting against the curved edges *b'*, the nose c^3, engaging the teeth of the bar B, the forwardly-projecting finger-piece E, and the rearwardly-projecting shank *c*, and the coiled spring D, located between the shank *c* and the partition *d'* of casting A, substantially as described.

406,498. INCANDESCENT LAMP. CHARLES A. RACKSTROW, New York, N. Y. Filed Mar. 20, 1889. Serial No. 304,782. (No model.)

Claim.—1. In combination with the filament of an electric lamp, an extraneous support for the same, said support being fast to the lamp at one end and abutting loosely against the lamp at the other, substantially as described.

2. In combination with the filament of an electric lamp, a fine rib fast at the base of the same and abutting loosely between the sides of the exhaust-seal, substantially as described.

3. In combination with the filament of an incandescent electric lamp, a rib fastened to the base of said lamp and abutting loosely between the sides of the seal thereof, said rib being provided with an aperture through which said filament is adapted to pass, substantially as described.

4. In combination with the glass globe and filament of an incandescent lamp, a glass rib spun from the base of the globe and abutting loosely within the seal thereof, substantially as described.

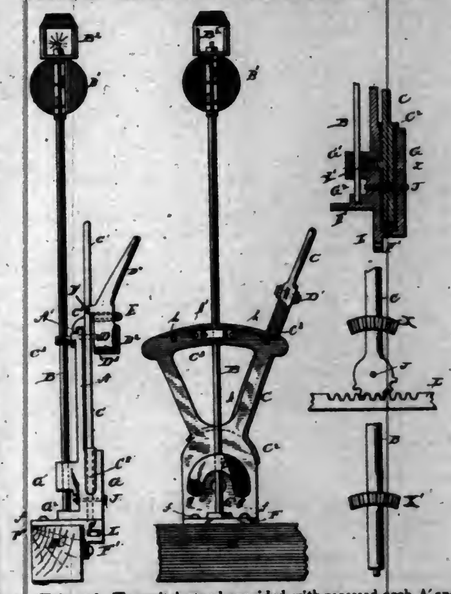
5. In an incandescent electric lamp, a rib attached to the base thereof abutting between the sides of the seal of the same and provided with an aperture, in combination with a filament passing through said aperture, and a conducting material inserted in said aperture, substantially as described.

6. In an incandescent electric lamp, a support attached to the base thereof and provided with an aperture, in combination with a filament passing through said aperture, and a conducting material inserted into said aperture, substantially as described.

406,499. SPRING-SCALE. EDWARD F. BERGMAN, Frankfort, assignor of one-half to John R. Stack, Ilion, N. Y. Filed Oct. 26, 1888. Serial No. 289,362. (No model.)

Claim.—1. The combination, with a weight-support and a spring

406,499.



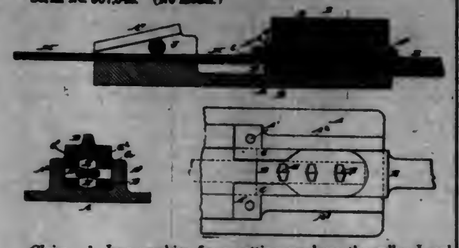
having opposite legs suitably connected to the weight-support, of separate supports secured to the opposite legs of said spring, and an indicator-finger pivoted to one support and connected to the other support by a link pivoted to said support and pivoted to the indicator-finger at a leverage with its point of support, substantially as and for the purpose set forth.

2. The combination of a suspension-support, a spring, a weight-support connected to the spring, a scale or dial, an oscillating indicator-finger, and an adjustable connection to said indicator-finger for rocking the same and indicating the weight applied to the weight-support, substantially as and for the purpose specified.

3. The combination of a U-shaped spring, a weight-support, and connections or links connecting the weight-support to the opposite legs or extremities of the spring, with a scale, an indicator-finger rocked over said scale, and lugs or supports secured to opposite legs of said spring and pivoted to separate points on the indicator-finger, one of which lugs or supports is adjustable for adjusting the indicator-finger, substantially as and for the purpose set forth.

4. In a spring-scale, the combination of a weight-support, a spring having opposite legs suitably connected to the weight-support, an indicator-finger, an adjustable support secured to one leg of said spring and to the indicator-finger, and a link pivotally supported upon the opposite leg of the spring and pivoted to the indicator-finger, substantially as and for the purpose described.

406,500. HIGH-SIGNAL SWITCH-STAND. NATHANIEL W. BOYD, Stockton, Pa. Filed Feb. 18, 1889. Serial No. 300,357. (No model.)

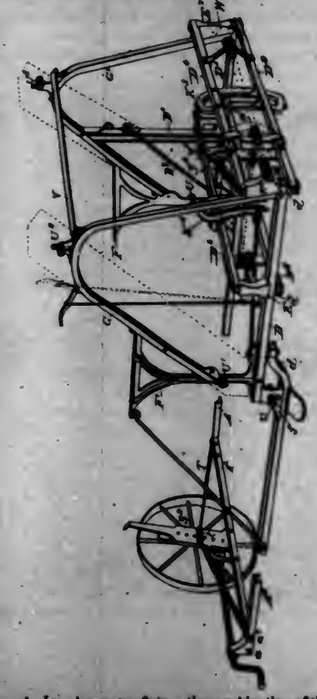


Claim.—1. The switch-stand provided with recessed arch A' and with flanges F and F', adapted to embrace the cross-tie K, in combination with the lever C, pivoted to the stand at J and provided with the arm C^3, adapted to hook onto the arch of the stand, and with the gravity-pawl D, pivoted to the said lever above said arm and provided with the interlocking tenon D^3, adapted to enter by gravity and register with holes *h* in the arch of the stand, and thus to lock the lever at either end of its throw, substantially as and for the purpose set forth.

2. The switch-stand formed with base adapted to rest on a single cross-tie and having the signal-shaft B journaled in abutments on the same, in combination with the operating-lever C, intergeared with said shaft by a segmental gear-connection, and with the gravity-pawl D, pivoted to the lever and provided with the interlocking tenon D^3, and extension, so that both lever and pawl-handle may be grasped instantly

with the same hand, said lever being connected to work along the side of the arch-head of said stand, substantially as and for the purposes set forth.

406,501. APPARATUS FOR UPSETTING EYE-BARS. WATSON COOKE and DANIEL CARLOUGH, Paterson, N. J. Filed Apr. 17, 1888. Serial No. 307,543. (No model.)



Claim.—1. In a machine for upsetting eye-bars, the roller J and internal wings A^4, in combination with the top piece or platen D, bed A, and ram R, arranged to serve as herein specified.

2. In a machine for upsetting eye-bars, the bed A, with its side ledges A^3 A^3, the platen D, having two longitudinal grooves provided with two dovetail ridges G' and G^2, the top slide G and bottom slide B, exchangeable cheeks C, the reciprocating ram R, and means for holding the bar against the action of the ram, all combined and arranged to serve as herein specified.

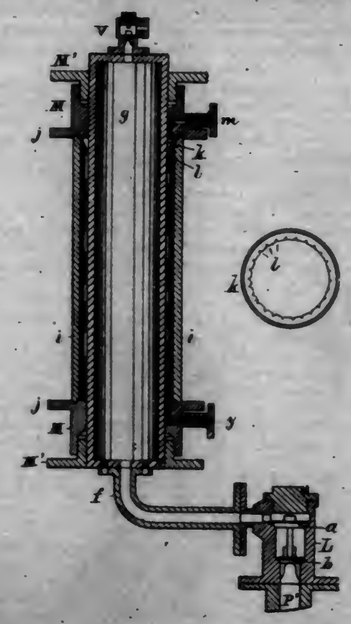
3. In a machine for upsetting eye-bars, the ram R, slides B and G, side ledges A^3 A^3, and cheeks C, in combination with each other and with anti-friction rollers E, in contact with the hot metal, arranged to receive directly the flatwise-distending pressure of the bar in the act of upsetting, substantially as herein specified.

406,502. SELF-MENDING HARVESTER. ORVILLE COOLEY, EDWARD PRIDMORE, and HOMER M. JOHNSTON, Batavia, N. Y., assignors to the Johnston Harvester Company, same place. Filed June 9, 1887. Serial No. 240,529. (No model.) Patented in Canada Jan. 27, 1887, No. 27,294, and in England Apr. 30, 1887, No. 6,364.

Claim.—1. In a harvester-frame, the combination of the metallic quadrangular three-faced channeled bars, the intervening securing-plate having the central bolt-hole and face-depression on one side corresponding with the face of one bar and depressions on its opposite face to receive the edge of the flanges forming the side squares of the other bar, with ribs that project over and impinge against the sides of the same for the prevention of lateral displacement, and the securing-bolts made to pass through the bar and plate for holding the parts in an interlocked position, substantially as described.

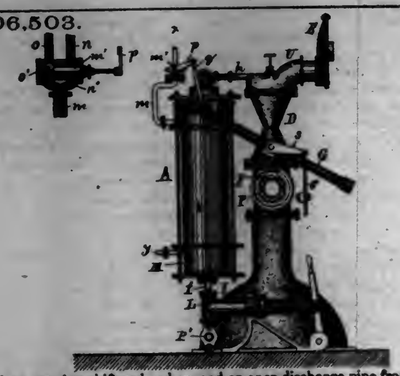
2. The combination of the harvester gear-frame, the seat-plank standard, and the bent channel-steel elevator-supporting bar, the outer end of which bar rests upon the outer bar of the gear-frame, while the inner end of the said bent bar abuts against and is secured to the seat-plank standard, substantially as described and set forth.

3. In combination with a harvester provided with a grain-elevator, the metallic quadrangular three-faced channeled bar gear-frame, rectangular in form, with two straight longitudinal channeled bars, one over the other, upon each side of the frame, the intervening bar-supporting posts placed at the ends of the side bars, the posts having their upper ends grooved for receiving the lower edges of the flanges forming the sides of the channel-bar, while the reverse end of the post is recessed so as to form lips that shut over upon either side of the face of the lower bar, against which it impinges, and the front and rear cross-tie bars made from quadrangular three-faced channel steel, the parts being firmly united by bolts passing through the faces of the bars and lengthwise of the posts, substantially as described and set forth.



4. The combination, in a channel-steel harvester-frame formed in the manner shown, of the bars D^2 D^2, post Y', having the channeled and grooved ends corresponding with the face of the bars against which the ends of the posts abut, the diagonal arm Y^2, for supporting the inner end of the finger-bar, the post-securing bolt, the curved extension Y, and bar D', all arranged substantially as described, and for the purpose set forth.

5. The combination, with the tilting mechanism and the channel-steel frame-work of a harvester, of the brace-rod D^4, the straight side bar D^2, the vertical post D^4, the bar D', and the bar G', bent in the form shown, all the parts arranged and operating substantially as described and set forth.



406,503. APPARATUS FOR VAPORIZING OIL. HERBERT CORTHELL, Newark, N. J. Filed Nov. 1, 1887. Serial No. 253,951. (No model.)

Claim.—1. In a hydrocarbon-vaporizing apparatus, the combination, with the generator, of a contiguous receptacle for retaining hot and cold fluid in contact with the generator, pipes for supplying hot and cold fluid to the said receptacle, valves with passages for alternately connecting such pipes with the receptacle, and a gas-receiver with a movable part arranged and operated to shift such valves, as and for the purpose set forth.

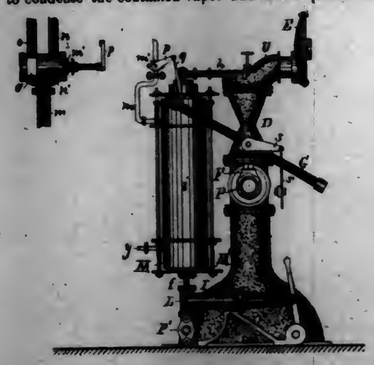
2. In a hydrocarbon-vaporizing apparatus, the combination, with the generator, of a contiguous receptacle for retaining hot and cold fluid in contact with the generator, pipes for supplying hot and cold fluid to the said receptacle, a gas-receiver with a movable part arranged

406,503.

and operated to shift such valves, and an open discharge-pipe from the receptacle, as and for the purpose set forth.

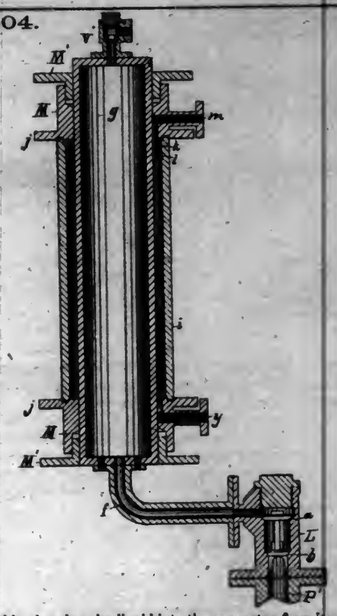
3. In a hydrocarbon-vaporizing apparatus, the combination, with a cylindrical generator, of a receptacle for hot and cold fluid surrounding the same, a distributer inserted in the receptacle with notches adjacent to the shell of the generator, a discharge-pipe from such receptacle, and pipes for supplying hot and cold fluid to such receptacle, as and for the purpose set forth.

4. In a hydrocarbon-vaporizing apparatus, the combination, with a cylindrical generator *g*, of the cylindrical receptacle *i* surrounding a portion of the same, stuffing-boxes applied to the ends of the generator and clamped upon the ends of the receptacle, and pipes for supplying hot and cold fluid to the receptacle, as and for the purpose set forth.



5. In a hydrocarbon-vaporizing apparatus, the combination, with a cylindrical generator *g*, of the cylindrical receptacle *i*, surrounding a portion of the same, stuffing-boxes M, applied to the generator, with flanges *j*, grooved to fit the ends of the receptacle *i*, glands M', fitted to the stuffing-boxes, rods R', with nuts applied to the flanges of the glands, and springs S', applied to the rods to press the flanges *j* elastically together upon the receptacle *i*, and pipes to supply hot and cold fluid to the receptacle, as and for the purpose set forth.

6. In a hydrocarbon-vaporizing apparatus, the combination, with the generator, of a contiguous receptacle for retaining hot and cold fluid in contact with the generator, pipes for supplying hot and cold fluid to the said receptacle, valves with passages for alternately connecting such pipes with the receptacle, a gas-receiver with a movable part arranged and operated to shift such valves, a generator supply-pipe connected with the reservoir of hydrocarbon fluid, a valve-chamber inserted in such supply-pipe, and a pump connected with such valve-chamber to force the hydrocarbon fluid into the generator when starting the apparatus, as and for the purpose set forth.



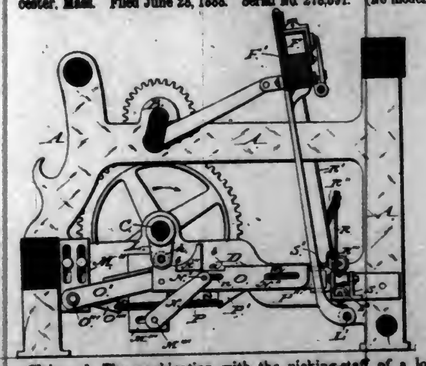
406,504. PROCESS OF VAPORIZING OIL. HERBERT COTTRELL, Newark, N. J. Filed Dec. 22, 1887. Serial No. 258,664. (No model.)

Claim.—1. In the art of generating vapor from a hydrocarbon liquid, the method of drawing the liquid intermittently into the generator, which consists in intermittently heating and cooling the generator, and forming a partial vacuum therein, to lift the liquid from its reservoir, substantially as herein set forth.

2. The process of generating vapor from a hydrocarbon liquid, which consists, first, in supplying the liquid to the generator; secondly, heating the generator to vaporize the liquid; thirdly, cooling the generator to condense the contained vapor and form a partial vacuum,

406,504.

and, fourthly, drawing the liquid into the generator from its reservoir by such vacuum, substantially as herein set forth.



3. The process of manufacturing an illuminant with hydrocarbon vapor, which consists, first, in supplying the hydrocarbon fluid to the generator; secondly, heating the same to vaporize the liquid; thirdly, discharging the vapor from the generator against a regulated pressure, fourthly, cooling the generator when such pressure rises too high, to produce a partial vacuum, and, fifthly, drawing the liquid into the generator from its reservoir by such vacuum, substantially as herein set forth.

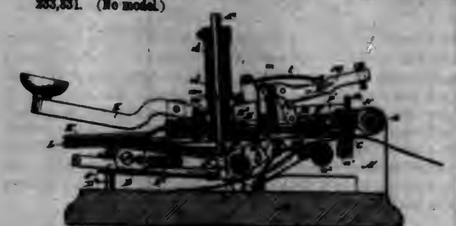
406,505. PROCESS OF FINISHING PAPER. ZENAS CRANE, Jr., Dalton, Mass. Filed Mar. 19, 1888. Serial No. 267,951. (No specimens.)

Claim.—The hereinbefore-described process of finishing laid paper, which consists in piling two or more sheets of the paper as it is made by the machine in alternate positions with respect to the lines of said paper and submitting the pile to pressure.

406,506. SHUTTLE-MOTION FOR LOOMS. JAMES T. CREE, Worcester, Mass. Filed June 23, 1888. Serial No. 278,391. (No model.)

Claim.—1. The combination, with the picking-staff of a loom and a rotating shaft carrying a tappet-arm, of a toggle-jointed lever arranged in position to be struck by the said tappet-arm in its rotation, and devices intermediate the free end of said lever and the picking-staff for actuating the latter to throw the shuttle.

2. The combination, with the picking-staff of a loom and a rotating shaft carrying a tappet-arm, of a toggle-jointed lever arranged in position to be struck by the said tappet-arm in its rotation, a shoe



carried at the free end of the said lever, a lever carrying a roller in contact with the inclined side of said shoe, and a connection from the said lever to the picking-staff.

3. The combination, with the picking-staff of a loom and a rotating shaft carrying a tappet-arm, of a toggle-jointed lever arranged in position to be struck by the said tappet-arm in its rotation, a sliding piece mounted on one of the members of said lever, an arm jointed to said sliding piece and forming therewith a toggle-connection the angle of which is less than that between the parts of the carrying-lever, and a connection intermediate the said sliding part and the picking-staff for actuating the latter to throw the shuttle.

4. The combination, with the picking-staff and the shaft C, having the arm L, carrying the roller A, of the treadle O O', jointed, as described, the sliding part P", having the shoe N" and carried by the part O, the arm N, having a toggle-connection with said sliding part, the spring P, and devices intermediate the part P" and picking-staff for actuating the latter to throw the shuttle.

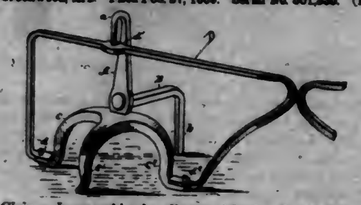
5. The combination, with the picking-staff and the shaft C, having the arm L, carrying the roller A, of the treadle O O', jointed, as described, the sliding part P", having the shoe N" and carried by the part O, the arm N, having the toggle-connection with the said sliding part, the spring P, the shoe S', the bracket S and its roller, the arm R and its roller, and the connection R".

406,507. TYPE-WRITING MACHINE. JOHN H. DAY, New York, and CHARLES STOFFORD, Brooklyn, assignors to John H. Day and George Lester, both of Richmond Hill, N. Y. Filed Apr. 6, 1887. Serial No. 233,531. (No model.)

Claim.—1. In a type-writing machine, the combination, substantially as described, of a longitudinally-movable printing-carriage, a series of type carried thereby and movable independently thereof, a printing-lever for effecting impressions from the type, a lever for determining the position of the series of type with reference to the printing-lever, a sleeve or collar coupling the two levers, whereby the first-named lever may be operated by the second lever, and an escapement or feeding device and actuating mechanism therefor, substantially such as described, for advancing said carriage longitudinally after each impression.

2. The combination, in a type-writer, of an index-plate, a series of type, an index-finger for determining the position of the type through the instrumentality of the index-plate, a printing-lever, a pin engaged by the printing-lever for effecting impressions from the type, an escapement device, the vertically-movable pin d^3, operating the escapement device, and a vertically-movable collar coupling said pin with the printing-lever.

3. The combination, in a type-writer, of a longitudinally-movable carriage, the type carried thereby and movable independently thereof, a printing-lever for effecting impressions from the type, an escapement device for the carriage governing its longitudinal movement, a detachable mechanical connection consisting, essentially, of the hook upon the central pin d^3 and the movable lever *d*, between the escapement device and the carriage, and a tension device for impelling the carriage in one direction, placed under stress by the forcible movement of the carriage in the opposite direction, substantially as described.



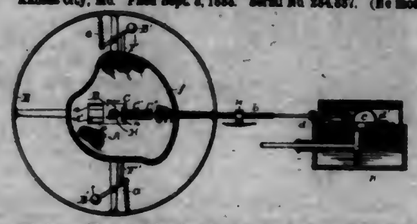
4. In a type-writer, the combination, with the movable carriage and the escapement-bar, of pawls engaging the teeth of said bar, and a yielding spring normally forcing the pawls toward and holding them in engagement with the bar, but permitting them to be moved at right angles to the length of the bar and then thrust out of engagement therewith upon the backward movement of the carriage, substantially as described.

5. In a type-writing instrument, the combination, with the movable carriage and the levers for effecting the impressions from the type, of an escapement device, a pin moving with the levers normally engaging the support of the escapement device, and means, substantially as described, for withdrawing the support from engagement with said pin.

6. In a type-writing instrument, the combination of the adjusting device consisting of the lever P, having the wedge-shaped extension, the toothed plate G, the lever M, for effecting impressions from the type, the bell-crank lever p^3, with which the adjusting-lever is connected, and a yielding connection between said bell-crank lever and the lever M.

7. In a type-writing instrument, the combination of an index-plate, a type-carrying plate, a printing-lever, a lever for determining the position of the type, said lever moving in a horizontal direction, and also having a vertical movement in any of its horizontal positions, a mechanical connection between the printing-lever and the last-named lever, consisting of a sleeve or collar, and an adjusting-lever engaging the type-carrying plate.

406,508. COMBINED ANDIRON AND FENDER. SAMUEL DUNN, Greenwood, Ark. Filed Feb. 27, 1889. Serial No. 301,336. (No model.)

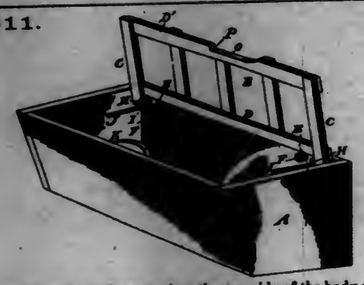


Claim.—In a combined andiron and fender, the combination, with the upright having its upper end bent downwardly in hook form, and the supporting-feet having their ends turned upwardly and terminating in hook-shaped projections, of a fender or bow provided with an aperture near the center of its length to receive the bent end of the upright, and with similar apertures in its ends to receive the projections of the supporting-feet, substantially as and for the purposes set forth.

406,509. DOOR-CHECK. WILLIAM H. FOUTS, Keokuk, Iowa. Filed Apr. 12, 1889. Serial No. 306,923. (No model.)

Claim.—The combination, with the part A, formed with recess *b*, and the base B, secured to said part A by means of the screw *d*, serving as a swivel-connection between said parts, of the two steel ribbons D D', secured to the door, with their adjacent ends curved and underlapped, substantially as shown and described.

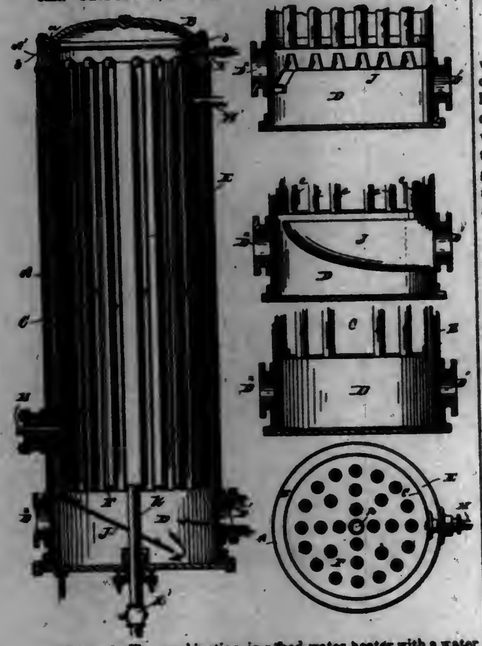
406,510. STEAM-ENGINE GOVERNOR. FREMONT R. GAYLORD, Kansas City, Mo. Filed Sept. 2, 1888. Serial No. 284,887. (No model.)



Claim.—The combination of slide-block D with main shaft H, the said block revolving with said shaft, plate A, having cam-grooves *f*, and arranged to slide loosely on said block, valve-operating rod *b*, moved by connection with said plate, screw C, having one end threaded into a socket in plate A, pinion C, mounted on the free end of this screw and located in socket 16 in said block D, toothed rack E, pivoted at *g* and meshing with said pinion, fly-wheel B, mounted on the main shaft adjacent to plate A, weights B', pivoted to the arms of said fly-wheel, opposing springs *a*, and rods F F', which connect said weights to the toothed rack, substantially as specified.

406,511. FEED-TROUGH. ELIAS GRAHAM and JAMES DOOLITTLE, Hazel Dell, Ill. Filed Mar. 22, 1889. Serial No. 304,263. (No model.)

Claim.—1. In a feed-trough, the combination, with the body A, of the rack having its timbers C extended beyond the rear strip D, the staples E, secured to the rear edge of said strip, the eyes G, on the inner face of the rear side of the trough and engaging said staples, the pins I, arranged lengthwise of the body and secured in the extended ends of the timber C, and the coiled springs H H, having their convolutes around said pins, with one end secured to the strip D and



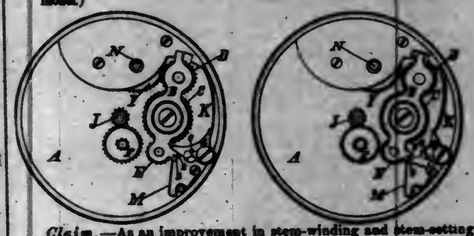
406,511.

the other end adapted to bear against the rear side of the body of the trough, substantially as and for the purpose specified.

2. The combination, with the body of the trough and the hinged rack, the front cross-bar of which is formed with recess O and shoulder P, of the latch K, pivoted to the front wall of the body within the same and having near its upper end a notch L, and the spring-rod M, one end secured within the lower end of the latch and the other end retained in the loop N, substantially as shown and described.

406,512. FEED-WATER HEATER. JOHN J. HOPPE, Springfield, Ohio. Filed Dec. 19, 1887. Serial No. 258,363. (No model.)

Claim.—1. The combination, in a feed-water heater with a water space or chamber, of a steam-supply chamber extending entirely under said water-space and provided with contracted outlet and inlet openings, heating-tubes opening in said steam-supply chamber closed at one end and extending longitudinally into said water-space, whereby steam is caused to enter said heating-tubes from said supply-chamber without the aid of circulating-tubes, substantially as specified.

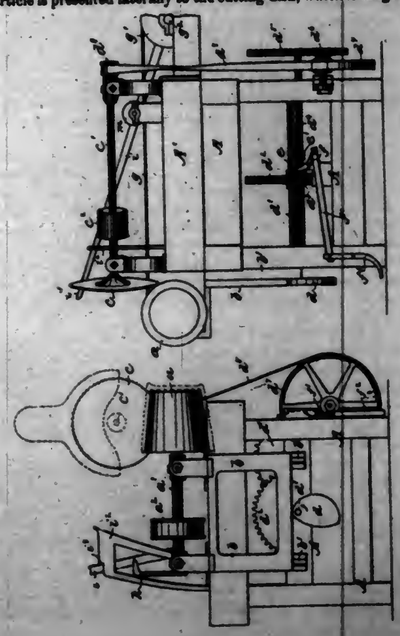


2. The combination, in a feed-water heater with a water space or chamber, of a steam-supply chamber extending entirely under said water-space and provided with contracted outlet and inlet openings, heating-tubes leading into said supply-chamber closed at one end and extending longitudinally through said water-space, and a deflector in said supply-chamber to further retard the passage of the steam through the same and cause it to enter said heating-tubes, substantially as specified.

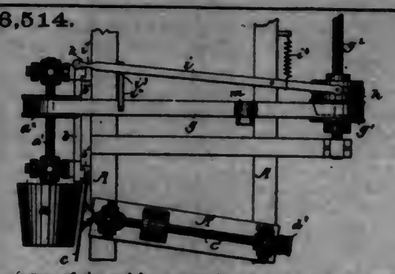
3. The combination, with an outer casing having an inner casing secured therein, so as to form a heating passage or chamber between the same, a supply-chamber in the lower portion of said outer casing, and below the bottom of said inner casing, the vertical heating-tubes extending into said inner casing, said tubes being closed at the top and open at the bottom in the said supply-chamber, substantially as and for the purpose set forth.

4. The combination, with an outer and inner casing, the supply-chamber in the lower portion of said outer casing, the vertical heating-tubes leading from said supply-chamber in said inner casing, said tubes being of uniform external diameter and closed at the top, as described, an inlet and outlet pipe connected to said inner chamber, a blow-off pipe above said outlet-pipe, a discharge-pipe leading from the bottom of said inner casing and stuffing-boxes around said supply and discharge pipe where they pass through said outer casing substantially as and for the purpose set forth.

5. The combination, with the water-space C, of a supply-chamber D, the heating-tubes *c* closed at one end and extending into the water-space, and the deflector J, substantially as and for the purpose set forth.



406,513. STEM WINDING AND SETTING WATCH. GUSTAF F. JOHNSON, Aurora, Ill. Filed Sept. 12, 1887. Serial No. 249,488. (No model.)

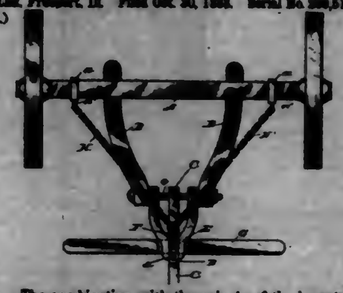


Claim.—As an improvement in stem-winding and stem-setting watches, the lever A, actuated by the end-thrust of the stem-key, in combination with the lock-lever G and the swinging yoke B, said lock-lever and yoke being so formed at the point of their contact as to cause the yoke with its attached wheels to be locked in engagement with the dial-wheels when the lock-lever is restrained in its movements to a certain limit, but will permit the same to be automatically disengaged therefrom when the lock-lever is allowed additional movement, as when the watch is removed from the case, all substantially as shown and described.

406,514. TURNING-MACHINE. FRANK E. KEITH, Peterborough, N. H., assignor of one-half to The Amoskeag Indurated Fibre Ware Company, same place. Filed Aug. 20, 1888. Serial No. 283,168. (No model.)

Claim.—1. The combination of a cutting-disk having peripheral teeth, the cutting-edges of which are in the plane of one face of the cutter and at the ends of the said teeth, with a mandrel that supports and rotates the article to be turned, and feed-carriage for said mandrel having guides at right angles to the axis of said mandrel, whereby the article is presented laterally to the cutting-disk, which is tangential

406,514.



to the surface of the article supported on the mandrel, substantially as described.

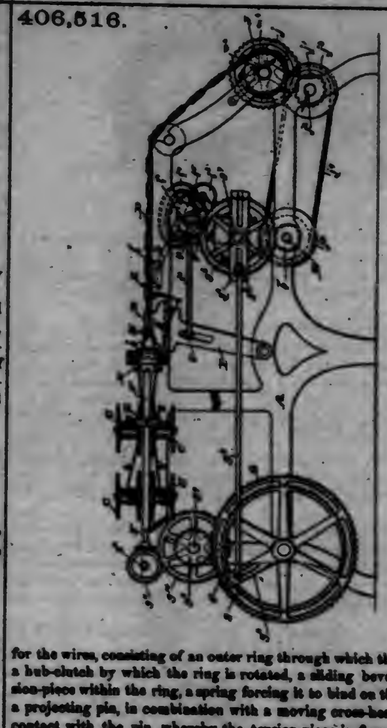
2. The mandrel and its supporting and feeding carriage, combined with the cutter and train of wheel-work actuated by the cutter-shaft, one of the shafts of which train is provided with a cam which actuates the carriage, and a clutch by which portions of said train of wheel-work are connected to cause the feed movement of the carriage, said clutch being constructed, as described, to be disengaged by the return movement of the carriage, substantially as described.

3. The combination of the cutter with the mandrel for supporting and rotating the article to be turned, and a feed-carriage for said mandrel, with an actuating-shaft for said mandrel and clutch thereon, and clutch-shipper operated by said carriage, substantially as described.

406,515. WAGON-TONGUE-ATTACHING DEVICE. ALBERT KOEHLER, Prospect, Ill. Filed Oct. 20, 1888. Serial No. 288,510. (No model.)

Claim.—The combination, with the axle A, of the bounds B and tongue C, pivotally secured thereto, the slotted plate D, recessed upon its upper surface and secured to the lower surface of the tongue in front of the tongue-pivot, the bolt E, passing through the slot with its head resting in the recess, the doubletree-clevis F, supported by the bolt, and the chain H, fastened at its middle to the clevis and having its ends secured to the axle near the ends thereof, substantially as set forth.

406,516. FENCE-MAKING MACHINE. THOMAS L. ARMSTRONG and EDWARD CLARK, Oakland, and GEORGE COTTRELL, San Francisco, assignors to the Union Fence Manufacturing Company, San Francisco, Cal. Filed July 6, 1887. Serial No. 243,005. (No model.)



Claim.—1. In a fence-making machine, the spools carrying the wires and the twisting-spindles by which the spools are carried, in combination with a pawl and ratchet, power mechanism for operating the pawl and ratchet, and gearing by which the power of the ratchet is transmitted to the spindles, whereby a limited motion of the ratchet is multiplied to effect the necessary number of turns of the spindles to twist the wires, substantially as herein described.

2. In a fence-making machine, the spools carrying the wires and the twisting-spindles by which the spools are carried, in combination with the means for rotating the spindles, consisting of a power-shaft having a crank-wheel, a swinging pawl, an adjustable connecting-rod between the pawl and the crank-wheel, a ratchet with which the pawl engages, and gearing between the ratchet and the rear ends of the spindles, substantially as described.

3. In a fence-making machine, a twister-head and tension-clutch for the wires, consisting of an outer ring through which the wires pass, a hub-clutch by which it is rotated, and a sliding tension-piece within the ring binding on the wires normally and adapted by its movement to relieve them, substantially as herein described.

4. In a fence-making machine, a twister-head and tension-clutch for the wires, consisting of an outer ring through which the wires pass, a hub-clutch by which the ring is rotated, a sliding bevel-ended tension-piece within the ring, and a spring causing the tension-piece to bind on the wires, substantially as herein described.

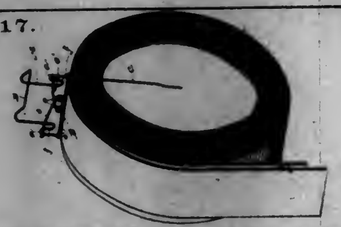
5. In a fence-making machine, a twister-head and tension-clutch

for the wires, consisting of an outer ring through which the wires pass, a hub-clutch by which the ring is rotated, a sliding bevel-ended tension-piece within the ring, a spring forcing it to bind on the wires, and a projecting pin, in combination with a moving cross-head coming in contact with the pin, whereby the tension-piece is forced to release the wires, substantially as herein described.

6. In a fence-making machine, the twister-head and tension-clutch consisting of the outer ring, the hub-clutch, and the sliding spring and actuated tension-piece within the outer ring, in combination with the rotating spindle fitted to the hub-clutch, whereby the twister-head is rotated, substantially as described.

7. In a fence-making machine, the movable cross-head H, before which the slat is inserted and forced and held against the previous twist, in combination with the means for operating said cross-head, comprising the rack and segmental gear, the swinging arm or lever, the cam, and the connecting-rod, substantially as herein described.

8. In a fence-making machine, the combination of rotating spindles, spools for carrying wire, twister-heads and tension-clutches comprising outer rings, hub-clutches and tension-pieces within said outer rings, and a sliding cross-head for forcing and holding the slat against the previous twist while the wires are twisting and releasing the clutch, substantially as described.

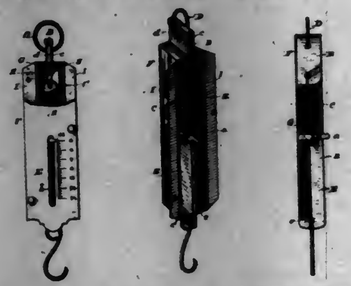


9. In a fence-making machine, the reel consisting of a head fixed on the drive-shaft, a head fixed on a removable shaft, one end of which is mounted in a bearing from which it can be removed and the other end is loosely fitted in a square socket in the first head, a pivoted stop for holding the removable shaft in place, and removable pipes fitted on lugs on the two heads, substantially as described.

10. In a fence-making machine, the reel consisting of the independent heads mounted on separate shafts, one of which is removable, and the pipes fitted on lugs on one head and having slots by which they are fitted on lugs on the other head, and fixed guides on said head by which the pipes are held to place, the wheels being arranged so that the reel may be readily taken to pieces and put together again, substantially as described.

406,517. CLASP FOR RIBBON-ROLLS. DANIEL H. DARBY and GEORGE B. GRIFFENBERG, Meadon, Ill. Filed Feb. 6, 1889. Serial No. 298,881. (No model.)

406,517.



Claim.—1. In a holder for rolled material, the combination, with the two spring-arms and connecting-frame, of the presser-bar mounted and adapted to slide on said arms, and the springs for holding said bar depressed against the circumference of the roll, substantially as described.

2. In a holder for rolled material, the combination, with the two arms and connecting-frame, of the presser-bar mounted and adapted to slide on said arms, and the springs, one of the ends of which engages shoulders or projections on the frame, and the opposite ends of which engage the presser-bar to hold the same depressed, substantially as described.

3. In a ribbon-holder, the combination, with the main frame formed with the depending arms and the bends or shoulders *a*, of the presser-bar and the springs resting thereon for holding the same depressed and engaging the said bends or shoulders, substantially as described.

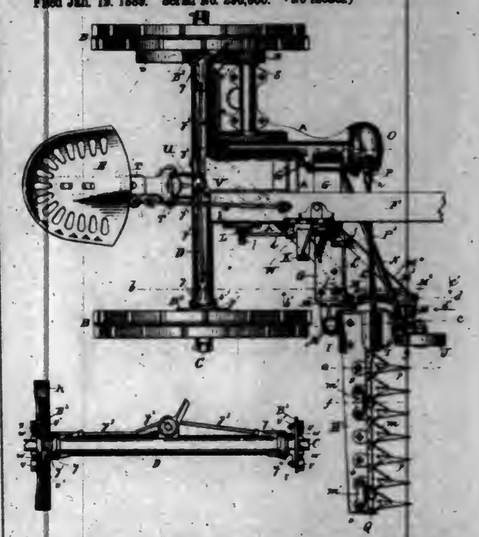
4. In a ribbon-holder, the combination, with the main frame formed of a single piece of spring-wire, having the depending arms with the inwardly-turned ends, the shoulders *a*, and the suspension-hook, of the presser-bar adapted to slide on said arms, and the springs resting thereon and engaging said shoulders to hold the bar depressed.

406,518. SPRING-SCALE. CHARLES FORSCHNER, New York, N. Y. Filed Feb. 11, 1889. Serial No. 299,366. (No model.)

Claim.—1. A casing for spring-scales, composed of a single piece of sheet metal which is bent up to form the back, side walls, and front flanges of the casing, and which is further formed with a closed top and with a closed bottom, substantially as set forth.

2. A casing for spring-scales, comprising in a single piece of sheet metal a back, side walls, front flanges, top wings, constituting the closed top of the casing, and bottom wings formed on the side walls of the casing and projecting at right angles thereto, said bottom wings being formed on their outer edges so as to constitute an open slot for the passage of the sliding rod of the spring-scale, substantially as set forth.

3. A casing for spring-scales, composed of a single piece of sheet metal and formed at its upper portion with wings projecting from the side walls of the casing, said wings being bent at right angles to the side walls so as to constitute a top for the casing, and said wings being further bent upwardly alongside of the suspending-bar of the scale, and one of said wings being bent over the top of said suspending-bar and down upon the other wing, substantially as set forth.



4. In a spring-scale, a suspending-bar, a sliding rod, and a coiled spring connecting said suspending-bar and said sliding rod, in combination with a casing inclosing said bar, rod, and spring, said casing being formed of a single piece of sheet metal bent to form the back, side walls, and front flanges of the casing, and being further bent to constitute a bottom for the casing, having a notch through which said sliding rod passes, and being formed at its upper portion with wings, which are bent to constitute the top of the casing, and which extend alongside the suspending-bar, one of the said upper wings being bent over the top of the suspending-bar and down against the other upwardly-extending wing, the dial-plate of the scale secured to the front flanges of the casing, and the suspending-loop passing through the upper wings of the casing and through the suspending-bar, substantially as set forth.

406,519. PROCESS OF TRANSFERRING PRINTS, &c. JOHN J. FOX, Flushing, N. Y. Filed Sept. 1, 1888. Serial No. 284,301. (No specimens.)

Claim.—1. The process of transferring a print of any description to an enameled oil-painted surface by preparing the surface by, first, rubbing the enameled surface with soap and water; second, applying turpentine thereto; third, applying nine parts of alcohol to one part of saturated alcoholic solution of camphor, substantially as described.

2. The process of transferring a print of any description to an enameled oil-painted surface by, first, rubbing the surface with soap and water; second, applying turpentine thereto; third, applying nine parts of alcohol to one part of saturated alcoholic solution of camphor, placing the print to be copied on the moistened surface, the application of direct pressure thereto, then the application of heated frictional pressure, substantially as described.

406,520. MOWING-MACHINE. JOEL GARFIELD, Worcester, Mass. Filed Jan. 19, 1889. Serial No. 296,800. (No model.)

Claim.—1. In a mowing-machine, the finger-bar and inner shoe, the latter pivoted at the back side to the frame rigid with the coupling-arm and resting upon an inclined supporting slide-block mounted in the front side of said frame to support the cutters at their proper normal level, but not impeding their upward movements, in combination with said frame, a suitable holding-rod pivoted to the shoe and the frame for holding the parts in position laterally, and a hand-lever connected with the slide-block, for elevating and lowering the cutters by hand, substantially as and for the purpose set forth.

2. The inner finger-bar shoe pivoted at its back side to an angular frame secured to the pivoted coupling-arm, which is connected with the lifting-lever, in combination with said angular frame, a holding-rod connected with the main frame, pivoted to the front side of the shoe and adapted to rest on said angular frame, substantially as set forth.

3. The inner finger-bar shoe pivoted at its back side to an angular frame secured to the pivoted coupling-arm, which coupling-arm is connected with the lifting-lever, in combination with said angular frame, a holding-rod connected with the main frame, pivoted to the front side of the shoe and adapted to rest on an inclined block fitted to slide in the angular frame, and a hand-lever operatively connected with said slide-block, substantially as and for the purpose set forth.

4. The combination of the inner finger-bar, shoe I, the ball-and-socket-joint bearing M', angular frame M, secured to the pivoted coupling-arm G, holding-lever N, pivoted to the main frame and to the front side of the shoe, inclined block M^3, fitted to slide in the angular frame, connecting-rod A^3, angle-rod A', fitted to rock in bearings on coupling-arm G, connecting-rod A, spring-lever L, and means for holding the same in an adjusted position, substantially as and for the purpose set forth.

5. The combination, with the pivoted finger-bar, the inner shoe I, and holding-rod N, of the hand-lifting mechanism consisting of the inclined block M^3, fitted to slide in frame M, connecting-rod A^3, angle-rod A', fitted to rock in bearings on pivoted coupling-arm G, connecting-rod A, pivoted spring-lever L, and the fixed quadrant for holding said lever in its adjusted position, substantially as shown and specified.

6. In a mowing-machine, the combination of the angular supporting-frame M, with the finger-bar pivoted at the back side of said frame only and the front side pivoted to a holding-rod N, in turn pivoted at its opposite end to the main frame, said holding-rod, and the pitman-rod P^4, both said holding and pitman rods being arranged above the frame M, brace-bar M^4, shoe I, slide-block M^3, and its rod A^3, coming in line therewith vertically, so as to admit of the cutting apparatus being folded over onto the pole of the machine, substantially as set forth.

7. In a mowing-machine, the combination of the fingers, the finger-bar, the rigid bottom cutters or ledger-plates, and the cutter-bar guide-clasps, arranged one over the other in contact with the finger-bar and ledger-plates between the fingers and said guide-clasps, and a series of bolts, each passed vertically through said parts to clamp them all tight together, substantially as set forth.

8. In a mowing-machine, the fingers, the finger-bar, the rigid bottom cutters or ledger-plates, the cutter-bar guide-clasps arranged one over another in contact with the finger-bar and ledger-plates, between the fingers and said guide-clasps, and a series of bolts each passed vertically through said parts to clamp them all tight together, in combination with the cutter-bar fitted in a slot in the under side of the aforesaid guide-clasps and the top movable cutters or sickles fastened to the under side of said cutter-bar, substantially as and for the purpose set forth.

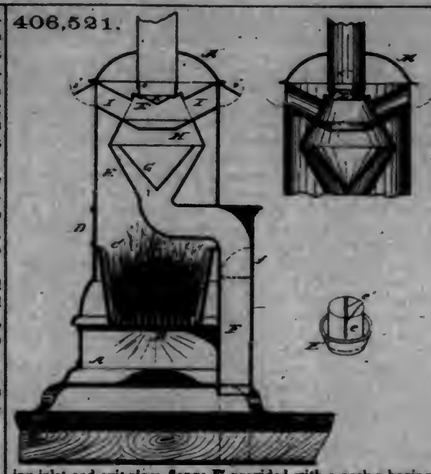
9. In a mowing-machine, the main driving-wheels fitted to turn on the main shaft and having hubs, each provided with an internal ratchet-gear, in combination with spring latches, one for each wheel, mounted on fixed hubs secured to the main shaft at each end thereof, (one of said hubs having a gear formed or secured thereon adapted to engage with the pinion for operating the cutting apparatus,) and a suitable foot-lever pivoted to the main-shaft sleeve and operatively connected with beveled rings adapted to engage with said spring-latches, substantially as and for the purpose set forth.

10. In a mowing-machine, the combination of the main driving-wheels fitted to turn on the main shaft and having hubs, each provided with an internal ratchet-gear, with suitable spring-pawls adapted to engage with said ratchet-gears, the pawls being fastened to short pins or studs fitted to turn in hubs secured to the main shaft, (one of said hubs having a gear formed or secured thereon adapted to engage with the pinion for operating the cutting apparatus,) said hubs and pins or studs, suitable pawls also secured to the pins or studs upon the opposite end from the spring-pawls, a beveled slide-ring fitted to slide on the main-shaft sleeve and to engage with the last-mentioned pawls, a double-arm foot-lever pivoted to said sleeve, and suitable connecting-rods for connecting the beveled rings with the hub of said foot-lever eccentric to its axis, substantially as and for the purpose set forth.

11. The combination of the seat-supporting bar having a front holding-rod pivoted thereto and to the pole or main frame of the machine, in combination with a rocking lever pivoted to the main frame, also pivoted at its rear end to the lower end of said seat-supporting bar and at its front end to a bar connected with said main frame, and the coupling-arm, whereby the weight of the rider on the seat may be utilized to counterbalance the weight of the cutting apparatus and thereby lighten the draft required in propelling the machine, substantially as set forth.

12. The combination of the jointed adjustable seat-supporting bar, with a front holding-rod pivoted thereto and to the pole or frame of the machine, a rocking lever arranged under the main shaft pivoted to the frame, preferably a little back of its center, also having an adjustable block at its rear end, to which the lower end of the seat-supporting-bar is pivoted and its front end pivoted to the coupling-arm, to which the lifting-lever is connected to lift the cutting apparatus, whereby a portion of the weight of said cutting apparatus may be counterbalanced by the weight of the rider on the seat and thus produce an easier draft, substantially as set forth.

406,521. HEATING-STOVE. CHARLES O. GRAVES, Washington, Kans. Filed Apr. 13, 1888. Serial No. 270,573. (No model.)



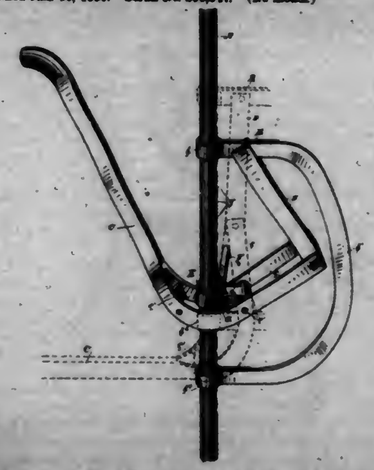
Claim.—1. The combination, with a stove, of the air-heating drum E, suspended inside of the same, having frusto-conical sides, inlet-flue F, entering the stove above the fire-pot, upwardly-inclined exit-pipes I, provided with dampers *i*, flange E', and the removable dished stop-plate K, substantially as described.

2. The combination, with a stove, of an air-heating drum E, having frusto-conical sides, a conical deflector G, suspended therein, an inwardly and downwardly inclined annular flange H, above the deflector, inlet-flue F, entering the stove above the fire-pot, and exit-pipes I, substantially as described.

3. The combination, with a stove, of an air-heating drum E, having frusto-conical sides, a conical deflector G, suspended therein, an annular flange H, above the deflector, inlet and exit flues, flange E', and stop-plate K, substantially as described.

4. The combination, with a stove, of an air-heating drum E, having inlet and exit pipes, flange E', provided with a neck *e*, having slots *e'*, and a removable plate for closing the neck, substantially as described.

406,521.



406,522. GRINDING-MILL. FRANK C. HALL, Philadelphia, Pa., assignor to William C. Stevenson, same place. Filed Nov. 1, 1888. Serial No. 289,702. (No model.)

Claim.—1. In combination with a series of independent grinding-surfaces, an outer hopper with openings in the bottom thereof leading to each grinding-surface, and a supplemental removable hopper for each opening, whereby the grinding-surfaces may be utilized to grind material of one kind or color or materials of different kind or color, substantially as described.

2. In a grinding-mill, a series of independent grinding-surfaces combined with a single outer hopper and openings within said hopper, one leading to each grinding-surface, and operating mechanism for the grinding-surfaces, substantially as described.

406,523. LIFTING-JACK. JAMES P. HAYS, North Temescal, Cal. Filed Jan. 16, 1889. Serial No. 296,547. (No model.)

Claim.—1. In a lifting-jack, the combination of a standard, a lift vertically movable thereon, a lever connected with the lift, and a

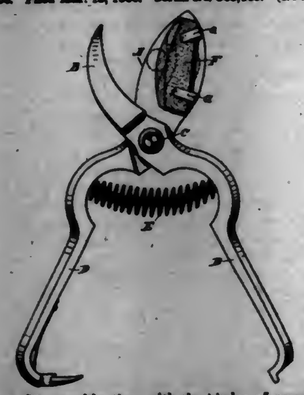
clutch connected with the lever and engaging the standard, said clutch forming the fulcrum for the lever and support for the lift, substantially as described.

2. In a lifting-jack, the combination of a standard, a lift vertically movable thereon, a lever connected with the lift, and a clutch fitted to and vertically movable upon the standard, said clutch being connected with the lever and forming, when engaging the standard, the fulcrum for the lever and support for the lift, substantially as described.

3. In a lifting-jack, the combination of a standard, a lift vertically movable thereon, a lever connected with the lift, and a clutch-ring pivoted to the lever and fitting over the standard, whereby it is adapted to cramp thereon and form a fulcrum for the lever and support for the lift, substantially as described.

4. In a lifting-jack, the combination of a standard, a lift vertically movable thereon, a lever having an upturned inner end, a link connecting said end with the lift, and a clutch-ring pivoted to the upturned end of the lever and fitting over the standard, whereby it is adapted to cramp thereon and form a fulcrum for the lever and support for the lift, substantially as described.

5. In a lifting-jack, the combination of the standard, the lift having an eye or socket fitted on the standard, and an extension with guide eye or socket fitted on the standard below, whereby said lift is adapted to move vertically on the standard and is guided in its movement, the lever having forked upturned ends passing on each side of the standard, the links connecting said ends with the lift, and the clutch-ring pivoted in the upturned ends of the lever and fitting over the standard, whereby it is adapted to cramp thereon and form a fulcrum for the lever and support for the lift, substantially as described.

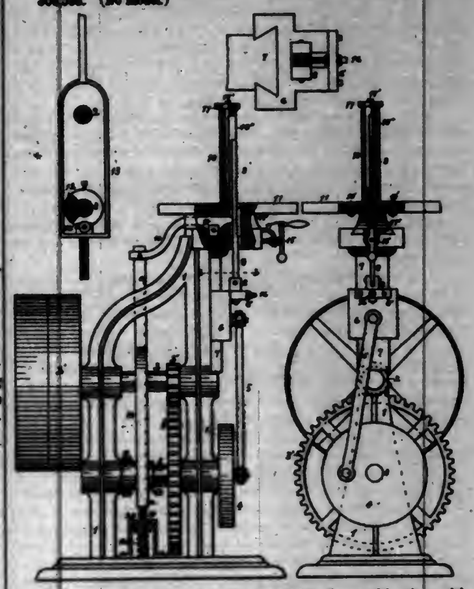


6. In a lifting-jack, the combination of a standard, a lift vertically movable thereon, a lever connected with the lift, a clutch-ring pivoted to the lever and fitting over the standard, whereby it is adapted to cramp thereon and form a fulcrum for the lever and support for the lift, and the arm fixed to the clutch-ring for relieving it from the standard, substantially as described.

7. In a lifting-jack, the standard having the notches or teeth, the lift fitted to and vertically movable on the standard, the lever connected with the lift, the clutch-ring pivoted to the lever and fitting over and engaging the standard, as described, and the fixed pawl on the clutch-ring for engaging the notches or teeth of the standard, substantially as described.

8. In a lifting-jack, the standard having the notches or teeth, the lift fitted to and vertically movable on the standard, the lever connected with the lift, the clutch-ring pivoted to the lever and fitting over and engaging the standard, as described, the pawl on the clutch-ring for engaging the notches or teeth of the standard, and the arm on the clutch-ring for relieving it, substantially as described.

9. A lifting-jack consisting of the combination of the notched standard, the sliding lift with guide-extensions fitted on said standard, the forked lever passing on each side of the standard, the links connecting said lever with the lift, the clutch-ring pivoted to the lever and fitting over the standard, and the pawl and arm of said clutch-ring, substantially as described.



406,524. PRUNING-SHEARS AND FRUIT-PICKER. BYRON JENNINGS, San José, Cal., assignor to C. W. Breyfogle and F. L. Voorhies, same place. Filed Mar. 13, 1888. Serial No. 267,165. (No model.)

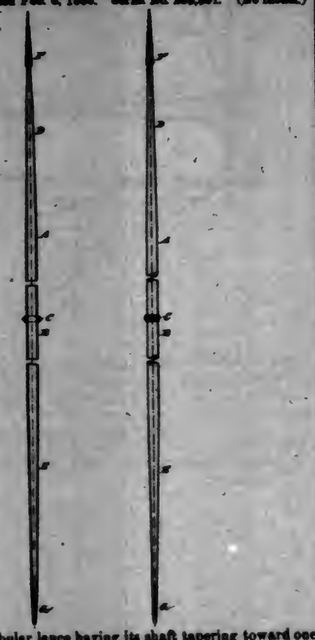
Claim.—1. The combination, with the blades of pruning-shears, of the rubber block and the clamps extending over the ends of said block only, while the center is left free to move backward from the edge of the blade when pressure is brought upon it, substantially as herein described.

2. In a pruning-shears, the blade A, having the extensions C upon its back, and curved over the front to form clamps near each end of the blade, in combination with a block of rubber fitted to slip beneath these clamps and having the central portion free from any holding device, substantially as herein described.

406,525. KEY-SEAT-CUTTING MACHINE. ORSON C. LITTLE and ADDISON H. LITTLE, Menasha, Wis.; said Orson C. Little assignor to Duncan T. H. MacKinnon, same place. Filed Apr. 9, 1889. Serial No. 306,988. (No model.)

Claim.—1. In a key-seat-cutting machine, the combination, with a mandrel adapted in diameter to enter the bore of the hub to be grooved, the mandrel having a longitudinal groove therein adapted to receive a cutting-tool, and means for its reciprocation thereon, of a slide carrying a socket or holder, and the aforesaid cutting-tool being pivoted thereon, said socket or holder being adapted for adjustment upon the slide and producing thereby the taper of the key-seat, substantially as described.

2. In a key-seat-cutting machine, a cutting-tool adapted for a reciprocating movement thereon, said tool being pivoted in a socket or holder, and the socket or holder adapted for adjustment for producing the taper of the key-seat, in combination with a lever, against one end of which said cutting-tool is reciprocated, said end of the lever being pressed against the cutting-tool and the feed thereof produced by the resiliency of a spring during its downward movement, and the spring relieved from pressure thereon during its return movement by the action of a cam or other like positive movement, substantially as described.



3. In a key-seat-cutting machine, the combination, with a reciprocating cutting-tool, of a lever fulcrumed in the rear of said tool and its free end arranged to press against the back thereof for producing the feed to said tool, a spring arranged to provide for said pressure, and a cam to relieve the pressure upon the tool during the return movement thereof, substantially as described.

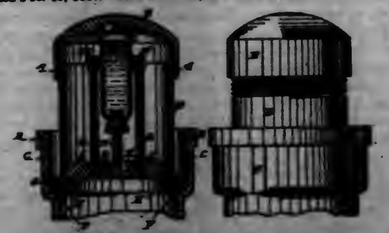
4. In a key-seat-cutting machine, the combination, with a mandrel adapted in diameter to enter the bore of the hub to be grooved, the mandrel having a longitudinal groove therein adapted to receive a cutting-tool, of a reciprocating cutting-tool and a movable backing therefor, said backing being pressed against the tool, and the feed of said tool produced during its downward or cutting movement by the resiliency of a spring, and relieved from said pressure upon its return movement by the action of a cam or other like positive movement, substantially as described.

5. In a key-seat-cutting machine, the combination, with a mandrel adapted in diameter to enter the bore of the hub to be grooved, the mandrel having a longitudinal groove therein adapted to receive a cutting-tool reciprocative in said groove, said tool being pivoted in a socket or holder arranged for adjustment for producing the taper of the key-seat, of a lever fulcrumed in the rear of said tool, the free end thereof arranged for pressure against the back of said tool by the resiliency of a spring during the downward or cutting movement of the tool and thereby producing the feed thereof, and also arranged for being relieved of said pressure upon the tool during its return movement by the action of a cam or other like positive movement, substantially as described.

6. In a key-seat-cutting machine, the combination of the frame 1, having the crank-shaft 3, arranged for revolution therein, the crank-wheel 4, connection-rod 5, slide 6, table 11, arranged for horizontal movement on the frame aforesaid, a mandrel secured to the table and movable therewith, said mandrel having a groove longitudinally thereof, and a cutting-tool 9, adapted for reciprocation therein, the socket 8 and means for its adjustment upon the slide 6, for the purpose of producing the desired taper in the key-seat, the lever 14, fulcrumed in the socket 1', the loop 13, cam 12, spring 18, means for limiting the movement of the spring, and the cage 20, all arranged and operating substantially as described.

406,526. TUBULAR LANCE. WILHELM LORENZ, Carlsruhe, Baden, Germany. Filed Feb. 6, 1889. Serial No. 298,891. (No model.)

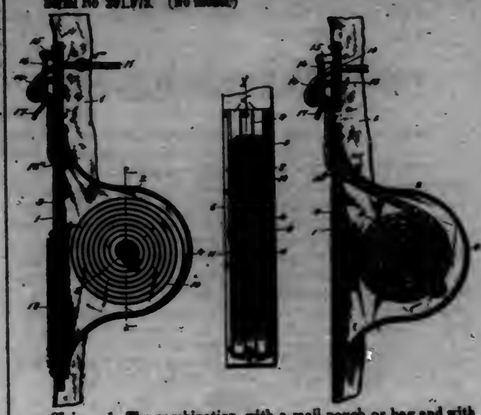
Claim.—1. A tubular lance having its shaft tapering toward one end, which terminates in a lance-head, substantially as set forth.



2. A tubular lance provided with a shaft tapering from near its center both toward the tip and toward the foot, as set forth.

3. A tubular lance provided with a shaft tapering toward each end and having the thickness of its tube-wall varied from the center to the ends, as set forth.

4. A tubular lance-shaft provided with a cylindrical portion substantially midway its length, and tapering from said cylindrical portion toward each end, as set forth.



5. A tubular lance having a shaft provided with a central cylindrical portion, and tapering from said portion to the end, the said central cylindrical portion having an annular flange to facilitate the grasping of the lance, as set forth.

406,527. DRAIN-TRAITER. BENJAMIN MERRAM, Boston, Mass. Filed Feb. 15, 1889. Serial No. 300,065. (No model.)

Claim.—In a drain-coster, the combination of an outer vessel open as its bottom and optionally closed by a screw-cap at its top and adapted to be attached to the drain-pipe, a smaller vessel removably contained in said outer vessel, a removable stopper in said inner vessel, a pin in contact with said stopper, and a screw-cap upon the outer vessel, the parts being so arranged that screwing down the cap on the outer vessel operates to remove the cork from the inner vessel, substantially as and for the purpose specified.

406,528. MAIL-POUCH. CHARLES W. MILLER, Clifton, Ariz., assignor of one-half to Charles Royce, same place. Filed Nov. 27, 1888. Serial No. 291,972. (No model.)

Claim.—1. The combination, with a mail pouch or bag and with its closing-cord, of a spring take-up secured within the bag and having the closing-cord connected therewith, substantially as specified.

2. The combination, with a mail pouch or bag and its closing-cord, of a face-plate secured to the pouch and having cord passages or openings and provided with take-up mechanism attached to said face-plate, substantially as specified.

3. The combination, with a mail pouch or bag and with its closing-cord, the bag being provided with an opening for the entrance of the slack portion of the cord into the bag, of a take-up and of an independent cord-fastening device, substantially as specified.

4. The combination, with a mail pouch or bag, of a face-plate and a housing attached thereto and divided into parallel compartments for the reception and operation of springs and cords, respectively, substantially as specified.

5. The combination, with a mail bag or pouch, of a face-plate secured to the bag, a housing secured within the bag over a cord-receiving opening in the face-plate and having a partition separating the part of the housing over said opening from the remaining portion of the housing, and a spring arranged in said remaining portion of the housing, and a shaft connected with a spring and passing through the housing and partition, substantially as specified.

6. The combination, with a mail pouch or bag, of a take-up mechanism arranged within the bag, closing-cords connected with said take-up mechanism, and a cord-fastener consisting of a bail and a projecting horn, against which the bail is adapted to bind the cord, substantially as specified.

7. The combination, with a pouch or bag, of a plate fastened within said bag, a horn projecting through the side of said bag, a bracket also projecting through the side of said bag, a bail hung to said bracket and taking over said horn, and a closing-cord passing through an opening in said plate, substantially as described.

8. The combination, with a mail pouch or bag, of a face-plate secured to the pouch and having a take-up, and provided with inlet and outlet cord passages or openings, and with an independent cord-fastening device located intermediate the openings, substantially as specified.

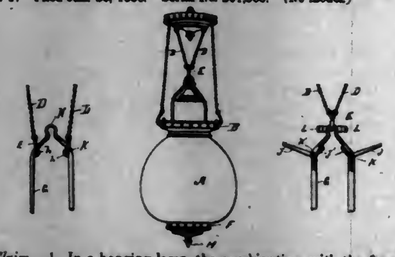
9. The combination, with a mail pouch or bag, of a face-plate secured to the pouch and having a take-up fastened thereto, and provided with inlet and outlet cord passages or openings, and with a protruding horn-shaped lug, over which the cord passes, and a swinging bail adapted to take over the lug and fasten the cords, substantially as specified.

10. The combination, with a mail pouch or bag, of a face-plate secured to the pouch and having a take-up, and provided with inlet and outlet cord passages or openings, and with a protruding horn-shaped lug, over which the cord passes, and a swinging pivoted spring-bail adapted to be sprung over the lug and bind the cords thereupon, substantially as specified.

11. The combination, with a mail pouch or bag, of a face-plate

secured thereto and having inlet and outlet cord-passages, and provided with a cord-receiving shaft, and a coiled spring for rotating the shaft and placed at one side thereof, substantially as specified.

12. The combination, with a mail pouch or bag, of a face-plate secured upon the inside thereof, provided with inlet and outlet cord passages or openings, and a housing secured to the plate, consisting of bent end strips, interposed partitions, and side strips, the whole being bound together and provided with a transverse shaft having a coiled spring, substantially as specified.



406,529. **HAME-TUG.** JOSEPH H. MCKENZIE, Tyler, assignor of one-half to Leslie A. Seymour, Eureka, Tex. Filed Feb. 27, 1889. Serial No. 301,306. (No model.)

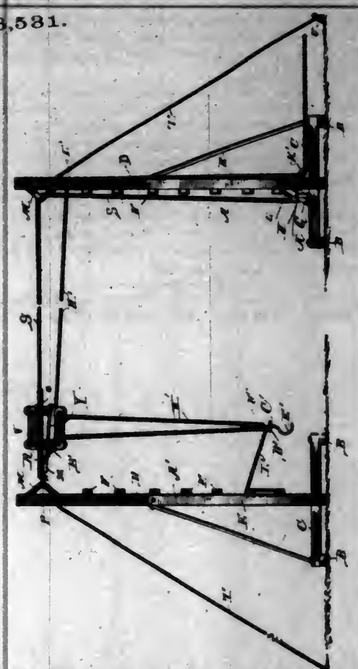
Claim.—1. In a hame-tug, the combination, with the bar provided at one end with a buckle, of the shield secured to the inner side of the bar and provided with an outward-extending guard, which extends through the loop of the buckle and is provided with a slot for the reception of the tongue of the buckle, substantially as specified.

2. In a hame-tug, the combination of the stiffening-bar A, provided at one end with a buckle and at the other end with a loop B, the shield D, attached to the inner side of the said bar and extending to the outer end of the buckle and provided with the guard G, the box-loop secured to the stiffening-bar, and the cover or protector F, secured over the said bar to conceal the same, substantially as specified.

406,530. **HANGING LAMP.** WILLIAM S. MCLEWEE, New York, N. Y. Filed Jan. 30, 1888. Serial No. 261,385. (No model.)

Claim.—1. In a hanging lamp, the combination, with the frame, rollers supported by said frame, a frame or holder adapted for the support of a lamp, and flexible connections adapted to operate on said rollers, of a globe or shade detachably held or supported by said flexible connection, and one or more catches on the opposite end of said flexible connection to adjustably support the said frame or holder and engage the lower portion of the globe or shade, whereby said frame or holder is securely held and locked below the base of said globe or shade, substantially as and for the purpose set forth.

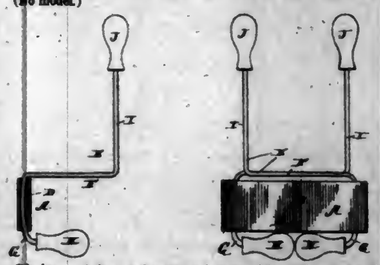
2. In a hanging lamp, the combination, with a frame provided with rollers, a holder adapted for the support of a lamp, and flexible connections adapted to operate upon said rollers, of a globe or shade detachably held by said flexible connection, and a locking or holding device adapted to securely lock and hold the holder or lamp-support in a fixed position below the base of the said globe or shade, substantially as described, and for the purpose set forth.



406,531. **HAY-STACKER.** WILLIAM NIGHTINGALE, Valley, Nebr. Filed Dec. 21, 1888. Serial No. 294,263. (No model.)

Claim.—1. The combination of the derricks, the angle-plates at the upper ends of said derricks, the track-rope having one end connected with the angle-plates of one of the derricks, a pulley journaled between the angle-plates of the other derrick and supporting the track-rope, a windlass having the free end of the track-rope attached and wound thereon, and a detent to prevent said windlass from rotating, substantially as set forth.

2. The combination of the derrick having the angle-plates at its upper end, the horizontal plate secured between said angle-plates and having a vertical perforation, and the track-rope having one end passed through said perforation and knotted and connected by lashing with the outer end of said plate, substantially as set forth.

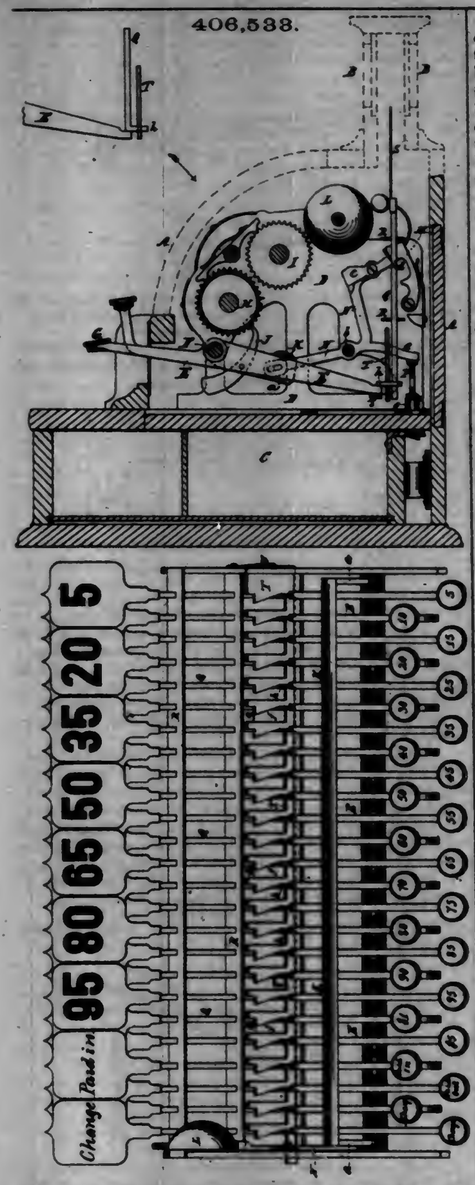


3. The combination of the derricks, the angle-plates at the upper ends of said derricks, a pulley journaled between the angle-plates of one of said derricks, a horizontal track-plate secured between the angle-plates of the other derrick and having a beveled catch on its under side and a vertical perforation, the track-rope passing over the pulley between the angle-plates of one of the derricks and having one end passed through the said perforations and knotted and secured by

406,531.

lashing with the outer end of said plate, a windlass for tightening the said track-rope, and a carrier having a pivoted catch to engage the beveled catch upon the under side of the horizontal track-plate, substantially as and for the purpose set forth.

406,532. **HAT AND COAT RACK.** JOHN M. OWEN and JOHN R. ROBERTS, Youngstown, Ohio. Filed Feb. 23, 1889. Serial No. 300,915. (No model.)



Claim.—A hat and coat rack comprising a base-plate having a vertical opening and a wire passed through said opening and curved so as to bind against the side of the opening, the wire being bent forward above and below the base-plate and the upper portion being bent upward, both ends of the wire being provided with knobs, as set forth.

406,533. **CASH INDICATOR AND REGISTER.** JOHN H. PATTERSON, Dayton, Ohio, assignor to the National Cash Register Company, same place. Filed June 23, 1888. Serial No. 278,010. (No model.)

Claim.—1. In a cash register and indicator, the combination of a series of operating-keys of fixed values pivoted on a horizontal shaft at the front of the machine, a horizontal supporting-bar extending transversely across the machine in rear of the rear ends of the keys and provided with a series of vertical slots, each having an inclined wall and supporting-shoulder, and a series of vertical tablet-rods arranged in guides and actuated by said operating-keys, and carrying at their upper ends indicating-tablets, and provided at their lower ends with projections which extend through the slots in said supporting-bar, substantially as and for the purpose described.

2. In a cash register and indicator, the combination of a series of operating-keys of fixed values pivoted on a horizontal shaft at the front of the machine, and a registering mechanism operated by said keys to register the value thereof, a horizontal supporting-bar extending transversely across the machine in rear of the rear ends of the

406,533.

keys and provided with a series of vertical slots, each having an inclined wall and supporting-shoulder, and a series of vertical tablet-rods arranged in guides and actuated by said operating-keys, and carrying at their upper ends indicating-tablets, and provided at their lower ends with projections which extend through the slots in said supporting-bar, substantially as and for the purpose described.

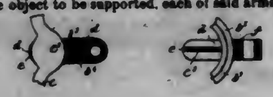
3. In a cash register and indicator, the combination of a series of operating-keys of fixed values pivoted on a horizontal shaft at the front of the machine, a horizontal supporting-bar extending transversely across the machine in rear of the rear ends of the keys and provided with a series of vertical slots, each having an inclined wall and supporting-shoulder, and a series of vertical tablet-rods arranged in guides, and a registering-wheel operated by said keys and bearing on its periphery a series of numbers in multiples of one, substantially as and for the purpose described.

4. In a cash register and indicator, the combination of a series of operating-keys of fixed values pivoted on a horizontal shaft at the front of the machine, a series of registering-wheels operated by said keys to register the value thereof, a horizontal supporting-bar extending transversely across the machine in rear of the rear ends of the keys and provided with a series of vertical slots, each having an inclined wall and supporting-shoulder, and a series of vertical tablet-rods arranged in guides, carrying at their upper ends indicating-tablets, and provided at their lower ends with projections which extend through the slots in said supporting-bar and are engaged by the rear ends of the pivoted operating-keys, substantially as and for the purpose described.

5. In a cash register and indicator, the combination of the operating-keys E, pivoted on the shaft F, slotted supporting-bar T, extending transversely across the machine in rear of the rear ends of said keys, and the vertical tablet-rods Q, carrying at their upper ends the indicating-tablets S, and provided at their lower ends with the projections A, extending through the slots in the bar T, substantially as and for the purpose described.

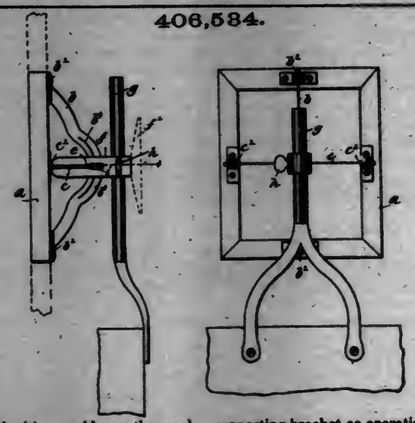
6. In a cash register and indicator, the combination of the operating-keys E, pivoted on the shaft F, and provided with the actuating-dogs J, registering-wheels H, slotted supporting-bar T, extending transversely across the machine in rear of the rear ends of the keys, and the vertical tablet-rods Q, carrying at their upper ends the indicating-tablets S, and provided at their lower ends with the projections A, extending through the slots in the bar T, substantially as and for the purpose described.

7. In a cash register and indicator having a series of operating-keys of fixed values actuating a series of indicating-tablets and a registering mechanism to indicate and register the cash sales corresponding to the values of said keys, the combination of a supplemental operating-key having on its front end a button bearing the sign "Paid In," an indicating-tablet actuated thereby and bearing a corresponding sign, and a registering-wheel operated by said supplemental key and bearing on its periphery a series of numbers in multiples of one, said supplemental key, tablet, and registering-wheel being designed and arranged to indicate each receipt of money on account and to register the total number of such receipts, substantially as described.



8. In a cash register and indicator having a series of operating-keys of fixed values actuating a series of indicating-tablets and a registering mechanism to indicate and register the cash sales corresponding to the values of said keys, the combination of a supplemental operating-key having on its front end a button bearing the sign "Paid Out," an indicating-tablet actuated thereby and bearing a corresponding sign, and a registering-wheel operated by said supplemental key and bearing on its periphery a series of numbers in multiples of one, said supplemental key, tablet, and registering-wheel being designed and arranged to indicate each payment of money out on account and to register the total number of such payments, substantially as described.

9. In a cash register and indicator having a series of operating-keys of fixed values actuating a series of indicating-tablets and a registering mechanism to indicate and register the cash sales corresponding to the values of said keys, the combination of a supplemental operating-key having on its front end a button bearing the sign "Charge," an indicating-tablet actuated thereby and bearing a corresponding sign, and a registering-wheel operated by said supplemental key and bearing on its periphery a series of numbers in multiples of one, said supplemental key, tablet, and registering-wheel being designed and arranged to indicate each credit sale and to register the total number of such sales, substantially as described.

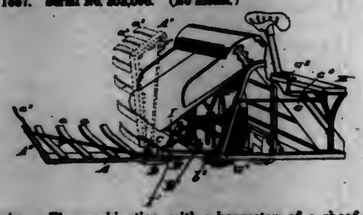


10. In a cash register and indicator having a series of operating-keys of fixed values actuating a series of indicating-tablets and a registering mechanism to indicate and register the cash sales corresponding to the values of said keys, the combination of a supplemental operating-key having on its front end a button bearing the sign "Change," an indicating-tablet actuated thereby and bearing a corresponding sign, and a registering-wheel operated by said supplemental key and bearing on its periphery a series of numbers in multiples of one, said supplemental key, tablet, and registering-wheel being designed and arranged to indicate each operation of the machine for the purpose of making change and to register the total number of such operations, substantially as described.

406,534. **ADJUSTABLE SUPPORT FOR MIRRORS OR SIMILAR OBJECTS.** JOHN R. PERKINS, Milford, N. H. Filed Mar. 11, 1889. Serial No. 302,747. (No model.)

Claim.—1. The combination of two supporting-arms, one arranged transversely to the other and having a pivotal or hinged connection with the object to be supported, each of said arms being pro-

406,584.

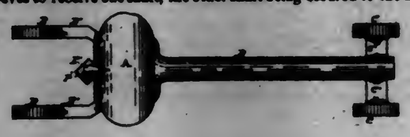


vided with a guide portion and a supporting-bracket co-operating with the guide portions of said arms, respectively, substantially as described.

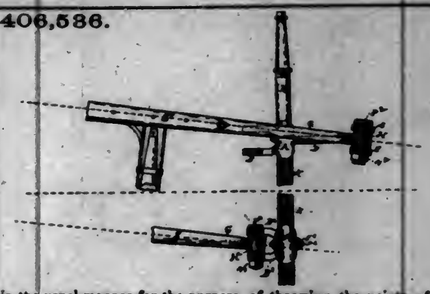
2. The combination of the bracket having guide-slots transverse to one another with supporting-arms having pivotal joints at their ends, and each having a guiding-surface flattened to operate in a corresponding slot of the bracket, the said guide portions of each arm being curved concentrically with the pivotal axis of the other arm and the guide portion of one having a larger radius than the guide portion of the other, substantially as and for the purpose described.

3. The combination of the horizontal supporting-bracket *f*, provided with a horizontal guide-slot *c*, with a horizontal supporting-arm *e*, provided with a pivotal joint at each end and with a broad flat curved guiding portion between its ends working in the guide-slot of said bracket, and a vertical arm hinged at its ends and having an intermediate guiding portion working in a guide in said bracket, substantially as described.

4. The combination of the supporting-bracket provided with guides transverse to one another with supporting-arms having intermediate guide portions and provided with pivotal joints at their ends, the guide portion of one of said arms being provided with a rib entering a corresponding groove in the supporting-bracket for retaining said supporting-arms in engagement with the bracket, substantially as described.



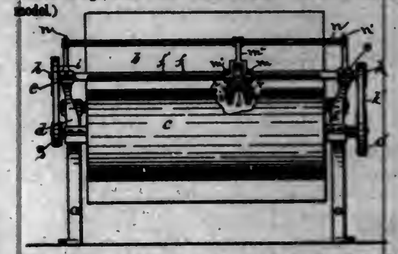
406,585. BUNDLE-DROPPER. EDWARD FRIEDRICH, Batavia, N. Y., assignor to the Johnston Harvester Company, same place. Filed Oct. 11, 1887. Serial No. 252,096. (No model.)



Claim.—The combination, with a harvester, of a sheaf-carrier composed of a finger-supporting beam divided into two parts and having its abutting ends hinged together, the upwardly and outwardly inclined end beam, the rearwardly-extending fingers secured to the said beams, the diagonal brace-rod, one end fastened to the free end of the end beam, the other end secured to the main beam at or near the hinge thereof, the dump-pivot on the inner end of the supporting-beam, the rock-arm B' and its pin *b'*, the crank-rod G, link G', rod G^2, and foot-piece G^3, substantially as described.

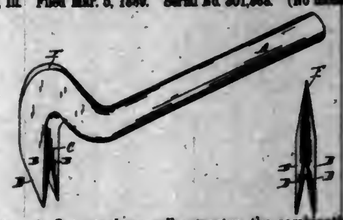
406,586. VEHICLE-SHAFT COUPLING. WILLIAM W. RANKIN, Pittsburg, Pa. Filed Oct. 26, 1888. Serial No. 288,103. (No model.)

Claim.—In combination with an axle and a pair of shafts, an arm extending from said axle substantially horizontally, and having coupling-eyes to receive one shaft, the other shaft being secured to the axle



406,586.

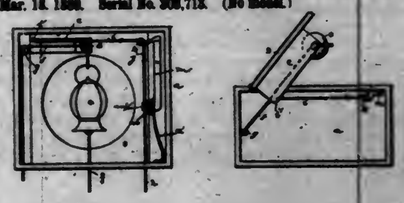
in the usual manner for the purpose of throwing the points of the shaft to one side, all substantially as and for the purposes set forth.



406,587. CARD-GRINDING MACHINE. FRANK I. THURSTON, Central Village, Conn. Filed June 12, 1888. Serial No. 276,956. (No model.)

Claim.—1. In combination with a longitudinally-channeled shaft and mechanism for rotating the same, a forked grinder-carriage, a double crown-wheel splined on said shaft between the forks of said carriage, bevel-gears supported by said carriage engaging said crown-wheel and carrying emery-rolls, as set forth, and mechanism for moving said grinder laterally on its shaft, substantially as and for the purpose specified.

2. In combination with a longitudinally-channeled shaft and mechanism for rotating the same, a fixed rod parallel with said shaft and adjacent thereto, a forked grinder-carriage fitted at one end to slide on said channeled shaft and at the opposite end to slide on said parallel rod, a double crown-wheel embraced by the fork of said carriage and splined on said channeled shaft, bevel-gears supported by said carriage meshing with said crown-wheel and carrying conical emery-rolls, as set forth, and mechanism for moving said grinder laterally on its shaft, substantially as and for the purpose specified.



406,588. STAPLE OR NAIL EXTRACTOR. ORMOND ENGLAND, Lee, Ill. Filed Mar. 5, 1889. Serial No. 301,963. (No model.)

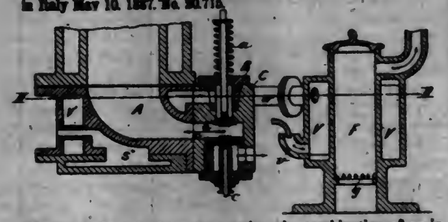
Claim.—1. In a staple or nail extractor, the combination of the lever A and jaws B B, the latter provided with substantially straight sides C and outer cutting-edges D, substantially as shown, and for the purpose described.

2. In a staple or nail extracting lever, the combination of the lever A, fulcrum F, and jaws B B, the latter provided with external cutting-edges D, substantially as shown, and for the purpose described.

406,589. SIGNAL-LIGHT. JOHN F. RIDENOUR, Hector, Ohio. Filed Mar. 18, 1889. Serial No. 303,713. (No model.)

Claim.—1. A signal-light box adapted to be located a distance from the ground and provided with a hinged door, in combination with a rod or connection for opening said door from the ground, and a cord carrying the signal, by which the same can be raised or lowered, and connected with the door to close the same from the ground and swing the signal in or out of the box, substantially as described.

2. In combination, a signal-light box, a hinged door for the same, a cord loosely connected with the door and extending from the same to or near the ground and carrying the signal, and by which the signal can be raised or lowered, and when raised to the door the same is closed, carrying the signal into the box, substantially as described.



3. In combination, a signal-light box, a hinged door for the same, an inwardly-extending plate or arm carried by the door, a cord connected with the plate or arm and adapted to carry the signal or lantern and extend to or near the ground and close the door, and thereby swing the lantern into the box, substantially as described.

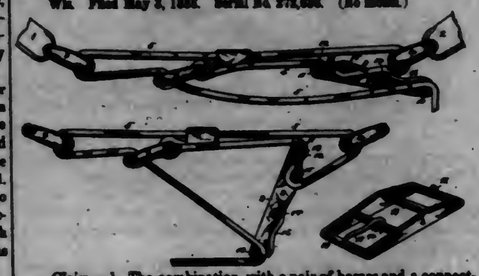
4. A signal-light box provided with a hinged door, a latch for the door, a rod or connection secured to the door and extending down to or near the ground, and adapted to operate the latch to release the door and swing the same open, a cord connected with the door and adapted to carry the lantern and raise and lower the same and close the door and swing the lantern into the box, substantially as described.

5. A signal-light box provided with a hinged door, a cord to carry the light and raise and lower the same, and a plate or projection carried by the door, to which said cord is connected, and which is adapted to swing the lantern in and out of the box, substantially as described.

6. A signal-light box having a hinged door, an inwardly-extending plate or projection carried by the door, and provided with a pulley near its outer portion, and a pulley in the box, located opposite said pulley carried by the door, in combination with a rope or cable, said cable passing over said pulleys and depending from the same and adapted to extend to or near the ground, and a signal-light adapted to be inclosed in said box and carried by the portion of the cable depending from said plate, for the purpose set forth.

406,540. HYDROCARBON-ENGINE. MATHIAS V. SCHILLER, Cologne, Prussia, Germany. Filed Apr. 9, 1889. Serial No. 306,762. (No model.) Patented in Germany Apr. 10, 1888, No. 46,121; in Belgium June 30, 1888, No. 73,679; in France July 3, 1888, No. 177,181; in England Aug. 16, 1888, No. 10,480; in Austria-Hungary Oct. 26, 1888, No. 19,286, and in Italy May 10, 1887, No. 20,715.

Claim.—1. In a hydrocarbon-engine, the combination of an independent furnace with a metallic evaporating-jacket surrounding the said furnace and divided by transverse partitions, so as to increase the evaporating-surface, substantially as described, and for the purpose specified.



2. In a hydrocarbon-engine, the combination of the explosion-chamber with an independent furnace, a metallic evaporating-jacket surrounding the said furnace and divided by transverse partitions, so as to increase the evaporating-surface, and a valve adapted to establish and interrupt communication with the explosion-chamber at every cycle of the engine, substantially as described, and for the purpose specified.

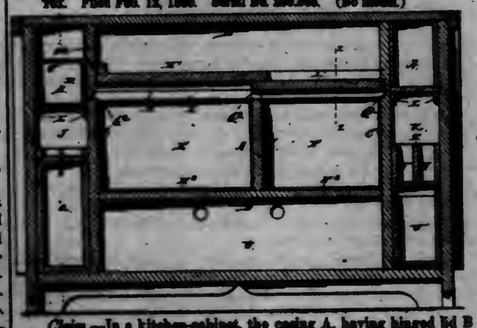
3. In a hydrocarbon-engine, the combination of an independent source of heat, with a helical or zigzag shaped evaporating-canal adapted to be heated by the said source and provided with a valve adapted to establish and interrupt communication with the explosion-chamber of the engine at every cycle, an oil feeder or pump adapted to introduce into the said evaporating-canal small exactly-measured quantities of liquid fuel at every cycle of the engine, and a pump, preferably the working-cylinder, for producing in the said canal at every cycle of the engine an air-blast into or toward the explosion-chamber, substantially as described.

4. In a hydrocarbon-engine, the combination of an independent furnace or lamp, with a helical or zigzag shaped evaporating-canal surrounding the said source of heat and provided with a valve adapted to establish and interrupt communication with the explosion-chamber at every cycle of the engine, an oil feeder or pump adapted to introduce into the said evaporating-canal small exactly-measured quantities of liquid fuel at every cycle of the engine, and a pump, preferably the working-cylinder, for producing in the said canal at every cycle of the engine an air-blast into or toward the explosion-chamber, substantially as described.

5. In a hydrocarbon-engine, the combination of the explosion-chamber and valve-chest, with an evaporating-canal surrounding the said explosion-chamber and adapted to be heated by the same, an independent source of heat, an auxiliary evaporating-canal adapted to be heated by the same, and a cock or valve adapted to establish communication between the explosion-chamber alternately with the first or the second of the said evaporating-canals, substantially as described, and for the purpose specified.

406,541. HAME-FASTENER. WILLIS S. SHERMAN, Marinette, Wis. Filed May 3, 1888. Serial No. 272,696. (No model.)

Claim.—1. The combination, with a pair of hames and a connecting hame-strap, of the herein-described buckle comprising longitudinal side bars and transverse end-connecting bars arranged in a common plane, one of which is provided with a lug adapted to take into a perforation formed in the hame-strap and having intermediate transverse bars arranged in a different plane, one of which bars is embraced by the strap and the other of which is provided with a tongue adapted to take into one of a series of perforations formed in the strap, substantially as specified.



2. The combination, with the hames 1 and 2, having the rings 3 and 4, the strap 5, having the perforations, and buckles 6, connecting the same, of the buckle 8, having the side bars 9 and cross-bars 10, 14, 15, and 11, the bar 14 being provided with a tongue and the bar 11 being provided with a lug 12, taking into an aperture 13 in the strap, which strap passes over said bars 11 and 15, the buckle being adapted, when swung to one side, to bend the strap upon itself, substantially as specified.

406,542. COVER FOR CROCKS AND JARS. JAMES A. SILVA, Sandusky, Ohio. Filed May 6, 1889. Serial No. 309,737. (No model.)

Claim.—The combination, with a crock having the flange B at its upper edge, of the elastic band C, provided with the screw-thread and encircling the crock just beneath the flange, and cover D, having a depending flange, said flange being provided with a corresponding screw-thread, the parts being constructed and arranged to operate substantially as and for the purpose described.

406,543. KITCHEN-CABINET. JAMES M. SKIPPER, Granbury, Tex. Filed Feb. 12, 1889. Serial No. 299,869. (No model.)

Claim.—In a kitchen-cabinet, the casing A, having hinged lid B

and partitions C C D G, forming flour and meal bins E F, in combination with the removable sheet-metal linings for the said bins, the removable cleats H I, and the covers H' I', arranged to slide upon the said cleats one above the other, substantially as set forth.

406,544. FASTENER OR BINDING-STRAP. FERDINAND W. STARR, Springfield, Ohio. Filed Mar. 20, 1889. Serial No. 304,010. (No model.)

Claim.—1. A fastener or binding-strap provided with prongs formed integrally and upset out of the plane of the strip to constitute a driving-head, substantially as described.

2. A fastener or binding-strap consisting of a strip of metal having corrugated prongs, the base of which is struck up out of the plane of the strip to form driving-heads, substantially as described.

3. A fastener or binding-strap consisting of sheet metal, having integral prongs corrugated and struck up at their bases to form driving-heads and having an angular outline at their driving edges, substantially as specified.

4. A fastener or binding-strap provided with prongs formed integrally and upset out of the plane of the strip, the metal being thickened at the base of said prongs, substantially as specified.

5. A fastener or binding-strap provided with prongs formed integrally, corrugated and struck up out of the plane of the bases of the same to form driving-heads, and having multiple points at their driving edges, substantially as described.

406,545. DOUBLE-POINTED CORRUGATED FASTENER. FERDINAND W. STARR, Springfield, Ohio. Filed Mar. 20, 1889. Serial No. 304,011. (No model.)

Claim.—1. A corrugated fastener, each corrugation of which is provided with a double point, substantially as specified.

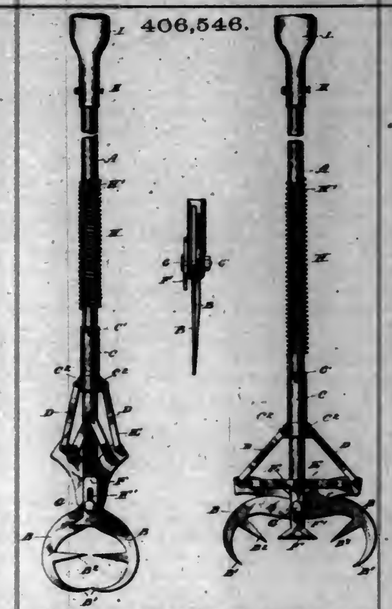
2. A corrugated fastener, each of the corrugations of the same having a double point comprising a draw cutting-edge intermediate the points, substantially as described.

3. A corrugated fastener, each of the corrugations of which is provided with a double point comprising a draw cutting-edge, and having beveled notches in the sides of said corrugations, substantially as described.

4. A fastening device consisting of a single corrugation having a double point, substantially as described.

5. A fastening device consisting of a single corrugation having a double point, comprising a draw cutting-edge, substantially as described.

6. A fastening device consisting of a single corrugation having a double point, comprising a draw cutting-edge intermediate said points, and having a beveled notch on the side of said spike, substantially as described.



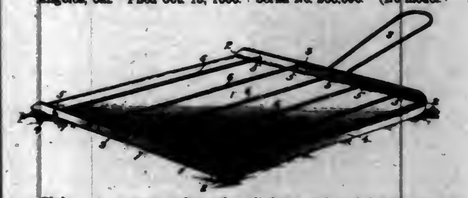
406,546. FISH-SPEAR. WILLIAM TABER, Clinton Corners, N. Y., assignor of two-thirds to Charles Haight Griffen, same place. Filed Mar. 9, 1889. Serial No. 302,723. (No model.)

Claim.—1. In a fish-spear, a cleft stem, a pair of spiked clutches pivoted to one another and to said stem within said cleft, a trip-link between said clutches and sliding upon said pivot, and locking-links pivoted to said clutches for the purpose of holding them open, in combination with a sleeve sliding upon said stem and attached to said clutches at their rear ends by means of links, and a spring attached to said stem and to said sleeve, substantially as described.

2. In a fish-spear, a cleft stem, a pair of spiked clutches pivoted to one another and to said stem within said cleft, and means for closing said clutches upon the fish, in combination with a sleeve, as I, fastened to the end of the staff of said spear, and a spring-pin, as K, passing through the rear end of said stem and the front end of said sleeve, substantially as described.

3. In a fish-spear, a cleft stem, a pair of spiked clutches pivoted to one another and to the stem within said cleft, said clutches being prolonged backward, and locking-links attached to said backward prolongations for the purpose of holding the clutches open, in combination with a sleeve sliding upon said stem and attached to said

406,546.



backward prolongations, a pin fastened to said stem, and a spiral spring attached to said sleeve, two coils of said spring embracing said pin, substantially as described.

4. In a fish-spear, a cleft stem, clutches bearing two spikes, said spikes being in the same plane, said clutches pivoted to one another and to the stem within said cleft, and means for closing said clutches upon the fish, substantially as described.

5. In a fish-spear, a cleft stem, a pair of spiked clutches pivoted to one another and to said stem within said cleft by means of a pivot having a screw-thread for insertion in said stem and a squared end, a nut screwing onto the other end of said pivot, a pair of locking-links attached to said clutches and to each other by means of pivots, and a trip-link provided with a slot sliding upon said squared end of the pivot and in the path of said locking-links, in combination with a sleeve sliding upon said stem pivotally attached to said clutches, and a spiral spring attached to said stem and to said sleeve, substantially as described.

406,547. TOASTER OR BROILER. CHARLES T. TARPENNING, Los Angeles, Cal. Filed Oct. 15, 1888. Serial No. 288,090. (No model.)

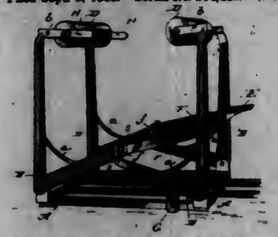
Claim.—1. A toaster formed of light metal and having two of its opposite sides bent downwardly at an angle to its body portion and its remaining opposite sides bent upwardly at an opposite angle and perforated, and provided with transverse wires extending from side to side, substantially as specified.

2. A toaster formed of sheet metal, of a rectangular shape, and having each of its corners slit or recessed and two of its opposite sides bent downward to form a rest for the toaster, and its remaining opposite sides bent upwardly at a reverse angle and perforated, and provided with transverse wires extending from side to side, headed at their outer ends, two of the wires being extended to form a handle, substantially as specified.

3. The toaster 1, having the corner recesses 2, and having its opposite sides bent in reverse directions, as at 3 and 4, and the latter provided with a series of perforations 5, and transverse wires 6, mounted therein and bent to form a handle 8, substantially as specified.

406,548. BILL-OF-FARE AND ADVERTISING CASTER. DELANCY R. TERRILL, Copenhagen, N. Y., assignor of one-half to Judson P. Hadcock, same place. Filed Mar. 19, 1889. Serial No. 303,847. (No model.)

406,548.



Claim.—1. The combination, with the base, the standard secured thereto at its lower end and at its upper end screw-threaded, as shown, and the handle having internal threads to engage the threaded end of the standard, of the body having rigid therewith the central downwardly-extending tubes B sleeved on the standard, the shoulder D^3 on the standard to form a stop for the tube, and the blocks in said body, substantially as shown and described.

2. The herein-described bill-of-fare and advertising caster comprising in combination a standard, a body pivoted upon said standard, a handle secured to the end of the standard above the body, and two or more series of interchangeable blocks having printed matter upon their faces, trays for receiving the blocks, and openings in the faces of the body of the caster for displaying the blocks within the trays, substantially as described.

406,549. COMPOSITION FOR COATING EGGS. JOHN F. TIMMONS, Maryville, Mo., assignor of one-half to William A. Peart, same place. Filed Apr. 2, 1889. Serial No. 305,600. (No specimens.)

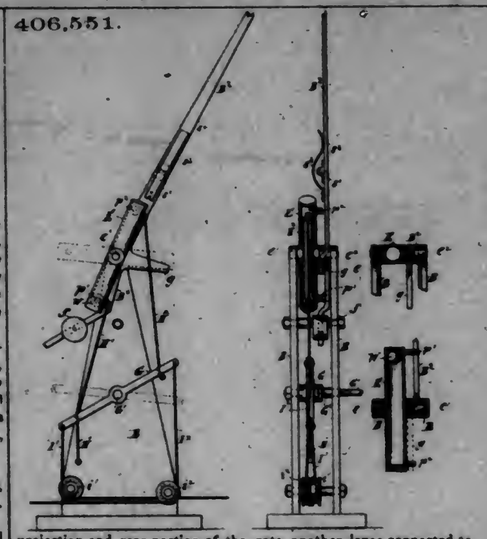
Claim.—The herein-described composition of matter to be used for the preservation of eggs, consisting of water, gum-shellac, bicarbonate of soda, white glue, and Spanish whiting, in the proportions specified.

406,550. MOP-WRINGER. WILLIAM P. TRACY, Grand Rapids, Mich., assignor of two-thirds to George N. Davis and Arthur Meigs, same place. Filed Sept. 3, 1888. Serial No. 284,412. (No model.)

Claim.—1. In combination, the four L-shaped levers supported to have pivotal movement, one of said pair being extended by a treadle-arm secured directly thereto, and a direct sliding connection between the second pair of arms or levers and the first pair, substantially as described, whereby when the treadle-arm is depressed the first pair of levers will be rocked, which will cause the operation of the second pair through the sliding connection.

2. In combination, the four L-shaped levers pivotally supported, a direct sliding connection between the pairs, consisting of the forks *f* on the lower arms of one pair embracing the lower arms of the other pair and the pins passing through the forks, and an operating-lever, substantially as described.

3. In combination, the two pairs of L-shaped levers, one set having forks embracing the other set, and stop projections against which the forks bear, substantially as described.



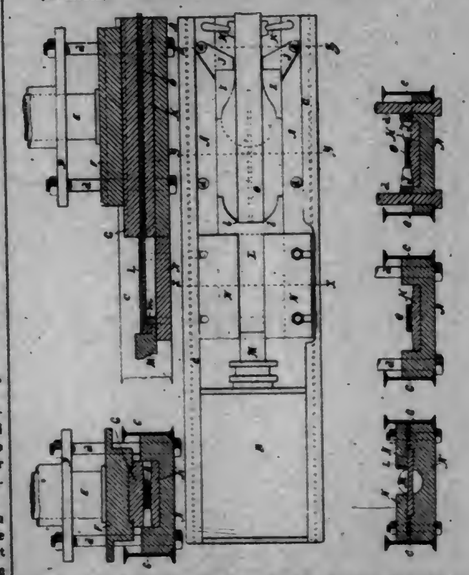
406,551. RAILROAD-GATE. GEORGE VARAR, Jr., New York, N. Y. Filed Jan. 23, 1889. Serial No. 297,948. (No model.)

Claim.—1. The combination, with a railway-gate having a transverse projection, of a lever and a movable weight supported by said lever, the said gate and lever being independently hung upon the same shaft, and the said lever being provided with pins or projections for engaging the transverse projection and operating the gate, substantially as specified.

2. The combination, with a railway-gate having a rear extension and a transverse projection, of a lever independently hung upon the same shaft, a weight supported by said lever, pins or projections at opposite ends of said lever alternately engaging the rear extension and transverse projection of the gate, tappets adjacent to the track, and connections between the tappets and said levers, substantially as specified.

3. The combination, with a railway-gate having a transverse projection, of a lever independently hung upon the same shaft, a weight supported by said lever, pins or projections engaging the transverse

406,551.



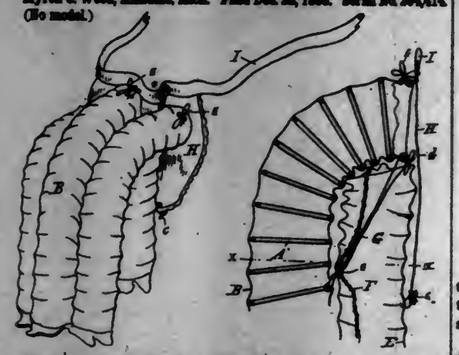
projection and rear portion of the gate, another lever connected to the weight-supporting lever with provision for lost motion, tappets adjacent to the track, and connections between the tappets and the second-mentioned lever, substantially as specified.

4. The combination, with a gate B', of a box E, provided with pins or projections for operating said gate, a lever G, cords or chains $H' H^2$, cords or chains $I' I^2$, and tappets adjacent to the track, substantially as specified.

5. The combination, with a gate B', of a box E, provided with trunnions, on one of which the gate turns and is supported, said box containing a weight and having projections for operating a gate-beam, substantially as specified.

406,552. APPARATUS FOR UPSETTING EYE-BARS. WILLIAM R. WEBSTER, Philadelphia, Pa. Filed Apr. 22, 1889. Serial No. 308,065. (No model.)

Claim.—1. In an apparatus for upsetting eye-bars, the combination of one or more sliding dies with an upsetting-plunger arranged to work between the die-faces without engaging them.



2. In an apparatus for upsetting eye-bars, the combination of dies for holding the bar to be upset, an upsetting-plunger arranged to work between said dies, supporting-guides for said plunger, arranged

in front of the dies, and a ram arranged to actuate the plunger and work between the said guides.

3. In an apparatus for upsetting eye-bars, the combination of a hydraulic cylinder or its equivalent and the housing of the dies with beams C C, connecting and binding them together, substantially as and for the purpose specified.

4. In an apparatus for upsetting eye-bars, a shaping-plunger having a shallow recess in its center adapted to engage the end of a bar and prevent it from moving sidewise during the early stages of upsetting.

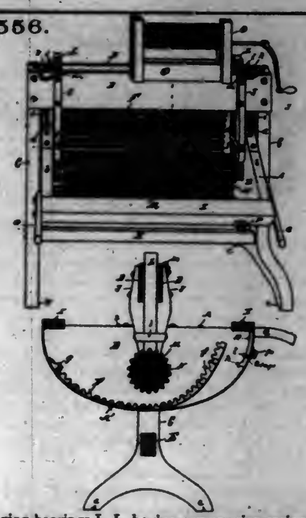
406,553. BUSTLE. ALBIN WHITE, Detroit, assignor of one-half to Myron G. Wood, Hillsdale, Mich. Filed Dec. 28, 1888. Serial No. 294,414. (No model.)

Claim.—In a bustle, the combination of the outer set of coils A A A', the inclosing fabric B, in which said outer set of coils are secured in vertical pockets formed therein, the inner set of tubular coils D D, the inclosing fabric E, forming the vertical pockets in which the said inner set of coils are secured and provided with an eyelet *a*, the bow-tape G, adjustably connecting the central portion of the outer set of coils with the top thereof, and passing through the eyelet *a* of the inner set of coils, the pad H, secured to the outer and inner set of coils by the tapes *c*, and having the waistband I, constructed and arranged substantially as described.

406,554. TONGS FOR HANDLING MERCHANDISE. ALBERT J. WOOD, Kansas City, Mo. Filed Jan. 22, 1889. Serial No. 297,112. (No model.)

Claim.—The tongs consisting of the handle having at its outer end a fixed arm and a pivoted arm provided with an extension connected by a rod to a lever pivoted upon the handle, said arms having clamping-plates, one of which has a hook, and which arms are curved upwardly and deflected or curved at their outer or upper ends in a line diverging upward from a vertical line passing through their pivotal points, substantially as set forth.

406,555. REVOLVING BOOK-CASE. JOHN B. ENTLER, Canton, Ohio. Filed Jan. 10, 1888. Serial No. 260,266. (No model.)

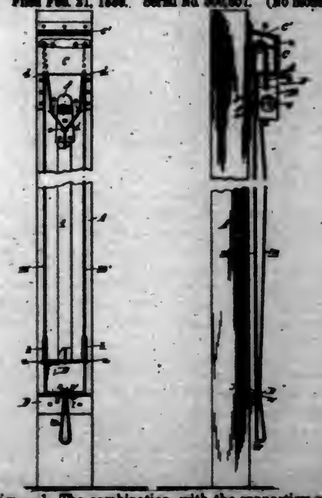


Claim.—In a revolving book-case, an outer casing provided with shaft-bearings and friction-rollers, in combination with an interior casing mounted upon a central shaft pivoted in said bearings, and consisting of corner-posts B^{17} and removable shelves B^{9}, connected to each other and to the corner-posts by pins B^{16}, and suitable gearing, substantially as and for the purpose specified.

406,556. WASHING-MACHINE. JOSEPH W. BAKER, Corry, Pa. Filed June 15, 1888. Serial No. 277,246. (No model.)

Claim.—The combination, in a washing-machine, of an oscillating tub A, having a semi-elliptical-shaped bottom A' and a fluted washboard F therein, with a fluted compression-roller M, mounted in ver-

406,556.



tically-moving bearings L L, having compression-springs *k k* secured to said bearings and to the frame, substantially as and for the purpose set forth.

406,557. BALANCED SLIDE-VALVE. JOSHUA R. BARNES, Springfield, Ill. Filed Feb. 16, 1889. Serial No. 300,194. (No model.)

Claim.—In a balanced slide-valve for steam-engines, said valve having a cap or rider adapted to slide steam-tight against the inner surface of the steam-chest cover, and made steam-tight upon the crown part of the valve by packing located in a groove extending entirely round the crown of the valve, the combination of steam-passages *c*, having their ingress-orifices in the exterior lower part of the crown of the valve and their egress-orifices in the packing-groove *d*, the packing ring or band *i*, ledges or shoulders *r*, a semicircular channel in the bottom of the groove *d*, and supporting-springs *h*, all of said parts constructed and adapted to operate substantially as and for the purpose set forth.

406,558. SIGNAL APPLIANCE. WILLIAM J. BARNES, Oshkosh, Wis. Filed Feb. 21, 1888. Serial No. 300,657. (No model.)

Claim.—1. The combination, with the supporting-post A, of a light frame or box joined to stanchions which pass, when raised,

through corresponding openings in a pulley-supporting box above and are connected with a double raising-lanyard passing over pulleys from below, the lower end being attached to and carried by the light-frame from below to form a lowering-rope integral with the raising-rope, a drag attached to a lower supporting-platform and engaging both the raising and lowering ropes, and a supporting-hook at the top arranged so as to engage a corresponding hook or projection upon the light-frame when descending in a perpendicular, substantially as shown, for the purposes specified.

2. The combination, with a supporting-post A, of a light-frame having posts or stanchions extending upwardly, attached to a double lanyard passing upwardly over pulleys at the top and downward below the light-frame and attached thereto, eyes or sockets at the top to admit or inclose the stanchions when raised, and a supporting-hook at the top to engage a corresponding hook or projection upon the light-frame when at perpendicular, substantially as shown, for the purposes specified.

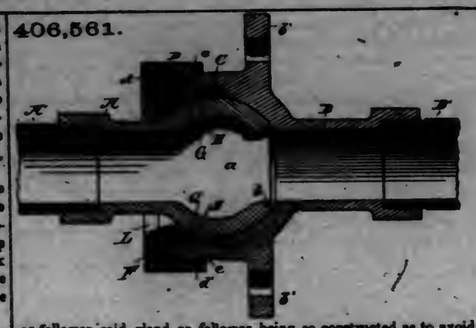
3. In a railroad or other signal, the combination, with a supporting-post, of a pulley secured to the upper part of the post, an elevating and lowering cord passing over the pulley, said cord extending in a loop near the bottom of the post, a light-frame having the two ends of the cord connected thereto, a hook or support for the light-frame to hold it firmly at the proper signaling-point, and a protective covering for the portion of the cord which passes over the pulley when the lamp is lowered for lighting or trimming.

406,559. PROCESS OF MANUFACTURING STARCH. ARNO REHN, Chicago, Ill. Filed July 10, 1888. Serial No. 280,432. (No specimens.)

Claim.—The herein-described method of producing refined starch by the acid process, embracing the following steps, to wit: the preliminary soaking of the whole grain in a weak acid solution, the crushing of the grain and its mixture with water, the separation of the germs and hulls from the starch-milk, the running of the starch-milk over starch-tables, the collection of the starch from the starch-tables and its mixture with a sufficient quantity of water to form a starch-milk of, say, 20° Baumé, the treatment of such starch-milk with an alkali—such as caustic soda—the introduction of the resulting alkalied starch-milk into the drum of a centrifugal separator and the separation of the starch from the gluten by centrifugal force, the removal by washing of any gluten deposited upon the surface of the starch-wall and the draining of the water and gluten from the drum, and, finally, the mixture of the starch collected from the drum with water and the washing out and elimination of the alkali by settlement and decantation, as set forth.

406,560. BOB-SLED. WILL J. BLACKSTON, Otter Lake, Mich. Filed Apr. 12, 1888. Serial No. 308,961. (No model.)

Claim.—1. In a sled, the combination, with the casting formed with semicircular bearing and circular block in said bearing, of the wearing-plate formed with ears embracing said block, and with the ribs *g* connecting said ears, substantially as shown and described, and for the purpose specified.



2. In a sled, the hollow casting B, formed with semicircular bearing at its upper end and with circular block in said bearing, with a space at each end thereof, combined with the wearing-plate formed with depending ears and ribs *g* connecting the same, and the transverse bolt pivotally connecting said ears and block together, substantially as shown and described.

3. In a sled, the combination, with the runners provided with the knuckles and the transverse timbers secured to portions of said knuckles, of the longitudinal timber, the rocking plate on the under side thereof at one end, and the loosely-working bolt securing the said end of the longitudinal timber to one of the transverse timbers, substantially as shown and described.

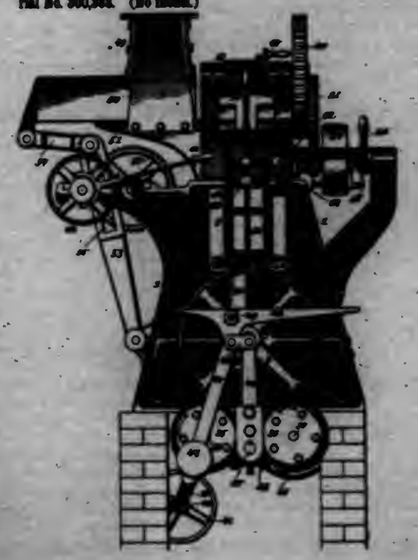
406,561. BALL-AND-SOCKET JOINT. WILLIAM BURNHAM, New York, N. Y. Filed Jan. 23, 1889. Serial No. 297,393. (No model.)

Claim.—1. In a ball-and-socket joint, the combination of a socket having a packing-space formed within its walls, a soft packing interposed between the ball and socket, a ball within said socket, a gland

406,561.

or follower, said gland or follower being so constructed as to avoid frictional contact with the ball, and an expansible ring interposed between the gland and packing, substantially as and for the purposes set forth.

2. In a ball-and-socket joint, the combination of a socket having a packing-space formed in its walls, a soft packing, a ball within the socket, a gland or follower so arranged as to have no frictional contact with the said ball, an expansible ring between the gland or follower and the packing, and a movable ring between the packing and said expansible ring, substantially as set forth.



3. In a ball-and-socket joint, the combination of a socket having a packing-space formed in its walls, a soft packing interposed between the ball and socket, a ball within said socket, a gland or follower, means for restricting the inward movement of said gland, and an expansible ring interposed between the gland and packing, substantially as and for the purposes set forth.

4. In a ball-and-socket joint, the combination of a socket having a packing-space formed in its walls, a soft packing, a ball within the socket, a gland or follower, a shoulder formed on said gland, an expansible ring between the said gland and packing, and a movable ring between the packing and said expansible ring, substantially as set forth.

5. The combination, in a ball-and-socket joint, of a ball and socket, said ball being within said socket, a gland or follower arranged as described, split ring G, and movable ring H, and soft packing beneath said movable ring, these parts being arranged for joint operation substantially as hereinbefore set forth.

6. The combination, in a ball-and-socket joint, of a ball *a*, socket *b*, said ball being within said socket, packing *c*, a gland or follower arranged as described, split ring G between the gland and packing, and a movable ring H between the packing and said split ring, these parts being arranged for joint operation substantially as hereinbefore set forth.

406,562. BRICK-MACHINE. WALFRED BURNHAM, Los Angeles, Cal., assignor to Charles H. Frost, same place. Filed Feb. 16, 1888. Serial No. 300,268. (No model.)

Claim.—1. In a brick-machine, a main frame, one or more mold-boxes supported in the main frame, a cover, as 13, for the mold-boxes, an eccentric-shaft, as 16, journaled in said cover, and a plunger, as 17, in combination with gear-wheels, a pulley, and clutch for operating said shaft and plunger, substantially as and for the purpose specified.

2. In a brick-machine, a main frame, one or more mold-boxes supported by the frame, and a gage, as 62, supported by the frame, in combination with a lower plunger and gages 64 and 65, supported by such plunger, substantially as and for the purpose specified.

3. In a brick-machine, a main frame, one or more mold-boxes, a lower plunger, a screw, gear-wheels, and friction-drum for operating the plunger, in combination with a rocker carrying friction-rollers 35 and 36 and belt-pulleys through which the friction-rollers are put into motion, substantially as and for the purposes specified.

4. In a brick-machine, a main frame, one or more mold-boxes, a lower plunger operated by a screw and gear-wheels, a friction-drum, as 12, and a rocker carrying pulleys and friction-wheels, in combination with a foot-lever 42, through which the lower plunger can be brought into operation or stopped at will, substantially as and for the purposes specified.

5. In a brick-machine, a main frame carrying one or more mold-boxes and a clay-filler, as 50, in combination with a pitman-crank, gear-wheels, pulley, clutch, and lever through which the clay-filler is moved and stopped at will, substantially as and for the purposes specified.

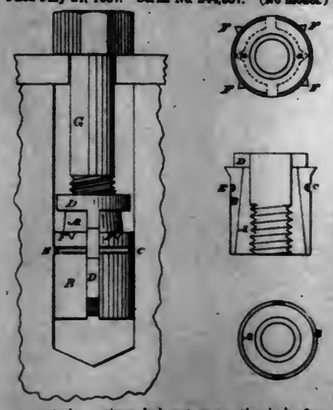
6. In a brick-machine, the combination of a main frame, one or more mold-boxes, a hinged cover, as 13, an eccentric-shaft, as 16, upper plunger, as 17, lower plunger, as 4, a screw, as 8, a rocker carrying friction-pulleys, as 35 and 36, a friction-drum, as 12, and a foot-lever, as 42, gage 62, supported by the frame, and gages 64 and 65, supported by the lower plunger, substantially as and for the purposes specified.

7. In a brick-machine, the combination of a main frame, one or more mold-boxes, a plunger, as 4, and a gage, as 64, supported by the said plunger, substantially as and for the purposes specified.

8. In a brick-machine, the combination of a main frame, one or more mold-boxes, a plunger, as 4, a gage, as 62, supported by some fixed part, and a gage, as 64, supported by said plunger, substantially as and for the purposes specified.

9. In a brick-machine, a rocking shaft, as 27, in combination with arms 29, sleeves 30, sleeves 31 and 32, shafts 33 and 34, friction-wheels, as 35 and 36, and driving-pulleys, as 37 38, substantially as and for the purposes specified.

406,563. COMPOSITION FOR FLOORING, ROOFING, AND OTHER PURPOSES.



CHARLES A. CATLIN, Providence, R. I., assignor of one-half to Cornelius S. Sweetland, same place. Filed Mar. 9, 1888. Serial No. 266,725. (No specimens.)

Claim.—1. The herein-described material or composition, the same being a tough, tenacious, and somewhat elastic substance composed of silicate of soda or potash having a comparatively small proportion of fibrous asbestus mixed therewith and uniformly distributed throughout the same, substantially as set forth.

2. A material or composition for roofing, flooring, and similar purposes, composed of silicate of soda or potash having fibrous asbestus mixed therewith and rendered insoluble by the addition of an acid, substantially as described.

406,564. EXPANSION-BOLT DEVICE.

ISAAC CHURCH, Toledo, Ohio. Filed July 21, 1887. Serial No. 244,857. (No model.)

Claim.—1. A bolt, a threaded nut upon the bolt, formed with inclined outer sides, and supplemental wedges movable upon the same, as and for the purpose set forth.

2. A bolt, a threaded nut upon the bolt, formed with an annular collar and right angled ribs, semicircular inclined surfaces between the ribs, and semicircular wedges movably secured upon the inclined surfaces, as and for the purpose set forth.

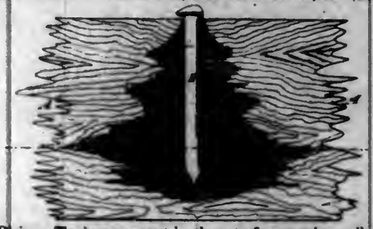
3. A bolt and a threaded nut upon the bolt, formed with diametrically-opposite inclined surfaces, in combination with oppositely-inclined wedges movably secured upon the inclined surfaces of the nut, as and for the purpose set forth.

4. A bolt and a threaded nut upon the bolt, formed with inclined surfaces, in combination with wedges movably secured upon the nut and provided with projecting studs upon the outer side thereof, as and for the purpose set forth.

406,565. EXPANSION-BOLT.

ISAAC CHURCH, Toledo, Ohio. Filed Apr. 22, 1889. Serial No. 308,170. (No model.)

Claim.—1. In an expansion-bolt, a shell formed with an interior inclined annular portion and a cylindrical tapered nut within the same, in combination with a threaded bolt within the nut, as and for the purpose set forth.



2. In an expansion-bolt, a cylindrical internally-inclined shell formed of two sections joined by a flexible portion intermediate the same, in combination with an inclined nut movable upon the incline of the shell, as and for the purpose set forth.

3. In an expansion-bolt, a cylindrical shell formed of a plurality of sections connected by a flexible central portion, each of the sections being formed with an inclined interior surface and a segment of an annulus, in combination with an oppositely-tapered nut movable upon the incline of the sections, and a bolt movable within the annulus formed by the assembling of the segments, as and for the purpose set forth.

4. In an expansion-bolt, semicircular sections formed with an internally-inclined interior portion, and slots extending from the same to the outer edge, in combination with an inclined nut between the sections formed with projections to move within the slots, as and for the purpose set forth.

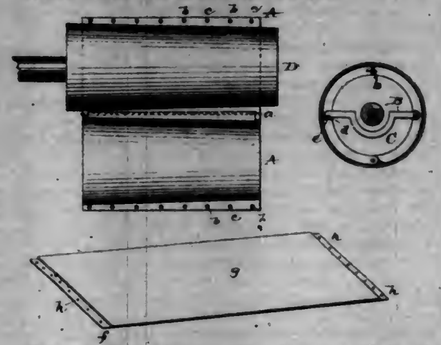
406,566. PRESERVING RAILWAY-TIES.

PLIMMON H. DUDLEY, New York, N. Y. Filed Dec. 23, 1886. Serial No. 222,375. (No model.)

Claim.—The improvement in the art of preserving railway-ties and other spiked and bolted timbers, consisting in first boring a hole in the wood transverse to the length of the pores and grain and which exposes the ends of the pores, in then applying a preservative compound in the hole, where it has access to the exposed ends of the pores, and in finally driving a spike or bolt to substantially fill the hole and force the preservative compound into the wood upon all sides, substantially as herein described.

406,567. TELEPHONE.

THOMAS A. EDISON, Menlo Park, N. J. Filed Feb. 19, 1886. Serial No. 192,485. (No model.)



Claim.—1. An electrode for telephones composed of a body of granules of carbonized hard coal, substantially as set forth.

2. In a telephone, the combination, with a diaphragm, of an electrode composed of a body of granules of carbonized hard coal included in the circuit and acted upon by the diaphragm to vary the resistance of the circuit, substantially as set forth.

3. In a telephone, the combination, with a diaphragm, of an electrode composed of a body of granules of carbonized hard coal, and metal surfaces between which such body of carbon-granules is held, one of such metal surfaces being controlled by the diaphragm, substantially as set forth.

406,568. PHONOGRAPH.

THOMAS A. EDISON, Llewellyn Park, N. J. Filed Oct. 17, 1888. Serial No. 288,363. (No model.)

Claim.—1. The combination, with a phonogram-cylinder, of a false shell made in two parts hinged together for receiving the phonogram-blank, substantially as set forth.

2. The false shell for phonographs, having a tapering bore and a cylindrical outer surface and made in two parts hinged together, substantially as set forth.

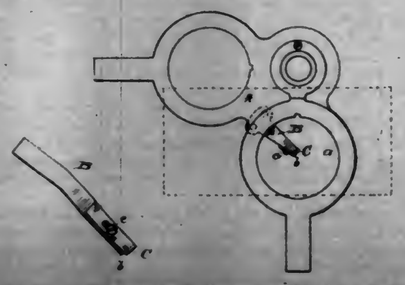
3. The false shell for phonographs made in two parts hinged together, in combination with a locking device for holding said parts together, substantially as set forth.

4. The false shell for phonographs composed of two parts hinged together, and having their edges provided with registering projections and perforations, substantially as set forth.

5. The flexible phonogram-blank consisting of a backing of flexible material covered, except at its ends, with flexible indenting material, substantially as set forth.

406,569. PHONOGRAM-BLANK.

THOMAS A. EDISON, Llewellyn Park, N. J. Filed Jan. 19, 1889. Serial No. 296,878. (No model.)



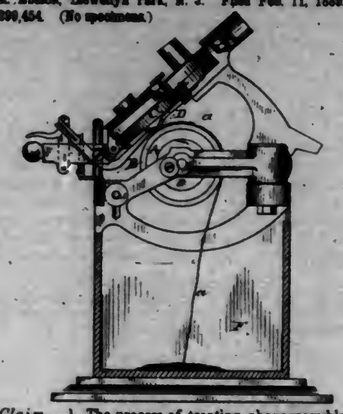
Claim.—1. A cylindrical phonogram-blank having a wound inner surface of filiform material, such as thread, and an outer surface of sound-recording material, substantially as set forth.

2. A cylindrical phonogram-blank having, in combination, a cylindrically-wound body of filiform material, such as thread, and an outer covering of the sound-recording material, substantially as set forth.

3. A cylindrical phonogram-blank having a wound internal lining of filiform material, substantially as set forth.

406,570. PHONOGRAPH.

THOMAS A. EDISON, Llewellyn Park, N. J. Filed Feb. 11, 1889. Serial No. 299,452. (No model.)

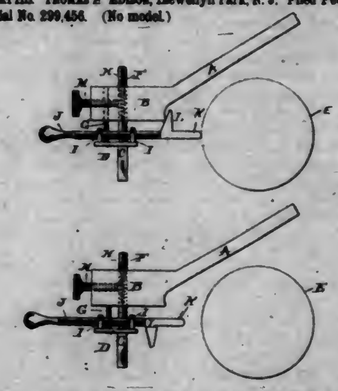


Claim.—1. In a phonograph, the turning-off tool provided with a breaking shoe or shoulder for powdering or breaking the chips, substantially as set forth.

2. In a phonograph, the combination, with the turning-off tool, of a breaking-shoe adjustably secured thereto and acting to powder or break the chips, substantially as set forth.

406,571. PROCESS OF TREATING PHONOGRAM-BLANKS.

THOS. A. EDISON, Llewellyn Park, N. J. Filed Feb. 11, 1889. Serial No. 299,454. (No specimens.)



Claim.—1. The process of treating phonogram-blanks having hard brittle surfaces, consisting in producing a tough film upon the surfaces of such blanks preparatory to turning them off, substantially as and for the purpose set forth.

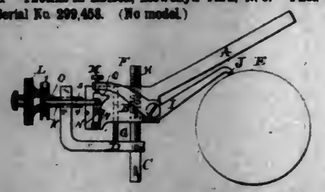
2. The process of treating phonogram-blanks having hard brittle surfaces, consisting in applying to such blanks preparatory to turning them off a solution which attacks the substance of the blanks and softens and toughens the surface, substantially as and for the purpose set forth.

406,572. AUTOMATIC DETERMINING DEVICE FOR PHONOGRAPHS.

THOMAS A. EDISON, Llewellyn Park, N. J. Filed Feb. 11, 1889. Serial No. 299,456. (No model.)

Claim.—1. In a phonograph, the combination, with the recorder or reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a determining-point carried by said frame and making contact with the phonogram-surface, a lock locking the spectacle-frame, operated by hand after the determining-point touches the phonogram-surface, substantially as set forth.

2. In a phonograph, the combination, with the recorder or reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a determining-point carried by said frame and making contact with the phonogram-surface, a lock locking the spectacle-frame, operated by hand after the determining-point touches the phonogram-surface, and mechanism independent of the locking mechanism operating to withdraw the determining-point from contact with the phonogram-blank after the locking of the spectacle-frame is effected, substantially as specified.



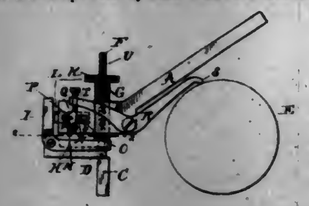
3. In a phonograph, the combination, with the recorder or reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a lever and a determining-point carried by said lever and making contact with the phonogram-surface, and a lock

locking the spectacle-frame, operated by hand after the determining-point touches the phonogram-surface, substantially as specified.

4. In a phonograph, the combination, with the recorder or reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a lever and a determining-point carried by said lever and making contact with the phonogram-surface, a lock locking the spectacle-frame, operated by hand after the determining-point touches the phonogram-surface, and mechanism, independent of the locking mechanism, operating to withdraw the determining-point from the phonogram after the locking of the spectacle-frame is effected, substantially as specified.

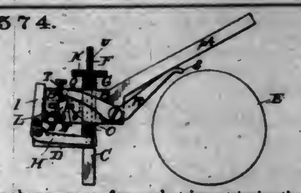
5. In a phonograph, the combination, with the recorder or reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a determining-point carried by said frame and making contact with the phonogram-surface and operated by hand after the operation by hand of the lock locking the spectacle-frame, and said lock locking the spectacle-frame, operated by hand after the determining-point touches the phonogram-surface, substantially as set forth.

406,573. AUTOMATIC DETERMINING DEVICE FOR PHONOGRAPHS. THOMAS A. EDISON, Llewellyn Park, N. J. Filed Feb. 11, 1889. Serial No. 299,458. (No model.)



Claim.—1. In a phonograph, the combination, with the recorder or reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a determining-point carried by said frame and determining by contact with the phonogram-surface the exact position of adjustment of the recording or reproducing point therewith, and a lock operated by hand for locking the position of the spectacle-frame at such point of adjustment, and a tripper tripping the determining-point away from the phonogram-blank operated by a farther movement of the locking mechanism beyond that necessary to lock, substantially as specified.

2. In a phonograph, the combination, with the recorder or reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a lever and a determining-point carried by said lever and determining by contact with the phonogram-surface the exact position of adjustment of the recording or reproducing point therewith, and a lock operated by hand for locking the position of the spectacle-frame at such point of adjustment, and a tripper tripping the determining-point away from the phonogram-blank operated by a further movement of the locking mechanism beyond that necessary to lock, substantially as specified.

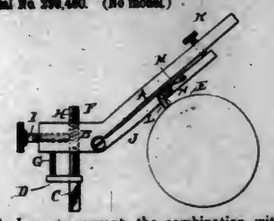


3. In a phonograph, the combination, with a movable frame, a guide-rest, and adjustable presser-foot, of a lock operated by hand to lock the movable frame and a tripper formed with a depression and a lever bearing the determining-point resting on said tripper, a sliding head on the locking-piece, and a connection between the tripper and sliding head, whereby the tripper is operated to trip the determining-point away from the phonogram-blank, substantially as specified.

406,574. AUTOMATIC DETERMINING DEVICE FOR PHONOGRAPH. THOMAS A. EDISON, Llewellyn Park, N. J. Filed Feb. 11, 1889. Serial No. 299,459. (No model.)

Claim.—1. In a phonograph, the combination, with the recorder and reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a determining-point carried by said frame and making contact with the phonogram-surface, a lock locking the spectacle-frame operated by hand after the determining-point has contacted with the phonogram, comprising a bar on the presser-foot, a screw-threaded bar in the spectacle-frame surrounding the bar on the presser-foot, and through which said bar is free to slide, and said presser-foot, substantially as specified.

406,574.



touches the phonogram-surface, and a tripper tripping the determining-point out of contact with the phonogram-blank operated by the operation of the lock, substantially as specified.

2. In a phonograph, the combination, with the recorder and reproducer-frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a lever and a determining-point carried by said lever and making contact with the phonogram-surface, a lock locking the spectacle-frame operated by hand after the determining-point touches the phonogram-surface, and a tripper tripping the determining-point out of contact with the phonogram-blank operated by the operation of the lock, substantially as specified.

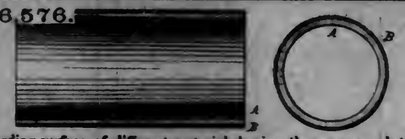
3. In a phonograph, the combination, with the recorder and reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a lever and determining-point carried by said lever and making contact with the phonogram-surface, a lock locking the spectacle-frame operated by hand after the determining-point has contacted with the phonogram, comprising a bar on the presser-foot, a screw-threaded bar in the spectacle-frame surrounding the bar on the presser-foot, and through which said bar is free to slide, and said presser-foot, substantially as specified.

4. In a phonograph, the combination, with the recorder and reproducer frame movable toward and away from the phonogram-surface, a guide-rest, and an adjustable presser-foot supporting the said frame from the guide-rest, of a lever and determining-point carried by said lever and making contact with the phonogram-surface, a lock locking the spectacle-frame operated by hand after the determining-point has contacted with the phonogram, comprising a bar on the presser-foot, a screw-threaded bar in the spectacle-frame surrounding the bar on the presser-foot, and through which said bar is free to slide, and said presser-foot, a tripper for withdrawing the determining-point from the phonogram-blank operated by the movement for operating the lock, comprising a rocking lever, sliding bolt, and tripping-piece, substantially as specified.

406,575. AUTOMATIC DETERMINING DEVICE FOR PHONOGRAPH. THOMAS A. EDISON, Llewellyn Park, N. J. Filed Feb. 11, 1889. Serial No. 299,460. (No model.)

Claim.—1. In a phonograph, the combination, with a movable frame, a guide-rest, and adjustable presser-foot, of a pivoted determining-point adapted to ride in a canted position on the surface of a revolving phonogram, substantially as specified.

2. In a phonograph, the combination, with a movable frame, a guide-rest, and adjustable presser-foot, of a pivoted L-shaped piece, one arm of which forms a determining-point, and the other arm of which is operated upon by a spring to throw the determining-point into the perpendicular when the phonogram ceases to revolve, and said spring, substantially as specified.



3. In a phonograph, the combination, with a movable frame, a guide-rest, and adjustable presser-foot, of a pivoted determining-point adapted to ride in a canted position on the surface of a revolving phonogram, and a lock locking the movable frame, operated by hand after the determining-point comes in contact with the phonogram, substantially as specified.

4. In a phonograph, the combination, with a movable frame, a guide-rest, and adjustable presser-foot, of a lever bearing a pivoted determining-point and an adjusting-screw for said lever, substantially as specified.

406,576. PHONOGRAM-BLANK. THOMAS A. EDISON, Llewellyn Park, N. J. Filed Feb. 16, 1889. Serial No. 300,514. (No model.)

Claim.—1. A phonogram-blank composed of a base and an outer

406,576.

recording-surface of different materials having the same or substantially the same coefficient of expansion, substantially as set forth.

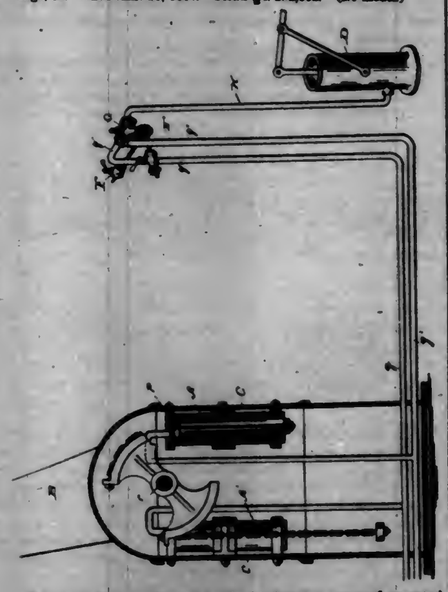
2. A phonogram-blank composed of a base of one material and a sound-recording surface of a different material, which is of a hard and brittle nature at ordinary temperatures, the two materials having the same or substantially the same coefficient of expansion, substantially as set forth.

3. A phonogram-blank having, in combination, a base of asphaltic material and an outer covering of sound-recording material, substantially as set forth.

4. A phonogram-blank having, in combination, a base of molded material and an outer covering of material having the same or substantially the same coefficient of expansion, substantially as set forth.

5. A phonogram-blank having, in combination, a base of molded material and an outer covering of another molded material, the two materials having the same or substantially the same coefficient of expansion, substantially as set forth.

6. A phonogram-blank having, in combination, a base of asphalt mixed with a material which contracts greatly in solidifying, such as carnauba-wax, and an outer covering of sound-recording material, substantially as set forth.



7. A phonogram-blank having, in combination, a base of asphalt mixed with a liquefying material, and an outer covering of sound-recording material, substantially as set forth.

8. A phonogram-blank having, in combination, a base of asphalt mixed with a material which contracts greatly in solidifying, such as carnauba-wax, and also with a liquefying material, and an outer covering of sound-recording material, substantially as set forth.

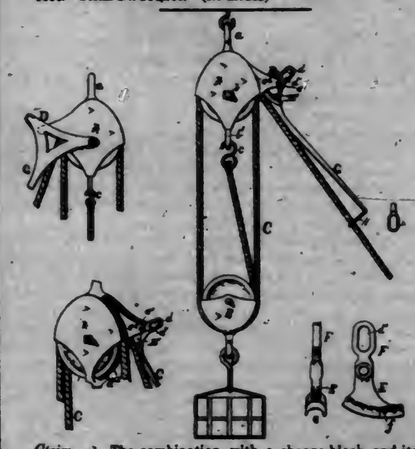
9. A phonogram-blank having an outer surface of metallic soap, and a base of another material having the same or substantially the same coefficient of expansion, substantially as set forth.

10. A phonogram-blank having a base of asphaltic material and an outer surface of metallic soap, substantially as set forth.

406,577. GATE. WILLIAM P. ELLIOTT and ARTHUR FARRAR, Chicago, Ill. Filed Mar. 29, 1887. Serial No. 232,862. (No model.)

Claim.—1. In a gate having a swinging bar on a post and actuated by fluid-pressure exerted from a pump, the combination, with the fluid-pressure mechanism at the post and the fluid-pump, of a cock G, in the communication between the said fluid-pressure mechanism and pump, having a recess *x* in its plug, a head *g*, provided with openings *f* and *f*², and valves for controlling the said openings, substantially as described.

2. In a gate having a swinging bar on a post and actuated by fluid-pressure exerted from a pump, the combination, with the fluid-pressure mechanism at the post and the fluid-pump, of a cock G, in the communication between the said fluid-pressure mechanism and pump, having a recess *x* in its plug, a head *g*, provided with openings *f* and *f*², and tubes *f* and *f'*, extending from the said opening, and provided with valves, substantially as and for the purpose set forth.

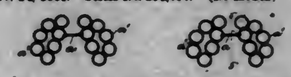


406,578. COPYING-PRESS. ADOLF REIMANN, Hamburg, Germany. Filed Dec. 17, 1888. Serial No. 293,836. (No model.)

Claim.—1. In copying-presses, the combination of the base-board or bed-plate *b*, the spring *f*, affixed to said board or plate, and the plate *a*, hinged to said spring *f*, substantially as set forth.

2. A copying-press comprising a bed-plate *b*, a spring *f*, affixed thereto, a plate *a*, hinged to said spring, a pin *k*, and a pivoted lever *h*, having a flange *u*, adapted to engage on said pin, and a rail *t*, the whole combined substantially as and for the purpose described.

406,579. HOIST. JOSEPH J. GREEN, Canton, Ohio. Filed Aug. 31, 1888. Serial No. 284,260. (No model.)

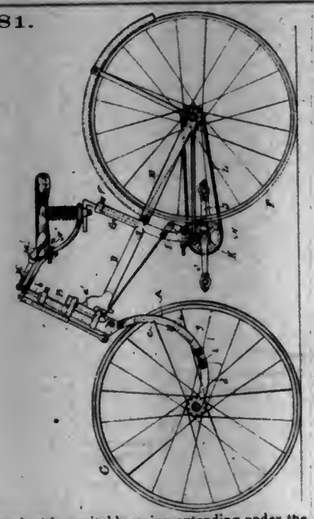


Claim.—1. The combination, with a sheave-block and its rope, of a lever and a segment pivoted at different points to the sheave-block, said lever having a pin engaging with a slot in the segment, whereby the movement of the lever controls the movements of the segment to hold or release the rope, substantially as described.

2. The combination of the sheave-blocks A and B, the rope C, the lever D, provided with the pin *d*, the pendent arm G, provided with the eye H, and the segment E, provided with the extension or arm F, having the elongated slot *d'*, substantially as and for the purpose described.

3. The combination of the sheave-blocks A and B, the rope C, the lever D, provided with the pendent arm G and eye H, the segment E, the groove *e*, and the teeth *f*, substantially as and for the purpose described.

406,580. NASAL RESPIRATOR. SUMNER H. GUYOT, Boston, Mass. Filed Nov. 24, 1888. Serial No. 291,757. (No model.)



Claim.—The improved nasal respirator herein described, consisting of a bow *a*, provided at each end with one or more shields *a'*, made up of a number of rings secured together, substantially as and for the purpose set forth.

406,581. VELOCIPEDE. CLAUS HAMSON and ANDREW PETERSEN, Worcester, Mass., assignors to Ivar Johnson, same place. Filed Nov. 1, 1888. Serial No. 289,756. (No model.)

Claim.—1. In a velocipede, the front fork having the arms thereof made in two parts, one pivoted to the other, with the main

406,581.

parts provided with a suitable spring extending under the upper end of the end section of each arm, and said end sections provided with a projection extending above its pivot, adapted to bear upon the spring aforesaid, substantially as and for the purpose set forth.

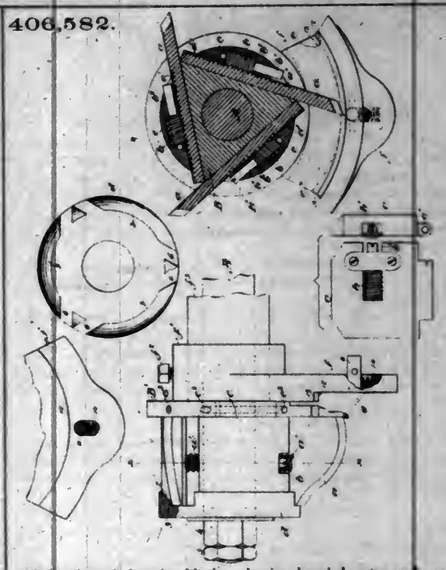
2. In a velocipede, the combination of the main parts *c* of the front fork, having the springs *g* secured thereto and extending under the end sections *d* of said arms, with said end sections *d* pivoted at their upper ends to the lower ends of the main parts *c*, and having the flanges *f* at their upper ends extending above their pivots and adapted to bear upon the top of the aforesaid springs, and the wheel-axle, substantially as and for the purpose set forth.

3. In a velocipede, the combination of the main parts *c* of the front fork, each having the vertical slot *h*, and the spring *g*, secured thereto in said slot, the free ends of said springs extending under the upper ends of the end sections *d*, and adjusting-screws *i*, adapted to bear upon the under sides of the springs *g* with said end sections *d* pivoted to the lower ends of the main parts *c*, and having a flange *f* at the upper end of each extending above the pivots of said sections and adapted to bear upon the tops of springs *g*, and the front-wheel axle, substantially as and for the purpose set forth.

4. In a velocipede, the combination of the main parts *c* of the front fork, having the springs *g* secured thereto and extending under the end sections *d* of said arms, and adjusting-screws *i*, adapted to bear upon the under side of each spring *g*, with said end sections *d* pivoted to the lower ends of the main part *c*, and each having a flange *f* at its upper end extending above the pivots of said sections and adapted to bear upon the tops of springs *g*, the foot-rests, and front-wheel axle, substantially as and for the purpose set forth.

5. In a velocipede, the front-fork pivot consisting of the pivot-bolt *e*, having a threaded longitudinal opening and transverse slots at its screw end to admit of said end being expanded, the expanding-screw *j*, and holding-nut *e'*, in combination with the main part *c* and end section *d* of the front fork, substantially as and for the purpose set forth.

6. In a velocipede front fork, the combination of the main part *c*, having the spring *g* secured in the vertical slot *h*, and the cushion *g'* in said slot under the lower end of said spring, with the end section *d* pivoted to the lower end of the main part *c* and having a flange *f*, adapted to bear upon the lower end of spring *g*, substantially as and for the purpose set forth.



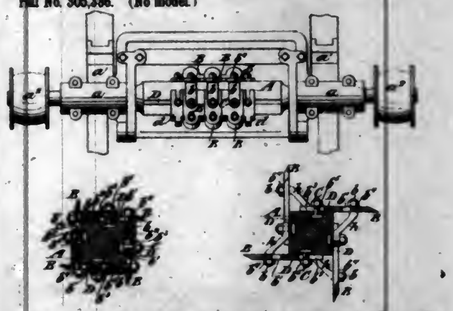
7. In a velocipede front fork, the combination of the main part *c*, having a spring *g* secured in a vertical slot *h*, and the adjustable holding-screw *i'*, adapted to bear against the under side of the lower end of said spring *g*, with the end section *d* pivoted to the lower end of the main part *c* and having a flange *f* adapted to bear upon the lower end of spring *g*, substantially as and for the purpose set forth.

406,582. HEEL-TRIMMER. MICHAEL T. HARRIGAN, Wollaston, assignor to James W. Brooks, trustee, Cambridge, Mass. Filed Jan. 15, 1889. Serial No. 296,334. (No model.)

Claim.—1. In a heel-trimming tool, the head and blades having a series of partial screw-threads, and caps or plates having each a recess at its inner side, combined with the worm-screws inserted in the openings of the said cap and engaging the said blades.

2. In a heel-trimmer, the head, the flange B', a series of blades,

406,582.

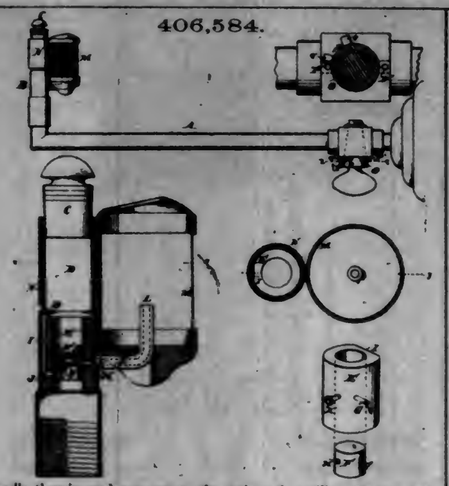


and the pivoted clamping-blocks *c*, having beveled outer ends, combined with the cap *d*, having a beveled surface to act upon the outer ends of the said blocks and force them toward the blades, substantially as described.

3. In a heel-trimmer, a head and blades and a bracket, combined with a segmental tread-guard and movable pivot for the same, whereby the tread-guard is free to tip for a limited distance in the direction of its length, substantially as and for the purpose set forth.

4. In a heel-trimmer, the head, the blades having the series of threads, the flange B', and the series of pivoted blocks having screw-threads at their inner faces and beveled at their outer ends, combined with the series of blade-adjusting worm-screws and a cap having a beveled portion 3 to act upon the said blocks, to operate substantially as described.

406,583. PLANING-MACHINE. ALFRED B. HUTCHINSON, Brooklyn, and ERNST F. AUTENRIETH, New York, assignors to the Glen Cove Machine Company, (Limited,) Brooklyn, N. Y. Filed Mar. 30, 1889. Serial No. 305,286. (No model.)



Claim.—1. The combination, with a cutter-head, of a cutter placed against one side thereof, a bolt securing the rear end of the cutter to the said side of the head, and a second bolt one end of which is fastened to the head on a side thereof at an angle to the first-mentioned side and which passes through the cutter outside of the head, substantially as and for the purpose herein set forth.

2. The combination, with a cutter-head, of a cutter placed against one side thereof, a bolt securing the rear end of the cutter to the said side of the head, a second bolt passing through the cutter outside of the head, and a third bolt securing said second bolt to the head, substantially as and for the purpose herein set forth.

406,584. GAS-BURNER. ALFRED P. JACOB, Philadelphia, Pa. Filed Aug. 13, 1888. Serial No. 282,594. (No model.)

Claim.—1. The combination of a main gas-burner with an auxiliary burner opening therefrom, a short inverted-cup-shaped valve loosely held entirely within said main burner and free to move ver-

406,584.

tically therein, and passages to the main and auxiliary burners controlled by said valve, so that when the one is opened the other is closed.

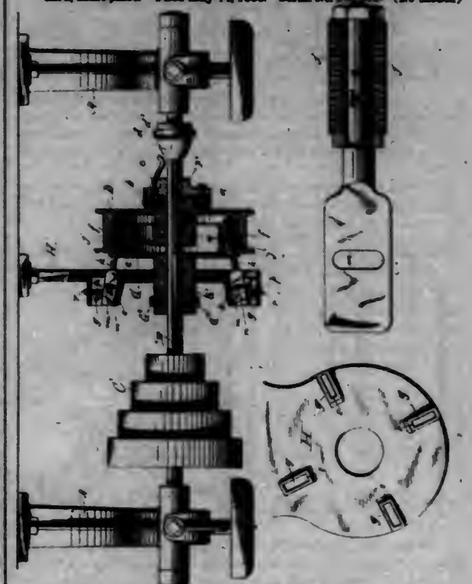
2. The combination of a main gas-burner with an auxiliary burner opening therefrom, a cylindrical chest held in said main burner and provided with passages leading, respectively, to the main and auxiliary burners, and a sliding valve loosely supported in said cylindrical chest normally open to the passage leading to the auxiliary burner and closed to that leading to the main burner.

3. The combination of a main gas-burner with an auxiliary burner opening therefrom, a removable cylindrical chest held in said main burner and provided with passages leading, respectively, to the main and auxiliary burners, and a sliding valve loosely supported in said cylindrical chest normally open to the passage leading to the auxiliary burner and closed to that leading to the main burner.

4. A gas-burner consisting of a main burner, in combination with an auxiliary burner opening therefrom, and a valve operated by the pressure of the gas, consisting of a vertically-movable inverted cup, and a cylindrical piece within which said cup is supported and upon the sides of which it is guided, located within the main burner, and provided with openings, respectively, to said main and auxiliary burners, said openings to the main burner being normally closed and the opening to the auxiliary burner being normally open.

5. A gas-burner consisting of a main burner, in combination with an auxiliary burner opening therefrom and a valve operated by the pressure of the gas, consisting of a vertically-movable inverted cup, and a cylindrical piece within which said cup is supported and upon the sides of which it is guided, provided with passages substantially in opposite sides opening, respectively, into the main burner and into the auxiliary burner located within the main burner, the former of said passages being normally closed and the latter normally open when the supply is increased.

6. In a gas-burner, the combination of the main burner B, auxiliary burner L, opening thereinto, cylinder E, held in said burner, having a passage-way K on the one side to said auxiliary burner, and passage-ways I J on the other to said main burner, valve F, provided with opening H, normally opposite to passage-way K into the auxiliary burner loosely secured in said cylinder E, but free to rise therein to close the passage-way into the auxiliary burner and to open that into the main burner.



7. In a gas-burner, the combination of the main burner B, auxiliary burner L, opening thereinto, cylinder E, held in said burner having a passage-way K on the one side to said auxiliary burner and passage-ways I J on the other to said main burner, valve F, provided with opening H, normally opposite to passage-way K into the auxiliary burner, loosely secured, by means of slot *f* and pin G, on said cylinder E, but free to rise therein to close the passage-way into the auxiliary burner and to open that into the main burner.

406,585. MATERIAL FOR THE TREATMENT OF WALLS, &c. JOSE P. KING, West Brighton, N. Y. Filed Apr. 24, 1888. Serial No. 308,494. (No specimens.)

Claim.—1. The above-described composition of matter, composed, essentially, of a restraining material, ground stone or its equivalents, and a fibrous material—such as asbestus—as set forth.

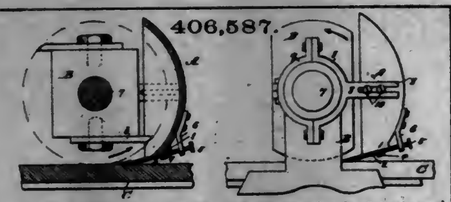
2. The above-described composition of matter, composed, essentially, of a restraining material, ground stone or its equivalents, and a fibrous material—such as asbestus or its equivalents—reduced to a finely-divided condition and combined, as set forth.

406,586. APPARATUS FOR REVERSING ROTARY MOTION. GEORGE LAYER, Worcester, Mass., assignor of one-half to Silas W. Goddard, same place. Filed May 14, 1888. Serial No. 273,896. (No model.)

Claim.—1. In an apparatus for reversing rotary motion, the combination, with a shaft and a pulley running loosely thereon and provided with an internally-tapering flange, of a conical pulley having a spline-connection with said shaft, but capable of sliding thereon, and a series of intermediate rolls placed between the tapering surfaces of said pulleys, whereby the rotary motion of one pulley is made to impart a reverse rotary motion to the other pulley, substantially as described.

2. The combination, with a pulley running loosely on its shaft and a pulley having a spline-connection, but capable of sliding on the same shaft, of a series of rolls intermediate the inner and outer faces of said pulleys, substantially as described, said rolls being held on spindles pivoted in a supporting-frame, so the axes of said rolls may be brought into true alignment with the opposing faces of said pulleys, substantially as described.

3. The combination, with pulleys D and G and rolls *j*, arranged substantially as described, of a rigid frame held in a fixed position, and spindles pivoted in said fixed frame and carrying said rolls *j*, substantially as described.

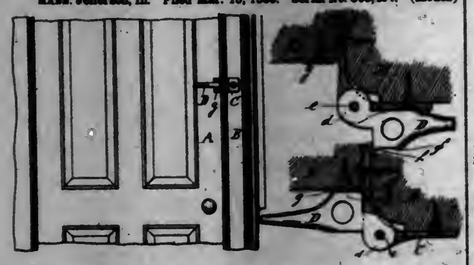


4. The combination, with pulleys D and G, provided with opposing faces, and rolls *j* placed between said faces, of supporting-frame H, with mortises to receive the roll-spindles, and springs applied to said roll-spindles, whereby said rolls are held from contact with the opposing surfaces of said pulleys when the same are separated, substantially as described.

5. The combination, with a shaft and a pulley running loosely around said shaft and being provided with clutching mechanism, whereby its motion is imparted to said shaft, of a pulley having a spline-connection and sliding on said shaft, said pulleys having opposing parallel faces inclined to the axis of their rotation, and rolls placed between said inclined faces, whereby the rotary motion of one pulley is made to impart a reverse rotary motion to the other pulley, substantially as described.

406,587. ROTARY PLANING-MACHINE. VINTON V. LAWRENCE, Waterford, Vt., assignor of one-half to Isaac F. Paul, Boston, Mass., and Amos H. Carpenter, West Waterford, Vt. Filed Aug. 29, 1888. Serial No. 284,104. (No model.)

Claim.—1. The combination, with the rotary cutter-head, of arms 8, which are journaled on the same axis and provided with slots, the presser-bar having an inclined cutter-seat 1 on its lower side, clamp-screws 10, which secure the cutter to said arms in any adjustment permitted by the slots, and the cutter 2, attached to the inclined seat 1, and screws for securing and adjusting said cutter, as shown and described.



406,587.

2. The combination, with the rotary cutter-head, of horizontal arms which are journaled on the same axis and provided with slots, the presser-bar, and clamp-screws which secure the latter to said arms in any adjustment permitted by the said slots, as specified and described.

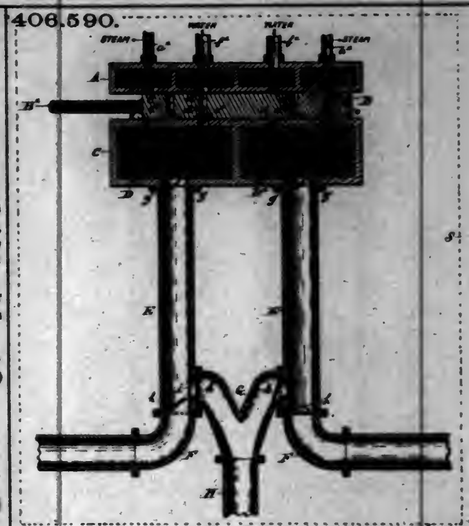
3. The combination, with the rotary cutter-head, of a presser-bar which is journaled on the same axis and is adjustable toward and from the cutter-head, as specified and described.

406,588. LATCH. DANIEL J. MILLMANN and DANIEL G. MILLMANN, Jefferson, Ill. Filed Mar. 15, 1889. Serial No. 303,497. (Model.)

Claim.—The combination, with a door and casing, of an angle-plate C, secured against the casing and having pivoted thereon the hub of a lever D, provided with square offset *f*, and fin *h*, engaging with plate *g* of the door, all substantially as set forth.

406,589. COTTON-CHOPPER. JOSEPH C. MCCOLLUM, Bloomfield, Mo. Filed Mar. 30, 1889. Serial No. 305,433. (No model.)

Claim.—In a cotton-chopper, the combination, with the frame, the lever, the wheels, and handles, of the blocks K, in advance of the levers, and having the vertical shank *k*, fitted in sockets in the side bars of the frame, and the scrapers L, secured to said blocks, substantially as shown and described, and the rakes M, in advance of the scrapers and having shanks secured in the side bars of the frame, as set forth.



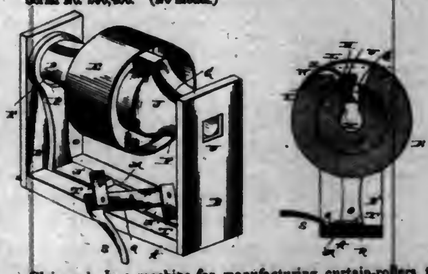
406,590. STEAM AND VACUUM PUMP. JOHN MCFARLANE, Washington, D. C., assignor of two-thirds to George J. Baxter and Henry Wax, same place. Filed Mar. 27, 1889. Serial No. 304,922. (No model.)

Claim.—1. In a vacuum-pump for dredgers, the combination, with a casing divided into two vacuum-chambers and a casing divided into two sets of water and steam compartments, of a reciprocating valve provided with ports, as described, and arranged to admit water and steam alternately into each vacuum-chamber, as and for the purpose set forth.

2. In a vacuum-pump for dredgers, the combination, with a casing divided into two vacuum-chambers and a casing divided into two sets of water and steam compartments, of a reciprocating valve provided with ports, as described, and arranged to admit water and steam alternately into each vacuum-chamber, and suction-pipes communicating with the vacuum-chambers, and valves situated in such suction-pipes, as set forth.

3. In a vacuum-pump for dredgers, the combination, with a casing divided into two vacuum-chambers and a casing divided into two sets of water and steam compartments, of a reciprocating valve provided with ports, as described, and arranged to admit water and steam alternately into each vacuum-chamber, suction-pipes communicating with the vacuum-chambers, and a Y-shaped discharge communicating with such suction-pipes, and a valve situated in such suction-pipes, and a valve situated in the Y, as set forth.

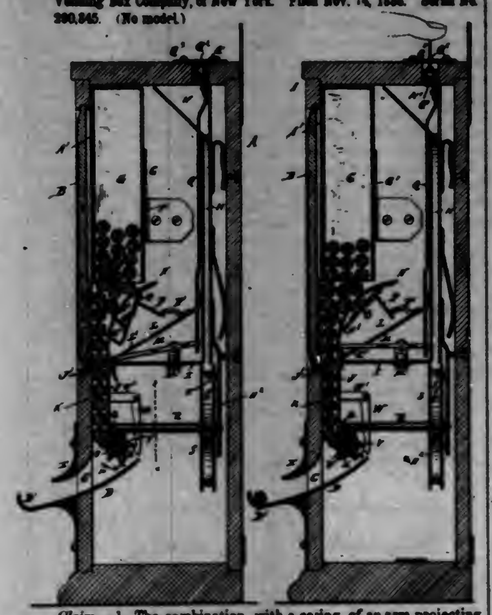
406,590.



406,591. TICKET-HOLDER FOR RAILWAY-CARS. CHARLES W. MCMURRAN, Hightstown, N. J. Filed Apr. 10, 1889. Serial No. 306,686. (No model.)

Claim.—The combination, in the ticket-holder, of the box B, having end flanges and slots 4, the spring C within the box B, and secured to the same at one end and having at the other end a thumb-piece, the end of the box being slotted for such thumb-piece to project, substantially as set forth.

406,592. MACHINE FOR MANUFACTURING CURTAIN-ROLLERS. ANDREW NORDLUND, Menominee, Mich. Filed Jan. 15, 1889. Serial No. 296,406. (No model.)

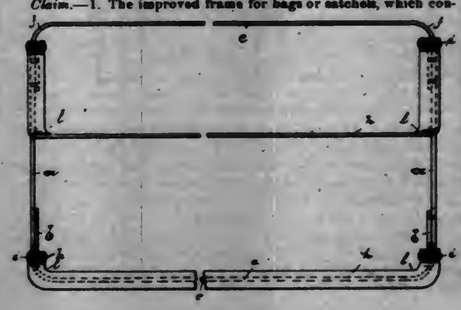


Claim.—1. In a machine for manufacturing curtain-rollers, the revolving tubular shaft having a longitudinal slot, one side of which is provided with a radial dovetailed recess, in combination with the radially-adjustable cutter-bar having a dovetailed lug fitting in the said recess, a spring arranged to force the said cutter-bar in an outward direction, and mechanism for forcing it inwardly toward the longitudinal center of the tubular shaft against the tension of the spring, as set forth.

2. The combination of the longitudinally-slotted revolving tubular shaft having tapering ends, the cutter-bar arranged to slide radially therein, and rings or bands arranged to move in opposite directions upon the tapering ends of the shaft, whereby the said cutter-bar may be forced inward toward the longitudinal center of the shaft, substantially as set forth.

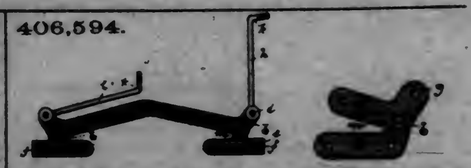
3. The combination of the frame having front and rear uprights, the longitudinally-slotted shaft journaled therein and having tapering ends, the cutter-bar arranged to slide radially in said tubular shaft, the slides arranged to move longitudinally upon the base of the frame and having uprights provided with rings or bands encircling the tapering ends of the shaft, and mechanism for moving the said slides simultaneously in opposite directions, substantially as set forth.

406,593. SELLING-MACHINE. JAMES M. O'REILLY, New York, N. Y., assignor, by direct and mesne assignments, to the Automatic Vending Box Company, of New York. Filed Nov. 14, 1888. Serial No. 290,845. (No model.)



Claim.—1. The combination, with a casing, of an arm projecting parallel with the front of the casing from the inner surface of one side wall and of a removable receptacle for the article to be sold, which receptacle fits in between the front of the casing and said arm and is provided with a projection on its rear wall, said projection resting on the above-mentioned arm, whereby the receptacle is held and supported in vertical position behind the front of the casing, substantially as set forth.

2. The combination, with a box or casing, of a coin-chute, a bar projecting through the upper end of the same, a lever actuated by the lower end of said bar, a curved plate secured to said lever, a cigarette-adjusting plate pivoted to said curved plate and having prongs forming a pocket, which prongs project through slots in the curved plate, an arm on said pivoted cigarette-adjusting plate, and a fixed arm against which the arm on the pivoted cigarette-adjusting plate abuts, substantially as set forth.

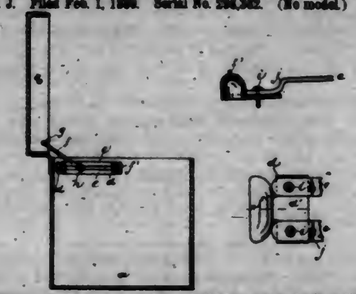


3. The combination, with a box or casing, of a coin-chute, a bar projecting into the upper end of the same, a lever actuated by the lower end of said bar, a curved plate on said lever, and a cigarette-adjusting plate pivoted on said curved plate, substantially as set forth.

406,594. BAG OR SATCHEL FRAME. WILLIAM ROSNER, Newark, N. J. Filed Oct. 30, 1888. Serial No. 289,373. (No model.)

Claim.—1. The improved frame for bags or satchels, which consists of end pieces *a a* and side pieces *c c*, united at their ends by hinge-pieces *b b*, and jaws *h h*, pivotally connected to said hinge-pieces, substantially as and for the purposes set forth.

406,594.



2. The improved frame combining end pieces and side pieces, and hinge-pieces connecting said side and end pieces, said hinge-pieces having an upward extension *g*, and jaws *h*, pivoted upon said extensions, substantially as and for the purposes set forth.

3. The improved bag-frame combining end and side pieces, and hinge-pieces having arms *c d*, against which said end pieces and side pieces are riveted, substantially as and for the purposes set forth.

4. The improved bag-frame combining end and side pieces, and hinge-pieces provided with extensions *g*, and arms *c d*, against which said end and side pieces are riveted, the latter being bent, as at *f*, to lie against said arms, and jaws *h*, and pivots *i*, connecting said jaws with said hinge-pieces, substantially as and for the purposes set forth.

5. A frame having end pieces *a a* and side pieces *c c*, extensions *g*, projecting above the line of the end pieces at the outer extremities thereof, and jaws hinged upon said extensions, substantially as and for the purposes set forth.

406,595. TRUNK STAY OR BRACE. WILLIAM ROSNER, Newark, N. J. Filed Feb. 1, 1886. Serial No. 290,362. (No model.)

Claim.—1. The improved trunk-lid brace herein described, combining therein end plates *d d*, stripe or rods *e e*, arranged in parallel relation to one another and secured to said end plates, a slot or way being formed between said stripe or rods, rivets or nails *i i*, for securing said parts together, and a bracing-strip arranged to work in said slot or way and adapted to be pivoted on the trunk-lid, all said parts being arranged and adapted to operate substantially as and for the purposes set forth.

2. The improved trunk-lid brace herein described, combining therein end plates *d d*, provided with flanges *d' d'* and guarding projections *f' f'*, stripe or rods *e e*, secured on said flanges apart and in parallel relation to one another to form a slot or way, and a bracing-strip arranged to work in said way and adapted to engage the trunk-lid, substantially as and for the purposes set forth.

3. The improved trunk-brace herein described, combining therein rods *e e*, having a slot or way between and end plates with guards *f' f'*, and a bracing-strip working in said slot or way at one end and adapted to engage the trunk-lid at the other, substantially as and for the purposes set forth.

4. The improved trunk-brace herein described, combining therein rods *e e*, arranged in parallel and separate relation to one another to form a slot or way, end plates *d d*, having flanges *d' d'*, and projections *f'*, serving as guards for the trunk-tray and as abutments to engage the extremities of the rods and pins, rivets or nails *i i*, for securing end plates and rods to one another and to the trunk-body, and a bracing-strip having its shank or stay *h* working in said slot or way, and said strip being adapted to engage the lid or cover, substantially as set forth.

406,596. LETTER FILE AND BINDER COMBINED WITH PERFORATING DEVICE. SOPHUS M. SCHEEL, Christiania, Norway. Filed Apr. 19, 1888. Serial No. 270,190. (No model.) Patented in Norway Mar. 14, 1888, No. 606.

Claim.—1. In a file for letters, papers, invoices, &c., the combination of a binding-case, impaling needle or needles, and arched transfer wire or wires, which latter, with their forward curved ends closing on or interlocking with the needles, are susceptible of a sidewise mo-

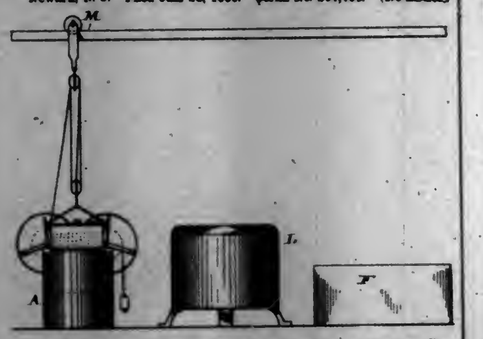
406,596.

tion, by which the back ends of the said transfer-wires swing off the back piece of the binding-case and close up to the inner edge of the bottom board of same and to the papers resting on it, substantially as and for the purposes specified.

2. In a file for letters, papers, invoices, &c., the combination of a binding-case, impaling needle or needles, and arched transfer wire or wires, which latter, with their forward curved ends closing on or interlocking with the needles, are susceptible of a sidewise motion, and by the base-plates F connected with the binding-case A B C of the letter-file, arranged substantially as and for the purposes specified.

3. The combination, with a base-plate F, of a transfer-wire E, whose inner end, carried through an aperture *f* in the base-plate, is provided with an arm *g*, substantially as and for the purposes specified.

4. A binding-case A B C, in combination with a flap L to allow the needles D to be thrown into a horizontal position, as and for the purposes specified.



5. In a file for letters, invoices, and papers, in which a mere tablet or board is substituted for the binding-case A B C to form a suitable base against which the filed papers rest, the combination of such board or tablet, needle or needles D, transfer wire or wires E, and flap L, the transfer-wires E being capable of a sidewise movement, by which their back parts swing close up to the inner edge of the papers, and the flap L allowing the needles to be thrown back into a horizontal position, all arranged substantially as and for the purposes specified.

6. The combination, with the studs O, fixed in the plate R, of the plate S, by its inner end fastened to the plate R and in its outer free end having apertures registering with the studs O, substantially as shown.

7. The combination, with the top board A of the binding-case, of a plate T, having a groove *q*, which, together with a split button *w*, serves to fasten the paper-punch to the binding-case, substantially as shown.

8. The combination, with the needles D, of a wire *m*, which, with both ends carried into the openings of the tube *k* of a plate N, swings in between the needles D, substantially as and for the purpose specified.

406,597. APPARATUS FOR THE MANUFACTURE OF PYROXYLINE. ROBERT C. SCHUPPHAUS, Adams, Mass., and MERRITT T. WHITE, Newark, N. J. Filed Jan. 28, 1889. (Serial No. 297,761. (No model.)

Claim.—1. In an apparatus for the manufacture of pyroxyline, the combination of a nitrating-pot and a removable receptacle for containing the cellulose, substantially as set forth.

2. In an apparatus for the manufacture of pyroxyline, the combination of a nitrating-pot and a removable perforated receptacle for containing the cellulose, substantially as set forth.

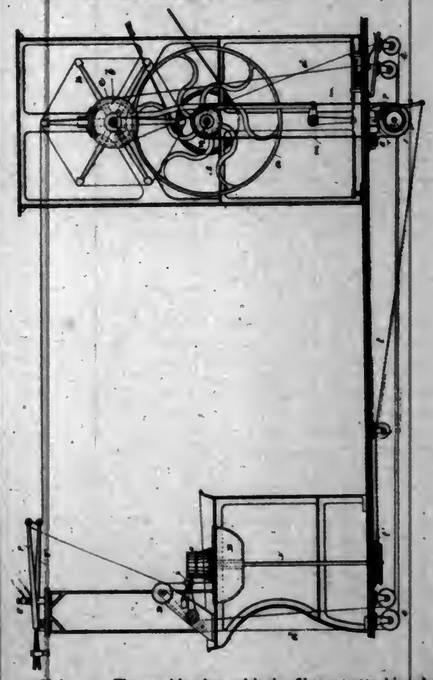
3. In an apparatus for the manufacture of pyroxyline, the combination of a nitrating-pot, an independent receptacle adapted to contain the cellulose, and covers for said nitrating-pot and independent receptacle, whereby the atmosphere is cut off from said nitrating-pot and receptacle, substantially as set forth.

4. In an apparatus for the manufacture of pyroxyline, the combination of a nitrating-pot, an independent removable receptacle for containing the cellulose adapted to be inserted in the nitrating-pot, a centrifugal machine, and a traveling carrier for conveying said removable receptacle from said nitrating-pot to said centrifugal machine, substantially as set forth.

5. In an apparatus for the manufacture of pyroxyline, the combination of a nitrating-pot, a centrifugal machine, a dumping-trough, a cage for containing the cellulose, and a traveling carrier for conveying said cage from said nitrating-pot to the centrifugal machine and dumping-trough successively, substantially as set forth.

6. In an apparatus for the manufacture of pyroxyline, the combination, with a dumping-trough provided with a water-space and a chamber to receive a charge of nitrated cellulose, of a receptacle for said nitrated cellulose adapted to fit within said chamber, and means for discharging the contents of said receptacle into said water-space, substantially as set forth.

7. In an apparatus for the manufacture of pyroxyline, the receptacle for the cellulose having in combination the cage perforated on all sides and having a perforated bottom and cover, and a perforated tube having an open bottom within said receptacle, substantially as set forth.



8. In an apparatus for the manufacture of pyroxyline, the cage for receiving the cellulose having a vertically-sliding bottom and means for lifting said bottom, substantially as set forth.

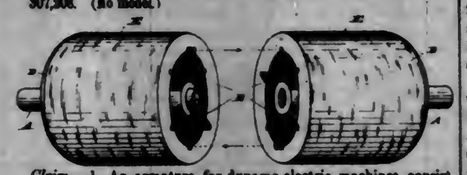
9. In an apparatus for the manufacture of pyroxyline, the receptacle, for the cellulose having in combination the external cage, the internal tube, and the vertically-sliding bottom for such cage attached to said tube, substantially as set forth.

10. In an apparatus for the manufacture of pyroxyline, the dumping-trough provided with a holder for receiving the cellulose-receptacle, substantially as set forth.

11. In an apparatus for the manufacture of pyroxyline, the dumping-trough and a holder for the cellulose-receptacle, in combination with means for securing said receptacle in said holder, substantially as set forth.

406,598. SILK-REELING MACHINERY. EDWARD W. SERRELL, Jr., New York, N. Y. Filed Apr. 25, 1884. Serial No. 129,193. (No model.) Patented in France Feb. 26, 1882, No. 147,624; in Sweden Mar. 21, 1882; in Italy Mar. 23, 1882; in Germany Mar. 28, 1882, No. 19,385; in Austria-Hungary May 17, 1882, No. 10,629; in Portugal June 30, 1882, and in Spain Sept. 26, 1882.

Claim.—1. The combination, with the filament-attaching device and means, substantially as set forth, for rotating the same, of a feeding-drum around which the thread is passed, a reel upon which the thread is wound, means, substantially as set forth, for rotating the reel and feeding-drum, a regulating-lever operated by variations in the tension of the thread, an electro-magnet and its circuit, which includes the regulating-lever, a cocoon-holder, and mechanism, substantially as set forth, that is brought into action by said magnet to rotate the cocoon-holder, substantially as and for the purposes set forth.



2. The combination, with the filament-attaching device and means, substantially as set forth, for rotating the same, of a feeding-drum, a reel upon which the thread is wound, means, substantially as set forth, for rotating the reel and feeding-drum so that the reel is revolved at a greater surface speed than that of the feeding-drum, a regulating-lever operated by variations in the tension of the thread, an electro-magnet and a circuit which includes the regulating-lever, a cocoon-holder, and mechanism, substantially as set forth, brought into action by the electro-magnet for rotating the cocoon-holder, substantially as and for the purposes set forth.

3. The combination of a winding-reel, a feeding-drum, mechanism, substantially as set forth, for rotating the reel and feeding-drum, the former at a greater speed than that of the feeding-drum, a lever operated by the breaking of the thread, a filament-attaching device, a cocoon-holder, means, substantially as specified, for rotating the cocoon-holder and filament-attaching device, an electro-magnet and circuit which includes the aforesaid lever, and mechanism, substantially as set forth, operated by said magnet for disconnecting the reel from its driving-wheel, substantially as and for the purposes set forth.

4. The combination, with the electro-magnet G, armature *r*, lever S, spring w^3, and electric circuit for said magnet, of the revolving-shaft J, ratchet-wheel *l*, pawl *p*, spring w^5, case *o*, cam *q*, and lever I, substantially as and for the purposes set forth.

5. The combination, with the electro-magnet G, its armature *r*, its electric circuit, the revolving shaft J, ratchet-wheel *l*, pawl *p*, case *o*, cam *q*, levers I and S, and springs w^3 w^5, of the cocoon-holder, shaft N, ratchet-wheel X, pawl l^2, slide *t'*, spring T, and connection *t* between the lever I and slide *t'*, substantially as and for the purposes set forth.

406,599. DYNAMO-ELECTRIC MACHINE. WILLIAM L. SILVEY, Lima, Ohio. Filed Apr. 20, 1888. Renewed Apr. 13, 1889. Serial No. 307,208. (No model.)

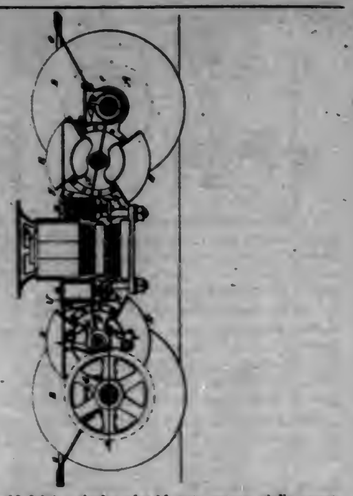
Claim.—1. An armature for dynamo-electric machines, consisting of two interlocking spiders B B, on which are mounted end plates D, one at each end, with numerous alternate blanks of sheet-iron and paper pressed between them, and the whole mounted on a shaft, substantially as and for the purpose set forth.

2. In an armature for dynamo-electric machines, the supporting-spiders B B, having each alternate wing shorter than the other, whereby the wings are made to interlock when the armature-blanks D E are mounted thereon, substantially as and for the purpose specified.

3. An armature-spider for supporting a magnetic ring on which the wires are wound, the spider consisting of separable parts united together by wedge-shaped projections, as set forth and described.

406,600. ELECTRIC RAILWAY-MOTOR. FRANK J. SPRAGUE, New York, N. Y., assignor to the Sprague Electric Railway and Motor Company, same place. Original application filed Mar. 1, 1889, Serial No. 301,683. Divided and this application filed June 4, 1889. Serial No. 313,083. (No model.)

Claim.—1. The combination of a wheeled vehicle and an electro-dynamic motor mounted thereon and propelling the same, the same being centered at one end on an axle of the vehicle at more than one point, and a flexible support for said motor at its other end, substantially as set forth.



2. The combination of wheeled vehicle and an electro-dynamic motor mounted thereon and propelling the same, having its field-magnet sleeved at one end on an axle of the vehicle at more than one point, and a flexible support for said field-magnet at its other end, substantially as set forth.

3. The combination of a wheeled vehicle, an electro-dynamic motor mounted thereon and propelling the same, the same being centered at one end on an axle of the vehicle at two points—one on each side of the motor—and a flexible support for said motor at its other end, substantially as set forth.

4. The combination of a wheeled vehicle, an electro-dynamic motor mounted thereon and propelling the same, having its field-magnet sleeved at one end on an axle of the vehicle at two points—one on each side of the motor—and a flexible support for said field-magnet at its other end, substantially as set forth.

5. The combination of a wheeled vehicle, an electro-dynamic motor mounted thereon and propelling the same, brackets extending from the field-magnet of said motor on each side and sleeved on an axle of the vehicle, a driving-shaft supported by said brackets, and

406,600.

gearing between said driving-shaft and said axle, substantially as set forth.

6. The combination of a wheeled vehicle, an electro-dynamic motor mounted thereon and propelling the same, brackets extending from the field-magnet of the motor on each side and sleeved on an axle of the vehicle, the armature-shaft of the motor supported in bearings on said brackets, and gearing between said armature-shaft and said axle, substantially as set forth.

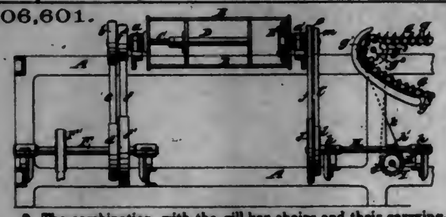
7. The combination of a wheeled vehicle, an electro-dynamic motor mounted thereon and propelling the same, brackets extending from the field-magnet of the motor on each side and sleeved on an axle of the vehicle, the armature-shaft of said motor, a counter-shaft supported by the brackets, gearing between said armature-shaft and said counter-shaft, and gearing between said counter-shaft and said axle, substantially as set forth.

8. The combination of a wheeled vehicle, an electro-dynamic motor mounted thereon and propelling the same, brackets extending from the field-magnet of the motor on each side and sleeved on an axle of the vehicle and formed or provided with bearings in which the armature-shaft of the motor is supported, a counter-shaft also supported by said brackets, gearing between said armature-shaft and said counter-shaft, and gearing between said counter-shaft and said axle, substantially as set forth.

9. The combination, with a wheeled vehicle, of an electro-dynamic mounted upon and propelling the same, the keeper of the field-magnet of said motor being situated parallel with and in proximity to a driving-axle of said vehicle and provided with two extensions, one on each side, which are sleeved on said axle at points outside the center of the motor, substantially as set forth.

10. The combination of a wheeled vehicle, an electro-dynamic motor mounted thereon and propelling the same and centered at one end on an axle of the vehicle at more than one point inside the wheels on said axle, and a flexible support for said motor at its other end, substantially as set forth.

11. The combination of a wheeled vehicle, an electro-dynamic motor mounted thereon and propelling the same and centered at one end on an axle of the vehicle at more than one point, a flexible support for said motor at its other end, and gear-wheels on said axle between the centering-supports of the motor and the axle-boxes, substantially as set forth.

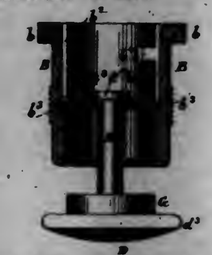


12. The combination of a wheeled vehicle, an electro-dynamic motor mounted thereon and propelling the same, brackets detachably secured to the field-magnet on each side and sleeved on an axle of the vehicle, a driving-shaft supported by said brackets, and gearing between said driving-shaft and said axle, substantially as set forth.

406,601. MACHINE FOR SPINNING HEMP, &c. JOHN F. W. STAIRS, Halifax, Nova Scotia, Canada. Filed Apr. 19, 1888. Serial No. 307,734. (No model.)

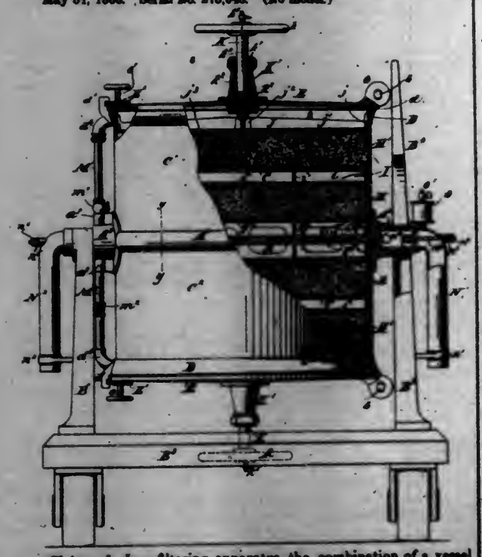
Brief.—The object of the invention is to dispense with the regulator and improve the construction of the machine, whereby a uniform yarn may be produced.

Claim.—1. The combination, with the endless series of gill-pin bars and the flier, of mechanism, substantially as herein described, interposed between the flier and said series of bars for the purpose of driving the said bars from the flier, substantially as herein described.



406,601.

2. The combination, with the gill-bar chains and their carrying-shafts and the flier, of mechanism, substantially as herein described, between the flier and one of the said carrying-shafts whereby the movement of the gill-pins is derived from the flier, substantially as and for the purpose herein described.



3. The combination, with the main shaft, the flier, the capstan therein, the gill-bar chains, and one of the carrying-shafts g^2 for the latter, of a shaft H between the flier and capstan and one of the said carrying-shafts, a pulley *e* on the flier, a pulley *m* on the capstan, pulleys *J l* on the said shaft H, belts *j j'* between the said pulleys *e J* and the said pulleys *l m*, respectively, and gearing, substantially as described, between the said shaft H and the carrying-shaft g^2, whereby the gill-pins bars and the capstan are both driven from the flier, all substantially as herein set forth.

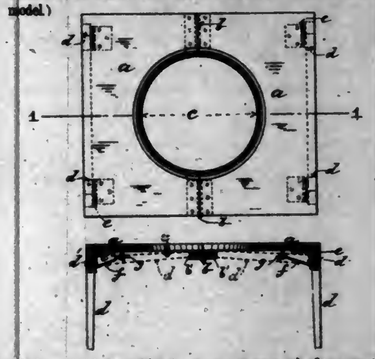
406,602. BUNG. WILLIAM H. SUNDAY, Scranton, Pa. Filed Apr. 19, 1889. Serial No. 307,829. (No model.)

Claim.—A bung having the inside bayonet-slot b^2, in combination with a valve D, having the stem E, provided with arms e^2 e^2, which engage said longitudinal slot, whereby said valve may be opened or closed by a forked hook-wrench, as described.

406,603. CONTINUOUS FILTER. JOHN SUTTON, Islip, N. Y. Filed May 31, 1888. Serial No. 275,648. (No model.)

Claim.—1. In a filtering apparatus, the combination of a vessel composed of a floor, a band or flanges at the circumference of the same, hollow trunnions secured to said band or flanges and serving one to receive and one to deliver liquid, shells fitted to the flanges or bands, covers at the outer ends, pipes or conduits between the receiving-trunnion and the compartments formed by the floor, shells, and covers, and pipes or conduits extending from the compartments to the delivery-trunnion, substantially as specified.

2. In a filtering apparatus, the combination, of a vessel, a cover for the vessel, a screw fitted in a socket with which the cover is provided and having two circumferential grooves separated by a rib notched in the direction of the length of the screw, a projection extending transversely from the socket into the grooved portion of the screw, and a lug attached to the vessel opposite the screw and provided with a tapped hole for engaging with the screw, substantially as specified.



3. In a filtering apparatus, the combination of a vessel, a cover for such vessel, a screw extending through the cover, an air-passage extending through the cover to an air-chamber surrounding the screw, a passage from the air-chamber through the outer portion of the screw, and an air-cock at the outer end of the screw, substantially as specified.

4. In a filtering apparatus, the combination of a vessel and a frame for sustaining filtering material therein and consisting of a ring and braces, the ring fitting snugly within the vessel and provided externally with a groove filled with packing material, substantially as specified.

5. In a filtering apparatus, the combination, with a vessel, of a support for filtering material arranged therein and consisting of a ring and braces, both the said ring and braces having transverse openings or recesses, through which liquid may flow to circulate within the whole of the space within said support.

6. In a filtering apparatus, the combination of a vessel having two compartments, a floor or diaphragm separating the two compartments, hollow trunnions, and stationary pipes fitted to the ends of the trunnions and secured to the trunnions by bolts affixed at their inner ends to the trunnions, extending through the pipes, and fitted with nuts at the ends outside the pipes, substantially as specified.

406,604. PORTABLE SEAT FOR WATER-CLOSETS. HAROLD H. TITTMANN, St. Louis, Mo. Filed Feb. 11, 1889. Serial No. 299,626. (No model.)

Claim.—1. A portable closet-seat composed of two seat-sections, each section having a semicircular orifice in one edge and each section provided at its opposite edge with legs hinged to fold against the under side thereof, said sections connected together on either side of the semicircular orifices by offset hinges, whereby the seat-sections may fold together substantially parallel to each other and accommodate the folded legs between them, substantially as and for the purposes described.

2. A portable closet-seat composed of two sections, each section having a semicircular orifice in one edge, said sections having strengthening-cleats secured to the under side of their abutting edges and hinged together at said edges to fold together, and each section provided at the opposite edge with legs hinged to fold against and between the seat-sections, substantially as and for the purposes described.

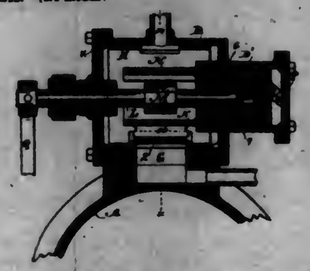
3. A portable closet-seat composed of two seat-sections, each section having a semicircular orifice in one edge and each section provided at its opposite edge with hinged legs adapted to fold against the under side thereof, said sections connected at their edges having the semicircular orifices by offset hinges, whereby the said sections may fold together substantially parallel and accommodate the folded legs between them, and locking devices secured to the legs and seat-sections for holding the legs upright while the seat is in use, substantially as and for the purposes described.

406,605. CARPENTER'S PLANE. REINHARD T. TORKELSON, Worcester, Mass., assignor to Iver Johnson, same place. Filed Nov. 23, 1888. Serial No. 291,675. (No model.)

406,605.

Claim.—1. A combined cutter and cap for carpenters' planes, comprising, in combination, the cutter having a suitable transverse holding-loop above its top surface and the cap having a longitudinal spring tongue or blade adapted to be passed through said loop to hold the cap in position during and after adjustment upon the cutter preparatory to the application thereof to the plane, substantially as and for the purpose set forth.

2. The combination of the cutter D with the detachable angle-plate M, fitted transversely in a suitable opening therein, and the cap E, having the longitudinal spring tongue or blade *g*, adapted to be passed through the loop formed by said angle-plate when fitted in position in the cutter, substantially as and for the purpose set forth.

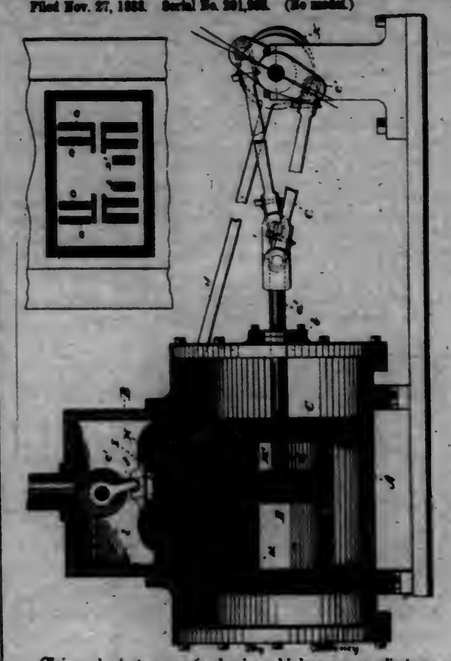


3. The combination of the cutter D with the detachable angle-plate M, fitted transversely in a suitable opening therein, and the cap E, having the supporting side flanges *h h* and the longitudinal spring tongue or blade *g*, the latter adapted to be passed through the loop formed by said angle-plate when fitted in position in the cutter, substantially as and for the purpose set forth.

4. In a bench-plane, the combination, with the cutter D, having a transverse opening with beveled sides, of the detachable angle-plate M, having flanges with the edges thereof beveled to correspond with the sides of the opening in the cutter, substantially as and for the purpose set forth.

5. In a bench-plane, the combination, with the cutter D, having a transverse opening with beveled sides, of the detachable angle-plate M, having flanges with the edges thereof beveled to correspond with the sides of the opening in the cutter and the tongue or blade of cap E, substantially as and for the purpose set forth.

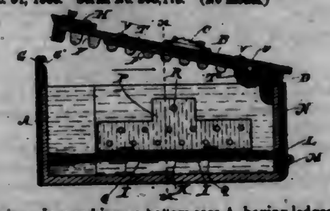
6. The combination of the stock, saddle, and clamp device of a bench-plane with the cutter D, provided with a transverse loop above its top surface, and the cap E, having the supporting-flanges *h h* and the tongue or blade *g*, the latter adapted to be passed through said loop to hold the cap upon the cutter during and after adjustment preparatory to the application thereof to the plane, substantially as and for the purpose set forth.



406,606. VALVE FOR STEAM-PUMPS. ABRAHAM A. TRIFOLD and CHARLES H. TRIFOLD, Brooklyn, N. Y. Filed Apr. 15, 1889. Serial No. 307,212. (No model.)

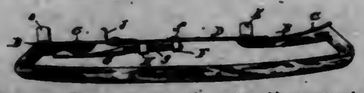
Claim.—1. The combination, with the steam-chest, cylinder, piston, and the ports between the steam-chest and cylinder, of a cylindrical valve having ports therein, a valve-moving plunger within the valve and steam-chest and adapted to be rotated and to move endwise, and inclined projections upon the valve-moving plunger and upon the head of the steam-chest, whereby the valve-moving plunger receives an endwise movement by the projections when turned and communicates to the valve a further movement in the same direction by the action of the inclined projections against each other when the plunger is moved endwise by the pressure of the steam, substantially as set forth.

2. The combination, with the steam-cylinder A and the steam-chest D, having ports, and the tubular extension D', of the head P, with inclined projections 8 upon its inner surface, the valve-moving plunger N, with corresponding inclined projections 7 upon the end thereof, the stem L and tappet M within the valve-moving plunger, and mechanism for moving the stem by the connection to the piston-rod of the engine, the valve H, surrounding one end of the plunger N, and the connection between the plunger N and valve H, substantially as set forth.



406,607. STEAM-ENGINE. WILLIAM A. VERHLAND, Chicago, Ill. Filed Nov. 27, 1888. Serial No. 291,968. (No model.)

Claim.—1. A steam-engine having a high-pressure cylinder operating as a piston in a low-pressure cylinder, the low-pressure cylinder having steam-passages communicating with ports or passages in the inner high-pressure cylinder and controlled by separate valves, the final exhaust-ports also being controlled by separate valves, said high-pressure cylinder also having a piston, substantially as set forth.



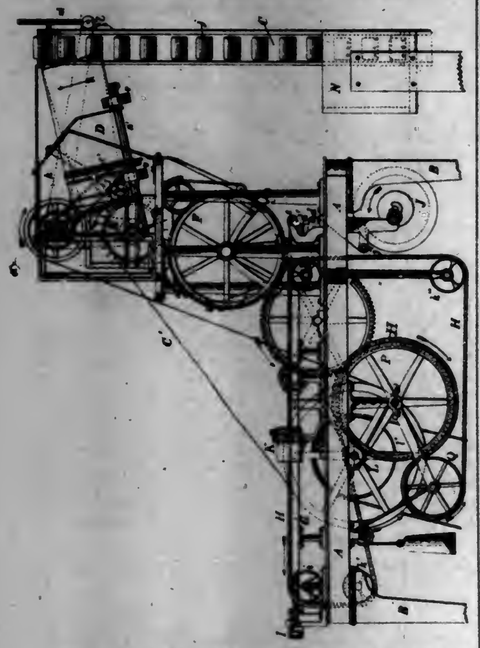
2. A steam-engine having a high-pressure cylinder operating as a piston in a low-pressure cylinder, the low-pressure cylinder having steam-passages communicating with ports or passages in the high-pressure cylinder and controlled by separate valves, the final exhaust-ports also being controlled by separate valves, said high-pressure cylinder also having a piston and the low-pressure cylinder having a plurality of piston-rods, substantially as specified.

406,608. SAD-IRON. SARAH WATERMAN, Milwaukee, Wis. Filed Dec. 31, 1888. Serial No. 295,175. (No model.)

Claim.—In a sad-iron, a hollow case A, having ledges I I integral with its sides at a distance from the bottom, and an aperture L across its rear end opposite to and below the grate, in combination with a grate K, supported movably on the ledges I I, and adapted to be withdrawn from the case rearwardly through the aperture L, substantially as described.

406,609. SKATE. JOHN H. YOUNG, Concord, N. H. Filed Nov. 16, 1888. Serial No. 291,021. (No model.)

Claim.—1. The combination of an adjustable plate having at one end an upward projection for engaging the heel of a boot and at the other end a block or nut swiveled to the under side and containing a horizontally-threaded opening, and an actuating-lever having its forward end swiveled to a plate for adjusting the sole-clamps and pro-



vided with a central threaded portion confined within said nut or threaded block, all substantially for the purpose set forth.

2. The combination, with a plate for actuating the sole-clamps and an adjustable heel-clamp, of a threaded actuating-lever, and a swiveled arm provided at one end with a swiveled nut connecting the threaded portion of said lever with said adjustable heel-clamps, substantially for the purpose set forth.

3. In clamping mechanism for skates, an arm or link for connecting the actuating-lever with the adjustable heel-clamp, having at one end a suitable hook for the reception of the free end of said lever, substantially for the purpose set forth.

4. In clamping mechanism for skates, the combination, with an actuating-lever having a threaded portion, of an arm or link having at one end a swiveled nut fitting the thread on said lever, its opposite end being attached to an adjustable heel-clamp, and provided with a suitable hook for the reception of the free end of said lever, all for the purpose described.

406,610. CIGARETTE-MACHINE. OSCAR W. ALLISON, Rochester, N. Y. Filed Nov. 10, 1885. Serial No. 182,362. (No model.)

Claim.—1. The combination, with the endless flexible band provided in its face with a continuous longitudinal groove, of a device so constructed as to distend the continuous groove in the band, substantially as set forth.

2. The combination, with the endless flexible band provided in its face with a continuous longitudinal groove, of a carrying-pulley provided with a raised ridge over which the band passes and whereby the band is bent transversely, thereby distending the groove, substantially as set forth.

3. The combination, with the endless flexible band provided in its face with a continuous longitudinal groove, of carrying-pulleys provided with raised ridges whereby the band is bent transversely and its groove is distended, and a supporting-table arranged between said pulleys, upon which table the band is carried in its normal straight form, substantially as set forth.

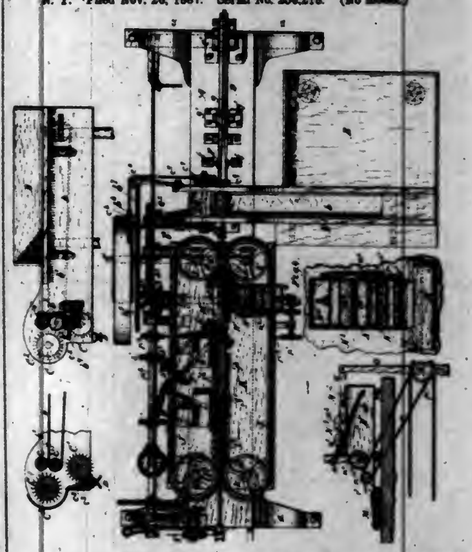
4. The combination, with suitable tobacco-feeding mechanism, of paper-supply rollers, the endless flexible band provided in its face with a continuous longitudinal groove, and a distending device whereby the band is bent transversely to distend its groove for receiving the paper and filler, substantially as set forth.

5. The combination, with the endless flexible band provided in its face with a continuous longitudinal groove and a device for distending the groove in the band, of the paper-supply rollers and the paper-former arranged between the supply-rollers and the grooved belt, substantially as set forth.

6. The combination, with the endless flexible band provided in its face with the continuous longitudinal groove and a device for distending the groove in the band, of the paper-former *f*, arranged to act on the paper before it passes into the distended groove, a paper-supply roll, and suitable paper-guide rolls arranged between the supply-roller and the paper-former, substantially as set forth.

7. The combination, with the feed-box N, of the elevator C, having its casing open at the bottom below the feed-box, substantially as described.

8. The combination, with the rotary feeding-cylinder D, of the slotted stationary plate R and the rotary toothed picker E, the teeth of which operate in the slot or slots of the plate, substantially as described.



9. The combination, with the rotary feeding-cylinder D, stationary slotted plate R, and toothed picker E, working in the slot or slots of the plate R, of the revolving supports *r r*, substantially as described.

10. The combination, with the rotary feeding-cylinder provided with internal pins *u*, of the stationary slotted plate R and the rotary picker-wheel E, working in the slot or slots of the plate R, substantially as set forth.

11. The combination, with the stationary slotted plate R, provided with rings *w* and *x*, the latter being cut away at *y*, of the rotary feeding-cylinder D, having one or more pins *y*, adapted to revolve in the annular groove between the said rings, substantially as described.

12. The combination, with the rotary feeding-cylinder D, of the slotted plate R, arranged at an angle with the axis of the cylinder, and the rotary toothed picker E, having teeth working in the slot or slots of the plate, substantially as described.

406,611. CIGARETTE-MACHINE. OSCAR W. ALLISON, Rochester, N. Y. Filed Nov. 26, 1887. Serial No. 256,218. (No model.)

Claim.—1. The combination, with the endless carrying-apron *b*, supported at its delivery end by roller *c'*, and the pressure-roller *c*, arranged over the delivery end of the apron, of the inclosing-casing C^3, provided with discharge-throat c^3, the upper picker-wheel C, arranged at the delivery end of the carrying-apron, and a picker-wheel C', arranged in the throat c^3, below the picker-wheel, and the carrying-apron *b*, substantially as set forth.

2. The tobacco-feeding mechanism, consisting, essentially, of the endless tobacco-carrying apron *b*, supported by roll *c'* at its delivery end, the pressure-roller *c*, arranged over the delivery end of the apron, the inclosing-casing C^3, provided with discharge-throat c^3, the upper picker-wheel C, arranged at the delivery end of the carrying-apron, a picker-wheel C', arranged in the throat c^3, below the picker-wheel, and the carrying-apron *b*, in combination with a grooved and flexible band D, substantially as described.

3. The combination, with the tobacco-feeding mechanism, of a traveling endless flexible receiving-band provided with a continuous longitudinal groove which receives the loose tobacco from the feeding mechanism, a wedge-faced wheel over which said band passes and whereby its groove is distended, inclined rollers or wheels arranged on opposite sides of said band and bearing against the base portions thereof, whereby the groove is held distended, and flat-faced rollers whereby the band is returned to its normal condition, substantially as set forth.

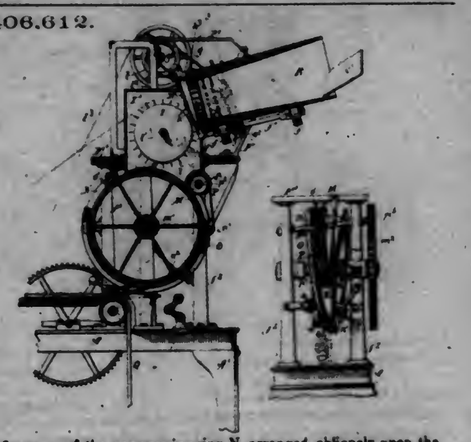
4. The combination, with the tobacco-feeding mechanism, of the traveling endless flexible receiving-band D, provided with a continuous longitudinal raised rib *d*, having continuous groove *d'* and base-flanges d^2 d^3, and rollers so constructed as to distend the groove and then return it to its normal condition, substantially as described.

5. The combination, with the tobacco-feeding mechanism, of the traveling endless flexible receiving-band D, provided with the continuous longitudinal raised rib *d*, having continuous groove *d'* and base-flanges d^2 d^3, suitable rollers for carrying the band, so constructed as to distend the groove in the rib and then return it to its normal condition, and the endless flexible compressing-band H, running in the groove of the receiving-band, substantially as described.

6. The combination, with the tobacco-feeding mechanism, of the traveling endless flexible receiving-band D, provided with a continuous longitudinal raised rib *d*, having continuous groove *d'* and base-flanges d^2 d^3, suitable rollers for carrying the band, so constructed as to distend the groove in the rib, the compressor-wheel *g*, operating to compress the tobacco in the groove, and the endless flexible compressing-band H, running in the groove, substantially as described.

7. The combination, with the feeding mechanism, of an endless flexible receiving-band provided with a continuous longitudinal groove which receives the loose tobacco from the feeding mechanism, pulleys whereby the groove of said band is distended, and returned to its normal condition, and an endless compressing-band which runs in the groove of the receiving-band after the latter has been returned to its normal condition, substantially as set forth.

8. In a cigarette-machine, the herein-described mechanism for drawing the cigarette-rod, consisting of the horizontally-arranged endless flexible bands J J, running face to face around pulleys on a suitable support, each band being provided at its upper corner with a continuous longitudinal recess, the two recesses forming the groove j^3, for receiving the cigarette-rod, substantially as described.



9. The combination, in a cigarette-machine, of mechanism for drawing the cigarette-rod, consisting of the horizontally-arranged endless flexible bands J J, running face to face around pulleys on a suitable support, each band being provided at its upper corner with a continuous longitudinal recess, the two recesses forming the groove j^3 for receiving the cigarette-rod, and the pressure-roller j^5, arranged over said groove, whereby the tobacco-filler is held down in the groove at or near the meeting-point of the bands, substantially as described.

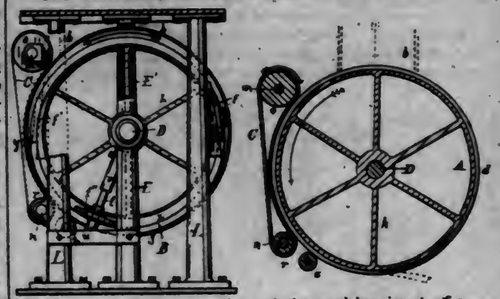
10. The combination, in a cigarette-machine, of mechanism for drawing the cigarette-rod, consisting of the horizontally-arranged flexible bands J J, running face to face around pulleys on a suitable support, each band being provided at its upper corner with a continuous longitudinal recess, the two recesses forming groove j^3 for receiving the cigarette-rod, the pressure-roller j^5, arranged over said groove, whereby the tobacco-filler is held down in the groove, and the paper-folder M and rotating paper-folding brush S, also arranged over the groove, substantially as described.

11. The combination, with the paste-table and a reciprocating frame, of paste-grinding rollers mounted in said frame, a wiper, and a paste-roller, whereby the paste is applied to the wiper, substantially as set forth.

12. The combination, with the paste-table and the grinding-rollers, of a reciprocating frame in which said rollers are mounted, a rock-arm whereby said frame is actuated, a rotary wiper, a paste-roller whereby the paste is applied to said wiper, and a pawl-and-ratchet mechanism connected with said reciprocating frame, whereby an intermittent rotary movement is imparted to said paste-roller, substantially as set forth.

406,612. CIGARETTE-MACHINE. OSCAR W. ALLISON, Rochester, N. Y. Filed Sept. 10, 1888. Serial No. 284,962. (No model.)

Claim.—1. The combination, with the receiving-wheel M, having a spherical or convex face and provided with a flange *m*, of the compressing-ring N, mounted obliquely upon the face of the receiving-wheel, and the covering-ring O, arranged obliquely upon the flange *m* of the receiving-wheel, substantially as set forth.



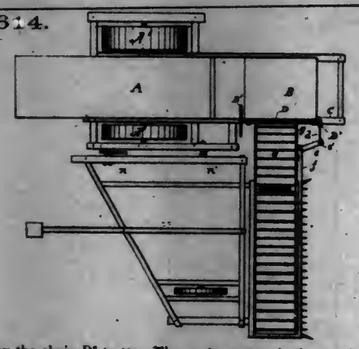
2. The combination, with the receiving-wheel M, having a spherical face and provided with a flange *m*, of the compressing-ring N, mounted obliquely upon the face of the receiving-wheel, the covering-ring O, arranged obliquely upon the flange *m* of the receiving-wheel, and supporting or guide rollers, whereby the compressing and covering rings N O are held in position, substantially as set forth.

3. The combination, with the receiving-wheel M, having a spherical face and provided with a flange *m*, of the compressing-ring N, arranged obliquely upon the face of the receiving-wheel, supporting-rollers *n*, a supporting-roller *n'*, mounted in an adjustable arm or bracket, and the covering-ring O, mounted obliquely upon the flange *m* of the receiving-wheel, substantially as set forth.

4. The combination, with the receiving-wheel M, provided with a flange *m*, of the compressing-ring N, arranged obliquely upon the face of the receiving-wheel, the covering-ring O, mounted obliquely upon the flange *m* of the receiving-wheel, and an endless belt P, arranged on the front or descending side of the receiving-wheel and adapted to cover the space between the flange *m* and the compressing-ring N, substantially as set forth.

5. The combination, with the continuously-revolving receiving-wheel M, having a spherical exterior surface and carrying an upwardly-projecting flange, of the obliquely-arranged revolving compressing-ring N, fitted upon wheel M and adapted to compress the tobacco against the flange projecting beyond the spherical surface of the wheel, and suitable mechanism for retaining the tobacco in the tapering space while being compressed, substantially as described.

406,613. CIGARETTE-MACHINE. OSCAR W. ALLISON, Rochester, N. Y. Filed Feb. 2, 1889. Serial No. 298,425. (No model.)



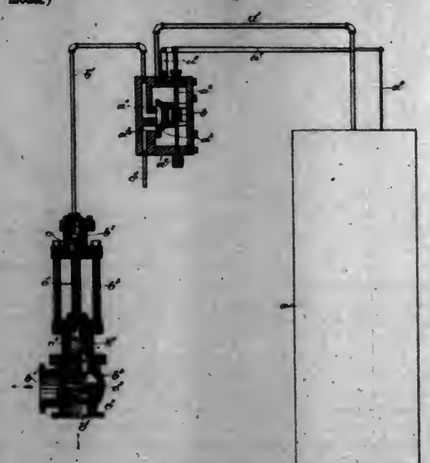
Claim.—1. The combination, with the revolving ring A, of a spherical shape on its exterior and provided with projecting flange *d*, of the outer obliquely-arranged ring B, fitted to the spherical surface of the ring A and traveling in the same direction, and the endless traveling apron or belt C, arranged and adapted to close the space between the rings on the descending side thereof and to complete the compression of the tobacco-filler, substantially as shown and described.

2. The combination, with the revolving ring A, of a spherical shape on its exterior and provided with projecting flange *d*, of the obliquely-arranged ring B, fitted to the spherical surface of the ring A and traveling in the same direction, and the endless traveling apron or belt C, arranged and adapted to close the space between the rings on the descending side thereof and to complete the compression of the tobacco-filler and the roller *r*, substantially as shown and described.

406,614. RAISING AND LOWERING MECHANISM FOR HARVESTERS. CHARLES A. ASHLEY, Stockton, Cal., assignor of three-fourths to Ann Clark, Robert A. Ashley, and Lucius E. Ashley, all of same place. Filed Sept. 30, 1887. Serial No. 251,145. (No model.)

Claim.—1. The combination of the header-frame, the thrasher-frame connected thereto, so as to rise and fall, as usual, the beam C of the thrasher and the beam *f* of the header, the rod *d*, provided with a hook end secured to the chain D^4 by pin *d'* and to the beam *f* by the eye-iron *e*, the chain D^4, the shaft D, having its bearings in boxes secured to feed-box B, the sprocket-wheel D^5 at its end con-

406,614.

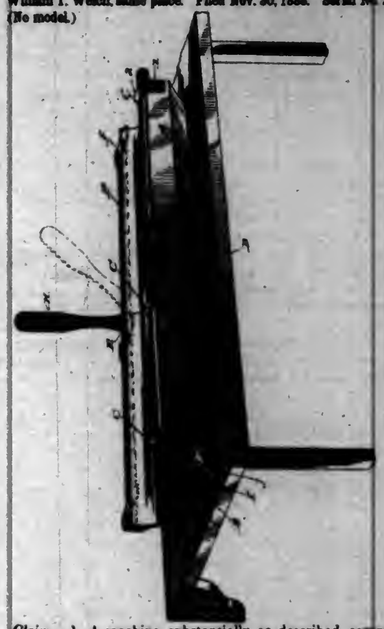


nected by the chain D^4 to the roller c, the roller c in the stand C, and stand C', the latter secured to the beam C, all substantially as shown.

2. In a combined thrasher and header, the combination of the shaft D, mounted in boxes secured to the feed-box B, and having the tiller-wheel D' at one end and the sprocket-wheel D^3 at the other end, the endless chain D^4, the forked stand C', the beam C of the thrasher, and its roller c, the washers c' upon the stem of the stand C', and means for connecting the chain D^4 to the header-frame and the beam C, all substantially as set forth.

3. In a combined thrasher and header, the combination of the shaft D, the tiller-wheel D', the sprocket-wheel D^3, the chain D^4, the roller c, the forked stand C', and its washers c' on the stem of the stand C', the rod d, with an eye in its lower end and hook at its upper end connecting the chain D^4 to the header, the eye-iron e, secured to the header-frame, and the beam C, all suitably located and attached to the machine, as shown and described.

4. In a combined thrasher and header, the combination of the beam C with the forked stand C', provided with the roller c and washers c', and connected by the chain D^4 to the sprocket-wheel D^3 on the end of the shaft D, the header-frame, the chain D^4 being suitably connected with the beam f of the header, all operating substantially as shown and set forth.



406,615. HYDRAULIC GOVERNOR FOR STEAM-PUMPS. CHAS. H. ATKINS, Palmer, assignor to the Geo. F. Blake Manufacturing Company, Boston, Mass. Filed July 16, 1888. Serial No. 280,027. (No model.)

Claim.—1. In a hydraulic governor for steam pumping-engines, the combination, with a valve-casing provided with a steam-inlet port and a steam-outlet port connected to the pump, and a valve in said casing to control the supply of steam to the pump, of a cylinder b^3, a piston in said cylinder connected to said valve, an independent valve-chest, an accumulator tank or vessel, a pipe connecting said valve-chest with said accumulator, a port in said valve-chest connected to the cylinder b^3, a valve in said valve-chest to control the supply of water to said cylinder, and a float or ram in said accumulator-tank connected to the valve in the valve-chest, to operate substantially as described.

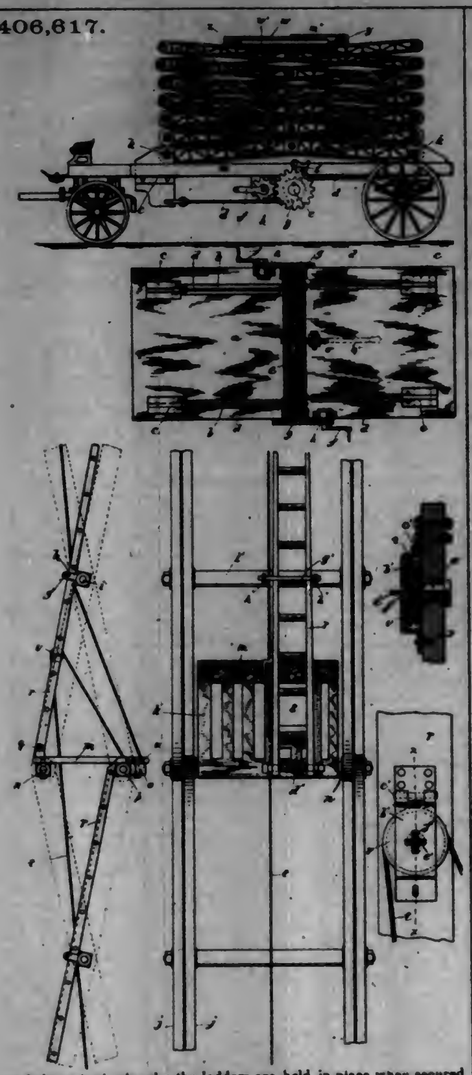
2. In a hydraulic governor for steam pumping-engines, the combination, with a valve-casing provided with a steam-inlet port and a steam-outlet port connected to the pump, and a valve in said casing to control the supply of steam to the pump, of a cylinder b^3, and a cylinder b^4 intermediate of the cylinder b^3 and valve-casing, pistons c c^2 in said cylinders connected to the said valve, an independent valve-chest provided with an outlet-port a^4, connected to the cylinder b^3, and an exhaust-port a^5, an accumulator tank or vessel, and a pipe connecting said tank with the said valve-chest, a valve in said valve-chest to control the supply of water to the cylinder b^3, and a float or ram in said accumulator-tank connected to the valve in the said valve-chest, substantially as described.

406,616. SOLDERING-CLAMP FOR EAVES-TROUGHS AND SPOUTS. HENRY C. ATKINSON, Scottville, Ky., assignor of one-half to William T. Welch, same place. Filed Nov. 30, 1888. Serial No. 292,341. (No model.)

Claim.—1. A machine, substantially as described, comprising a body portion provided with a longitudinal trough-like cavity and having at one edge of such cavity a stop, bearing, or seat, the presser-bar arranged at the opposite edge of such cavity extended approximately the full length thereof and having a portion or portions whereby to engage the trough-sections, such presser-bar being movable longitudinally in the direction of length of the cavity and downward, and a lever whereby to operate such bar, all substantially as described, whereby the portions engaging the edge of the trough-sections move thereagainst with a sliding and downward motion, as and for the purposes specified.

2. The combination of the body portion having cavity B and provided at one edge of such cavity with a stop, bearing, or seat, the bar F, arranged at the opposite side of the said cavity and provided with a portion or portions to engage the trough-sections and with diagonal slots g, the screws or studs G, passed through said slots, and the lever, all substantially as set forth.

3. A machine, substantially as described, consisting of a body-piece provided in one side with a gutter or groove I and in its other side with a trough-like cavity B and having a stop, seat, or bearing at one edge of such cavity, and a presser at the opposite edge of such cavity, substantially as set forth.



406,617. FIRE-ESCAPE AND LADDER. FRANCIS BAKER, Boston, Mass. Filed Sept. 24, 1888. Serial No. 286,160. (No model.)

Claim.—1. The combination of the lazy-tongs, the series of platforms pivoted thereto, the ladders between the platforms, and the rope or chain arranged, as shown, to raise all the platforms simultaneously.

2. The combination of the lazy-tongs, the pivoted platforms, the ladders, the pulleys on said ladders, and the rope or chain engaged with said pulleys and platforms, as set forth.

3. The combination of the lazy-tongs, the platforms, the ladders detachably secured at their lower ends to the platforms, as described,

406,617.

and the rods g', whereby the ladders are held in place when secured to the platforms, as set forth.

4. The combination of the lazy-tongs, the ladders having the pulleys v, and the movable yokes or guards for said pulleys, the platforms, and the rope engaged with the platforms and pulleys, as described, said rope being made detachable from the pulleys by the movable guards, as set forth.

5. The combination, with the lazy-tongs and a platform thereon, of a block 9, adapted to be pivotally engaged with said platform to swing horizontally, and a bridge pivoted to said block, so as to be capable of swinging vertically, as set forth.

6. The combination of the lazy-tongs having the horizontal platform w', an arm w'', connected by a rule-joint y' to a support on said platform, whereby said arm may be folded within the ladder or projected therefrom, and a pulley at the swinging end of said arm, whereby a rope may be suspended and raised and lowered.

7. The lazy-tongs composed of risers or members, consisting of the side pieces 2 2, connecting end pieces 3, transes 5, and bolts 4, as set forth.

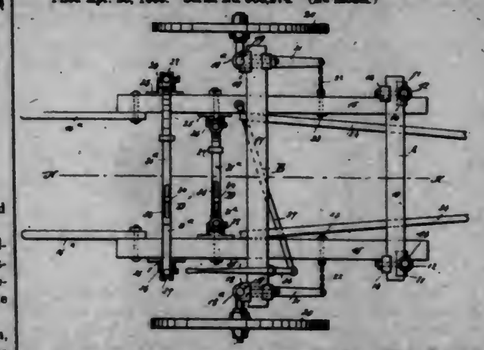
406,618. PANEL. HIRAM A. REDDOUT, Syracuse, N. Y., assignor of one-half to George I. Beach, same place. Filed June 30, 1888. Serial No. 278,098. (No model.)

Claim.—1. A section consisting of pulp-board or its described equivalent completely framed with wood, the pulp and frame being

406,618.

jointed together and having a surface-finishing material secured to the section and extending over the frame to the extreme edges of the same, substantially as specified.

2. A stile, standard, or cross-bar comprising two sections, each consisting of a body of pulp-board and having a surrounding frame of wood jointed or secured thereto, said sections being fastened apart, whereby grooves are formed for the reception of panels, substantially as specified.



3. A cross-bar consisting of two sections, each comprising a pulp-board body having a surrounding frame B of wood jointed thereto, tenons F, and spacing-blocks E, substantially as specified.

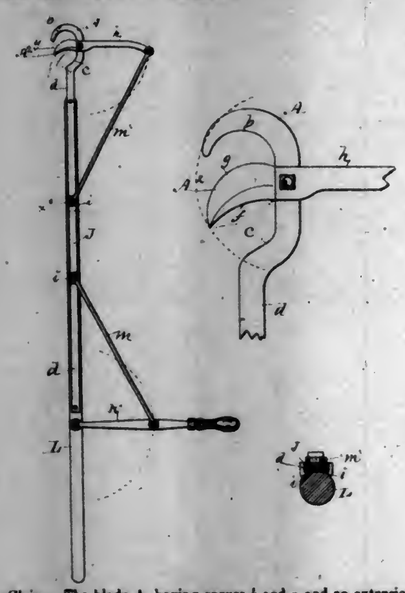
4. A section consisting of pulp-board or its described equivalent completely framed with wood, the pulp and frame being jointed together, and the frame being jointed at its corners by mortise-and-tenon joints, the tenons being shorter than the thickness of the mortised pieces, whereby the exterior surfaces of the latter are unimpaired, substantially as specified.

5. A structure comprising sections each consisting of two or more sheets of pulp-board cemented and compressed together, jointed to a wooden frame, and surfaced with veneer, and standards and cross-bars each comprising two of said sections connected together, substantially as specified.

6. A structure comprising sections consisting of a pulp-board body completely framed with wood and surfaced with veneer, standards made up of two of such sections spaced, as described, to form mortises for tenons, and cross-bars made up of two of such sections spaced and provided with tenons, substantially as specified.

406,619. CULTIVATOR. JOHN C. BENTHALL, Schulenburg, Tex. Filed Apr. 23, 1888. Serial No. 308,274. (No model.)

Claim.—1. In a cultivator, the combination, with a forward cross-bar, tubes laterally and vertically adjustable upon the same, a rod held in each of said tubes, and spaced longitudinal body-beams having one end secured to said rods, of an axle cross-bar, tubes vertically and laterally adjustable upon said axle-bar, an angled spindle held in each tube carrying a drive-wheel, and a link-connection between the spindles and body-beams, substantially as shown and described.



2. In a cultivator, the combination, with a forward cross-bar, tubes laterally and vertically adjustable upon the same, a rod held in each tube, and spaced longitudinal body-beams secured at one end to said rods, of an axle cross-bar, tubes vertically and laterally adjustable thereon, an angled spindle held in each tube carrying a drive-wheel, a link-connection between the spindles and body-beams, and laterally and vertically adjustable arched blade or share carriers secured to the body-beams, substantially as shown and described.

3. In a cultivator, the combination, with a forward cross-bar, tubes laterally and vertically adjustable upon the same, a rod held in each tube, and spaced longitudinal body-beams secured to the said rods, of an axle cross-bar, tubes vertically and laterally adjustable thereon, an angled spindle held in each tube carrying a drive-wheel, a link-connection between the spindle and body-beams, laterally and vertically adjustable arched blade or share carriers secured to the body-beams, a lever fulcramed upon the axle cross-bar, and a pitman-connection between the lever and opposite body-beam, substantially as shown and described.

4. In a cultivator, the combination, with a swinging frame, of transversely-aligning tubes secured to the side beams of the frame, a standard passed upward through each tube curved at the lower end to receive a share or blade, a thimble provided with two interior diameters, a set-screw uniting the tubes and standards, and curved bars secured to the upper end of each standard, united to form a laterally-adjustable arch-connection, substantially as shown and described.

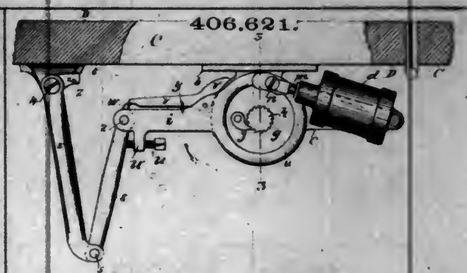
5. In a cultivator, the combination, with a swinging frame and disks having one radially-toothed face secured to the side beams of the frame, a second grooved and toothed disk contacting with the frame-disk, a tube detachably clamped to the grooved disks and frame, a share-carrying standard passed upward through each tube, a thimble provided with two interior diameters, a set-screw clamping the tubes to the standards, and a curved bar rigidly secured to the upper end of each standard, said bars being united by a laterally-adjustable connection, substantially as shown and described.

406,620. PRUNING-SHEARS. DANIEL B. BENTLEY, Geneva, Nebr., assignor of one-half to Daniel H. Goodrich, same place. Filed Feb. 25, 1889. Serial No. 301,017. (No model.)

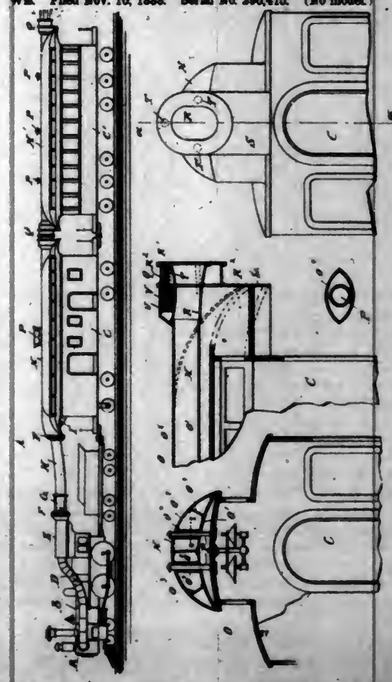
Claim.—The blade A, having curves *b* and *c*, and an extension *d*, fixed to the handle L, the blade A^1, having cutting-edges *f* and *g*, and an extension *h*, pivoted to the blade A, the slide J, having clasps *i* at its ends, the lever *k*, pivoted to the lower end of the handle, and the rods *m* and *m'*, connected with the ends of the slide, constructed and combined substantially as shown and described, for the purposes stated.

406,621. DOOR-CHECK. EUGENE I. BLOUNT, Cambridge, Mass., assignor to the Blount Manufacturing Company, Portland, Me. Filed Dec. 7, 1888. Serial No. 292,912. (No model.)

Claim.—1. In a door-check, the spring-actuated cap *g* and its connected arm, combined with a pivoted cylinder, and a piston and piston-rod, said piston-rod being pivoted at its outer end upon the periphery of said cap, substantially as set forth.



2. The spring barrel or casing, spring, and arbor, said spring being secured at one end to said barrel and at the other end to said arbor, combined with a rotary cap and connected arm, a ratchet-wheel on said arbor, a pawl pivoted on said cap and engaging said ratchet-wheel, a pivoted cylinder, and a piston-rod and piston, said piston-rod being pivoted at its outer end on the periphery of said cap, substantially as set forth.



3. The spring barrel or casing provided on its periphery with a cam, combined with the spring-actuated arm, the door, toggle-levers connecting said arm with the door, a lever *v*, pivoted upon said arm and provided at one end with a shoe adapted to operate on the periphery of the barrel and be actuated by said cam, the other end of said lever *v* engaging a projecting finger of one of said toggle-levers, and a set-screw or stop connected with said arm on the side of the fulcrum of said lever opposite that of the aforesaid projecting finger, substantially as set forth.

4. The spring barrel or casing provided on its periphery with a cam, combined with a spring-actuated arm, the door, a lug or bracket on the door, toggle-levers *s t*, connecting said arm with the door, a lever *v*, pivoted upon said arm and provided at one end with a shoe adapted to operate on the periphery of the barrel and be actuated by said cam, the other end of said lever *v* engaging a projecting finger of toggle-lever *s*, a set-screw or stop connected with said arm on the side of the fulcrum opposite that of the aforesaid finger, and said toggle-lever *t* being constructed and arranged to engage the stop of the lug or bracket on the door, substantially as set forth.

5. In a door-check, the spring casing or support provided with a base-plate and its connected bracket *c*, and the spring-actuated cap *g* and its connected arm, combined with a cylinder pivoted on said bracket and a piston and piston-rod, said piston-rod being pivoted at its outer end upon the periphery of said cap, substantially as set forth.

406,622. SPARK-CONDUCTOR. EDWARD J. BRANDT, Watertown, Wis. Filed Nov. 10, 1888. Serial No. 290,415. (No model.)

Claim.—1. The combination, with a train, of pipes leading from the opposite sides of the smoke-box of the locomotive to longitudinal

channels formed on the cars, a removable pipe between the locomotive-pipes and the said car-channels, and couplings for connecting the several channels with each other, substantially as shown and described.

2. The combination, with a train comprising a locomotive and cars, of pipes leading from the smoke-box of the locomotive, a fan or blower located in one of the cars and connected with the said pipes, and channels formed on the cars and into which the said blower discharges, substantially as shown and described.

3. The combination, with a train comprising a locomotive and cars, of pipes leading from the smoke-box of the locomotive, a fan or blower located in one of the cars and connected with the said pipes, channels formed on the cars and into which the said blower discharges, and flexible couplings for connecting the said channels of two succeeding cars with each other, substantially as shown and described.

4. The combination, with a train comprising a locomotive and cars, of a longitudinal channel formed on the clear story of each car and connected with the smoke-box of the locomotive, substantially as shown and described.

5. The combination, with a train comprising a locomotive and cars, of a longitudinal channel formed on the clear story of each car and connected with the smoke-box of the locomotive, and vertical pipes passing through the said channels for the passage of the ventilators of the cars, substantially as shown and described.

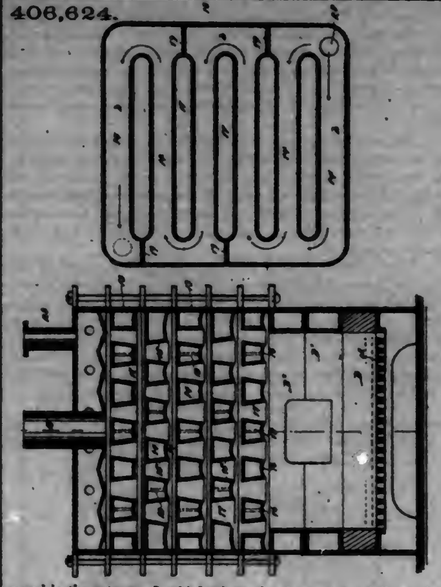
6. The combination, with a car provided with a channel N on its clear story, of a flexible tube connected with the end of the said channel, a metallic plate connected to the outer end of the said flexible tube, and a flexible casing connecting the said metallic plate with the end of the car, substantially as shown and described.

7. The combination, with a car provided with a channel N on its clear story, of a flexible tube connected with the end of the said channel, a metallic plate connected to the outer end of the said flexible tube, a flexible casing connecting said metallic plate with the end of the car, and tapering pins secured to the said metallic plate and projecting into corresponding sockets at the end of the clear story of the said car, substantially as shown and described.

8. The combination, with a car provided with a channel N on its clear story, of a flexible tube connected with the end of the said channel, a metallic plate connected to the outer end of the said flexible tube, a flexible casing connecting said metallic plate with the end of the clear story of the car, tapering pins secured to the said metallic plate and projecting into corresponding sockets at the end of the said car, and springs held in the said sockets and pressing against the said metallic plate, substantially as shown and described.

9. The combination, with a locomotive, of pipes leading from the smoke-stack of the said locomotive to a channel formed in the cab of the locomotive, the coupling F, held on the rear end of the said cab of the locomotive, a pipe projecting from the rear of the said coupling F, a flexible tube telescoping in the said pipe, and a second coupling F, held at the rear end of the said flexible tube and also secured on the front end of the first car, substantially as shown and described.

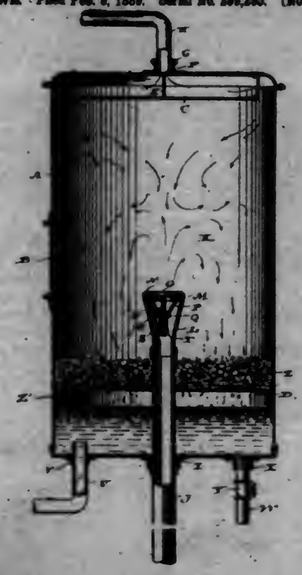
10. The combination, with a locomotive, of pipes leading from the smoke-stack of the said locomotive to a channel formed on the cab of the locomotive, the coupling F, held on the rear end of the said cab of the locomotive, a pipe projecting from the rear of the said coupling F, a flexible tube telescoping in the said pipe, a second coupling F, held at the rear end of the said flexible tube and also secured on the front end of the first car, and a pipe leading from the second coupling to a fan or blower, substantially as shown and described.



406,623. PICTURE-HANGER. WARREN M. SHINKERHOFF, Auburn, N. Y. Filed July 1, 1887. Serial No. 243,111. (No model.)

Claim.—A picture-hanger consisting of a main body provided with means for engaging a support for the same, a cord-support, and a single cord-locking projection extending outward from the facing surface of the main body, said projection being concaved or reduced between its outer end and the main body to form a notch or notches for the reception of the cord, substantially as described.

406,624. BOILER. WILLIAM H. BYRAM and JOHN REDMAN, Fishkill Landing, N. Y. Filed Mar. 14, 1889. Serial No. 303,224. (No model.)

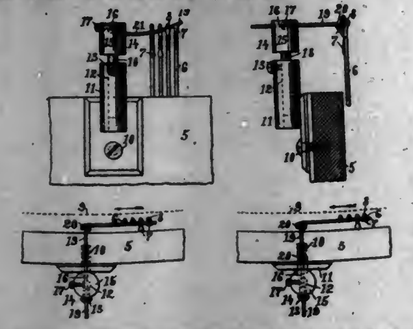


Claim.—1. The combination, with a series of sections containing parallel horizontal tubes and vertical tubes connecting the horizontal tubes of said sections, of alternately-arranged partitions rigidly secured in the returns of said horizontal tubes, substantially as shown and described, whereby a circuitous course is imparted to the water, as set forth.

2. The combination, with a series of sections containing horizontal, parallel, hollow, bar-like water-tubes having a concaved under surface, and vertical tubes connecting the horizontal water-tubes of said sections, of vertical alternately-arranged partitions located in the returns of the said horizontal tubes, substantially as shown and described.

3. In a boiler, the combination, with a series of independent sections arranged above the fire-box, one above the other, horizontal tubes carried by said sections having tapering sides and a concaved bottom surface, and vertical tubes connecting the outer tubes of each section at opposite diagonal corners, of vertical partitions alternately arranged in the opposite returns of the horizontal tubes of each of the said sections, all combined for operation substantially as shown and described, and for the purpose specified.

406,625. FEED-WATER HEATER. WILLIAM H. BURR, Sheboygan, Wis. Filed Feb. 9, 1889. Serial No. 299,295. (No model.)

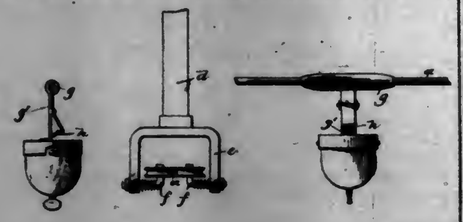


Claim.—1. The combination of a shell, a filter-bed arranged to divide the same into steam and water chambers, a steam-pipe communicating with the steam-chamber, a water-inlet pipe passed up through the water-chamber and filter-bed into said steam-chamber, a spring-controlled valve arranged on the latter pipe, and a delivery-pipe communicating with said water-chamber, substantially as set forth.

2. The combination of a shell, a filter-bed arranged to divide the same into steam and water chambers, a steam-pipe communicating with the steam-chamber, a water-inlet pipe passed up through the water-chamber and filter-bed into said steam-chamber, a spring-controlled valve arranged on the latter pipe, a delivery-pipe communicating with said water-chamber, and a blow-off pipe for the latter, substantially as set forth.

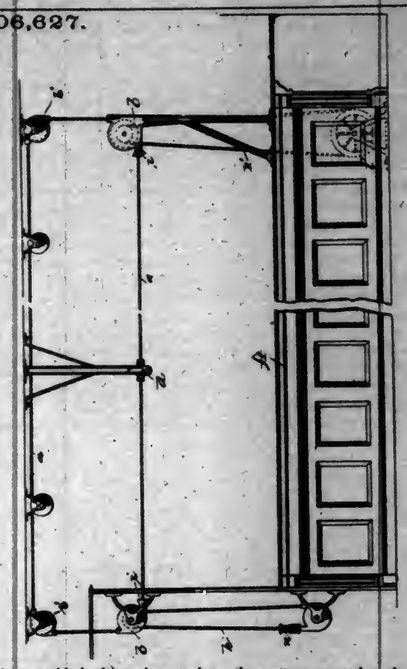
3. The combination of a shell provided with a suspended diaphragm, a filter-bed dividing the shell into steam and water chambers, a steam-inlet pipe communicating with said shell above the diaphragm, a division-plate arranged on the diaphragm to intercept the steam-pipe, a water-inlet pipe passed up through the water-chamber and filter-bed into the steam-chamber, a spring-controlled valve arranged on the pipe, and a delivery-pipe communicating with said water-chamber, substantially as set forth.

406,626. COMBINED THREAD-GUIDE AND LATCH-OPENER FOR KNITTING-MACHINES. HENRY A. CHURCH, Providence, R. I. Filed Nov. 8, 1887. Serial No. 254,605. (No model.)



Claim.—1. A combined thread-guide and latch-opener for knitting-machines, consisting, essentially, of a single piece of wire bent in substantially L shape, and provided at the junction of the two legs constituting the L with a guide-eye formed by bending the wire, one of the legs being adapted to engage and open the latches of the rotating knitting-needles, substantially as set forth.

2. A combined thread-guide and latch-opener for knitting-machines, consisting, essentially, of a single piece of wire bent in substantially L shape, and provided at the junction of the two legs constituting the L with a guide-eye formed by bending the wire, and formed also on one of its legs with one or more guide-eyes 20, substantially as set forth.



3. The combination, with the stand formed with a vertical socket and having a set-screw working into said socket, of a holder having a depending stem working in the socket of the stand, said holder having a horizontal passage or opening, and an L-shaped thread-guide and latch-opener working in said opening and adjustably held by a set-screw, said guide having one or more eyes and adapted to engage and open the latches of the knitting-machine, substantially as set forth.

406,627. CASH-CARRIER APPARATUS. DAVID W. COPELAND, Syracuse, N. Y. Filed Mar. 18, 1889. Serial No. 303,767. (No model.)

Claim.—1. In combination with an endless band and a receptacle carried thereby, a pair of horizontally-arranged pulleys on each side of the band for supporting the same, an arm or post having a yoke upon its lower end spanning the band, and brackets carrying the pulleys, said brackets having bearings in the ends of the yoke, and

406,627.

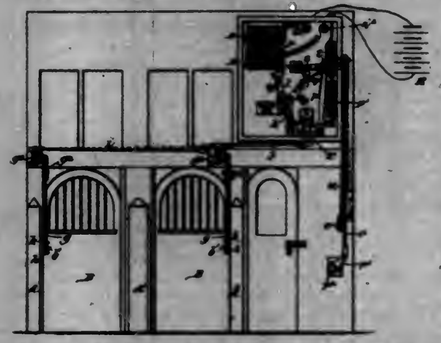
being provided with springs to keep the pulleys pressed against the band, substantially as described.

2. In combination, an endless band, means for operating it, supporting-drums at each end, an inclosing-case for each drum, a tubular socket projecting from each case, through which the band passes, and a carrier connected to the band and having cone-shaped projections in line with the socket, substantially as described.

406,628. BRAKE FOR VEHICLES. MICHAEL CONSEY, Forestville, Iowa. Filed Mar. 21, 1889. Serial No. 304,121. (No model.)

Claim.—1. The combination, with the frame of a sled having the rear ends of the runners thereof bifurcated, of the cross-piece pivoted in the forward ends of the runners and formed or provided with a forwardly-extending arm, said arm being provided with a longitudinal vertically-extending slot, the sleeves or clips arranged at opposite ends of said arm, the horizontal bars, the upper cross-piece pivoted to the forward ends of said bars, the tongue passing through the sleeves or clips and provided with a vertical perforation, the bolt passing through said perforation and through the longitudinal slot in the forwardly-extending arms, and the rear downwardly-extending bars pivoted to the ends of the horizontal bars and also pivoted in the bifurcated portion of the runners, said arms being provided with hooked ends, substantially as set forth.

2. The combination, with the frame of a sled having the rear ends of the runners thereof bifurcated, of the cross-piece pivoted in the forward ends of the runners and formed or provided with a forwardly-extending arm, said arm having a longitudinal vertically-extending slot, the clips or sleeves arranged at opposite ends of said arm, the rear horizontal bars, the forward horizontal bars pivoted thereto, the forward pivoted cross-piece, the tongue passing through the clips or sleeves and provided with a vertical perforation, the bolt passing through said perforation and through the longitudinal slot in the forwardly-extending arm, and the rear downwardly-extending bars pivoted to the ends of the horizontal bars and also pivoted in the bifurcated portion of the runners, said arms being provided with hooked ends, substantially as set forth.



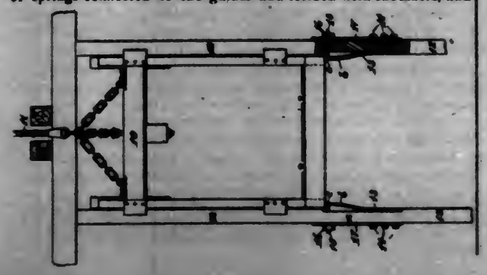
3. In a brake for sleds and other vehicles, the combination of the brake mechanism, the cross-piece pivoted to the forward ends of the runners and formed or provided with a forwardly-extending arm, said arm having a longitudinal vertically-extending slot therein, the sleeves

or clips arranged at opposite ends of said arm, the sliding tongue, and the turn-button for regulating the inward movement of said tongue, substantially as set forth.

4. In a brake for sleds and other vehicles, the combination of the brake mechanism, the cross-piece pivoted to the forward ends of the runners and formed or provided with a forwardly-extending arm, said arm having a longitudinal vertically-extending slot therein, the sleeves or clips arranged at opposite ends of said arm, the upper cross-piece, the sliding tongue secured thereto and provided with forward and rear perforations, the double-headed bolt passing through the forward perforations, the bolt passing through the rear perforation, and the turn-button, substantially as set forth.

5. The combination of the cross-pieces of the frame provided with staples upon their upper sides, the cross-piece pivoted in the forward ends of the runners and formed or provided with a forwardly-extending arm, said arm having a longitudinal vertically-extending slot therein, the clips or sleeves arranged at opposite ends of said arm, the rear horizontal bars, the forward pivoted bars, the upper cross-bar pivoted to the forward ends of said bars, the tongue passing through the clips or sleeves and provided with perforations for the reception of suitable bolts, the turn-button, the strip or brace connecting said turn-button to the upper pivoted cross-piece, the lower brace-piece, and the rear downwardly-extending bars suitably pivoted to the ends of the rear horizontal bars and also pivoted in the runners of the sled, said rods being provided with hooked ends, substantially as herein described and set forth.

406,629. ELECTRIC HORSE-DISCONNECTOR. GEORGE A. COULTER, Omaha, Nebr., assignor of one-half to James C. Ish, same place. Filed Sept. 15, 1887. Serial No. 249,811. (No model.)



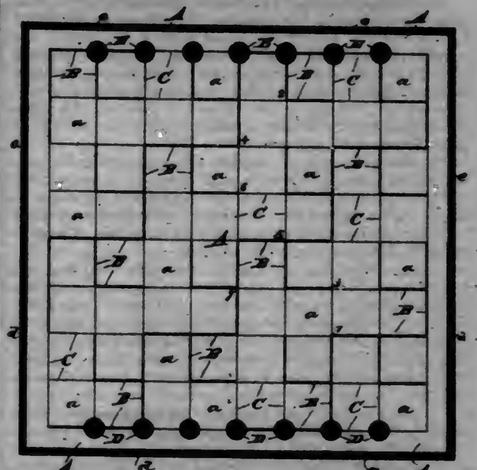
Claim.—1. The combination, with the two stall-doors hinged adjacent to each other, and electro-magnet-releasing devices, of a pair of horizontal levers C C, having a stationary fulcrum on the casing and their free ends loosely connected to the doors, the link-bars $c' c$, connected to the short ends of the levers, the cross-head c', screw-bolt c^2, spring c^3, and nut c^4, substantially as shown and described.

2. The combination, with the stall-doors and the locking devices for the same, of the rods $i j$, the T-shaped lever T, vertical bar p, attached to one arm thereof and provided with an upwardly-pulling spring p', lever q, loosely connected to the bar and having vertical pull-rod, link k, attached to the other arm of the lever T, lever l, with knuckle-plate n, pivoted to the box and also to the link, the magnets D D, and the armature having a spring pulling in unison with the magnets, substantially as shown and described.

406,630. SAFETY ATTACHMENT FOR ELEVATORS. JAMES COWIE, Lebanon, Pa. Filed Feb. 27, 1889. Serial No. 301,397. (No model.)

Claim.—The combination, with an elevator-cage and its guides, of springs connected to the guides and formed with shoulders, and

406,630.

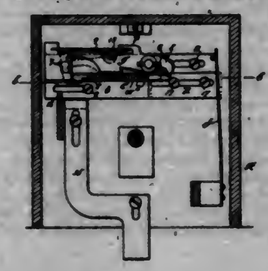


with outwardly-extending threaded shanks connected to the springs, and nuts which engage said shanks, substantially as described.

406,631. DRY-FLOUR PASTE. JOHN H. DAY, Albany, N. Y. Filed Mar. 27, 1889. Serial No. 304,993. (Specimens.)

Claim.—A new article of manufacture resulting from evaporating the moisture from liquid flour paste composed of flour, glue, and alcohol, and grinding the residue to a fine powder, substantially as described.

406,632. GAME APPARATUS. FREDERICK R. DUNHAM, New York, N. Y. Filed Mar. 11, 1889. Serial No. 302,981. (No model.)



Claim.—1. A game-board made with a series of adjacent figures, one part of each figure being formed by a line or lines of one color or style and the remaining part of each figure being formed by a line or lines of another color or style, said lines or colors being severally adapted to indicate the direction and extent of movement of the pieces or men used in playing the game, substantially as herein set forth.

2. A game-board made with a series of adjacent figures, one part of each figure being formed by a line or lines of one color or style and the remaining part of each figure being formed by a line or lines of another color or style, combined with two or more series of readily-distinguishable pieces or men adapted for movement on the boundary-lines of the figures of the board, substantially as herein set forth.

406,633. VENDING APPARATUS. CORNELIUS F. DE RIDDER, New York, N. Y., assignor, by mesne assignments, to the Postage Stamp Service Machine Company, of New York. Filed Mar. 30, 1889. Serial No. 305,397. (No model.)

Claim.—1. The combination, in a machine of the class referred to, of the casing having the slot to receive the coins with a movable

406,633.

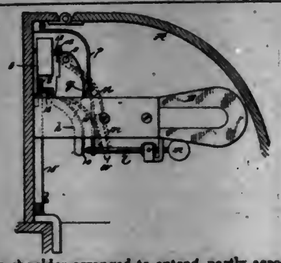


plate *b*, having a shoulder arranged to extend partly across said slot in position to be engaged by a coin of the proper thickness, substantially as described.

2. The combination, in a machine of the class referred to, of the casing having the slot *a* to receive the coins with the movable plate *b*, having the slot *c* registering with the slot *a* and contracted at one end to form shoulders which project partly across the slot *a*, substantially as described.

3. The combination, in a machine of the class referred to, of the casing having the slot to receive the coins with a movable plate *b* having a shoulder arranged to extend partly across said slot, and thereby reduce its width at one end, a second plate *d*, movable with and independently of the plate *b* and extending across the portion of the slot *a* which is reduced in width by the shoulders, and in position to be engaged by a coin or piece of metal of less than the proper thickness, and the latch-plate *g*, operated by said plate *d*, to lock the plate *b*, substantially as described.

4. The combination, in a machine of the class referred to, of a support *k*, arranged to receive the coins as they are introduced into the machine and to direct them forward in the proper course, with a magnet E, located adjacent to said support and in position to attract and retain thereon pieces of iron or other metal capable of being attracted by a magnet, substantially as described.

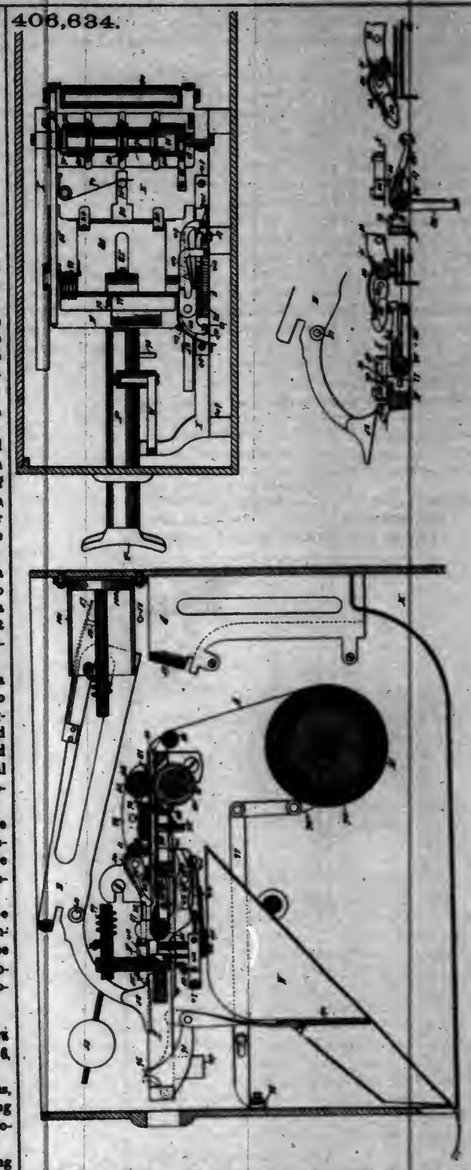
5. The combination, in a machine of the class referred to, of a support *k*, arranged to receive the coins as they are introduced into the machine and to direct them forward in the proper course, a magnet E, located adjacent to said support and in position to attract and retain thereon pieces of iron or other metal capable of being attracted by a magnet, and the guide *n*, operated to remove the arrested metal from the support by the deposit of the next coin, substantially as described.

6. The combination, in a machine of the class referred to, of the casing having the slot to receive the coins with the guide *k*, the counterbalanced support *k*, and the stop 14, for arresting a coin or piece of metal which is heavier than the proper coin, substantially as described.

7. The combination, in a machine of the class referred to, of the casing having the slot to receive the coins, with the guide *k*, the counterbalanced support *k*, and the stop 14, for arresting a coin or piece of metal which is heavier than the proper coin, and the guide *n*, operated to remove such heavier coin or piece of metal from the support by the deposit of the next coin, substantially as described.

406,634. VENDING APPARATUS. COMFORT F. DE REDON, New York, N. Y., assignor to Francis L. Wellman, same place. Filed May 6, 1889. Serial No. 309,709. (No model.)

Claim.—1. A delivery mechanism for a stamp-vending apparatus, consisting of the combination, with strip-feeding and stamp detaching and delivering apparatus, of a sliding carriage and means for reciprocating the same, substantially as described.



2. In a vending apparatus, the combination, with strip-feeding and stamp detaching and delivering apparatus, of a sliding carriage and a pulling-handle, substantially as described.

3. In a vending apparatus, the combination, with a sliding carriage through the reciprocation of which the various operations of feeding, detaching, and delivering the stamp are accomplished, of a governing-lever normally acting to lock the carriage stationary and adapted to gravitate and release said carriage, substantially as described.

4. The combination, with the sliding carriage F, of the double ratchet-bar, vibrating double pawl, and a switch operating at the end of a completed movement of the carriage in either direction to set the pawl into engagement with the ratchet-bar to prevent a false movement of said carriage, substantially as described.

5. In a vending-machine, the combination, with a sliding or reciprocating carriage whereby the feeding, detaching, and ejecting operations are effected, of a safety apparatus operating to compel the completion of the movement of the carriage, once begun, in either direction before the reverse movement can be made, substantially as described.

406,634.

6. In a vending-machine, the combination, with the apparatus for feeding the ribbon of stamps forward, of a detent operating to nip and hold the ribbon of stamps and a detaching apparatus operating to seize the foremost stamp and by a sliding movement to detach the same from the ribbon, substantially as described.

7. In a vending-machine, the combination, in the delivery mechanism for the stamps, of a stationary part through which the stamps are fed, means for suspending the movement of the strip of stamps, and a sliding carriage carrying a detaching apparatus operating to seize the foremost stamp, remove it from the ribbon of stamps, and deposit it in a delivery-chute, substantially as described.

8. In a vending-machine, the combination, with the stationary part of the delivery mechanism through which the stamps are fed and periodically held and the sliding carriage carrying the detaching apparatus operating to seize the foremost stamp, remove the same from the ribbon of stamps, and deliver the same, of a controlling-gate and means preventing its opening to discharge the stamp until the sliding carriage has completed its actuating movement, substantially as described.

9. The combination of a sliding carriage, the controlling-gate, and intermediate tripping device co-operating so that the forward movement of the carriage shall be completed before it raises the said gate to discharge the stamps, substantially as described.

10. The combination, with the sliding carriage carrying the stamp-delivering jaws 25 26 and means for feeding forward the strip of stamps, of the sliding stamp-guide 82, whereby the foremost stamp is supported close to the jaws when the same advance to seize it, substantially as described.

11. The combination, with the sliding carriage F, ratchet-bar having opposed teeth 28 11, of the double pawl 42 41 and switch-lever 46, with its arms 43 44, substantially as described.

12. The combination, with the sliding carriage F and ratchet-bar having opposed teeth 28 11, of the double pawl 42 41, switch-lever 46, its arms 43 44, and the stop-block 49 and stop-pin 29, substantially as described.

13. The combination, with the rack carried by the sliding carriage F, the pinion driven thereby, and the feeding-wheels, of a clutch for connecting the shaft carrying the pinion with the said pinion-wheel, so as to rotate them to perform the feeding operation, substantially as described.

14. The combination, with the sliding carriage F, its rack 65, the feeding-roll 62, wheel 60, and pinion 64 on shaft 61, of ratchet-wheel 73 and pawl 71, substantially as described.

15. The combination, with the guide 82, detent 30, and means for detaching the foremost stamp from the strip, of the feed-roller 62 and means for raising it temporarily out of action at the end of its feeding movement, substantially as described.

16. The combination, with the feed-roller 62 and jaws 25 26, of the sliding guide 82 and its cam 21, substantially as described.

17. The combination, with the jaws 25 26 and sliding guide 82 of a spring 74, substantially as described.

18. The combination, with the jaws 25 26 and pins 24, of the sliding guide 82 and its tongue 94, substantially as described.

19. The combination, with the feeding-roll 62 and detent 30, of the reciprocating jaws 25 26 and cam-arms 33, substantially as described.

20. The combination, with the reciprocating jaws 25 26 and detent 30, of actuating cam-arms 33 and elastic connections between said jaw 30 and arms 33, substantially as described.

21. The combination, with the nipping-jaws 25 26 and the sliding carriage, of the rock-arms 37 and cams 36 and 40, substantially as described.

22. The combination, with the nipping-jaws 25 26, of the tappet 77 and stop 78, substantially as described.

23. The combination, with the nipping-jaws 25 26, of the tappet 77, stop 78, and cams 36 and 40, substantially as described.

24. The combination, with the nipping-jaws 25 26, of the toes 20, substantially as described.

25. The combination, with the nipping-jaws 25 26 and arms 33 of the spring 86, substantially as described.

26. The combination, with the nipping-jaws 25 26 and arms 33, of the spring 86 and toes 20, substantially as described.

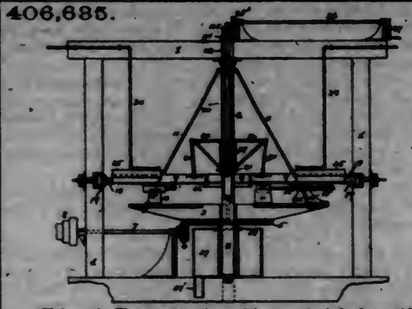
27. The combination, with the sliding carriage F and its tappet 93, of the gate 90 and lifting-lever 91, substantially as described.

28. The combination, with the sliding carriage F and its nose-piece 55, of the governing-lever B and its shoe 52, substantially as described.

29. The combination, with the sliding carriage F and its nose-piece 55, of the governing-lever B, its shoe 52, stop 56, and stud 58, substantially as described.

30. The combination, with the sliding carriage F and its nose-piece 55, a governing-lever B, its shoe 52, and stop 56, of the stud 58 and coin-guide G, substantially as described.

31. The combination, with the casing having coin-slot *a*, the sliding plate *b*, co-operating therewith, and the arm 15, of the rocking lever 98, latch-bar 97, lever 95, and actuating spring-arm 96, released to operate upon said lever 95 by unreeling the ribbon or strip of stamps therefrom, substantially as described.



32. In a vending-machine, the combination, with the sliding carriage whereby the feeding, detaching, and ejecting operations are effected, of the spring-operated retracting-rod, substantially as described.

33. In a vending-machine, the combination, with the sliding carriage whereby the feeding, detaching, and ejecting operations are effected, of the cushioned rod 99, substantially as described.

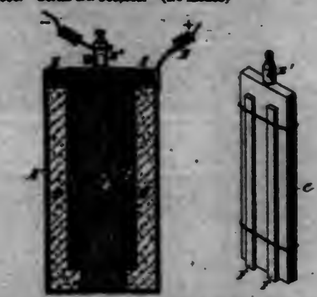
34. In a vending-machine, the combination, with the sliding carriage whereby the feeding, detaching, and ejecting operations are effected, of the rod 99, piston 100, and cylinder 101, substantially as described.

406,635. CONCENTRATING AND AMALGAMATING MACHINE. GEORGE Q. DEMMING, Stockton, Utah. Filed May 26, 1887. Renewed May 28, 1889. Serial No. 312,264. (No model.)

406,635.

Claim.—1. The combination, with a vertical shaft provided with a support for the pans, of the said pans having the forms of sectors, whereby they form a circle when assembled, and each pan provided with sliding bearings on its support, and mechanism comprising a cam, a cam-roller, buffers, and spring for imparting to each pan a radial sliding and jarring movement as it is carried around by the shaft.

2. The combination, with a vertical shaft 2, provided with a suitable support 3 for the pans, said support having buffers 14', of the mechanism for imparting rotation to said shaft, the pans 9, each provided with shoes 10 10', a buffer 14, a cam 18, a spring-rod 15, and a spring 16, and the rollers 19 on the machine-frame, arranged to strike said cams on the pans.



3. The combination, with the tubular slotted shaft 2 and the pans 9, of the rod 20 in the hollow of the shaft, the cross-piece 21, loose on said rod and engaging the slots in shaft 2, the sleeve 29 on shaft 2 and resting on cross-piece 21, said sleeve having arms 30, the links 31, connecting arms 30 with the pans, respectively, and means, substantially as described, for raising and lowering said rod 20.

4. The combination, with the main frame and the rollers 19, mounted adjustably thereon, of the shaft 2, rotatively mounted in said frame and provided with a support for the radially-sliding pans, the said pans each provided with a cam 18, adapted to bear on said rollers as the shaft revolves, and the springs that return or retract the pans, substantially as and for the purposes set forth.

5. The combination, with the independently-moving pans arranged around the shaft, of the said shaft, the feed-pipes arranged over the pans, and the deflecting-shields 35, arranged over the spaces between the pans under said feed-pipes, and means for operating said pans, substantially as set forth.

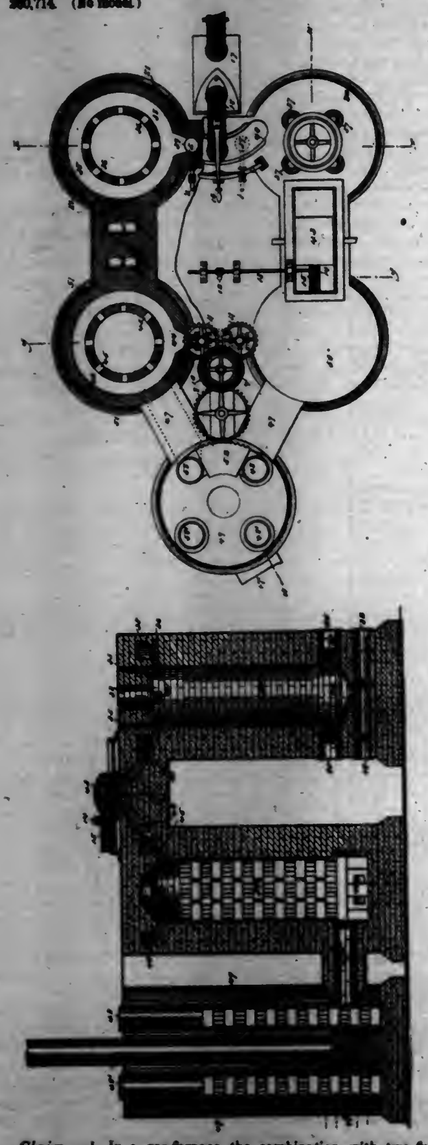
6. The combination, with the pans and hollow shaft 2, of the mechanism for simultaneously lifting the inner ends of said pans, consisting of the non-rotative lifting-rod 20 in said hollow shaft 2, cross-piece 21, rotatively mounted on the rod 20, sleeve 29 and its arms, coupling-links 31, nut 25, and mechanism for rotating said nut.

406,636. GALVANIC BATTERY. MATTHEW DOUGHTY, Worcester, Mass., assignor of one-half to Edward P. King, same place. Filed Mar. 14, 1889. Serial No. 303,202. (No model.)

Claim.—1. The excitant-paste for batteries, composed of madder, sal-ammoniac, sulphate of zinc, bichloride of mercury, and water, mixed together in proportions substantially as specified.

2. The excitant composition formed of madder, sal-ammoniac, sulphate of zinc, bichloride of mercury, and water, substantially as described, in combination with the zinc and carbon elements in an electric battery, substantially as set forth.

3. The combination, with the carbon or negative element, the positive element, and the excitant-filling, in an electric battery, of pieces of wood-charcoal disposed in contact with the carbon or negative element for absorbing and condensing hydrogen.



4. The combination, in an electric battery, of the zinc A, the car-

bon C, the excitant material or paste D, composed of madder, sal-ammoniac, sulphate of zinc, bichloride of mercury, and water, as specified, and wood-charcoal F, for absorbing hydrogen, all substantially as and for the purpose set forth.

5. A battery composed of the double-cell cup of indurated fiber or neutral material, with a zinc lining, a carbon center having a filling or re-enforce of wood-charcoal, and an intervening filling between said zinc and carbon, of excitant-paste composed of madder, sal-ammoniac, sulphate of zinc, bichloride of mercury, and water, substantially as set forth.

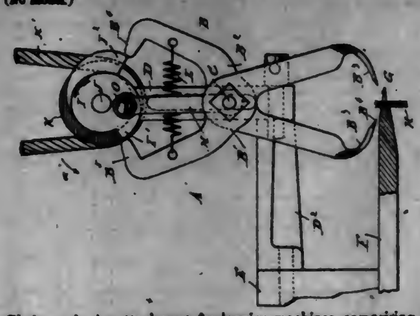
6. An electric battery having or containing pulverized madder, in combination with the excitant agents, substantially as and for the purpose set forth.

406,687. APPARATUS FOR THE MANUFACTURE OF FUEL-GAS. MARY T. DWIGHT, Montclair, N. J., administratrix of George S. Dwight, deceased. Original application filed Oct. 2, 1884, Serial No. 144,530. Divided and this application filed Jan. 14, 1888. Serial No. 260,714. (No model.)

Claim.—1. In a gas-furnace, the combination, with two fuel-chambers 20 21, communicating with each other at their bases, of two air-heating chambers 50 51, communicating with the upper parts of the respective fuel-chambers above the fuel contained therein, and steam-pipes and gas-escape passages also communicating with the upper parts of each of said fuel-chambers above the fuel contained therein, whereby an air-blast may be passed through either of said air-heating chambers, thence downward through the fuel in the fuel-chamber connected therewith and upward through the fuel in the other fuel-chamber, and the products of combustion passed thence through the other air-heating chamber, and whereby steam may be passed downward through the fuel in either fuel-chamber and then upward through the fuel in the other fuel-chamber, and the resulting gas escape from the upper part of the last chamber, substantially as described.

2. In a gas-furnace, the combination, with two fuel-chambers 20 21, communicating with each other at their bases, of two air-heating chambers 50 51, communicating with the upper parts of the respective fuel-chambers above the fuel contained therein, and steam-pipes and gas-escape passages also communicating with the upper parts of each of said fuel-chambers above the fuel contained therein, whereby an air-blast may be passed through either of said air-heating chambers, thence downward through the fuel in the fuel-chamber connected therewith and upward through the fuel in the other fuel-chamber, and the products of combustion passed thence through the other air-heating chamber, and whereby steam may be passed dowaward through the fuel in either fuel-chamber and then upward through the fuel in the other fuel-chamber, and the resulting gas escape from the upper part of the last chamber, and the shifting pipe 18, for connecting with the upper parts of the gas-escape passages of either of said fuel-chambers, substantially as described.

3. In a gas-furnace, the combination, with two fuel-chambers 20 21, communicating with each other at their bases, of two air-heating chambers 50 51, communicating with the upper parts of the respective fuel-chambers above the fuel contained therein, and steam-pipes and gas-escape passages also communicating with the upper parts of each of said fuel-chambers above the fuel contained therein, whereby an air-blast may be passed through either of said air-heating chambers, thence downward through the fuel in the fuel-chamber connected therewith and upward through the fuel in the other fuel-chamber, and the products of combustion passed thence through the other air-heating chamber, and whereby steam may be passed downward through the fuel in either fuel-chamber and then upward through the fuel in the other fuel-chamber, and the resulting gas escape from the upper part of the last chamber, and valves for controlling the communication between said air-heating chambers and the respective fuel-chambers, substantially as described.



4. In a gas-furnace, the combination, with two fuel-chambers 20 21, communicating with each other at their bases, of two air-heating chambers 50 51, having connections for receiving an air-blast at each end and communicating with the upper parts of the respective fuel-chambers above the fuel contained therein, and steam-pipes and gas-escape passages also communicating with the upper parts of each of said fuel-chambers above the fuel contained therein, whereby an air-blast may be passed through either of said air-heating chambers, thence downward through the fuel in the fuel-chamber connected therewith, and upward through the fuel in the other fuel-chamber, and the products of combustion passed thence into and burned with an air-blast as they pass through the other air-heating chamber, and whereby steam may be passed downward through the fuel in either fuel-chamber and then upward through the fuel in the other fuel-chamber, and the resulting gas escape from the upper part of the last chamber, substantially as described.

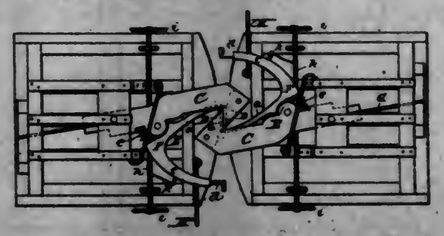
5. In a gas-furnace, the combination, with two fuel-chambers 20 21, communicating with each other at their bases, of two air-heating chambers 50 51, having connections for receiving an air-blast at each end and communicating with the upper parts of the respective fuel-chambers above the fuel contained therein, and steam-pipes and gas-escape passages also communicating with the upper parts of each of said fuel-chambers above the fuel contained therein, whereby an air-blast may be passed through either of said air-heating chambers, thence downward through the fuel in the fuel-chamber connected therewith, and upward through the fuel in the other fuel-chamber, and the products of combustion passed thence into and burned with an air-blast as they pass through the other air-heating chamber, and whereby steam may be passed downward through the fuel in either fuel-chamber and then upward through the fuel in the other fuel-chamber, and the resulting gas escape from the upper part of the last chamber, and a steam-boiler having flues communicating with each of said air-heating chambers to receive the products of combustion therefrom, substantially as described.

6. In a gas-furnace, the combination, with the two fuel or combustion chambers 20 21, of the two air-heating chambers 50 51, the passages 41 42, connecting said fuel and air-heating chambers, the sliding covers 43, for controlling said passages, and means by which said covers can be operated simultaneously, substantially as described.

7. In a gas-furnace, the combination, with the two air-heating chambers 50 51, of the air-pipe 55 and its branches, communicating with the tops and bottom of said chambers, the cocks 4 5 6 7, and means by which said cocks can be operated simultaneously, substantially as described.

406,638. ATTACHMENT FOR LOOPING-MACHINES. RAYMOND R. ELLSWORTH, Cohoes, N. Y. Filed Nov. 3, 1888. Serial No. 289,896. (No model.)

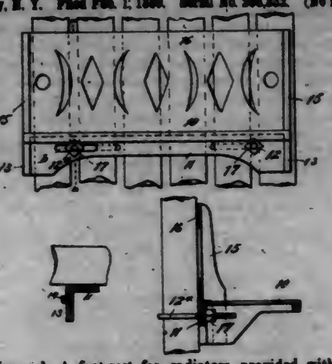
Claim.—1. An attachment for looping-machines, comprising a pair of vertically-movable tongs, a rotary cam between the upper ends of the tongs to rock the two members thereof on their pivot, means for closing the tongs, and a positive connection between the cam and the tongs for raising and lowering said tongs, substantially as set forth.



2. An attachment for looping-machines, comprising a pair of tongs adapted to engage with their lower ends the surplus material above the impaling-needles, a cam-wheel for opening and a spring for closing said tongs, and a pitman pivotally connected with the pivot of the said tongs, and also connected with a crank-pin on the cam-wheel, substantially as shown and described.

3. An attachment for looping-machines, comprising a pair of tongs adapted to engage with their lower ends the surplus material above the impaling-needles, a fixed frame having a slot in which is held to slide the pivot of the said tongs, a cam-wheel having a rotary motion and serving to open said tongs, a spring for closing the tongs, and a pitman pivotally connected with the pivot of the said tongs and with a crank-pin on the said cam-wheel, substantially as shown and described.

4. An attachment for looping-machines, comprising a pair of tongs adapted to engage with their lower ends the surplus material above the impaling-needles, a fixed frame having a slot in which is held to slide the pivot of the said tongs, a cam-wheel having a rotary motion and serving to open and close said tongs, a pitman pivotally connected with the pivot of the said tongs and with a crank-pin on the said cam-wheel, and a spring for closing said pair of tongs, substantially as shown and described.



5. An attachment for looping-machines, comprising a frame having a vertical slot, a pair of tongs adapted to engage with their lower ends the surplus material above the impaling-needles, the pivot of said tongs being held to slide in the said vertical slot, a cam-wheel secured to a shaft mounted to rotate in the said frame and serving to open the upper ends of the said tongs, a spring connected with the upper ends of the said tongs to close the same, a pitman pivotally connected with the said pivot-pin of the tongs, and a crank-pin secured on the face of the said cam-wheel and pivotally connected with the said pitman, substantially as shown and described.

406,639. CAR-COUPLING. AUSTIN ELLIOTT, Kansas City, Kans. Filed Sept. 26, 1888. Serial No. 286,470. (No model.)

Claim.—The herein-described car-coupling, consisting of the elongated draw-head pivoted near its rear end to the platform of the car and provided with the spring G, the front end of said draw-head terminating in a hook-shaped projection D, and provided with an elbow-shaped lever F, the one arm of which rests within the space at the rear of the said hook-shaped projection D, while the other arm thereof projects to one side of the car, substantially in the manner and for the purpose specified.

406,640. RADIATOR FOOT-REST. GEORGE C. FELTER, Haverstraw, N. Y. Filed Feb. 1, 1889. Serial No. 298,332. (No model.)

Claim.—1. A foot-rest for radiators provided with vertical grooves or recesses on its sides at the inner ends thereof, and a vertical open-work shield having downward-extending arms 14 entering said recesses or grooves, substantially as set forth.

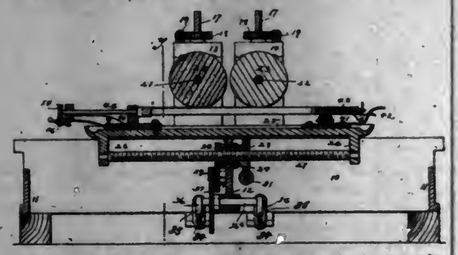
2. As an improved article of manufacture, a foot-rest for radiators, consisting in the shelf 10, having integral depending flanges 11 13 along its inner side and ends, respectively, the flange 11 being provided with a bolt-aperture and a longitudinal slot 6, and the end flanges 13 being vertically grooved or recessed at their inner ends, the hook-bolts extending inwardly through said aperture and slot, and provided with nuts on their inner ends, and the open-work shield 16 having integral end flanges 15 and depending arms 14 entering said recesses or grooves, substantially as set forth.

406,641. MEASURING-VESSEL. JOHN FREYTAG, Dayton, Ohio. Filed Nov. 26, 1888. Serial No. 291,942. (No model.)

Claim.—1. An improved measuring apparatus, substantially as described, comprising a supply-pipe, a discharge-pipe, a number of measuring-chambers, faucets controlling the inlet to and discharge of said measuring-chambers, branch pipes connecting the faucets of each of said measuring-chambers with the supply-pipe, and branch pipes connecting each of such faucets with the discharge-pipe, all being constructed substantially as described, whereby all of said measuring-chambers may be filled through the same pipe and emptied through the same pipe, as and for the purposes set forth.

2. An apparatus, substantially as described, consisting of the casing or cabinet, the measuring-chambers arranged in said cabinet, the faucets arranged in the cabinet and controlling the inlet to and discharge from said measuring-chambers, the handles of said faucets being arranged outside the cabinet, the supply-pipe, the branch pipes arranged in the cabinet and connecting the supply-pipe with the faucets of each of the measuring-chambers, the discharge-pipe extended through the front wall of the casing or cabinet, and the branch pipes arranged in the cabinet and connecting the discharge-pipe with the faucets of each of the measuring-chambers, substantially as set forth.

406,642. WIRE-STRETCHER. WILLIAM G. FROST, Lebanon, Ind. Filed Oct. 3, 1888. Serial No. 287,097. (No model.)



Claim.—1. A wire-stretcher consisting of a horizontal frame with means at one end for securing the end of a fence-wire, and a pulley or wheel at the other end with a pawl-and-ratchet wheel and means for operating the same, and lateral projections with means for securing brace-wires thereto, substantially as described.

2. A wire-stretcher consisting of frame 1, with horizontal portion 2, having at one end eye 3, and at the other vertical side pieces 5, a pulley 7, with ratchet-wheel 10, having its axle 6 provided with squared end 12, mounted in inclined slots 9 in the side pieces 5, pawl 11, engaging ratchet-wheel 10, and lateral projections 13, with holes 14, substantially as described.

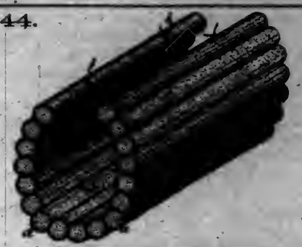
3. The combination, with a wire-stretcher consisting of frame 1, with horizontal portion 2, having the eye 3 at one end and the vertical side pieces 5 at the other, pulley 7 and ratchet-wheel 10, having axle 6, with squared end 12, mounted in inclined slots 9 in said side pieces, pawl 11, engaging ratchet-wheel 10, and lateral projections 13, with holes 14, of the brace-wires 15, having their ends secured to projections 13, the horizontal fence-wire 4, secured to eye 3, and the fence-wire 5', secured to pulley 7, substantially as described.

406,643. MACHINE FOR GRINDING AND POLISHING RIFLE-BARRELS. ORLANDO M. GRIMES, New Haven, Conn. Filed Aug. 23, 1883. Serial No. 283,553. (No model.)

Claim.—1. The combination, with the frame having opposite front and rear standards, parallel transverse shafts journaled in said standards, a buffing-roller on one shaft and a grinding-roller on the other, and pulleys on said shafts, of upward-extending levers pivoted between their ends to the opposite sides of the frame and engaging at their upper ends the opposite ends of both roller-shafts, a transverse shaft connecting the lower ends of each pair of levers, and a longitudinally-extending shaft having cams for operating said two connecting-shafts, substantially as set forth.

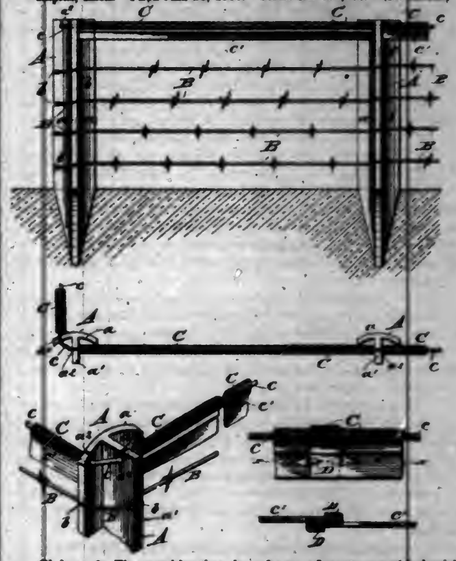
2. The combination, with the frame and the transverse roller journaled thereon, of a longitudinally-reciprocating table under the roller, and a head and a tail stock mounted on the said table and provided, respectively, with a longitudinally-extending aligned key and spindle, substantially as set forth.

3. The combination, with the reciprocating table, of a head-stock provided with a series of longitudinally-extending parallel keys, a transverse shaft geared to the outer ends of said keys for rotating them, and a series of parallel longitudinally-sliding spindles mounted in the tail-stock in alignment with said keys, substantially as set forth.



4. The combination, with the frame, the rollers, the levers 32, one for each roller, engaging at their upper ends the ends of the roller-shafts, the transverse shafts 34 34, connecting the lower ends of said levers and provided with vertical fingers 35, the longitudinally-extending shaft 36, having cams 36 36 between said fingers, and a gear-wheel 37, of the longitudinally-reciprocating table having a feed-screw 27, a rotary internally-threaded hub 28, through which the said screw passes, a drive-shaft geared to said hub, and a pinion 30 on the hub, a pinion 39, driven by the pinion 30, and a smaller pinion 38, connected with pinion 39 and meshing into gear-wheel 37, substantially as set forth.

5. In a machine for grinding and polishing rifle-barrels, the combination, with slotted standards, vertically-adjustable boxes held in said standards, rotary roller-carrying shafts journaled in said boxes capable of lateral movement, and a sliding table below said shafts, of levers engaging the ends of the roller-shafts, finger-carrying shafts linked to said levers, a cam in frictional contact with the fingers, a feed-bar attached to the table, and a drive-shaft and gearing, substantially as shown and described, connecting the drive-shaft with the cam-shaft and table-feed, as and for the purpose specified.

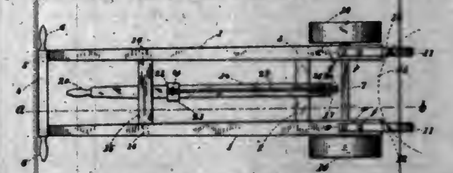


406,644. NON-HEAT-CONDUCTING FABRIC. HIRAM M. HANMORE, Santa Cruz, Cal. Filed Jan. 16, 1889. Serial No. 295,994. (No model.)

Claim.—A non-heat-conducting fabric consisting of a woven foundation fabric having a weft of tule-grass, each of the spires of which is independently covered with a coating of adhesive material, an external coating of non-heat-conducting heat-proof substance covering both the warp and the weft of the fabric, and a coating of pulverulent non-heat-conducting and water-proof substance applied to the exterior of said non-heat-conducting and heat-proof substance, substantially as specified.

406,644.

406,645. FENCE. JAMES HIGGINS and JOHN SULLIVAN, Grand Rapids, Mich. Filed Jan. 26, 1889. Serial No. 297,700. (No model.)

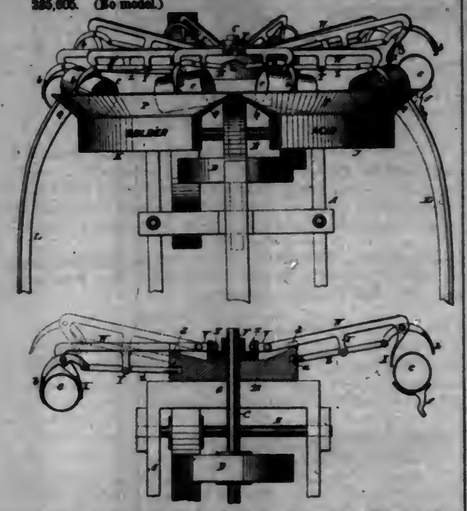


Claim.—1. The combination, in a fence, of posts provided with upper slots, a wire run along the posts and into said slots, and guard-rail plates clamped to said wire and abutting adjacent posts, substantially as herein set forth.

2. The combination, in a fence, of posts made with a face-plate and a flange or rib, said flange provided with an upper slot, a wire stretched along the posts and in their flange-slots, and a guard-rail plate clamped to the wire between and abutting adjacent posts, substantially as herein set forth.

3. The combination, in a fence, of posts A, made with face-plate a and flange or rib a', said flanges provided with slots b a^3, barbed-wire stringers B, set into the post-slots b, and an upper guard-rail C, consisting of a plain wire c, stretched along the posts in their slots a^3, and plates d', clamped to the wire c and abutting adjacent posts, substantially as herein set forth.

4. In a fence, the combination, with adjacent slotted posts, a head-wire stretched between them in the slots, and a guard-rail plate consisting of two parts end-lapped and having bent tongues clasped over and upon the extremities of the parts at their joint, substantially as herein set forth.

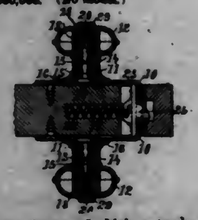


406,646. BARREL-TRUCK. JULIAN P. HILL, Buffalo, N. Y. Filed Apr. 13, 1889. Serial No. 307,149. (No model.)

Claim.—1. A barrel-truck consisting of the frame portion provided with handles 6, and carrying the wheels and pointed holding-irons, in combination with a tilting bar pivoted between the side frame-bars and provided with two holding-hooks 17 and 18, one directly back of the other, whereby the edge of a barrel may be caught between the two hook portions 17 and 18 and held securely, so that it cannot tip either way, substantially as described.

2. In a barrel-truck, the combination of the frame portions secured together by cross-bars and provided with handles 6 and truck-wheels 10, holding-irons 11, having substantially upright portions 12, and a pivoted tilting bar 14, having a handle 20, hooks 17 and 18, secured to the end of the tilting bars, and a supplementary hook-bar secured to a collar made longitudinally adjustable on the tilting bar, for the purposes described.

406,647. CAN-SOLDERING MACHINE. WILLIAM HIPPERLING, New York, N. Y., assignor to Stephen A. Gross, Plainfield, N. J., and Richard A. Donaldson, Brooklyn, N. Y. Filed Sept. 17, 1883. Serial No. 285,805. (No model.)



Claim.—1. In a machine for soldering the seams of tin cans, the receptacles for acid and solder arranged in the arc of a circle, combined with a series of rotating clamps for carrying the cans through the baths and a cam for opening and closing the clamps, said clamps consisting of the levers W Z and jaws X b, substantially as and for the purposes set forth.

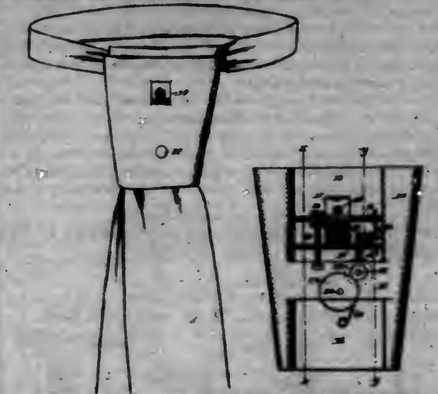
2. In a machine for soldering the seams of tin cans, the receptacles for acid and solder arranged in the arc of a circle, combined with the wheel F, clamping-levers W, radiating therefrom and having jaw X, the rocking levers Z, carried by the levers W, the pivoted jaw b, and the cam having cam edge d and groove e, substantially as set forth.

3. In a machine for soldering the seams of tin cans, the horizontal acid and solder receptacles J K, having inclinations Q at their ends and arranged in the arc of a circle, combined with the vertical driving-shaft C, the wheel F thereon, a series of rotating clamps connected with said wheel, and a cam-wheel E, for opening and closing said clamps, said cam having elevations and depressions arranged to cause the clamps to tilt the cans after leaving the baths, substantially as and for the purposes set forth.

406,648. LATCH. JOHN HOYT, Jr., Providence, R. I. Filed July 16, 1888. Serial No. 280,068. (No model.)

Claim.—1. A lock the frame of which extends over the inside and outside of the door and across the edge thereof, provided with two independent knobs for operating the latch, substantially as described.

2. The lock formed with the U-shaped frame to clasp the door, provided with the hubs having the knobs loosely mounted thereon, and the eccentric for operating the latch provided with shafts constructed to be connected with and disconnected from the knobs, as described.



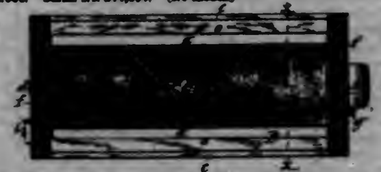
3. The combination, in a lock, of a knob loosely mounted on the frame, the latch, the eccentric for operating the latch, and a key for locking the knob to the eccentric, substantially as and for the purpose herein described.

4. The combination, in a lock, of the knob loosely mounted on the frame of the lock, the shaft provided with a locking end and carrying the eccentric, and the U-shaped latch-frame having the latch attached thereto and operated by the eccentric when the knob is secured to the shaft of the eccentric, substantially as described.

5. The combination, in a lock, with the lock-frame, of a knob loosely mounted, a shaft connected with the latch-operating device, the latch-frame provided with the latch, and a key constructed to secure the knob to the latch-shaft, as described.

6. The combination, in a lock, of the frame 10, the hub 11, the knob 12, the shaft 15, the eccentric 16, the latch-frame 23, provided with the latch 25, and the spring 26, substantially as described.

406,649. NECKSCARF. ELLIS T. HOWARD, Chicago, Ill. Filed Mar. 20, 1888. Serial No. 268,247. (No model.)



Claim.—1. A form for necktie-heads consisting of a shell shaped to the contour of said head, provided with parallel flanges 12 and cross-bar 11, an opening being formed in the front of the shell, a clock-work mounted between said flanges and cross-bar, a rotary carrier operated thereby and provided with peripheral ornamentations successively registering with the said front opening, substantially as set forth.

2. The combination, with a necktie having an opening in its head and a small aperture below the same, of a rotary peripherally-ornamented carrier visible through said opening, a clock-work actuating said carrier, and a winding-shaft extending through the aperture, substantially as set forth.

3. The combination, with a necktie, of a shell shaped to the contour of the head of the tie and covered by the material thereof, the shell and material having registering openings, a carrier within the shell and having a series of ornaments successively registering with said openings, and mechanism within the shell for operating the carrier, substantially as set forth.

406,650. BLACKBOARD-ERASER. WALTER F. JONES, Perth, assignor of one-half to C. W. Burdett, Syracuse, N. Y. Filed June 20, 1888. Serial No. 277,697. (No model.)

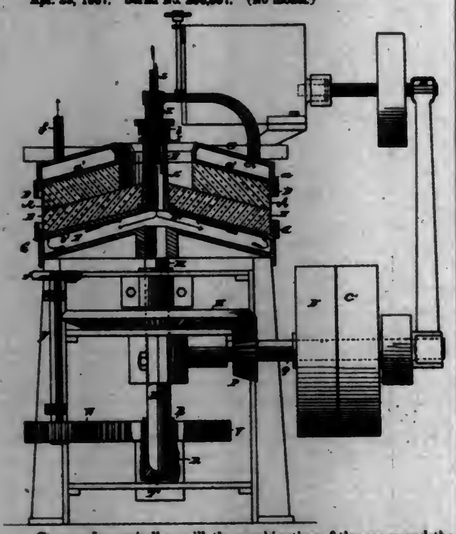
Claim.—1. In a blackboard-rubber, the handle of which consists of a dust-receptacle, the eraser situated centrally in the said receptacle, with dust-entrances at opposite sides of the eraser, as set forth and shown.

2. A blackboard-rubber consisting of a handle formed with a dust-receptacle, a main eraser situated in said receptacle and extending from end to end thereof, with dust-entrances at opposite sides of the eraser, and eraser-strips extending across the ends of the main

eraser and ends of the aforesaid dust-entrances, substantially as described and shown.

3. In combination with the handle formed with a dust-receptacle, the eraser situated in said receptacle and extending from end to end thereof, with dust-entrances at opposite sides of said eraser, and a tongue projecting from the back of the eraser and extending lengthwise thereof, substantially as and for the purpose set forth.

4. In combination with the handle formed with a dust-receptacle, the eraser situated in said receptacle and pivoted to opposite ends thereof, dust-entrances between the sides of the eraser and sides of the receptacle, and valances along the edges of the receptacle, substantially as described and shown, for the purpose set forth.



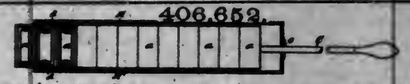
5. In combination with the handle formed with a dust-receptacle and an eraser occupying the longitudinal central portion of said receptacle, with dust-entrances along the sides of the eraser, cleats attached to the edges of the dust-receptacle and projecting part way over the dust-entrances, substantially as described and shown.

6. In combination with the handle formed with a dust-receptacle, the eraser occupying the longitudinal central portion of said receptacle and pivoted to opposite ends thereof, a thumb-piece attached to one of the pivots of the eraser, and a latch connected to the end of the handle and adapted to engage the thumb-piece, and thereby lock the eraser in its position, as set forth.

7. In a blackboard-eraser, the combination of the handle, formed with a dust-receptacle and with a discharge-opening at the end of said receptacle, and a gate connected to the handle and adapted to close said opening, as set forth.

8. The combination of the handle formed with a dust-receptacle, the eraser occupying the longitudinal central portion of the receptacle, with dust-entrances at opposite sides of the eraser, a discharge-opening in the corner of one end of the receptacle, and a cushion on the back of the handle to receive the concussion when rapping the handle to expel the dust from the receptacle, substantially as described.

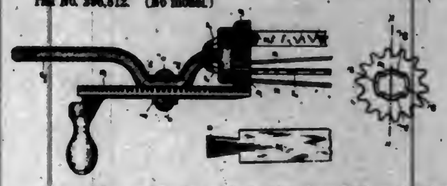
406,651. **GRINDING-MILL.** ROBERT KENT, Brooklyn, N. Y. Filed Apr. 29, 1887. Serial No. 236,557. (No model.)



Claim.—In a grinding-mill, the combination of the upper and the lower stones and their hollow metal chambers with means for producing a circulation of water within said chambers, consisting of the sleeve H, extending from the lower chamber up through the eye of and above the upper stone and its cooling-chamber, the pipe K, having a stuffing-box I, connecting it with the upper end of said sleeve, and having also a lateral branch communicating with the cooling-chamber of the upper stone, and the supply-pipe L, passing into the top of said pipe K and terminating below the communication of the latter with its side branch, whereby the cold water entering the supply-pipe and the lower cooling-chamber is caused to return and pass from the latter by the inflow and around the supply-pipe to the upper cooling-chamber, substantially as described.

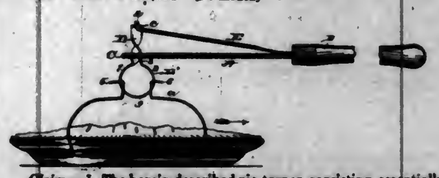
406,652. **CIGARETTE-CASE.** FRANCIS S. KINNEY, Pequanno, N. J. Filed May 12, 1887. Serial No. 237,994. (No model.)

Claim.—1. The herein-described case for packages of cigarettes, having the removable end piece *b*, the pressure piece or pieces *d*, and



406,652.

an opening or openings arranged to receive a plunger in position to act upon the innermost package, substantially as described.

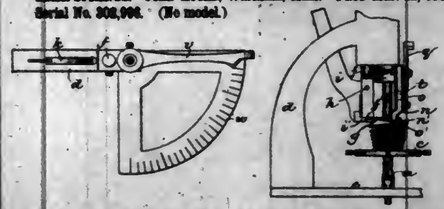


2. The combination, with the case A, having the removable end piece *b* and slot *g*, of the plunger C, extending through it and adapted to move in the slots, substantially as described.

406,653. **HOG-BEATER.** JOHN L. KIRBY, Cambridge, assignor to the Dover Stamping Company, Boston, Mass. Filed Jan. 19, 1887. Serial No. 224,812. (No model.)

Claim.—The combination of the beating-floats E, formed at their upper ends into dovetails, with the pinion D, formed with a cavity in its center composed of two pairs of conical segments *d d'*, the pair *d* being of greater transverse diameter than the pair *d'*, and with the conical bushing-plug *g*, substantially as and for the purpose described.

406,654. **PIE-TURNER.** WARREN R. LOCKE, West Somerville, assignor of one-third to Theodore F. Hovey, Boston, Mass. Filed Mar. 9, 1888. Serial No. 266,664. (No model.)



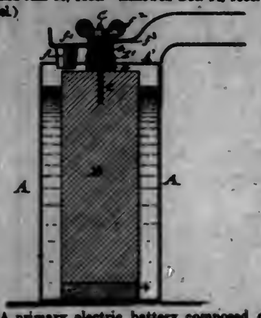
Claim.—1. The herein-described pie-turner, consisting, essentially, of a rigid handle A, formed with the elongated guide-eye C, the spirally-twisted metallic ribbon D, arranged in and vertically and rotarily movable in said guide-eye, the flat spring E, connected with the handle and with the ribbon at one side of the guide-eye in said handle, and the hooks or arms attached to the ribbon at the opposite side of said guide-eye and adapted to engage a pie-plate, substantially as described.

2. The rigid handle A, terminating at one end in the guide-eye C, and a flat spring-arm B, arranged above the handle, combined with a spirally-twisted ribbon arranged in the said guide-eye and pivoted to the spring-arm, and having a stop to limit its upward movement, and hooks pivoted to the lower portion of the said ribbon, substantially as described.

3. The handle A, having a guide-eye, and a spring interposed between the handle and the upper end of the spirally-twisted ribbon, combined with said spirally-twisted ribbon arranged in the guide-eye, and pivotally attached at its upper end to the spring and at its lower end bent to form a hook-supporting portion, and two hooks pivoted to said portion intermediate of its extremities to provide for the separation of the hooks, substantially as and for the purpose set forth.

406,655. **APPARATUS FOR TESTING WATCH BALANCES AND HAIR-SPRINGS.** JOHN LOGAN, Waltham, Mass. Filed Mar. 12, 1889. Serial No. 302,906. (No model.)

Claim.—1. The combination, with an oscillating or reversely-rotating chuck or balance holder, of holding-jaws arranged to hold the outer end of a hair-spring at one side of the center of oscillation of the chuck and adjusting-jaws movable in the arc of a circle whose center is in line with the said center of oscillation, as set forth.



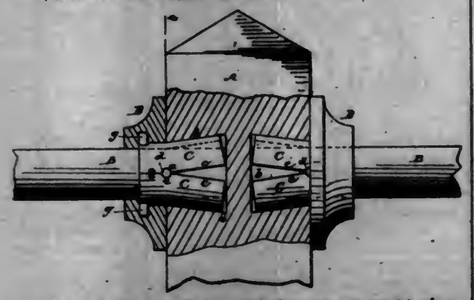
2. The combination, with an oscillating or reversely-rotating chuck or balance holder, of holding-jaws arranged to hold the outer

end of a hair-spring at one side of the center of oscillation of the chuck, adjusting-jaws movable in the arc of a circle whose center is in line with the said center of oscillation, and a pointer and index-plate, whereby the extent of movement of the adjusting jaws may be determined, as set forth.

3. The combination of the standard *d*, having the holding-jaws *f f'*, and the sleeve *m*, journaled in said standard and having the adjusting-jaws *n' o'*, as set forth.

4. The standard having the holding-jaws, the sleeve journaled in top standard, the adjusting-jaws and the pointer on said sleeve, and the index-plate attached to the standard, all combined substantially as set forth.

406,656. **GALVANIC BATTERY.** FREDERICK LOVE, New York, N. Y., assignor, by direct and mesne assignments, to John A. Annesley, same place. Filed Jan. 16, 1888. Renewed Dec. 14, 1888. Serial No. 293,657. (Model.)



Claim.—1. A primary electric battery composed of a closed exterior casing made of hermetically-sealed zinc plates, a carbon block supported at the interior of said casing, an exciting-liquid in the space between the carbon block and the casing, and a screw-post applied to the carbon block and extended to the outside of the casing, and fastening devices for said block, substantially as set forth.

2. The combination of a closed exterior hermetically-sealed zinc casing, a carbon block supported at the interior of the same, an exciting-liquid in the space between the block and casing, a screw-post applied to the carbon block and extended to the outside of the casing, insulating-collars applied to the carbon block and the top of the casing, and screw-nuts for retaining the block and collars in position, substantially as set forth.

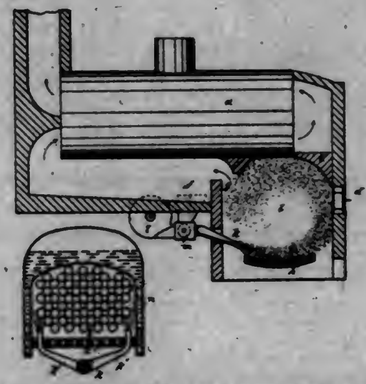
3. A primary electric battery composed of a closed exterior hermetically-sealed casing of zinc plates, a carbon block at the interior of said casing, an exciting-liquid in the space between the carbon block and casing, a screw-post attached to the carbon block and extended through the top of the casing, insulating-collars applied to the carbon block and the top of the casing, a screw-nut for holding said collars in position, and a binding thumb-nut for the conducting-wire, substantially as set forth.

4. In a primary electric battery, a closed exterior hermetically-sealed casing or shell formed of zinc plates soldered together, substantially as set forth.

406,657. **FENCE.** HENRY H. MADDEN, Hudson, N. Y. Filed Apr. 4, 1888. Serial No. 269,966. (No model.)

Claim.—1. The combination, with the post or support having a tapering recess increasing in size toward its inner end, of a metal rod or tube fitting loosely at its end within said recess or socket, rocking locking devices connected intermediately of their length to the sides of the entering end portion of the rod or tube, and a closing flange or nut on the rod, arranged to engage with said rocking devices, and operating to spread the inner end portions of the latter within the enlarged portion of the recess or socket in the post or support, substantially as specified.

2. The combination of the post or support A, having one or more tapering sockets or recesses *b* in it, increasing in size in an inward direction, the metal rod or tube B, the angularly-constructed half-sleeves or bushings C C, connected, as by a pin or bolt *d*, with and fitted to rock upon said rod, and the closing nut or flange D, applied to said rod or tube and to the outer end portions of the half-sleeves or bushings, and operating to expand the inner end portions of the latter within the tapering socket or recess in the post or support, essentially as shown and described.



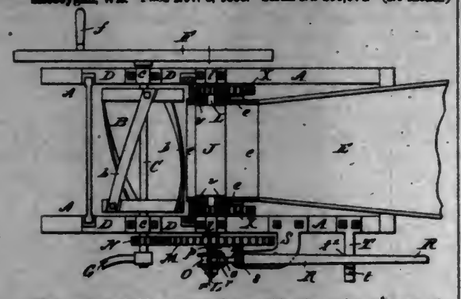
406,658. **MACHINE FOR STARTING HAT-BODIES.** WILLIAM P. MARSHALL, Newburyport, Mass., assignor of one-half to Charles H. Pierson, Brooklyn, N. Y. Filed Sept. 26, 1888. Serial No. 286,344. (No model.)

Claim.—1. In a starting-machine for hat-bodies, the combination, with a roller having its periphery of other than round shape to form ribs or edges, of a second roller having its periphery of other than round shape to form edges or ribs and supported in fixed bearings above the first roller to form a pocket for the reception of the hat-bodies to be treated, and rotating at a greater speed than the first roller, whereby a squeezing action is obtained, substantially as described.

2. In a starting-machine for hat-bodies, the combination, with a roller having its periphery of other than round shape to form ribs or edges, of a second roller of smaller diameter and having its periphery of other than round shape to form edges or ribs and supported in fixed bearings having its center above the periphery of the larger roller to form a pocket for the reception of the hat-bodies to be treated, and rotating at a greater speed than the larger roller, substantially as described.

406,659. **APPARATUS FOR BURNING CULM OR PULVERIZED COAL.** ALLAN MACUE, Brooklyn, assignor to Herbert H. Sanderson, trustee, New York, N. Y. Filed Mar. 2, 1888. Serial No. 266,552. (No model.)

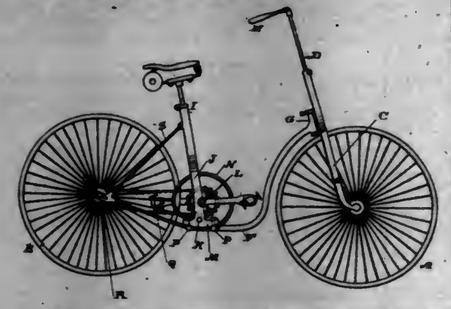
Claim.—1. The combination, with a furnace-chamber, of an air and pulverized-coal injector upwardly projecting the injected coal into the chambers provided with deflecting-surfaces, as shown, thereby maintaining the coal in suspension during combustion above a still air-space in the lower part of the furnace-chamber for reception of the ashes, substantially as described.



2. The combination, with a furnace-chamber, of an air and pulverized-coal injector and deflectors in the chamber upwardly projecting and maintaining the coal in suspension during combustion above a still air-space in the lower part of the furnace-chamber for reception of the ashes, substantially as described.

3. The combination, with a furnace-chamber, of an air and pulverized-coal injector and a concave-pan deflector in the lower space, on which the impinging jet is diffused upwardly and backward over the incoming jet, substantially as described.

4. The combination, with a furnace-chamber, of an air and pulverized-coal injector that injects the coal and air, the deflector A, located above a comparatively still air-space below for reception of the ashes, in the lower space whereon the incoming jet impinges, and one



or more deflectors in the upper space that direct, diffuse, and, with the currents of injected air, maintain the coal in suspension during combustion, substantially as described.

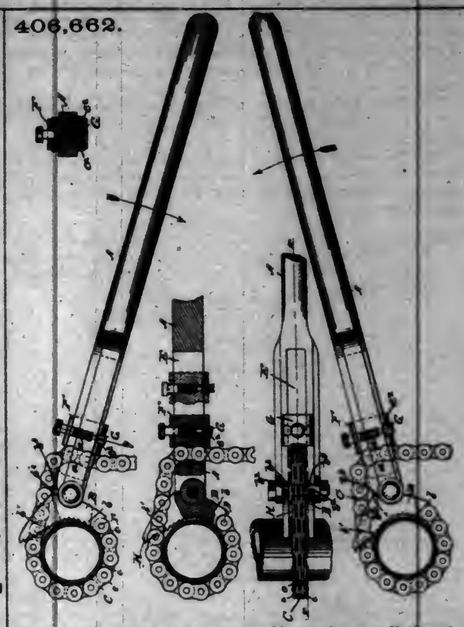
406,660. FODDER-CUTTER. PHILIP MEYER and WILLIAM SCHRAGE, Sheboygan, Wis. Filed Nov. 6, 1888. Serial No. 290,074. (No model.)

Claim.—In a fodder-cutter, the combination, with a frame, of a main driving-shaft journaled within the same, a cutter-head mounted upon the driving-shaft, a pinion secured upon the end of the driving-shaft, the upper and lower feed-rolls, the upper roller being mounted in the vertically-adjustable frame V, the driving-wheel M, loosely mounted upon the lower feed-roll shaft and meshing with the pinion N, the clutch O for operating the said wheel, the lever R, gears *j* and *k*, idlers X and Y, for operating the upper feed-roll, and means for operating the main driving-shaft, substantially as shown and described.

406,661. BICYCLE. EDWIN MORRIS, San Francisco, Cal. Filed Nov. 22, 1888. Serial No. 291,595. (No model.)

Claim.—1. In a bicycle, the front perch or frame and the seat-standard having the lower ends united upon a movable pivot, in combination with a spring or springs supporting said joint and connecting the rear axle or the frame thereof with the front frame, substantially as herein described.

2. In a bicycle, the front frame or perch and the rear frame having the movable joint or union at their point of meeting, the crank-shaft journaled in the lower end of the seat-standard, the chain-pulleys, and chain whereby power is transmitted from the crank-shaft to the rear wheel, in combination with an intermediate spring or springs forming a connection with the front frame or perch and the rear frame or wheel axle, substantially as herein described.



3. In a bicycle, the front and rear wheels and frames within which the wheels are journaled and by which the machine is guided, a seat-standard the lower end of which is connected by a movable joint with the front frame or perch, a spring or springs secured to the lower ends of the seat-standard and connected, respectively, with the front perch and the rear-wheel axle or frame, and the braces S, connecting said rear-wheel axle with the seat-standard, substantially as and for the purpose herein described.

406,662. CHAIN-WRENCH. JOHN D. MORAN, New York, N. Y. Filed July 12, 1888. Serial No. 279,704. (No model.)

Claim.—1. In a chain-wrench, the combination, with the lever having the end shoulder or abutment b^3, of a gripping-jaw having its toothed face concave at *b* and relatively convex at b', and having the back edge shoulder b^2, the said jaw being pivoted to the end of the lever for co-operation of the said shoulders with the said concave and convex toothed parts, and the chain connected to one end of said gripping-jaw, whereby the wrench may be operated in either direction to screw or to unscrew the pipe without removing it therefrom.

2. In a chain-wrench, the combination of the lever having the

406,662.

slot E, the notch c^3, and the end shoulder or abutment b^3, the gripping-jaw having its toothed face concave at *b* and relatively convex at b', and constructed with the back shoulder b^2, the pivot connecting said jaw with the lever at one side of the said joint-shoulders b^3 and b^2, the chain having one end pivoted to the heel of the jaw, and the slide F in the lever-slot, and provided with a locking-latch G, substantially as described, for the purpose specified.

3. In a chain-wrench, the combination of the lever having the slot E and the notch c^3, a gripping-jaw pivoted to the end of said lever, and a chain connected to one end of said pivoted jaw, with means for locking said chain to the lever, consisting of the slide F, secured within said slot, and the spring-latch G, carried by said slide and operating in the said notch, the said slide and the end of the lever-slot having coincident swells *a a*, corresponding to the curved edges of the chain, substantially as described.

406,663. GARDENER'S AND COTTON-PICKER'S BRACE. JAMES D. MCKINNEY, Mossy Creek, Ga. Filed Nov. 13, 1888. Serial No. 290,751. (No model.)

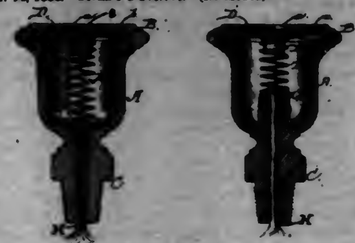
Claim.—1. A brace for gardeners, cotton-pickers, &c., consisting of a fulcrum-pad adapted to bear upon the pelvis and having two springs attached thereto and extending downwardly behind the legs and provided with fastenings, and a middle spring extending upwardly, and fastening devices for connecting its upper end to the arms or shoulders, substantially as and for the purpose described.

2. A brace for gardeners, cotton-pickers, &c., consisting of the combination of a fulcrum-pad A, two springs C C, extending downwardly therefrom and provided with straps D D, for securing the same to the legs, a middle spring B, extending upwardly, and a cross-bar E, connected to the top of spring B and provided at its ends with arm-rings F and strap G, substantially as and for the purpose described.

406,664. DRAWER-PULL. GEORGE S. PEARSON, Waterbury, Conn. Filed May 8, 1889. Serial No. 310,095. (No model.)

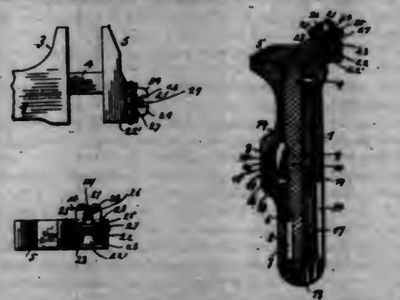
Claim.—1. A stud for furniture-handles, consisting of a shank having a head, a sleeve having a flange, and a shell having a shoulder

406,664.



against which the head of the shank rests, and a flange closed over said head and the flange of the sleeve to fasten the parts together.

2. The combination, with a stud consisting of a shank having a head, a sleeve having a flange, and a shell having a shoulder 7 and flange 10, said flange being closed over the head and the flange of the sleeve to hold the parts together, of an escutcheon having an opening 2, through which the shank and sleeve are passed, the sleeve being closed over the back of the escutcheon to hold the latter and the stud together.

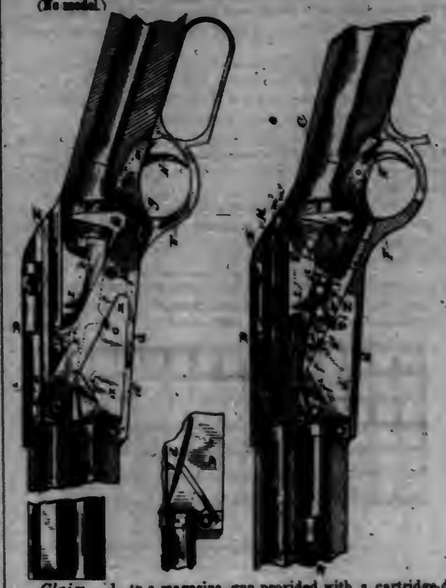


3. In combination, an escutcheon having openings 2, a bail having lugs 12, and a stud consisting of a shank having a head, a sleeve having a flange, and a shell having openings 6, which are engaged by the lugs, a shoulder 7, and flange 10, said flange being closed over the head of the shank and the flange of the sleeve, the shank and sleeve being passed through openings 2 and the sleeve turned over the back of the escutcheon to hold the parts in place, substantially as described.

406,665. LUBRICATOR. DAVID M. PERRIN, Baltimore, Md. Filed Apr. 14, 1888. Serial No. 270,670. (No model.)

Claim.—The herein-described lubricating-cup, having a chamber A, exteriorly screw-threaded at its upper edge and provided with a tubular stem C, the cap B, fitting over the open top of the chamber A, provided with a female screw to engage the threaded upper edge of said chamber, and also provided with a central aperture *a*, the spiral spring F, resting at its lower end on the floor of the chamber A, the valve-head E, fitted to the upper end of the said spring and provided with a flat upper surface and a central upstanding spur *e*, and the elastic packing-disk D, arranged on the flat upper surface of the valve-head and engaged at its center by the spur *e*, whereby said disk is normally pressed by the spring against the inner surface of the cap to cover the aperture therein, and may be removed from the head by disengaging it from the spur, substantially as and for the purpose specified.

406,666. COMBINATION-WRENCH. FRED J. PRATT and JOHN H. LAKE, Jackson, Mich. Filed June 19, 1888. Serial No. 277,556. (Model.)



Claim.—1. The combination, with the wrench provided with a socket having a lateral opening with tapering sides, of gripping-jaws eccentrically pivoted in said socket, substantially as described.

2. A wrench constructed with an auxiliary pair of automatic gripping-jaws eccentrically pivoted in a socket having a lateral opening and tapering sides adapted to close the jaws, and a vertical central tapering rib located between the shanks of the jaws and serving to open the jaws, substantially as shown and described.

3. A combination-wrench consisting of casing 1, with serrated clamping-block 8 and thumb-nut 11, the movable jaw 5, with serrated shank 4, engaging block 8, the sliding bit 17, located in casing 1 and having pin 19, located in slot 20 and extensible through slot 18, and the grip 21, consisting of jaws 24, eccentrically pivoted to ears 25 and located in socket 22, with lateral opening 23, having tapering sides, and the vertical tapering rib 22′, extending between the shanks 28 of jaws 24, substantially as and for the purpose specified.

406,667. MAGAZINE FIRE-ARM. JOSEPH M. REAMS and WILLIAM L. HORNE, Meriden, Conn. Filed July 5, 1888. Serial No. 279,078. (No model.)

Claim.—1. In a magazine-gun provided with a cartridge-discharge in the rear of the receiver, the combination, with a sliding breech-bolt, of a guard-lever pivoted thereto and a cartridge-carrier, said guard-lever having a cartridge-passage through the same, substantially as described.

2. In a magazine-gun, the combination, with the cartridge-carrier and sliding breech-bolt, of the bifurcated guard-lever and the carrier-lever provided with pivoting-ears with a cartridge-passage between them, substantially as described.

3. In a magazine-gun provided with a cartridge-discharge in rear of the receiver, the combination, with cartridge receiving and operating devices having a longitudinal cartridge-passage, (a firing-pin being located above the said passage,) of a trigger and a rear, also having a cartridge passing through the same, substantially as described.

4. The combination, with the cartridge-carrier and its supporting-lever, of a cartridge-stop on said lever yielding in a rearward and downward direction, substantially as described.

5. The combination, with the cartridge-carrier and its supporting-lever, of a cartridge-stop yielding in a rearward and downward direction and a spring for returning said stop after a movement in either direction, substantially as described.

6. In a magazine-gun provided with a cartridge-discharge in rear of the receiver, a cartridge-carrier and a cartridge-carrier lever, a passage for the cartridge through the receiver above the main body of said lever, and a cartridge-stop on said lever yielding in a rearward and downward direction, substantially as described.

7. The combination, with the cartridge-lever, of the cartridge-stop provided with two curved slots, a connection with the lever through each slot, and a spring forcing the bottoms of said slots against said connections, substantially as described.

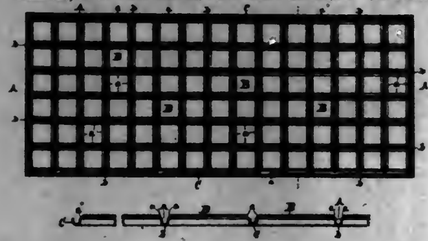
8. In a magazine-gun having the magazine below the barrel, the combination, with a cartridge-carrier and a cartridge-discharge in the rear of said carrier, of a yielding cartridge-stop provided with a finger-piece, whereby the same may be operated to permit the free removal of the cartridges from the magazine, substantially as described.

9. The combination, with the bifurcated guard-lever, of the link pivoted to the lever and to the receiver and provided with the spring securing-pin adapted to engage the lever, substantially as described.

10. The combination, with the bifurcated guard-lever having a recess in one of its arms, of the link pivoted between the arms to the

receiver and provided with the spring-actuated pin adapted to engage the securing-recess of the arm, substantially as described.

11. The combination, with the guard-lever provided with a locking-recess, of the cartridge-carrier and the carrier-lever provided with projections adapted to engage the locking-recesses of the guard-lever when in its open position, whereby the said parts are held against accidental displacement when in an open position, substantially as described.



12. The combination, with the guard-lever provided with the locking recesses and cams, of the cartridge-carrier and carrier-lever, the latter provided with projections adapted to engage the locking-recesses of the guard-lever in front of the cams, substantially as described.

13. In a magazine-gun provided with a cartridge-discharge in rear of the receiver, the combination, with the cartridge-carrier, of the bifurcated guard-lever, each arm of said lever being provided with a cartridge-guide f^3, substantially as described.

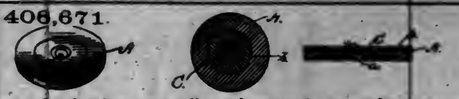
14. The combination, with a magazine-gun, of a device for closing the charge-opening of the same, consisting of a pivoted spring-actuated lever and a closing-plate pivoted to said lever, substantially as described.

15. The combination, with a magazine-gun, of a device for closing the charge-opening of the magazine, consisting of a bifurcated spring-actuated lever and a closing-plate pivoted between the arms of said lever, substantially as described.

406,668. METALLIC FINISHING FOR BUILDINGS. LOCKLEY L. SAGEBORPH, Cincinnati, Ohio, assignor of one-half to Charles H. Harder, Fishmont, W. Y. Filed Mar. 16, 1888. Serial No. 268,557. (No model.)

Claim.—As a new article of manufacture, a sheet of metallic finishing made up of figures B, each figure being formed by the compound grooves A, each groove having the angular faces *a*, terminating in the circular portion *b*, substantially as set forth.

406,669. RED COLOR. TRAUGOTT SANDMEYER, Basle, Switzerland, assignor, by mesne assignments, to the Farbenfabriken, vormals Fr. Bayer & Co., Elberfeld, Prussia, and the Action-Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Oct. 24, 1888. Serial No. 288,073. (Specimens.)

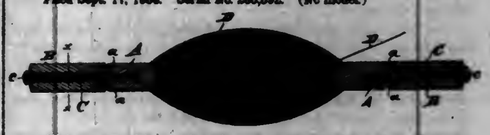


Claim.—The herein-described process for the production of red to violet colors by first boiling ortho-toluidine with caustic soda and gradually adding thereto nitro-benzine; the product is then reduced by means of zinc powder, then allowed to stand until cold; it is then poured into concentrated muriatic acid, boiled, and diluted with water, then filtered, after which I add Glauber's salt and mix it with muriatic acid cooled and diazotized by nitrite of sodium; the final product is poured into a solution of soda and naphthionate of sodium, the whole heated and precipitated with salt, substantially as described.

406,670. YELLOW COLOR. TRAUGOTT SANDMEYER, Basle, Switzerland, assignor, by mesne assignments, to the Farbenfabriken, vormals Fr. Bayer & Co., Elberfeld, Prussia, and the Action-Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Oct. 24, 1888. Serial No. 288,074. (Specimens.)

Claim.—The herein-described process for producing yellow colors (dyeing cotton without mordants) by first boiling ortho-toluidine with caustic soda in proper proportion, then adding thereto gradually nitro-benzine in proper proportion, then reducing the product by means of powdered zinc, then allowing the same to stand till cold, then pour it into muriatic acid, boil, dilute with water, and then filter, then add Glauber's salt, then diazotized by the addition of nitrate of sodium, the whole then poured into a solution of caustic soda, soda, and salicylic acid, then heat the whole, and precipitate with salt, substantially as herein described.

406,671. WIRE-DRAWING DIE. WILLIAM H. SAWYER, Providence, R. I. Filed July 6, 1888. Serial No. 207,412. (No model.)

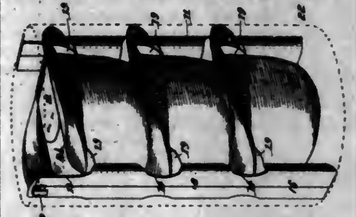


Claim.—1. The herein-described wire-drawing die, consisting of the supporting-plate A, having a wire-passage, and the drilled jewel or die C, having its die-hole in line with the wire-passage, and secured

upon the plate by a surrounding and overlapping mass of cement or readily-fusible metallic alloy, substantially as described.

2. The wire-drawing die composed of the recessed supporting-plate A, having a wire-passage through the bottom of its recess, the jewel or die C, arranged upon the bottom of said recess with its hole in line with the wire-passage, and the jewel-embedding alloy or cement surrounding and overlapping said jewel in the recess, substantially as specified.

406,672. KITE-CORD STICK. CHARLES SCHULTZE, New York, N. Y. Filed Sept. 17, 1888. Serial No. 285,592. (No model.)



Claim.—1. A kite-cord stick made with a body portion adapted to receive the cord and provided with tapering or conical end parts or shoulders, and handles axially in line with the stick-body, and on which the body is journaled, substantially as herein set forth.

2. A kite-cord stick made with a body portion adapted to receive the cord and provided with tapering or conical end parts or shoulders, and handles at the ends of the body of like diameter and axially in line therewith, and on which the body is journaled, said handles being countersunk to correspond with the conical ends of the stick-body, substantially as herein set forth.

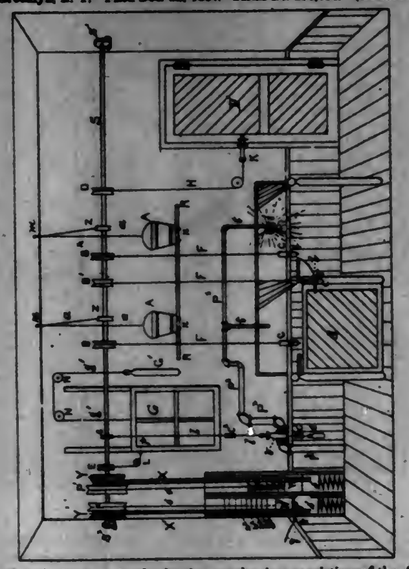
3. A kite-cord stick made with a body portion adapted to receive the cord and provided with tapering or conical end parts or shoulders, and handles on which the stick-body is journaled and countersunk to correspond with the ends of the stick-body at the joints therewith, substantially as herein set forth.

4. The combination, in a kite-cord stick, of a body portion A, having tapering ends or shoulders *a a*, tubular handles B B, countersunk to correspond with said ends *a a*, and headed nails or pins C C, passed through the handles into the ends of the stick-body, substantially as herein set forth.

406,673. REST FOR PACKING HATS. JAMES W. SUTHERS, Brooklyn, assignor of one-half to Triest & Co., New York, N. Y. Filed Oct. 16, 1888. Serial No. 288,228. (No model.)

Claim.—1. In a hat-rest, a column provided with a series of spaced slots and integral tongues below said slots extending transversely to and beyond the sides of the column, substantially as shown and described.

2. In a hat-rest, a tubular column provided with a series of spaced transverse slots, integral transverse tongues below said slots extending beyond the sides of the column, and a flexible strap secured to the upper end of the column above the upper tongue, substantially as and for the purpose specified.



3. In a hat-rest, the combination, with a tubular column provided with a series of transverse slots and tongues below said slots extending beyond the sides of the column, of a strip of pliable material attached at one end to the upper portion of the column and adapted to extend beyond the upper tongue, substantially as shown and described.

4. The combination, with opposed tubular columns provided with a series of horizontally-aligning spaced slots and tongues below each of said slots extending beyond the sides of the columns, of flexible straps attached to the upper contiguous surface of each column projecting beyond and over the upper tongue and having their free ends secured together, substantially as shown and described.

5. An essentially rectangular blank cut away centrally and transversely at one end, a series of central transverse spaced slots parallel with the upper cut-away portion, and semicircular cuts extending

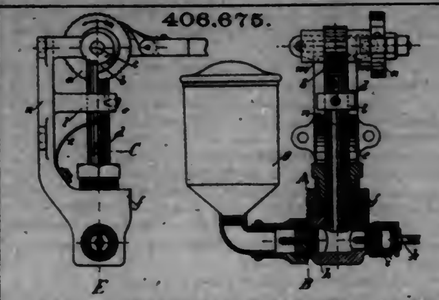
downward from the ends of the upper cut and the transverse slots and curving inward, substantially as shown and described.

406,674. ANIMAL-RELEASING DEVICE. MORTIMER M. SHELLEY, Brooklyn, N. Y. Filed Dec. 22, 1887. Serial No. 258,668. (No model.)

Claim.—1. An animal-releasing mechanism consisting of the following-named elements in combination: a winding-shaft, a line secured thereto and provided with a weight, removable means for upholding the weight, and a line also secured to said shaft and provided with a releasing-bolt, whereby, when said weight is permitted to fall, said shaft is thereby rotated and withdraws the releasing-bolt by winding up its line, substantially as and for the purposes set forth.

2. An animal-releasing mechanism consisting of the following-named elements in combination: a winding-shaft, counter-weights suspended by lines or wires on opposite sides from said shaft, and one or more releasing-bolts suspended by lines or wires from said shaft, whereby said shaft may be rotated in either direction by impairing the counter-balance of said weights, substantially as and for the purposes set forth.

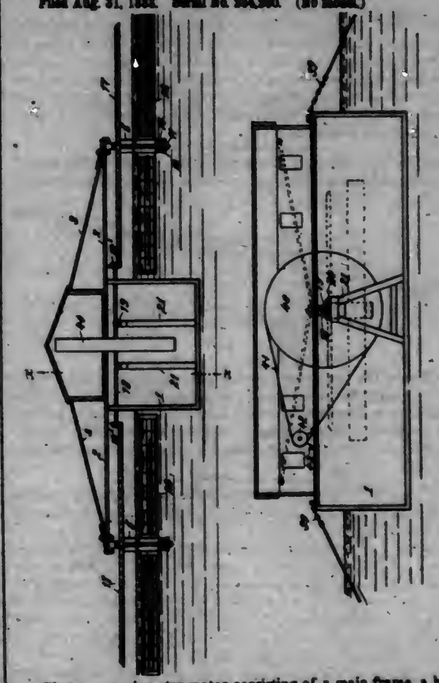
3. In an animal-releasing mechanism, in combination with a winding-shaft and a weight secured thereto by a line or wire, one or more releasing-bolts suspended by lines or wires from said shaft, and an elastic bumper or arresting device, whereby the momentum of said weight is gradually arrested when unwinding its line from said shaft, substantially as and for the purposes set forth.



4. In an animal-releasing mechanism, in combination with a winding-shaft, one or more hinged buckets connected thereto by a line or lines, whereby on the turning of said shaft said buckets are turned upon their hinges and their contents discharged, substantially as and for the purposes set forth.

5. In an animal-releasing mechanism, in combination with a winding-shaft provided with a line and weight, a water-releasing device, an endless belt or line secured to said releasing device and operated on fixed pulleys by said shaft, and a running weight secured by a line to said endless belt, whereby while the slack of said belt is taken up lost motion for said shaft is obtained before it causes the opening of said releasing device by said endless belt, substantially as and for the purposes set forth.

6. An animal-releasing mechanism consisting of the following-named elements in combination: one or more halter-detachers, a pipe and bucket—one or both—for discharging water, and a releasing bolt or catch on one or more doors, all connected by lines or wires to a winding-shaft operated by a weight secured thereto by a line or wire, whereby upon the fall of the weight the animals are released and driven out of the building without the necessity of persons entering the same, substantially as and for the purposes set forth.



406,675. LUBRICATOR. CHARLES F. L. SIMONSEN, Copenhagen, Denmark. Filed Mar. 20, 1888. Serial No. 268,089. (No model.) Patented in France Feb. 20, 1888, No. 188,241; in Belgium Feb. 20, 1888, No. 80,710; in England Feb. 20, 1888, No. 2,888, and in Norway Feb. 20, 1888, No. 363.

406,675.

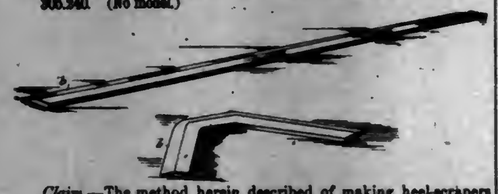
Claim.—In a lubricator, the combination, with a casing, of a piston working in the same, a spring pressing the piston upward, a cam which presses the piston downward gradually as said cam rotates, a ratchet-wheel on the shaft of the cam, and a pawl engaged with said ratchet-wheel, substantially as herein shown and described, and for the purpose set forth.

406,676. WATER-MOTOR. HUGO A. STRAUSS, New York, N. Y. Filed Aug. 31, 1888. Serial No. 284,260. (No model.)

Claim.—1. A water-motor consisting of a main frame, a horizontal driving-shaft mounted thereon, horizontal water-wheels suspended from frames projecting from the main frame, each water wheel having a horizontal bevel gear-wheel geared with the driving shaft, and having wings vertically movable on the axis of the water-wheel and formed with a series of hinged plates opening in one direction only, the several parts of the wings being detachable, substantially as described.

2. In a water-motor, a horizontal water-wheel constructed with vertical rod 4, a rotary casing 5, surrounding rod 4 and having external vertical T-shaped slots 23, the blocks 8, with necks 9 in their ends, the inclosed casings 6, with anti-friction rollers 7, bearing against rod 4, and anti-friction rollers 14, located between plates 10 and 11 at the bottom of casing 5, in combination with vertically-movable T-shaped pieces 22, located in slots 23, horizontal bars 24, hinged to pieces 22 and having depending arms 25, with bottom bar 26, and horizontal rods 27, having hinged thereto the overlapping plates 28, and the end vertical bar 30, fastened to bar 24, with recesses 31, into which rods 27 project, a bar 32, hinged to the upper end of bar 30, with projections 33, located in recesses 31 and secured

to slotted lug 34 by pin 35, and the horizontal brace-bars 36, connecting with the ends of bars 24 and engaging pins 37 thereon, substantially as described.



3. In a water-motor, a horizontal water-wheel constructed with a vertical rod 4, and a rotary casing 5, mounted on rod 4 and having external vertical T-shaped slots 23, in combination with T-shaped wing-supports 22, engaging and vertically movable in slots 23, horizontal bars 24, connected by brace-rods 34' and bars 36 and hinged to supports 22, to swing upward thereon, and having depending arms 25, with bottom bar 26, and horizontal rods 27, having hinged thereto the detachable overlapping plates 28, the end vertical bar 30, fastened to bar 24 and having recesses 31, into which rods 27 project, and a bar 32, hinged to the upper end of bar 30, with projections 33, located in recesses 31 and secured to slotted lug 34 by pin 35, substantially as described.

4. In a water-motor, a main frame, a driving-shaft mounted in anti-friction roller-bearings thereon, and a horizontal water-wheel constructed with a vertical rod depending from the main frame, a rotary casing loosely mounted on the vertical rod and having anti-friction roller-bearings, vertically-movable wings mounted on the casing, with horizontal rods, and overlapping plates hinged to the rods and opening in one direction, and a horizontal bevel gear-wheel mounted on the casing and geared with the driving-shaft, substantially as described.

5. A water-motor consisting of float 1, having mounted therein the driving-shaft 18, resting on anti-friction rollers 19, and the supporting-frame consisting of laterally-extending bars 2 and brace-rods 3, the vertical rods 4, depending from the bars 2, rotary casings 5, mounted on rods 4, having anti-friction roller-bearings 7 and 14, water-wheel wings mounted on casings 5, vertically movable thereon, formed in detachable parts and having overlapping plates 28, and the bevel gear-wheels 17, mounted on casings 5 and geared with driving-shaft 18, substantially as described.

406,677. METHOD OF MAKING HEEL-SCRAPERS FOR PLOWS.

HENRY D. TERRELL, Conyers, Ga. Filed Mar. 29, 1889. Serial No. 305,240. (No model.)

Claim.—The method herein described of making heel-scrapers from a straight flat bar having its front longitudinal edge beveled downwardly and outwardly, which consists in first heating said bar at its center and then bending it edgewise rearwardly at opposite sides of its center to form the inclined scraping-blades, substantially as set forth.

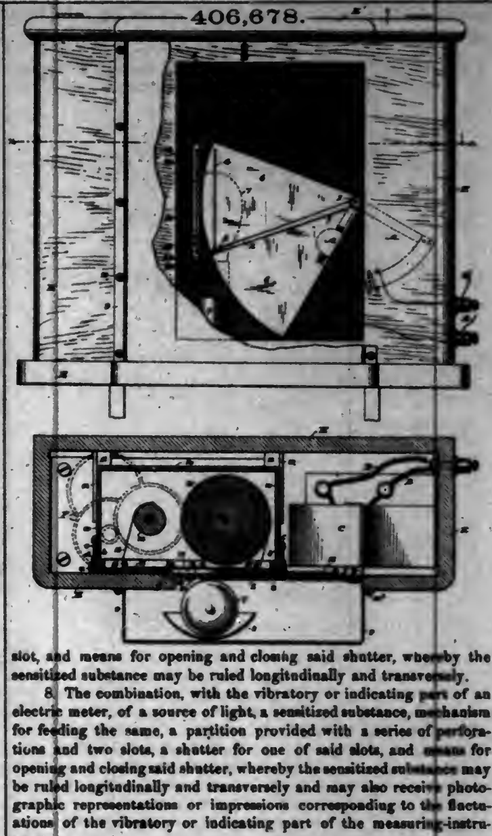
406,678. RECORDING APPARATUS FOR ELECTRIC METERS.

GEORGE W. WALKER, New York, N. Y. Filed Mar. 9, 1889. Serial No. 302,650. (No model.)

Claim.—1. The combination of a source of light, a substance sensitive to light, and a partition having a straight slot with an electric meter whose indicating part is provided with an elongated eye.

2. The combination of a source of light, a substance sensitive to light, and a partition having a slot, with an electric meter whose indicating part is provided with an eye and shields on the right and left thereof equal each in size to the length of the slot in the partition.

3. The combination, with the vibratory or indicating part of an electric meter, of a source of light, a sensitized substance, a motor for feeding the same, a partition provided with two slots, and a shutter governing one of said slots.



4. The combination, with the vibratory or indicating part of an electric meter, of a source of light, a sensitized substance, a motor for feeding the same, a partition provided with two slots, a shutter governing one of said slots, and means for opening and closing said shutter at predetermined periods of time.

5. The combination, with the vibratory or indicating part of an electric meter, of a source of light, a sensitized substance, a motor for feeding the same, a partition provided with two slots, a shutter provided with an arm and a spring, a lever, a cam for actuating said lever, and a clock-movement for rotating said cam.

6. The combination, with an electric meter, of a source of light, a sensitized substance, mechanism for feeding the same, and a partition provided with a series of apertures for effecting longitudinal ruling of the sensitized substance.

7. The combination, with an electric meter, of a source of light, a sensitized substance, mechanism for feeding the same, a partition provided with a series of perforations and a slot, a shutter for said

406,678.

slot, and means for opening and closing said shutter, whereby the sensitized substance may be ruled longitudinally and transversely.

8. The combination, with the vibratory or indicating part of an electric meter, of a source of light, a sensitized substance, mechanism for feeding the same, a partition provided with a series of perforations and two slots, a shutter for one of said slots, and means for opening and closing said shutter, whereby the sensitized substance may be ruled longitudinally and transversely and may also receive photographic representations or impressions corresponding to the fluctuations of the vibratory or indicating part of the measuring-instrument.

9. The combination, with the vibratory or indicating part of an electric meter, of a sensitized substance, an electric lamp for affecting said substance, an electric circuit including said meter, said lamp, and translating devices, and means, substantially as described, for extinguishing the light of said lamp when all of said translating devices have been disconnected or thrown into disuse.

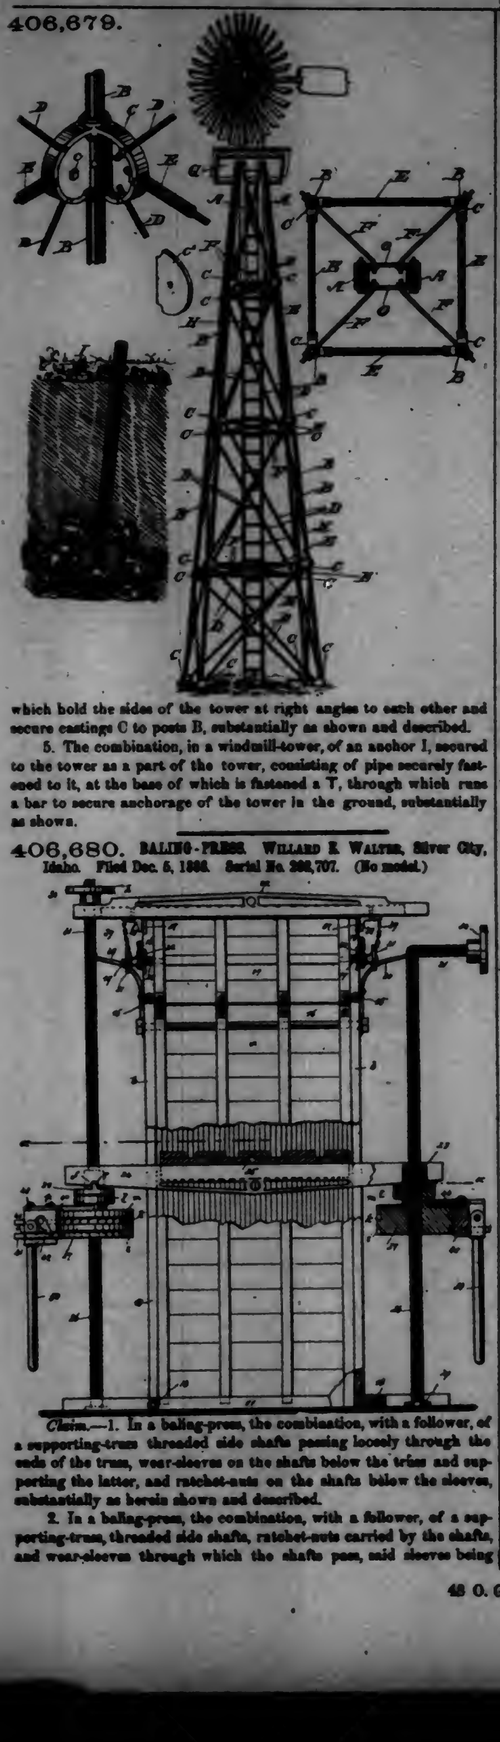
10. The combination, with the vibratory or indicating part of an electric meter, of a sensitized substance, an electric lamp for affecting said substance, an electric circuit, translating devices, an electro-magnet, and a circuit-closer, whereby the said lamp is adapted to be lighted as soon as one (or more) of said translating devices is put into use.

11. The combination, with the vibratory or indicating part of an electric meter, of a suitable casing, a source of light, a box or compartment removably fitted within said casing, a sensitized substance within said box, and means for feeding said sensitized substance.

12. The combination, with an electric meter, of a suitable casing, a source of light, a clock-movement, a box removably connected to said clock-movement, and a strip or ribbon of sensitized material within said box adapted to be fed by said clock-movement.

406,679. WINDMILL-TOWER.

GEORGE WALLENMEYER, Ithaca, N. Y. Filed Sept. 25, 1888. Serial No. 286,373. (No model.)



Claim.—1. The combination, in a windmill-tower, of the castings C with the girts E and stay-rods D, said castings being provided with circular openings through which the four corner-posts B are passed, substantially as shown.

2. The combination, in a windmill-tower, of the four corner-posts B and the castings C with the stay-rods D and the girts E, of the support of the corner-posts B, substantially as and for the purpose set forth.

3. The combination, in a windmill-tower, of the four corner-posts B and the castings C, provided with the slots, the stay-rods D, and the girts E, and the metal plates *c'*, which hold said rods in the slots and prevent the nuts from turning in the castings C, substantially as set forth.

4. The combination, in a windmill-tower, of the post B and the castings C, the stay-rods D, and the girts E with the diagonal rods F,

406,679.

which hold the sides of the tower at right angles to each other and secure castings C to posts B, substantially as shown and described.

5. The combination, in a windmill-tower, of an anchor I, secured to the tower as a part of the tower, consisting of pipe securely fastened to it, at the base of which is fastened a T, through which runs a bar to secure anchorage of the tower in the ground, substantially as shown.

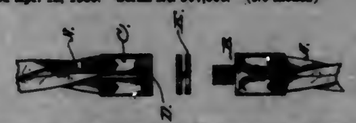
406,680. BALING-PRESS.

WILLARD R. WALTER, Silver City, Idaho. Filed Dec. 5, 1888. Serial No. 292,707. (No model.)

Claim.—1. In a baling-press, the combination, with a follower, of a supporting-truss threaded side shafts passing loosely through the ends of the truss, wear-sleeves on the shafts below the truss and supporting the latter, and ratchet-nuts on the shafts below the sleeves, substantially as herein shown and described.

2. In a baling-press, the combination, with a follower, of a supporting-truss, threaded side shafts, ratchet-nuts carried by the shafts, and wear-sleeves through which the shafts pass, said sleeves being formed with ribs which enter recesses formed in the truss ends, substantially as described.

3. In a baling-press, the combination, with a structure 10, united by cross-bolts, of doors hinged to the side and end walls of said structure, a means for binding said doors to place, a press-head hinged to two of the doors, a follower, and a follower-advancing mechanism, substantially as described.



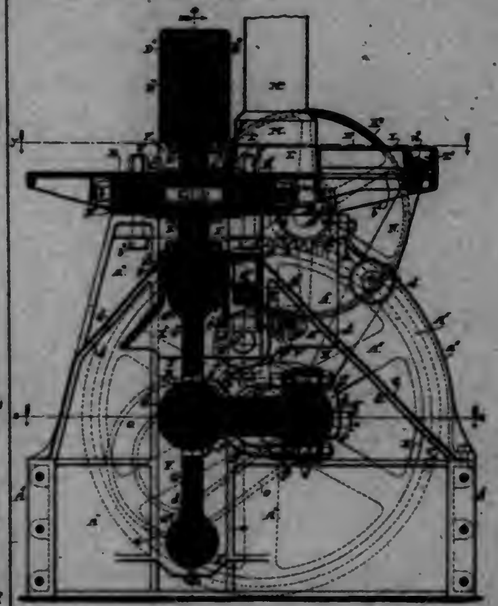
4. In a baling-press, the combination, with a follower, of a truss by which said follower is supported, threaded shafts, ratchet-nuts mounted upon said shafts, the truss ends overlapping the nuts, a press-head, a truss secured thereto, threaded rods hinged to the threaded shafts, and nuts carried by said threaded rods, the nuts being arranged to engage the ends of the truss that is arranged in connection with the press-head, substantially as described.

5. In a baling-press, the combination, with the structure 10, of the hinged side doors 17, the hinged end doors 18, provided with the recesses 20, the bolts 19, secured to the doors 17 and adapted to enter the recesses 20 of the doors 18, and the nuts 21 on said bolts, substantially as herein shown and described.

6. In a baling-press, the combination, with the ratchet-nuts 27, provided with the ratchet-teeth *i k*, the heads *l*, and the flanges *m*, of the recessed lever-heads 40, the pawls 41, pivoted in the recesses of the said heads, the pivoted springs 42, and the lever-arms 50, pivoted to the heads, substantially as described.

406,681. LIGHTNING-ROD.

JOHN H. C. WATTS, Baltimore, Md. Filed Apr. 12, 1888. Serial No. 307,008. (No model.)



Claim.—1. A coupling for lightning-rods, consisting of the flat resilient spring interposed between the screw-threaded shanks of two sections or lengths, substantially in the manner and for the purpose specified.

2. In a coupling for lightning-rods, the flat resilient spring E, in combination with the screw-threaded shanks B and C of sections A, substantially as and for the purpose specified.

406,682. BRICK-MACHINE.

BRUCE C. WHITE, Chicago, Ill., assignor to Chisholm, Boyd & White, same place. Filed June 27, 1887. Serial No. 242,577. (No model.)

Claim.—1. The combination, with the machine-frame, a stationary mold sustained thereon, and upper and lower compressing-plungers sliding therein, of slide-bars connected with the upper plunger and movable vertically upon the frame, toggle-arms pivoted to said slide-bars and to the lower plunger and sustaining said slide-bars and upper plunger from the lower plunger, means connected with the middle joint of the toggle-arms for actuating the same, and a lifting device

applied to the lower plunger for moving the same vertically, together with the toggle-arms, slide-bars, and upper plunger, substantially as described.

2. The combination, with a machine-frame, a stationary mold, and upper and lower compressing plungers, of slide-bars mounted upon the frame and connected with the upper plunger, toggles pivoted to the lower plunger and to the slide-bars and sustaining said slide-bars from the lower plunger, a horizontal shaft provided with a crank, a connecting-rod joining the crank with the middle joint of said toggles, and a cam mounted upon the shaft and acting upon under surface of the lower plunger to raise and lower the plungers, slide-bars, and connected parts, substantially as described.

3. The combination, with a machine-frame, a series of stationary molds located at the upper part of the frame, upper and lower compressing-plungers, upper and lower cross-heads supporting said plungers, vertical slide-bars mounted in the machine-frame and attached at their upper ends to the upper cross-head, toggle-arms pivoted to the lower cross-head and to the said slide-bars and supporting the said slide-bars from said lower cross-head, a horizontal shaft located beneath and parallel with the lower cross-head, said shaft being provided with a crank, a connecting-rod joining the said crank with the middle joint of the toggles, and cams mounted upon said shaft and acting upon the lower cross-head to raise and lower the said cross-head and connected parts, substantially as described.

4. The combination, with stationary molds, upper and lower plungers, and upper and lower cross-heads supporting said plungers, of vertically-movable slide-bars attached at their upper ends to the upper cross-head, toggle-arms pivoted to the lower ends of the slide-bars and to the lower cross-head and sustaining said bars from the said lower cross-head, a drive-shaft provided with a crank for actuating the toggles, a connecting-rod uniting said crank with middle joint of the toggle-arms, and cams mounted upon the shaft and acting upon the lower cross-head, said cams being provided with outwardly-inclined surfaces for lifting the lower cross-head and connected parts, located in such position with relation to the crank-pin that in compressing the brick the lower cross-head will be elevated by the action of the cams before the upper cross-head is depressed by the action of the toggle-arms, substantially as described.

5. The combination, with a machine-frame, a stationary mold, and two opposing vertically-moving plungers sliding in the mold, of toggles or equivalent compressing devices connected with both of said plungers, said toggles and connected parts being mounted to slide freely in a vertical direction upon the frame, cams or equivalent lifting devices separate from the said compressing devices, acting upon the lower plunger and the compressing devices connected therewith for moving the latter vertically, and an adjustable stop sustaining the lower plunger and connected parts when the latter are unsupported by the lifting devices, whereby the quantity of clay placed in the mold to form the brick may be varied as desired, substantially as described.

6. The combination, with stationary molds, upper and lower plungers working therein, an upper cross-head sustaining the upper plungers, vertically-movable slide-bars attached at their upper ends to the said upper cross-head, a lower cross-head sustaining the lower plungers mounted to slide vertically in the machine-frame, toggle-arms pivoted to the lower ends of said slide-bars and to the lower cross-head and supporting said slide-bars from the said lower cross-head, a crank-shaft provided with a crank for actuating the toggles, a connecting-rod uniting the said crank with the middle joint of the toggles, cams upon the said shaft acting upon the lower cross-head to move the latter and connected parts vertically, and adjustable stops upon the machine-frame sustaining the lower cross-head when the latter is unsupported by the cams, substantially as described.

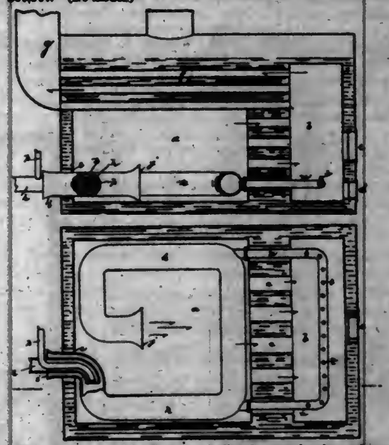
7. The combination, with the machine-frame and a stationary mold supported upon the frame, of upper and lower plungers working in said mold, cross-heads supporting said plungers, long slide-bars rigidly attached at their upper ends to the ends of the upper cross-head and sustaining and guiding the same, said slide-bars extending past and below the lower cross-head, and the frame being provided with guides for the lower parts of the slide-bars, said guides being located entirely below the top of the mold-table, and compressing devices connected with the lower ends of said slide-bars and with the lower cross-head, acting to force the plungers together, said compressing devices being located beneath the mold-table, all substantially as described.

8. The combination, with the machine-frame and stationary molds, of upper and lower plungers, upper and lower cross-heads, slide-bars attached to the upper cross-head, toggles connecting the lower ends of the slide-bars with the lower cross-head, a shaft provided with a crank, a connecting-rod uniting the crank with the toggles and cams on the said shaft acting upon the lower cross-head, said lower cross-head being constructed to bear at its ends against the side edges of said slide-bars, substantially as described.

9. The combination, with the machine-frame comprising imperforate frame-plates A and A', a mold-table secured to the top of said plates, and actuating devices located beneath the mold-table, of removable covers Q and Q', fitted between the said frame-plates, substantially as described.

10. The combination, with frame-plates A A', provided upon their inner faces with inclined ribs, of covering-plates Q and Q', resting upon said ribs, substantially as described.

11. The combination, with the machine-frame comprising imperforate frame-plates A A', a mold-table secured to the top of said plates, upper and lower cross-heads, and mechanism located beneath the table for actuating said cross-heads, said lower cross-head being provided with flat vertical side faces, of covering-plates Q Q', supported at their side edges upon the frame-plates and bearing at their upper margins against the lower cross-head, substantially as described.



406,683. JOINT FOR HOLLOW SHELLS, &c. LYMAN WHITE, Waterbury, Conn., assignor to Randolph & Clowes, same place. Filed Nov. 22, 1888. Serial No. 291,569. (No model.)

Claim.—1. The combination, with opposing cylinder-sections having their contiguous ends turned inward at an angle, of an interior peripherally-grooved tie-ring, a locking-ring, and an external cover or strengthening-band, substantially as shown and described.

2. The combination, with opposing cylinder-sections having their ends turned inward at an angle to form a flange, of an internal supporting tie-ring provided with a peripheral groove adapted to receive the flanges of the cylinder-sections, and a locking-ring also entered into the groove of the tie-ring between said flanges and in contact therewith, all combined for operation substantially as shown and described.

406,684. APPARATUS FOR MAINTAINING COMBUSTION IN SECONDARY CHAMBERS OF BOILER OR OTHER FURNACES. JOHN WILSON, New York, and ALLAN MASON, Brooklyn, assignors to Herbert M. Sanderson, trustee, New York, N. Y. Filed Mar. 8, 1888. Serial No. 266,567. (No model.)

Claim.—The combination, in a boiler-furnace having primary and secondary combustion-chambers, of the pipe-retort entering and extending around the sides, back, and front of the primary combustion-chamber and terminating therein in a lateral discharge, the branch pipe of said retort, said branch pipe extending into said secondary combustion-chamber and provided with a series of burners, and the injector-feeder extending within the retort for supplying said retort with the fuel elements, substantially as described.

406,685. WATER-HEATING APPARATUS. LEONARD M. WOOLCOCK, Auburn, N. Y. Filed Mar. 9, 1889. Serial No. 302,602. (No model.)

Claim.—1. The combination, with a series of horizontal sections having central apertures forming the fuel-magazine, and provided with draft-flues, of a cylinder forming a continuation of said fuel-magazine, provided with radial webs or ribs terminating at the lower edge of the cylinder in radial feet, and a steam-dome surrounding said cylinder and supported upon said sections and said radial feet, substantially as described.

2. The combination, with the fuel-magazine, of a sliding cover for the same, said cover having an inclined top adapted when the cover is disengaged from the magazine to guide the fuel into the magazine, substantially as described.

3. The combination, with the fuel-magazine, of a sliding cover for the same, having an inclined top concave or trough-shaped in cross-section, adapted when said cover is disengaged from the magazine to guide the fuel into said magazine, substantially as described.

4. The combination, with the fuel-magazine, of a sliding cover for the magazine and one or more sets of guides for said cover, whereby said cover may be made to engage either set of guides, substantially as described.

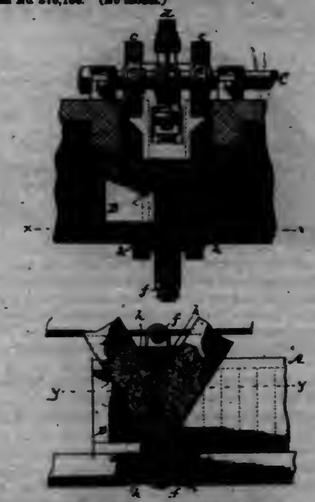
5. The combination, with the fire-pot having an ash-pit beneath the same, of a damper in a wall of said ash-pit and a check-draft damper between the ash-pit and the smoke-flue, substantially as described.

6. The combination, with the fire-pot having an ash-pit beneath the same, of a damper in a wall of said ash-pit, a check-draft damper between the ash-pit and smoke-flue, and an operative connection between the damper and the check-draft damper, substantially as described.

7. The combination, with the fire-pot having an ash-pit beneath the same, of a chamber surrounding the fire-pot and connected with the smoke-outlet, a damper in the wall of said ash-pit, and a check-draft damper between the ash-pit and the said chamber, substantially as described.

8. The combination, with the fire-pot having an ash-pit beneath the same, of a chamber connected with the smoke-outlet, a damper for controlling the draft, a check-draft damper between the ash-pit and said chamber, and an arm on said damper engaging the check-draft damper, substantially as described.

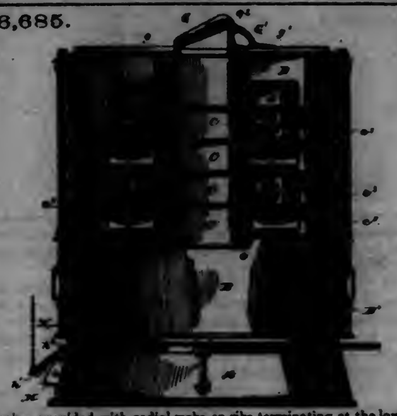
9. The combination, with the fire-pot, of sections forming the boiler, the section adjacent to said fire-pot having a hollow annular portion around the center of the same depending within the fire-pot and extending below the horizontal plane of the bottom of said section, substantially as described.



10. The combination, with a furnace having a hand-hole in its walls communicating with the smoke-flues and having unequal diameters, of a cover having unequal diameters engaging said hand-hole, a bolt passing through said cover and provided at one end with a securing-plate rigidly secured thereto and at the other end with a head, whereby said bolt may be turned and the plate made to engage the walls of said hand-hole for securing said cover in place, substantially as described.

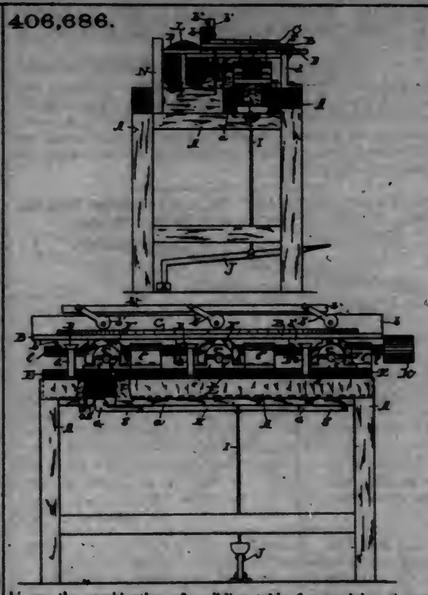
406,686. MACHINE FOR RABBETING TABLE-LEAVES. REUBEN W. WOODMAN, Saccarappa, Me. Filed Nov. 6, 1888. Serial No. 290,173. (No model.)

Claim.—1. In a machine for rabbeting swinging table-leaves for receiving their hinges, the combination of a sliding table for receiving the table-leaf, a cutter-head rotating in a plane at right angles to said table and having its cutting-edge adjusted to cut a shallow recess or groove in the edge of said leaf, a frame beneath said table, a saw or cutter journaled therein, and means for lifting said frame and feeding it horizontally to cut a narrow longitudinal groove through said shallow recess, substantially as and for the purpose set forth.



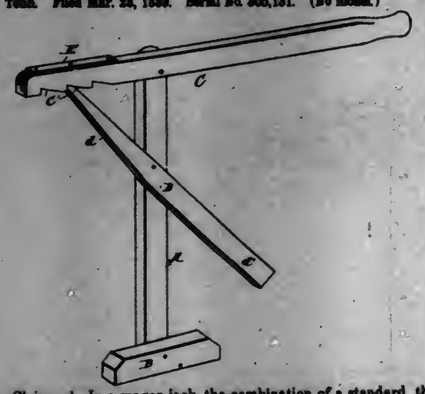
2. In a machine for rabbeting swinging table-leaves for receiving hinges, the combination of the saw-frame and the cams for supporting and lifting said frame, said cams being provided with teeth, racks on the bottom of said frame to engage said teeth when the frame is lifted to the desired height, and levers for rotating said cams, substantially as and for the purpose set forth.

406,687. METHOD OF MANUFACTURING ORNAMENTAL BRICK. JAMES C. ANDERSON, Highland Park, Ill. Filed June 6, 1888. Serial No. 276,186. (No model.)



Claim.—The method herein described of ornamenting dry-clay brick, which consists in pressing the clay into brick form and then forcing into the face of the newly-formed brick a dry clay powder in the form of vines, stems, fruits, and flowers in relief or in depression.

406,685.

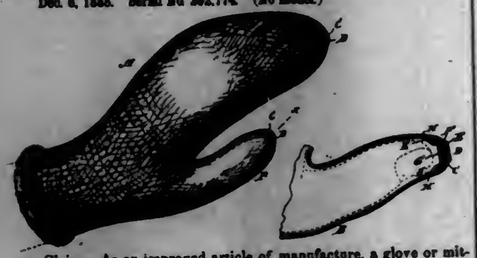


406,686.

406,688. METHOD OF ENAMELING OR INCRUSTING BRICKS, &c. JAMES C. ANDERSON, Highland Park, Ill. Filed Apr. 24, 1889. Serial No. 308,451. (No specimens.)

Claim.—An improvement in the art of manufacturing incrusted bricks, tiles, and other clay articles, which consists in applying a composition of finely-divided or comminuted enamel and pure metals to the articles while the same are in a green or unburned state, and in then burning said articles to the pottery point to fuse the enamel and metals and cause them to form an incrustation of enamel integral with the main body of the article.

406,689. LIFTING-JACK. WILLIAM R. ANDREWS, Union City, Tenn. Filed Mar. 28, 1889. Serial No. 305,131. (No model.)

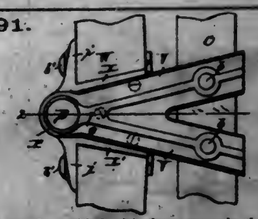


Claim.—1. In a wagon-jack, the combination of a standard, the lever pivoted to the upper end of the standard and provided upon the under side of the short arm with a rack, and a prop pivoted to the standard and adapted to engage automatically said rack intermediate of its ends, substantially as described.

2. In a wagon-jack, the combination of the standard, the lever pivoted at the upper end of the standard and provided with a rack, and the prop pivoted to the standard and having its upper portion gradually reduced in thickness, the longer and heavier arms of said lever and prop being on the same side of their points of pivotal connection to the standard, substantially as and for the purpose described.

3. In a wagon-jack, the combination of the standard secured to a suitable base, the lever pivoted to the upper end and to one side of the standard and provided with a rack, and the prop pivoted near the opposite side of the standard, whereby the parts are adapted to be folded compactly together, substantially as described.

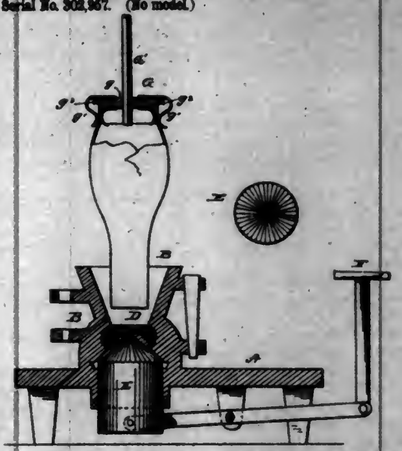
406,690. MITTEN, &c. JOHN ARBUCKLE, Brooklyn, N. Y. Filed Dec. 6, 1888. Serial No. 292,774. (No model.)



Claim.—As an improved article of manufacture, a glove or mitten for the hand, provided with an air-passage and a spring-pressed valve which closes outwardly to prevent the egress of air and opens inwardly to permit air being blown into the glove or mitten from the mouth to warm parts of the hand, substantially as described.

406,691. WHIFFLETREE. SAXTON J. ARNOLD, Everett, Mass. Filed Apr. 9, 1889. Serial No. 306,503. (No model.)

Claim.—1. The combination of the braces adapted to be secured



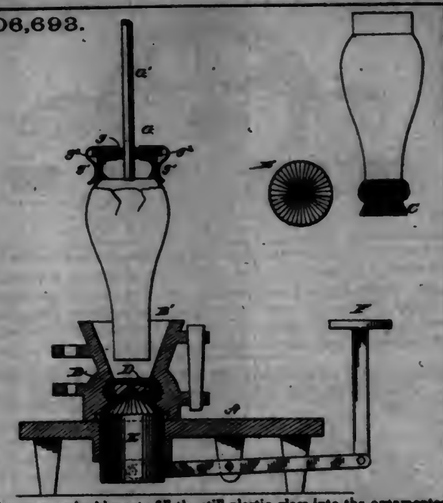
to a cross-bar and provided with the recesses in their inner faces, the whiffletree-iron having the projecting bearings upon its upper and lower faces journaled in said recesses, and a bolt passing through the braces and whiffletree-iron, as set forth.

2. The combination, with the bolt, of the braces adapted to be secured to a cross-bar and provided with recesses on their inner faces, the whiffletree-iron having projecting bearings upon their upper and lower faces and provided with a vertical hole A, of greater diameter than the bolt, whereby the whiffletree-iron is out of contact with said bolt, substantially as described.

3. The combination of the V-shaped braces provided with recesses in their inner faces, the whiffletree-iron having bearings journaled in the recesses of the braces and provided with the rearward-extending plates approximately triangular in form and designed to be set in corresponding recesses in the whiffletree, and a bolt passing through the braces and the whiffletree-iron, substantially as described.

4. The combination of the V-shaped braces provided with recesses in their inner faces and having bolt-holes concentric with said recesses, one of said bolt-holes being square, the whiffletree-iron having bearings journaled in said recesses and provided with a central hole A, adapted to receive a bolt, and a bolt passing through the braces and the whiffletree-iron and being out of contact with the latter, substantially as described.

406,692. METHOD OF ORNAMENTING OPEN-ENDED GLASSWARE. THOMAS B. ATTERBURY, Pittsburg, Pa. Filed Mar. 12, 1889. Serial No. 302,957. (No model.)



Claim.—1. The method of ornamenting open-ended glassware, which consists in placing the heated article in a former having the ornamental configuration to be given to the article, closing the ends, and then blowing into the article to cause it to be forced into or assume the configuration of the mold, as set forth.

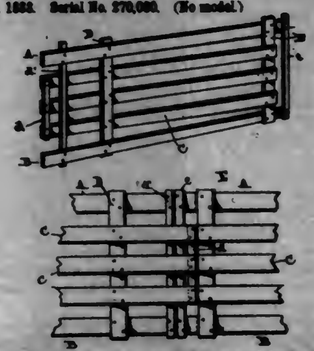
2. The method of ornamenting open-ended glassware, which consists in blowing the article and finishing it in plain form without the aid of a mold, then placing the article in a blow-snap, reheating the portion to be ornamented, placing the heated end in a former having a movable bottom, moving the movable bottom upward to ornament the top, making the same air-tight, and finally blowing through the snap to fill the still plastic glass into the ornamented portion of the former, as set forth.

406,693. APPARATUS FOR ORNAMENTING OPEN-ENDED GLASSWARE. THOMAS B. ATTERBURY, Pittsburg, Pa. Filed Mar. 12, 1889. Serial No. 302,958. (No model.)

Claim.—1. In a device for ornamenting hand-blown glassware, a former or mold having the ornamental configuration to be given to the article formed or cut in the inner face thereof, a plug to close the bottom thereof, and a device for holding the article and permitting

406,693.

the same to be blown to fill the still plastic glass into the ornamented portion of the former, as set forth.

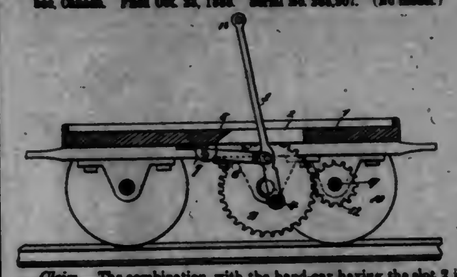


2. In a device for ornamenting hand-blown glassware, a former or mold having the ornamental configuration to be given to the article formed or cut in the inner face thereof, a plug or plunger provided with the corrugated face to crimp the edge of the article, and a blow-snap to hold the article, substantially as and for the purpose set forth.

406,694. ICE-BREAKER. ALVAH H. ASHTON, Webster City, Iowa. Filed Feb. 28, 1889. Serial No. 301,467. (No model.)

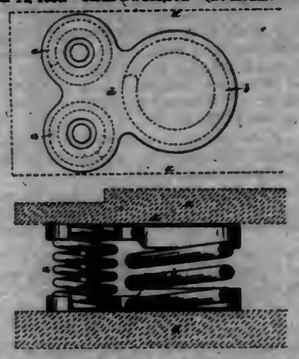
Claim.—A composite ice-breaker for piers and the like, consisting of two metallic sides inclined laterally with respect to each other and partly surrounding the pier, a concrete filling, and piles extended vertically between the sides of the structure and embedded in said filling, substantially as described.

406,695. FENCE. MARION J. BARROW, New Mecanfield, Mo. Filed Apr. 9, 1888. Serial No. 270,089. (No model.)



Claim.—1. The herein-described fence-panel having end battens and having the ends of the rails fastened to the opposite sides of the said battens, respectively, the rails being extended at one end beyond the end batten and provided with stops on their opposing faces which are adapted to spring apart, and the other end of the panel being provided with a corresponding stop, substantially as and for the purpose described.

2. The herein-described fence-panel, having the ends of the rails extended beyond the end battens, some of the said ends being in one plane and others in another, and adapted to be sprung apart and provided with stops on their opposing sides, substantially as and for the purpose described.



3. The herein-described fence-panel, having the ends of the rails extended at one end beyond the end batten and arranged in different planes, the top and bottom rails being in one plane and the intermediate rails being in another plane, and having the ends of the rails of each plane united by a step, the two steps being adapted to be sprung apart, substantially as and for the purpose described.

406,696. HAND-CAR. THOMAS S. BARWIS, Arthabaskaville, Quebec, Canada. Filed Oct. 22, 1888. Serial No. 288,907. (No model.)

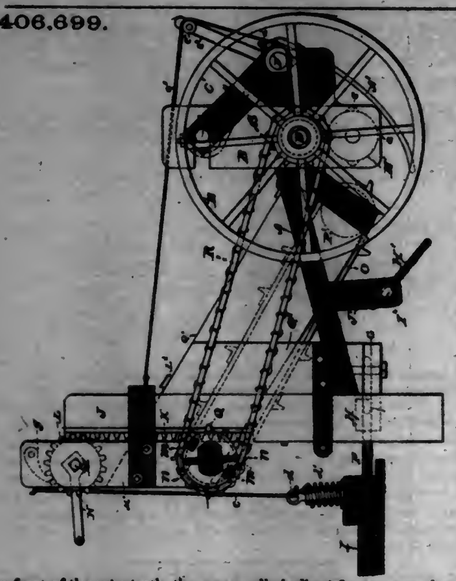
Claim.—The combination, with the hand-car having the slot 2 in its platform and a transverse crank-shaft journaled under the platform between the front and rear axles, of the upwardly-projecting lever 3, extending down through said slot and connected with the crank, and the longitudinally-extending lever 6, pivoted to the under side of the platform at one end of the slot to work therein, and at its other end pivoted to the lower end of lever 3 above the crank, and gearing connecting the crank-shaft with an axle of the car, substantially as set forth.

406,697. GRADUATED CAR-SPRING. THOMAS M. BELL, Philadelphia, Pa., assignor to the Charles Scott Spring Company, same place. Filed Dec. 14, 1888. Serial No. 293,561. (No model.)

Claim.—1. A graduated car-spring having the primary and secondary springs arranged in the form of a triangle with a pair of springs at the outer portion of the structure, so as to provide a support for the outer end of a spring-bolster throughout substantially the whole width of the latter, as set forth.

2. The combination, in a graduated car-spring, of a pair of primary springs, and a secondary spring arranged in the form of a triangle, the pair of primary springs being at the outer portion of the structure, so as to support the outer end of the spring-bolster, all substantially as specified.

406,698. INCRUSTATION PREVENTIVE. DAVID R. BOOSINE, St. Louis, Mo. Filed Dec. 15, 1888. Serial No. 293,003. (No specimens.)



Claim.—A boiler compound consisting of extract of hemlock, gambia, sumac, wormwood, and salts of tartar, mixed together in about the proportions named.

406,699. HAY-LOADER. HARRY L. BOSWORTH, Clifton, Dak. Filed Nov. 27, 1888. Serial No. 291,967. (No model.)

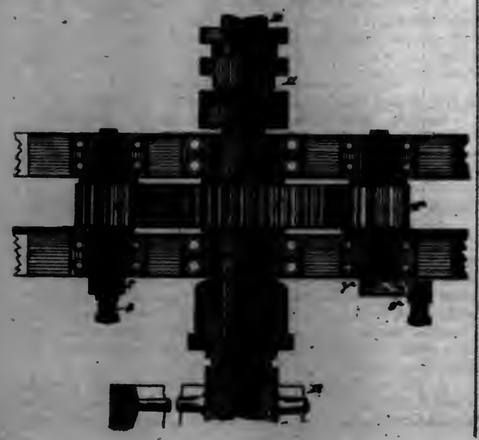
Claim.—1. The combination, with the endless carrier, the pulleys, and the driving mechanism, the sprocket-wheel of the driving mechanism being loosely mounted on the extended journal of one of the pulley-shafts, the clutch-arms thereon extending in opposite directions, of the clutch-block having the angular longitudinal opening engaging an angular portion of the extended journal, said angular portion having a notch, the vertical arms thereon, and the spring-keeper, substantially as specified.

2. The combination, with the loader-frame, the side pieces B, wheels E, the shaft D, and the rake-teeth, of the rock-shaft having journaled bearings in the depending portions of the frame and located

406,699.

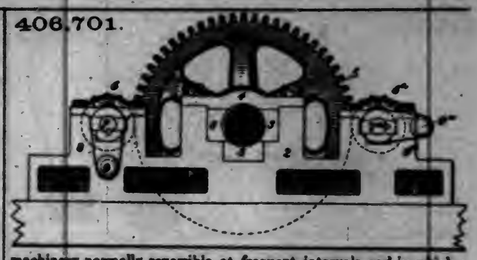
in front of the rake-teeth, the rearwardly-inclined fingers secured to said rock-shaft, and the feed-roller having the projections and operated by the pinions on the wheel-axle, substantially as set forth.

406,700. DEODORANT AND DISINFECTANT. HENRY M. CALDWELL, Sydney, New South Wales, assignor to Harry James Goodricke Cattanach, same place. Filed May 27, 1886. Serial No. 203,373. (No specimens.) Patented in Victoria Mar. 31, 1886, No. 4,486; in Queensland Apr. 3, 1886, No. 111; in England May 24, 1886, No. 6,966, and in New South Wales June 5, 1886, No. 1,868.



Claim.—1. A composition of matter formed of sulphate of iron, oxide of manganese, oil of eucalyptus, and water, substantially in the manner and in the proportions set forth.

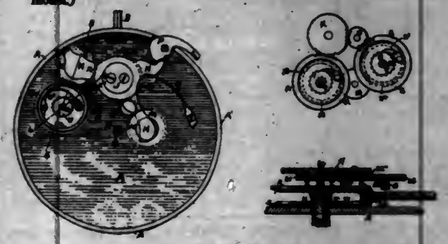
2. A composition of matter formed of sulphate of iron, oxide of manganese, oil of eucalyptus, water, caustic soda, and peroxide of manganese, substantially in the manner and in the proportions set forth.



406,701. ROLLING-MILL. ROBERT A. CARTER, Pittsburg, Pa. Filed Dec. 13, 1888. Serial No. 293,454. (No model.)

Claim.—1. As a mechanism for operating roll-trains and other geared machinery normally reversible at frequent intervals and in which a fly-wheel is dispensed with, the combination of a main gear-wheel mounted on the shaft through which reversibility is effected, and two or more independently-driven pinions (but without fly-wheels) arranged to engage the main gear-wheel at equal or approximately equal distances around its periphery, substantially as set forth.

2. As a mechanism for operating roll-trains and other geared



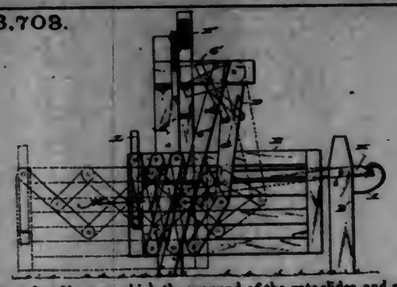
406,701.

machinery normally reversible at frequent intervals and in which a fly-wheel is dispensed with, the combination of two or more main gear-wheels mounted on the shaft through which reversibility is effected, and two or more independently-driven pinions alternating with the main gear-wheels, each pinion intermeshing with the main gear-wheels on each side thereof, substantially as set forth.

406,702. WATCH-WINDING MECHANISM. WHEELOCK R. CLIFFORD, Waltham, Mass. Filed Feb. 9, 1888. Serial No. 263,537. (No model.)

Claim.—1. In combination with a watch-movement actuated from the unwinding of a wound spring, mechanism for winding said spring, composed of two loose-turning gear-wheels, two ratchet or clutch wheels, one for each of said loose gear-wheels, two pawls or clutches to engage and to pass freely over said ratchet or clutch wheels, and means, consisting of a driving gear-wheel having connection with both of said loose gear-wheels, whereby from its rotation in either direction the loose gear-wheels will be simultaneously rotated, but in opposite directions, all combined, arranged, and operating substantially as and for the purpose described.

2. In combination with a watch-movement actuated from the unwinding of a wound spring, mechanism for winding said spring, composed of two loose-turning gear-wheels, an arbor or stud common to both of said gear-wheels, two ratchet or clutch wheels, one for each of said gear-wheels, two pawls or clutches to engage and to pass freely over said ratchet or clutch wheels, and means consisting of a driving gear-wheel having connection with both of said loose gear-wheels, whereby from its rotation in either direction the loose gear-wheels will be simultaneously rotated, but in opposite directions, all combined, arranged, and operating substantially as and for the purpose described.



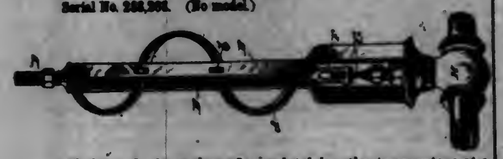
3. In combination with a watch-movement actuated from the unwinding of a wound spring, mechanism for winding said spring, composed of two loose-turning gear-wheels, an arbor or stud common to both of said gear-wheels, two ratchet or clutch wheels, one for each of said gear-wheels, two pawls or clutches to engage and to pass freely over said ratchet or clutch wheels, and a gear-wheel to directly mesh with one and to connect with the other of said loose gear-wheels through an intermediate gear-wheel, and to rotate them in opposite directions, all combined, arranged, and operating substantially as and for the purpose described.

4. In combination with a watch-movement actuated from the unwinding of a wound spring, mechanism for winding said spring, composed of two loose-turning gear-wheels, an arbor or stud common to both of said gear-wheels, two ratchet or clutch wheels, one for each of said gear-wheels, two pawls or clutches to engage and to pass freely over said ratchet or clutch wheels, a gear-wheel to directly mesh with one and to connect with the other of said loose gear-wheels through an intermediate gear-wheel and to rotate them in opposite directions, and a support for said driving gear-wheel adapted to be adjusted to place its said gear-wheel in and out of said mesh, all combined, arranged, and operating substantially as and for the purpose described.

406,703. GATE. CASSIUS M. COCHRAN, Marion, Ind. Filed Apr. 23, 1888. Serial No. 306,599. (No model.)

Claim.—1. The combination, in a sliding gate, of the supporting-posts, bell-crank lever, and lazy-tongs, supported substantially as

406,703.



shown, a bar H, upon which the rear end of the gate slides, and a vertically-sliding bar which engages with pins extending from the bar H and from a short arm of the bell-crank lever for operating the bar H, bell-crank lever, and gate, substantially as shown, and for the purpose set forth.

2. The combination, in a sliding gate, of the pivoted levers F, having depending bars F', the lower ends of which are connected to double-crank arms, a vertically-sliding bar E, connected to levers F and having slots *e'* and *f*, lazy-tongs M, a bell-crank lever D, the short arm thereof having a pin which engages with the slot *e'*, and the long arm of said lever engaging with the inner end of the lazy-tongs M, a vertically-moving bar L, connected to the front end of said lazy-tongs, the bar H, having near one end a notch and a projecting pin engaging with the slot *f*, the other end of the bar H having a spring I, and a pin *j* upon the gate for engaging with said notch, the parts being organized substantially as shown, and for the purpose set forth.

3. The combination, in a sliding gate operated by a bell-crank lever and lazy-tongs, arranged substantially as shown, of a movable bar L, adjustably secured to the front end of the gate, the forward end of the lazy-tongs being adapted to engage with said bar, for the purpose set forth.

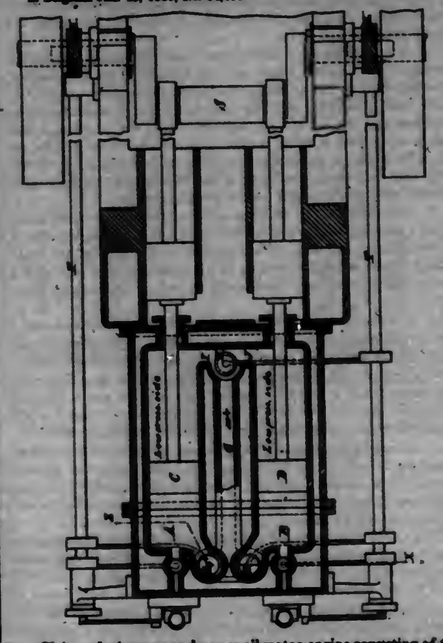
406,704. THERMOSTATIC DRAFT-REGULATOR. SAMUEL F. COLLINS and GRAHAM S. SLACK, Binghamton, N. Y. Filed Oct. 16, 1886. Serial No. 216,206. (No model.)

Claim.—1. A regulator for maintaining the temperature at a determined point, consisting of a tube arranged in sinuous form, a suitable support, suitable guides to control the movement of the tube and cause its lower end to move in approximately a straight line, a connection from one end of said tube to the valve or damper, and an opening to the interior of said tube for filling the same, substantially as described.

2. A regulator consisting of a tube bent in sinuous form and having movable supports between the bends, connection between one end and the valve or damper, said tube containing or being in connection with an expansible material, substantially as described.

3. A regulator consisting of a tubular spring bent in sinuous form with movable supports therefor, and an adjustable connection between one end of said tube and a valve or damper, said tube containing or being in connection with an expansible material, substantially as described.

406,705. METAL WHEEL. LOUIS J. CRECELIUS, St. Louis, Mo. Filed Dec. 11, 1888. Serial No. 293,242. (No model.)



Claim.—1. A metal wheel having a hub-filling cast therein onto the ends of the spokes, for the purpose described.

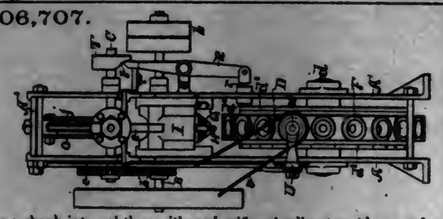
2. In a metal wheel, the combination of the spokes and a hub, the latter consisting of a shell, and a filling applied around the ends of the spokes in a molten or liquid condition, substantially as and for the purpose set forth.

3. In a metal wheel, the combination of the spokes and hub, the latter consisting of a shell and a filling in which the ends of the spokes are embedded and having end flanges S, substantially as and for the purpose set forth.

4. In a metal wheel, the combination of the spokes and hub, the latter having perforated enlarged ends to receive the spokes, and a filling cast into the shell, substantially as and for the purpose set forth.

406,706. COMPOUND GAS OR OIL MOTOR-ENGINE. WILLIAM J. CROSSLEY, Openshaw, Manchester, County of Lancaster, England, assignor to the Gas-Motoren-Fabrik-Deutz, Deutz-on-the-Rhine, Germany. Filed Jan. 31, 1888. Serial No. 262,570. (No model.) Patented in England Feb. 4, 1886, No. 1,705; in France Jan. 12, 1889, No. 186,331, and in Belgium Jan. 15, 1889, No. 84,695.

Claim.—1. A compound gas or oil motor-engine consisting of two cylinders having discharge-valves at the rear ends, the two reciprocating pistons, an exhaust-valve common to the front ends of both cylinders, and a passage-way leading from the said discharge-valves and communicating with the front ends of both cylinders to conduct the gaseous products from behind each piston into the spaces in front of both pistons, where such products expand and are discharged through the exhaust-valve common to both cylinders, substantially as described.



2. A compound gas or oil motor-engine consisting of two cylinders located side by side, having at their rear ends alternately-opened discharge-valves and provided with front communicating ends, the two pistons connected with a single crank-shaft to move to and fro together, an exhaust-valve opened at intervals and common to the front open ends of both cylinders, and a passage-way interposed between the cylinders and leading from the said discharge-valves to and communicating with the front ends of both cylinders and the exhaust-valve to conduct the gaseous products from behind each piston into the spaces in front of both pistons, where such products expand, move the pistons rearward, and then discharge through the exhaust-valve common to both cylinders, substantially as described.

406,707. MACHINE FOR MOLDING PLASTIC MATERIALS. FREDERICK C. DAHL, Cleveland, Ohio. Filed Aug. 7, 1888. Serial No. 282,170. (No model.)

Claim.—1. In a machine for molding plastic material, the combination of a vertical wheel and mechanism for imparting to said wheel an intermittent movement and for holding it firmly while the material is being pressed into shape, with a reciprocating hollow die, outlet and inlet pipes to said die, whereby a cooling-fluid may be kept constantly circulating through said die, said outlet-pipe being arranged to discharge said fluid into one or more of the molds containing the molded articles, substantially as and for the purpose specified.

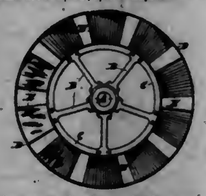
2. In a machine for molding plastic material, a die consisting of a recessed bottom part, a plate secured to said bottom part and hav-

406,707.

ing a shank integral therewith, and orifices leading to said recess for the attachment of outlet and inlet pipes, substantially as and for the purpose specified.

3. In a machine for molding plastic material, the combination of a vertical wheel having molds secured radially to the face thereof, and mechanism for imparting to said wheel an intermittent movement and for holding it firmly while the material is being pressed into shape, a reciprocating die having an inclosed recess, and outlet and inlet pipes to said recess, whereby a fluid may be forced through said recess under pressure, the outlet-pipe being so formed that it will discharge said fluid into one or more of the molds containing the molded articles, substantially as and for the purpose specified.

4. In a machine for molding plastic material, a vertical wheel having a series of molds on the edge thereof and having a series of ratchet-teeth on said edge, with a grooved cam, a pivoted bar, a pin secured to said bar and operating in the groove of said cam, and a pawl pivoted to said bar, substantially as and for the purpose specified.



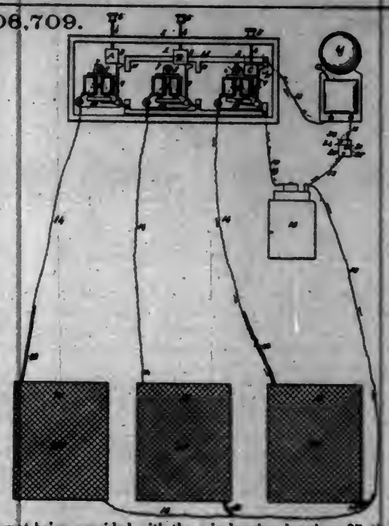
5. In a machine for molding plastic material, the combination of a reciprocating die, a vertical wheel carrying a series of molds and having a plate secured to the side thereof, said plate being provided with sockets a^5, and mechanism for revolving said wheel intermittently, with lever, a pin for engaging said sockets, and a cam for moving said lever in one direction and a spring for moving it in the opposite direction, substantially as and for the purpose specified.

6. In a machine for molding plastic material, the combination of a cross-head and means for guiding the same, and a die secured thereto, with a toggle, a cylinder, piston and piston-rod, a link connecting said toggle and piston-rod, and cam L, substantially as and for the purpose specified.

7. In a machine for molding plastic material, a wheel and a series of molds secured thereto, combined with a revolving swab and mechanism for drawing said swab into and out of said molds, substantially as and for the purpose specified.

8. In a machine for molding plastic material, a wheel and a series of molds secured thereto, combined with a pivoted arm, a horizontal bar pivotally connected therewith, a revolving swab carrying spindle journaled in said bar, a spring for moving said arm in one direction, and a revolving cam for moving it in the opposite direction, substantially as and for the purpose specified.

406,708. PROPELLER-WHEEL. WILLIAM H. DANIELS, Southampton, England. Filed Nov. 15, 1888. Serial No. 290,939. (No model.) Patented in England Nov. 2, 1888, No. 13,344.



Claim.—A marine propeller formed of a central boss, arms of a suitable length radiating from said boss approximately parallel to the plane of motion, an inner circular rim carried by the ends of said arms, transverse blades set at any desired pitch and secured to said rim, and the outer concentric rim to which the tips of the blades are secured, the space between the boss and inner rim affording a free water-space, whereby churning is prevented, substantially as set forth.

406,709. INVISIBLE BURGLAR-ALARM ELECTRIC MAT. JAMES W. DAWSON, St. Louis, Mo. Filed Apr. 19, 1889. Serial No. 307,637. (No model.)

Claim.—1. In a burglar-alarm mat, &c., the combination of the series of compartments of the sectional mat constructed of pasteboard or paper fabric, the sheet-metal interlacing straps 19, that flexibly connect said sections, the connecting strap 22, the straps 24 and 25, secured on top of the mat, the positive and negative conductors 13, 14, and 38, that connect with the straps 22 and 25, the sections of

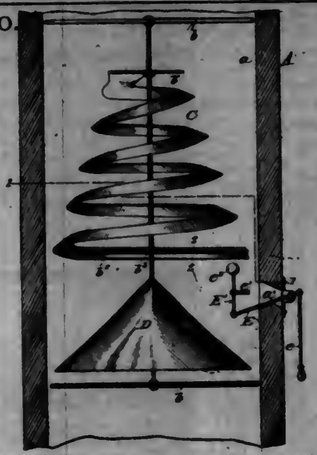
406,709.

said mat being provided with the spiral-spring housings 27, the twin spiral springs that are seated in said housings and are metallically secured in electric contact to the straps 24, and the bow-wires 29, that couple the twin spirals together, and which bow-wires come into electric contact with the straps 19 when the burglar steps on the mat and closes the circuit, all adapted to form part of a closed-circuit line, substantially as described, and for the purpose set forth.

2. In a burglar-alarm mat, the combination of the series of compartments of the sectional mat, provided with perforate housings for spiral springs, the sheet-metal interlacing-straps 19, their connecting-strap 22, the straps 24 and 25, the twin spiral springs 28, the coupling bow-wire 29, that couples said springs, the copper-foil conductors 38, the electric positive and negative wires 13 and 14, the battery 16, the annunciator 1, and the electric bell 44, substantially as described, and for the purpose set forth.

3. In a burglar-alarm mat, &c., the combination of the perforated compartments of a sectional mat composed of pasteboard or paper fabric, the interlacing sheet-metal strips 19, the strap 22, the straps 24 and 25, the twin spiral springs 28, the bow-wires 29, that couple said springs, the loop-hinges 36, that connect sections of said mat to enable it to fold, the copper-foil conductors 38, the positive and negative conductors 13 and 14, the annunciator 1, having announcing-tablets 3, the magnets 6, the armature 10, the pivoted brush-switches 9, the conducting-bar 12 and its pendent arm 11, with which the brush of said switch affiliates when the circuit is closed, the electric bell 44, with which the side switch of the electric current connects, and the battery 16, substantially as described, and for the purpose set forth.

4. In a burglar-alarm mat, &c., the combination of the perforated compartments of the sectional mat of pasteboard or paper fabric, the interlacing sheet-metal straps 19, the straps 22, 24, and 25, the twin spiral springs 28, their bow-wire coupling 29, the annunciator 1, the battery 16, the electric bell 44, the switch-box 30, for breaking the current, and the circuit making and breaking devices that electro-magnetically connect the parts, substantially as described, and for the purpose set forth.



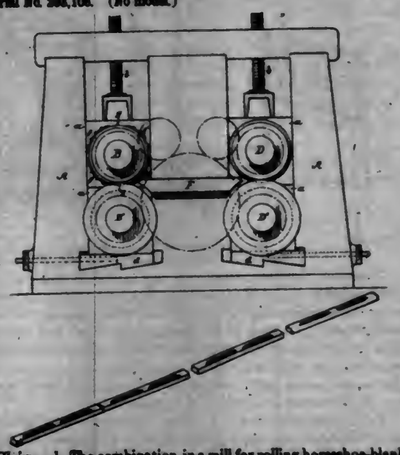
5. In a burglar-alarm mat, &c., the combination of the compartments of the sectional electric alarm-mat provided with the spiral-spring housings 27, the sheet-metal interlacing straps, the straps 22, 24, and 25, the twin spiral springs 28, the bow-wires that couple said springs, the fabric cover that surmounts said mat, the battery, the electric bell, the annunciator with its recording-tablets, magnets, brush-switch, and conducting-bar 12, and the copper-foil and wire conductors that connect said parts, substantially as and for the purpose set forth.

406,710. SOOT AND SPARK ARRESTER. JEAN B. E. DUHAM, Chicago, Ill., assignor of three-fourths to Abraham Bachrach, Charles Bachrach, and Dominick L. Langevin, all of same place. Filed Feb. 20, 1889. Serial No. 300,612. (No model.)

Claim.—1. The combination, with the chimney A, having flue *a*, of the rotating spiral C, mounted in said flue, and having an increasing diameter from top to bottom, substantially as and for the purpose specified.

2. The combination, with the chimney A, having flue *a*, of the rotating spiral C, mounted in said flue, and composed of a strip having a body inclined transversely downward and outward, and provided at its outer margin with a depending flange, the said spiral increasing in diameter from top to bottom, whereby the convolutions are caused to overlap each other, substantially as and for the purposes specified.

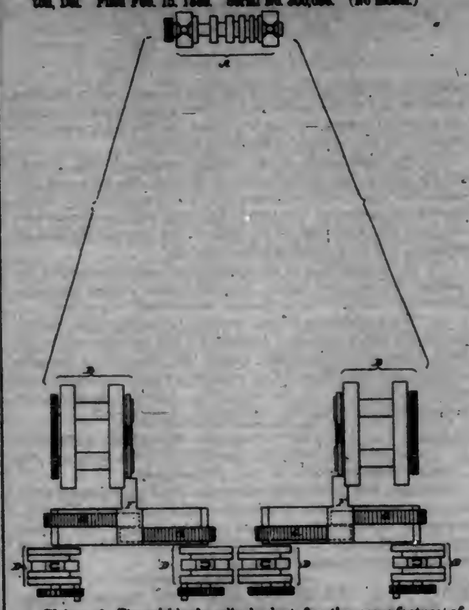
406,710.



3. The combination, with the chimney A, having flue *a*, of the rotating spiral C, mounted in said flue, and having an increasing diameter from top to bottom, and the cone D, arranged in the flue below the spiral with its apex upward, and having a base of a diameter equal to the diameter of the bottom of the spiral, substantially as and for the purposes specified.

4. The combination, with the chimney and its flue, of the spiral loosely suspended therein, and means for vibrating said spiral, substantially as and for the purposes specified.

5. The combination, with the chimney and its flue, of the spiral loosely suspended therein, the lever E, extending through a slot in the chimney, and the rod E', operated by said lever and adapted to strike the spiral, substantially as and for the purposes specified.

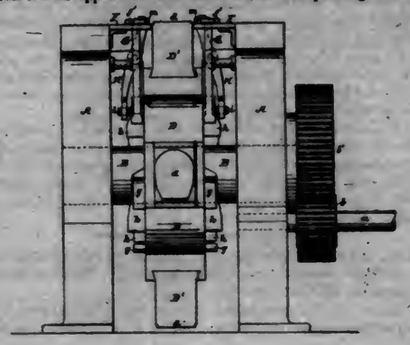


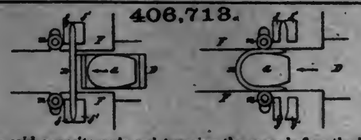
406,711. ROLL FOR ROLLING HORSESHOE-BLANKS. WILLIAM BYRON and WILLIAM SEAMAN, Wilmington, Del. Filed Dec. 10, 1888. Serial No. 293,108. (No model.)

Claim.—1. The combination, in a mill for rolling horseshoe-blanks, of the creasing-rolls having one or more fins or projections for transversely indenting the bar so as to partially sever the same, and finishing-rolls driven at slightly greater surface speed than the creasing-rolls, so as to impart a slight draft to the bar and tear it apart at the indented portions, all substantially as specified.

2. The combination of the creasing-rolls having one or more indenting-fins for partially severing the bar, the finishing-rolls driven at a greater surface speed than the creasing-rolls, so as to impart draft to the bar and pull it apart at the indentations, and a box or trough for guiding the bar in its passage from the creasing-rolls to the finishing-rolls, all substantially as specified.

406,712. PLANT OF MACHINERY FOR THE MANUFACTURE OF HORSESHOES. WILLIAM BYRON and WILLIAM SEAMAN, Wilmington, Del. Filed Feb. 15, 1889. Serial No. 300,094. (No model.)





Claim.—1. The within-described plant for the manufacture of horseshoes from a bar, said plant comprising a mill for rolling horseshoe-blanks from said bar, a pair of blank-bending machines located one at each side and in advance of said mill, a receiving-table at the delivery end of the mill, and feed belts or aprons extending laterally from said receiving-table, one to one bending-machine and the other to the opposite bending-machine, whereby the blanks delivered by the mill can be conveyed to the bending-machines alternately, substantially as specified.

2. The within-described plant for the manufacture of horseshoes from a bloom or billet, said plant comprising a bar-rolling mill, a pair of supplementary rolling-mills located one at each side and in advance of said bar-mill and constructed to form into separate horseshoe-blanks the bars delivered by said bar-mill, four blank-bending machines located one at each side and in advance of each blank-rolling mill, a receiving-table at the delivery end of each blanking-mill, and a pair of laterally-extending feed belts or tables for each receiving-table, one feed-belt extending to one bending-machine and the other to the opposite bending-machine, whereby the bar produced by the primary rolling-mill may be conveyed to the blanking-mills alternately and the blanks produced by each blanking-mill can be conveyed alternately to the bending-machines working in conjunction therewith, substantially as specified.

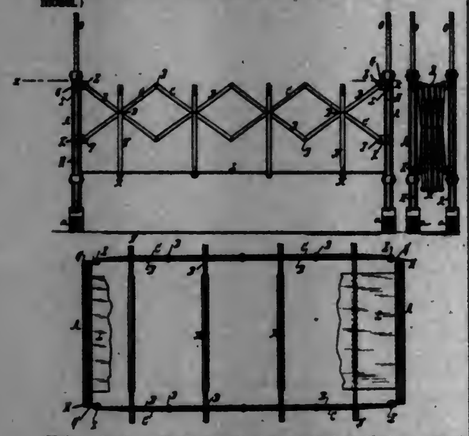
406,713. HORSESHOE-BENDING MACHINE. WILLIAM BYRON and WILLIAM SEAMAN, Wilmington, Del. Filed Feb. 15, 1889. Serial No. 300,097. (No model.)

Claim.—1. The combination of the rotating die-holding disk, supports for the opposite ends of the blank, beveled pressing-dies for

406,718.

acting on said opposite ends and tapering the same before the blank is bent around the former-die as the latter advances, levers carrying the movable pressing-dies, and cams upon the disk for actuating said levers as the disk rotates, substantially as specified.

2. The combination of the rotating die-holding disk, supports for the opposite ends of the blank to be bent, dies for pressing the ends of the blank, rolls for pressing said ends inward against the contracted rear portion of the former-die, levers carrying the movable dies and rolls, and cams at the ends of the die-carrying disk for actuating said levers, substantially as specified.

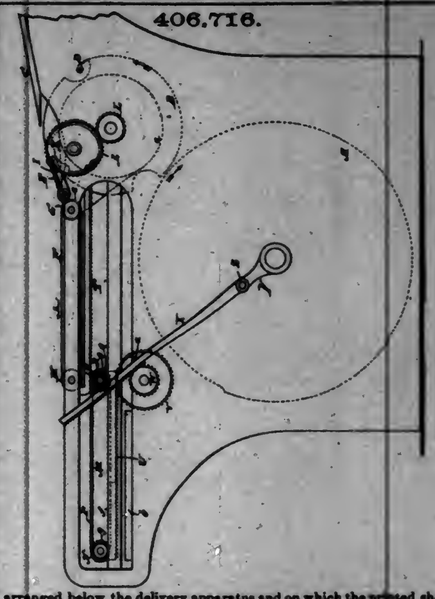


3. The combination of the rotating disk having dovetailed projections, with the dies having dovetailed bases secured within the dovetailed recesses of the projections, substantially as specified.

4. The combination of the rotating die-carrying disk, and the dies rigidly mounted thereon, bearings for the opposite ends of the blank, acting to bend the blank around the former-die as the latter advances, and supporting shelves or tables eccentric in respect to the axis of rotation of the die-holding-disk, whereby the shoes are stripped from the former-die, substantially as specified.

406,714. PROCESS OF MAKING FIRE-PROOF MATERIALS. ALEXANDER FELDMANN, Linden, near Hanover, Prussia, Germany. Filed July 7, 1886. Serial No. 207,267. (No specimens.)

Claim.—The process of producing fire-proof material and articles by comminuting fluoride of magnesium and magnesia, mixing the substances together with water and making a dough thereof, imparting to the said dough the required form, and subsequently drying and burning the same, substantially as described.



406,715. FOLDING BED OR CRADLE. CHARLES A. FISHER, Mystic River, Conn. Filed Mar. 15, 1888. Serial No. 303,440. (No model.)

Claim.—1. A cradle composed of the ends A A, having vertical rods H H attached thereto, the upper brackets G G, stationary on said rods, the lower brackets K K, adapted to slide on said rods, the sides composed of folding sections B C, pivoted together in the form of lattice-work or lazy-tongs, and jointed to said upper and lower brackets, the arms N N, suspended from pivoted connections of the lattice-work, the cross-bars M M, supported by the lower ends of said arms, and the flexible fabric L, attached to the ends A A, and cross-bars M M, substantially as described.

2. The combination of the ends A A, the rods H H, attached to said ends and extended over the same to form loops O O, the brackets G G, stationary on said rods, the brackets K K, movable on said rods, and the sides composed of the folding sections B C, pivoted together in the form of a lattice-work or lazy-tongs and jointed to the said brackets, substantially as described.

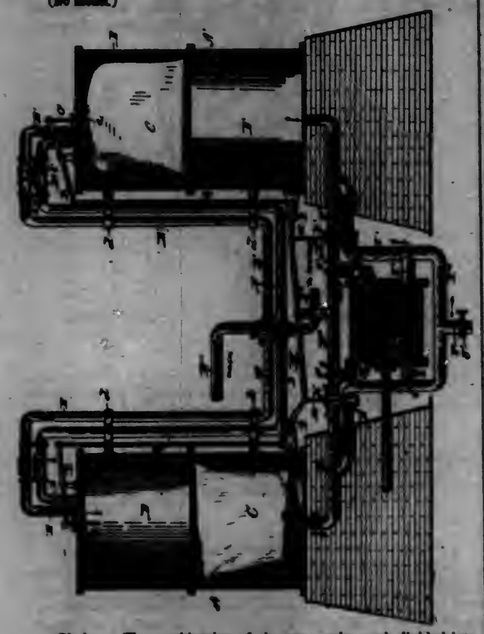
406,716. SHEET-DELIVERY APPARATUS FOR PRINTING-MACHINES. GEORGE P. FERNER, New London, Conn. Filed Sept. 20, 1888. Serial No. 285,879. (No model.)

406,716.

Claim.—1. In combination with an impression-cylinder, a delivery apparatus, and a receiving-table, of a reciprocating carriage arranged below the delivery apparatus and on which the printed sheet is deposited by said delivery apparatus, and a crank for positively moving said carriage in both directions, substantially as described.

2. The combination, with an impression-cylinder and a receiving-table, of a delivery traveler or tapes receiving the sheet direct from the cylinder without the aid of grippers or equivalent mechanism, and a reciprocating carriage located below the tapes and on which the printed sheet is deposited by the said delivery-tapes, substantially as described.

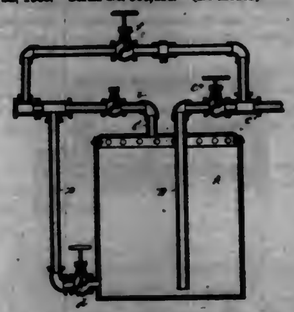
406,717. HEAD-LIGHT SIGNAL ATTACHMENT. WILLIAM O. FISK, Moreland, assignor of one-third to Martha Terrell, Chicago, Ill. Filed Jan. 31, 1889. Serial No. 298,396. (No model.)



Claim.—1. In combination with the head-light casing of a railway-locomotive, a colored glass mounted in a frame, lugs on opposite sides of the frame having holes through them, rods secured to the head-light casing in front of the flame of the light and serving as guides for the lugs, springs combined with the rods to lift said frame, a pulley secured beneath a rod, and a cord fastened to a lower corner of the frame passing under the pulley and extending back into the cab of the locomotive, as and for the purpose stated.

2. The combination, with a railway-locomotive head-light casing formed with a slot in its upper part back of its white glass, of a colored glass mounted in a frame, a chamber covering the slot and made large enough to receive the frame, rods extending vertically from the bottom of the head-light casing to the top of the chamber, spiral springs encircling the rods, lugs on opposite sides of the frame having bearings for the rods, and a cord leading from a lower corner of the frame under the pulley back to the cab of the locomotive, substantially as and for the purpose stated.

3. The combination of the colored light D, mounted in the frame D', the lugs *d*, formed with holes through them and secured two and two to opposite sides of the frame, the head-light casing of a railway-locomotive having a slot made in its top parallel with and back of the white glass of the head-light and large enough to permit the



frame and lugs to pass through, the chamber C, covering the slot and being large enough to receive said frame, the rods *e e*, secured to the bottom of the head-light casing and the top of the chamber and passing through the holes in the lugs, the spiral springs *d' d'*, encircling the rods, the lug d^2, secured to the lower side of the frame, the pulley *c'*, secured to the lower side of the head-light casing, the hollow hand-rail A', and the cord d^3, fastened to the lug d^2, passing beneath the pulley and extending through the hand-rail back into the cab of the locomotive, substantially as and for the purposes specified.

406,718. APPARATUS FOR FORCING GAS THROUGH MAINS. JOHN S. FISH, Cheshire, Ga. Filed Nov. 27, 1888. Serial No. 291,963. (No model.)

Claim.—The combination of the two tanks, each divided into two compartments by a movable imperforate diaphragm, valved inlet and outlet pipes leading into the gas-compartments of the said tanks, an air-pump, valved pipes connecting the air-pump with the air-compartment of the said tanks, and valves for automatically reversing the flow of air through the pump, substantially as herein described.

406,719. APPARATUS FOR HEATING TIRES. JAMES W. FOSBIT, Chalmer Hill, Va., assignor of one-half to Edward H. Winston, same place. Filed Apr. 22, 1889. Serial No. 308,131. (No model.)

Claim.—1. In a tire-heating apparatus, the combination of a reservoir or tank, an air-supply pipe communicating therewith, an outlet-pipe, and the hydrocarbon-supply pipe D, entering the tank or reservoir below the surface of the liquid and communicating with the outlet-pipe, substantially as described.

2. In a tire-heating apparatus, the combination of a reservoir or tank, an air-supply pipe, an outlet-pipe, and the hydrocarbon-supply pipe D, entering the tank near the bottom and communicating with the outlet-pipe and provided with a cock or valve, substantially as described.

406,720. PROCESS OF TRANSFERRING PRINTS, &c. JOHN J. FOX, Flushing, N. Y. Filed May 15, 1888. Serial No. 310,570. (No specimens.)

Claim.—1. In the process of transferring a print of any description to an oil-painted surface, preparing the said surface by pouring over the surface methylic alcohol and then allowing it to evaporate, substantially as described.

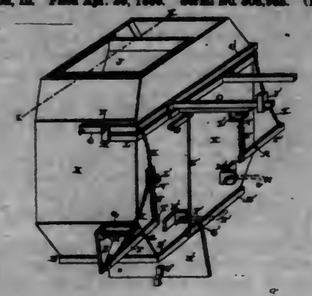
2. The process of transferring a print of any description to a smooth oil-painted surface by preparing the surface by, first, pouring alcohol (methylic alcohol included) over the surface and allowing it to evaporate; second, smearing the surface with oil or grease, substantially as described.

3. The process of transferring a print of any description to a smooth oil-painted surface by, first, pouring methylic alcohol over the surface and allowing it to evaporate; second, smearing the surface with oil or grease; third, placing the print on the prepared surface and applying direct or frictional pressure thereto, substantially as described.

4. The process of transferring a print of any description to a smooth oil-painted surface by, first, pouring methylic alcohol over the surface and allowing it to evaporate; second, smearing the surface with oil or grease; third, placing the print on the prepared surface and the application of pressure thereto; fourth, saturating the print with any suitable chemical solution or water, and finally stripping the print from the said surface, substantially as described.

406,721. CAR-AXLE-BOX LID. LEONARD FREDERICK, Pittsburg, Pa., assignor to the Morris Box Lid Company, same place. Filed May 16, 1889. Serial No. 310,994. (No model.)

Claim.—1. A car-axle-box lid formed with an elastic or spring bulge or swell bounding or bordering the perforation for the pivotal bolt of said lid, substantially as described.



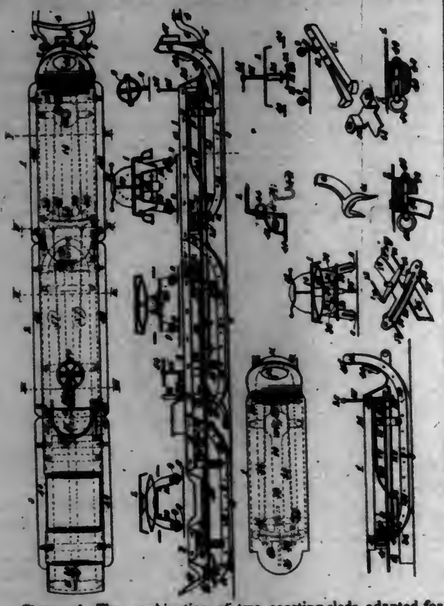
2. A car-axle-box lid formed of sheet spring metal and with an elastic swell or bulge at the pivotal end and a hole through said bulge, substantially as described.

3. A car-axle-box lid formed of sheet spring metal and with an outward bulge or corrugation transverse to its length at one end and with a hole through said bulge or corrugation, substantially as described.

4. In combination with a car-axle box, a lid formed of sheet spring metal and with an outward bulge at one end bounding or bordering a hole through said bulge, and a pivotal bolt inserted through said hole into the box and bearing with its head against the convex side of the bulge, substantially as described.

5. In combination with the car-axle box having the opening B and rib or shoulder C at the lower edge of said opening, a lid formed of sheet-steel, and with a tongue at one end having an outwardly-bulging transverse corrugation, and a hole through the same, and a bolt inserted through said hole into the box and bearing with its head against the convex side of the corrugation, substantially as described.

406,722. GRAIN-WEIGHING MACHINE. HORACE M. FOLWIDER, Redmon, Ill. Filed Apr. 30, 1888. Serial No. 308,962. (No model.)



Claim.—1. The combination of the receptacle K, the bearings Q, the shafts R, the latches S, bottoms H', and the partially-revolving shaft G', with the trip-arms T, the springs secured to their inner ends, the chains secured to their outer ends, and the scale-beam, substantially as shown.

2. The combination of the receptacle K, the laterally-moving hopper placed in its upper end, suitable partially turning or rotating supports upon which the hopper is supported, a connecting mechanism, and the bottoms H', by means of which the hopper is moved from one side of the partition in the receptacle to the other, substantially as described.

3. The combination of the divided receptacle, the laterally-moving hopper, the cranks connected to the hopper, the shafts Z, to which the lower ends of the cranks are secured, the cranks D' F', the connecting-rod between the cranks, the partially-revolving shaft G' and the bottoms secured thereto, substantially as specified.

406,723. COASTING-SLED. ALBERT I. GALLAWAY, St. Louis, Mo. Filed Mar. 28, 1889. Serial No. 304,969. (No model.)

Claim.—1. The combination of two coasting-sleds adapted for connection together and one of them having the runners connected to its body by a fifth-wheel connection, substantially as and for the purpose set forth.

2. A sled-body connected to the runners by a pivot-connection, supporting-wheels tracking on the body, and a plate or bar on the runners, substantially as set forth.

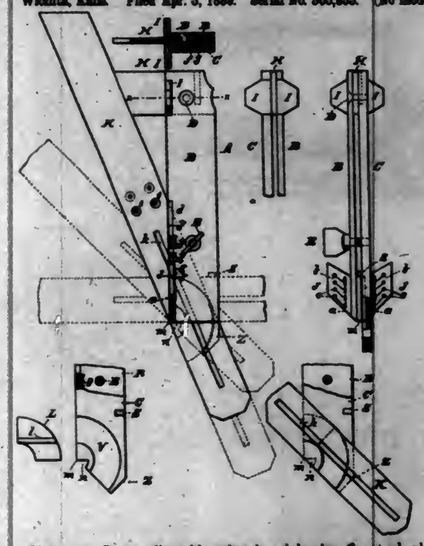
3. A sled-body pivoted to the runners and having bearing thereupon by a block 30, connected to the body by a spring 29 and carrying wheels 31, tracking on a plate 20, secured to the runners, all substantially as set forth.

4. The combination, in a sled, of runners connected to the body by a pivot-joint, and a hand or tiller shaft 27, with hand-bar 28, connected to the runners, substantially as and for the purpose set forth.

5. The combination of a sled supported on runners fixed upon the body, a sled 1, connected to the sled 2 and in line therewith, and having its runners connected to the body by a pivot, rods 57, connected with the pivoted runners, and a hand wheel or bar 54, shaft 55, and cross-bar 56, to which the rods 57 are connected, substantially as and for the purpose set forth.

6. The sled-coupling composed of the bar 54, having a spring-hook 51 upon one sled and bracket 53 upon the other engaging together, substantially as set forth.

7. The combination of wheels 31 upon the sled-body, plate 20 upon the runners, pivotal connection between the body and the runners, a lug 32 upon the wheel-bearing 30, passing through a slot 33 in the plate, and pin 34, passing through the lug beneath the plate, substantially as set forth.



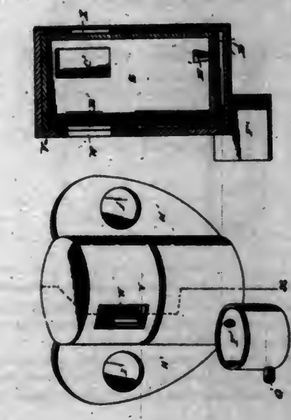
8. The combination, in a sled having the body and runners connected by a pivot, of wheels 31 upon the body, tracking on a plate 20 upon the runners, provided with a curved slot 33, a lug 32, working in the slot, with pin 34, and the cleats 38, substantially as and for the purpose set forth.

9. The starting-lever 67, connected to the sled by a fulcrum-pin 66, extending through a longitudinal slot 68 in the lever, allowing the vertical and oscillatory movements of the lever, for the purpose set forth.

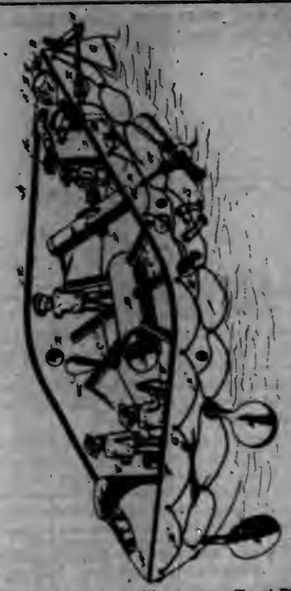
10. The sled-runner formed of a longitudinally-slotted pipe, with a flat steel blade inserted in the slot, substantially as shown and described.

11. The steps 40, hinged to the sides of the sled with the brace-rods, constructed and operating substantially as set forth.

406,724. ADJUSTABLE MITER-BEVEL. MATTHIAS GAYER, Wichita, Kans. Filed Apr. 3, 1889. Serial No. 305,853. (No model.)

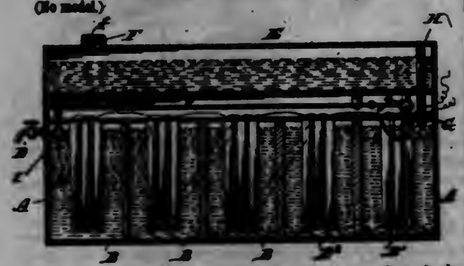


Claim.—1. In an adjustable miter-bevel having the stock-plates B and C, the miter-flanges having their bevel edges extending back from the center point *m* and having the indicator-marks and perforations for miter-bevels of less angular opening, substantially as specified.



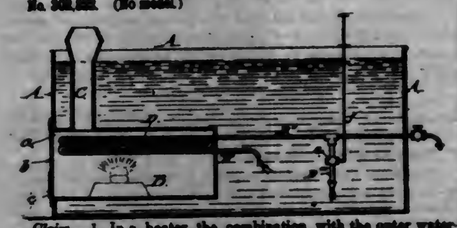
2. An adjustable miter-bevel consisting of the stock-plate B, having the clamp-screw E and right-angle stop S, the slotted stock-plate C, having the arc-bearing extension Z beyond its center point, the try-square blade, clamp-screw, the slotted bevel-blade having rabbet-markers, and the slide, substantially as specified.

406,725. SUBMARINE BOAT. JEAN B. GERBER, San Francisco, Cal. Filed Jan. 3, 1888. Serial No. 259,753. (No model.)



Claim.—A submarine life-saving boat having a closed deck fore and aft, except at the point Y, a stationary vertical cylinder V, provided with lateral wings H', forming sealed partitions between the interior of the boat and the exterior chamber Y, the windows I in said wings, the inlet *x*, and the outlet W, provided in said cylinder, the internal rotative cylinder Z, provided with apertures C' and B', and an air-inlet and an air-storage drum communicating with the internal cylinder through its bottom, all constructed and adapted to operate as specified.

406,725.



406,726. GALVANIC BATTERY. HENRY GOSWITH, Philadelphia, Pa., assignor of three-fourths to Charles W. Kennedy and Ransom F. Rankin, both of same place. Filed Apr. 16, 1889. Serial No. 307,309. (No model.)

Claim.—1. The combination of the battery, the supply-tank, the outlet or overflow pipe, the pipes connecting the several cells of the battery to one another, the vent-pipe, the feed-pipe having a valve for opening or closing it, and the lever jointed at one end to said valve and having a hydrometer at its other end, substantially as and for the purpose set forth.

2. The combination, with the cells and the automatically-operating feed-tank, of the regulating device consisting of the hydrometer, in combination with the lever and valve for opening or closing the outlet of the feed-tank, substantially as and for the purpose set forth.

406,727. WATER-HEATER. JOSEPH HACKER, LOUIS W. COLBY, and JOHN W. HEATON, Waterloo, Iowa. Filed Mar. 11, 1889. Serial No. 302,882. (No model.)

Claim.—1. In a heater, the combination, with the outer water-tank, of the longitudinally-disposed furnace supported therein above its bottom and having one end opening through one end of the outer tank, a door closing said end, and the coil D within the furnace, having its ends D' D'' passing through the inner end of the furnace, one of said ends communicating with the water-tank and the other extending through one of the walls of said tank and having a valve exterior thereof, whereby water may be drawn directly from the coil, substantially as described.

2. The combination, with the outer tank and the furnace therein having an open end closed by a door and provided with the flue C, of the coil D within the furnace, having its opposite ends D' D'' passing through the rear of the furnace at different levels, one of said ends communicating with the water-tank and the other extending through the outer tank and provided inside of said tank with the downwardly-extending branch pipe D''', the valves in the end D'' and branch pipe D''', and the operating-rod connected with the valve-stem of the valve in the branch pipe, substantially as described.

406,728. PROJECTILE. HENRY ST. J. HALFORD, Widow, and WILLIAM H. HALFORD, Redland, Bristol, assignors of one-third to Arthur Greenwood, Leeds, England. Filed May 5, 1888. Serial No. 272,902. (No model.)

Claim.—A projectile or bullet having a solid metal core formed of lead or alloy inclosed in a case of copper or other metal harder than lead, said projectile or bullet having its solid core protected against fusing by friction in a gun-barrel through the medium of an additional thickness of substance interposed between the core and case and which is of slower conductivity than the solid core, substantially as described.

406,729. DOOR-PLATE. CHARLES R. HARRIS, Williamsport, Pa. Filed May 22, 1888. Serial No. 274,875. (No model.)

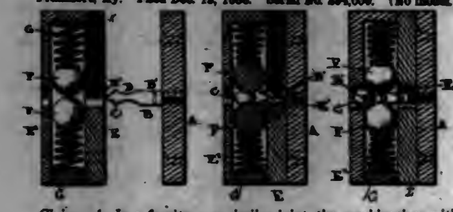
Claim.—1. A door-plate formed of two or more parts and which are made extensible, according to the length of the name, substantially as shown.

2. The combination of the two end pieces, central connecting-pieces for uniting the end pieces together and upon which the end pieces can be adjusted in relation to each other, and the letter and division plates out of which the name is formed, substantially as shown.

3. The combination of the end pieces of the frame and the connecting-pieces by which they are adjustably united, the connecting-pieces being adapted to receive and hold the letter and division plates the same as the end pieces, substantially as described.

4. The combination of the end pieces of the frame having their inner edges turned inward, the connecting-pieces having both their edges turned inward and adapted to catch over the two edges of the frame, and the letter and division plates having their ends turned inward and adapted to catch over the turned-in edges of the parts of the frame and the connecting-pieces, substantially as specified.

406,730. LOCK-HINGE. LEWIS R. HARVIN, Frankfort, Ky. Filed Dec. 17, 1888. Serial No. 293,770. (No model.)



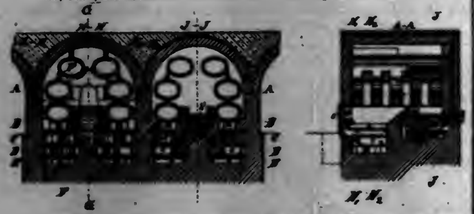
Claim.—1. A hinge having a catch rigidly affixed to and projecting from the face of one leaf at a distance from the pintle, and the opposite hinge-leaf mortised opposite said catch and having a spring-clasp engaging said catch only when the hinge is closed, substantially as described.

2. The leaf of a hinge having a rigid catch projecting from the face thereof at a distance from the pintle, and the opposite leaf having a slot or mortise therein at a position opposite the catch, and a pair of spring-pressed balls or cylinders behind said mortise in position to engage the catch only when the hinge is closed, all in combination, substantially as described.

3. The combination, with one leaf of a hinge, of a catch projecting from the face thereof, the opposite leaf of the hinge having a mortise through which said catch passes when the hinge is closed, and a positive locking-piece which may engage said catch and lock the hinge closed, as set forth.

4. The combination, with the leaves of a hinge, of a catch on one leaf, a friction-clasp on the other leaf operating on said catch, and a positive lock, also operating on the catch, substantially as described.

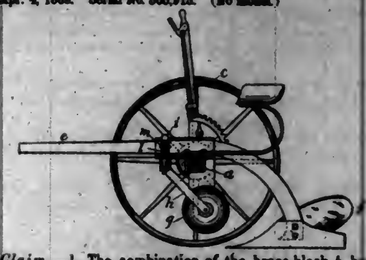
406,731. COUPLING FOR FURNITURE. LEWIS E. HARVIE, Frankfort, Ky. Filed Dec. 19, 1883. Serial No. 294,059. (No model.)



Claim.—1. In a furniture or similar joint, the combination, with a coupling-plate, of a projecting catch having an enlarged head and inclined neck behind the same, a second perforated plate having its face bearing on the first when the coupling is closed, and a pair of spring-pressed clasps behind said second plate in position to bear on the inclined neck of the catch, substantially as described.

2. In a furniture-joint, the combination, with a plate having a projecting catch provided with enlarged head and inclined neck, of a second plate having a hole through which said catch passes, so that the two plates abut when the joint is closed, and spring-pressed balls or cylinders connected to said second plate in position to bear on the inclined neck at both sides of the head of the catch, all substantially as described.

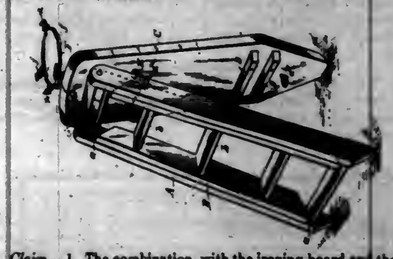
3. In a furniture-joint, the combination of a coupling-plate having a projecting catch with enlarged end and inclined neck, a second perforated plate which receives the catch and bears on the first when the coupling is closed, spring-pressed clasps connected to the second plate in position to bear on the inclined neck of the catch when the coupling is closed, and a positive lock, also in position to engage said catch and hold the coupling-plates in contact, all substantially as stated.



4. In a furniture-joint, a coupling-plate having a catch adjustably connected thereto, said catch having enlarged head and inclined neck, and a second perforated plate which bears on the first when the coupling is closed, said second plate having spring-pressed clasps in position to engage the inclined neck of the catch when the coupling is closed, all combined and relatively arranged substantially as described.

406,732. RETORT AND MUFFLE FURNACE. JULIUS T. HAHN and HERMANN M. VACHERON, Dresden, Saxony, assignors to the Stettiner Chamottefabrik Actien-Gesellschaft, Stettin, Prussia, Germany. Filed Oct. 10, 1885. Serial No. 179,499. (No model.) Patented in Germany May 26, 1883, No. 23,226; in England May 23, 1884, No. 8,144; in Belgium June 16, 1884, No. 66,294; in Sweden July 26, 1884; in Norway Aug. 5, 1884; in Denmark Oct. 30, 1884, No. 944, and in Spain Nov. 20, 1884, No. 6,423.

Claim.—The fire-place having air-inlets *i* below the grate, and the combustion-chamber, also having an air-inlet *l* behind the bridge-wall, in combination with a series of air-heating channels h^3 below the combustion-chamber and leading to the inlet *l*, air-flues *h h'*, communicating with both the air-inlets to the fire-place and with the air-flues h^2, and the air-inlet *l* to the combustion-chamber, and smoke-flues intermediate of these flues *h h'*, all substantially as described.



406,733. SULKY-PLOW. CALVIN M. HERVEY, Fulton, Ark. Filed Apr. 4, 1888. Serial No. 205,913. (No model.)

Claim.—1. The combination of the brace-block *k*, having the groove 3, flange 4, extension 5, having the groove 7 and perforations *j* and 9, and the center piece having the perforations 10 and the half-sleeve *l'*, with axle *a*, fitting in said groove 7, seat-spring *n*, fitting on the upper face of said extension, U-bolt 8 and nuts binding the whole together, beam *c*, fitting in slot 3, half-sleeve *l*, fitting on half-sleeve *l'*, and U-bolt *m* and nuts, binding the whole together, substantially as shown and described.

2. The cast-iron combination-block provided with the flanges 2 and groove 3, flange 4, extension 5, having the flanges 6, groove 7, perforations *j* and 9, and the center piece having the perforations 10 and half-sleeve *l'*, said block adapted to combine with said bolt in place the axle *a*, seat-spring *n*, beam *c*, and half-sleeve *l* or pin *i*, in conjunction with the U-bolts *m* and 8, all substantially as shown and described.

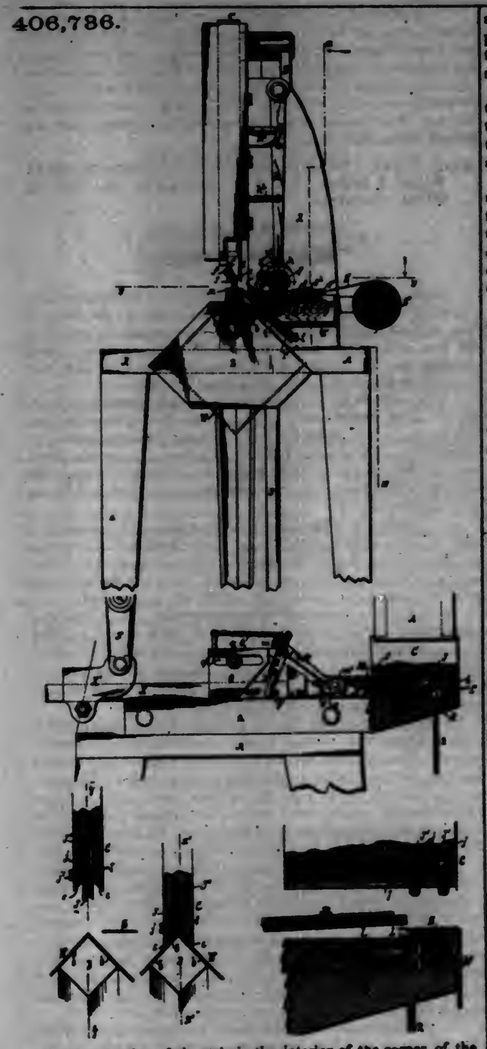
406,734. COMBINED STEP-LADDER, IRONING-BOARD, AND STAND. REUBEN HOOVER, Boone, Iowa. Filed Jan. 25, 1889. Serial No. 297,807. (No model.)

Claim.—1. The combination, with the ironing-board and the support, as A B, having steps, of the rest or stand F and the hinge connecting the said stand with the ironing-board and having a pivotal support, whereby the said stand can be turned end for end and thrown back, substantially as hereinbefore set forth.

2. The combination, with the combined ironing-board and step-ladder, of the stand and the hinge connected by pivot with the board and fastened to the said stand, substantially as and for the purpose described.

3. The combination, with the ironing-board, of the reversible rest or stand having feet, the said feet having offsets formed therein, substantially as and for the purpose described.

406,735. FORK. DANIEL J. HUGHES, East Boston, Mass., assignor of one-half to Frank. D. Brivogio, same place. Filed Apr. 10, 1889. Serial No. 306,660. (No model.)



Claim.—The herein-described fork having the intermediate circular tines and the outer elliptical tines of greater width than the circular tines, whereby an arch is formed between the outer tines which rest upon the cob when in use, substantially as described.

406,736. MACHINE FOR APPLYING FASTENING-STRIPS TO BOXES. GORAY L. JARDEN, New York, N. Y. Filed Jan. 26, 1888. Serial No. 262,005. (No model.)

Claim.—1. The combination, with a die and a recessed support co-operating to lay a fastening-strip upon the exterior of the corner of an interposed box, of the slide K, extending into the recess in the support, a supporting-segment L, connected with said slide, and a folder M, moving in a direction opposite to said slide for laying the

406,736.

overlapping portion of the strip in the interior of the corner of the box, substantially as shown and described.

2. The combination, with a die and a recessed support co-operating to lay a fastening-strip upon the exterior of the corner of an interposed box, of the slide K, extending into the recess in the support, a spring-pressed supporting-segment L, pivoted to the slide, and a folder M for laying the overlapping portion of the fastening-strip in the interior of the corner of the box, substantially as shown and described.

3. The combination, with a die and a recessed support co-operating to lay the fastening-strip upon the exterior of the corner of the interposed box, of a reciprocating slide extending into the recess in the support, a supporting-segment connected with the interior end of the slide, and a folder having a translatory and oscillatory movement, substantially as shown and described.

4. The combination, with a die and a recessed support co-operating to lay the fastening-strip upon the exterior of the corner of the interposed box, of a slide extending into the recess in the support, a spring-pressed supporting-segment connected with the interior end of the slide, a folder M, a link-lever and pin connection of the same with the slide, the foot-lever D, having a cam-surface *d'*, and a lever N, having a roller-stud N', engaging said surface *d'*, said lever being connected with the slide, substantially as shown and described.

5. The combination, with a vertically-reciprocating die and a recessed support, of the slide extending into the recess in the support, a supporting-segment connected with the interior end of the slide, and a folder M, said slide and folder being actuated to lay the overlapping end of the strip in the interior of the corner of the box when the die is upon the corner of the box, substantially as shown and described.

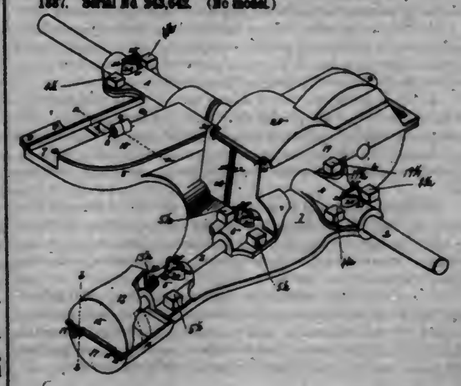
6. The combination, with the die and support co-operating to lay the fastening-strip upon the corner of a box, of a yielding clamp in the die, said clamp being provided with diverging faces constructed to hold a strip against the corner of the box while said strip is being severed, substantially as described.

7. The combination, with the die and support co-operating to lay the fastening-strip upon the corner of a box and a yielding clamp fitted into a recess in the die and constructed to hold a strip against the corner of the box while said strip is being severed, of a feeding device, substantially as described, for feeding the strip between the die and support and a cutter for severing the strip, substantially as described.

8. The combination, with the main frame A, the angular box-support B, the reciprocating die C, and the feeding and cutting devices, substantially as described, of the vertical gage R, fitting upon and movable along the length of the box-support, serving as an abutment for the edges of a box and provided with an attached horizontal arm resting on the main frame, and having a longitudinal slot lengthwise adjustable and adapted to be rigidly fixed in a stationary position by a screw-connection with said main frame, substantially as described.

9. The combination, with the die and a recessed support co-operating to lay a fastening-strip upon the interior of the corner of an interposed box, of the longitudinally-adjustable slide K, extending into the recess in the support, a supporting-segment L, connected with the slide, and an adjustable folder M, substantially as shown and described.

10. The combination, with a die and a support having diverging faces and co-operating to lay a fastening-strip upon the corner of an interposed box, a cutter, a feeding device, substantially as described, and a folder having a vibratory movement in the direction of the movement of the die and a translatory movement perpendicular to the path of the same, substantially as shown and described.

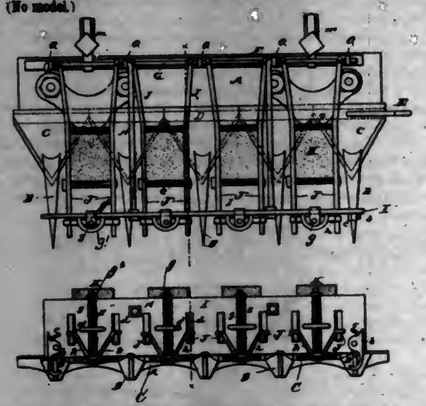


11. The combination, with a die and a support co-operating to lay a fastening-strip upon a box, of mechanism, substantially as described, for suitably severing and feeding the strip and rendering the same adhesive, and a presser-plate *t*, made to engage said box, substantially as described.

406,737. SUBSOIL-HOE. JOHN R. JOHNSON, Newton, Ill. Filed Aug. 14, 1888. Serial No. 282,715. (No model.)

Claim.—As an improved article of manufacture, the hereinbefore-described subsoil-hoe, composed of a handle having a kerf in its lower end, and the blade composed of a thin strip of spring-steel of uniform thickness and of a width corresponding with the diameter of the handle bent between its ends on an oblique line and having one edge beveled to an edge, one end of the blade being inserted in said kerf and held therein by rivets, substantially as specified.

406,738. MOWER-FRAME. JAMES H. JOHNS, Rockford, Ill., assignor to the Emerson, Talcott & Company, same place. Filed July 7, 1887. Serial No. 243,642. (No model.)



Claim.—1. In a mowing-machine frame, the combination of a tool-box, a lid to the tool-box, and a hinge connecting the lid to the box, the hinge consisting of a pintle and a hook, one of these two parts being formed integral with the lid, and the hook being held in engagement with the pintle by a removable part of the frame, substantially as set forth.

2. In a mowing-machine frame, the combination of a tongue, a tool-box, a lid for the tool-box, and a hinge for connecting the lid to the box, the said hinge consisting of a pintle and a hook, one of the parts being formed integral with the lid and the other locked to the frame by the tongue, substantially as set forth.

3. In a mowing-machine frame, the combination of a tongue removably secured to the frame, a tool-box, a tool-box lid, and a hinge for connecting the tool-box lid with the box, the said hinge consisting, essentially, of a pintle formed integral with the lid, and a hook having a shank bent to conform to the tongue-seat in the frame, whereby the securing of the tongue to the frame locks the hook of the hinge against displacement, substantially as set forth.

4. The combination, in a mower, of the frame constructed to form the lower portion of the gear-case, the upper portion of the said case composed of two sections, the lower section of the said upper portion having a split wall and perforated hinge-ears at opposite ends of the said wall, the top section of the upper portion being a lid with projecting pintles to enter the perforated ears in the lower section, the split wall springing apart in order to allow the pintles to be secured in the ears, substantially as set forth.

406,739. MOWING-MACHINE-KNIFE GRINDER. CLEMENT A. KELLOGG, East Carmel, Ohio. Filed Feb. 15, 1889. Serial No. 299,954. (No model.)

Claim.—1. The combination, with a mower, of the spring grindstone-holders, their attaching-frame, the slotted plate connected to the arms of said frame and provided with pivoted hooks engaging the finger-bars, and buttons engaging said hooks for securing said holders in position upon the finger-bar, whereby the grindstones are held between the guards to engage the edges of the cutters as they are reciprocated during the motion of the mowing-machine over the ground substantially as specified.

2. The combination, with the finger-bar of a mowing-machine, of a detachable spring grindstone-holder, its attaching-frame, the plate connected to the arms of the attaching-frame, and a button-and-hook connection between said plate and finger-bar, substantially as specified.

3. The combination, with a mower, of pivoted spring-holders, grindstones, and limiting-guides consisting of yokes engaging said holders, preventing lateral motion of said holders, while allowing the vertical motion thereof, substantially as specified.

4. The combination, with a mower and clamps to hold the same to the cutter-bar, of the pivoted detachable grindstone-holders, their springs, the limiting-guides consisting of yokes engaging said holders, preventing lateral motion of said holders, and the fastenings whereby the holders are secured to the guards in front, substantially as specified.

5. The combination, with a mower, of the slotted front plate or guide, the detachable pivoted clamping-holders engaging said plate or guide, springs to press the holders down to their work, and fastenings to secure the holder-frame to the cutter-bar of a mowing-machine, substantially as specified.

6. The cutter-bar grinder for mowers, consisting of the detachable frame and its clamps and front fastenings, the pivoted clamping-holders for the grindstones, and the guide-slots of the frame-plate, through which the straps of said holders extend, the spring-guides and yokes, and the pressure-springs, substantially as specified.

7. A grinder for cutter-bars of mowers, consisting of the pivoted spring-holders and beveled grindstones projecting downward from said holders between the guards of the cutter-bar, and yokes engaging said holders permitting vertical play of said spring-holders, but preventing lateral movement, said attachment being designed to be detachably secured to the finger-bar to grind the cutters thereof as they are reciprocated during the motion of the machine over the ground, substantially as specified.

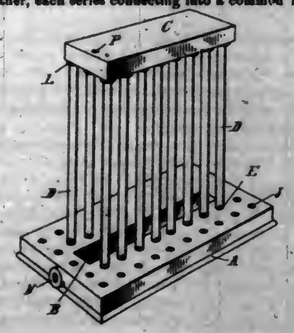
406,740. TOP DRAWING-ROLL FOR SPINNING-MACHINES. WARREN T. KELLOGG, Cohoes, N. Y. Filed Mar. 14, 1888. Serial No. 267,144. (No model.)

Claim.—1. The spindle for a drawing-roll of a spinning-machine, consisting of a shaft formed with a bearing-surface for the revoluble boss, and end supports consisting of end caps detachably secured to the ends of the shaft and formed with their inner ends of greater diameter than the diameter of the bearing-surface of the shaft, substantially as described, and for the purpose specified.

2. The spindle for a drawing-roll of a spinning-machine, consisting of a shaft formed with a bearing-surface for the revoluble boss and having screw-threaded sockets in the ends, and end supports consisting of end caps of larger diameter than the bearing-surface of the shaft and formed with centrally-projected screw-stems to engage the threaded sockets of the shaft, substantially as described, and for the purpose specified.

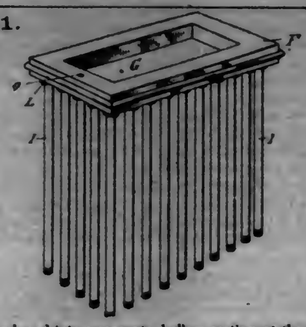
3. A spindle for a top roll of a spinning-machine, consisting of a shaft formed with a bearing to take the revoluble boss and having diametrical holes formed through the said bearings, in combination with a saturable packing arranged in said holes with the ends flush with the periphery of the bearing, substantially as described.

4. A spindle for a top roll of a spinning-machine, consisting of a shaft formed with a bearing to take the revoluble boss and having diametrical holes formed through the said bearings, said holes having chamfered edges, in combination with a saturable packing arranged in said holes with the ends flush with the periphery of the bearing, substantially as described.



5. A spindle for a top roll of a spinning-machine, consisting of a shaft A, formed with bearings having diametrical oil-wells for the revoluble bosses, a middle portion 1, of greater diameter than the said bearings and terminating in shoulders 3, and provided with screw-threaded sockets in the ends, and bearings consisting of end caps having threaded projections to engage the threaded sockets of the arbor and annular shoulders extending beyond the circumference of the boss-bearings on the shaft, substantially as described.

6. The combination of the spindle A, having boss-bearings provided with oil-holes projected diametrically through the said bearings, and packing arranged in said holes with the ends flush with the surface of said bearings, a middle portion of greater diameter than the said bearings and provided with threaded sockets in the ends, bearings consisting of end caps having threaded stems projected from their inner faces, and annular shoulders extending beyond the face of the bearings, and bosses formed with counterbored ends to set over the annular shoulders of the end caps, substantially as described.



7. The combination, with the spindle having oil-holes diametrically arranged through it, and detachable end pieces consisting of caps of larger diameter than the spindle secured to the ends of the spindle, of bosses having counterbored ends to project over the inner edges of the detachable end caps, substantially as described.

406,741. RADIATOR. PATRICK J. KENNEDY, Detroit, Mich. Filed Apr. 11, 1889. Serial No. 306,884. (No model.)

Claim.—1. In a radiator consisting of two series of piping, one within the other, each series connecting into a common hollow cast-

406,741.

ing at one end and into a separate hollow casting at the other end, substantially as described.

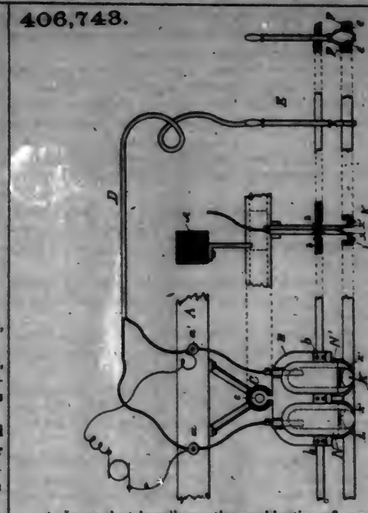
2. The base A, having two series of screw-threaded apertures, the central cast top C, the outer cast top F, and two series of radiating-pipes connecting the two-part top with the base, substantially as described.

3. In a radiator, the base A, having two series of screw-threaded apertures and a central aperture, the central cast top C, the outer cast top F, the space H between two series of radiating-pipes connecting the two-part top with the base, and a suitable air valve or valves in said top, substantially as described.

4. In a radiator, a central cast hollow top and an outer cast hollow top, each having a series of connecting-pipes, each pipe secured to the top by means of a long screw-thread and a lock-nut, a screw-thread on the lower end, and a base common to both series of pipes, substantially as described.

406,742. TIRE FOR WHEELS. JAMES H. KLIPSTEIN, Buchanan, Va. Filed Apr. 13, 1889. Serial No. 307,102. (No model.)

Claim.—1. In a vehicle-wheel, a tire of continuous coiled wire or band-steel surrounding the rim of the wheel, substantially as specified.



2. A vehicle-tire of continuous elastic coiled steel wire or band-steel, substantially as specified.

3. The combination, with a tire of continuous coiled wire or band-steel, of the nuts secured in the ends of the tire and the bolt swiveled to one of said nuts and adapted to engage the other, substantially as described.

4. The combination, with a tire, of the nuts secured in the ends thereof, the bolt swiveled to one of said nuts and adapted to engage the other and provided with a reduced portion *d*, and a key having a slot conforming to a configuration of the sides of the reduced portion and provided with a projection to engage a recess in a felly, substantially as described.

5. The combination of the tire of continuous coiled wire or band-steel having its ends suitably secured together and an elastic cord passing through said end around the felly, substantially as described.

406,743.

4. In an electric railway, the combination of a supply-conductor and the terminal of a propelling electric motor, with a connection therefrom leading to a contact device normally in contact with the supply-conductor, and a supplemental flexible conductor also connecting with the terminal and normally out of contact with the said conductor, but adapted to be placed manually in engagement therewith.

5. In an electric locomotive, the combination of the propelling-motor and two contact devices, both in electrical connection with one pole of the motor, one of said contact devices being normally in engagement and the other normally out of engagement with a supply-conductor.

6. In an electric railway, the combination of a supply-conductor and a propelling electric motor with a contact device normally in engagement with the conductor and a supplemental contact device adapted to be placed in engagement with the said conductor, but normally out of contact therewith, both said contact devices being electrically connected to one pole of the motor.

7. In an electric railway, the combination of the vehicle, the propelling-motor, and a supply-conductor with a contact device removed from and independent of the movement of the vehicle and a flexible electrical connection between the contact device and the motor, whereby the motor-circuit can be completed after the car has left the track.

8. In an electric railway, the combination of a vehicle, a propelling-motor, and an exposed supply-conductor extending along the line of way with a contact device independent of the movement of the vehicle and in engagement with the conductor at a substantially fixed point and an electrical connection between the contact device and the motor.

9. In an electric railway, the combination of a vehicle and a propelling-motor with a conduit, a supply-conductor therein, a contact device engaging with the conductor in the conduit detached from and not partaking of the movement of the vehicle, and a yielding electrical connection between the contact device and the vehicle.

10. The combination of a vehicle, a motor, a line-conductor, and an electrical connection adapted for normal traveling contact with the line-conductor, with a flexible conductor longer than the normal connection between the motor and line-conductor connected to a terminal of the motor and placed in temporary connection with said line-conductor.

11. A manual contact device for use upon an electric railway and disconnected from the vehicle, except through a flexible conductor comprising a bared contact-surface adapted to be placed in engagement with a supply-conductor, and a support for the contact-surface, having an insulated handle.

12. The combination, with a conduit and an inclosed conductor, of a manual contact device disconnected mechanically from the vehicle and comprising a contact-conductor adapted to extend into the conduit, an insulating-handle outside the conduit, and a flexible conductor for connection with a translating device.

13. In an electric railway, the combination, with a supply-conductor inclosed in a slotted conduit, of a contact-conductor smaller in diameter than the width of the slot, so as to turn therein, and an offset at its lower end having one dimension smaller than the width of the slot, so as to be withdrawn therethrough.

406,744. ELECTRIC RAILWAY. WALTER H. KNIGHT, New York, N. Y. Original application filed Mar. 13, 1886, Serial No. 195,133. Divided and this application filed Dec. 22, 1888. Serial No. 294,441. (No model.)

Claim.—1. The combination, with an electric locomotive having a contact device adapted to normally maintain a traveling connection between the stationary supply-conductor and the motor of the locomotive, of a supplementary contact device having a flexible connection with the motor and adapted to be manually operated to connect with the said supply-conductor.

2. The combination, with an electric locomotive and a supply-conductor inclosed in a conduit, of an intermediate contact device extending into the conduit and a supplementary manual contact device having a flexible connection with the locomotive and having one dimension smaller than the opening in the conduit, so as to be inserted and withdrawn therethrough at will.

3. In an electric railway, the combination, with a terminal of a propelling electric motor, of a contact device adapted to normally maintain a traveling electrical connection between the motor and a supply-conductor, a supplemental flexible conductor leading from said terminal, and a manual contact device thereon adapted to be placed in connection with a supply-conductor.

14. In a current-collector for electric railways, the combination of a common frame or support with two independent insulating-panels secured thereto and a conducting-core in each panel.

15. The combination of the frame having the three projecting legs and the contact-conductors supported between adjacent legs.

16. The combination of the frame having a plurality of legs in line with one another and contact-conductors in the spaces between adjacent legs.

17. The combination of two insulated conductors having a common frame with an intermediate metallic connecting-piece supporting the conductors.

18. The combination, with the two insulated conductors extending through the slot of the conduit, of protecting metallic pieces before and behind extending into the slot and a corresponding intermediate protecting-piece.

19. The combination, with the two insulated conductors extending into the slot of a conduit, of a surrounding plow-frame having an intermediate metallic portion.

20. In a current-collector, the combination of a common frame, two guides thereon, and two insulating-panels containing the contact-conductors engaging the said guides.

21. In a current-collector, the combination of the common frame or support, the projecting legs extending down therefrom, the two insulating-panels and contact-conductors, and guiding devices between the panels and the legs.

22. In a current-collector, the combination of the common frame having two recesses therein open at their lower ends, insulating-panels adapted to slide into said recesses, and contact-conductors in said panels.

23. In a current-collector for electric railways, the two insulated conductors and a common frame having an intermediate portion between the conductors, in combination with a contact-shoe in circuit with each conductor, but extending in an opposite direction from their supports.

24. In an electric railway, the combination of a conduit and the plow consisting of a common frame, two insulating-panels, each inclosing a contact-conductor extending down into the conduit in line with the slot, and contact-pieces extending laterally from said conductors.

25. In a current-collector, the combination of the common frame and the two insulated contact-conductors therein with the pivoted contact-shoes projecting in opposite directions.

26. The combination of the insulated conductors of opposite polarity and a common protecting-frame therefor with a contact-shoe pivoted directly to each of said conductors.

27. The combination, in a current-collector, of the common frame, two insulated contact-conductors carried thereby, two contact-shoes depending below the conductors, respectively, and an insulating projection behind each shoe.

28. The combination, in a current-collector, of a supporting-frame having two or more projecting legs, an insulating panel and conductor included between the said legs, and an electrical connection from the said conductor extending through the frame.

29. The combination of a metallic frame or support, an insulating panel and conductor held therein, and an insulated electrical connection from the said conductor extending through the frame.

30. The combination, with a plow-frame, of an insulating-bushing through the upper part thereof, a connecting-rod extending through the said bushing, and a conducting-core leading to the contact device, with which core the said rod connects.

31. In a contact device for an electric railway, the combination of a frame or guard having depending legs, with an insulating-panel inclosing a connecting-core adapted to be inserted through the opening between said legs and guided thereby, and a connection with the said core extending through the upper part of said frame, but insulated therefrom.

32. The combination, in an electrically-propelled vehicle, of a transverse guide, a contact device for a supply-conductor inclosed in a slotted conduit engaging therewith, having a frame or guard to which the contact-conductor extending through the slot is attached, and an electrical connection leading from said contact-conductor at a point above the said frame or guard to a fixed point of the vehicle.

33. In a contact device for an electric railway, the combination of a frame or guard having depending legs, an insulating-panel adapted to be inserted between said legs and secured thereto, and a conducting-core in said panel having a contact-piece at one end and at the other end a connecting device.

34. The combination, with the plow-frame, of the flat conducting-core insulated therefrom and a contracted conductor extending from the upper end of said core through the frame for connection with the propelling-motor.

35. The combination of an insulated protected conductor extending through the slot of a conduit with a pivoted shoe in circuit with said conductor and having a contact-piece connected to its support with an intermediate air space.

36. In a contact device for an electric railway, the combination, with a metallic frame or guard, of a conducting-core therein extending below its insulating-sheathing to a contact-piece, and the said insulating-sheathing wholly inclosing the said core to a point below the said frame or guard.

37. The combination, with the conduit and the insulated conductor adapted to extend into the conduit, of a permanent frame or guard therefor connected to the vehicle and wearing-pieces attached to the frame and extending into the conduit.

38. In an electric railway, the combination of a slotted conduit inclosing a supply-conductor, a plow frame or support connected to the vehicle, a contact-conductor carried by said support, and a removable wearing-guard fastened to the support independently of the conductor.

39. In an electric railway, the combination of a slotted conduit inclosing a supply-conductor, a collector-support carrying a contact-conductor, and removable guard-plates along the edges of the support for protecting the same.

40. The combination of the supporting-piece connected to the vehicle and extending down into the conduit with a conductor carried thereby and a wearing-piece between the side of the conduit and the support secured to said support.

41. The combination of the conduit, the plow-frame having two or more projecting legs, and the insulated conductor with a removable guard attached to each leg and extending into the conduit.

42. The combination of the plow-frame having two or more legs extending down through the slot of a conduit and guard-plates protecting each leg from wear against the conduit.

43. The combination of a plow or current-collector extending through the slot of a conduit and a guard let into the same, so that their outer surfaces are substantially flush.

44. The combination of a contact-conductor extending into a slotted conduit with a protecting-piece and a removable wearing-guard substantially flush with the outer surface of the protecting-piece.

45. The combination of the plow-frame or guard extending into a slotted conduit and a contact-conductor carried thereby with removable wearing-guards let into the frame substantially flush with its outer surface.

46. In a current-collector, the combination of the conductor extending through the slot of a conduit with a plow-frame having an exposed panel of insulating material in which the said conductor is inclosed, detachable wearing-guards on the frame extending into the conduit, and a support for the frame permitting transverse movement relatively to the vehicle.

47. The combination of the transverse guide, the plow-frame movable along the same, and the wearing-pieces attached to the frame.

48. The combination of the transverse guide, the plow-frame engaging therewith and carrying an insulated conductor with an electrical connection at its upper end, permitting movement of the conductor, and detachable wearing-pieces attached to the frame and extending into the slot of the conduit.

49. In an electrically-propelled vehicle, the combination of a transverse guide independent of the axle, a conduit, and an inclosed conductor with a plow movable freely along said guide.

50. In an electric railway, the combination of a conduit, a conductor inclosed therein, a transverse guide independent of the car-axle, a contact device for the conductor, and a connection between the contact device and the vehicle movable freely along said guide.

51. The combination of a transverse guide independent of the car-axle, a contact device, a mechanical connection between the contact device and the vehicle movable freely along said guide, and an independent electrical connection between the contact device and motor.

52. The combination of a conduit and inclosed conductor with a transverse guide upon a vehicle independent of the axle, a contact-plow movable freely along said guide, and a flexible electrical conductor between the plow and motor.

53. The combination of a vehicle, a transverse guide independent of the axle, a conduit and inclosed conductor with a common frame movably connected to said guide, and two contact devices connected to the frame and extending into the conduit.

54. The combination, with a contact device for an electric locomotive, of a moving head attached thereto and a transverse guide extending over the path of movement of said head and embracing the same, whereby the engaging-surfaces are protected.

55. In an electric railway, the combination, with a supply-conductor inclosed in a conduit beneath the surface of the roadway and a vehicle upon the roadway, of an intermediate contact device, a moving head therefor, and a transverse guide beneath the vehicle extending over the path of movement of said head and embracing the same, whereby the engaging-surfaces are protected from mud and dust.

56. The combination of a conduit, an inclosed conductor, a transverse guide upon the vehicle, and an insulated protected contact-conductor extending into the conduit and movable along said guide to compensate for irregularities in the slot, and a contact-piece in circuit with said conductor and movably attached to its support.

57. The combination of a vehicle, a transverse guide thereon, a conduit and inclosed conductor with an insulated protected contact-conductor extending into the conduit and movable along said guide, and a contact-piece in circuit with said conductor and movably connected to its support through an intermediate spring.

58. The combination of a common plow-frame, two conductors therein, and contact devices movably attached to their supports, the said frame having bearings permitting movement relatively to the vehicle.

59. The combination of a vehicle, a transverse guide thereon, and a common frame carrying insulated contact-conductors and movable along said guide with two pivoted contact devices having movements independent of the frame.

60. The combination of a transverse guide upon a vehicle with a current-collector movable along said guide and consisting of a common frame or guard, two insulating-panels, and a contact-conductor inclosed in each of said panels.

61. The combination of an electrically-propelled vehicle, a conduit outside the track-rails, and a supply-conductor therein with a transverse guide, a contact device for engagement with the conductor, and intermediate connections movable freely on said guide.

62. The combination, with a vehicle, a conduit placed outside the track-rails, and a supply-conductor therein with a current-collector connected to the vehicle at a point beyond the wheels and movable laterally relative thereto.

63. The combination of an electrically-propelled vehicle, a conduit extending along the line outside the track-rails, and a supply-conductor therein with a transverse guide on the vehicle, a contact device, and a support therefor movable along said guide.

64. The combination of a vehicle and a transverse guide thereon extending beyond the wheels with a supply-conductor laid substantially parallel with the track and outside the rails, and a contact device connected to and movable along said guide.

65. The combination of the vehicle, the conduit and line-conductor extending along outside of the track, and the transverse guide extending beyond the wheel of the vehicle with the plow or collector movable laterally along the guide.

66. The combination, with the vehicle, the conduit and line-conductor outside the track, and a transverse guide connected to the vehicle and extending beyond the slot in the conduit, of the current-collector movable freely along said guide.

67. The combination, in an electric railway, of a slotted conduit, an inclosed supply-conductor, and an electrically-propelled vehicle with a contact-plow extending down into the slot and movable laterally relatively to the vehicle and a hinged contact shoe or piece connected to the plow at a point inside the conduit and having an independent movement relatively to the remainder of the plow.

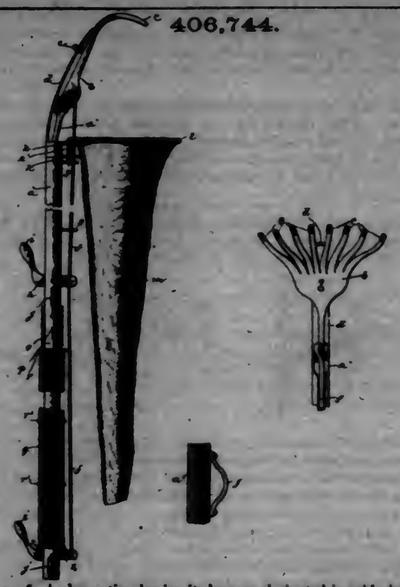
68. The combination, in an electric railway, of a conduit and inclosed supply-conductor, an intermediate contact-plow consisting of an upright part extending down into the conduit and movable laterally relatively to the vehicle, and a contact shoe or piece hinged to the upright part on a longitudinal axis at a point within the conduit.

406,744. FRUIT-GATHERER. JEREMIAH KRESS, Carlisle Springs, Pa. Filed Mar. 5, 1888. Serial No. 266,393. (No model.)

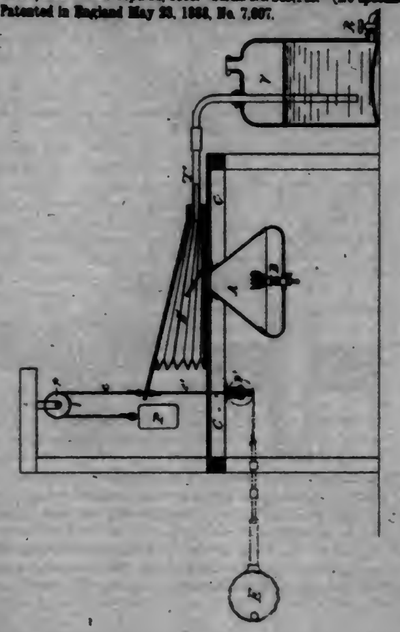
Claim.—1. In a fruit-picker, the combination of the pole, a picking-claw pivoted at its lower end to and extending above the upper end of the pole, said claw consisting of a body portion and a series of diverging fingers extending upwardly from said body and curving forwardly at their upper ends, a connection loosely secured to said claw above its pivoted end and extending downwardly along the pole to draw the claw down, and a spring secured to the pole and connected to said claw to yieldingly hold the same in its normal upright position, substantially as described.

2. In a fruit-picker, the combination of the pole, a picking-claw formed integral and consisting of a body portion pivoted to the upper end of the pole to swing forwardly and having a series of diverging fingers extending upwardly and curving forwardly at their free ends, a plate-spring at one end secured to the pole and extending upwardly and connected to said claw to yieldingly hold the same in its normal position, and a rod or connection to draw the claw downwardly, substantially as described.

3. The combination, with the pole, a picking-claw hinged to the upper end of the pole, and a rod or connection connected to the claw and extending longitudinally of the pole, of an operating-lever extending transversely through and pivoted in the pole and loosely secured to said connection at one end, and a stationary handle secured to the pole near said operating-lever, substantially as described.



4. The combination of the pole, a cap on the upper end of the pole having an upwardly-extending bifurcated pin, a picking-claw consisting of a body portion having its lower end pivoted in said pin and a series of diverging picking-fingers, a spring secured to the rear side of the claw to yieldingly hold it in position, and a rod connected to its front side to draw the claw down, substantially as described.

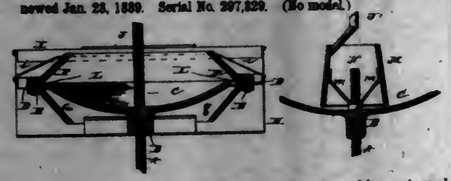


5. In a fruit-picker, the combination of the pole, and lateral perforated brackets secured to the upper end of the pole, with a flexible conveyer or tube, and a ring by which the same is supported and its upper end held open, said ring being provided with a hook removably located in the perforation of said brackets, substantially as described.

6. A fruit-picker comprising a pole made in two sections removably secured together by a sleeve and pins, a series of wires around the lower section and longitudinally located on and secured to the same to prevent bending, and a picker carried by the pole, substantially as described.

406,745. METHOD OF ORNAMENTING CHINA, PORCELAIN, &c. VICTOR J. KUHN, Paris, France, assignor to F. Bapterosses & Company, same place. Filed Sept. 11, 1888. Serial No. 285,143. (No specimens.) Patented in England May 23, 1888, No. 7,607.

406,744.

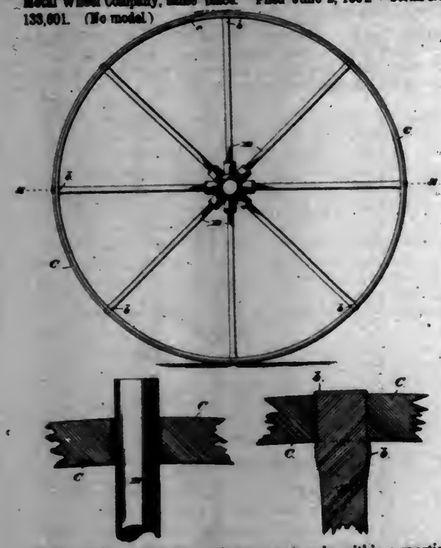


Claim.—1. The herein-described method of ornamenting china, porcelain, &c., consisting in painting the articles with vitrifiable colors combined with silicate of potassa, acetate of lead, pulverized borax, and glycerine, and then vitrifying the colors, all substantially as set forth.

2. The method herein described of ornamenting china, porcelain, &c., by painting the articles with vitrifiable colors combined with silicate of potassa, acetate of lead, pulverized borax, and glycerine, and then vitrifying the colors by treatment with a bath composed of a solution of borax, hydrochloric acid, sulphuric acid, and hydrofluoric acid.

406,746. CENTRIFUGAL MACHINE FOR CREAMING MILK.

CHRISTIAN F. LARSEN, Copenhagen, Denmark. Filed Mar. 7, 1888. Renewed Jan. 23, 1889. Serial No. 297,829. (No model.)

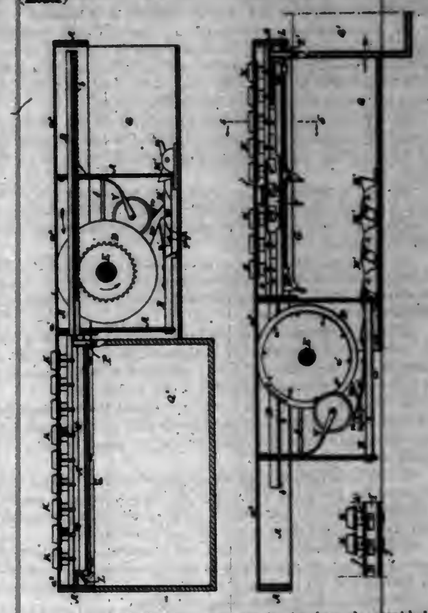


Claim.—1. As an improvement in centrifugal machines adapted for creaming milk, &c., the combination, with a shallow receiver, of an upper inwardly-projecting collar and a lower inwardly-projecting collar, the receiver communicating with the space formed between its under side and the lower collar by means of suitable ducts, substantially as and for the purpose shown and set forth.

2. The combination of the inwardly-projecting upper collar, the shallow centrifugal disk or receiver, pipes secured to the bottom of the receiver, the inwardly-projecting lower collar, and suitable ducts or connections between the receiver and the annular space formed between the bottom of the receiver and its encircling lower collar, substantially as and for the purpose shown and set forth.

3. The combination of the receiver, constructed in the form of a shallow vessel or pan, and having an upper inwardly-projecting collar and a lower inwardly-projecting collar, and provided with ducts, as described, with the truncated cone arranged in the center of the receiver, and the adjustable supply pipe or nozzle, substantially as and for the purpose set forth.

406,747. MANUFACTURE OF METAL WHEELS.



JAMES R. LITTLE, Quincy, Ill., assignor, by mesne assignments, to the Quincy Metal Wheel Company, same place. Filed June 2, 1884. Serial No. 133,601. (No model.)

Claim.—The method of securing a metal spoke within a mortise, which consists in inserting the spoke into the mortise and then expanding the portion contained therein by compressing the same longitudinally between two relatively-movable devices, one of which is adapted to bear against the inner end of said spoke and the other to inclose and grasp said spoke outside of said mortise and to prevent enlargement at the point grasped, substantially as and for the purpose specified.

406,748. CASH REGISTER AND INDICATOR.

MATTHIAS R. LOSSIER, Philadelphia, Pa. Filed Oct. 18, 1888. Serial No. 288,497. (Model.)

Claim.—1. An indicating apparatus having interchangeable key-bars for tens, units, &c., each carrying a series of keys, a sliding number-plate, a locking-bolt, and a hinged retaining-frame for the sliding plate.

2. An indicating apparatus having interchangeable key-bars for different denominations, as tens, units, &c., each carrying a series of keys, a sliding number-plate, and a locking-bolt, substantially as described.

3. An indicating apparatus having key-bars each with transverse openings for the reception of the keys, a longitudinal groove on one side for the number-plate, and a longitudinal groove on the other side for the locking-bolt, substantially as described.

4. The combination of the key-bar and the series of keys, each having a spring to tend to keep it elevated, with a sliding number-plate and operating-spring, and a pivoted retaining-frame for the sliding plate acted upon directly by the keys.

5. The combination of the key-bar having a sliding number-plate on one side and a locking-bolt on the other, with a series of operating-keys, each having on one side a shoulder to form a stop for the sliding plate and on the other a catch to engage with the locking-bolt, substantially as described.

6. The combination of the grooved key-bar and operating-keys with a sliding number-plate of T-section and having a rack on one flange, a cog-wheel gearing with the rack, a spring to act on the said wheel, and a retaining-frame for the plate operated by the keys, substantially as described.

7. The combination of the key-bar, keys, and locking-bolt having a projecting finger with a hinged retaining-frame engaging with and retaining the locking-bolt until operated by one of the keys, and a spring to act on the locking-bolt.

8. The combination of the key-bar, keys, and locking-bolt having a spring, with a rock-shaft having a catch to retain the bolt in its outward position and a sliding frame to act on the shaft to free the bolt from the catch, all substantially as described.

9. The combination of the frame and sets of operating-keys with sliding number-plates and a sliding frame having projections to act directly on the said plates to return them to their normal positions, substantially as described.

10. An adding or registering mechanism having a series of adding-wheels and a set of controlling-keys for each of the several wheels, with a cash-drawer to transmit motion from one adding-wheel to the next higher, substantially as described.

11. The combination of the frame and sets of operating-keys with sliding number-plates and locking-bolts, and a sliding frame to act directly on the plates and bolts to return them to their original positions after registry.

12. The combination of the frame and sets of operating-keys with sliding number-plates and a cash-drawer having projections to act on the said plates to return them to their normal positions, substantially as described.

13. The combination of an indicating and registering machine with a cash-drawer free to be moved in and out before the operation of the indicator, but adapted to act upon the moving parts after each indication, substantially as described.

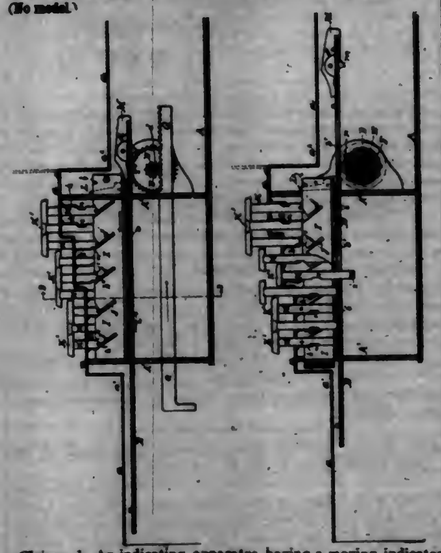
14. The combination of the frame and sets of operating-keys with sliding number-plates, locking-bolts for the keys, and a cash-drawer having projections to act on the said plates and locking-bolts to return them to their normal positions after each registry.

15. The combination of numbered indicating-wheels and operating-springs with keys numbered to correspond and controlling the said wheels, and adding-wheels, also correspondingly numbered and mounted upon the same shaft with the indicating-wheels, all substantially as set forth.

16. The combination of the sliding number-plates, operating-keys, and spring-operated indicating-wheels geared to the number-plates, with a series of adding-wheels mounted upon the same shaft with the aforesaid wheels and operated therefrom, all substantially as setforth.

17. An indicating and registering machine having its indicating-wheels and adding-wheels all mounted upon the same shaft, with a series of devices arranged out of line with the shaft to transmit movement successively from one adding-wheel to the next, substantially as set forth.

18. An indicating and registering machine having indicating and adding wheels representing successive denominations all mounted upon the same shaft, with a sliding frame carrying devices to transfer motion from one adding-wheel to the next higher successively, substantially as specified.



19. The combination of the adding-wheel U of a registering-machine with another adding-wheel U', and a fixed bar having a switch-gate to be opened by the first wheel at each revolution, and a sliding frame carrying a lever, a part of which travels on the bar and is adapted to operate the second wheel on the opening of the said switch-gate, all substantially as described.

20. The combination of the adding-wheel U of a registering-machine with another adding-wheel U', a bar having a switch-gate to be opened by the first wheel at each revolution, a sliding frame carrying a lever with a tail-piece traveling on the bar and adapted to operate the second wheel when the switch-gate is open, the said bar having a notch to prevent return of the sliding frame without completing the registration.

21. The combination of the fixed frame carrying a series of adding-wheels mounted upon a shaft with a sliding frame and devices, substantially as described, mounted part upon the fixed frame and part upon the sliding frame to transfer motion from one wheel to the next.

406,749. CASH REGISTER AND INDICATOR.

MATTHIAS R. LOSSIER, Philadelphia, Pa. Filed Apr. 5, 1889. Serial No. 306,061. (No model.)

Claim.—1. An indicating apparatus having a moving indicator and means to move it from its normal position at zero, with a series of keys, one or more engaging with the said indicator to retain it in its normal position, and any one of the keys being adapted when operated to act as a stop for the moving indicator, all substantially as described.

2. An indicating apparatus having a number of moving indicators for successive columns of figures, as units, tens, hundreds, &c., and each having combined with it a means to move it from its normal position at zero, and a series of keys, one or more engaging with the said indicator to retain it in its normal position, and any one of the keys being adapted when operated to act as a stop for the moving indicator, all substantially as described.

3. An indicating apparatus having a moving indicator and its impelling-spring, with a series of keys, one or more engaging with the said indicator to retain it in its normal position, and any one of the keys being adapted when operated to act as a stop for the moving indicator, and devices, substantially as set forth, to restore the parts to their normal positions, all substantially as set forth.

4. In an indicating apparatus, the combination of a moving indicator and its impelling-spring with a series of keys, each of which is adapted to arrest the moving indicator, and one or more of the keys engaging with the moving indicator to retain it in its normal position, and a locking-bar to act in conjunction with the keys, all substantially as described.

5. An indicating apparatus having interchangeable key-bars representing successive denominations, as units, tens, hundreds, &c., each carrying a moving indicator and a series of keys, one or more engaging with the indicator to retain it in its normal position at zero, and any one of the keys serving as stops, all substantially as described.

6. An indicating apparatus having interchangeable key-bars, each carrying a moving indicator and its impelling-spring, with a series of keys, one or more engaging with the indicator to retain it in its normal position, and a locking-bolt to act in conjunction with the keys, all substantially as described.

7. In an indicating apparatus, the combination of a moving indicator and its impelling-spring with a series of keys, one or more engaging with the indicator to retain it in its normal position, and any one of the keys serving to arrest the moving indicator when depressed, and a locking-bar having a positive motion imparted to it by the depressed key, all substantially as set forth.

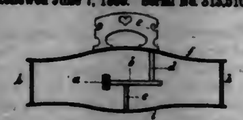
8. In an indicating apparatus, the combination of a moving indicator and its impelling-spring with a series of keys to normally retain and also to arrest the indicator when released, and having pins or projections, with a locking-bolt having inclined notches for the pins or projections to move the bar upon the depression of a key, all substantially as described.

9. In an indicating apparatus, the combination of a moving indicator and its impelling-spring with a series of keys to normally retain and also to arrest the indicator when released, and having pins or projections, with a locking-bar having inclined notches for the pins or projections to move the bar upon the depression of a key, and yielding retainers to hold the keys in their normal elevated positions, all substantially as described.

10. The combination of a moving indicator having a notch or notches with a series of keys, one or more having a projection or projections to engage with such notch or notches to retain the indicator in its normal position, and an impelling-spring for the indicator, any of said keys being adapted to act as a stop for the moving indicator, all substantially as described.

11. The combination of a moving indicator and its impelling-spring with a series of keys having pins or projections, one or more engaging with the indicator to retain it in its normal position, and any one of the keys acting as stops for said moving indicator, with a locking-bar having inclined grooves for said pins or projections, and also having bevels or inclines *j'* for such of the keys as act as retainers, all substantially as described.

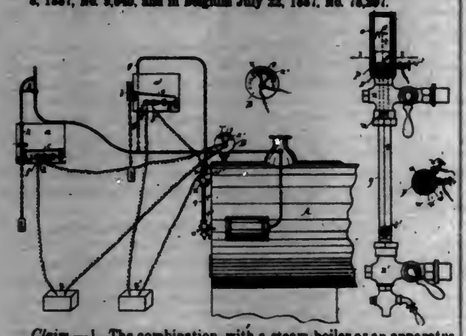
12. The combination of a moving indicator, its impelling-spring, and a series of keys to normally retain the indicator, and also to arrest it, with a locking-bar acting in conjunction with the keys and devices, substantially as set forth, to return the parts to position.



13. The combination of a moving indicator, its impelling-spring, and a series of keys to normally retain the indicator, and also to arrest it, with a locking-bar acting in conjunction with the keys, yielding retainers to hold the keys in their normal elevated positions, and devices, substantially as set forth, to return the parts to position.

14. An indicating apparatus having a number of moving indicators and corresponding series of keys representing successive denominations, as units, tens, hundreds, &c., with the numbered heads of each series of keys out of line with their respective key-stems and arranged alternately on one and the other side of the line of their stems, substantially as and for the purpose described.

15. An indicating apparatus having a number of moving indicators for different columns of figures, and each indicator with a



series of numbered keys therefor, the numbers of adjoining series being contrasted in color, as and for the purpose set forth.

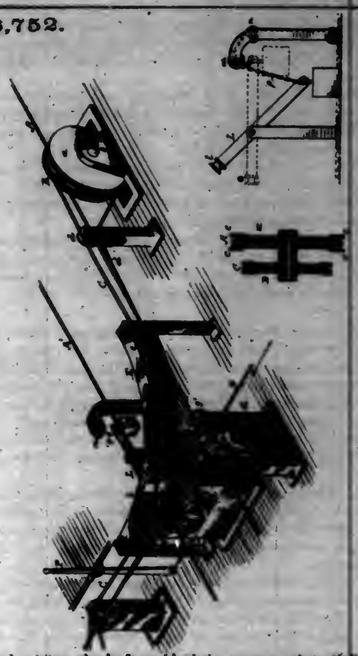
406,750. VIOLIN. JOHAN D. LOFTHUSEN, Pittsburg, Pa. Filed July 7, 1888. Renewed June 7, 1889. Serial No. 313,510. (No model.)

Claim.—The combination, with the violin *f h i* and the center bar *e* thereof, of the lever *b*, resting with one end in a mortise in said bar *a*, a sounding-post *d*, standing between the other end of said lever *b* and the front *f* of said instrument, and the post *c*, standing between the middle of said lever *b* and the back of said instrument, all substantially as and for the purpose set forth.

406,751. ELECTRICAL APPARATUS FOR REGULATING STEAM-BOILERS, &c. FRANÇOIS MARTINOT, Paris, France. Filed June 27, 1887. Serial No. 242,502. (No model.) Patented in France Mar. 10, 1887, No. 182,066; in Germany July 4, 1887, No. 6,133; in England July 8, 1887, No. 9,645, and in Belgium July 22, 1887, No. 78,267.

Claim.—1. The combination, with a steam-boiler or an apparatus of a similar character, and with a manometer or similar instrument attached thereto and an electric battery connected therewith, and an electro-magnet *e e'* and a pivoted lever *d*, engaging therewith, of an apparatus *a*, provided with a vertically-sliding rod *k*, having a weight *l* suspended from its lower end, and having its upper end connected with the handle of a cock or valve *k'*, communicating with an escape-pipe leading from the boiler, whereby provision is made for the escape of the excess of steam in order to prevent explosion, substantially as herein described.

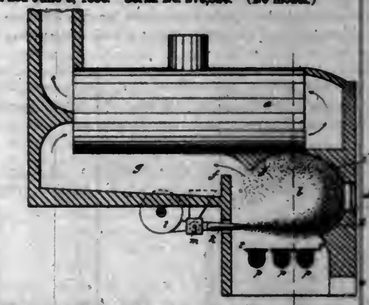
2. The combination, with a steam-boiler or an apparatus of a similar character, and with a water-gage attached thereto and an electric battery connected therewith, of an apparatus *a'*, provided with an intermittently-rotating wheel *b*, having peripherical grooves carrying a weighted chain, and having pegs *b'* on its side for engagement with a lever *c*, which in turn engages with a lever *d*, engaging with an electro-magnet *e e'* and with an electric battery connected with said boiler, and with a pipe leading from the source of water-supply, whereby provision is made for automatically feeding water to the boiler, substantially as herein described.



3. In an apparatus embracing the application of electricity to steam-boilers and devices of a similar character, for the purpose of automatically feeding water to the boiler, the combination, with the boiler, the water-gage, the water-feeding apparatus, and the battery *a'*, of the devices inclosed in the chamber *p* and cap *o* and connected therewith, consisting of the vessels *w' w''*, and the forked rod *t*, carrying the float *t'*, and the washer or collar *u*, arranged and operating substantially as and for the purpose herein described.

406,752. CURVE AND CROSSING DEVICE FOR CABLE RAILWAYS. ASHBEL MATTHEWS, Philadelphia, Pa. Filed Mar. 20, 1888. Serial No. 268,206. (No model.)

Claim.—1. In a cable-railway system, the combination of the main and crossing cables, the supplemental curve cable, a driving-wheel having a broad periphery around which the main cable passes without crowding, and a grooved wheel mounted on the same shaft with the driving-wheel and around which the curve cable passes, said grooved wheel being at a sufficient distance from the driving-wheel to permit the passage of the grip between the two wheels, substantially as specified.



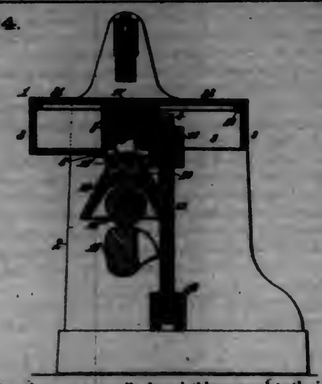
2. The combination, in a cable-railway system, of a lever carrying at one of its ends a depressing-roller with an operating chain or

406,752.

rope and guiding-wheels for said chain or rope, substantially as described.

406,753. APPARATUS FOR BURNING CULM. ALLAN MASON, Brooklyn, assignor to Herbert H. Sanderson, trustee, New York, N. Y. Filed June 8, 1888. Serial No. 276,589. (No model.)

Claim.—1. The combination, with a furnace-chamber, of one or more air and pulverized-coal injectors and deflecting-surfaces for injecting and for a time maintaining the coal in suspension in the furnace-chamber by the injecting forces, and independent or separate burners below the injected fine fuel, between which the coal-ashes are precipitated, substantially as described.



2. The combination, with a furnace-chamber, of one or more air and pulverized-coal injectors and deflecting-surfaces for injecting and for a time maintaining the coal in suspension in the furnace-chamber by the injecting forces, and independent or separate burners below the injected fine fuel, between which the coal-ashes are precipitated, and consisting of trough-shaped drawers adapted for being inserted and withdrawn through the side wall of the furnace and being charged with fuel independently, substantially as described.

3. The combination, with a furnace-chamber, of the improved burner consisting of a fuel-holding trough having perforated sides and top flanges and fitted in a slideway through the furnace-wall, substantially as described.

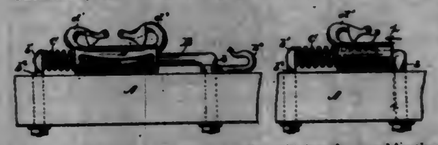
406,754. BRICK-MACHINE. HENRY W. MEAD, Quincy, Ill. Filed Aug. 2, 1888. Serial No. 281,767. (No model.)

Claim.—1. In a brick-machine, the stationary mold-table having a transverse rib 4, side standards 2, and vertical side plates 5 beside the standards, provided with offset top edges 7 and inwardly-turned bottom edges 6, in combination with the interchangeable mold-box

406,754.

bearing against the transverse rib, detachably secured to the inwardly-turned bottom edges and having top lateral flanges 9, resting on the offset top edges of the plates, substantially as described.

2. In a brick-machine, the stationary mold-table comprising the vertical side plates 5, provided at their upper edges with the offsets 7 and at their lower portions with inwardly-turned edges 6, in combination with the interchangeable mold-box resting at its bottom on the inwardly-turned lower edges of the plates and having its upper edge provided with lateral flanges 9, resting on the offsets of said plates, and bolts 10, passing through the inwardly-turned lower edges of the plates and detachably engaging the mold-box, substantially as described.



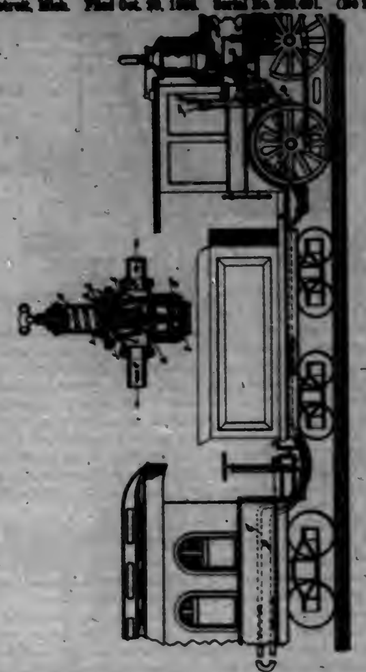
3. The combination, with the stationary mold-table having the transverse rib 4, provided at one side with the plunger-head guide-bearing 13, and the vertical plates 5, having inwardly-turned lower edges 6, of the interchangeable mold-box 8, resting on the said inwardly-turned edges at one side of the transverse rib, the plunger-head 11, moving in and guided by said guide-bearing at the other side of said rib and having a laterally-projecting plunger-support 14, and the interchangeable plunger 17, having a rigid stud detachably connected with the lateral support, substantially as described.

4. The combination, with the mold-table and mold-box of a brick-machine, of a plunger-head guide-bearing on the table outside the mold-box, and a plunger-head moving in said guide-bearing, and having a laterally-projecting support carrying a plunger, substantially as described.

5. In a brick-machine, a plunger-head having a lateral projecting plunger-support for the plungers, and provided with a recess into which open apertures through the support, in combination with plungers having studs passing through said apertures and receiving nuts upon their threaded ends, substantially as described.

6. In a brick-machine, the combination, with a mold-table having upper and lower bearings, of a plunger-head moving in and wholly guided by said bearings, an interchangeable mold-box, and a suitable support upon the plunger-head for interchangeable plungers, substantially as described.

406,755. DRAFT ATTACHMENT FOR VEHICLES. JOHN D. MILLER, Washington, D. C., assignor of one-half to John A. Baker, same place. Filed Jan. 4, 1889. Serial No. 295,491. (No model.)



Claim.—1. In a draft attachment for vehicles, the combination, with the horizontal bar rigidly attached to the shaft, of the slide mounted on said bar with the draft-chain or trace-hook mounted directly thereon, and the spring interposed between said slide and the forward end of the horizontal bar through which the draft is transmitted to the shaft, substantially as described.

2. In a draft attachment for vehicles, the combination, with the horizontal bar rigidly attached to the shaft, of the slide mounted on said bar and having the sockets in the forward end, the draft-chain or trace-hook mounted on said slide, and the coil-spring within the socket through which the draft is transmitted to the shaft, substantially as described.

3. In a draft attachment for vehicles, the combination of a slide carrying hooks for attachment to the draft chain or trace and the back-chain, said hooks having pivotally attached to them pawls for retaining the links of such chains in position, and a spring interposed between said slide and the forward end of a horizontal bar upon which all these parts are mounted, and which bar is rigidly attached to the shafts of a vehicle, substantially as described.

4. In a draft attachment for vehicles, the combination, with a slide containing a socket for the accommodation of a spiral spring, and having upon it hooks for attachment to the draft chain or trace and the back-chain, said hooks having gravitating pawls for retaining in position said chains, a spring interposed between said slide and the forward end of a horizontal bar, upon which all these parts are mounted, and which bar is rigidly attached to the shafts of a vehicle, of a hook for attachment to the breeching-chain, said hook mounted upon the rear depending end of said horizontal bar, substantially as described.

406,756. CAR-HEATING APPARATUS. CHARLES F. MIMBOUR, Detroit, Mich. Filed Oct. 20, 1888. Serial No. 288,691. (No model.)

Claim.—The combination, in a hot-water-heating apparatus for car-heating, of a high-pressure boiler or heater, a pressure-reducing valve having an indicating-gage, an air-expansion chamber provided with an indicating-gage, said chamber being secured to and having communication with the end of the return-pipe of the radiating system, and a branch connecting-pipe secured to the said return-pipe near said chamber and affording communication between said return-pipe and a force-pump, as described.

406,757. SMOKE-CONSUMER. GORDON MCDOWELL, Evanston, Ill. Filed Jan. 2, 1889. Serial No. 295,576. (No model.)

Claim.—1. A furnace provided with slots for the admission of air to the fire situated above the furnace-door, having a door for closing such slots, and means for automatically regulating the closing of such door, substantially as described.

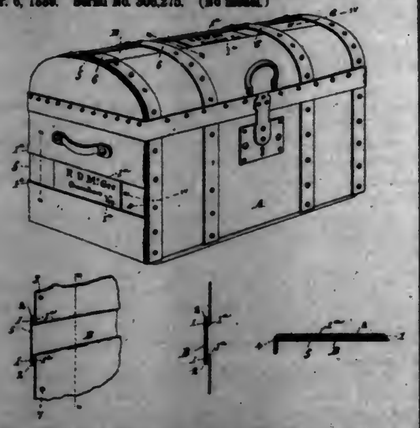
2. The combination of a chamber situated above the entrance to the furnace and communicating therewith by means of slots or perforations, a door for closing such slots, and means for automatically regulating the closing of such door, substantially as described.

3. The combination of the fuel-door, a chamber situated above the entrance to the furnace and communicating therewith by means of slots or perforations, a door for closing such slots, and an arm secured to the fuel-door and adapted to open the slot-door, substantially as described.

4. The combination of the fuel-door, slots or perforations in the roof of the furnace-entrance, a door for closing such slots, an arm secured to the fuel-door and adapted to open the slot-door, and means for automatically regulating the closing of such door, substantially as described.

406,757.

5. The combination of the fuel-door B, lever B', for opening such door, chamber D, slots C C, door E, for closing such slots, arm R, for opening door E, and means for automatically regulating the closing of such door, substantially as described.



6. The combination of door B, having lever B' and arm R, chamber D, slots C C, and door E, arm G, rods H H', piston I, spring K, and cylinder J, having pipe K' and cock L, substantially as described.

7. The combination of the fuel-door, an air-chamber situated above the entrance to the furnace and communicating therewith by means of slots or perforations for the admission of air to the fire, a door for closing such slots, an arm attached to the fuel-door for opening the slot-door, and deflectors for directing the air downward toward the fire, substantially as described.

8. The combination of an air-chamber situated above the entrance to the furnace and communicating therewith by means of slots or perforations, a door for closing such slots, an arm attached to the fuel-door for opening the slot-door, and means for automatically regulating the closing of such door, substantially as described.

9. The combination of an air-chamber situated above the entrance to the furnace and communicating therewith by means of slots or perforations, a door for closing such slots, an arm attached to the fuel-door for opening the slot-door, means for automatically regulating the closing of such door, and deflectors for directing the air downward toward the fire, substantially as described.

406,758. TRUNK. ROBERT D. MCGEE, Owensborough, Ky. Filed Apr. 6, 1889. Serial No. 306,275. (No model.)

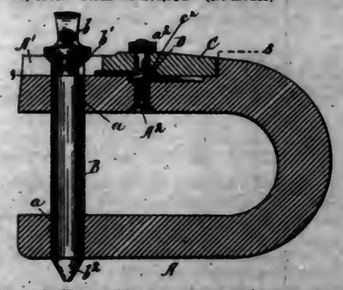
Claim.—1. The combination, with a trunk, of a sheet-metal covering bent, substantially as described, to form inner laps 1, outer laps 1°, and grooves 2 entirely across the surface of the trunk, said grooves being closed at one end and open at the other end, and having re-enforce straps 6, all substantially as herein described.

2. The combination, with a trunk, of a sheet-metal covering bent to form the inner laps 1, outer laps 1°, and grooves 2, running across the surface of the trunk, whereby the card may be inserted, said grooves being closed at one end by the straps 6, substantially in the manner described.

3. The combination, with a trunk, of a sheet-metal covering bent to form inner laps 1 and outer laps 1° for the retention of the card, substantially in the manner and for the purposes explained.

4. A pocket for the reception of a card, constructed of a single piece of sheet metal bent to form the inner laps 1, outer laps 1°, and the grooves 2, in connection with said laps, and adapted to be attached to the article to be labeled, substantially in the manner shown and described.

406,759. PAPER-FASTENER. GEORGE W. MCGILL, Rivertale, N. Y. Filed Dec. 6, 1888. Serial No. 292,796. (No model.)



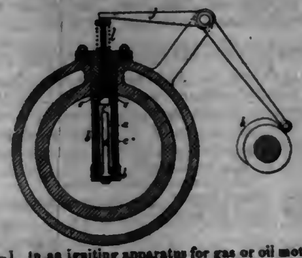
Claim.—As an improved article of manufacture, the adhesive paper-fastener herein described, consisting of a piece of flexible fabric having an adhesive surface and formed with a flat head and tongue in substantially the same plane, and the tongue provided with a transverse depression, forming its joining hinge-like connection with the lower edge of the head to facilitate the turning down and cementing of the latter, substantially as set forth.

406,760. SHOE. WILLIAM J. MCKINNEY, Rising Sun, Md. Filed Sept. 21, 1888. Serial No. 285,967. (No model.)

Claim.—In a shoe, the combination of a vamp A, having its rear edges cut in substantially a vertical line, the back A', having its front edges parallel with and abutting against the rear edges of the vamp, the gores A^3, secured to the edges of the vamp and back and folded upon itself, and the elastic attachment secured to the upper parts of the vamp and back, substantially as described.

406,761. CLEVIS. EMERY M. MCVICKER, Madison, Wis. Filed Nov. 30, 1888. Serial No. 292,214. (No model.)

Claim.—1. The combination, with the clevis provided with rigid arms having end apertures and an independent pin, of the latch or arm pivoted on one of the said rigid arms of the clevis and adapted to be turned upon its pivot so as to be brought into engagement with the clevis-pin, and a spring bearing upon said pivoted latch or arm and holding the same normally in a position to engage with the clevis-pin, substantially as and for the purposes specified.



2. The combination, with the clevis-body having rigid arms, one of which is cut away, as described, and an independent pin, of a spring-actuated latch or arm pivoted on said cut-away portion and having the form thereof, whereby a flush surface without any projections is provided, substantially as and for the purposes specified.

3. The combination, in a clevis, of the body A, with rigid arms provided with apertures *c*, one of said arms being cut away, as shown at *d*, and having projection A', arranged at one side of the aperture *c*, and having a latch in the form of said cut-away portion, on which it is mounted and abutting normally against the projection A', substantially as and for the purposes specified.

4. The combination, with the clevis-pin, of the clevis-body having rigid arms, one of which is cut away, as described, a pivoted latch mounted on said cut-away portion and having the form thereof, and a spring for actuating said latch, said spring being arranged entirely between the latch and clevis-body and wholly inclosed thereby, substantially as and for the purposes specified.

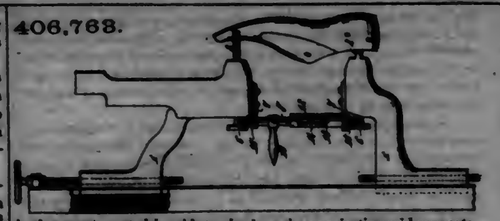
5. The combination, with the independent clevis-pin, of the clevis-body A, having rigid arms, one of which is provided with a pivot-post A^3 and groove a^3, the latch C, having aperture *c* to receive the pivot-post and groove c^3, and the spring D, coiled around said post and having its ends arranged, respectively, in the grooves a^3 and c^3, substantially as and for the purposes specified.

406,762. IGNITING APPARATUS FOR GAS OR OIL MOTOR-ENGINES. NICOLAUS A. OTTO, Cologne, assignor to the Gas-Motoren-Fabrik-Deutz, Deutz-on-the-Rhine, Germany. Filed Nov. 6, 1883. Serial No. 290,072. (No model.) Patented in Italy Jan. 3, 1888, XLVIII, 98; in England Oct. 5, 1888, No. 14,349; in Belgium Oct. 13, 1888, No. 83,954, and in France Nov. 5, 1888, No. 193,988.

Claim.—1. In an igniting apparatus for gas or oil motor-engines, an incandescent metal tube contained within a chamber forming a narrow annular channel around it and a central channel through it, said passages communicating with the cylinder-space by an opening controlled by a valve or slide, a portion of the combustible charge in the cylinder being admitted at the required moment into said channels, so as to come into intimate contact with both the inner and outer surfaces of the incandescent tube and be ignited thereby, the heat of the incandescent body being maintained by the said combustion, substantially as described.

2. In an igniting apparatus for gas or oil motor-engines, an incandescent body of fire-clay or other suitable refractory bad conductor of heat formed as a lining to a metal chamber projecting into the cylinder and containing a refractory metal tube, the interior of such chamber being put in communication with the interior of the cylinder at the required moment by a slide or valve controlling an opening from the cylinder to such chamber, so that a portion of the combustible charge passes into the said chamber and becomes ignited by contact with the incandescent refractory lining and tube, such lining and tube being maintained in a state of incandescence both by the combustion within it and by the heat of the combustion in the cylinder transmitted through the walls of the chamber, substantially as herein described.

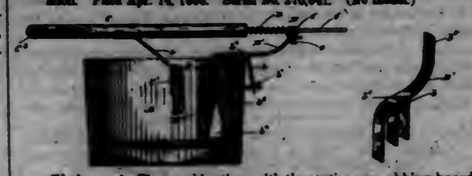
406,763. LASTING-MACHINE. SETH W. PAINE, Rochester, N. Y., assignor to William S. King, Minneapolis, Minn. Filed Sept. 26, 1888. Serial No. 286,249. (No model.)



Claim.—1. The combination, with suitable standards or supports, of two movable rests for respectively supporting the heel and toe of a last, and a rock-shaft acting upon both rests to simultaneously depress them, substantially as described.

2. The combination, with suitable standards or supports, of two lengthwise-movable rests for respectively supporting the heel and toe of a last, springs acting on the rests to move them outward, and a rock-shaft acting on both rests to simultaneously move them inward against the pressure of the springs, substantially as described.

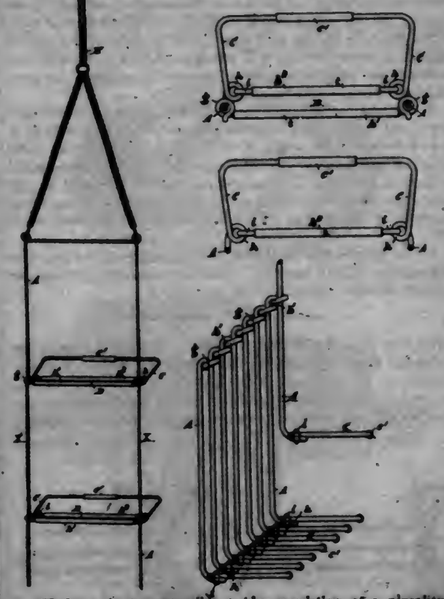
3. The combination, with suitable standards or supports having brackets, of the lengthwise-movable toe and heel rests carried by the standards, springs forcing both rests upward, and a rock-shaft journaled in the brackets and acting at its extremities on both rests to simultaneously move them downward, substantially as described.



4. In a boot or shoe lasting mechanism, the combination, with suitable standards adjustable toward and from each other, of toe and heel supports seated in said standards, springs projecting said supports in one direction, a shaft having cams acting upon flanged heads or collars on said supports, and a sleeve embracing the shaft and having a slot receiving a pin thereon, substantially as described.

406,768.

5. In a boot or shoe lasting mechanism, the combination, with suitable standards adjustable toward and from each other, of last-supports having springs projecting them longitudinally, and a shaft having cams which retract said last-supports, one of the cams being keyed to and adjustable on the shaft to compensate for the adjustment of the standards, substantially as described.



406,764. WASHING-MACHINE. LEE R. PALMER, Imlay City, Mich. Filed Apr. 14, 1888. Serial No. 270,641. (No model.)

Claim.—1. The combination, with the stationary rubbing-board provided with a supporting-arm having a bearing, of a reciprocating rubbing-board provided with an operating-handle projected forward from its engagement with said latter board, its forward end engaged with the bearing of said arm and having a sliding movement therein, substantially as described.

2. The combination, with the stationary rubbing-board provided with an arm having a bearing and a tub-clamp secured to said arm, of a reciprocatory rubber provided with a handle which slides in said bearing and a spring for imparting a resilient movement to said reciprocatory rubber, substantially as set forth.

406,765. EXTENSIBLE LADDER. JOHN B. PARRY, Liverpool, County of Lancaster, England. Filed Feb. 7, 1889. Serial No. 299,078. (No model.)

Claim.—1. An extensible ladder consisting of a plurality of stages, each comprising the side members A, having at the top por-

tion the top loops *g*, connected by the stationary rung-bar *b'*, and in which connected loops the vertical parts of the stage next above slide, said side members of each stage having their lower portions extended at right angles through the top loops of the stage next below, and thence bent laterally around at the rear into the rectilinear stay-bar C, substantially as described.

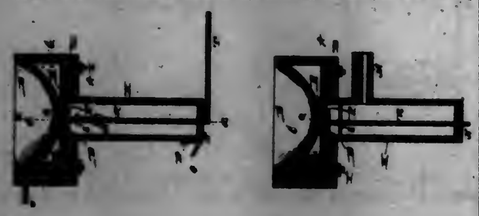
2. An extensible ladder consisting of a plurality of stages, each comprising the side members A, having loops *g* at their upper ends, connected by a stationary top bar *b'*, in which loops the vertical parts of the stage next above slide, said side members of each stage having their lower portions extended at right angles through the top loops of the stage next below into the stay-bar C, having the connecting bottom rung-bar *b*³, which, when the ladder is extended, moves beside the rung-bar connecting the top loops of the stage next below, substantially as described.

3. In an extensible ladder composed of a plurality of stages, as described, the stages herein set forth, consisting of a top *b'*, loops *g*, side members A, rung-bar *b*³, and prop-bars C, substantially as described.

4. The combination, in an extensible ladder composed of a plurality of stages, as described, of the bars *b'* and *b*³, constituting the rungs of the ladder when extended, the bar *b'* being the top bar of the said stage, and connected to the side members A thereof, the bar *b*³ being connected to the lower end of the said side members and adapted to lie parallel and in the same horizontal plane as the bar *b'* when the ladder is extended, substantially as described.

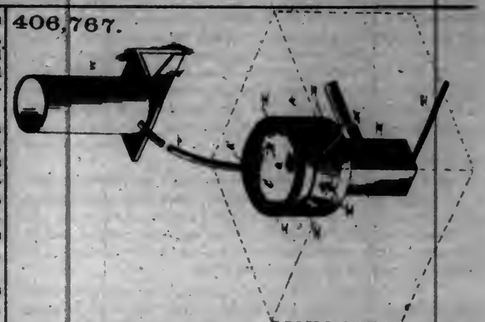
5. In an extensible ladder composed of a plurality of stages, as described, the combination of side members A of said stages, loops *g*, and top bar *b'*, said top bar of a stage being adapted to serve as the rung or part of the rung between said stages, substantially as set forth.

406,766. KITCHEN-CABINET. DUPLEAR PECORD and LEVI PECORD, Concordia, Kans. Filed Jan. 3, 1889. Serial No. 295,282. (No model.)



Claim.—1. In a kitchen-cabinet, the combination, with the casing having a horizontal partition C, and the flour and meal bins arranged between said partition and the top of the casing, of the slide O, supported by the said partition and carrying a sifter, and moving under the mouths of the bins so as to bring the sifter under either, and the independent transverse slides Q R, arranged between the partition and the slide O, and adapted to cover or uncover the mouths in the lower ends of the bins, as set forth.

2. The combination, with the casing having the horizontal partition C, and the flour and meal bins arranged between the said partition and the top of the casing, of the cleats N, secured to the under side of said partition, the slides Q R, arranged between said cleats and the partition and below the bins, and the slide O, supported by said cleats below the slides Q R, and carrying the sifter, and moving under the mouths of the bins so as to bring the sifter under either, as set forth.

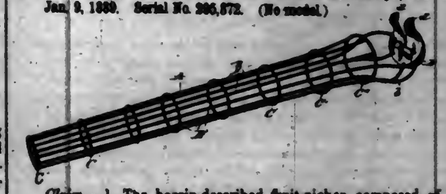


3. In a kitchen-cabinet, the bins G H, arranged side by side, combined with the slide O, carrying a sifter, and adapted to register with the mouth of either one of the bins, as set forth.

406,767. BLACKSMITH'S FORGE. WILLIAM J. PUGSLEY, McCracken, Kans. Filed Mar. 29, 1889. Serial No. 305,303. (No model.)

Claim.—1. In a blacksmith's forge, the combination, with the tuyere-box, the bottom of which has a central screw-threaded opening, of the concavo-convex cover constituting the fire-pot and having

406,767.



a central downwardly-extending screw-threaded pipe, by which it is connected with the bottom of said box, substantially as set forth.

2. The combination, with the annular water-chamber or tuyere and the top constituting the fire-pot, of the cinder-box located below the same and having the blast-pipe connected thereto, the rotatable grate located in the central tube of the tuyere and having a rod extending downwardly through the cinder-box, and an operating-handle at the lower end of said rod, substantially as set forth.

3. The combination of the annular water-chamber or tuyere, the cinder-box located below the same, the rotatable grate, the removable slide at the lower end of the cinder-chamber, and the latch to retain said slide in position, substantially as and for the purpose set forth.

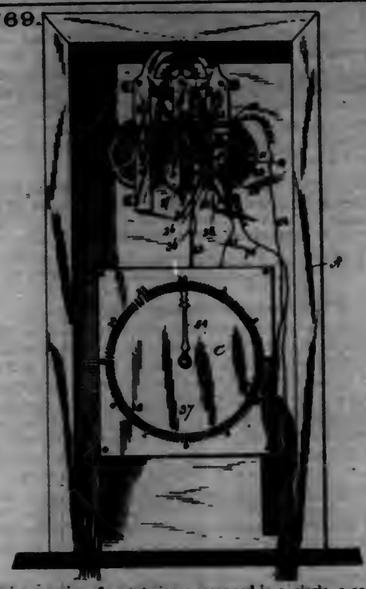
4. The combination of the cinder-box having an annular horizontal flange at its inner end, the tuyere-box or water-chamber having perforations extending vertically through its walls, the concave top plate constituting the fire-pot and having a central depending tube connecting it through the bottom of the water-chamber with the upper end of the cinder-box, and suitable connecting-bolts, substantially as and for the purpose set forth.

406,768. FRUIT-PICKER. HUGH M. RAGUE, Brooklyn, Ala. Filed Jan. 9, 1889. Serial No. 295,872. (No model.)

Claim.—1. The herein-described fruit-picker, composed of longitudinal rods B and B' and inclosing rings or bands for holding the rods together, the rods B', extended beyond the ends of the rods B and having the cutting-plate attached to said extended rods, substantially as shown.

2. The herein shown and described fruit-picker, composed of longitudinal rods B and B', the latter of which are extended beyond the ends of the rods B and have the extended portions *b* curved first outwardly and then inwardly, rings encircling the said rods, and the cutting-plate attached to the ends of the extended portions *b* and having one side elongated and curving inwardly and outwardly to form blades, substantially as described.

406,769. SIGNAL OR ALARM TRANSMITTER AND TIME-INDICATOR. ANDREW J. REAMS, El Dorado, Kans. Filed Aug. 3, 1888. Serial No. 281,916. (No model.)



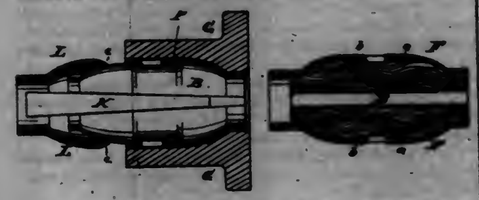
Claim.—1. The combination, with the clock-frame, of a block of insulating material secured thereto, an L-shaped lever pivoted upon the block having an arm of an insulating material and the other arm of a conducting material, a circuit-closing disk, and springs engaging the disk and conducting-arm of the lever, substantially as described.

2. The combination, with the sleeve of the hour-wheel, of a wheel secured thereto, a stud on the frame, a cam-wheel on the stud engaging the wheel on the sleeve of the hour-wheel, an L-shaped lever pivoted to a block of insulating material secured to the frame, a roller on the lever engaging the cam-wheel, and a spring for engaging L-shaped lever, substantially as and for the purpose specified.

3. The combination, with the sleeve of the hour-wheel, of a wheel secured thereto, a stud secured to the frame and carrying a cam-wheel meshing with the said wheel, an L-shaped lever pivoted to the frame and carrying a roller engaging the cam-wheel, and a spring for drawing the lever out of contact with the cam-wheel, substantially as described.

4. The combination, with the clock mechanism, of an automatic circuit-closing device constructed of a plate of suitable insulating ma-

406,769.



terial, having a series of metal pieces arranged in a circle, a contact hand or pointer mounted above the said pieces, mechanism connecting with the hand or pointer, and an insulated wire connecting the clock mechanism and mechanism for operating the hand or pointer, whereby, when the clock is in operation, the hand or pointer will be operated at determined intervals, substantially as and for the purpose specified.

5. The combination, with the minute-arbor, of a ratchet-wheel secured thereto, a lever pivoted above the same and having a pin engaging the ratchet-wheel, an automatic circuit-closer below the clock mechanism, a hand or pointer moving over the same, and an insulated rod connecting with the lever on the clock and operating the hand or pointer on the circuit-closer, substantially as and in the manner described.

6. The combination of an automatic circuit-closer, metallic pieces secured thereto, a switch-board, and conducting-wires connecting the metallic pieces and switch-board, a contact hand or pointer mounted above the metallic pieces, and mechanism for operating the hand or pointer, substantially as and for the purpose specified.

406,770. VEHICLE-HUB. THOMAS J. REID, Gananoque, Ontario, Canada. Filed Apr. 17, 1888. Serial No. 307,580. (No model.)

Claim.—1. A vehicle-hub consisting of a split or checked wooden core, metallic shells for incasing said core, and a wooden wedge for expanding said core within the casing, substantially as and for the purpose set forth.

2. A hub for vehicle-wheels, having a wooden core made from cracked hub-blocks first compressed and subsequently expanded within a metallic shell, substantially as and for the purpose described.

3. In a hub for vehicle-wheels, the combination of the wooden core B and metallic shells L and F, having oppositely-beveled inner edges so inclined that the edge of one will be upset by contact with the other as the shells are driven to place, substantially as and in the manner described.

4. In a hub for vehicle-wheels, the combination of the wooden core B and metallic shell F, extending beyond the middle of the hub, having its inner portion thickened so as to form an inwardly-projecting shoulder, substantially as and in the manner described.

5. In a hub for vehicle-wheels, the combination of the wooden core B, the metallic shell F, with inner portion thickened to form inwardly-projecting shoulder and inner edge beveled upward, and the metallic shell L, with inner edge beveled downward, substantially as and for the purpose described.

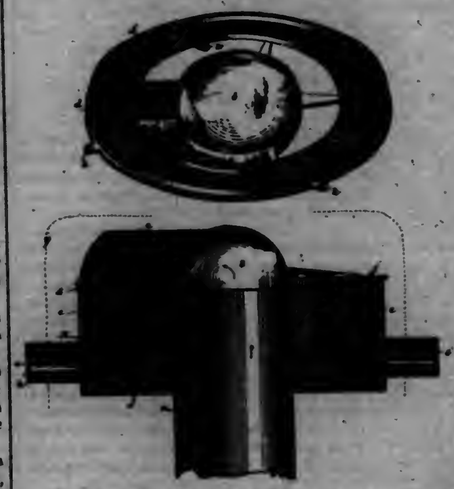
6. As an improved article of manufacture, a hub made up of a wooden body having a single longitudinal split and a wedge-shaped expanding piece tapering both longitudinally and transversely, said hub being incased by a metallic shell, within which it is expanded by the wedge-shaped piece.

406,771. SECONDARY-BATTERY ELECTRODE. ANDREW L. RICE, New York, N. Y. Filed Apr. 24, 1889. Serial No. 308,249. (No model.)

Claim.—1. The method of preparing a secondary element, which method consists in forming a plate or support of conductive material with cells or holes decreasing in diameter from one side to the other, filling such cells with active material, and then folding the plate upon itself in such manner that the smaller ends of the holes are outside, substantially as described.

2. The method of preparing a battery element, which method consists in forming a plate of lead or other material with tapering cells or holes, filling such cells or holes with active material, and then folding said plate on a line such that the large end of the cells will be opposite to a solid part of the plate, substantially as described.

3. The method of preparing a battery element, which method consists in forming a plate with tapering cells or holes, filling the same with active material, and folding the plate upon itself with a sheet of absorptive material interposed between the two leaves, the fold being so made that the small ends of the cells or holes are outside, substantially as described.



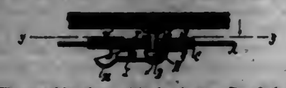
4. The method of preparing a battery element by forming a plate with tapering holes and projecting strips or ears, filling the holes with active material, folding the plate upon itself, and clamping the two leaves together by overlapping the strips or ears, substantially as described.

5. A secondary-battery element consisting of a folded plate or support having holes or cells of larger area on one side of the plate than on the other, said holes or cells being filled with active material and the smaller ends of said cells being outside, substantially as described.

6. A secondary-battery element consisting of a doubled or folded plate provided with tapering holes filled with active material, the smaller ends of said holes being outside, and a sheet of absorbent material interposed between said holes, substantially as described.

7. A secondary-battery element consisting of a doubled or folded plate having cells filled with active material, the two leaves of said element being bound together by overlapping strips or ears at the edges of the plate, substantially as described.

406,772. COVER FOR RADIATORS. THOMAS T. ROCKETT, Philadelphia, Pa. Filed Apr. 2, 1889. Serial No. 305,769. (No model.)



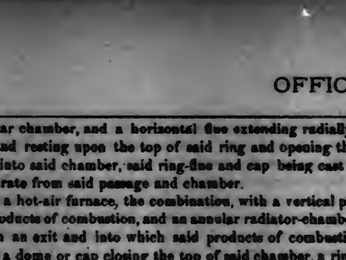
Claim.—1. The combination, with the passage conveying the products of combustion from the fire-box of a furnace, and an annular chamber provided with an exit and surrounding the passage, of a dome or cap closing the top of said passage, a ring closing the top of

said annular chamber, and a horizontal flue extending radially from said cap and resting upon the top of said ring and opening through the same into said chamber, said ring-flue and cap being cast in one piece separate from said passage and chamber.

2. In a hot-air furnace, the combination, with a vertical passage for the products of combustion, and an annular radiator-chamber provided with an exit and into which said products of combustion are passed, of a dome or cap closing the top of said chamber, a ring closing the top of said chamber and located in a plane below the cap, and a flue extending radially from said cap to and resting upon the top of said ring, the outer end of the flue being closed and the ring being provided with an opening connecting said chamber and flue, the cap, flue, and ring being cast in one piece, substantially as described.

3. In a hot-air furnace, a vertical passage for the products of combustion, and an annular chamber surrounding the same, into which the products from the passage pass, in combination with a single integral casting forming a cap for the upper end of the passage, a ring forming the top of said chamber, and a flue opening into and extending radially from the cap to an opening through the ring, substantially as described.

406,773. FASTENING FOR CARRIAGE-CURTAINS. HENRY C. SAGEMAN and JOHN SEIBOLD, Mount Vernon, N. Y., assignors, by direct and mesne assignments, to Ann Maria Sageman, same place, and George W. Mabie, Brooklyn, N. Y. Filed Feb. 23, 1888. Serial No. 301,434. (No model.)



Claim.—1. The combination, with the button B, of the plate C, formed with the openings D E, and the covering-plate hinged to the plate C and formed with the cover G, the socket H, and the thumb-piece M, substantially as described.

2. The curtain A and plates C and N, formed with openings D E to receive the button or article to which the fastening is to be applied, in combination with the hinged covering-plate formed with the cover G, the socket H, and thumb-piece M, substantially as described.

3. The button B, in combination with the plate C, formed with the openings D E, and the covering-plate G H M, connected to plate C by a spring-hinge operating to bring the cover G of the covering-plate down upon the plate C to close the opening D and lock the button in the fastening, substantially as described.

406,774. GAGE FOR SAWS. HENRY SAUNDERS, Perry, Mo. Filed Mar. 30, 1888. Serial No. 305,363. (No model.)

Claim.—1. In a gage for sharpening and swaging the teeth of circular saws, the combination of the arm A, the extension-plate E thereon, the clamp-screw to secure said extension-plate to said arm at any desired adjustment, and the clamp or vise pivoted to the extension-plate, substantially as described.

2. The vise or clamp comprising the laterally-adjustable plates, one of which is provided with the arm Y, in combination with the arm A, the extension-plate E thereon, and the pivot-connection between the arm Y and said extension-plate, substantially as described.

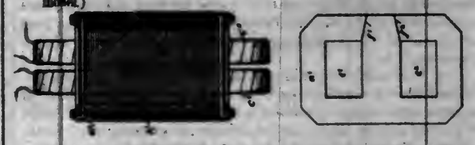
3. In a saw-gage, the vise or clamp comprising the plates M N, adapted to the contour of the saw-teeth, and the adjusting-screws to move said plates laterally toward and from each other, in combination with a support for the clamp, substantially as described.

4. In a saw-gage, the clamp or vise comprising the plates M N, adapted to the shape of the saw-teeth and having the lateral arms at their rear ends guided one on the other, the set-screws to secure said arms at any desired adjustment, the ears projecting from the lower front ends of the plates, and the set-screws connecting said ears, in combination with means for supporting the gage, substantially as described.

5. In a gage for circular saws, a standard having the clamp or vise adapted to receive the saw-teeth in succession, said clamp or vise having the shoulders O beveled outward on their opposing sides at their front edges, for the purpose set forth, substantially as described.

6. The circular-saw gage comprising the arm A, having the foot B, for the purpose set forth, the extension-plate E, guided on the arm and having the longitudinal slot I and the curved slot H, the set-screw in slot I and engaging-arm A, the vise or clamp bearing against the extension-plate and comprising the laterally-adjustable plates M N and the screws to operate the same, the handle extending through the extension-plate and having the studs forming the pivot for the vise or clamp, and the adjusting or set screw operating in slot H and engaging the vise or clamp, substantially as described.

406,775. THERMOSTATIC-VALVE REGULATOR. CHARLES F. SAUTTER, Brooklyn, N. Y. Filed Oct. 27, 1888. Serial No. 289,348. (No model.)



Claim.—1. In an apparatus for producing cold by the expansion of a gaseous fluid, the combination, with the expansion-chamber O, of the closed box A, the gas-supply pipe B, leading into said box, the pipe C, leading from the box into the expansion-chamber, the valve adapted to close the pipe C, and the thermostat adapted to control the position of the valve, both the expansion-chamber and the closed box being situated in the refrigerator, substantially as described.

2. The combination, with the expansion-chamber O, of the closed box A, the gas-supply pipe B, leading into said box, the pipe C, leading from the box into the expansion-chamber, the tip A, secured in said pipe, the spring-pressed roller-valve E, adapted to close the mouth of the tip A, and the thermostat adapted to control the position of the valve, both the expansion-chamber and the closed box being situated in the refrigerator, substantially as described.

3. The combination, with the expansion-chamber O, of the closed box A, the gas-supply pipe B, leading into said box, the pipe C, leading from the box into the expansion-chamber, the valve adapted to close the pipe C, the thermostat adapted to control the position of the valve, and the adjusting device G, both the expansion-chamber and the closed box being situated in the refrigerator, substantially as described.

406,776. LAMINATED CORE FOR ELECTRICAL APPARATUS. ALBERT SCHMID, Allegheny, assignor to the Westinghouse Electric Company, Pittsburg, Pa. Filed Nov. 6, 1888. Serial No. 290,150. (No model.)

Claim.—1. A core for electrical apparatus, consisting of thin stamped plates of magnetizable material placed side by side and intervening layers or lamina of electrically-insulating magnetic oxide formed upon and covering the entire surfaces and edges of the plates.

2. A core for electrical apparatus, composed of thin stamped plates of magnetizable material and intervening strata of non-electric-conducting oxide formed upon the surfaces of such plates and covering the edges and burrs thereof.

3. A core for electrical apparatus, consisting of stamped plates of magnetizable material placed side by side and in contact with each other, said plates being annealed after being stamped, whereby their entire surfaces and edges are coated by an oxide.

4. A core for electrical apparatus, consisting of alternate layers of magnetizable material and magnetic oxide formed by annealing after the plates are stamped.

5. A core for electrical apparatus, consisting of alternate layers of magnetizable material and magnetic oxide, the latter being formed in layers upon the surfaces of the plates and covering the edges and burrs.

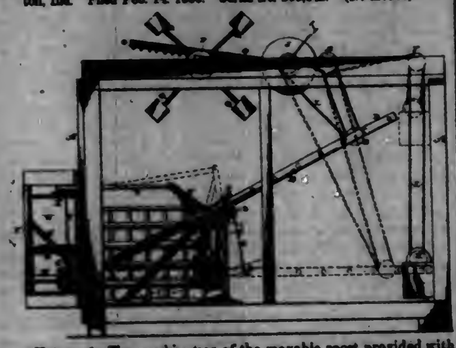
6. A core for electric converters, consisting of annealed plates of magnetizable material placed side by side and intervening lamina of insulating oxide formed upon the surfaces of the plates and covering the edges thereof, in combination with coils of insulated wire.

406,777. ARMATURE FOR ELECTRIC MACHINES. ALBERT SCHMID, Pittsburg, Pa., assignor to the Westinghouse Electric Company, same place. Filed Dec. 26, 1888. Serial No. 294,570. (No model.)

Claim.—1. An armature for electric machines, composed of lamina of magnetizable material having openings, the openings through certain of said lamina being of different shape from those of other of the lamina.

2. An armature for electric machines, consisting of plates or lamina of magnetizable material laid with their faces adjacent to each other, said lamina having openings, the openings of certain of the

406,777.



plates corresponding with each other in size and position, while the metal of the other plates projects a greater or less distance into the longitudinal openings left by the first-named lamina.

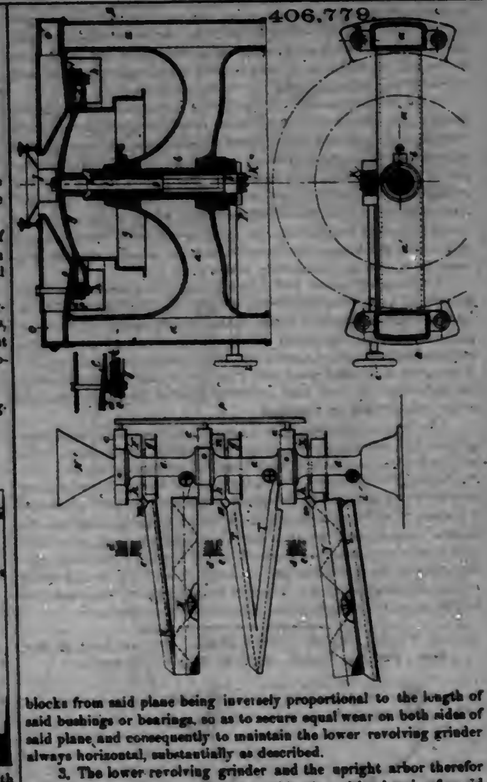
3. An armature for electric machines, composed of lamina of magnetizable material, having longitudinal openings extending from end to end, certain of the lamina projecting into said longitudinal openings.

4. An armature for electric machines, consisting of plates of magnetizable material stamped with openings and arranged in groups, and of alternate groups of plates stamped with openings of a different size or shape, the openings in the several groups of plates forming together continuous openings through the armature.

406,778. POULTRY-HOUSE. GOTTLIEB W. SCHROEDER, Huntington, Ind. Filed Feb. 14, 1889. Serial No. 299,842. (No model.)

Claim.—1. The combination of the movable roost provided with a series of pulleys, two sets of pulleys overhead, and a counter-weight provided with pulleys, a wheel provided with a spring-dog, a cord which passes around the pulleys and the hub upon the wheel, the crank-shaft upon which the wheel is loosely placed, the toothed rod, and the wheel P, provided with teeth to engage with the toothed connecting-rod, and the weighted arms, substantially as shown.

2. The combination of the movable roost and a counter-weight connected thereto for returning it to position with a connecting-cord, a pivoted and weighted lever mounted upon a standard and provided with an arm U, the pivoted connecting-rod having a cord Y attached to its outer end, and a bolt mechanism whereby the movement of the lever S, as the roost descends, causes the door to which the bolt mechanism is applied to first close and then operates the bolt so as to lock the door, substantially as described.



3. The combination of the pivoted roost and a counter-weight connected thereto with the pivoted lever S, provided with a counter-weight at one end, the cord which connects the lever to the roost, the arm U, the pivoted connecting-rod V, having a cord Y attached to one end, the door W, the pulley attached to the door, the pivoted rods B', connected together at their inner end by the rod C', a weight A', and the bolt D', attached to the vertical rod C', substantially as set forth.

406,779. GRINDING-MILL. JOSEPH SCHWEITZER, Paris, France. Filed Oct. 6, 1888. Serial No. 287,373. (No model.) Patented in France May 30, 1888, No. 190,915.

Claim.—1. In combination with the machine-frame and stationary horizontal upper disk-grinder, the revolving horizontal lower disk-grinder, the upright revolving arbor having the said lower grinder mounted thereon, and the vertically-adjustable tubular step-bearing supported upright in said machine-frame and constituting the sole journal-bearing for said arbor, said tubular bearing being closed at the bottom for holding oil, and comprising a tubular portion which extends over nearly the whole length of said arbor, and a step which is attached to and adjusted with said tubular portion and underlies the lower end of the said arbor, substantially as described.

2. The lower revolving grinder and revolving arbor therefor provided with a driving-pulley, in combination with bushings or bearing-blocks on opposite sides of the horizontal plane through the middle of said pulley, the distances of the middle of the bushings or bearing-
